(Oxford: March 5, 1888.)

In the introduction to Letter B of my Icelandic Dictionary, I have equated Latin *fors*, *forte*, with Icelandic *burðr*. That introduction was written at this place in the early months of 1867, now twenty-one years ago.

Bera is one of the great verbs of Icelandic, the Leviathan of Letter B. It gave me a vast deal of trouble at the time. It is Section C (as I call it), the impersonal usages, which bear most upon the present question. Space and regard for your readers forbid my copying or even abstracting two condensed columns of print—*Si ut scripsit novus consul dixisset, principem enecuisse*. Nor can any translation of mine convey to the reader the living breath of the native idioms as *felt* by an Icelander. However, one is not far from the mark in saying that there runs through the section the notion of an invisible, passive, sudden, involuntary chance agency, a "*fatis agimur*" indeed. Thus, *bera at*, or reflex, *beraz at* = "to befall, chance, happen, come to pass," and the corresponding noun, *at-burðr* = "event, chance, hap, accident." How, seeing this, can one help equating *ferre* with *bera*, and *fort-is* with *burðr*?

In another section, marked by me A II., is *bera*, "to bear, give birth," and the corresponding noun, *burðr*, "birth," but also, in plural, denoting the birthright or accompaniments, endowments of birth = "rank, honour, might, strength"; and this calls to mind Latin *fortis*, "strong," and *fortuna*, "luck." Fairy midwives, called *Norns*, were present (to the Norse mind) at the birth of every mother's child, shaping there and then at the very hour of "birth" the child's "fortune" and future life. I have long held "birth" and "fortune" to be related words, in both senses, A II. and C. Am I wrong? I mean it etymologically, and in the ancient, not modern, sense—no more.

In all these words, verbal *ð* and nominal *þ* go together. Besides *bera* and *burð-r*, there are *skera*, "to cut," and *skurð-r*, "a cut"; *stela*, "to steal," and *stulð-r*, "a theft"; *þuerra*, "to wane," and *þurð-r*, "a decrease"; *verða*, "to happen," and *urð-r*, "the destiny." All those nouns are masculine; if feminine, then for obvious reasons we have the unlauted *ð* (*y*), thus *byrð-r*, "a burden"—all fitting in with the Table of Vowels given by Prof. Brugmann in his recent great work.

GUDBRAND VIGFUSSON.

THE CANARY ISLANDS.

Puerto de Orotava, Tenerife: March 1, 1888.

As reviewer of Mrs. Stone's recently published volumes on the Canary Islands, I feel bound to

explain that my criticism of that book remains unaltered, and is quite unaffected by her letter of self-defence (ACADEMY, February 18). Every point was examined with care, and now there is nothing to retract or to change. Furthermore, since my notice was written, friends (long resident here) have pointed out many other errors of detail relating more especially to matters of fact, which imply both hasty generalisation, and "a partial knowledge of these islands." What could be expected but this result, when a book is the product of a few weeks spent in each of the chief islands of the group? One re-echoes Mrs. Stone's dogma that "criticism founded upon a partial knowledge of these islands is apt to be most misleading." To take the two largest islands only, if Mrs. Stone denies that her knowledge and her experience of both Tenerife and Grand Canary are but *partial*, we shall concede to her at once some hitherto unacknowledged privilege of infallibility belonging to a lady traveller. It is necessary to dwell upon this point, because of Mrs. Stone's tone of assured superiority over her predecessors, which permeates the book from its preface onwards. Such a tone has caused some people to take a distorted view of these volumes. Knowledge and infallibility, however, cannot walk the same road for long without one of them going to the wall.

Briefly, I wish to point out some mistaken deductions in Mrs. Stone's letter. Her list of bibliographical titles is exactly as I suspected. Ninety-one titles is not so very formidable or cumbersome a number after all, nor does it amount to one half of the total that I have collected in a trial list. A goodly percentage of these were accessible to London students. The question I asked was not only whether Mrs. Stone had "insufficiently consulted original authorities," but also whether she had not believed herself to have consulted all authorities, when the contrary could be distinctly shown. As to original authorities for the earlier history of the islands, Mrs. Stone holds some very decided views, which cannot be reconciled with those of the veteran historian and critic Don Agustín Millares, of Las Palmas. By the verdict of the latter authority I shall prefer to abide.

Misprints can, of course, be amended in a second (let us trust, abridged) edition, but the matter of local names is not so easy to gloss over as Mrs. Stone supposes. We have lists of topographical names throughout the archipelago in the works of Webb et Berthelot, Olive, Millares, and Chil y Naranjo; and by these a majority of names have become fixed, and are now unquestionable. Of those which have puzzling variants, I do not remember any in Mrs. Stone's work worthy of mention. Thus, whether rightly or wrongly fixed, there is for the mass of names an authorised nomenclature in topography. No rashness, no dogmatism, therefore, were needed as assistance when I corrected a few Tenerife names, which future tourists will wish to know accurately. As to names of people and places, Mrs. Stone's dearly-loved authority, Glas, cannot always be depended on.

Again, the maps are hardly seriously to be called by the author "mymaps." For want of research the map of Tenerife has been altered without warrant for accuracy, and that of Palma contains some place marked "Arriba" and "Abajo," which to me is a puzzle, since if a man went to Boscaille not knowing its name, and was told that he had walked through "Upper" and "Lower," without mention being made of the name of Boscaille, he would feel as much in a fog as to that place, as I am in regard to this village in Palma. The Admiralty Charts, Fritsch, and Don Marcial Velasquez are, I repeat, authorities for the other maps. Private observations made

by Mr. Stone in topography and meteorology do not call for remark, nor could a reviewer have mentioned those of Mr. Béchervaise at Las Palmas as being specially worthy of attention.

Mrs. Stone's work is a book of travel only. Who could possibly mistake it for anything else? But books of travel require to be padded (sometimes considerably so) with matters relating to the history, geography, and manners and customs of the regions they describe. I have shown that Mrs. Stone's padding lacks accuracy throughout; but her travel proper is, apart from prolix verbosity, usually interesting. Yet, if an author, in her preface, leads one, by her own words, to expect a work showing the results of some research apart from her journal notes, I did not surely exceed the limits of ordinary anticipation, in expressing disappointment, when such research proved to be hollow.

Before closing this letter I will deal with Mrs. Stone's twice-announced fact that herself and her husband "were the first English to visit the singularly isolated and beautiful island of Hierro, and that "No English-speaking-person has been on this island since the days of Columbus." Without proving the random nature of the latter statement, let me ask one question. Has Mrs. Stone yet become aware of the fact that Hierro was explored in a thorough and scientific manner by two English gentlemen (Dr. W. Duppa-Crotch and his brother) somewhat more than twenty years ago? Curiously enough, the name of one of these gentlemen appears in Mrs. Stone's own pages concealed by a dash.

"Truth is the strong thing," we are told by Mr. Robert Browning, and Mrs. Stone assures us that her aim was truth. Weak points, we all know too well, are inevitable in human workmanship; but, after they have been exposed, for an author to maintain that they were beyond the limits of attack, by mere assumption of superior wisdom, is hardly advisable.

GEORGE F. HOOPER.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, March 19, 8 p.m. Society of Arts: Cantor Lecture, "Alloys," II., by Prof. W. Chandler Roberts-Austen.

8 p.m. Victoria Institute: "The Results of many Years' Survey among the Coral Formations in the Pacific," by Dr. H. B. Guppy; "Chinese Ethnology and Chronology," by Dr. O. A. Gordon.

8 p.m. Aristotelian: "Attention," by Mr. G. F. Stout.

TUESDAY, March 20, 8 p.m. Royal Institution: "Before and after Darwin," X., by Prof. G. J. Romanes.

7.45 p.m. Statistical.

8 p.m. Society of Arts: "What style of Architecture should we Follow?" by Mr. William Simpson.

8 p.m. Civil Engineers: Discussion, "Economy-Trials of a Non-condensing Steam-Engine—Simple, Compound, and Triple," by Mr. F. W. Willans.

Zoological: "The Classification of the Ranidae," by Mr. G. A. Boulenger; "Descriptions of Sixteen New Species of Shells," by Mr. G. B. Sowerby; "A Worm of the Genus *Aelosoma*," by Mr. Frank E. Beddard.

WEDNESDAY, March 21, 8 p.m. Society of Arts: "The Evils of Canal Irrigation in India, and their Prevention," by Mr. I. H. Thornton.

THURSDAY, March 22, 3 p.m. Royal Institution: "Microscopical Work with Recent Lenses on the Least and Simplest Forms of Life," III., by the Rev. W. H. Dallinger.

8 p.m. Telegraph Engineers: "Electrical Stress," by Prof. A. W. Rücker and Mr. O. V. Boys.

8 p.m. Society for the Encouragement of the Fine Arts: "The Fine Arts of Palestine," by Mrs. E. A. Finn.

8.30 p.m. Antiquaries.

FRIDAY, March 23, 7.30 p.m. Civil Engineers: Students' Meeting, "Principal Types of American Swing Bridges," by Mr. H. H. Hodge.

9 p.m. Royal Institution: "A Lecture with—and without—Point," by Sir Frederick Bramwell.

SATURDAY, March 24, 3 p.m. Royal Institution: "The Modern Drama, III, English," by Mr. W. Archer.

8.45 p.m. Botanic: General Meeting.

SCIENCE.

RECENT WORKS ON THE MICROSCOPE.

The Microscope in Theory and Practice. Translated from the German of Prof. Carl Naegeli and Prof. S. Schwendener. (Sonnenschein.)

My Microscope and Some Objects from My Cabinet. By a Quekett Club-man. (Roper & Drowley.)

The Student's Handbook to the Microscope. (Same Author and Publishers.)

A Manual of Elementary Microscopical Manipulation. By T. Charles White. (Same Publishers.)

ANY one who takes up Naegeli and Schwendener's work with the expectation of finding in it an addition to our many popular books on the microscope, such as Carpenter's or Hogg's or Beale's, will be disappointed. He will find here no general description of the use of the instrument, or directions as to the dissecting apparatus with which the beginner should provide himself; no pretty drawings of animals or plants to be picked up in a slimy pond, of snow-crystals, or the scales on butterflies' wings. He will find, on the contrary, every page bristling with mathematical formulae and diagrams; and, unless his object be to learn something of the theory as well as the practice of the microscope, and unless he has some knowledge of mathematics, he had better send away the book whence it came.

Few of those who use the microscope as a toy, few even of those who use it as an adjunct to biological or petrological work, are able to realise the skill which has been requisite to bring the instrument to its present high state of perfection, or the extent to which a knowledge of the higher mathematics is essential to its improvement. There are microscopists in this country who are deeply versed in microscopical optics; but they are mostly amateurs. Almost the whole of the practical application of science to the instrument has come from Germany; and it is to the researches of Prof. Abbé de Jena that we chiefly owe the extraordinary advance during recent years in the evolution of the microscope.

The first part of the work treats of the Theory of the Microscope; and discusses, among other special subjects, Chromatic and Spherical Aberration, and the vexed question of Aperture. Under the head of the Theory of Microscopic Observation, we have a section on Interference Phenomena. In Part VII. the phenomena of Polarisation are entered into in detail. Nor are points of practical technique passed over. The reader will here find advice, which cannot but be of service to him, from the highest possible authority, on such points as the Preparation and Treatment of Specimens, the Preservation of Microscopic Specimens, and the Measurement and Drawing of Microscopic Objects.

The translation from the original German—a work of no ordinary difficulty—has been very satisfactorily accomplished, at the outset by Mr. F. Crisp, and completed by Mr. J. Mayall, jun.

The two little books by the writer who styles himself "A Quekett Club-man" are well adapted to interest the beginner in this fascinating science; written, as they are, in a pleasant and easy style, and tastily got up by the publishers. The one we have placed first describes the appearance presented under the microscope by such objects as the parasitic fungus on the dock, a diatom, a freshwater *Hydra*, a butterfly's wing, a spider's eye, and a slice of limestone. In the second, the microscopes of the best English makers—Baker, Beck, Collins, Crouch, Powell, Ross,

Swift, Watson, and others—are described and compared, together with the accessory apparatus necessary for the worker. These are both books which can be placed with confidence in the hands of students. Before new editions are called for, we would venture to make two suggestions to the writer: first, that to the *Handbook to the Microscope* should be added a short chapter on section-cutting and the mounting of slides; and, secondly, that the specific and generic names should be carefully revised. By this means, the use of such terms as "a foraminifera," "Pleurosigmata," and others, which jar upon the scientific reader, would be avoided.

Praise is needless for any work by the accomplished "late President of the Quekett Microscopical Club." Although the book is a very small one, Mr. White's *Manual* goes over considerably larger ground than the second of the "Quekett Club-man's." We find here instructions for mounting, section-cutting, staining, injection, &c. With this little manual, in addition to the two preceding ones, the beginner will be well provided.

ALFRED W. BENNETT.

CORRESPONDENCE.

THE NEW KANISHKA INSCRIPTION AND THE TITLE "SHĀHI."

Paris: Mars 6, 1888.

Vous avez publié dans le No. 826 de l'ACADEMY une lettre du Dr. G. Bühler, de Vienne, au sujet d'une inscription datée de la 7^e année du mahārāja rājātrāja Shāhi Kanishka, qui vient d'être trouvée à Mathurā par l'infatigable explorateur, Dr. Burgess. Cette inscription, indépendamment de son importance au point de vue du Jainism, est particulièrement intéressante en ce qu'elle nous apprend que Kanishka avait le titre de Shāhi. Jusqu'ici le plus ancien texte qui mentionnât ce titre iranien, était une inscription trouvée également dans le Kankali mound, à Mathurā, en 1869, et datée de Samvat 87 du roi Vāsu-deva (= 165 A.D.), et l'on pouvait douter que ce titre eût également appartenu à Kanishka et Huvishka, ses prédécesseurs. La découverte de la nouvelle inscription signalée par le savant professeur de Vienne fait tomber tous les doutes, et est, en outre, une éclatante confirmation de la lecture shahanano shah (Shāhinshāh) proposée par Dr. Aurel Stein pour la légende PAONANOPAO des monnaies de Kanishka et de ses successeurs (v. l'ACADEMY, Septembre 10 et 24, et Octobre 1 et 8, 1887). L'an 7 de Kanishka correspond à A.D. 85; on a donc l'indication certaine, par cette inscription, et par les monnaies, que le titre royal shāh et shāhinshāh était usité en Perse et dans l'Iran oriental au premier siècle de notre ère, bien que ce soit seulement 150 ans plus tard que ces appellations se rencontrent sous la forme malkān malkā sur les monnaies des Sassanides.

C'est là une de ces surprises comme l'Inde nous en a déjà révélée et comme elle nous en réserve d'autres, grâce aux intelligentes recherches des savants anglais et allemands de la Commission archéologique de l'Inde.

ED. DROUIN.

RAWLINSON B. 512 AND THE TRIPARTITE LIFE OF S. PATRICK.

London: March 6, 1888.

A catalogue of the contents of Rawl. B. 512 (one of the most valuable of the Irish MSS. in the Bodleian) has just been published in pp. xiv.-xlv. of the introduction to the Rolls edition of the Tripartite Life of S. Patrick. Permit me, through the columns of the ACADEMY, to ask the possessors of this book to make in their respective copies the following

corrections of the catalogue in question. For these I am indebted to the learning and palaeographical skill of Mr. S. H. O'Grady:

- P. xv., l. 13, Da . . . should doubtless be Dálaigh—Tadg ó Dálaigh having been a poet who flourished A.D. 1520.
- xv., l. 22, for os, read or; l. 23, for and, read for.
- l. 30, and note 2, for Ceannus, read Ce[n]annus "Kells."
- Note 2, for "Breifne," read "Breifnes" (of which there were two).
- xvi., ll. 6, 7, for críocharacht, read críocharach[dó]racht.
- xvii., note 2, for these miracles, read this miracle.
- xix., ll. 21, 22, read Sunday eventide has overtaken us, and under God's protection may I be!
- Note 3, for unyoke, read leave off.
- xxii., l. 7, for inbir, read dinbir.
- Note 1, l. 14, for at the end of, read hard by.
- xxiii., note 4, the second sentence should be, "Knowest thou that in every year there are four fair things?"
- xxiv., note 1, for (when) found, read as taken.
- xxv., l. 10 } for iarrad, read iarraid.
- xxvii., l. 8 }
- xxvi., l. 4, for arcabail, read ar cabair.
- Note 4, ll. 5, 6, 7, read enumerated here be helping us both. I and Gerald, the eventide of the festival of Mary of the Salutation (Lady-day) overtaking us.
- xxvii., note 2, should be "I am Dubthach . . . who have written a stave (or 'gathering') for Conchobar . . . and we waiting our opportunity to ask," &c.
- xxviii., note 6, for to reckon their ranks and their steps, read to rehearse them in gradations and in degrees.
- Note 7, for number, read enumeration.
- xxix., note 1, fesc is right. Translate "and last night was wet." In l. 2 of the text dele "[leg. fusc?]"
- xxxi., note 3, for throne, read royal seat.
- xxxii., l. 21, after ceneol, insert "Eogain."
- Note 5, the meaning is: "Irard mac Coise concocted this work of imagination for [i.e. against] the Cindl Eogha'n, after he had by them been unjustly plundered [as it were], in re the alaying of Muiredach, son of Eogan, so that they trumped up a charge against him, and went illegally to work," &c.
- xxxv., note 1, l. 3, for were . . . read were parting; l. 5, for warfare, read use of arms.
- xxxvi., note 5, for should, read do.
- xxxvii., note 1, the last line of the quatrain should be: "Whose judgments are not on the track of truth"—lorg fire = Wahrheitslauf.
- xxxviii., note 1, for delight (them), read make melody.
- xxxix., l. 10, for Feart, read Feart[ar].
- xl., l. 17, for Maine, read [of Hy] Maine.
- Note 2, for Aidne, read of Aidne.
- xlili., l. 4, for "an Aisia," other copies have "Achaia," which is a much better reading.
- Note 2, for full of chastity, read "perfect (and) chaste"—lana being a scribal error for imlana.
- xl., note 1, for saith . . . read saith on the other side of the page.

So far Mr. O'Grady. I take this opportunity of correcting the following misprints and other

errors in the Rolls edition of the Tripartite Life:

- P. xxvii., l. 9, for disis in, read disi sin.
- xxxviii., l. 5, for oltrifited, read oltrifited.
- lxxii., col. 2, ros-aslacht should be opposite ad-slig, and conom-adnaiss should be opposite adnácim.
- ci., l. 2, for Hieronyman, read Hieronymian.
- cxviii., l. 12, for Royal, read Royale.
- cxviii., last line, after MS., insert in.
- cxlv., l. 28, dele "for which we have."
- cllii., l. 22, for quina, read *quina.
- cliv., l. 4, read dagforcillidib.
- clxviii., l. 9, read ros-airillem.
- clxxiv., l. 3, read mentioned.
- clxxix., l. 9, before Irish, insert ancient.
- clxxxii., col. 2, l. 31, for remedy, read remedies.
- cxo., col. 2, ll. 2, 14, 23, dele the colon;
- l. 32, for plentitude, read plenitude.
- cxci., l. 3, read nones.
- 5, l. 5, for one of the two contexts, read the context.
- 9, ll. 22, 25, after read, reading insert out.
- 29, ll. 15, 16, for be at Germanus's hand, read act for Germanus.
- l. 21, read "What ails the hag?"
- 47, l. 27, for path, read puts.
- 57, l. 10, for cried out, read laughed;
- ll. 30, 32, for cleric, read clerical student; l. 31, for before, read beside.
- 75, l. 10, for enjoined us, read charged me.
- 153, l. 15, for tonsures, read tonsure.
- 431, l. 1, for one of the two connected passages, read the context.
- 655, col. 1, s.v. nemed, read ard-nemed.
- 664, col. 2, s.v. mirror, read French mirer.

The following additions may also be made to the introduction: in p. cxxxi., l. 18, it should be stated that, according to the late Henry Bradshaw, the Oxford and Cambridge MSS. here mentioned are copies of the *Terti Vita* in its proper state, i.e., without ca. i.-xi. and xciv. The *clochan* or causeway, mentioned in p. 458, l. 20, should have been referred to in p. cxlix., l. 5; the reference to sun-worship in Cormac's Glossary should have been mentioned in p. clviii., l. 36; and the evidence of daily celebration afforded by the Tripartite Life, p. 192, l. 26, should have been noticed in p. clxxvi., l. 22.

WHITLEY STOKES.

SCIENCE NOTES.

At the Bath meeting of the British Association for the Advancement of Science, which commences on September 5, the following gentlemen will be presidents of the Sections: A, Prof. Schuster; B, Prof. Tilden; C, Prof. Boyd Dawkins; D, Mr. Thiselton Dyer; E, Sir Charles Wilson; F, Lord Bramwell; G, Mr. Preece; H, Gen. Pitt Rivers.

MESSRS. GURNEY & JACKSON, successors to Mr. Van Voort, announce an *Illustrated Manual of British Birds*, by Mr. Howard Saunders, to be issued in monthly parts. Each species will have a woodcut and two pages of letterpress devoted to it; and the whole will form a volume of nearly 800 pages. The illustrations will, for the most part, be identical with those in the fourth edition of *Yarrell*, of which the two last volumes were edited by Mr. Saunders. The first part will be published in the course of next month.

PROF. J. LANGE, of Copenhagen, has sent us a very elaborate *Nomenclator Floras Danicæ*. It contains a complete list of all the species described in the *Flora Danica*, edited by Prof. Lange, with synonyms, arranged in order of publication, and a second list, arranged alpha-

betically, of the species figured in the plates. The range of species includes not only flowering plants, but ferns and their allies, mosses, algae, and fungi. The geographical range comprises Denmark, the entire Scandinavian Peninsula, Iceland, and the Faroe Islands. Many critical remarks of great value are added.

MEETINGS OF SOCIETIES.

CAMBRIDGE ANTIQUARIAN SOCIETY.—(Monday, March 5.)

PROF. A. MACALISTER, president, in the chair.—Prof. J. H. Middleton read notes on the temple of Apollo at Delphi and its existing remains. The fifth and last temple was begun soon after 548 B.C. by a Corinthian architect named Spintharus, but the whole building and its sculpture was not completed till about a century later. The very scanty remains which now exist of drums of columns, capitals, architraves, and a few other features, bear a close resemblance to the existing temple at Corinth. Some of the details, such as the hypotrachelia, are so exactly similar in both temples that one may reasonably suggest that Spintharus was also the architect of the temple at Corinth. The temple at Delphi was hexastyle, peripteral with pyknostyle intercolumniation: the main front was of Parian marble, the rest of local stone. It was divided into a pronaos in antis, a large hypæthral cella, an inner sanctuary, and below it a subterranean vault which contained the tripod on which the priestess sat to deliver the oracles. Her voice, passing up through an opening in the vault into the sanctuary above, was there heard by the attendant priests of Apollo, and then repeated in a poetical form to the persons in the cella who had come to consult the oracle. The main objects within the temple were: (1) in the sanctuary the golden statue of Apollo, the omphalos with its gold ornaments, the sacred fire, and probably the iron bowl-stand by Glaucus of Chios (seventh century B.C.) and the iron chair of Pindar; (2) in the cella, statues of Apollo Moiragetes, Zeus Moiragetes, two Fates, and Hermione, together with an altar to Poseidon; (3) in the Pronaos was a bronze statue of Homer, and the silver krater given by Croesus. The sculpture in the front pediment represented Apollo, Leto, Artemis, and the Muses; in the back pediment Dionysus, as inventor of the lyre, and the Thyiades. In the metopes over the pronaos were reliefs of some of the deeds of Heracles and battles between the gods and giants. These sculptures were partly the work of Praxias, a pupil of Calamis and contemporary of Pheidias, and were partly finished after his death by another Athenian sculptor, Androcthenes. Only the most scanty fragments of these various pieces of sculpture are now in existence.—Mr. J. W. Clark made some remarks on a fireplace associated with the Lady Margaret lately discovered in the master's lodge at Christ's College. The college was founded in 1505, and the buildings were commenced at once. The statutes, issued in 1506, speak of the master's lodge as completed; and though such assertions in statutes, licences, and other documents must be received with caution, we know from other sources that in this case the building-work did proceed without interruption. The master's lodge was therefore probably completed when the following passage in the statutes was written. It may be thus translated: "We allow the master for the time being to occupy the chambers on the ground floor under the chambers on the first floor which have been built for our own use, and in our absence for the use of John, Bishop of Rochester," i.e. Bishop Fisher. The master's chambers here mentioned are the three rooms on the ground floor between the chapel and the hall, the original size of which may be readily made out; and the chambers above them, reserved for the foundress, are of the same size. The most important of these was clearly that which has the beautiful oriel-window on the side next the court, now the drawing-room of the master's lodge; and in the east wall of this the fire-place in question was discovered in the course of some alterations undertaken shortly after the election of the present master. It had been completely hidden by a modern chimney-piece. It consists of a low four-centered

arch, set in a square panel. The material is clunch. The pendants are filled with foliage, of a very delicate and beautiful design, admirably executed; a remark which applies also to the devices which ornament the bosses projecting from the hollow which forms the principal member of the mouldings of the panel. The jambs, for a height of about three feet, are unadorned, and were originally ornamented with painting in tempera, traces of which were visible when the fireplace was first discovered. There were originally sixteen devices, not counting the foliage which decorates the corners of the panel; but when the fire-place was opened out, the two lowest on the left hand were found to have been wholly destroyed. The subjects of the remaining fourteen are: (1) a full-blown rose; (2) a fleur-de-lys surrounded by daisies, some full-blown, some in bud; (3) the letters H.R. knotted together by a piece of cord; (4) three feathers, one drooping sinister, two dexter, set in a scroll, bearing the words *Dieu et*; (5) a portcullis; (6) a full-blown rose; (7) the letters H.R. as above; (8) a portcullis; (9) a fleur-de-lys, set on a background of foliage; (10) an arched-crown, surmounted by a cross, and backed by foliage; (11) a group of daisies and leaves, growing out of a flower-pot or flower-bed; (12) a full-blown rose; (13) three feathers as in (4), the scroll bearing the words *Dieu et moi*; (14) a basket or flower-pot, out of which daisies are growing. It was suggested that these badges might be arranged in two groups, the one commemorating the Lady Margaret, the other her son, King Henry VII. The first group consists of the fleur-de-lys and daisies (2); the fleur-de-lys alone (9); the group of daisies (11); the basket of daisies (14); the second group of the portcullis (5), (8); the full-blown rose (1) (6) (12); the crown (10); and the letters H.R. (3) (7). The feathers set in a scroll bearing a motto which was evidently *Dieu et mon droit* (4 and 13) are somewhat puzzling. Feathers were the badge, among others, of the Beauforts, and as such appear on the gate of Christ's College; but they do not occur among the well-known badges of King Henry VII; nor is it usual to find them employed as the badge of a reigning sovereign.—Mr. J. J. W. Livett read an account of his visit to the Cistercian monastery at Whitwick, on the northern border of Charnwood Forest in Leicestershire—a house where at the present day the strictest rules of the order are observed. The buildings consist of museum, poor house, guest-chambers, cloisters, cells, &c., described by the architect, Pugin, "as in the lancet style, with massive walls and buttresses, long and narrow windows, high gables and roofs, with deeply-arched doorways." Every portion of the architecture and fittings correspond to the austerity of the order. The monks assemble in the chapel at 2 a.m. on week-days, and at 1 a.m. on Sundays, no one being allowed to speak till 5.30 a.m. The cloisters resemble those at Queen's College. In the museum is a "Crucifixion" by Van Dyck, and a "Veronica" by Albert Dürer, as well as two remarkable illuminated Antiphonaries of the twelfth century. There are also collections of fossils and Roman coins. The monastery was founded in 1833 by brethren from Mount Melleray in Ireland, so that it is directly descended from Cîteaux through the houses of La Trappe, Val de Sainte, and Saint Susan's, Lulworth.

SOCIETY OF BIBLICAL ARCHAEOLOGY.—(Tuesday, March 6.)

DR. PAGE RENOUF, president, in the chair.—Prof. Amélineau, of Paris, sent an account of a very interesting MS., which was read by the secretary.—After thanking the owner, Lord Zouche, who had generously placed at his disposal his Coptic MSS. for the study of the Memphitic and Theban versions of the New Testament, the author explained that for some time he had been trying to arrive at a text of this version which would be satisfactory. The MS. now described is not, of course, entirely unknown, as it has already been mentioned by Prof. W. Wright and Bishop Lightfoot. Prof. Amélineau stated that, having now copied the whole of the text, and spent much time and labour on its study, he was in a position to fully describe its contents. It had been supposed from the account in Mr. Curzon's catalogue to contain commentaries on two of the Gospels; but the examination had proved, as suspected by

Bishop Lightfoot, that it contained a collection of extracts bearing on the four Gospels, as well as other matter. Besides the value of the MS. for the text of the New Testament, it was pointed out that it was even more valuable from the number of selections from the Fathers, which had been added to carry out the purpose of the compiler. Although it is not quite perfect, still a very large quantity remains. Originally it contained 300 folios, of which 254, or 508 leaves, still survive, having been bound up in any order probably for their preservation. The extracts are numerous, and naturally vary in length. They include portions of the writings of the most celebrated Fathers of the Greek Church—Athanasius, Cyril, Gregorius Nazianzenus, Basil of Caesarea, Gregory of Nyssa, Chrysostom, Clement of Alexandria, the historian Eusebius, Titus of Bostra, Simon Stylites—without doubt, the well-known saint; and, above all, a series of extracts from the Patriarch Severus of Antioch. His writings, with those of Cyril and Chrysostom, had been laid under contribution more than the rest. This, Prof. Amélineau pointed out, was most fortunate, because none of the works of Severus are extant, although in his time he played a most important part in Syria as well as in Egypt. In the latter place his renown was so great that round his name a large number of legends grew up. From this MS. it was possible for the first time to know him from his own writings. The extracts from Cyril are also of great interest, as they differ in details from the published copies of his work. Among other matters it was mentioned that there were also found in the MS. portions of the lost commentaries of Eusebius, &c. Prof. Amélineau then considered the caligraphy and date of the MS., and how it bore comparison with other Coptic MSS.; and in conclusion he stated that the MS. of Lord Zouche was valuable, not only linguistically but theologically, and from an historical point of view as well. The Bishop of Durham had said that he who published it would do a service to scientific and historical study. Prof. Amélineau pointed out that he had done a portion of this in copying and studying it most carefully, and was now prepared to give it to the world; and he only hoped that some interested person would come forward and assist him in such a desirable undertaking.

NEW SHAKSPEARE.—(Friday, March 9.)

DR. F. J. FURNIVALL, in the chair.—A paper on "Shakspeare's Accentuation of Proper Names" was read by Mr. B. Dawson, who contended that the accent on proper names in Shakspeare was not varied, as had been asserted, but always stable and fixed. For example, "Messala," Mr. Dawson urged, was always accented on the penultimate, while the accents in "Dunstan," "Coriolanus," "Coriol," and "Posthumus," were also invariable; and he proceeded to show how, in doubtful cases, the lines in question could be scanned according to his theory. The meeting, however, found itself unable to accept this invariability in several instances.

FINE ART.

COLLECTORS of PICTURES, CHINA, &c., can insure against Fire in the best offices at reduced rates and upon a special system which provides a guarantee (which an ordinary policy does not) of full payment in the event of claims, by applying to the FINE ART INSURANCE PROTECTION SOCIETY, 42, Boodle's Lane, Eastcheap, E.C.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromes and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—Geo. RENN, 115, Strand, near Waterloo-bridge.

"The National Gallery."—*The Italian Pre-Raphaelites.* By Cosmo Monkhouse. (Cassell.)

THIS book on the National Gallery is a guide that will prove very useful to many visitors of that collection who seek for information about an art the principles of which they do not understand, and who expect enjoyment where they cannot find out by themselves what the merits of the various

pictures are. Mr. Monkhouse addresses himself to the public at large; and, accordingly, he discusses many questions which, in the preliminary knowledge of art, are indispensable. The pictures are reviewed in chronological order, and grouped according to the local schools in which they have been produced. Only very few have been omitted altogether, or merely enumerated. The pictures by great masters are all discussed in detail, and thus an opportunity is given to the reader to understand the manners of the several painters. There are also very useful cross-references to other pictures in the same collection. Such comparative studies within the limits of the National Gallery are strongly to be recommended to those who aim at a thorough knowledge of the subject. The description of the subject of the pictures has in most cases been omitted, for the obvious reason that the visitor to the Gallery can do without it when looking at the pictures. To him the concise title is all he needs when using this guide-book. Information of this kind is, of course, essential in the official catalogue, as also the references about the material and the size of the pictures, the details of the lives of the artist, &c. Both may therefore be used side by side. Mr. Monkhouse's book is profusely illustrated with excellent woodcuts. We may perhaps disagree with the writer in some questions of detail as well as in some of his views about the aims of the Italian Pre-Raphaelites, but we thoroughly approve of the principles on which his handbook has been compiled.

J. P. RICHTER.

EGYPT EXPLORATION FUND.

M. NAVILLE'S LECTURE ON "BUBASTIS AND THE CITY OF ONIAS."

III.

(Continued from the ACADEMY of February 25.)

By far the most interesting, and I may say the most exciting excavations which we made this year were those at Bubastis, of which I shall speak only briefly, because they are but a beginning. The reason which induced me to go to Tell Basta was a report which I heard that the fellahs, in digging for *sebkah*, had come across tombs of the XVIIIth Dynasty. It is a curious fact that in all our excavations in the Delta, and even in places which had already been explored, there does not appear one single monument of the XVIIIth Dynasty. Whence does this arise? Was the Delta still occupied by the Hyksos? Certainly not by the Hyksos kings, as we know of the capture of Avaris by Ahmes; besides, Thothmes III., in his military expeditions, had to pass through the Delta. It may be that the XVIIIth Dynasty considered the country as still impure and adverse to the Theban gods, and that for this reason they did not like to build temples in the Delta. Certain it is that the earliest traces we have met with in the Delta are inscriptions of Seti, who had the Delta god Set in his name, and Rameses II., who adopted the worship of Set, and dedicated a large number of statues and monuments to that god. Scarabs of Amenhotep III. and his wife have frequently been discovered at Bubastis; but the fact that people were buried with scarabs of the XVIIIth Dynasty is but a very scanty piece of information.

Our first attempts in the tombs were unsuccessful. We came across sepulchral pits, with traces of the cartonnages, painted blue and red,

which had contained the bodies; but, except a few amulets, we found nothing of interest. Therefore, we soon turned from the tombs to the area of the temple—a large rectangular depression surrounded on all sides by the mounds of houses, which, according to Herodotus, must in his time have been higher than the temple. In that depression, a few blocks of weathered red granite were the witnesses of Mariette's unsuccessful attempts, which he soon abandoned. We find in Herodotus a complete description of the temple, which he says was one of the most beautiful in Egypt; and he describes the great festivals which took place there in honour of the goddess. Could this magnificent building have disappeared altogether? Were there no traces left of the great sanctuary of Bast? We broke ground in April; and, during the month that Mr. Griffith and I worked together, the interest of the work grew every day. We began at several places at once—first near the mounds, at a place where a large block with a sculpture of Osorkon II. was still visible. There we found columns with palm and lotus capitals, which may be of the time of the XIIth Dynasty. They seem to have belonged to a doorway leading from the city towards the temple, for we found traces of a basalt pavement in that direction. The temple itself we attacked in three different places—towards the east, where was the entrance, in the middle, and at the back, which was at the west side. We were astonished, after a few days, at the enormous number of huge blocks which we discovered at an inconsiderable depth. The eastern part now presents, though on a smaller scale, an appearance not unlike that of Sān. A large space is covered with enormous granite masses all thrown over each other; and where it is impossible to trace the direction of a wall, the blocks are intermingled with fragments of colossal statues, double or single, and also with remains of shrines which have not escaped destruction. The first cartouche we met with was that of Osorkon II., and afterwards, on a colossal statue, we found the cartouche of Rameses II.; but before we began turning the blocks we found the name of no other king. The sculptures of Osorkon II. are very numerous, and they have a peculiar character. They consist of processions of priests and gods advancing towards the king, who is seated in a shrine with the crown of Upper or Lower Egypt on his head, and generally accompanied by the goddess Bast. In some places these priests are represented in the most extraordinary positions, and performing curious dances. Everything points to a great festival given by Osorkon—very likely on the day of his coronation. In fact, as I read in the inscriptions, this part of the temple is called *hat heb*, the hall of the festival. There near the entrance, as at Sān, stood a considerable number of statues; there Rameses accumulated his colossal images, of which it is clear that a great number were usurpations. It seems to me very doubtful whether the beautiful head of black granite which has been brought to England really belongs to him. It may very well have been the portrait of an earlier king, on which Rameses merely engraved his name.* Another case where the usurpation is evident is that of the crouching statue of the royal prince, also brought to this country.† It is evident that the inscription on the front and on one of the sides has been erased, and even the head has been diminished on one side in order to cut in the lock of the royal prince. The royal son Mentuhereshoptef was first officer of his father, general of cavalry to his majesty. The inscrip-

tion is dedicated to Bast and Uati, the goddess of Netersekh, the name of the territory of Bubastis and of Bubastis itself. Mentuhereshoptef was older than Menephtah, who inherited the crown. He very likely died before him. The name of Menephtah occurs several times. He also bore the title of general, but of infantry. At the entrance of the hall of the festival we discovered other statues: a beautiful head in red granite in a perfect state of preservation, which is now at the entrance of the Boolak Museum. It belongs also to Rameses II., and wears the *atef* crown—a head-dress which is seldom found in a good state of preservation. From the same place come also the weathered statue of the royal son of Kush, of which the name is destroyed, and the small group of a priest and priestess of the time of the Psammetic; the name of the priestess Tahontui is alone preserved. Other statues were so much weathered that we did not take them away, and there is good hope that we may find more. I believe, for instance, that we may find the base of the statue to which the head of Rameses belonged. The back appeared under some heavy blocks, which we could not roll. It is still on the spot waiting for us.

If Rameses has usurped many monuments and statues of his predecessors, Osorkon II. has done the same by him. Sometimes even the usurpation has not been completed, and has been done in the following way, which is very common. It occurs in the second cartouche in the name of Rameses II. The cartouche begins with the figure of Ra, with a solar disk on his head. Amon is placed opposite and the sign *mer* underneath. The second cartouche of the Bubastite is Osorkon Si Bast mer Amen. This last part is common with Rameses II.; so, in order to do it quickly, Osorkon erases, in the cartouche of Rameses, the lower part under the sign *mer*, and merely enlarges the hawk's head so as to make it look like the lion Bast; he also widens the solar disk on one side so as to make it an egg, which reads *si*. Thus the new cartouche reads Si Bast mer Amon, which Osorkon thought sufficient to cause him to be recognised. It is curious that, although the XXIInd Dynasty is said to be Bubastite, we found none of its kings except Osorkon II., the fourth king, who was very likely the Zerach of the Bible who fought against Asa.

After having laid bare all the space covered with large blocks which once was the hall of the festival, the second part of the work, which we could only begin, was the turning of those blocks, in order to see whether they bore any inscriptions. This was done by special workmen, *shayaleen*, under the command of a sheikh. These *shayaleen* are very strong men accustomed to lift heavy loads, such as cotton bales. They bring their ropes and tie them round one of the large blocks; then, at the command of a singer, and after a short prayer to the Prophet, they all pull together in time. If the stone resists, the appeals to the Prophet become louder and more incessant, until the enormous mass begins to move slowly, and at last falls forward amid shouts of joy. This work we could only begin and carry on during two days. It is the most exciting part of the excavations, and that which promises the most startling results. Thus, quite unexpectedly, we came across the cartouche of Pepi I., a king of the VIth Dynasty, of the remote Pyramid period, whose cartouche has already been found at Sān. There the question was raised whether Pepi could be considered as the founder of Tanis, or whether his stone had not been brought from Upper Egypt by Rameses II., or one of the later kings; but now this doubt no longer exists. The fact that the name of Pepi I. has been found not only at Tanis, but also at Bubastis, and there twice (as we have also a fragment of another cartouche of the same

king) shows that the construction of the two temples can only be attributed to Pepi, who is also the founder of Denderah. Pepi achieved conquests in Sinai. His name is found on tablets in the Wadi Maghara, and it is natural that he should have founded cities and temples on his eastern frontier. He is the first king of the Old Empire whose name is found in the Delta north of Memphis. Another interesting name there discovered was that of Usertesen III., one of the powerful rulers of the XIIth Dynasty, and his name accounts for the architectural style of the middle part of the temple. There we found some of the most beautiful columns which are seen in Egypt—monolithic granite columns unfortunately broken to pieces, but of workmanship so perfect, that it cannot be attributed to the XIXth Dynasty. Some of them have capitals with lotus buds; others with palm leaves; others with the head of Hathor. Of course, Rameses and Osorkon have engraved their names everywhere; but it is evident that the monuments are more ancient, as the names have often been cut across some of the ornaments of the columns. Here we have another point of resemblance to Sān. Evidently the kings of the XIIth Dynasty enlarged the temple of Bubastis, and some of the statues which now bear the name of Rameses II. are their work.

Thus we now know that the temple of Bubastis, long considered as hopelessly lost, not only exists in ruins, but has already yielded most interesting inscriptions, and may contain many more. We have done only one-third of the work; all the back part of the temple is really intact, and most of the blocks have not been turned.

It is always dangerous to play the prophet in speaking of excavations; but I cannot help feeling confident that those heaps of stones which we left untouched last spring keep in store for us some valuable and thoroughly unknown documents.

I look forward to the day when I shall again hear the song of the *Shayaleen*—when I shall again see the granite masses roll over and reveal inscriptions which have been concealed for two thousand years; and I earnestly hope that the friends and supporters of the Egypt Exploration Fund will soon reckon Bubastis as one of the choicest conquests due to their persevering and enlightened interest.

CORRESPONDENCE.

THE HYKSOS.

London: March 18, 1888.

From whatever point of view the type or race of the Hyksos invaders of ancient Egypt is regarded, the question presented is undoubtedly difficult and obscure. But, notwithstanding what may be said to the contrary, I am still of opinion that the Hyksos were probably of a pure or mixed Semitic race. No doubt, however, the heads of Khita warriors with "pig-tails" depicted at Abu-Simbel, and similarly adorned heads on the Hittite monuments, may reasonably suggest a Mongolian irruption into Western Asia at an extremely remote period. But into the general question I do not now propose to enter. When, however, Canon Taylor observes of the Hyksos that "their chief deity, Set or Sutech, who was also the chief god of the Kheta, does not belong to the well-known Semitic pantheon," I feel that the statement should scarcely be allowed to pass without comment. To speak of "the well-known Semitic pantheon" seems to imply that all the gods worshipped by the different Semitic peoples are well known, so well known as to make it certain that Set was nowhere included among them. I venture to think, however, that our knowledge of the deities worshipped by some, if not all, of these peoples is far from perfect. I need not point to

* This fine head has been presented by the Egypt Exploration Fund to the Museum of the University, Sydney, N.S.W.

† Presented by the Egypt Exploration Fund to the Museum of Fine Arts, Boston, U.S.A.

the multitudinous deities of the ancient Babylonians; for no Biblical student requires to be told how obscure is our information concerning some of the deities worshipped by the Israelites themselves when, according to the Old Testament, they lapsed into idolatry. Speaking of the Egyptian god Set, the late Dr. Birch observed—"One idea is that his name was the most ancient one of God amongst the Semitic races" (Wilkinson's *Ancient Egyptians*, ed. 1878, vol. iii., p. 145), and referred to the work of Pleyte (*La Religion des Pré-Israélites: Recherches sur le Dieu Seth*, Leide, 1865). It is not difficult to understand that the name "Set" has been identified with "Shaddai," the proper name of God in patriarchal times, according to Exod. vi. 3. Moreover, certain passages in Genesis where Seth is spoken of are supposed to have relation to a deity; and Prof. Sayce has lately, if I rightly recollect, proposed, in *Hebraica*, an emendation of the obscure passage (Gen. iv. 7) which would make this passage refer to "the god Sheth." But, whatever may be the value of these criticisms, the identification of "Set" with "Shaddai" has too much plausibility to allow of so sweeping an assertion as that of Canon Taylor; and the identification cannot be put aside by a reference to the ideas which in Egypt were specially associated with the name of Set some time after the expulsion of the Hyksos. Previously Set had been regarded with reverence.

THOMAS TYLER.

"THE ARCHAEOLOGICAL REVIEW."

London: March 13, 1883.

May I be allowed to explain that the arrangement of the index of papers contributed to archaeological societies under author's names was found, after practically trying other plans, to be the only satisfactory method; and that before finally adopting it, I took the opinion of many authorities, including Mr. A. W. Franks, Mr. H. B. Wheatley, and others. As explained in the editorial note, it will be followed by a subject-index, arranged somewhat on the plan of the subject-index to the catalogue of the London Library; and this surely will supply students with all that is necessary for the purpose of research. As I have worked at this for about six years, I venture to think that my experience may be of use in estimating the proper way of proceeding with so vast an undertaking. Indeed, very few people can really know what such an index involves in the shape of work.

G. LAURENCE GOMME.

NOTES ON ART AND ARCHAEOLOGY.

UNDER the title of *A Season in Egypt, 1887*, Mr. W. M. Flinders Petrie will issue to-day, through the Leadenhall Press, an illustrated account of his recent work in Egypt. The volume deals chiefly with the rock inscriptions along the Nile, near Assuan, the pyramids of Dahshur, the roads in the Fayum, and the weights of Memphis. The size is large quarto; and it is illustrated with no less than thirty-two lithograph plates.

THE exhibitions to open next week include Mr. John Fulleylove's drawings of Oxford, at the Fine Art Society's; Mr. J. Haynes Williams's "Fair and Famous Fontainebleau," at the Goupil Gallery—both in New Bond Street; and the annual spring exhibitions of English and foreign pictures by Mr. Thomas McLean and Messrs Arthur Tooth & Sons, side by side in the Haymarket. At the last men-

tioned, the attraction is F. Eisenhut's "The Snake Charmer."

M. AUTOKOLSKY, the Russian sculptor, has been elected a foreign associate of the Académie des Beaux-Arts, in place of the late M. Gallait. The only other candidate who received votes was Mr. Hunt, the American architect.

THE Grolier Club—a famous New York body, consisting wholly of men who care for books and prints—has lately, in its rooms in Madison Avenue, had an exhibition of the *Liber Studiorum* of Turner; and it has published, or rather issued, after its manner, an exquisitely printed catalogue, done at "The De Vinne Press." We have been the recipients of such a pretty attention as consists in the sending us a "large paper" copy. The exhibition itself, we note—and English lovers of the *Liber* will be glad to hear it—comprised a very interesting and complete representation of the work. Though English art is not much in vogue in America—is indeed much less in vogue than English people—there have long been collectors of Turner in the greater cities and in the centres of education. It is now some years since Prof. C. E. Norton, of Cambridge, Mass., displayed a collection and published a catalogue based a good deal on that of the Burlington Fine Arts Club. In the Grolier Club Exhibition there figured a certain number of Turner's etchings and a complete set of engravings, very many of them in that "first published state" which, when the impression is a chosen one, obviously represents better than anything else the intention of the master in making the picture. It is not mentioned in the Catalogue to whom the exhibited collection belongs; but we think it likely that it is that of only one collector, it belongs to Mr. Howard Mansfield—to whom is due probably the very sufficient introductory "note," which displays a complete acquaintance with the *Liber Studiorum*, its history, and, we may even add, its literature.

M. THÉODORE DURET—one of the most "advanced" of French writers on art—lately published in a costly artistic magazine a careful and serious study of the art of Mr. Whistler, with which he is, we need hardly say, much in sympathy. In this article Mr. Whistler is considered both as painter and as etcher, and reproductions of a very few of his works are given. We should ourselves have chosen a later etching than the one of the child, which is most elaborately reproduced. It is a work of thirty years ago. Of course, one is always glad to see again the portrait of the painter's mother—a quite famous canvas; nor is anything to be urged against the "Lady Arohibold," which, indeed, is a portrait *très-réussi*. We are glad M. Duret so completely recognises the excellence of the "Twenty-six Etchings," published a year or two ago by the Dowdeswells. "Il semble impossible," he writes, "que M. Whistler puisse jamais dépasser en souplesse et en finesse de pointe, en velouté et transparence de tirage, le degré de perfection atteint dans cette série."

MR. T. WILSON, of Edinburgh, has sent us an artist's proof of a mezzotint by Mr. W. A. Clouston after the portrait of Principal Shairp, painted by Mr. Robert Herdman for St. Andrew's University. Principal Shairp died before the picture was exhibited at the Royal Scottish Academy last year; and Mr. Herdman himself only lived long enough to give his approval to the engraver's work. The portrait is half length; but the interest is entirely concentrated on the face, which seems to us both faithful as a likeness and a good example of the softness which mezzotint can attain.

THE STAGE.

"CHRISTINA" AND "LE DEPUTÉ DE BOMBIGNAC."

"CHRISTINA," the elaborate piece by Mr. Mark Ambiant and Mr. Percy Lynwood—which was brought out in the summer at a *matinée*, we forget where—was, in a revised form, produced at the Olympic last week, with scenery and effects suggestive of an anticipated run, and with a cast of distinctly exceptional strength. While we write, the play is yet susceptible, perhaps, of even further alteration. The exposition of matters in the first act is not free from dullness; the settlement of them in the fourth is not free from obscurity. But the second and third acts—in which the engrossing action takes place—are powerful, ingenious, full of varied excitements. The piece deals, as a whole, with a subject which no small portion of the public finds very interesting—the theme of conspiracies made and conspiracies thwarted; and though its true hero may smile and smile and be a villain, its heroine is engaging and faultless. Moreover, the piece has in it at least one comic scene of singular freshness; and, from end to end, it is extremely well written. "Christina," then, has very good chances of a prolonged success; and, at all events, it was received on the first night with overwhelming applause.

We hope the daily papers have relieved us from the responsibility of telling in uncertain detail its intricate story. But we will say briefly who are its chief characters, and what are its strongest points. There is a fairly reputable exile—one Prince Korosekoff—who, when he is not housed at Claridge's Hotel, dwells picturesquely on the shores of the Lake of Geneva. Christina is his daughter. As regards Russia, at all events, she shares his revolutionary views; but when her highly placed English lover ventures to suppose that her notions of our insular politics are hardly less incendiary, she utters a reply both epigrammatic and reassuring. Most of our problems have been solved already, she tells us. "In England you have only to find land for the labourer, and work for the millionaire." Christina has two lovers. One of them—the Englishman—is Lord Ernest Arden. The other is Count Freund, a German by his name; a false revolutionist, who, though he helps her father as secretary, betrays him and the cause, and everybody and thing with which he comes into contact. He is the most ingenious and the most absolute of scoundrels; but he says a very sharp thing. We confess ourselves inclined to forgive him for a quarter of an hour—well-disposed towards him for perhaps twenty minutes—after his undoubted though often misapplied intelligence has taken stock of the revolutionary-minded, and has expressed their theory in a nut-shell, when he says of them that their deepest sense is of the supreme duty of doing exactly what they like. It is a pity that a gentleman so sound in judgment and so penetrating in observation should in his own life be quite so undesirable and repulsive as Count Freund. Christina, of course, will have none of him. But he intrigues to obtain her and the fortune which

will be hers. He takes a short cut to put his rival out of the way. He is foiled, but is again ever on the alert. His command over her father's future—obtained through a knowledge of his secrets—he uses to compass his own aims. Later on he tries to stab the aged and revolutionary Prince. In the evening, by the lake, within sight of the mountains—when "light by light puts forth Geneva"—he maims, but cannot kill him. Christina, in her one disagreeable scene—a scene in which Miss Alma Murray almost recalls the power and horror of "The Cenci"—has serious thoughts of stabbing Count Freund for all his earlier evil deeds and this crowning one. Eventually this arch scoundrel is destroyed by one who had long cherished thoughts of vengeance—a certain Alexis, whom he vilely wronged.

Two other characters, with a distinct bearing upon the fortunes of the play, we have not had occasion to name. One of these is a most worthy and enterprising journalist—he belongs quite to "the newer journalism"—whose longings are for the triumph of right; who is always willing to assist the sufferer, perhaps with money, certainly with advice and a paragraph; and who finds his efforts in the interests of humanity not at all incompatible with a business-like regard for the circulation of his print. Mr. Frank Archer looks and plays this part with absolute discretion and completeness. The part suits him down to the ground, and he is right in every moment of it. The other character is a bold and pleasant young Frenchwoman—entirely frank and positive—with the virtue of good spirits. Mdle. Adrienne Dairrolles does all the part requires with admirable gusto; and these things help materially in the success of the piece. Mr. Robson, the younger, is adequate as her lover; Mr. Yorke Stevens is adequate—but he is not more than adequate—as the good lover of Christina. Miss Rose Leclercq has too little to do. Mr. Rodney plays Alexis with force; Miss Helen Leyton the part of a Swiss maid with care and grace. But it is by the acting of Miss Murray and Mr. Willard that the piece in the last resort has to stand or fall. Miss Murray's method has long been allowed to be refined and distinguished; and, what is more, it is individual. She never—after the manner of the mere imitators of this or that great French artist—assumes and affects an excitability not in her organisation. Her passion and tenderness, her grace and quietude, are her own. Miss Murray's love scene, in the second act of "Christina," is as delicately impulsive, as exactly controlled a performance as anything she has done. She is never less than competent, and here and elsewhere she is thoroughly interesting. But the greatest opportunity of all is reserved for Mr. Willard. His Freund is a powerful creation, and one with which the reasonable student of the actor's art will feel himself bound to be acquainted. Mr. Willard's grip of any character is apt to be extraordinarily firm. He strikes the right note without faltering; but never have his qualities and intelligence, decisiveness, and vigour been exercised to greater advantage, or with more admirable variety, than in the presentation of Freund—a polished scoundrel of a well-bred world.

A word must suffice to record the curious

and the not quite justified popular success of "Le Deputé de Bombignac" at the Royalty. It seems that in England it is a greater hit than Molière. This smartly constructed farce is found more fascinating than "L'Etourdi." So much the worse for the public. How "Le Deputé de Bombignac" contrived to get upon the boards of the Théâtre Français at all is a problem requiring explanation. It dates from the days of M. Perrin, we hear—which are not so very remote, by-the-by—and M. Perrin was more eager for a money success than to maintain the traditions of the theatre. It was generally possible, however, to secure a money success without entering into direct rivalry with the Variétés or the Palais Royal. "Le Deputé de Bombignac"—from which is derived "The Candidate," at the Criterion—is essentially of the Palais Royal. Its plot is frankly farcical; its language the language of equivocation. As literature, it has no value. Having said this, we are quite free to add that three out of the six or seven people now engaged in representing it invest it with some faculty of amusement. These are M. Jean Coquelin—the famous comedian's son—Mdle. Patry, and M. Coquelin himself. Mdle. Patry acts very skillfully as a dictatorial middle-aged woman—a mother-in-law, and a very dragon in the house. M. Coquelin displays his usual wealth of facial expression, his readiness of resource, and his wonted effectiveness in the delivery of his words. In a character which, if we took it seriously, would be morally despicable, he contrives to be amazingly sympathetic. The remaining artists are of little account. It is time to say plainly that the women, as a group, would be represented on the English stage infinitely better.

FREDERICK WEDMORE.

MUSIC.

RECENT CONCERTS.

MR. F. CORDER's ballad, "The Minstrel's Curse," for declamation, with orchestral accompaniment, was performed for the first time at the Crystal Palace last Saturday. The poem of Uhland was set to music by Schumann, and the cantata was performed at a concert of the London Musical Society in 1885. Mr. Corder has treated the subject differently. His music is of the melodramatic order. Both Schumann and Liszt have left specimens of this kind, and the programme-book stated that Mr. Corder had taken them as models. We see no reason whatever to complain of the music, which colours well the words; but it occupies a distinctly subordinate position, and is not likely in any way to increase Mr. Corder's reputation as a composer. He has yet to fulfil the promise shown in his "Bridal of Triermain." Mendelssohn's music to "Oedipus" was given for the first time since 1868. The chorus sang well, though the tenors were occasionally a little flat. In both the above-mentioned works Mr. C. Fry proved an effective reciter. The London Vocal Union was much applauded for its excellent rendering of Cooke's "Strike the Lyre," and a part-song by Hatton. The attendance was only moderate.

Mdme. Schumann again attracted a large audience to St. James's Hall on Saturday, but did not appear on Monday evening. She is probably reserving all her strength for Thursday, when she is announced to play Chopin's F minor Concerto at the first Philharmonic concert.

But her place was occupied by Miss Fanny Davies, one of her most earnest and successful pupils. She played Mendelssohn's very dry Caprice in F sharp minor, displaying excellent technique. In her encore—Chopin's Nocturne in B major (Op. 62, No. 1)—she had a better opportunity of appealing to the hearts of her audience. Except for a little hardness in the middle section, it was admirably given. She also took part in Beethoven's Pianoforte Trio in B flat (Op. 97) with Herr Joachim and Piatti. Her reading was pure, intelligent, and refined. She seemed, however, afraid to give herself up wholly to the music, and there was not always the necessary life and warmth. But, as we have often said before, Miss Davies is young; her powers are not yet matured. The programme included Beethoven's Rasoumowski Quartet in E minor, led by Herr Joachim; and a Larghetto and Rondo for two violins, by Spohr, performed by the eminent violinist and his talented pupil, Miss E. Shinner. Herr Niemann was the vocalist, but his rendering of songs by Schubert and Schumann was not satisfactory. His voice was not in good order, yet no apology was made.

We noticed a few weeks back the performances of Mdle. Dratz on the clavi-harp at Eastbourne. A concert was given at Prince's Hall on Tuesday afternoon to introduce the instrument to London. There was a large gathering, especially of musicians. It is certainly a very clever invention. In arpeggio passages the tone of the harp is wonderfully imitated. The clavi-harp was tested in combination with the piano, violin and harmonium, and the result of the afternoon may be pronounced a success.

The performance of the "Rose of Sharon," under the direction of the composer, at St. James's Hall on Tuesday evening, came at an appropriate moment to remind us that Dr. Mackenzie's appointment as principal of the Royal Academy of Music has been won, not by intrigue or favour, but by genuine merit. The "Rose of Sharon" is a fine work, and the Procession chain of choruses, whether considered dramatically, or from a purely musical point of view, is a masterly production. There are so many good things in this oratorio that we cannot but wish Dr. Mackenzie would apply the pruning-knife once more, and cut out certain numbers towards the close which still impede the dramatic action. The performance was an excellent one. The Novello choir sang with unusual spirit. Mdle. Nordica interpreted her part with much intelligence and feeling. There was some doubtful moments in the first part; but she was heard to great advantage in the sleep scene, and in the duet near the close. Messrs. Lloyd and Santley were in splendid voice. The other vocalists were Miss Hope Glenn and Mr. Tufnail. The lady was much applauded for her solo in the last part. There was a very good attendance, and the composer was well received.

J. S. SHEDLOCK.

MUSIC NOTES.

THE usual summer series of nine Richter Concerts is announced. They commence on Monday, May 7, at St. James's Hall. Berlioz's "Faust" will be given for the first time under Dr. Richter's direction. The list of excerpts from Wagner's music-dramas will be increased by the "Schmidelieder" from "Siegfried," "Hagen's Wacht," and the closing scene from "Götterdämmerung." Dr. Stanford's Irish Symphony and Dr. Mackenzie's Overture, "Twelfth Night," are promised. Haydn is represented by one Symphony, and Weber and Mendelssohn each by an Overture.

SATURDAY, MARCH 24, 1888.

No. 829, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscripts.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

English Writers: an Attempt towards a History of English Literature. By Henry Morley. Vol. II. From Cædmon to the Conquest. (Cassell.)

THIS second volume of Prof. Morley's *English Writers* appears about eight months later than the date for which it was announced. But the delay has been turned to good account. The new volume gives evidence of extensive study of the best modern literature bearing upon the subject, and it is comparatively free from glaring errors such as abounded in its predecessor. It cannot, indeed, be recommended as a safe guide for students to whom minute accuracy is of importance; but as a popular book it has decided merits. Prof. Morley knows, what some writers of far greater learning seem not to know, that literature is a thing to be enjoyed, and not merely a subject for critical or philological analysis; and he has succeeded in being thoroughly interesting even in dealing with the most unpromising parts of his subject. With regard to the former volume, I am still of opinion that it is a pity that it was published at all. The present volume, in spite of many serious defects, some of which will be referred to in the course of this article, has a distinct value of its own; indeed, I know no other book so well adapted to create an interest in the remains of our oldest literature.

The opening chapter, dealing with the poem of "Widsith," does not show Prof. Morley at his best. The interest of this composition is not so much literary as ethnological, and the problems connected with it require for their discussion precisely that kind of knowledge in which the author is most deficient. In a footnote on p. 2 he undertakes to tell his readers who "Jornandes" was; but—with his usual infelicity when writing about matters of continental Teutonic history—he has apparently managed to confound that writer with Cassiodorus. The suggestions that "Hwala" may possibly be Cyrus, and that "Hnæt" is the English form of the name written by Jordanis as "Cniva," would not now be entertained by any sound Teutonic philologist. Equally inadmissible is the conjecture that Alewih is the same name as "Olaus or Olave." The two names have absolutely nothing in common. Prof. Morley, however, concerns himself but little with the detailed interpretation of the poem; and his remarks on its place in literary history, and on the function of the Scóp or gleeman, are frequently happy. I am inclined to agree with him in rejecting the attempts—though recommended by the great name of Müllenhoff—to reduce "Widsith" to strophic form by the hypothesis of extensive interpolations and transpositions.

In treating of Cædmon Prof. Morley adopts the untenable theory—discarded by every scholar whose opinion is of any value—that the extant paraphrases of Scripture are substantially the work of the Northumbrian peasant celebrated by Bæda. Nothing can be more certain than that these compositions proceed from several different authors, and that in general they were written by men who could read the Latin Bible for themselves. Prof. Morley, for the most part, states fairly enough the opinions of modern scholars on the question of authorship; but he has evidently failed to appreciate the strength of the arguments on which they rest. In order to ridicule the attempts of German critics to prove diversity of authorship by the internal evidence of style, he tries to show that a plausible case might be made out for ascribing his own first volume to two different writers. Caricature of this kind can only prove, what no one doubts, that the method referred to is untrustworthy when carried to an unreasonable excess of subtlety. To contend that the method itself is essentially fallacious would be absurd. If the "Ode on a Grecian Urn" had happened to have been first printed in an edition of the works of Crabbe, even Prof. Morley would hardly demand that some external evidence should be produced before he could admit that it was not by the same author as "The Borough." The fact is that the only ground for assuming unity of authorship in the so-called Cædmon poems is that they are found in the same MS.—a circumstance which is sufficiently accounted for by their affinity in subject. In the days of Junius the attribution of the paraphrases to Cædmon was the most obvious guess that could have been made. The fact that this guess is over two centuries old gives it a sort of traditional authority; but if it had been made for the first time by a living German scholar, there can be little doubt that Prof. Morley would have rejected it as an extremely adventurous speculation. My own conjecture, on which I do not desire to lay great stress, is that a genuine song of Cædmon's may possibly be found—no doubt in a much altered form—in the long interpolation in the "Genesis," which is the best known portion of the reputed Cædmon poems; and that the Old-Saxon poem of the "Heliand" may have been founded on the original songs of the Northumbrian poet. Intrinsically there seems to be a strong probability that the English missionaries to the continent would carry with them the works of the Northumbrian sacred poet of whom Bæda thought so highly, and would adapt them to the use of their converts speaking a language closely allied to their own. The "Heliand," as a connected poem, is doubtless the work of a native Old-Saxon who was a man of considerable learning; but there is nothing to forbid the supposition that he worked up into a continuous whole the already current translations of Cædmon's lays. The well-known "Versus de Poeta," if they are rightly regarded as having been originally prefixed to the "Heliand," really amount to a definite ascription of the ultimate authorship of the work to Bæda's inspired peasant; and, in any case, they seem to show that poetry purporting to be Cædmon's was known among the Old-Saxons. It is obviously a mistake to

attribute to the authorship of an illiterate peasant those portions either of the Anglo-Saxon sacred poems or of the "Heliand" which are mere close reproductions of the Bible story, or which imply intimate knowledge of commentaries or theological writings. According to Bæda, Cædmon's songs were founded on his recollection of what he had heard read. It appears to me that the splendid fragment known as the "later Genesis," the close affinity of which with the "Heliand" has been conclusively proved by Prof. Sievers, may be regarded as quite possibly a genuine work of Cædmon, even though it be only a retranslation from a version in Old-Saxon.

The speculations of Palgrave and of Sandras and Bouterwek with regard to the origin of the name "Cædmon" are not worth the space which Prof. Morley has given to them. Palgrave pointed out that the name is not significant in Old-English, and whimsically suggested that it might be a pseudonym, derived from the Aramaic title of the Book of Genesis! Prof. Morley mentions this wild fancy with a sort of half-approval, but gives as an alternative the conjecture of Sandras and Bouterwek that the first element in the name may be the Anglo-Saxon *cæd*, a "boat." This word, however, is a mere misreading of the well-known word *ceol*. I am inclined to think that the name is of Celtic origin, identical with the Catumanus and the modern Welsh Cadfan. The initial element, Cæd-, occurs, so far as I know, in no other Old-English names, except Cædwalla and Cædbæi. The former is admittedly of British origin, and it seems quite possible that the latter may be so also. If this conjecture be correct, Prof. Morley will be able to use it as an argument for his favourite contention that the imaginative elements in English literature are due to the admixture of Celtic blood in the English people.

The chapters on the English writers in Latin—Bæda, Aldhelm, Alcuin, and others—are interesting, and tolerably accurate, though there is an odd slip on p. 137, where the name of Bugge, the daughter of King Kentwine, is mistaken for the name of a place. The succeeding chapters, treating of the early glossaries, the poem of "Judith," and the Vercelli and Exeter books, are open to little objection. It may, however, be noted that Prof. Morley speaks of the Vespasian Psalter as Kentish, in accordance with an opinion formerly maintained by Mr. Sweet, but now regarded by him as untenable. The prevailing opinion is that the dialect is Mercian.

In the chapter on Cynewulf, the author shows a good deal of wholesome caution in dealing with a subject that has been the theme of much controversy. His view is that the only works which can with confidence be ascribed to Cynewulf are those which are actually signed—the Elene, the Juliana, and the Crist. Prof. Morley does not seem to be acquainted with the dissertation of Ramhorst, which to my mind appears to be conclusive in showing that the "Andreas" is the work of the same poet. I am myself inclined to think that some, at least, of the riddles are of Cynewulf's composition; but I fully agree with Prof. Morley in rejecting both the theory of Leo that the first riddle is a charade on the writer's name, and that of Trautmann (which he inadvertently ascribes to Dietrich)

that the answer is "A Riddle." At the same time, I cannot accept Prof. Morley's own proposed solution. Before discussing it I may as well state my own view, which is, that the so-called riddle is not a riddle at all, but a fragment of a dramatic soliloquy, like "Déor" and "The Banished Wife's Complaint," to the latter of which it bears, both in motive and in treatment, a strong resemblance. The poem is certainly "enigmatical" enough; but its obscurity may be due to the absence of context, and in part also to the monodramatic form. To me it seems quite as intelligible as the "Banished Wife's Complaint," or even as some of the poems in Mr. Browning's *Dramatis Personae*. The following is an attempt at a translation. The speaker, it should be premised, is shown by the grammar to be a woman. Apparently she is a captive in a foreign land. Wulf is her lover and an outlaw, and Eadwacer (I suspect, though it is not certain) is her tyrant husband. Whether the subject of the poem be drawn from history or Teutonic legend, or whether it be purely the invention of the poet, there seems to be no evidence to determine:

* * * * *

Is to my people as though one gave them a
present.
Will they give him food if he should come to
want?
It is otherwise with us!

Wulf is on an island, I on another.
The island is closely surrounded by fen.
On yonder isle are fierce and cruel men;
Will they give him food if he should come to
want?
It is otherwise with us!

I waited for my Wulf with far-wandering
longings
When it was rainy weather, and I sat tearful.
When the brave warrior encircled me with his
arms
It was joy to me, yet was it also pain.

O Wulf, my Wulf! it was my longings after
thee
That made me sick—it was thy seldom coming—
It was a sorrowful heart, not the want of food!

Dost thou hear, Eadwacer? The cowardly (?)
whelp of us two
Shall Wulf carry off to the wood.
Easily can that be broken asunder which never
was united.

The song of us two together
[* * * * *]

Some points in this translation are open to dispute. The rendering of *on þræt cuman* as "to come to want" is suggested by the Icelandic phrase *at þrotum koma* in the same sense. The literal meaning of *þræt* (= Icel. *braut*, from the same root as *þrot*) is "pressure, stress," whence its usual sense of "a throng or crowd." *Apæcgan*, which occurs only in this passage, I take as the causative of *þicgan*, and as meaning "to give food to, to entertain." The adjective *earh*, which I regard as the accusative of *earh* "cowardly," is commonly explained as "swift," from *earu*. Except with regard to these details, and to the punctuation, my translation does not differ essentially from that which is generally accepted.* I do not pretend that the meaning is perfectly transparent; and

* In the last two lines, perhaps, *geador* should be construed with *gesomnad*. If so, the translation would be: "Easily can that be broken apart which was never joined together, namely our song." This leaves the sense substantially unaltered.

probably if we had the entire poem my translation might be found to require some correction. But the general sense does not seem to present any great difficulty, and I think the fragment as it stands has enough of poetic interest to be worth disinterring from the grave in which it has been buried by the notion that it is to be regarded as a riddle. Probably such an idea would never have occurred to anyone but for the accident that the fragment appears at the head of the riddles in the Exeter Book.

The reader may, however, wish to know what are the explanations that have been offered of the meaning of the piece by those who have treated it as a riddle. The theory of Leo, accepted in substance by Dietrich and Rieger, is that it is a charade on the syllables *Cyn-e-Wulf*. A detailed exposition of this solution would require a whole column; but its futility has been so clearly shown by Trautmann (whose arguments Prof. Morley repeats) that it is needless to discuss it. Trautmann's opinion is that the speaker is "a riddle" personified, and that Wulf is *the guesser*, who is compared to a wolf, and who finally seizes and "carries to the wood" *the answer*, which is the "whelp" or offspring jointly of himself and of the riddle. Let the reader compare this ingenious interpretation with any translation of the "riddle" that attempts to be fairly literal, and refrain from smiling if he can. Trautmann makes no attempt to show why the name of Eadwacer has been introduced; he regards it merely as the name of the "whelp"; but if the "whelp" be the personified answer, it was an odd proceeding on the part of the poet to bestow upon him a name at all, unless it had some appropriate signification. Prof. Morley's solution is, perhaps, somewhat more plausible, but I do not see how it is to be reconciled with Anglo-Saxon grammar. The speaker, he thinks (apparently overlooking the feminine adjective), is "the Christian Preacher," and Wulf is the devil. The interpretation of the last few lines must be given in Prof. Morley's own words, as I do not understand it clearly enough to summarise it:

"There is the preaching. Hearest thou it? Eadwacer—the word means *custos bonorum*, watcher over our wealth—the child of us both, of Christian teacher and of the flesh. He carries the wolf to the wood; he brings the power of the devil over us to the rood-tree, the wood of the cross. Men who have never been joined in Christian brotherhood, and who are easily parted from each other, our music brings together."

Possibly this interpretation might be amended so as to make it consistent with grammar, but it is scarcely worth patching up.

Prof. Morley also endeavours to explain the Latin riddle which has sometimes been ascribed to Cynewulf:

"Mirum videtur mihi: lupus ab agno tenetur;
Obcurrit agnus et capit viscera lupi
Dum starem et mirarem, vidi gloriam magnam
Duo lupi stantes et tertium tribulantes
Illi pedes habebant, cum septem oculis videbant."

The current opinion is that this is a play upon the various dictionary senses of *lupus*; but even if it were proved that these were known to the Anglo-Saxons, the solution does

not seem very satisfactory. Prof. Morley thinks that in the first line the lamb is the Lamb of God, and the wolf the devil. In the last three lines he suggests, if I correctly understand him, that "tertium" is not "a third wolf," but the third person of the Trinity. Who the two wolves are he does not say, but the four feet are the four Gospels, and the seven eyes refer to the "seven eyes of the Lamb" in the Book of Revelation. An alternative suggestion given in a footnote is that "the two wolves might be the Old and New Testament troubling the devil." I cannot feel much confidence in either of these conjectures, but they are certainly ingenious.

I have left myself no space to discuss the remaining chapters, forming nearly half the volume. For the most part they deal but little with controversial matter. They are agreeable reading and seem to contain no very serious mistakes. On the whole, Prof. Morley may be congratulated on the remarkable improvement which this portion of his work shows when compared with the former volume. If he is able to make an equal advance in each succeeding volume, his critics will before long find nothing to say except in praise.

HENRY BRADLEY.

Olysses; or, Scenes and Studies in many Lands. By W. Gifford Palgrave. (Macmillan.)

No one will dispute the appropriateness of the title which Mr. Palgrave has chosen for his collection of essays. Versatile and keen-witted as his great model, he has become full of the knowledge of the remotest corners of the world, and is familiar with the habits and feelings of many races of men who must always remain strangers to the ordinary traveller. Within the limits of two or three chapters he is able to present "scenes and studies" of the Anatolian peasantry, which bring clearly before our view the life and movement of the present and the "relics and survivals" of the past. A visit to the monastery of Sumelas is described in a manner worthy of Curzon. A collection of folk-tales and spectre-stories from Trebizond recalls the old legends of the Lamias in Pontus, and the witty talk of Lucian on the marvels of the Syrian legends; and the modern traveller is able to cap the ancient stories with allusions to gruesome Russian goblins, and the "hollow half-man" of the Brazilian forest. His account of the Georgians, the "handsome but worthless nation" of Gibbon's well-known description, is the more valuable because it was written before half the population was handed over to Russia to be denationalised by the treaty of 1878. The "Savoy of the Caucasus" is little known and rarely visited, and when Mr. Palgrave travelled through it a great part of the country was almost a *terra incognita* even to its Turkish masters. "Russian Georgia" was then undergoing the process of being civilised *à la Russe*, which has since been extended to the whole district, at the expense of the picturesque and romantic qualities of the people, though, no doubt, to their practical and positive advantage.

The description of Upper Egypt is twenty-two years old, and the traveller's opinions on many topics might be changed if he were to

revisit the country which he remembers as it lay helpless under the exactions of Ismail. His essay is, however, still interesting in a very high degree to all who have visited, or longed to visit, the "widespread wonders" of Luxor. Mr. Palgrave holds to the essential truthfulness of his sketch, especially with regard to the fellaheen, whom he regards as a most shuffling, mean-spirited, and unsatisfactory race of men; and we may, on the whole, accept the truth of his own candid criticism on the merits of his work, and say that it would be difficult to find elsewhere "a better panoramic view of what remains to us of Thebes of the Hundred Gates."

The account of Luxor is followed by an essay on "West Indian Memories," containing an interesting picture of life in Martinique, and a description of the boiling lake in Dominica, which is the more valuable because very few European travellers have visited the crater of the Grande Soufrière, and because the lake itself was destroyed by an earthquake in 1880, about four years after the date of Mr. Palgrave's visit. After traversing a half-extinct crater filled with the noise and steam of the brightly coloured salt and sulphur springs, the explorers came to a silent burnt-out region ridged with the debris of another crater, and climbing a barrier-wall of volcanic deposits came suddenly upon the boiling lake:

"A strange sight to see, and not less awful than strange. Fenced in by steep, mostly indeed perpendicular, banks from 60 to 100 feet high, cut out in ash and pumice, the lake rages and roars like a wild beast in its cage; the surface, to which such measurements as we could make assigned about two hundred yards in length by more than half the same amount in breadth, is that of a gigantic seething cauldron, covered with rapid steam, through which, when the veil is for a moment blown apart by the mountain breeze, appears a confused mass of tossing waves, crossing and clashing in every direction, a chaos of boiling waters. Towards the centre, where the ebullition is at its fiercest, geyser-like masses are being constantly thrown up to the height of several feet, not on one exact spot, but shifting from side to side, each fresh burst being preceded by a noise like that of cannon being fired off at some great depth below, while lesser jets often suddenly make their appearance nearer the sides of the lake. . . . Above us was the deep azure of the sky, veiled ever and anon by massive wreaths of steam, that ceaselessly rose in capricious swirls, to be caught up and scattered by the trade-winds, then to unite in one dense canopy overhead. Seen from a distance these steam-wreaths form the cloud so often noticed by seafarers as they coast along the southerly shores of Dominica, and look high up at the rugged crest of the Grande Soufrière."

Almost immediately after his visit to the Lesser Antilles, Mr. Palgrave was appointed to Her Majesty's Consulate at Manila, the "tropical Venice," to use his own picturesque expressions, fronting the vast harbour-gulf which forms "the secure vestibule of the typhoon-swept China seas." The Malay life in the Philippines is depicted with an enthusiasm which few of his readers will share. The author endeavours to describe a land and a people of the highest type of mortal excellence. The Archipelago is without a rival in beauty through all its islands "from the extreme northern verge of the Formosan channel to where the tepid equa-

torial wave sinks faint on the coral-reefs of Borneo." The inhabitants are pleasant and domestic in their ways, moderate polytheists, and gifted with "a happy immunity from the virus inoculation of improvement and progress."

Mr. Palgrave admits that in some particulars the East has lessons to learn from "unquiet disintegrating Europe," but his sympathies are all on the side of Cathay. China is praised for despising the bright mirage of our "promise-phantoms." In Canton the traveller will see how well it is with a nation that knows when it is well off, and "prefers to enjoy in quiet the steady if not dazzling light of its own tried and hereditary lamp." The Japanese are reminded of the excellence of their "Shinto" or system of nature-worship, which, though supplanted by a more modern Buddhism, "appears coeval with the first dawn of Japanese history, adds lustre to its brilliant noon, and blends even yet with the rays of its declining day." The traveller has heard that a progressive change has come over "the spirit of the Japanese dream," even since his essay was first published in 1881; but he hopes that the shade will be but transient, "to be followed by renewed splendour of the ancestral light." When he comes to deal with Siam he finds much more to say in favour of Buddhism as the most beneficent and humanising of the systems promulgated among mankind. In an extremely interesting account of the Siamese pilgrimages to the footprint of Buddha at Phra-Bat he expresses the hope that the land of Siam, "this strange survival of past ages, this land forgotten by the years," may long continue faithful to the memory of her first lawgiver, by obeying whose precepts she "took a place among the kingdoms, and attained whatever power and prosperity she has possessed or is ever likely to possess."

From discussing the vast antiquities of the Eastern world the traveller passes to the modern beauties of life in La Plata, the trade of Montevideo, and the glorious story of the patriotism of the soldiers of Lopez. But even in the dense forests of Paraguay and along the reaches of the Parana and the Argentine River he meets "the fatal contagion of a mimic Europeanism," the blight that creeps over all lands infected with "Western-European intercourse." The essay on Paraguay is full of valuable information. Mr. Palgrave is thoroughly at home in describing the manners of its strange people of mixed Basque and Guarani blood, the beauty of its forest-scenery and multitudinous lakes, and the dangers and delights of life in a "land of electricity."

The volume ends with a romantic love story from Nejd, which was originally published some years ago in *Macmillan's Magazine*. It is not in form a record of personal travel. But the author explains that its substance was collected by him from native sources, while wandering "as an Arab among Arabs." Mr. Palgrave claims, on behalf of "Ulysses," to include the story of Alhamah's Cave among "the results of his own diversified sojournings"; and his readers will probably be glad enough to welcome another record of self-sacrifice and generous sentiment from one who formerly told so well the story of Herman Agha.

CHARLES ELTON.

The Life and Times of John Wilkes. By Percy Fitzgerald. In 2 vols. (Ward & Downey.)

A KEEN perception of a good subject for portraiture is among the qualities of Mr. Fitzgerald, and in his choice of Wilkes as a sitter he has displayed more than his accustomed shrewdness. The central figure in the embittered struggle for freedom against the exercise of general warrants, and in the subsequent campaign for liberty of election to a seat in the lower house of legislature, would, if only for his share in these momentous issues, deserve to be drawn at full length. But Wilkes has other, though it may be less important, claims to a place in the world's memory. For many years a contest raged between the fathers of the city and the members of the House of Commons over the vexed question of the publication of the debates in Parliament; and in this fray the coolness and intrepidity of Wilkes as one of the leading combatants gave material assistance to the success of his cause, and, which he valued still more, had no little influence on his own popularity among his fellow-citizens. The claims of Wilkes to public distinction are not yet exhausted. From his youth, which was passed in the Dutch University of Leyden, until his death some fifty years later, his time was spent in the company of those whom the lovers of literature and political history regard with interest. Charles Townshend and Dowdeswell, two rival chancellors of the exchequer, were among his associates in Holland. Askew, the learned physician, whose house was crammed with editions of the classics from the basement to the garret, consorted with him during his residence at Leyden; and while Wilkes was abroad he threw the spell of his conversational powers around the Scotch philosopher, Andrew Baxter, whose life was protracted sufficiently long to enable him to commit to the press the substance of their talk in the "Capuchine's garden at Spaw in the summer of 1745." With such a training Wilkes became no mean scholar; and all his life, whether with or without any means for paying the printers in his employment, he was distributing among the literati of his day copies of the works of classical writers which had been struck off under his editorship at his private press. Lord Mansfield and Dr. Johnson both fell under the fascination of his manners; and it is no inconsiderable advantage when an author is able, as Mr. Percy Fitzgerald is, to transfer bodily to his narrative several of the best known pages in Boswell. Two more names stand out conspicuously in connexion with Wilkes. Churchill, the satirist, lived and died the staunchest of his allies in the strife of political controversy. Horne Tooke sought his society, fought for some time by his side, and sympathised with his cause to the last; but for many years their personal friendship was severed.

Do the volumes of Mr. Fitzgerald present an adequate memorial of so interesting a character? To this question the answer must be in the negative. He has dived into the voluminous papers of Wilkes which are preserved in the British Museum, and recovered from the deep many curious passages, the most characteristic of which bear on the

turbulent demagogue's friendship with his poetic friend, Churchill. But more selections might have been made with advantage, the materials might not infrequently have been presented in a more attractive form, and the student might have been spared that dread of incompleteness of research and inaccuracy of fact which hang around all the literary labours of Mr. Fitzgerald. On the very threshold of this memoir these haunting suspicions most invade the mind. The opening page of the narrative is faced by a pedigree of the family of Wilkes, which starts from Edward Wilkes, of Leighton Buzzard, the great-grandfather of "Wilkes and Liberty"; but a genealogical tree of the house, more complete in minor details, is printed in the pages of so well-known a county history as Lipscomb's *Buckinghamshire*. Over one of the characters in this pedigree Mr. Fitzgerald leaves the reader involved in hopeless ambiguity. Israel, the brother of John Wilkes, is represented in it as the father of Charles Wilkes, a commodore in the navy of the United States. On p. 9 it is stated that Charles, the son of Israel, became "cashier in the United States' bank. From this branch sprang a celebrated commodore of the United States' Navy, a dashing officer and man of science." Turn the page, and a contradictory statement stares you in the face. There we read that

"Israel Wilkes, when advanced in life, had a son born, Charles Wilkes, who became a man of science, a commodore in the American Navy, . . . and was more particularly famed for having stopped the English steamer *Trent* on the high seas and taken out the two Confederate agents."

At the close of the second volume Mr. Fitzgerald reverts to the subject. The daughter of Wilkes left the family property situated in Buckinghamshire and three other counties to her cousin, the American Charles Wilkes; and the biographer, after printing an abstract of the will, adds: "I am inclined to doubt whether he can have been the Commodore Wilkes who became conspicuous in the American War of Secession." A further change of opinion is apparent a few pages later. Mr. Fitzgerald there extracts a passage from Carlyle's reminiscences on Jeffreys's second wife, "actual brother's daughter of our demagogue Wilkes. She was the sister of Commodore Wilkes, who boarded the *Trent* some years ago." With this passage the work concludes, and the reader is consequently spared another change of front. Not often are such startling mutations of opinion in an author's mind so frankly revealed to public gaze.

A striking instance of Mr. Fitzgerald's neglect to communicate the whole circumstances bearing on the connexions of Wilkes occurs in the first volume (p. 14). The celebrated Dr. Mead is stated, and correctly stated, to have been nearly related to the family into which Wilkes married; and the doctor's daughter, Mrs. Nicholls, is named at a subsequent date as the nearest relative but one of the demagogue's wife. This, I believe, is the sole mention in the two volumes of Mrs. Nicholls. Nowhere is it mentioned that she was married to an eminent physician, one of the victims of the Scotch premier whom Wilkes attacked. Her husband was Dr. Frank Nicholls, "a very eminent man," as

Dr. Johnson said, who was turned out by Bute "from being physician to the king to make room for one of his countrymen, a man very low in his profession." This treatment, which even the high-prerogative Johnson did not seek to palliate, could not have been pleasing to Wilkes, who, for his daughter's sake, would follow with interest the troubles or advantages of her relations. An editor of Boswell—and Mr. Fitzgerald's edition of the immortal biography does not rank among the least of his innumerable literary ventures—may be excused for being ignorant of the lives of some of Johnson's contemporaries, but the outlines of Boswell's life should be imprinted indelibly in his memory. Wilkes proceeded, as we have already stated, to the University of Leyden; and, according to Mr. Fitzgerald, (i. 15) "it will be recollected that some twenty years later Boswell set off to prosecute his studies at the same seat of learning." To trust to recollection is too often fatal to a man of letters, and the biographer of Wilkes falls within that condemnation. It was not to the University of Leyden but to that of Utrecht that Boswell set out at his father's wish to complete the study of the law. The warning of Dr. Routh on the necessity of verifying all quotations should be dinned over and over again into the ears of Mr. Fitzgerald. Who would suppose from the string of names on p. 36—"Sir Francis Dashwood, Bubb Dodington, Lords Melcombe and Orford"—that Dodington and the first-named peer were one and the same person? Look, again, at vol. i., p. 58, where the connexion of Wilkes and Smollett is chronicled, and note the sentence that Smollett's *Critical Review* was threatened "with a prosecution for an attack on Admiral Brown." Mr. Fitzgerald, when he stops to think, knows better than this. A person with half his acquaintance with the history of the period would be aware that the name of the gallant admiral who invoked the terrors of the law against the Scotch reviewer should have been given as Knowles. There is another matter which I would dwell on, and the offender in this instance is not the biographer of Wilkes. When the patriot was in the Tower, some verses on his imprisonment were penned by Lady Temple, which have induced Mr. Fitzgerald to remark that "the gods had not made her ladyship poetical." The lines are inscribed "The Jewel in the Tower"; and both the title and the greater part of the lines are stolen from a longer song, originally composed on Sir Robert Walpole's imprisonment in the same building. It was not poetry only that the gods omitted to plant in the mind of Lady Temple.

The question whether Wilkes believed in the opinions with which his name is indelibly associated has disturbed many minds, and is not yet set at rest; but Mr. Fitzgerald evidently believes that he was only engaged in acting a part. The sarcasm of Wilkes that his friend and legal adviser, Sergeant Glynn, "was a Wilkite, which I never was," seems to sway the mind of Mr. Fitzgerald to the adoption of this belief; but it should be remembered that the great agitator was a man of infinite jest, and that his remarks were not invariably meant to be taken seriously. In one respect his most candid friend could not doubt his sincerity,

and that was his affection for his daughter. Whether present or absent, her happiness was ever in his thoughts, and for her sake he deemed no exertion too great. To everyone else he was lavish of promises, but remiss in performance. He undertook with reckless prodigality a series of undertakings which he never could have contemplated carrying to completion. One of these labours—the task above all which it was most incumbent upon him to execute—was an edition of the works of his devoted ally, Charles Churchill; but all that Wilkes accomplished is summed up as "little more than a single note to each poem." His conversation was inimitable, but he indulged in times in the grossest obscenity. He knew, however, how to suit his talk to his company; and, if he sank with the low, he could raise himself to an intellectual quality with the highest personages of his age. Wilkes merited a much better monument of his life than Mr. Fitzgerald has thought fitting to supply.

W. P. COURTNEY.

My Ladies' Sonnets: and other "Vain and Amatorious" Verses, with some of Graver Mood. By Richard Le Gallienne. (Liverpool: W. & T. Arnold.)

EVERYONE has not the courage with which Charles Lamb openly flouted the wisdom of the ancients as embodied in popular proverbs. That "beauty is but skin-deep," and that "handsome is as handsome does," are pious opinions which I have never dared explicitly to deny; and yet I always find myself believing pleasant things of good-looking people, and even of good-looking books, and I am disappointed less often than I ought to be. Here, for example, is a little volume, the sight and handling of which bring a quick thrill of pleasure to the heart of the book-lover. Its gray side boards, its white, ribbed back, its luxurious paper, and its pretty rubricated initials, are so appetising that in looking forward to the less sensuous pleasure of reading we believe all things and hope all things. Nor are we disappointed, unless, to use the quaint words of Thomas Fuller, we "expect what in reason we cannot expect."

Mr. Le Gallienne is obviously young, for many of his poems are examples of a kind of work which, when perfectly sincere and instinctive—as it is here—is produced only in youth. Could I say of his volume that it is devoid of all the crudities of thought, emotion, or expression which belong to the adolescent period, it would be simply equivalent to saying that it has the forced artificial maturity which gives no real satisfaction in the present, and forbids all hope of growth in the future. But it has surprisingly few of these things, and—what is of more importance than either their presence or their absence—it provides abundant evidence that Mr. Le Gallienne has the root of the matter in him. One of the most refreshing, because one of the rarest, qualities of his verse is its individuality. Here and there is an echo of Keats or Rossetti, or of one of the recognised producers of *verse de société*; but, in the main, Mr. Le Gallienne speaks with a voice of his own, and it is a voice of much natural sweetness, which has been cared for and cultured without having been, as sporting men say,

"trained too fine." At present the most notable deficiency in his work is the inevitable lack of body which we always feel conscious of in verse which is largely the expression of pure sentiment or passion unweighted by a pervading thought; but many poets whose mature work has been as rich in body as in bouquet have begun their career—as Lord Tennyson begun his—by mere studies in the art of graceful and musical utterance. The one unpardonable sin in poetry is the sin of insincerity, and from this Mr. Le Gallienne is free. He has wisely chosen to sing the emotion that he has rather than the thought that he has not, and a larger and wider experience of life will give his verse substance and gravity; but the habit of affectation once formed seems to be ineradicable, and it vitiates the work of a lifetime. Within his own range he works freely, without strain or spasms, but with prevailing grace and sweetness, and often with arresting and winning felicity of touch. His sonnets are unequal, and some of them seem to have been written at a time when his study of sonnet structure was incomplete, many having three rhymes in the octave; but they all possess what I ventured some time ago to call "a sonnet-making argument," that is, a motive which naturally clothes itself in the sonnet form, and they are therefore more satisfying than other performances of the same kind which are, from a technical point of view, less faulty. Here is a sonnet addressed by Mr. Le Gallienne to his mother, which has an attractive *naïveté* due to a combination of ingenuity and tenderness that is not infrequent in his verses:

"Sweet mother, I did long to sing for thee
A birthday song, but somehow from my throat,
When I essayed, died out the struggling note
O'erburdened with the weight of sympathy.
So easy has it ever seemed to me
To pen a sonnet to my lady's look
Or write a verse in some confession-book,
That it seemed strange I had no song for thee;
And yet none such has come, although I strove
Long time for music: now I know at length
Why so this is, for as a mother's love
Is sacredest of all, so must the strength
To sing it be the strongest—thus in vain I long
Till that strength comes to sing 'my mother's song.'"

This is, I take it, one of the poems "of graver mood." From the lighter pieces, which give the volume its special character, I should like to select the very graceful "Ballade of Old Sweethearts," but it is probably known to many readers of the ACADEMY, having been reprinted in Mr. Gleeson White's recent anthology of English poems in the old French forms; so I select instead a little lyric of quotable length which may be taken as a fair sample of Mr. Le Gallienne's average work.

"A maiden in grey and gold,
Grey robe and a golden band,
Grey eyes and a golden smile
I never can understand.

"Thus only she seems to me,
She may have a heart somewhere,
She may have a love to win
For him with a heart to dare.

"It may be the grey is but
Dawn-mist of the coming day,
That her golden smile will clear—
With all such mists—away.

"It may be if one should speak
He would thaw that freezing grey,
And heighten the sunny gold,
But who dare that essay?"

"So still she must seem to me,
As ever she's seemed of old,
Grey robe and a golden band,
Grey eyes and a smile of gold."

Mr. Le Gallienne, in the verses described by Milton's phrase, quoted (with a superfluous "and") in his title, is, for the most part, a singer of the sentiment rather than the passion of love; but two of three of the poems—notably "Quelle heure est-il?"—have a passionate fervour, which seem to indicate that the poet does not always let himself go, but has a stock of strength in reserve. One of the pieces of this latter kind, the sonnet entitled "A Vigil," is, however, a mistake from every point of view; and, should a new edition of *My Ladies' Sonnets* be called for, Mr. Le Gallienne will find it easy to substitute for it something worthier of himself and more harmonious with the other contents of the volume.

I have left myself but little space in which to speak of the longest and, in some respects, most important of Mr. Le Gallienne's poems. This is "The Bookman's Avalon," which is the first of "Three Booklover's Songs," as they are called, though not one of them is a song in the strict sense of the word. It is a quaintly and fancifully elaborated description, written in Spenserian stanzas, and richly adorned with Keats-like imagery, of a dream-built palace "of vistaed halls and alcoved galleries," rich with the literary spoils of time, in which the wanderer recognises by the dreamer's instinct "The Bookman's Paradise." The many mansions of this heaven of books are very charmingly imagined; and Mr. Le Gallienne's style acquires here a certain gusto and sumptuousness, which indicates that he is on specially congenial ground. The other two "songs" are less important, though "A Ballad of Bindings" is made pleasant by the vein of very bright humour which runs through it.

As a rule, the best way in which to review a book consisting mainly of brief lyrics is to give copious selections rather than to indulge in copious comments. I have not adopted this course in reviewing *My Ladies' Sonnets*, because many of Mr. Le Gallienne's best poems have some little flaw of execution which, though generally too trifling to mar the reader's pleasure, would be apt to reveal itself somewhat aggressively "in that fierce light which beats upon" a quotation. In spite, however, of all their little lapses, the total of which does not amount to much, these poems give more pleasure and refreshment than we can ever derive from the faultily faultless work which has every charm but that charm of life which Mr. Le Gallienne's work certainly possesses. If he can perfect his art without losing simplicity and spontaneity, we may expect from him something of permanent worth.

JAMES ASHCROFT NOBLE.

Service Afloat, or the Naval Career of Sir William Hoste. (W. H. Allen.)

THIS narrative of distinguished services of an officer who was pre-eminently of the Nelson school cannot fail to be of interest. It is,

naturally, based on the Memoirs and Letters published more than fifty years ago, which now are not readily met with. To those, therefore, who either do not possess, or are unacquainted with, the early two-volume work, this is a capital substitute, or perhaps in some ways an improvement on the original. There is in it more condensation, more connexion in the history of the great Napoleonic war, and more illustration of events referred to from other authorities. A good index and a *résumé* of the principal affairs in which Hoste had sole or part command are alike useful to the student, and with commendable discreetness the anonymous editor has relegated his notice of the Hoste family to the appendix. Thus we escape anything like that lengthy preliminary genealogical dissertation which editors have usually felt it their duty to begin biographies with.

We find but one thing to which we must take exception, and that is that the editor considers Sir W. Hoste to have been "a great man." He seems to have been driven to this judgment in defence of his hero against the somewhat severely critical remarks on Hoste's professional character to be found in the Life of Sir William Napier. It was, however, scarcely necessary to go so far. For it seems a most unfortunate use of a term which by general consent is applied specially to those who strike out new paths for themselves and their fellows, and who lead the way boldly where none have ventured before. Nelson, St. Vincent, Rodney, and Hawke, each of these is marked among his contemporaries for having displayed peculiar skill—thereby achieving success—in tactics, strategy, organisation of a fleet, or management of men so as to obtain exact discipline. Such, too, no doubt were Rooke, Blake, Monson, and Drake, though of them we know less certainly. But Hoste's name cannot be placed in the same category with these. His career was too short to allow of fair comparison even with the earlier part of that of his master, Nelson, for the latter received the rank of rear admiral at the age of thirty-nine, while Hoste virtually retired from active service when in his thirty-fifth year.

Yet in twenty-one years of active service Hoste, by good fortune, was continually in contact with the enemy, and thus received a training than which none could have been better for a British naval captain. Serving as a youngster in the *Agamemnon*, when Calvi and Bastia and Hotham's action off Genoa brought her commander's name before the public; then, later, being present at the battle off Cape St. Vincent, at the unfortunate attack on Santa Cruz de Tenerife, and, lastly, at the wonderful victory in Abukir Bay, Hoste had acquired much of the Nelsonic character for boldness, good seamanship, "political courage," and untiring exertion. After the truce of Amiens collapsed his work lay almost entirely in the Adriatic, of which he wrote in 1810:

"We have plenty of work cut out for us in the Adriatic, and of all stations it is the pleasantest; such variety and amusement, and prizes to boot, make the hours pass quick, I assure you."

Between cruising (which then in those waters was no slight task in winter), and blockading, and cutting-out expeditions, Hoste spent six years in the Adriatic during his two com-

missions on the *Amphion* and *Bacchante*. The action off Lissa is what will best hand his name down to posterity. Its decisive result, and the brilliancy and precision with which Hoste's weaker force was handled, showed how much high discipline and united action, with skilful pilotage, could effect even against an adversary of double strength in men and guns. The key to repeated failures on the part of the French and their allies in the Adriatic is given us by Hoste himself. He writes, several months before Lissa :

"The truth is, they are afraid of the weather, and are very badly manned; we are well manned, and do not care a fig about the weather."

Withal, to sum up Hoste's professional career, he proved a model captain, who, with opportunities and health, might have become a famous admiral.

We have two or three minor points to mention in connexion with this admirable memoir. One is the fact that, in the time of the great wars, "interest" was as much sought after and needed in order to obtain quick promotion and good appointments as now. Another trifle to be noticed is the anxiety for "pewter" or prize money, which, after the days of the grand *guerre d'escadre* had gone by, animated our officers and men. Hoste wrote, on entering the Adriatic, "I have at last got on good ground for 'pewterising.'" He seems to have gained a fair share of prize money, and we do not think that, as to honours, he was so shabbily treated as he himself affirmed. Our last point is to ask why the name of the French commander-in-chief at the battle of the Nile should here be spelled "Brueix" instead of Brueys? It leads to some confusion with the contemporary Minister of Marine, Rear-Admiral Bruix. We also notice a slight discrepancy in dates on p. 84. Ganteaume left Brest for Berteau Roads on January 7, 1801, but did not actually sail for his destination in the Mediterranean till January 23. And on p. 179, we may fill up the blank name of the captain of the *Danaë* with that of Villon. We think that the names of the captains of the Italian men-of-war, on the same page, need revision. With that, our privilege of giving vent to small grumbles is satisfied.

GEORGE F. HOOPER.

NEW NOVELS.

The New Judgment of Paris. By Philip Lafargue. In 2 vols. (Macmillan.)

A Wily Widow. By Henry Cresswell. In 3 vols. (Hurst & Blackett.)

A Flight to Florida. By Peregrinator. In 2 vols. (White.)

Alma. By Emma Marshall. (Sonnenschein.)

Vere Thornleigh's Inheritance. By A. M. Hopkinson. (London Literary Society.)

Looking Backward. By Edward Bellamy. (Boston: Ticknor; London: Trübner.)

The Emotions of Polydore Marasquin. By Léon Gozlan. (Vizetelly.)

The New Judgment of Paris is, perhaps, the most remarkable and most successful performance on literary stilts that the English reading public has yet seen. It may

be the work of a woman, but looks more like the work of a very clever man, who is laughing in his sleeve at the scientific and artistic faddishness he reproduces, at the majority of his characters, and, above all, at the fearfully and wonderfully precious style he affects. If *The New Judgment of Paris*, which ought rather to have been styled "The Old Judgment of Helen," is not essentially a satire, it is essentially an absurdity. That a girl like Ida Bannatyne—clever, pretty, superficial, healthily but unconsciously selfish—should, when the chance comes her way, amuse herself for a season in London with picking up the cant, and playing with the ideas, of *savans* and studios, is likely enough. That—sent out from a country parsonage, to get on in the world, and, in her heart, believing in the gospel of getting on—she should marry a good-natured, well-built blockhead of a country baronet is, perhaps, inevitable. But that she should allow herself, even for a time, to be engaged to Ambrose Trevor, who is Posthwaite and Maudle rolled into one, who lives on phrases, who, to induce a young lady to sit to him, tells her "I want to depolarise, to disindividualise you, and help men to look through the concrete beauty to the abstract beauty which lies beyond"—well, in asking his readers to believe anything of this sort Mr.—supposing it is Mr.—Lafargue makes a large draft upon their credulity. What is even more improbable, he makes Ida think in Trevor's phrases, as when she says not to him, but to herself, "He is spiritual to my mere *spirituelle*. But he lacks balance. I could be pendulum to his spring, checking explosion and carrying him over gulfs of lethargy and despair." But if Trevor be left out of consideration it must be allowed that there is scarcely a weak character in *The New Judgment of Paris*. John Sumner, whom Ida ought to have chosen—a George Warrington about to leave Bohemia and settle in Hampstead—was deserving of even more pains than Mr. Lafargue has bestowed upon him; and the same may be said of his sister Eva, who, no doubt, marries Ambrose some day, and gives that poor creature the sympathy he needs, as well as the "balance" that her friend Ida could never have supplied. There is a fascination, too, about that refined Chevy Slime, Dr. Harvey Bland, half quack, wholly self-seeker though he is. Mr. Lafargue is not strong in incident. The fortunes of the artistic sheet, the *Byleaf*, supply a little fun, but that is obviously mere comic business. The stories, too, of the unlovable Sister Irene and the contest for a seat in Parliament between Sir Eric Armstrong and John Sumner are dragged clumsily into the story, as if to show that Mr. Lafargue does know something of fashionable nursing and modern politics. His style, resonant though it is, is occasionally very effective; a passage towards the end descriptive of the sea, as seen from the cliffs near Dover, shows it at its best. Mr. Lafargue has a sense of humour, and, indeed, represses it too much. But is he not unconsciously humorous when he represents Trevor "tempting" Ida, who has been sitting to him in his studio for Aphrodite, "to stay, with fruits and sweetmeats and fair words," and "her white hands making havoc among the caramels, while

Mrs. Catchpole, in her distant corner, demurely devours the delicacies they send her." This is a very elegant edition of the old story of Mariana and Wilhelm and old Barbara. But does the spectacle of Aphrodite munching caramels quite suggest a symphony? And had Trevor not a drop of gin, or at least a glass of sherry, to offer poor Mrs. Catchpole?

Mr. Henry Cresswell is not seen at his best—which is very good of its kind—in *A Wily Widow*. He does not seem to have started writing with a stock of ideas sufficiently large to last him through three volumes. He gives us only two strong characters—Maud Gainsborough, the poisoning widow, who gets rid of a husband, and very nearly gets rid of a rival with the help of aconite, but is yet a lovable, warm-hearted creature; and her brother-in-law, Anthony, who dislikes and cheekmates her. But the duel between the two could have had full justice done to it in one volume. The love-affair between Frank Warrington and Lily Hardwicke is terribly spun out, however; and Mr. Cresswell does not make so much, in the first volume, of the cruel practical joke played on Warrington by his first sweetheart as he has made of somewhat similar incidents in previous works. The plot of *A Wily Widow*, such as it is, is well constructed.

A Flight to Florida might have been better, but it might also have been a great deal worse. "Peregrinator" writes of the fascinations of that State with the enthusiasm of Mayne Reid, but in a more chastened style. He is full of almost *Handy Andy* animal spirits; indeed, some of the practical jokes played on a certain Mr. Williams are spoiled by horseplay. The passages in the first volume between Glendinning and Raby, whose courtship is of the Benedick and Beatrice sort, are well-managed, and show "Peregrinator" to be possessed of a sunny humour. But the tragedy—it is little else—which brings the two together in the end will be generally resented as violent, unpleasant, and unnecessary.

In *Alma*, Mrs. Marshall probably attains the perfection of her humble, but honest, sub-Dickensian art. She frequently errs on the side of prolixity; *Alma* is agreeably short and quite compact. As a rule, she puts too many figures in her work; in *Alma* there are only four of any pretensions—Alma Montgomery, the pretty music mistress herself; the mother of her fiancé, Dr. Herbert Law; her blind musical brother; and the mysterious peer, whose life is a series of disappointments in love, relieved to some extent by indulgence in good deeds and champagne. Probably most of the special public that Mrs. Marshall caters for with no inconsiderable success will regret that Alma does not marry Lord Heroncliffe in the last page. His eccentricities are but the raw material of which high character is made, whereas Dr. Law is certain, after marriage, to develop into a commonplace practitioner and husband. But, even it be allowed that Mrs. Marshall might have made a better arrangement for Alma than she has done, her story is singularly free from blemishes. The ups and downs of the music-mistress's social and professional struggles; her ill-treatment at the hands of

Mrs. Law; her recognition by Dr. Earle; the appearance on the scene of her two good angels, Lord Heroncliffe and Herbert Law's father—are traced with skill and sympathy. Alma's blind brother Christopher is perfect in his way; indeed, Mrs. Marshall ought to have sent so good a child to Heaven as certainly as she ought to have placed Alma in the arms of Lord Heroncliffe. It is evident that Mrs. Marshall does delight to make humble people happy, and to make their happiness result from a goodness that sustains and solaces industry; and there is contagion in her delight. *Alma* is very warmly to be commended.

Vere Thornleigh's Inheritance is neither better nor worse—though it is unfortunately longer—than most stories of pretty girls who have fortunes and parents that they are ignorant of, but that certain villains know of only too well. Mr. Tressider, who is as much of a scoundrel as this story can boast of, is too weak for his part, and so has no worse punishment inflicted on him than that involved in seeing Vere marry his son Paul and not his son Hugh, and in having an offer of marriage refused by Vere's mother. Mabel Tressider is a sufficiently lively girl of the modern conventional sort, chattering constantly of "the Pater," and "cream satin bodies" and equally important topics. Crosby Savile, the comic barrister, who is in store for her, is tolerable enough till he becomes serious and lets the world know that he

"early resolved that if he could prevent it his marriage should not be a lottery, that he would know his future wife in her home and out of it; in sunshine and rain, in south winds and east winds."

It is hardly possibly to criticise a colourless story like *Vere Thornleigh's Inheritance*.

It is a pity to see so able a writer and so careful an analyst of character as the author of *Dr. Heidenhoff's Process* bitten by the craze which at present prevails on the other side of the Atlantic for trying to present in fiction the domestic and social life of a coming century. Yet this is what Mr. Edward Bellamy attempts—and the only thing he attempts—in *Looking Backward*, which ends apparently in his hero's marrying a girl who ought to have been his own grand-daughter. It is so far well, perhaps, that the new Heavens and the new Earth wherein dwelleth economical righteousness, and into which Mr. Bellamy practically resolves his twenty-first century, should prove quite as fatiguing as either earthly or ethereal paradises generally are. There is much careful and even some graceful writing in *Looking Backward*; but it is quite thrown away.

The Emotions of Polydore Marasquin is a harmless, laughable, ingenious book, reminding one here and there of M. Paul Célière's *Startling Exploits of Dr. J. B. Quies*, but more demurely written. The idea of wrecking a Macao dealer in birds and beasts on an island inhabited chiefly by monkeys, including a baboon and a pair of chimpanzees that he had sold to certain British naval officers, is an original one, and is worked out by M. Leon Gozlan with an effective humour, which is not spoiled by realism, or tainted with suggestiveness. The imitativeness of monkeys is a stock subject with writers for boys, and one

or two of the oddities of the creatures that are first the tyrants and afterwards the slaves of Polydore Marasquin, strike us as having done duty before. But the inversion of the old relations between Polydore and his tame baboon, Karabouff the First, the successful masquerading of Polydore as mandril-emperor of the island where he figures as a castaway, the conduct of the love-sick and loyal chimpanzees, are all quietly droll, and as novel as they are droll. Perhaps *The Emotions of Polydore Marasquin* is a profound satire on humanity; if so, M. Gozlan conceals his Swiftian mission with marvellous success. His book is a remarkable one to be written by a Frenchman, and to be translated and published by Messrs. Vizetelly. It is filled, though not adorned, with comic but roughly executed illustrations.

WILLIAM WALLACE.

RECENT THEOLOGY.

The Life and Times of John Skinner. Bishop of Aberdeen, and Primus of the Scottish Episcopal Church. By William Walker. (Aberdeen: Edmond & Spark.) Dr. Walker is already favourably known as the biographer of Dr. Gleig, Bishop of Brechin and Dunkeld; and of the saintly Alexander Jolly, Bishop of Moray. In the present volume he deals with a remarkable man and with the stirring times of the repeal of the penal laws affecting Episcopalians in Scotland. Bishop Skinner was son of the Scottish poet, John Skinner, of Linshart ("Tullochgorum"), whose verses were so warmly admired by Burns, and whose interesting biography has been already given to the public by Dr. Walker. To all who are interested in the history of the Scottish Episcopal Church this *Life of Bishop Skinner* may be heartily commended. It will give to the reader a vivid sense of the rapid growth of the Church in numbers and influence within the last ninety years, and of the forcible repression under which it managed to exist in the last century.

A Sketch of the Life and Episcopate of the Right Reverend Robert Bickersteth, D.D., Bishop of Ripon. By the Rev. Montague Cyril Bickersteth. (Rivingtons.) Mr. Bickersteth very modestly entitles his biography of his father a sketch; but the narrative is full and thorough. The diocese of Ripon was reconstituted in 1836, and Bishop Bickersteth succeeded Bishop Langley, the first bishop of the see, in 1857. His position was not an easy one; for the most able and energetic workers in the diocese were High Churchmen, and to continue Bishop Langley's work without their hearty co-operation was impossible. But without any very extraordinary gifts Bishop Bickersteth was a capable man of business, a vigorous preacher, and a hard and conscientious worker. He, moreover, exhibited toleration and tact in his dealings with those of his clergy who were not in sympathy with his own pronounced evangelical views; so that his episcopate, though not brilliant, was successful and prosperous. Mr. Bickersteth's book is, as we have said, full and thorough. It is also well arranged and clearly written, but it is too laudatory. This is a difficult fault for a son to avoid, or for a reader to pardon. We wish to know what the world thought of Bishop Bickersteth, not only when it praised, but when it criticised. We should like also to feel sure that the bishop had some faults and weaknesses; and would probably love him more if his biographer could have loved him less.

Bishop Forbes: a Memoir. By Donald J. Mackey. (Kegan Paul, Trench & Co.) The late Bishop Forbes, of Brechin, having taken a very

prominent part in some of the keenest ecclesiastical controversies of his day directed, with a spirit of wisdom worthy of imitation, that the most important part of his correspondence and journals should be preserved unopened and under seal for twenty-five years from the date of his death. Despite the desire indicated by this fact, and the disapproval of the family of the bishop, who possess much material that may assist some future biographer, Mr. Mackey has persisted in making a book. The casual reader, glancing through this volume, would not unnaturally come to the conclusion that Mr. W. E. Gladstone was the bishop's only correspondent. Mr. Gladstone has been so ill-advised as to furnish Mr. Mackey with a considerable number of the bishop's letters; but the replies, which would, doubtless, in some instances, be interesting, remain, if preserved at all, under seal at Brechin, waiting for the expiry of the quarter of a century. It is much to be regretted that Bishop Forbes's wishes should be so far set at naught by his biographer, notably in his partisan attacks on ecclesiastical opponents. The bishop, though uncompromising, was full of magnanimous generosity towards those with whom he was brought into controversy, and was a real lover of the things that make for peace. The bishop asked for silence for a space, and till, in all probability, those who were most actively engaged in the embittered religious disputations that led to his trial should have passed away; but Mr. Mackey so little regards his intentions that with loud voice he shouts afresh the party war-cries. Alexander Penrose Forbes was a man of wide culture, of scholarly tastes, and considerable ecclesiastical learning. Above all he was a man of earnest piety and self-devotion. His life deserves to be told; and we hope the time may come when it will be told from a fund of sufficient material, and in a becoming spirit. Mr. Mackey has certainly not forestalled such a biography. The material Mr. Mackey had before him was scanty, but even that material is edited in a slovenly way. Thus, at p. 170, writing to Mr. Gladstone, Bishop Forbes gives an interesting notice of a literary friend, who had suddenly died; but there is no hint from the editor as to the name of the person referred to. Mr. Mackey was, as we learn from the title-page, formerly a clergyman officiating in the Scottish Church. He might, accordingly, have avoided such errors as that the Scottish Communion Office "was dethroned from its rightful place" by the General Synod of 1876, or that the Bishop of Aberdeen was Primus in 1875 (p. 210). It is not the case (witness Edinburgh Cathedral) that the plan of two incumbents for one charge has "now happily entirely disappeared" (p. 63). Erastus (not *Erastian*, p. 208) was the name of the physician of Baden after whom certain ecclesiastical views have received their designation. Hiberio or Hiberia—not Hibernio (p. 249)—was the name given by St. Patrick to Ireland.

THE pamphlet of the Rev. Frederick Hockin on *John Wesley and Modern Methodism* (Rivingtons), originally published anonymously in 1874, has now in its fourth edition expanded into a volume of over two hundred pages. He aims at proving that the present followers of the founder of Methodism have deviated from the teaching which their father in religion advocated consistently throughout life; and in support of this argument he alleges that many important passages of Wesley's teaching have since his death been eliminated from his writings. The contradictions between the principles of John Wesley and those of the modern Methodists have been set out by several previous writers, and notably by Mr. Denny Umlin. It may well be doubted whether the game is worth the candle. The views of Methodism have passed away—be it for good or for evil—

from the sacramental doctrines which John Wesley preached himself, and wished to see established in others. If the Wesleyan ministers desired to revert to the old-fashioned opinions of High-Churchism which formed the staple of Wesley's principles, they would soon be abandoned by the congregations which now assemble in the chapels of Methodism. The county of Cornwall has long been identified with this form of dissent, and in no place have the Wesleyan ministers found better ground for the sowing of their seed. An interesting appendix in Mr. Hockin's work is devoted to an examination of the statement that before Wesley's day the natives of Cornwall were habituated to the crime of murdering the shipwrecked, and of the character of the Cornish clergy at that period. The first charge is probably groundless; but the good qualities of the clergy of the Established Church about 1760 will scarcely be estimated by impartial critics so highly as Mr. Hockin would desire.

The Sisters of the Poor and their Work. By Rev. Henry D. Nihill. (Kegan Paul, Trench & Co.) The twelve letters contained in this volume were originally printed for private circulation "to furnish the friends of The Sisterhood of St. Mary at the Cross with some account of their work." The recent trial of Allcard v. Skinner has induced their author to publish them that the public may understand clearly the nature of the institution they describe. The letters date from 1870, and will be read with great profit by all interested in the condition of the poor. They make no attempt to be sensational, and are remarkably bright and cheerful; but they give us an unusually clear and graphic account of the work done in Shoreditch by the Sisters of the Poor. Mr. Nihill has done well to publish his admirable letters; not only the Sisters, but the public also, will thank him for his work.

The Parish Priest of the Town. Lectures delivered in the Divinity School, Cambridge. By John Gott. (S. P. C. K.) These terse and vigorous lectures give us in short compass the advice of a veteran in all departments of a town clergyman's work. We know of no book in which a clergyman's practical and spiritual duties are more clearly and fully stated; earnest piety, sound commonsense, and thorough acquaintance with the subject treated of are rarely found in such equal combination as in Dr. Gott's six lectures. The third part of the appendix, entitled "A Town Curate's Prayer Desk," will be greatly appreciated by those for whom it is intended.

NOTES AND NEWS.

MESSRS. BLADES, EAST, & BLADES, have issued a circular regarding the publication of a facsimile of the MS. of Thomas Dingley's account of the progress of the first Duke of Beaufort, as lord president of the council in Wales, through Wales and the Marches in 1684. This document was printed, in a very limited number of copies for private circulation, in 1864. It is now proposed to reproduce it by photo-lithography, thus giving all the pen-and-ink sketches of castles, monuments, coat armour, &c. The present Duke of Beaufort, who owns the MS., has given his consent to the publication, at the request of the Cambrian Archaeological Association. The work consists of 354 pages, with two maps; and it will be published in a handsome volume, demy quarto. The subscription price, for an edition of 350 copies, is one guinea.

THE first volume brought out by the New Spalding Club has now been issued to members: *Memorials of the Family of Skene of Skene*, from the Family Papers, with other Illustrative Documents, edited by Dr. William Forbes

Skene, Historiographer for Scotland; with reproductions of sketches by the late James Skene of Rubislaw. The other portion of the first year's issue is also printed, and will soon be in the hands of members. It consists of vol. i. of the Chartulary of the Collegiate Church of St. Nicholas, one of the few Scotch Chartularies enumerated by the late Dr. John Stuart in his Report on the MS. Materials for History in Scotland (Hist. MSS. Com. Rep. I. iii.) as still unprinted. The volume is edited by the Rev. James Cooper, Minister of the Church of St. Nicholas, and will contain illustrations by Mr. George Reid.

At the recent sale of the Aylesford library—which realised altogether £10,754—the four folios of Shakspeare fetched the following prizes. The first folio (1623), somewhat patched and soiled, but otherwise a good copy, £200; the second folio (1632), a copy which had belonged to Theobald, and afterwards to Dr. Johnson, in whose handwriting there were many notes (£140, Henry Irving); the third folio (1664), a fine copy (£93); the fourth folio (1685), also a good copy (£29).

A HOLOGRAPH MS. of Burns, containing several of his best-known poems, with variations from the printed edition, was sold at Sotheby's on Tuesday last for £215 5s. It was bought for the Burns Museum at Kilmarnock.

MR. MURRAY has now in the press Mr. Sydney Buxton's *Finance and Politics*, an historical study of the last sixty or seventy years, which will shortly be published in two volumes. A seventh edition of Mr. Buxton's *Handbook to Political Questions* is also in preparation.

MR. GRANT ALLEN's new novel, *The Devil's Die*, will be published, in three-volume form, by Messrs. Chatto & Windus in the course of next month.

Miracle Gold is the title of a new three volume novel by Mr. Richard Dowling, which will be ready at the libraries next week.

Two new volumes of stories will be published next week by Messrs. Ward & Downey—*David Pointdexter's Disappearance*, by Julian Hawthorne, and *Idle Tales*, by Mrs. Riddell.

A VOLUME of *Legends and Traditions of Yorkshire*, by Rev. Thomas Parkinson, is announced for early publication by Mr. Elliot Stock.

A VOLUME, entitled *Holiday Recreations and other Poems*, from the pen of Mr. Alexander Skene Smith, of Johnstone, N.B., will be published shortly by Messrs. Chapman & Hall.

MESSRS. ROPER & DROWLEY will issue immediately a manual of daily devotional reading for home use by busy or invalid persons, by the Rev. A. Hunter Dunn. Its title will be *Holy Thoughts for Quiet Moments*.

MESSRS. SIMPKIN, MARSHALL & Co. will publish the cheap edition of Miss Braddon's recent novel, *Like and Unlike*, early next July. The same firm will issue, in three volumes, *The Fatal Three*, the novel which Miss Braddon is now engaged in writing for Messrs. Leng & Co.'s syndicate of newspapers.

MESSRS. FREDERICK W. WILSON & BROTHER, of Glasgow, will publish immediately a new work by Mr. John Davidson, entitled *Smith: a Tragedy*. The author's earlier drama, *Bruce*, was favourably reviewed some time ago in the ACADEMY.

WE understand that Mr. Bellars's recent little book of private devotions, *Before the Throne*, is already in a fourth edition, enlarged. Messrs. Swan Sonnenschein & Co. announce for immediate publication an edition of it adapted to the Scottish Communion office, with a preface by the Bishop of Aberdeen and

Orkney; and also an edition adapted to the American Prayer-Book, with a preface by the Bishop of Springfield.

MESSRS. BURNS & OATES have in the press a popular edition of Bishop Ullathorne's works on the *Endowments of Man*, entitled respectively "The Groundwork of the Christian Virtues," "The Endowment of Man," and "Christian Patience: the Strength and Discipline of the Soul."

MR. T. FISHER UNWIN will publish immediately a cheap edition of Mr. Hutton's *Literary Landmarks*, revised and enlarged by the author.

THREE editions of Mr. Panton's manual of household management, *From Kitchen to Garret*, have been exhausted in the course of a few months. The fourth edition is now at the printers.

THE Queen has been pleased to become the patron of the Royal Historical Society.

Corrections.—In Prof. Zupitza's letter on "German Words in Middle English," in the ACADEMY of March 10, the Old High German word should be "pilgrim" not "pilgrim"; in the passage from King Alfred's Pastoral Care read "ðæs" instead of "des"; and Old French *tenser* is "to protect" not "to protest."

THE FORTHCOMING MAGAZINES.

IN the next number of the *Contemporary Review*, Prof. Max Müller will write on "The New German Emperor"; Prof. A. V. Dicey, on "Old Jacobinism and New Morality"; Dr. Clifford, on "Baptist Theology"; Canon MacColl, on "Islam and Civilisation"; and Michael Davitt, on "The Irish Landlord's Demand."

THE April number of *Art and Letters* will contain the new play written by Mme. Sara Bernhardt, which is to be produced by her at the Odeon Theatre, on March 31; also, "A Wedding Chest," by Vernon Lee; a poem by Oscar Wilde; "The Comédie Française," by F. Sarcey; and "Art at the Mirletons Club," by G. Jollivet.

MR. WALTER BESANT will contribute the second of two articles on "The Writing of Novels" to the April number of *Atlantis*. The same number will also contain the opening chapters of a serial story by Mr. Grant Allen, entitled "The White Man's Foot."

SOME of the many remains of undoubtedly Roman origin which have been found in the Chester city walls will be described, with illustrations, by Mr. E. W. Cox, in the April number of the *Antiquary*, under the title of "The Symbolism of the Sculptured Remains found at Chester."

MR. BLADES will continue his papers on the origin of printing in the April number of the *Bookworm*, on this occasion stating the case "Coster v. Gutenberg." In the same number there will be an article on the "First Folio of Shakspeare."

MR. FREDERICK J. CROWE will contribute a paper on "The Rise and Growth of the Song Form in Music" to the coming number of *Cassell's Family Magazine*.

THE April number of *The Play-Goer's Magazine* will contain what claims to be the fullest biography yet published of Mr. H. Beerbohm-Tree, illustrated with six portraits; letters from Mr. Percy Fitzgerald and others on the proposed Stage-School of Acting; and biographies, with portraits, of the late Mr. Clayton and Mr. A. W. Pinero.

"THOSE YOUNG PEOPLE" is the title of a serial story which Annie Thomas (Mrs. Pender Cudlip) will commence in the April number of *Illustrations*.

THE novel, "Mr. Barnes, of New York," will be given away, as extra supplements, with Nos. 235 and 236 of *Cassell's Saturday Journal*, published on March 27 and April 4. In No. 235 (which will form the first number of a new volume), two new serial stories will be commenced—"Lady Biddy Fane," a tale of adventure, by Frank Barrett, illustrated by J. Finemore; and "An American Penman" (from the diary of Inspector Byrnes, of the New York detective force), by Julian Hawthorne.

Decoration for April will contain a supplement, which it is intended shall become a permanent feature, with the title of "The Art Trades' Review," under the editorship of Mr. W. Norman Brown, author of "Principles and Practice of Decorative Art." The title of the journal will henceforth be *Decoration and Art Trades' Review*. The price will remain the same as heretofore.

MESSRS. SWAN SONNENSCHNEIN & CO.'S ANNOUNCEMENTS.

"THE History of South Africa, 1486-1691," by George McCall Theal, with 3 maps; "The South African Gold Fields," a guide for investors, miners, and intending visitors, by Ernest Glanville, of Cape Town; "Ireland in '98," sketches of the principal men of the time, based on published volumes and unpublished MSS. of the late Dr. R. Madden, and edited by J. B. Daly, with portraits and other illustrations; "History of Ireland," by Dr. R. Hassencamp, authorised translation, in 2 vols.; "Sierra Leone; or, the White Man's Grave," by G. A. Lethbridge Banbury, with plates; "Samoa; or, the Last White Man on the Beach," by W. B. Churchward, illustrated; "Life in the Cut, Sketches of Barge Life," by Amos Reade; "The Russian Peasantry, their Agrarian Condition, Social Life, and Religion," by Stepniak, in 2 vols.; "The Russian Storm-Cloud," by Stepniak, second edition; "English Associations of Working Men," by Dr. Baernreither, translated by Alice Taylor; "The Science of Religions," by Emil Burnouf, translated by J. Liebe; "Memoirs of the Reign of Louis XIV. and the Regency," by the Duke of Saint-Simon, translated by Bayle St. John, in 3 vols.; "Boswell's Life of Dr. Johnson, together with a Journal of a Tour in the Hebrides," edited by Percy Fitzgerald, second edition, in 3 vols.; "German Socialism and Ferdinand Lasalle," by W. H. Dawson, with a portrait; "Chants of Labour," with music, compiled by Edw. Carpenter, with a frontispiece and illustrated title-page by Walter Crane; "The Demon of Dyspepsia; or, Digestion Perfect and Imperfect"; "Volapük Grammar and Reading Book," by Prof. Kirchhoff, and Key to the same; "Volapük Dictionary"; "Volapük Commercial Correspondence"; "Practical Essay Writing," by A. W. H. Forbes; "Parallel Grammar Series," Latin, Greek, German, and French; "A First History of the English People," by Amy Baker, in 4 vols.; "A New Era in Thought," by C. Howard Hinton; "Poultry," a manual for breeders and exhibitors, by a Poultry Farmer; "Model Engine Making," by J. Pococke; "The Dog, its Diseases and Management," by Prof. J. Woodroffe-Hill, illustrated. Novels: "Love's a Tyrant," by Annie Thomas, in 3 vols.; "Vaia's Lord," by Jean Middlemass, in 3 vols.; "Two Chorus Girls," by Hamilton Clarke; "St. Bernard's," the Romance of a Medical Student, third edition, and Key to same; "A More Excellent Way," by Constance Howell; "Peccavi," by Emily F. D. Osborn, in 3 vols.; cheap edition of "Lucy Smith, by F. C. Philips. In the Unicorn Series: Earl of Desart's "Lord and Lady Piccadilly," Mayne Reid's "Death Shot," Skottowe's "Sudden

Death." Imperial Parliament Series: "Church Reform," by Albert Grey and Canon W. H. Fremantle, "London Government and City Guilds," by J. F. B. Firth.

MESSRS. CROSBY LOCKWOOD & SON'S ANNOUNCEMENTS.

"WATERWORKS," being notes on the storage of water in reservoirs, the construction of embankments, weirs, stream gauges, rainfall, conduits and pipes, domestic water supply, pumping engines, service reservoirs, water power, water wheels, corn mills, rivers, floods in rivers, conservancy of rivers, county boards, and watershed areas, by Charles Slagg; "The Mechanical Engineer's Office Book," by Nelson Foley, second edition, much enlarged; "Practical Surveying," a text-book for students preparing for examinations or the colonies, by George W. Usill; "Granite and Our Granite Industries," with numerous illustrations, by G. F. Harris; "Asbestos," a popular account of its properties and commercial uses, and of the asbestos mines of Canada, by Robert H. Jones; "The Mechanic's Workshop Handy-book," a practical manual on mechanical manipulation, by P. N. Hasluck, a new volume of Lockwood's "Handybooks for Handicrafts"; "A Treatise on Metalliferous Minerals and Mining," by D. C. Davies, fourth edition; "The Foreign Commercial Correspondent," being aids to commercial correspondence in four languages, French, German, Italian, and Spanish, by Charles E. Baker.

ORIGINAL VERSE.

FAILURE.

"All honour to him who shall win the prize,
The world has cried for a thousand years,
But to him who tries, who fails and dies,
I give great honour, and glory, and tears."
JOAQUIN MILLER.

You have failed, you say, in your life.
I tell you that now and forever,
You stand above all in the strife,
Though the world may acknowledge it never.

They will never know half the cost
That you paid with your heart's best blood;
They who marr'd your life, till you lost
So much that the world counts good.

To know what you might have been,
If they who stood close to your side
Had bid you go forth and win
All that which is now denied.

Yours is the great true heart,
That speaketh no word of blame,
But endureth on to the end,
With a love that is still the same.

You pray to your God for strength,
He will help you to bear the cross,
Till you win your rest at length,
From all suffering, pain, and loss.

You may never be great in the sight
Of the world;—but before God's throne
You will one day stand crowned in the light
When He calleth together His own.

F. P.

OBITUARY.

AMOS BRONSON ALCOTT AND LOUISA MAY ALCOTT.

THE last representative of that famous circle of New England Transcendentalists which included Emerson, Hawthorne, Thoreau, Parker, and Margaret Fuller, died at Concord on March 5.

Mr. Alcott was not only the last but the eldest of the company. He was born on November 29, 1799, one year earlier than John Brown, and four years earlier than Emerson. The popular impression about him was that he was a most unpractical person—a visionary, a

dreamer; and, in truth, there was a certain measure of correctness in the popular impression. He was a profound student of Plato and the mystics of all ages, and knew far more about them and their ideas than about modern commerce and the things of daily life; and he was a dreamer of beautiful dreams. His continual effort to make those dreams real in the world met with invariable failure—that is to say, his enterprises collapsed, usually very quickly; but, if the influence he exercised over the minds and lives of the children and the men and women with whom he came in contact could be measured, the judgment pronounced would probably be quite other than "failure." Emerson, who met him in 1836, and remained his life-long friend, esteemed him highly from the outset. He wrote of him, to Margaret Fuller the next year, as one who had in him "more of the God-like than any man I have ever seen"; and, touching this point of "success," he said: "I shall dismiss for the future all anxiety about his success. If he cannot make intelligent men feel the presence of a superior nature, the worse for them; I can never doubt him." In 1839 he described him to Carlyle as "a majestic soul, with whom conversation is possible." This was strong speech from Emerson, who was not only a keen critic of character, but a hater of superlatives. When Mr. Alcott visited England in 1842, Emerson sent him to Carlyle, but not without some questioning how the man of facts would receive the man of ideas; and the foreboding was realised, for Carlyle—forgetful as he too often was of the rightful claims of hospitality—tried to make Alcott a butt for his rough wit, and, at the best, only saw in him "a genial, innocent, simple-hearted man of much natural intelligence and goodness, with an air of rusticity, veracity, and dignity withal which, in many ways, appeals to one." Mr. Alcott, on his part, was not drawn towards Carlyle. "His wit was sombre, severe, hopeless; his very merriment had madness in it; his humour was tragic even to tears."

In 1825 Mr. Alcott opened a school in Cheshire, Connecticut, which was maintained for about two years; a little later he commenced another at Fremont Place, Boston, but it had an even shorter existence. Then, in 1831, he married, and in 1834 founded his more famous "Temple School." Among his assistants were Margaret Fuller and Elizabeth Peabody, the latter of whom in her *Record of a School* has given to the world an interesting and instructive account of Mr. Alcott's principles and methods. His daughter Louisa was there also, as a pupil; and the Plumfield School, in her *Little Men* is chiefly based on this undertaking of her father's. His school was conducted, says Mr. Sanborn, "on Pestalozzian and Christian principles"; but, in the eyes of Boston orthodoxy in that day, Pestalozzian principles were strange and Christian principles dangerous, and the result was that a brief but striking success was followed by failure. Alcott's fatal offence was the admission of a negro child into the school; whereupon all but five of his scholars were withdrawn by their scandalised parents, and, in 1839, the doors were closed.

Less satisfactory was Alcott's attempt to form a community for adults. He declined an invitation to join Brook Farm; but about the same time (namely, in 1843), with the co-operation of Lane and others, he established "Fruitlands." This was a farm of some ninety acres, situated about three miles from Harvard, and remote from any high-road. The vegetarian diet, which Mr. Alcott had adopted in 1835, was to be one feature of the institution. The purpose of the founders was the setting aside "of all impure diet, dirty habits, idle thoughts, and selfish feelings." Great were the hopes; but

Alcott and his co-workers had little of this world's wisdom, and within one year Fruitlands had ceased to be.

Mr. Alcott was a teacher more than a man of letters. There is little system in his writings. They are mainly notes of thought, but of such a kind as to charm and also stimulate to a high degree. He was one of the promoters of *The Dial*, and contributed to its pages. His *Concord Days*, *Table Talk*, *Tablets*, and *Sonnets and Cazonets*, are all current in America, and should be edited for this country also, but they still await an enterprising publisher.

Absolutely sincere himself, Mr. Alcott never doubted the equal sincerity of others. His faith in mankind was boundless. As Mr. Frothingham says: "A singular sincerity characterised his mind and his life; he formed his beliefs on ideal laws and based his conduct on them." His was an original nature and self-poised. He sought for guidance within himself, not from his fellow men. He was not a disciple or follower of anyone. At one time he was regarded as the leader of the "Transcendental" movement, but he lacked the practical qualities of which Emerson had so large a measure; yet he received and needed less influence from Emerson than, perhaps, any other member of that circle.

Miss Louisa May Alcott was born in 1833, on the anniversary of her father's birth. It has been said that one of Mr. Alcott's best contributions to literature was his daughter, Louisa; and readers of all ages, here and in America, will give their cordial assent to that. Few writers are more popular, and none more deservedly so. A touching and beautiful picture of the Alcott household is given in *Little Women*—a picture entirely true in spirit, though not realised in all particulars. Louisa Alcott herself was "Jo"; but Jo's career and hers differed in some important respects. She was herself more self-devoted and heroic even than Jo. *Moods* (as originally written) is, perhaps, the most vivid of all her stories. I do not remember to have ever read a book whose characters seemed to me so much like flesh and blood as the characters set forth in *Moods*. A new and more cheerful ending was written years after, but this was a blunder. *An Old-Fashioned Girl* is one of the healthiest books possible to put into the hands of girls or boys either. Admirable as a writer, Miss Alcott was not less admirable as a woman. She was an indefatigable nurse of wounded soldiers during the Civil War until she was herself stricken down. She was equally faithful in all the domestic relations. No better tribute to her greatness is needed than that which her father offered in the following sonnet:

"When I remember with what buoyant heart,
Midst war's alarms and woes of civil strife,
In youthful eagerness thou didst depart,
At peril of thy safety, peace, and life,
To nurse the wounded soldier, swathe the dead—
How pierced soon by fever's poisoned dart,
And brought unconscious home, with wildered head—
Thou, ever since, mid languor and dull pain,
To conquer fortune, cherish kindred dear,
Hast with grave studies vexed a sprightly brain,
In myriad households kindled love and cheer;
Ne'er from thyself by fame's loud trumpet beguiled,
Sounding in this and the farther hemisphere—
I press thee to my heart, as Duty's faithful child."

Her last earthly service was tending her dying father—a service which claimed her own life; and, when he was gone, she followed him immediately into the unseen.

WALTER LEWIN.

MAGAZINES AND REVIEWS.

Le Livre has been, since the beginning of the year, so well furnished with strictly literary articles that it would be unreasonable to quarrel with M. Uzanne for giving none such in the non-ephemeral part of his magazine for March. This part is made up of some extracts from recently sold autographs; and of a paper by the editor himself, on "M. Félix Buhot," an etcher especially for the purpose of book illustration, who is, perhaps, not very widely known in England. From what, however, we ourselves have seen of his work, we should be disposed to agree with much of what M. Uzanne says. Some technical notes of M. Buhot's experiments with different papers and modes of preparing them are interesting.

CORRESPONDENCE.

BISHOP COLENSO.

East Anstey Rectory: March 17, 1898.

As the reviewer of Sir G. Cox's *Life of Colenso* in the ACADEMY, I hope you will allow me space for a brief reply to Dr. Littledale's letter in your issue to-day.

I have not seen the hymn book to which Dr. Littledale refers; but Bishop Colenso's opinions on the propriety of addressing hymns and prayers directly to Christ, instead of through Christ to God, are fully set forth in the second volume of Sir G. Cox's work, pp. 100-104. It was pointed out at the time that the bishop's opinion was only novel as being a reversion to early Christian usage.

I may, however, remark that Dr. Littledale's estimate of the Christianity of any book, prayer or hymns, by its express mention of the name of Christ would lead to curious results. There have been good people who have objected to the continuance of the Book of Esther in the Canon because it contains no mention of the name of God, but the objection has never been

regarded as valid. Dr. Littledale would hardly deny that there may be, and unhappily are, hymns and prayers surcharged with the mention of names of Christ, but destitute of the minutest shred of His spirit and teaching; and, on the other hand, a hymn may contain no express mention of Christ, and yet may be thoroughly interpenetrated with the genuine essence of Christianity. A rigid application of Dr. Littledale's literalism might conceivably have the effect of eliminating from our sources of Christian teaching such accredited formulas as the Sermon on the Mount or the Lord's Prayer, each of which contains no express "mention of the name of Christ."

JOHN OWEN.

London: March 20, 1898.

Please correct an error in my letter in the ACADEMY of last week. For "the late Martin B. Sharp, editor of the *Guardian*," read "Martin B. Sharp, late editor of the *Guardian*."

Mr. Sharp is, I am glad to say, still in the land of the living, and remembers the hymnal I described.

R. F. LITTEDALE.

THE BLACK BOOK OF CARMARTHEN.

University College, Cardiff: March 12, 1898.

All who are interested in the old literature of Wales will feel deeply grateful to Prof. Rhys and Mr. Gwenogvryn Evans for the beautiful facsimile of this, the oldest of Welsh MSS., which has just been issued to the subscribers. In the valuable "Palaeographical Note" prefixed to the facsimile, Mr. Evans says: "It would be very interesting to trace the history of the Black Book of Carmarthen from the time it was written down to the year 1859, when it found a welcome and a home at Peniarth." It may, perhaps, be worth while to point out that the MS. itself supplies one bit of evidence relative to its own history. On folio 3a, just below the text, appears the name יִסְכָּר גְּרִיפִּיד, which, doubtless means, in homely Welsh orthography, "Jasper Gruffydd." It is probably safe to assume that this is the signature of the Rev. Jasper Griffith, who was at one time owner of Hengwrt MSS. 4 and 5 (see *Archæologia Cambrensis*, July 1869, p. 210), and 172 (1b. October, 1869, p. 366). According to the late Mr. Wynne (i.e. Jasper Griffith "was made Warden of Ruthin, February 9, 1599, being chaplain to Rd. Bancroft, Archbishop of Canterbury, and died in 1606." It seems then that the Black Book of Carmarthen was at one time in the hands of Jasper Griffith; and, charitably assuming that the reverend gentleman would not write his own name, even in Hebrew characters, in a book belonging to another we may conclude that it was his property. Hengwrt MSS. 4 and 5, above mentioned, are parts of the well-known "Llyvyr gwyn Rhydderch" (the White Book of Roderick). In MS. 172, there is a short note in Jasper Griffith's own handwriting, in which he mentions the "White Book as being in his possession. I hope that Mr. Evans will soon have an opportunity of examining the writing and ascertaining whether any of the notes in the Black Book are from the same hand.

THOMAS POWELL.

THE ROUTE FROM SYRIA TO EGYPT.

Weston-super-Mare: March 12, 1898.

Prof. Sayce's account of Farama (ACADEMY, No. 824), with Prof. Robertson Smith's comments (ACADEMY, No. 823), bring to my mind conjectures which I have long entertained. With regard to Farama, may it not well be the Pairma, a fortified position of Merenptah, mentioned in Pap. Anastasi III. (Chabas, XIX. Dyn. 107)? This seems the more likely as Mukaddasi gives

the name of Pelusium as al-Firmâ. In connexion with this I have supposed that the Aduma, to which the Shasu belonged who were admitted through the line of forts (Anast. VI.), was not Edom (as generally understood) but the Adima of the story of Saneha, where that hero found himself on his escape from the Egyptian frontier wall (Maspero, *Mémoires d'Arch. Égypt.* iii., 74; Les prem. lignes, &c., 21). I have thought that the פִּרְמָא of Exodus was the same name, and this opinion is expressed by M. Naville (*Pithom*, 24). Moreover, it seems to me that this very name survives as el-Adâm, which Mr. Greville Chester found applied to "a portion of the Gebel" between Tel Habûa and Tel-el-Hir, some twenty miles east (a little north) of Tel Defneh. It is worthy of notice that the territory of the Shasu began on the east side of the frontier-fortress of Zar or Zal, and the great name of Khar or Khal extended as far also.

A year and a half ago I mentioned my speculations to Mr. Griffith at the British Museum, and I heartily join with Prof. Sayce in the wish that Farama may be well-examined.

Prof. Friedrich Delitzsch writes: "The place where the site of the ancient Pelusium must be sought the Arabs call *Farama*, according to Champollion and Brugsch = Coptic *Feromi* or *Peromi*, old Egyptian *Perema* (*Wo lag das Paradies?* 313). See also Dümichen (*Geschichte*, &c., in Oncken's series, p. 264).

I think the old Egyptian local name "Romen" must be identical with the Româneh which Mr. Greville Chester says he found to be a district of the desert of considerable extent (Pal. Exp. F. *Quarterly*, 1880, 147). HENRY GEORGE TOMKINS.

THE "FORTNIGHTLY REVIEW" ON LORD HERBERT OF CHERBURY.

Eton College: March 19, 1888.

Will you allow me a reply to Mr. Sidney Lee's criticism on my article upon Lord Herbert of Cherbury in the *Fortnightly Review*? Mr. Lee has claims to be considered a specialist in the subject, as he has, I understand from several allusions in his letter, written an introduction to an edition of Lord Herbert's autobiography.

My article was written in 1885, before Mr. Lee's book appeared. It was meant as an inoffensive literary study of the man. I did not profess to consult family records or original documents. I merely wrote from such sources as were then available. The article was originally a long one, and had to be much curtailed and compressed. Three years after it was accepted by the editor I received the proofs, and I candidly confess that I did nothing more than revise them in the ordinary way. I should of course have procured Mr. Lee's book, and compared it with my conclusions; but I regret to say that the fame of Mr. Lee's book had not reached me. Consequently I used the old chronology throughout—the chronology of the original edition of Herbert's autobiography, and the *Biographia Britannica*. It appears that Mr. Lee has changed all that; and I am very glad to hear it, for it was apparently much in need of revision. But I must protest against the spirit which seems to have dictated these criticisms. I cannot help feeling that Mr. Lee considers the subject a monopoly of his own; that his objections are more to display his erudition than to correct my statements; and that, perhaps, the real grievance he has against me is that I have not consulted his book. He does not credit me with having adopted a consistent system of chronology. He merely detaches my dates where they disagree with his own, and advances his arguments against the correctness of my

version; and I candidly admit that he appears in one or two cases to be right.

But if this were all, I could pardon it. I would even welcome it. But when, among his tabulated "errors," he introduces no less than two cases where I have merely been quoting Lord Herbert (whose orthography was fantastic), and scolds at me for not correcting them; when three cases again are merely matters of literary criticism, where one man's opinion is as good as another's; when in three other cases he finds fault with me for not supplying more information, and calls these mistakes, when it was merely a question of space allowed; when he makes three gross and gratuitous errors among his own statements; and when, lastly, in one case, he deliberately puts into my mouth a statement which I never made at all—then, indeed I am bound to protest.

The first objection he makes is that I have called Herbert a K.C.B. That title is now the received terminology for a Knight of the Bath. Mr. Lee disingenuously contrives to give the impression that Herbert was not a Knight of the Bath at all, in order to strengthen the appearance of my inaccuracy. It is true that the order was enlarged in 1815, and the style altered from K.B. to K.C.B. But if Mr. Lee follows out the principle of retaining the ancient terminology, he ought to call his hero Lord Casbery and not Cherbury, the name being so spelt even in the register of his burial; but he adopts Cherbury because it is the modern equivalent for the old name. I adopt K.C.B. for the same reason.

The first of the tabulated objections is that I have called Herbert "practically unknown"; and in order to prove the contrary Mr. Lee tells us that not only is there a modern French book of the subject, but that there is an analysis of one of Herbert's works in Hamilton's notes on Reid, and that Mr. Ohurton Collins has reprinted his poems. This is fame indeed! But the key to the paragraph lies in the fact that "an autobiography was edited with notes, &c., in 1886." Mr. Lee does not say here that this is his own work; but such is the case, and it is here, as elsewhere, obvious that this has been the sting.

2. Lord Herbert's descent from Pepin.—I follow here the authorised publication of the Herbert Pedigree (I think by the Camden Society). Mr. Lee seems to be unaware of the existence of this book; at any rate, he does not refer to it, for fear of weakening his case. It is, however, well-known to students. Whether or no the descent is genuine, neither Mr. Lee nor anyone else knows; but it is the only one we have. It was certainly believed by his contemporaries.

3. Date of birth.—I follow here the older authorities, p. xxii. of the Prefatory Memoir of the edition of 1824.

4. "His mother was a Shropshire heiress." Even Mr. Lee does not attempt to deny this. He is disappointed that I did not say more about her. My article was about Lord Herbert, not about his mother. Mr. Lee might as well blame me for not inserting an exhaustive account of George Herbert, his brother.

5. A mistake which I do not justify. It should have been "six brothers, of whom four were gentleman adventurers of the sword." Mr. Lee attempts to reduce six to two; but the expression is applicable to four.

6. Mr. Lee tells me that "Telesius" should be "Telesius" that he was not an astrological writer, and that this is very gross blundering. Lord Herbert calls him "Telesius" himself, and I was quoting Lord Herbert. Mr. Lee apparently here wishes to correct Lord Herbert's own statement—which is the only thing I concerned myself with—and to make me insert

a Life and Works of Telesius, in addition to the memoir of Lord Herbert's mother. As to Telesius not being an astrological writer, does Mr. Lee know of the *Varit de rebus naturalibus libelli* by that author?

7. "The divinity of the Schoolmen." No Schoolman, says Mr. Lee, is mentioned. True, but they are implied throughout. It is not necessary to pass outside even the limits of my own article to show how much Lord Herbert owed to them, and how much time he had devoted to them. Such criticisms as this are not only trivial, they are disingenuous.

8. Mr. Lee complains that I use the word "threatens" to write a certain treatise when I should have said "proposes." True, I do. It was a misguided attempt at humour. I meant to imply that the proposal would not be a welcome one. With melancholy earnestness Mr. Lee says "threatens." Oh! he does nothing of the kind; he merely says he will. As to the spelling of "Galateus," it is characteristic of the want of humour for which the criticism is so remarkable that Mr. Lee cannot let me alone even here. Half the amusement of Lord Herbert's proposal is the ludicrous farrago of inaccurate dogmatism in which he indulges. Does Mr. Lee really expect me to insert a note to say that I am aware that these names are not strictly accurate in orthography, or that the works with which they are credited are not precisely what is described? What with notes and excursions my article would have been a volume.

9. Juliers. I wrote S. Julien. I am sorry to say, on referring to my MS., I find that it stands there correctly. I omitted to alter it in the revise. My only excuse is the length of time which elapsed since the original composition of the article. I call Sir E. Cecil one of the English generals. It should have been "commander-in-chief." It should have been nothing of the kind. He was merely commander of the small English detachment of 4,000 men who were assisting the Low Country Army. Commander-in-chief would have been a most misleading term.

10. Mr. Lee finds fault with me for speaking of the Duke of Buckingham at a certain date as plain "George Villiers," stating that I call him by this name in 1617, when he was Viscount Villiers. That he was Viscount Villiers in 1617 I do not for a moment deny; but the unprejudiced reader will hardly be prepared for the real fact—that I make no such statement at all. I say that on Herbert's return from his travels he became Villiers's friend; but, if Mr. Lee had had the courtesy to state the fact which cannot have escaped him, he would have seen that I was merely using the older chronology, such as it was in 1885 before the appearance of the monumental work to which he so frequently and feelingly alludes. I put the embassy to France in 1619. The *Biographia Britannica* puts it even so early as 1616. Thus, when Lord Herbert returned, in 1615, according to my chronology, Villiers was still George Villiers.

More than this. Mr. Lee not only puts into my mouth a statement which I did not not make; but, in taking 1617 as the date of Herbert's return from foreign parts, he makes a gross error. In the volume called the Old Herbert Papers, there is a letter from Francis Newport, written to Herbert at the Hague in January 16, 1615. There is another written to him in England, addressing him as Ambassador in May of that year. Therefore he must have returned, and, further, have made Villiers's acquaintance in the interval. Now, as Villiers was only knighted on April 23 of the same year, I think I am right in saying that when Herbert returned he was plain George Villiers. In fact, not only has Mr. Lee deliberately misquoted my words, but he has

made a series of blunders himself in chronology.

11. Mr. Lee finds fault with me for saying that, after a certain date, the "notices of his life are rather scanty." And he quotes "the Powysland Club collections, the Calendars of State Papers, the Parliamentary Journals." But, what do these record, except the fact that his public life had practically come to an end? He then speaks of the "helpless theorising" with which I try to account for his disappearance from public life. Mr. Lee does not take into account the fact that I have said that possibly his political disappointments may have been the cause. That he can pass over, because it would invalidate his criticism; and, again, he alludes to the "latest edition of the autobiography" (his own), which here as elsewhere it is criminal to be unacquainted with.

12. "Anthony Master" should be "Thomas Master." It should be. If anyone will look on p. xxxii. of the memoir to which I have already alluded, he will see the not unnatural reason of my mistake.

13. I bracket two books "Religio Laici"—and "Religio Gentilium"—as forming one book. "They were published separately." Yes, I never for an instant denied it. Any reader could see that I did not profess to give an exhaustive account of his works. In fact, I say "chief writings," and the books are merely bracketed for convenience. Mr. Lee would have seen that too, if he had not been bent on fault-finding. Further, in his zeal for alteration, Mr. Lee must needs give his version of the title of the work, in order to make it appear that I have not even quoted it rightly. He had better have left it alone. The title is "De Religione Gentilium, errorumque apud eos causis," and is not "De Errorum Causis," as Mr. Lee states. That is a different treatise altogether, published seven years before. These are merely questions of references; and Mr. Lee should have been certain of his own ground before proceeding to lay down the law.

14. This is a literary criticism on Lord Herbert's Poems in which I indulge, and with which Mr. Lee disagrees. That is the only sense in which it is an error; and I think that most unprejudiced critics will agree with me.

15. Another literary criticism on the life of Henry VIII., with which Mr. Lee disagrees. The fact is, he has adopted Lord Herbert; and to judge from the acrimonious tone of his defence of his writings, it would almost seem as if he were responsible for them himself.

16. I give a slight *résumé* of Lord Herbert's philosophy; and Mr. Lee is at me because it is not more exhaustive. An analysis of the *De Veritate* would be as much out of place in a magazine article as it is in place in a philosophical treatise. What with Lord Herbert's mother, and the life of Telesius, and an analysis of the *De Veritate*, my article would have been a volume. But I may mention, for Mr. Lee's satisfaction, that in my original MS. the *De Veritate* was analysed, but excluded to bring the article into reasonable limits.

17. Mr. Lee tells me that calling the Deists "a body of uncertain origin" implies that I think them to be an organised sect. The language may be misleading, but it is the language of the French writer Viret, who, in order to assign the school a definite place in philosophy, treats them, as he necessarily must, as an organic whole.

Now for an instance of Mr. Lee's own erudition. He says: "Lord Herbert was not known to his contemporaries as 'the chief patron of Deism,' &c. I believe Leland, in 1754, first gave him the title of Deist." As a matter of fact, he is totally wrong in both statements. The words are Dr. Halyburton's—a Scotch Professor of Theology, who was born some

years before the death of Lord Herbert—and it is by him that the title of Deist is applied. Surely a man of Mr. Lee's professions should not, in correcting a fellow-student, proceed from such misstatements.

18. Mr. Lee endeavours to make your readers believe that I have invented the title of a book which has no existence. "Leland" should of course be "Leslie." Mr. Lee must know this. It was obvious that I was analysing Leslie, not Leland. I admit the error, but not its gravity.

The rest of this criticism is idle. I say that a certain controversy was rancorous. Mr. Lee says it was not, and quotes three authors (spelling the name of one incorrectly) who are not rancorous. But it is merely a question of citing others. If he has gone as deeply as he professes into the question, the names of Leslie and Shelton, not to speak of Hill or Balguy, would occur to him; but if he were to mention Leslie it would spoil one of the best of his paragraphs, in which he deals with my mistake, and so he suppresses it.

Mr. Lee is a specialist, as I have said before; and I do not dispute his claim to superior knowledge in the matter of Lord Herbert. But of the pretentious list of eighteen grave errors with which he credits me I do not plead guilty to more than four: one of those is a typographical error (careless on my part, I admit), one is the substitution of the name Anthony for Thomas, another the name Leland for Leslie, and, lastly, I have given the number of Lord Herbert's brothers wrongly.

We differ on several questions. Perhaps if I had had the advantage of seeing Mr. Lee's book I should have agreed with him; but he ought to be the first to excuse that, instead of dwelling upon it at every point. At the date at which I wrote, with the object for which I wrote—to give a general picture of an interesting man—the opportunities for consulting private papers and family records did not fall in my way.

ARTHUR BENSON.

THE CANARY ISLANDS.

London: March 21, 1888.

You cannot wish, and I am sure I do not, to prolong a discussion upon the accuracy of my book on the Canary Islands. Permit me only to say that your reviewer is, in my opinion, relying too much upon the authority of certain native writers. I will take but one example. He refers twice to Don Agustin Millares. I have had the pleasure and advantage of Don Agustin's acquaintance, and I have his writings by me here. In many matters he is a great authority; but where I have disagreed with him I have done so deliberately, in consequence of my own observation and study. Neither Don Agustin nor Don Gregorio Chily Naranjo, for instance, has, as they told me themselves, ever been through all the islands.

OLIVIA M. STONE.

M. CLÉDAT'S EDITION OF THE "CHANSON DE ROLAND."

London: March 19, 1888.

The writer of the notice of M. Clédat's version of the *Chanson de Roland* (ACADEMY, March 17) expresses his regret that M. Clédat did not devote his time to the production of an annotated edition of the chanson, instead of to the version under review. May I point out that M. Clédat has already published an *édition classique* of the poem (Garnier Frères, 1886). It is, however, an unsatisfactory one, for two reasons: firstly, in accordance with the theory that the *Chanson de Roland* is of French not Norman origin, he has taken upon himself to "reform" the text—"Notre réforme la plus apparente a été de franciser le manuscrit

d'Oxford," he says in his preface; secondly, in his glossary, he has given no references to the text—an unpardonable omission, especially in an *édition classique*.

PAGET TOYNBEE.

AI POINTMENTS FOR NEXT WEEK.

MONDAY, March 26, 8 p.m. Society of Arts: Cantor Lecture, "Alloys," III., by Prof. W. Chandler Roberts-Austen.

8.30 p.m. Geographical: "A Naturalist's Explorations in the Solomon Islands," by Mr. C. M. Woodford.

TUESDAY, March 27, 8 p.m. Society of Arts: "The Panama Canal," by Mr. J. Stephen Jeans.

8 p.m. Civil Engineers: Discussion, "Economy-Trials of a Non-condensing Steam-Engine—Simple, Compound, and Triple," by Mr. P. N. Willans.

8.30 p.m. Anthropological: "The Akkas," by Sir Richard F. Burton.

WEDNESDAY, March 28, 8 p.m. Chemical: Anniversary Meeting; President's Address; Election of Officers.

8 p.m. Geological: "Some Eroded Agate Pebbles from the Soufian," and "The Probable Mode of Transport of the Fragments of Granite and other Rocks which are found embedded in the Carboniferous Limestone of the Neighbourhood of Dublin," by Mr. Valentine Ball; "The Upper Eocene, comprising the Barton and Upper Bagshot Formations," by Mr. J. Starkie Gardner and Mr. H. Keeping.

SCIENCE:

SOME BOOKS ON BUTTERFLIES AND MOTHS.

South African Butterflies: a Monograph of the Extra-Tropical Species. By Roland Trimen, assisted by James Henry Bowker. Vol. I. Nymphalidae, 355 pages and six coloured plates. Vol. II. Erycinidae and Lycaenidae, 242 pages and three coloured plates. (Trübner.)

Rhopalocera Malaya: a Description of the Butterflies of the Malay Peninsula. By W. L. Distant. Quarto, 498 pages and forty-six coloured plates. 1882-1886. (West, Newman, & Co.)

A Catalogue of the Moths of India. Compiled by E. C. Cotes, first Assistant in the Indian Museum, Calcutta, and Col. Swinhoe. Part 2. Bombyces. Octavo, 214 pages. (Calcutta.)

Who, when a child, has not run after a butterfly and tried to catch it, either with his cap or a little gauze net? and who does not recollect, with delight, after a long dreary winter, the sight of the first pretty orange-tipped butterfly fluttering in the sunshine, along an adjacent hedge-row? No wonder that this inborn delight survives in many persons their childish years, and is developed into the study of insects in general, or of those of the order of Lepidoptera, so named from the coating of scales with which the wings of butterflies and moths are thickly covered. Of this we have evidence in the authors of the three works above mentioned. Twenty-five years ago Mr. Roland Trimen, the indefatigable curator of the South African Museum at Cape Town, published a work on the butterflies of South Africa; and he has now brought out the first two volumes of a new and much enlarged edition of the same work, which will be completed by a third volume to contain about 142 species, bringing the total of known South African forms up to about 380 (being nearly 200 more species than were included in the former work). Of butterflies from all the regions of the globe nearly 10,000 species have been catalogued, while in the British Islands we possess only about sixty kinds.

Mr. Trimen commences his new work with an extremely well-written introduction of nearly fifty pages, in which the general characters of insects, and especially of the Lepidoptera, are laid down with great clearness. The Rhopalocera, or knob-horned species (as the butterflies have been distinctively called), are then described in the general peculiarities of their structure in the perfect state, their caterpillars or larvae, and chrysalids or pupae; their classification, geographical distribution, the differences presented by the sexes; their haunts and habits, modes of flight, carriage of wings when in flight or at rest, migrations, protective resemblances and mimicry (as for want of a fitter word, the resemblance, more or less complete, between two different species has been termed), and local distribution of the 380 South African butterflies. Of these, 118 species belong to the family Nymphalidae (4 to the sub-family Danainae, 29 Satyrinae, 24 Acraeinae, and 61 Nymphalinae). Of the Erycinidae there is only one species of *Libythea*, of the Lycaenidae there are 116 species, of the Papilionidae 84 species (69 species of Pierinae and 15 species of Papilioninae), and of the Hesperidae there are 61 species. The descriptions of these species are very carefully worked out in their different states, and the entire work is one of the most satisfactory faunas which has yet appeared on entomology. We are, however, sorry to perceive that the systematic arrangement of the different families proposed by the German Lepidopterists, and adopted by Mr. Bates (commencing with those butterflies which have the forelegs rudimental, especially in the males), has been adopted in preference to that previously generally followed, commencing with the noble Equites, as Linnaeus termed the giant Papiliones; no scientific advantage having been obtained by the substitution of the German plan over the Latreillian arrangement.

With reference to the curious relations which have been termed mimicry (of which many instances have been long since recorded, especially in the writings of Swainson and others), Mr. Trimen gives the following as the summary of his own discoveries:

"Having been able to show (1) that the Danainae and Acraeinae in Africa, like their allies elsewhere, are provided with offensive odours and secretions; (2) that the butterflies mimicking them invariably occur in the same districts, and in six cases (South African) in the very same localities; (3) that in eight cases the mimickers are known to be very much scarcer than the species which they copy [which seems to us to be a proof that the mimicking process had not been very beneficial]; (4) that in five cases where the Danais or Acraea presents local forms or merely slight varieties, even these are mimicked by individuals of the imitating species; (5) that in three cases where the sexes of the insect mimicked differed strikingly from each other, the sexes of the mimickers present corresponding differences; and (6) that in four cases observed in life by [the author], it was next to impossible to distinguish the mimicker from the species which it mimicked. It must be remembered that these extraordinary likenesses are not those of general colouring and pattern alone, but include outline and form, and extend to minute reproduction of prominent markings, however small; and that the deception is often further ensured by following closely the kind of flight and mode of resting proper to the species copied" (p. 37).

The nine coloured plates exhibit the excellent progress made in the art of chromolithography, and are from the press of Messrs. West, Newman & Co.

In the second of the works mentioned at the head of this article, *Rhopalocera Malayana*—a description of the butterflies of the Malayan Peninsula—Mr. Distant, well qualified by his residence in those antipodean regions, has produced a beautifully illustrated work, unexceptionable in its typography, and with forty-six sumptuously coloured plates and numerous woodcuts scattered through the text, representing unfigured species, with occasional structural details of the genera. The general classification adopted is that in which the Papilionidae are displaced from the head of the Rhopalocera and brought into close connexion with the Hesperidae; and 503 species are described—including a number of new species—the descriptions being preceded by a short introduction, in which the difficulties arising from the want of a generalised view of the faunas of different parts of India is alluded to, and an example given in which several species of the genus *Euploea* are relegated as local varieties to *E. Diocletianus*—namely, *Eupl. Rhadamanthus* from Continental India; *Eupl. Diocletianus* from Tenasserim, Malay Peninsula, Cochin China, and Sumatra; *Euploea Alcides* from Java; and *Eupl. Lowi* from Borneo. The adoption of such a system as is here proposed will cause a great revolution in the local catalogues of the insects of all countries.

The second part of the catalogue of the moths of India has just been issued by the trustees of the Indian Museum at Calcutta, containing the great division of the Bombyces, of which the list consists of 1535 species, among which are some of the most gigantic of known insects. (The previous first part of the catalogue recently issued comprised 188 species of Sphingidae.) The catalogue has been carefully worked up with the synonyms added from the memoirs of Messrs. Butler, Moore, Walker, Felder, Kellicott, &c.; and the species in the Calcutta Museum are indicated by initials, as in Walker's British Museum catalogues.

We have also received the *Journal* of the Asiatic Society of Bengal issued on September 1, 1887, which is occupied with a "List of the Lepidopterous insects collected in Tavoy and in Siam during 1884-5 by the Indian Museum collector, under C. E. Pitman. Part II. Rhopalocera, by H. J. Elwes and Lionel de Nicville." One hundred and sixty-seven species are described or indicated. In the introductory remarks the authors speak of the difficulty of determining many of the Indian species, in consequence of the want of proper discrimination between local forms or varieties and distinct species, the rage for raising the former to the rank of the latter having induced the proposal to add greatly to the list of real species.

I. O. WESTWOOD.

CORRESPONDENCE.

INDIAN INSCRIPTIONS.

Göttingen: March 17, 1888.

Some readers of the ACADEMY will be glad to learn that Dr. Burgess has re-discovered that "huge inscription," existing "in some

part of the state of Gwalior," which was first discovered by Sir A. Cunningham, and mentioned by Dr. F. E. Hall, in 1862, in the *Journal* of the Bengal Asiatic Society (vol. xxi., p. 6), but had since then been lost sight of. According to Mr. Fleet, *Indian Antiquary* (vol. xv., p. 108), the inscription had to be looked for at, or in the neighbourhood of, Sironj; and it has actually been found at Siron (or Siyadóni, as it is called in the inscription itself), in the Lalitpur district of the North-Western Provinces, about nine miles north-west of Lalitpur and thirteen miles north-east of Chandéri.

The inscription consists of forty-six lines, with about 160 syllables in each line; and excepting the first two, and portions of the last three or four lines, it appears to be well preserved. With the exception of ll. 39-46, it is in prose. It records a large number of donations to various deities, and its chief value will probably be considered to consist in its furnishing the date Samvat 964=907 A.D. for the paramabhāṭāraka mahārājādhirāja paramēśvara Mahēndrapālādēva, who meditated on the feet of the p.u.p. Bhōjadēva; and the date Samvat 1005=948 A.D. for the Dēvapala who meditated on the feet of the p.m.p. Kshitipālādēva. Besides these four paramount sovereigns, it mentions the mahārājādhirājas Dhūrjāta and Nishkalanka of Siyadóni, and the mahāsāmantādhīpati Undabhata, who is mentioned in a Tērāhi inscription with a date, the calculation of which enables us to assign the dates given in this inscription with certainty to the Vikrama era. In recording that a prince of Mahōdayā, which is compared with the city of the immortals, gave to certain Brāhmins the town of Rāyakka, the inscription appears to show that the paramount sovereigns Bhōjadēva, &c., spoken of, were kings of Kanyakubja.

The whole inscription will soon be made generally accessible by Dr. Burgess.

F. KIELHORN.

SEECK'S "QUELLEN DER ODYSSEE."

March 18, 1888.

The new number of the *American Journal of Philology* (viii. 4) contains an article by a Mr. B. Perrin, who is good enough to allude to my notice in the ACADEMY of Seeck's *Quellen der Odyssee* (July 2, 1887). I dismissed the book, he says, with contempt and the usual mercenary fling of the English—"Who pays?" Now I have no great objection to being called "mercenary," when the epithet comes from the "land of the almighty dollar"; but I cannot help thinking that Homeric students will be very sorry to read Mr. Perrin's paper. We in England have been wont to regard the *American Journal of Philology* as devoted to sound and sober classical studies. Our confidence is likely to be shaken if its pages are opened to unknown writers who uphold the wildest of German theories. Herr Seeck's arguments are hardly better than those by which the Abbé Harduin in the last century tried to disprove the genuineness of Vergil's *Aeneid* and Horace's *Odes*. The study of Homer is in some danger of falling into the same condition as that of Roman Britain. The solid facts are being buried under mountains of enormous and extravagant speculation. It is only fair to add that Dr. Weir Smyth's review of Jebb's *Iliad*, in the same number of the *Journal*, is a scholarly piece of work, and stands in marked contrast to Mr. Perrin's composition.

THE REVIEWER.

SCIENCE NOTES.

M. ERNEST FAVERO, who is at present finishing a history of Australian exploration, is about to undertake a new journey, accompanied by a surveyor, who will be paid by two

colonial geographical societies. M. Favenc, who defrays his own expenses, will start from Western Australia into the interior, along a track never before followed, and then turn southward to the sea.

THE Geologists' Association have made arrangements for an excursion to Southampton on Easter Monday and Tuesday, in conjunction with the Hampshire Field Club. The special object on both days will be to examine the fine cliff sections of fossiliferous Haddon, Barton, and Bracklesham beds from Hordwell westward, now made accessible by the opening of the new railway to Bournemouth. The director of the excursion will be Mr. W. Whitaker, assisted by Mr. J. Starkie Gardner. Some members of the association intend also to visit the neighbourhood of Newbury on the previous Friday and Saturday.

DR. ROBERT BROWN has prepared an account, based upon the most recent researches and discoveries, of the origin of the Eskimo, which will be published in an early number of the *Archæological Review*.

MM. FRÉMY AND VERNEUIL have recently submitted to the French Academy of Sciences some remarkable specimens of artificial ruby, which they have succeeded in producing by improvements on their earlier methods of synthesis. By the action of fluoride of barium on alumina containing traces of bichromate of potassium, they have obtained fine crystals, lining cavities in a friable white matrix from which they are easily separated. The crystals appear to be identical, both chemically and physically, with the natural ruby. They consist solely of alumina coloured with a little chromium. They present a beautiful colour, and are hard enough to scratch topaz. M. Des Cloizeaux has found that in crystalline form and optical properties they agree with the native mineral.

PHILOLOGY NOTES.

DR. HUGO SCHUCHARDT, Professor of the Romance languages at Gratz, has made his debut in Basque with a pamphlet of thirty-eight pages, entitled *Romano-basquies*, (1) P, dealing with Basque words beginning with that letter, and derived from the Romance. The work is thoroughly done, and gives additional proof of how much the Modern Basque vocabulary is a borrowed one.

THE recently issued number of *Y Cymmrodor* is not only thicker but better than usual. Besides an elaborate paper by Dr. Nettlau on the Welsh verb, Mr. Phillimore has edited the *Annales Cambriae* and Old Welsh genealogies from Harleian MS. 3859. It has all the appearance of being an excellent piece of work, and it disposes of a considerable number of errors. What its value to Welsh philologists may be we do not know, but historians will be very thankful for it. Prof. Lloyd's article on the Old Welsh name-system is also very instructive. It is clear that the Oxford School is rapidly routing the charlatanism which has so long been in possession of the field of Welsh history and philology. The present editor of *Y Cymmrodor* is Dr. Isambard Owen.

THE last number of Bursian's *Jahresbericht* contains reports on Aristotle (by Susemihl), Pindar, the post-Aristotelian Philosophy, Quintilian, Propertius, and Roman antiquities. The English students of Propertius receive a full notice, and should consult it. From the rest one sentence of Susemihl's is worth quoting: "Die Abhandlung von Tyrrell ist ein erfreuliches Zeichen dafür dass es auch in England Männer gibt, welche die Art wie mit der Aristot. Politik umgeht, mit Freimuth und gesunden Menschenverstand zu beurtheilen sich durch die ausseror-

dentliche Auctorität dieses Mannes in seinen und ihrem Vaterlande nicht abhalten lassen."

A *Dictionary of the Targumim, the Talmud Babli and Yerushalmi, and the Midrashic Literature*. Compiled by M. Jastrow, Ph.D. Part II. (Trübner.) It may be enough to refer to our former notice of this lexicon—a valuable and laborious, though somewhat unequal work, which aims at supplying a real want, and has been compiled by a scholar of wide learning and immense industry. The good points of the work are sufficiently prominent, and the defects are really such as to amuse rather than to irritate. Christian students certainly will be in no danger of being carried away by the new "wind of doctrine" which pervades many of the etymologies presented here. They will not easily be persuaded that *אור* means "the Light of God" (comp. Ps. cxviii. 27), or that *אור* (so printed, and given as a word of separate affinities) = *אור* from *אור*, or that *אור* means the "bubbling (egg)," or that *אור* is contracted from *אור*, or even that *אור* is from *אור*. Would it not be better, however, to economise space by reserving such heresies for the columns of some critical periodical, that the learned author might see how they strike fellow-workers at least equally competent with himself?

Corrigenda.—In Mr. Whitley Stokes's letter, entitled "Rawlinson B. 512 and the Tripartite Life of S. Patrick," in the ACADEMY of last week, p. 192, col. 2, l. 21, for "nones" read "none"; l. 29, for "puts" read "pass."

MEETINGS OF SOCIETIES.

CYMMRODORION.—(Wednesday, March 7.)

DR. ISAMBARD OWEN in the chair.—Prof. T. F. Tout, of St. David's College, Lampeter, read a paper on the "Welsh Counties." He said that the oldest of the exclusively Welsh counties of today are due to Norman conquests in South and East Wales. Among the lordships established by Norman adventurers in Wales were Gower, Brecknock, Montgomery, Bromfield, and Chirk. The smaller ones were modelled after the manor, but two of the larger ones—the lordships of Pembroke and Glamorgan—which had *jura regalia*, grew to be the earliest counties in Wales. As to Pembroke, Gilbert of Clare, father of Richard Strongbow, the invader of Ireland, was made its first earl in 1138, and his earldom became the county palatine of Pembroke. It was considerably smaller than the ancient Dimetia, as Lamphey, Kemmes, and the district round St. David's were not included in it. Somewhat earlier, Robert Fitzhamon had conquered large districts in Glamorgan; and his daughter was married to one of the natural sons of Henry I.—Robert, Earl of Gloucester—in which family the lordship remained till 1217, when it passed over to the house of Clare. The rest of South and East Wales remained under Lords Marches, while the lords of Gwynedd reigned in North Wales. Before the final conquest of Wales by Edward I., shires were growing up in South Wales, e.g. in 1280 the king granted the "counties of Carmarthen and Cardigan" to Bogo de Knoville to be governed by him. By the Statutum Gwallae of 1283, the counties of Carnarvon, Merioneth, and Anglesey, were established in North Wales, subject to the justices of Snowdon, sitting at Carnarvon; but each county possessed local officers of its own (sheriffs, coroners). The continuity of association has been preserved in these counties, as the old organic divisions into cantreds and commotes were used as the basis of the settlement; and the boundaries have practically remained the same ever since. The provisions of 1280 as to South Wales were confirmed and extended. Carmarthen was made the capital of West Wales, which included the counties of Carmarthen and Cardigan. There was a separate sheriff for each county,

that of Cardigan being styled Sheriff of Cardigan or "Lampadar." Prof. Tout said that "Lampadar," though generally taken for Lampeter, really stood for Llanbadarn, and meant, not the village of that name, but the town of Aberystwith, which is situate in the parish of Llanbadarn. The jurisdiction of the Sheriff of Carmarthen was limited, as the ecclesiastical liberty of Abergwill, the lordships of Llandovery, Abermarlais, and others were not included in it. Cardiganshire had more organic unity than any other county in Wales. It represented the ancient kingdom of Ceredigion, and its men had always acted together in resisting foreign invasions. Flint was also established as a separate county by Edward I. When the conqueror gave to his nephew, Hugh Lupus, the Earl of Chester, included with it was as much of Wales as could be recovered from the Welsh. Hence, in old records, it is stated that "the county of Flint appertaineth to the Sword of Chester." The Sheriff of Flint was, therefore, made subject to the Sheriff of Chester, and its records were also kept in the latter city. Thus, all Wales excepting the lands of the Marchers was divided into shires. But there was no unity in Wales. There were nearly 130 Lords Marchers independent of royal jurisdiction. The union of Wales with England under Henry VIII. completed the shire system in Wales. The Lords Marchers were reduced to be lords of manors. The palatine character of Pembroke and Glamorgan was abolished. Several Marcher Lordships were grouped together to form the counties of Brecon and Radnor with Courts of Exchequer and Chancery at Brecon. Denbigh and Montgomery were similarly formed in the north, with courts at Denbigh. Many of the Marcher Lordships on the border were absorbed into the adjacent English counties, and this fixed the boundary between England and Wales. The remaining lordships were made into the county of Monmouth, but the shires were under the jurisdiction of Westminster. Besides these, there are two counties of cities or boroughs in Wales, Haverfordwest and Carmarthen. Prof. Tout further spoke of the antiquity of the ecclesiastical divisions in Wales, which often indicate early political and racial distinctions.—In the discussion that followed, Lord Powis referred to the independent jurisdiction exercised by the Welsh courts as late as the present century; but the loss of the more ancient records of these courts as well as of the franchise of the Marcher Lordships renders difficult the reconstruction of the history of the Welsh judicature.

FINE ART.

COLLECTORS of PICTURES, CHINA, &c., can insure against fire in the best offices at reduced rates and upon a special system which provides a guarantee (which an ordinary policy does not) of full payment in the event of claims, by applying to the FINE ART INSURERS PROTECTION SOCIETY, 43, Botoolph-lane, Eastcheap, E.C.

MR. FULLEYLOVE'S "OXFORD."

A SERIES of drawings, which form a picturesque record of Oxford, are now on view at the Fine Art Society's. They are the work of Mr. John Fulleylove, whose depicting of architecture and of stately gardens has become familiar of late years even to a public outside the pretty wide circle of the Royal Institute. Many of them, as will be imagined, are in water-colour. But many are in pencil; and the pencil work is, in its own way, quite as remarkable as that which is in colour, as we shall point out with a little more detail before we have done. But first a word or two on the works in which the artist has employed the more popular medium. We think the water-colour drawings are more unequal than were those of Petraroh's country. Perhaps this is because Oxford, though a very good subject for Mr. Fulleylove, is not so entirely his own as is that land of stately grace in Southern France. Perhaps, too, with certain of the drawings he may have been somewhat hurried; or, by the introduction of the not exactly stately figure of the University "man" into his design, he may have made a concession more welcome to academic than to

artistic folk. At all events, the inequality is somewhat noticeable. The exhibition contains some things not very strong or very *rusci* for Mr. Fulleylove, and, with these, some of the best things he has ever done. The peculiar excellence is, perhaps, chiefly to be sought in some of the largest and some of the smallest drawings. Thus, there is a large drawing of the quadrangle of Brazenose—black-grey stone with the grass plot in the centre and the now removed statue—which is entirely admirable. This work is largely conceived and so executed that a unity of impression is preserved. Other drawings of middle size may be mentioned as even more brilliant studies of what we should call still life—the still life of ancient stone, ancient woodwork, richly coloured “table-case,” or shadowed window. Thus No. 13, “St. John’s College, with Archbishop Laud’s Library,” and No. 77—a particular bit of the Bodleian, with a show-case supported on a chest of drawers, most wonderfully painted for glory and delicacy of colour in a common thing—come to be singled out. And, to find perfection, or something very much like it, in the quite tiny drawings, one has hardly to go beyond No. 23—which shows the nave and choir of the cathedral—and No. 70a, which shows Magdalen and its famous bridge—the texture of the bridge idealised to marble; the whole affair a dream of silver in the sharp yet placid morning light. Mr. Fulleylove is an artist of individual vision; yet he has had the wisdom to study carefully “the masters.” He would never have painted this Christ Church and this Magdalen quite as he has if he had not known Turner’s vignettes—the illustrations to Rogers’s *Poems*, and the like. He would never have painted “Ifley Mill” (75) quite as he has if he had not been a student of Dewint. His work is not imitative, but he has assimilated much.

To turn to the pencil drawings. Pencil has generally been accounted a very unpopular medium; but Prout and Mr. Fulleylove have in different generations, and thus far in different measures, done something to give it acceptance when it is employed to render architecture. Mr. Fulleylove may not yet have acquired that extraordinary economy in the selection of line which is one of the charms of pencil work at its best—which is quite the charm of a certain “Calais” which we remember by Prout—but which even Prout by no means always displayed. But his pencil-touch is singularly varied—now bold, now delicate. He gives emphasis and accent by it. It is never monotonous and uninteresting. It has vitality in it. And what is done in the matter of architecture is done with a fund of knowledge in the background—knowledge never obtruded but always possessed. One is glad to know that these drawings are capable of almost exact reproduction by the skilled lithographic printing of Mr. Way, and that the Fine Art Society has seen its way—the pun is quite atrocious—to promise us a volume so reproduced. F. W.

LETTER FROM EGYPT.

Cairo: March 9, 1888.

I have just seen Dr. Robertson Smith’s letter in the ACADEMY of February 25, supplementing from the abundant stores of his Oriental knowledge the account I had given of my recent journey from Gaza to Kantara. As he seems to have overlooked my chief reason for identifying Khan Yûnas with Jenyso, I am tempted to add a few more words on the subject. Before doing so, however, I must point out that my letter was necessarily written without the aid of any books, except Murray’s *Handbook*, from which comes the statement that Pelusium is the “Pheromi of the Copts.” The writer of

the statement was, I suppose, Sir Gardner Wilkinson, in which case it would be worth while to hunt up the authority for it. I observe, by the way, that Parthey considers the identification of Peremoun with Farama or Pelusium open to question.

As I had no access to books, I spelt the proper names as I heard them actually pronounced by the natives. *Rapha* was called by them *Rapha*, illustrating Spitta Bey’s note on the interchange of *en* and *ha* in Egyptian Arabic. The forms *Qes* and *Qatiye* or *Qatyeh* represent the pronunciation of a Beduin who acted as my guide at Farama. My camel-drivers called the two places *Ges* and *Gatyeh*. I am not certain about the pronunciation of *Româneh*, but it seemed to me to contain only one *m*.

Now let me turn to the question of Jenyso. The oasis in the midst of which Khan Yûnas stands is the only large one between Gaza and El-Arish, and I must doubt whether it has been otherwise since the beginning of the Christian era. The “desert” between these two cities is not the kind of desert to which oriental travellers are accustomed. It consists of a long series of sand-hills, covered, for the most part, with scrub, which depends for its growth on the rain and the sea-mists. Trees can grow only where there are springs of water, and this is the case in a very few places. One of these places is *Raphia*, another is *Khan Yûnas*. But whereas there is a plentiful supply of water at *Khan Yûnas*, *Raphia* possesses only a single miserable well. At *Raphia*, moreover, there is no *tel*. The remains of the old town extend over a very small area, and, I should judge, are nowhere more than a couple of feet in depth. *Khan Yûnas*, on the other hand, is the only place I passed between Gaza and El-Arish which is built on a *tel*, and the *tel* is of much the same height as those of Gaza and El-Arish. Its antiquity may be gathered from the fact that the beautiful mosque of Barquq stands on the present summit of the mound, showing that no accumulation of soil has taken place there during the last 500 years. I passed no other spot where the site of a city comparable with *Kadylis* or *Gaza* could conceivably be placed; unless, indeed, we are to suppose that a whole *tel* has been swallowed up by the sand. But in that case, what was the city represented by the *tel* upon which *Khan Yûnas* stands?

I think I forgot to mention that my Beduin guide informed me that at a place called *Qasr Awêt*, two and half hours to the south-east of *Qatiye*, the Beduin discovered some five years ago chambers built of stone and buried under the ground, similar to those recently found at El-Arish.

Dr. Robertson Smith does not allude to *Hemdiye*. Is it *Gerrha*?

Bir el-Abd is “hardly an easy afternoon’s journey” from *Qatyeh*, as it took us rather more than six hours to accomplish it. Half an hour from *Qatyeh* are some palms and a well, formerly known as *Bir Ogba*, but now called *Bir Bassûn*. I was told that *Mazâr* was seven hours from *Bir el-Abd*; but I cannot say whether this is correct, as my own route lay along the edge of the sea.

M. Bouriant has been kind enough to let me copy one of the cuneiform tablets from *Tal el-Amarna*, which is in his possession. Those belonging to the Boulak Museum are locked up in the director’s house; and, like several other objects of interest, are inaccessible both to the employees of the museum and to foreign scholars who visit Cairo during the winter, while M. Grébaut is up the river. The tablet is written in a neo-Babylonian form of cuneiform script, though some of the characters are peculiar; and it belongs to the period extending from the age of *Assur-bani-pal* to that of *Darius*. It contains despatches relating to the planting of

trees, the laying of foundation-stones and other matters apparently in the land of Nu . . . and the city of *Zumurimba*, and is addressed by an official to the king, whom he calls, in Egyptian fashion, “my Sun-god.”

M. Grébaut, I hear, is still engaged in clearing the site of the temple of Luxor, where he has found an inscription belonging to a soldier of the time of Constantine.

A. H. SAYCE.

CORRESPONDENCE.

THE HYKSOS.

Weston-super-Mare: March 10, 1888.

In Canon Taylor’s letter in this day’s ACADEMY he speaks of the Mongolic type of the portrait-statues which are generally supposed to be those of the Hyksos. In my *Studies on the Times of Abraham* (Bagster, 1878), I have given the heads of all those statues except one found in the Fyûm, and have discussed their characteristics.

It was Mariette who first pointed out the strong resemblance of this statuary to the present people of the Delta lake-country (*Rev. Arch.*, 1861), and he considered that the Kheta were the leaders of the Hyksos invasion. Lenormant first (I think) wrote of the Turanian element in these figures in 1867 (*Les Prem. Civilis.* i. 208):—“A race which is not even purely Semitic, and must be pretty strongly mixed with the Turanian elements which science reveals to-day as having borne so large a part in the population of Chaldaea and Babylonia”; and later, to the same effect (“*Frammento di Statua*,” &c., *Bollettino della Commissione Arch. Comunale di Roma*, 1877, p. 13); and again in 1882 (*Hist. Anc.* 3^{me} ed., ii. 145, 153); and at the end of his life in 1883 he repeats the same opinion, and discriminates strongly between these faces and those of the Kheta race (*Les Orig. de l’Hist.* t. ii., part ii., pp. 279, 314). The resemblance of the *Giadubar* statues of Assyria to the attributes of Attila was noticed by me (*Times of Abraham*, 174), and I quoted from Herbert the statement that Attila claimed descent from Nimrod.

Prof. Flower remarked that the sphinx of Sâu

“has certain Mongolian characters, specially in the breadth and prominence of the cheek-bones, so much as to suggest that the invasion and occupation of Egypt by the so-called ‘Shepherds’ was one of the numerous instances in which some of the nomadic Tartar hordes of Central and Northern Asia have poured forth from their native lands, and overrun and occupied for a longer or shorter period the countries lying to the west and south of them. If this view can be maintained,” he said, “the Hyksos invasion would have been only one of the series of which the conquests of Attila, Tchingis Khan, and Timur, and the more permanent settlement of the Finns, the Magyars, and the Turks in Europe, are well-known examples” (*Journal of Anthropol. Institution*, vol. xvi. 377)."

In quoting these words at Manchester (Brit. Assoc. Sect. H., Sept. 2, 1887) I added the comment:

“But I think it likely that only the leaders of a vast motley alliance in this case were of the race so characterised, and the matter lies deep.”

Lepsius considered that these Hyksos lords (of the statues) were “Hamitic,” of the Pûn race by the Red Sea. This does not seem to me so likely; but it is supported by Maspero (*Hist. Anc.* 4^{me} ed. 162), who thinks that the sphinxes of Sâu were only surcharged with the title of Apophis, and belonged to earlier lords of Lower Egypt.

These rough notes may be useful. In a hasty letter I cannot go into detail, but I hope to deal with the matter in a paper on Mr.

Flinders Petrie's casts which I am preparing for the Anthropological Institute. Lenormant said that his friend Dr. Hamy had in hand a work in which he would treat this and kindred questions. I cannot find out whether this work has yet appeared.

HENRY GEORGE TOMKINS.

NOTES ON ART AND ARCHAEOLOGY.

MR. J. H. MIDDLETON, the Slade professor of fine art at Cambridge, has been elected to a fellowship—an ordinary, not a professorial, fellowship—at King's College.

MISS EDITH MARTINEAU, and Messrs. Walter Crane, Arthur Melville, and A. E. Emslie have been elected Associates of the Royal Society of Painters in Water-Colours.

THE exhibitions to open next week include the Society of Lady Artists (who are careful to describe themselves as "professional") at the Egyptian Hall, Piccadilly; and what is called "a summer exhibition of high-class paintings" at the Continental Gallery, in New Bond Street.

WE may also mention that Mr. G. A. Rogers has now on view, at the Woodcarving Studio in Maddox Street, a bust in Pentelic marble, recently discovered at Athens. It is a female head, with a crown showing the Acropolis and its temples; and it doubtless represents the city of Athens, though we believe that no other similar arrangement is known.

ON Monday and Tuesday of next week Messrs. Sotheby will sell a valuable collection of coins and medallions—chiefly Roman, Byzantine, and Greek—consigned direct from Italy and Constantinople.

THE valuable stained glass windows in the cloisters of Lord Sudeley's house at Tollington have been recently studied by Mr. W. B. Strugnell, of Cheltenham, from whom we may expect a descriptive catalogue historical, heraldic, and artistic. The windows number fifteen, of three lights each; the glass extends from close of the fifteenth to the end of the seventeenth century. One escutcheon bears, in addition to the motto of the garter, the "castles" of a first creation of a dignity—that of the Dukedom of Gloucester conferred on Richard III.

THE STAGE.

THE COMEDY AT THE VAUDEVILLE AND "THE BLOT ON THE 'SCUTCHEON'."

IN presenting an adaptation of *Joseph Andrews* at the Vaudeville, Mr. Buchanan takes occasion to refer to the success of his version of *Tom Jones*, and to say that that proved how unnecessary it is, in dramatising the great masters, "to preserve the coarseness of their period as well as the humanity of their genius." The sentence is neatly turned, and it expresses one side of the truth. Mr. Buchanan, when he deals with Fielding, does preserve, I think, "the humanity of his genius." That inspires Mr. Buchanan to write acceptable and genial, if sometimes ill-constructed, plays; but Mr. Buchanan does not in the strict sense "dramatise" Fielding at all. Nor could Fielding, in the strict sense, be dramatised without the retention of a great deal of what Mr. Buchanan condemns as coarseness. The fact is, Fielding was a very penetrating student of human nature. Fielding actually wrote what Thackeray declared no modern novelist would dare to write—the history

of the average young man. Hence a certain element of coarseness, a certain plainness of speech, which, in the treatment of the novelist by Mr. Buchanan, must be at once got rid of. If Mr. Buchanan's pieces pose as substantially accurate stage versions of rollicking and powerful eighteenth-century fiction, I hold them to pose unwarrantably. But if they assert themselves only as engaging "variations" on a theme which a great master has supplied—and especially as variations suitable to the day, and suitable to the requirements of Mr. Thorne and an always competent company—I accept them cheerfully, as such. Nay, notwithstanding here and there a common repartee and inappropriate retort, I think them, on the whole, very dexterous and agreeable playwright's work, inasmuch as they do bring upon the stage effectively nearly all of Fielding's characters that can properly be brought there. The last of them affords opportunity for a thorough stage realisation, not of the book indeed, but of Parson Adams, of his wife, and of the young woman in whom he shows so legitimate an interest. Joseph Andrews himself is not quite so adequately presented by the dramatist, because he is deprived of at least one important motive for action. He is not tempted as his sister Pamela was. And Lady Booby, as Mr. Buchanan conceives her, is unnatural and inconsequent. Had it occurred to her to propose marriage to Joseph, it would not have occurred to her, on his refusal, to charge him with violence. That could only have been the act of the Lady Booby whom Fielding, and not Mr. Buchanan, imagined—a Lady Booby gross and ungoverned: a Potiphar's wife.

One makes these qualifications—these reservations—in one's approval; but, that being done, it is easy to express, likewise, the pleasure and interest which the piece affords. I do not inquire further, too closely, into the ingredients of the dish. The dish is palatable, and looks well at table, or, to put it in other words, the play sustains its interest; the evening is occupied pleasantly; scenery and stage arrangement of these old-world characters are alike excellent; and the acting, which is never seriously amiss, is, as regards certain players, quite without fault. Every kind of physical advantage has been bestowed on Mr. Conway. He can be hearty with grace; he is sympathetic and chivalrous. Yet he is not a perfect, though he is, no doubt, a fascinating Joseph Andrews. He wants *naïveté*. He is honest and brave; but he is not absolutely simple. Now, the Lady Booby who, in Mr. Buchanan's rendering of the story, "importunes" Joseph "with love in honourable fashion," and makes many tenders of her affection towards him—and afterwards gives proof of her innate vulgarity and inconceivable spite—is represented skilfully, and with discretion, by Miss Vane, who is seen far better in the part of one who deems herself fascinating than she was some weeks ago in the part of one who is really found to be so. The method of Miss Eliza Johnstone—who comes for the nonce from Toole's Theatre—is wont to be pungent. She plays well as that maid of Lady Booby who was the true ancestress of Mrs. Malaprop. Miss Homfrees—large and matronly, domestic and smiling, dressed neat and clean in quiet browns and sober tea-

greens—realises, in appearance at least, Mrs. Adams to the life. Miss Kate Rorke is Fanny. This young artist was so successful as Sophia, and so admirable in "Heart of Hearts," that much has come to be expected of her. She is deservedly a playgoer's favourite. Fanny, however, does not give her quite such opportunities as were found in the other two plays. As it is, Miss Rorke makes Fanny impulsive and ingenuous, natural and charming, though she cannot make her very varied. The cleverest thing in her performance is the inexplicable flavour of rusticity with which, from beginning to end, she contrives to endow it. Hers is undoubtedly a dramatic temperament. Mr. William Rignold is almost needlessly sententious as Sir George Wilson—of whom Joseph Andrews is the long-lost son; but Mr. Rignold, whatever his mannerisms, must, at all events, have the credit of suggesting a man with a sorrow. Mr. Royce Carleton would have played Gipsy Jim more powerfully than the present performer of the part; but the part, after all, is a small one. Mr. Scott Buist does well as Squire Booby; and Mr. Cyril Maude most excellently well as the graceless Lord Fellamer, who, at the instigation of Lady Booby, carries off the screaming fair. Mr. Frederick Thorne gives us a good bit of character-acting as Llewellyn-ap-Griffith. His make-up is excellent; his face very curiously Welsh. I have kept Mr. Thomas Thorne's Parson Adams to the last, because it is distinctly the most finished performance in the play. Few of the parts played by a manager who has never been unduly ambitious have allowed him to be so very varied; few have been filled by him with such significant and telling, yet always delicate, details. And, unlike more than one actor of acquired position, Mr. Thorne scarcely ever introduces a detail that may not belong to the picture. Thus, in his performances, the effect remains broad and true, though the touches by which it is obtained are many and intricate. Throughout the play we have the sense of the very presence of Fielding's good parson; a picture of Adams, placid of countenance, benign of gesture, with his long white bands and his rusty cassock—a man so human that he was wont indeed to be "filled with ale," and was now and then ecstatic in condition at the sight of a game pie—but so domestic that he preferred his ale at home, "however sour," "to any vintage of Falerno."

The Browning Society's performance of the "Blot on the 'Scutcheon,'" at the Olympic, one afternoon last week, was a *succès d'estime*: nothing more. I have, of course, no sympathy with those purely mechanical playwrights, those judges simply managerial in their notions, who, because Mr. Browning, forty years ago, had not the stage dexterity of a Sardou, contrive to be insensible to the interest of close thought, original character, touching sentiment, and the rhythm of splendid verse. Are these so abundant upon a stage, fed not exclusively but for the most part, by commissioned writers of "text" and "libretto"—by third-rate authors far less individual and intellectual than their critics—that we can afford to disregard them in favour of the first dramatist who knows precisely how long a speech the gallery will stand with contentment, and at what point the after-dinner

occupants of the stalls must be saved from positive boredom? The "Blot on the 'Scutcheon'" is a great example of true dramatic literature, as distinguished from theatrical writing; and if half "the profession" was not eager to see it last week, that is only because it is but a minority of the profession who have any sense of the presence or absence of the literary quality in that which they recite. Many prominent actors and actresses entertain much more than a feeling of indulgence—they entertain a feeling of gratitude for the *banal* and the turgid. The "poet" for them is often only the person who can best embody commonplace thought in fluent and flowery rhyme. *Que voulez-vous?* Between these and a poet like Mr. Browning a gulf is fixed. Divorce—a separate maintenance—must inevitably be pronounced. But actors understand the stage taste of the time; and so, while one says this roundly, one quite admits that the plays of Mr. Browning are not adapted with perfection to the pit of to-day. Hence the *succès d'estime*. Yet a cast more brilliant—actors of more assured experience—would have obtained a finer and even a more popular result than was obtained last week at the Olympic, where, taking appearance and accomplishment both into account, the women were so much better than the men—though the men worked earnestly and deserve, surely, no hard words. Miss Alma Murray's entire performance showed a mental grasp of the character of Mildred and of the situations she traverses that was remarkable, and, I may add, peculiar. And what she conceived she could express. Miss Alexes Leighton—though a little wanting perhaps in inventiveness, in readiness of resource, in the long speech pronounced over the prostrate form of Mildred—was a Guendolen exceedingly spirited and pleasant: mistress of many an effective pose and telling gesture. And she was dressed admirably. Earnestness was the best characteristic of the men, or, it, may be, an intelligence in excess of their technical means; for I am sure that Messrs. Fulton, Rodney, Foss, and Webster put the best work at their command into the business before them. Nay, in a piece as bristling with difficulties as it is rich in great occasions, they did many things well.

FREDERICK WEDMORE.

MUSIC.

RECENT CONCERTS.

THE first concert of the seventy-sixth season of the Philharmonic Society took place last Thursday week at St. James's Hall. A Suite for small orchestra by the old French master, Rameau, proved to be a selection of dance movements from that composer's opera, "Castor et Pollux," produced at Paris in 1737. The name of Suite does not appear quite appropriate to this selection, for with every movement there is a change of key. In the Suite proper the uniformity of key was—with few exceptions—observed. But even the first and last movements of the Rameau-Gevaert Suite are not the same: the first is in G minor, the last in A. The music is very quaint and pleasing. Mme. Schumann played Chopin's Concerto in F minor. Liszt was right when he said that the Polish composer's Concertos "are beautiful, indeed, but we may discern in them more effort than inspiration." The larghetto of the F minor is a lovely conception, but in

the first and last movements the moments of effort are more numerous than those of inspiration. But, on this occasion, it was not so much the work as the interpreter that claimed attention. To hear it from one who had known Chopin, who had been one of the first to introduce his music to the public, was an uncommon treat. Chopin has been dead nearly forty years, and there are very few pianists now before the public who both knew and heard him. Whatever Mme. Schumann attempts she does well. She plays Schumann *à la* Schumann and Chopin *à la* Chopin. For elegance of phrasing, charm of tone, the performance could scarcely be surpassed; but the difficulties evidently taxed the lady's strength. Still it was a brilliant victory, and the applause at the close was most enthusiastic. Mme. Schumann afterwards kindly accompanied Miss Liza Lehmann in two songs by Schumann—"Der Nussbaum" and "Frühlingsnacht." Afterwards came Dr. Stanford's Overture to the "Oedipus Rex." This piece is only in its right place when given as an introduction to the play. It indicates—as Gluck said an overture ought to do—the subject and character of the piece about to follow. However, one could appreciate its purely musical merits, and the effective scoring. It was well given, under the composer's direction. The second part of the programme included Schumann's D minor Symphony, and the Tannhäuser Overture. The excellent band was, excepting in the "Oedipus," under the intelligent guidance of Mr. F. H. Cowen.

Last Monday's Popular Concert could not have been better planned nor better carried out. It commenced with the F minor Quartet, "the most thoroughly" Beethovenian "of Beethoven's works," as Mendelssohn once said; and it was interpreted by Mme. Norman-Néruda, and Messrs. Ries, Straus, and Piatti. Mme. Schumann played a small portion of Schumann's "Humoreske"—the Novellette in F, and for an encore—the "Schlummerlied" from Schumann's Op. 124. She was in splendid form. She afterwards joined Mme. Néruda and Signor Piatti in Brahms's Trio in C minor—a work first heard in London last season at Herr Kwast's recital. It was given later on by Mr. C. Hallé. Mme. Schumann had evidently made up her mind to do full justice to the work of a composer on whom fell the mantle of Robert Schumann. Not only was her technique irreproachable, but she played with unwonted vigour and fervour. Of the Trio itself we have already spoken. It grows in interest, though we cannot yet make up our mind as to the Finale, which appears laboured. The programme ended with Mendelssohn's fragments from an unfinished Quartet. Mdlle. Janson was very successful as vocalist.

Mr. C. Wade gave the last concert of his series on Tuesday evening at Prince's Hall. Of the concert-giver's rendering of songs by Dvorák and Gounod, it is unnecessary to speak. Miss M. Hall was the lady vocalist. The Cologne Conservatoire String Quartet party appeared for the second time, and played Beethoven's Quartet in E minor. Of the cellist, Herr Hegyesi, we wrote favourably last season. He proved an excellent solo player. The leader, Herr Gustav Hollaender, is intelligent, and plays with *entrain*; but he is rough, and his intonation leaves much to be desired. Herr Schönberger gave two solos by Tchaikowsky. His soft touch is delightful; but, when he seeks to emulate Rubenstein, the effect is not pleasant.

Otto Hegner, a child of eleven, gave a pianoforte recital at Prince's Hall on Thursday afternoon. He commenced studying music at the age of five, and for several years he has been under the guidance of the pianist and composer, Hans Huber, of Bâle. Hitherto his

teacher has objected to foreign tours; and in spite—nay, in consequence—of the child's wonderful talent, we doubt whether he should not have been kept quiet yet longer. That, however, concerns the boy's future welfare; for the moment we have to speak of his present performances. His technique is extraordinary, and he has a highly sensitive touch. In fact, he is specially gifted; and, though only a child, plays like a master. He is of an excitable nature, and it is not astonishing that he should sometimes over-mark or hurry. He cannot yet strike the octave. His reading of Beethoven's Sonata in B flat (Op. 22) was a surprise. He managed to display his individuality in a striking manner. In pieces by Bach, Rubenstein, and Raff, he won loud applause. Hoffmann was wonderful enough, but this boy—after allowing for his advantage in age—is more so. This is the result partly of a finer musical temperament, and also, probably, of more solid training. He will give a second recital next week.

J. S. SHEDLOCK.

MUSIC NOTES.

THE last of the present series of Novello's oratorio concerts is announced for Wednesday next, March 28, at St. James's Hall, when Gounod's "Redemption" will be performed. The soloists will be Mme. Antoinette Trebelli, Mme. Patey, Mr. Lloyd, Mr. Plunket Greene, and Mr. Santley. Dr. Mackenzie will conduct.

AGENCIES.

LITERATURE.

"Story of the Nations" Series—*The Goths*, from the Earliest Times to the End of the Gothic Dominion in Spain. By Henry Bradley. (Fisher Unwin.)

MR. BRADLEY'S history of the Goths is a contribution of especial fitness to the "Story of the Nations." While some of the other volumes in this series necessarily deal with states, the story told in this volume is emphatically that of a nation. In many respects the story is a sad one—a romance that "does not end happily." When we look at the qualities of the tribes which bore the generic name of Goths, at the capacity for civilisation which they displayed before any of the other Teutonic races, and at the share which they actually took on overthrowing the Roman Empire and founding new states out of its ruins, it is impossible not to feel that they deserved to stamp their name in broad and bold characters on the new Europe which they did so much to create. Yet, while the Frank, the Burgundian, and the Lombard—all of them the inferiors of the Goth in intellectual endowments, and some of them his inferiors in warlike prowess—have linked their names for ever with some of the fairest portions of the continent, Gothland only describes a remote province in Sweden, which has but a legendary connexion with the Goths of history. Gothic architecture and Gothic destructiveness are the only topics which bring their name before the mind of an ordinary reader, who, as soon as he penetrates a little below the surface, discovers that the glory of the first and the disgrace of the second are almost equally undeserved by the countrymen of Alaric and Theodoric.

Mr. Bradley, in the volume before us, tells the story of this noble Teutonic race from the earliest times to the fatal day of Guadalete, when the Visigothic monarchy of Spain tottered and fell at the first blow from the sword of Islam. It is a wide field, both in space and time, to traverse in one small volume; but the author has accomplished his task successfully—leaving, so far as we can see, no important fact unrecorded—and more than fulfilling the promise made by his very modest preface. The style is clear and simple, and he must be a very fastidious reader who does not find that the interest of the subject carries him through from King Berig to King Roderic. The illustrations, when they are drawn from existing archaeological treasures—such as the torque of Buzeu (p. 17), the Codex Argenteus (p. 60), and the diptychs at Monza (pp. 104 and 109)—are a valuable addition to the student's knowledge. We cannot think, however, that the imaginary pictures—"In the Forest,"

"On the Marab," and so forth—will greatly assist the reader's fancy, or are quite worthy of the text.

To come to points of detail: we are glad to see that in his account of the runes Mr. Bradley mentions with favour Dr. Isaac Taylor's suggestion that these letters represent the Thracian alphabet of the sixth century B.C., communicated to the Teutonic tribes along the Vistula and the Niemen, and modified by them in the succeeding centuries. Though this theory is as yet far from being definitely established, it certainly seems worthy of careful consideration; and we think that the trade in amber and furs which was doubtless carried on between the Euxine and the Baltic is a sufficient cause for the intercourse between Greeks and Goths which is postulated by it.

We are not quite sure that Mr. Bradley is right in stating definitely (p. 50) that "the Visigoths were divided into three tribes or petty kingdoms, which were ruled by 'judges' named Athanaric, Frithigern, and Alavivus." We certainly meet with all these three men as Visigothic *judices*; but there is nothing, we think, to show that there may not have been many other *judices* besides them. The whole subject of these judge-leaders of the Visigothic people still remains obscure, after all the labour that Dahn, Köpke, and others have bestowed upon it; and it is hardly likely that with such materials as we have—a few sentences in Ammianus, a martyrology, a chapter of Jordanes, who was himself hurriedly transcribing a half-understood book of Cassiodorus—we shall ever get a precise picture of the early Visigothic polity. We observe that Mr. Bradley accepts Dahn's statement that Athanaric "had inherited his power from his father, Rothestes." This may very likely be true, but the statement rests on a somewhat uncertain identification of Athanaric with the Ἀθάριδος of the "Acta S. Sabae." The two names are clearly different, and it is not quite certain that they are meant for the same person.

From the Visigothic "judges" we pass on to the Roman emperor whose dealings with them proved so disastrous to the empire. Mr. Bradley says: "Unfortunately Valens, though a brave soldier and a well-meaning man, had little decision of character or knowledge of men." This seems to us to be too favourable a character of Valens. Ammianus, in summing up his virtues and vices, says, it is true, that he was "severus militaris et civilis disciplinae corrector," but, on the other hand, "subagrestis ingenii, nec bellicis nec liberalibus studiis eruditus," "cessator et piger." This is hardly the description of a brave soldier; and, though Ammianus certainly gives Valens high praise for his financial administration of the empire, the dark picture which he draws of his avarice, suspicion, and cruelty does not correspond with our idea of a well-meaning man.

The defeat and death of Valens are well and concisely told; and the following paragraph is an excellent summary of Theodosius's policy towards the Goths, so far as we are able to collect it from the fragmentary narrative of Zosimus:

"The sovereignty of Theodosius was now acknowledged by the whole Gothic nation, excepting only the Ostrogoths north of the

Danube-mouths and the Black Sea, who still continued under the Hunnish yoke. The emperor understood the character of his new subjects well enough to perceive that gratitude and honour were the ties which could best secure their faithfulness, and his conduct towards them was marked by kindness and confidence. The Visigoths were provided with lands in Thrace and the Ostrogoths in Asia Minor [?]; and large gifts of corn and cattle were made to them. They were allowed to govern themselves by their ancient laws. Their warriors were embodied into a separate army, under the name of allies [Foederati—not quite equivalent to Socii], receiving handsome pay and honoured with many special privileges, and many of the Gothic nobles were promoted to high office in the state and in the imperial household. These measures had their intended effect. Although, no doubt, there were movements of discontent here and there, yet, as long as Theodosius lived, the great body of the Goths seem to have regarded their benefactor with feelings of passionate loyalty. In his war against the Western usurpers—Maximus and Eugenius—the Gothic warriors rendered invaluable service."

The story of Alaric is told with great, perhaps almost too great compression, though we do not see that any important particulars are omitted. We doubt whether we have any authority for saying definitely that he died "at the age of only thirty-five years." This would put his birth in 375, and would make him only nineteen at the battle of the Frigidus, when he was already holding an important command in the army of Theodosius.

In the chapter entitled "How the Western Empire came to an End" Mr. Bradley makes a serious attempt to remove a very ancient landmark. He writes:

"It was in the year 476 that Orestes was put to death. For four years longer Odovacar seems to have kept up the pretence of being the servant and protector of the boy-emperor. But in the year 480, Augustulus was made formally to resign his throne, and to add his signature to a memorial which the Senate addressed to the Eastern Emperor Zeno, saying that they had determined to abolish the useless dignity of Emperor of the West, and asking him to proclaim himself sovereign of the whole Roman world. Of course, they added the request that Zeno would entrust the government of the western provinces to that excellent statesman and soldier Odovacar, and confer on him the rank of Patrician."

The further fortunes of the embassy are told, and it is added:

"But, although Zeno might refuse to acknowledge the action of the Senate, it was none the less the fact that the abdication of Romulus was the end of the Western Empire. The year 480 is a memorable date in history, and the name of 'Romulus Augustulus' a memorable name, though the poor boy-emperor himself never did anything to make it so."

Now, while fully agreeing that the embassy of 480 marked an important change in the attitude of Odovacar towards the empire, we can hardly admit that 480 rather than 476 should be chosen as the date of what we call the downfall of the Western Empire, or that Odovacar kept up for four years the pretence of being the servant of Romulus. Doubtless, 476 seemed a less memorable year to those who lived through it than it has done to the makers of our historical compendiums. Still even contemporaries assigned to it a more

important place than any which they gave to 480. What says Count Marcellinus, who, as a Byzantine official, was likely to know the view taken of these events at the Eastern court?

"Indict XIV. Basilisco et Armato Coss. [=476] . . . Odoacer rex Gothorum Roman obtinuit. Orestem Odoacer illico trucidavit. Augustulum filium Orestis Odoacer in Lucullano Campaniae castello exilii poena damnavit. *Hesperium Romanæ gentis imperium . . . cum hoc Augustulo perit*, anno decessorum regni Imperatorum DXXII, Gothorum dehinc regibus Romam tenentibus."

Cassiodorus, the secretary of the man who dethroned Odovacar, has this entry for the same year—the consulship of Basiliscus and Armatus:

"His Coss. ab Odoacre Orestes et frater ejus Paulus extincti sunt, *nomenque regis Odoacer assumpsit*, cum tamen nec purpura nec regalibus uteretur insignibus."

The continuer of Prosper (Codex Havniensis) has, under the same year:

"Odoachar ab exercitu suo rex levatur x Kal. Sept."

We think it is unnecessary to multiply proofs of the fact (till now, we believe, universally admitted) that Odovacar did not, even for four years, pretend to rule, as Ricimer had done, as chief minister of the emperor; but that he took in 476 the title of king (king of what or of whom is another and a difficult matter), thrusting Augustulus at once from the throne and stripping him of the purple, though he did not clothe himself with that imperial garment.

We have indicated some statements in which we do not altogether agree with Mr. Bradley, but they are very few in comparison with the extent of his work. His narrative, on the whole, seems to us to be as accurate as it is undoubtedly clear, strong, and simple; and it will give to the reader an excellent idea of the varied fortunes of the two great branches of the Gothic nation.

THOS. HODGKIN.

Heartsease and Rue. By James Russell Lowell. (Macmillan.)

MORE than forty years ago Margaret Fuller pronounced judgment on American literature generally in the second volume of her *Papers on Literature and Art*. She had something to say about writers who were comparatively young then, but who are looked up to by the present generation as sages and literary law-givers. Among the poets of that day whose names are not yet forgotten she admired Bryant, but regarded Longfellow as "artificial and imitative." However, she admitted he had "elegance, a love of the beautiful and a fancy for what is large and manly, if not a full sympathy with it." Moreover, she was of opinion that his verse breathed "at times much sweetness," and "if not allowed to supersede what is better, may promote a taste for good poetry. Though imitative he is not mechanical." She then proceeded:

"We cannot say as much for Lowell, who, we must declare it, though to the grief of some friends, and the disgust of more, is absolutely wanting in the true spirit and tone of poetry. His interest in the moral questions of the day has supplied the want of vitality in himself;

his great facility at versification has enabled him to fill the ear with a copious stream of pleasant sound. But his verse is stereotyped; his thought sounds no depth, and posterity will not remember him."

In many respects Margaret Fuller was a noble woman, but she was not a great critic. Her own feelings, often prejudices, swayed her judgment too much for that. Always self-assertive, she was doubly so when, as in this case, she wielded the editorial "we." All her geese were swans, and all swans that were not hers were geese. Mr. Lowell was not one of her swans; and, consequently, she was blind to his merits, and greatly exaggerated his defects. In truth, however, if he was not a poet of the first rank, there was already before the public work of his that deserved something better than such sweeping condemnation; and, though he was a young man then (for he is not an old man yet), she shut out all his possibilities of amendment and improvement in her final pronouncement "posterity will not remember him."

However, Margaret Fuller notwithstanding, since that time Mr. Lowell has held his own in the estimation of the world for forty years and more. What will be thought of him at the end of another forty years is not a subject to dogmatise upon; but it seems unlikely he will be forgotten even then. Since Margaret Fuller spoke—and in justice to her as well as to him, this should be noted—he has done some of his best work, including the famous *Fable for Critics*, in which he more than paid her back for her sharply expressed opinion of him:

"Miranda meanwhile had succeeded in driving Up into a corner, in spite of their striving, A small flock of terrified victims, and there, With an I-turn-the-crank-of-the-Universe air, And a tone which, at least to my fancy, appears Not so much to be entering and boxing your ears, As unfolding a tale (of herself, I surmise), For 'tis dotted as thick as a peacock's with I's."

And much else to similar effect. *The Biglow Papers*, which appeared about the same time as the *Fable for Critics*, have, perhaps, done more than any of his other works to make his reputation. They will not be the chief means of maintaining it; but misspelling and vulgar dialect do much to gain a hearing, and have secured temporary popularity for works whose merit is infinitely below the solid merit of Hosea Biglow's work—for "Artemus Ward's" trivialities and "Josh Billings's" Tupperisms, for example.

Mr. Lowell's new book shows that, up to the present time, there has been no falling off in power. Some of the pieces printed in it are, indeed, dated a number of years back, having, in accordance with the author's old-established habit, been "laid on the shelf." This is the case with the "Epistle to George William Curtis," the first part of which is dated 1874; but the "Postscript" of 1887 is as good as the earlier portion. The finishing verse is especially fine, fully justifying Margaret Fuller's admission that Mr. Lowell has "great facility at versification," and as fully vindicating him against her assertion that "his thought sounds no depth." Here it is:

"Home am I come; not as I hoped might be, To the old haunts, too full of ghosts for me, But to the olden dreams that time endears, And the loved books that younger grow with years;

To country rambles, timing with my tread Some happier verse that carols in my head, Yet all with sense of something vainly mist, Of something lost, but when I never wist. How empty seems to me the populous street, One figure gone I daily loved to meet,— The clear, sweet singer with the crown of snow Not whiter than the thoughts that housed below!

And, ah, what absence feel I at my side, Like Dante when he missed his laurelled guide, What sense of diminution in the air Once so inspiring, Emerson not there! But life is sweet though all that makes it sweet Lessen like sound of friend's departing feet, And Death is beautiful as feet of friend Coming with welcome at our journey's end; For me fate gave, whatever she else denied, A nature sloping to the southern side; I thank her for it, though when clouds arise Such natures double-darken gloomy skies. I muse upon the margin of the sea Our common pathway to the new To Be, Watching the sails, that lessen more and more, Of good and beautiful embarked before; With bits of wreck I patch the boat shall bear Me to that unexhausted Otherwhere, Whose friendly peopled shore I sometimes see, By soft mirage uplifted, beckon me, Nor sadly hear, as lower sinks the sun, My moorings to the past snap one by one."

Mr. Lowell arranges the poems in his present volume under the five headings of friendship, sentiment, fancy, humour and satire, and epigrams. Speaking generally, I should say he proves himself strongest in the first and fourth sections. He never seems to me very strong in "sentiment," but when intellect as well as heart is involved his poems are often admirable. He is a finer, if not a greater, humourist than Dr. Holmes; and he has the added merit that, if not a more facile versifier, assuredly he is more truly a poet. Holmes may, indeed, be, as Lowell in his address to him on his seventy-fifth birthday says, a "master alike in speech and song of fame's great antiseptic style"; but the reader of Lowell's verses feels the strength of the personality behind them and that they are—whatever their literary quality—the true expression (if I may say so) of a manly man.

Of the humorous pieces, the longest is "Fitz Adam's Story" the greater part of which, we are told, was written "many years ago," as portion of a larger work to be made up of tales in verse—a project never fulfilled. "It gives me a sad pleasure," says Mr. Lowell in a note, "to remember that I was encouraged in this project by my friend, the late Arthur Hugh Clough." The excellence of "Fitz Adam's Story" lies more in the telling than in the story itself. There are excellent passages in it, in Mr. Lowell's best humorous style; as, for example:

"All tourists know Shebagog County: there The summer idlers take their yearly stare, Drees to see Nature in a well-bred way, As 'twere Italian opera or play. Encore the sunrise (if they're out of bed), And pat the Mighty Mother on the head: These have I seen—all things are good to see— And wondered much at their complacency. This world's great show, that took in getting-up Millions of years, they finish ere they sup; Sights that God gleams through with soul-tingling force They glance approvingly as things of course, Say, 'That's a grand rock,' 'This a pretty fall,' Not thinking, 'Are we worthy?' What if all The scornful landscape should turn round and say, 'This is a fool and that a popinjay.'"

The description of the old-fashioned best

parlour at the inn, given later on, is quite as good; and excellent phrases, thickly scattered up and down, enliven the whole piece. "The Protest" is in a different vein of humour (by the way, I notice it has somehow got into the section of "Sentiment") and has the merit of brevity, which enables me to give it in full:

"I could not bear to see those eyes
On all with wasteful largesse shine,
And that delight of welcome rise
Like sunshine strained through amber wine;
But that a glow from deeper skies,
From conscious fountains more divine,
Is (is it?) mine.
"Be beautiful to all mankind,
As Nature fashioned thee to be;
'Twould anger me did all not find
The sweet perfection that's in thee:
Yet keep one charm of charms behind—
Nay, thou'rt so rich, keep two or three
For (is it?) me!"

Enough has now been said and quoted to show that Mr. Lowell did well to give the world a new volume of poems. If we are destined still to wait for his long-promised biography of Hawthorne, we may be grateful that we have this pretty book to help to pass the time.

WALTER LEWIN.

Decisive Battles since Waterloo. By Thomas Knox. (Putnam's Sons.)

THE title of this work has been plainly taken from that of one of the most interesting of historical studies. The late Sir Edward Creasy's account, however, of the great contests which have affected the fortunes of nations and empires from the earliest times differs widely from Mr. Knox's *résumé* of the "decisive battles" which have been fought "since Waterloo." The one was a military narrative in the true sense. It consisted in the main of military details; and it abounded in military criticism of real value. The volume before us is rather a history in which the actual events of war are not always placed in sufficient prominence. It is deficient in information of a technical kind; and the author seems to avoid the expression of judgments upon the nature and the results of the great operations described by him, and on the qualities of the commanders engaged in them. He has also omitted to review or to notice the immense change wrought in the mechanism of war by the scientific discoveries of the age, and the extraordinary development of the armed force of Europe caused by the conscription and the Prussian system. In short, his work ought to have had more of a professional and a special character. It is, nevertheless, extremely interesting; and it will be valuable to the general reader, and even, in some degree, to the student of war. It is a careful, accurate, and impartial account of the most important battles of the world since the fall of Napoleon in 1815. Its descriptions are good, if not brilliant; and the style of the narrative is easy and lucid.

The battles described in this volume are comprised in three historical periods, and their characteristics are in accord with them. Exhausted Europe settled down to heal the ravages of war after the great day of Waterloo, and its states were, for the most part, at peace with each other during nearly forty years. Yet the temple of Janus was not wholly

closed even as regards the estate of Christendom. There were civil wars in Poland, in Spain, in Italy, not to speak of the risings of 1848; and the siege of Antwerp, well-told in this book, marked the severance of Belgium from the Dutch monarchy. The energies, however, of the Great Powers of Europe were chiefly engaged from 1815 to 1854 in operations against barbarian races, and especially against the realms of Islam; and the Cross rose over the waning Crescent. France overran and annexed Algeria; a Russian army, under the command of Diebitsch, crossed the Balkans, approached the shores of the Bosphorus, and almost gazed on the towers of Byzantium; and, at Navarino, the Ottoman fleets were destroyed by the English, the French, and the Russians, and the independence of Greece was won. Many years afterwards we had to contend for empire along the banks of the Sulej; and a whole series of battles, crowned happily by the triumph of Gujrat, made England mistress of the great land of the Punjab. Mr. Knox has described these contests very well; but English readers will learn, perhaps, more from his account of two conflicts in the New World with which they are probably less familiar. The battle of Ayacucho, fought in 1824, sealed the fate of the rule of the Spanish monarchy over its dependencies in South America; and Mr. Knox has given us an excellent sketch of the Mexican campaign of 1847, remarkable for the conquest of Texas, of New Mexico, and of California—vast tracts in which the freedom and energy of the Anglo-Saxon has replaced the indolence and despotism of the Spanish race, and has developed marvels of industry and wealth.

The long peace of Europe came to an end in 1854 with the Crimean War. That war, undertaken to defend the Turk against Russia by two Christian powers, has shocked the sympathies of the present day; but Inkerman remains an enduring monument of the energy and heroism of the British soldier. Mr. Knox has fully described the capture of the Malakoff and the fall of Sebastopol; but in this, and in other instances, he has not tried to give us a view of the war as a whole. Cawnpore and Lucknow, also, are names in which England may still feel pride. Never, perhaps, was the dogged stubbornness of the race—the qualities that won Albuera and Waterloo—more grandly illustrated than in the Indian Mutiny. It is unnecessary to dwell on the operations in China from 1853 to 1860; but the campaign of Italy in 1859 brings us to the second period we have referred to—that of wars in which the dominant force was "nationality" and the hopes of races. Magenta and Solferino were glorious days, for they promoted the cause of freedom and right; but they were not remarkable as mere battles. No military skill was shown on either side; and a great general would have turned the scale of fortune in favour of either belligerent. Mr. Knox has given us an excellent account of the great and decisive fight of Sadowa; but, apart from the issues involved in the contest, the main interest in the war of 1866 consists in the fact that it first showed to Europe the daring and power of the great Dane, Von Moltke. Yet the strategy of the Prussian chief was hazardous; and had Napoleon been in the place of Benedek, Von Moltke would have

been made to pay dear for his attempt to unite the divided masses of the Prussian armies within striking distance of a concentrated foe in the north of Bohemia. Sadowa led to the union of Germany; and this necessarily caused a rupture with France, the great fomentor of German divisions, from the days of Henry IV. to those of Napoleon. Mr. Knox has described with much accuracy the great battles of Gravelotte and Sedan; and his account of these is strictly impartial, and not falsified by the glare of success, which has bewildered not a few narrators. He ought, however, to have told us something about the operations of the whole campaign; and these detached scenes of the mighty drama will not satisfy a true student of war. The great Civil War of the American States was not a war of nationality in a strict sense, but it was a desperate contest for national unity; and, taken altogether, it perhaps transcends in importance all the wars of this era. Mr. Knox has described extremely well the siege and the slow fall of Vicksburg; he has devoted special care to the great day of Gettysburg, the turning-point in the tide of the strife; and he has done justice to the perseverance of Grant, and to the last efforts of Lee, after the fall of Richmond. But here, again, he has not attempted to give us a general idea of the war; and, apart from the tremendous consequences which followed the triumph of the cause of the North, the military student will always turn an attentive eye to what is omitted from this work—the admirable illustrations of the art of war displayed by Lee and Stonewall Jackson, beyond comparison the best examples of the method of operating against divided enemies which have been witnessed since the days of Napoleon.

Wars of nationality have not been frequent since the close of the great struggle of 1870-1. An exception may be, perhaps, made in the case of the invasion of Turkey in 1877; but if this was in part a Pan Slavist movement, it was also largely due to dynastic ambition. Mr. Knox's account of the siege of Plevna, and of the desperate strife round the famous lines, is very interesting and well summed up; but he has not brought out one great feature of the war—that, if we except Skobelev, Gourko, and Osman, the chiefs in both camps showed few great qualities. The battles fought during the third period do not require particular notice. The arms of England have not shone brightly in it, though we do not forget Roberts in Afghanistan, and Wolseley's movements before Tel-el-Kebir; but one of the most instructive of these passages of war is the conflict between the ironclad ships of the Chilean and Peruvian navies. At this moment it seems not improbable that aspirations and passions of race may again bring on an European conflict. The Continent is a huge armed camp; and the attitude of the great Continental Powers is one of scarcely concealed distrust and suspicion.

As we look back at the long series of wars during these three periods, history will say, we think, that they have furthered, taken altogether, the cause of progress. France, indeed, mourns for Alsace and Lorraine; and it is impossible not to feel regret for the military eclipse of that Bellona whose tricolor, within living memory, was dominant

from Madrid to Moscow. But if "principles have been rained in blood," the wars of these years have set Greece free; have emancipated Belgium from a galling yoke; have made Italy and Germany united nations; have saved India from barbarian anarchy; have shaken the evil rule of the Turk; have in South America broken the bonds of Spain; above all, have maintained the integrity of the Great Republic of the Far West, and have prevented a dismemberment which would have been fatal to the best interests of civilisation and mankind.

WILLIAM O'CONNOR MORRIS.

A Holiday on the Road: an Artist's Wanderings in Kent, Sussex, and Surrey. By J. J. Hissey. (Bentley.)

ALL sensible persons know that England proper cannot be seen from either rail or high road. In the lanes behind the Queen's highway lie moss-grown farms and manor-houses, gray abbeys, mouldering castles, new and—often in Sussex and Surrey—illimitable prospects, simple yet undreamt of revelations of beauty which Linnell and Birket Foster loved to imitate. The delight of living among these far overbalances, for the lover of the country, the hurried social life and manifold conveniences of cities. When these remains of old England are intelligently studied in the light of archaeology and history, a district or county is amply sufficient for a lifetime. Until recent years this conviction was silently cherished by dwellers in the country. They did not care to avow their quiet happiness before a generation of tourists and eager sight-seers—much on the selfish principle that an angler who has lit upon a good trout-stream does not betray its locality to his fellows. After Mr. Ruskin had taught the true meaning of nature, art, and beauty, it all at once flashed upon the intellect of the country that the most charming and varied instances of all three were to be found in their own land. An army of pilgrims now sets out every summer to discover England. Mr. Hissey is a well-known pioneer in this exploration. For three or four years we have read his summer rambles with pleasure, and hugged our own happiness the closer to our bosom. He has seen much that we have visited, and has seen it well. We claim a closer acquaintanceship—nay, a tie dearer than that of friendship. Old loves linger for us among the heather and hawthorns in many an out-of-the-way nook of the country. They dwell in ivy-mantled granges where blush roses peep in at them through the windows; by many a Scotch loch and birch-hung Yorkshire stream they wait with an eye "to mark our coming and look brighter when we come." But an æsthetic Mormonism is abhorrent to us. We have settled quietly down with the one well-tried spouse of youth and romance, and only recall every now and then furtive memories of wayward fancy and sentiment. Where this paradise is matters not. Mr. Hissey can only find it by even more careful search than he displays in his recent jaunts. For the true beauty of England still sleeps behind the thick hedges and deep meads. The prince who is to claim her does not drive his carriage and pair. He goes afoot, and is all the more

welcome because he has tramped many dusty ways, climbed many a hill, and forded fern-haunted streams innumerable before he reaches the enchanted garden. Dropping allegory, however, to take a driving tour through England is good, but to tramp it on foot is better.

Last summer Mr. Hissey's holiday led him to Tonbridge by Caterham and Croydon; thence over the Weald heights through Mayfield and Alfriston to Pevensey, Hurstmonceaux, Hythe and Ramsgate; and so by Lenham and Sevenoaks home. No more characteristic route could have been chosen. High uncultivated down and fertile valleys, dotted with old manor houses and picturesque farms here and there, lead to rivers crossed by bridges starred with lichens, and command fine views of the low country, which fades again into the translucent blue of mingled sea and sky. Mr. Hissey drove through this unrivalled loveliness of nature, softened and made fairer by man, during the month of June. Striking as the scenery would be at any time of the year, the fresh greens and vaporous atmosphere of early summer cast over it the glow of enchantment. Small wonder were it that the commonest hedge-row and most ordinary thatched cottage delighted him. Like a sensible man he had made up his mind to be pleased, and the reality transcended expectation. Naturally Penshurst, sacred as it ever will be to the memory of Sir Philip Sidney, charmed him. The downs by Beachey Head, too, are well described. Some of the keen air and flying savours of salt and wildflowers there to be found seem to breathe in his pages. Indeed, nature always inspires him more than art. He catches the tone of a landscape better than the gray desolation of a ruin. Could a Surrey common be painted in clearer colours?

"Wind-swept and sunny, here the landscape opened out, affording us a sense of space and freedom. These rough grassy expanses that so specially abound in this portion of England—gay with golden gorse or flowering broom, purple with heather now and again, the home of waving bracken, with their stunted thorns, countless plants, flowers, and weeds (all beautiful, to even the despised weeds), forming as they do a wild harmony of greys and golds, of reds and russet greens, contrast delightfully with the enclosed cultivated fields around and hedge-bound lanes. A bit of primeval England in the midst of highly-cultivated ground."

Above all other districts, however, says Mr. Hissey, through which he has travelled—that is, through some thousands of miles in England, "I cannot call to mind any fourteen miles of country more full of changeable beauty than those pleasant never-to-be-forgotten ones between historic Mayfield and sleepy little Hailsham."

The author's style is smooth, and, if anything, too monotonous for a book of travel. It might occasionally have been more rough and vigorous, to match the Surrey hills, and now abrupt and broken, to suit the sharp turns of the lanes beyond. It is, in truth, too superfine for common, every-day English life and scenery. We long for fewer altitudes, and a little familiar writing. He does, in truth, chat with innkeepers and ostlers, and occasionally with country folk on the way; but he has little sense of humour, and seems always trying to be impressive. Such

places as Ightham Moat and Bodiam Castle are fatal snares, and at once demand fine writing and somewhat trite sentiment. We willingly drive along the rose-strewn lanes with Mr. Hissey. He has a good eye for the country, and talks naturally as we are whirled along. When evening comes and brings rest at some old-fashioned inn, he is an equally pleasant companion as he points out its timber gables, its oak partitions, the antiquity and artistic excellence of the iron frame which supports the sign, made most probably of Sussex iron generations ago. But it is time to tremble when the ramble over the fields succeeds, with the castle or manor house to be visited as twilight deepens its mystery. Then he thinks the occasion demands a poetical description, a word-painting in solemn tones, a few reflections evoked by the gloom and decay around. And then, sooth to stay, we silently slip away and leave him to his ecstasies.

It would be unfair, however, not to state that this is a book of excellent intention. It aims at showing something of the beauty and the delight to be found in our own land, and such a book demands ever a cordial welcome. And it forms a pleasing memento for any lover of the three home counties which the author drove through. There is a good deal of varied information to be picked up here and there in its pages. Mr. Hissey's drawings and tailpieces are at times admirable. We may particularise the view of Beachey Head, "on the South Downs," and the sketch of Bodiam Castle. Most persons have seen something of the country which Mr. Hissey has described; and they may compare with advantage this skilled traveller's views on it with their own memories, refresh the outlines which time has rubbed off from remembrance, and indulge, perhaps, in that charming prevision of a holiday next summer which is oftentimes more pleasant than the reality. If so, the debt may be gratefully acknowledged, and Mr. Hissey, we fancy, would wish for no better remuneration. It is not given to everyone to be first himself charmed with common life, and then to succeed, by writing of and sketching it, also in charming a large circle of readers. It is worth while, though, to point out to him that as Admiral Blake was not born until some ten years after the Spanish Armada approached our shores, he could scarcely have said he had plenty of time in which to finish his game of bowls as well as to conquer the Spaniards. Of course, Mr. Hissey is thinking of Sir Francis Drake. M. G. WATKINS.

A Menology of England and Wales; or, Brief Memorials of the Ancient British and English Saints, arranged according to the Calendar; together with the Martyrs of the Sixteenth and Seventeenth Centuries, compiled by Order of the Archbishop and the Bishops of the Province of Westminster. By Richard Stanton, Priest of the Oratory. (Burns & Oates.)

It has long been a surprise to us that a book of this kind has not been provided for the use of students. To Catholic and Protestant alike a handbook telling the main facts in the lives of those who have been honoured in this

country as saints and martyrs seems almost a necessity. To those who live at a distance from the great libraries, all enquiries have been almost impossible as to the career of the less known Englishmen who were venerated as holy before the change in religion; and, as a consequence, it has not been uncommon for writers on topography and other local matters to fall into errors which would be grotesque did we not know the extreme difficulty of finding the right clue in such a tangled wilderness. For the future, those who blunder will not have the same excuse. The biographies in Mr. Stanton's volume are all short—some of them, indeed, far too much compressed; but references are carefully given to authorities where a fuller account may be found, except in those instances where the loss of record evidence has deprived us of everything except a mere name in a calendar or the dedication of a church.

Mr. Stanton's volume contains more than we hoped for, or than the title-page promises. Besides those who have received public honours he has added a few names of persons "eminent in the history of the church for their holy lives and services in the cause of religion." This was a wise step. Popular devotion has never been limited by the church's formal decrees; and there have been many venerated, with good reason, as holy persons who have never been the subject of canonisation. Alcuin, Grosseteste and John Daldery are cases in point. Of this last there was a silver shrine in Lincoln Minster, which was of course destroyed at the Reformation.

The addition of short biographies of those who suffered for their religion under our Tudor and Stuart sovereigns is an advantage. Till quite recently there were reasons why this could not have been done. Now nothing stands in the way, except the fact that concerning some of them little at present is known. This is no insuperable difficulty, however. Much has been printed bearing on the lives of these martyrs which was not till recently known to be in existence; and as time goes on and family papers see the light, we may hope that more will be discovered. The sufferers sprung from every rank of life. Of those who came of noble or gentle blood we may trust that their relatives were not so careless as to let them pass away without some record.

The Welsh and Cornish saints must have exercised the patience of Mr. Stanton not a little. They are very numerous, and of many of them nothing but a mere name survives. Their biographies, if ever committed to writing, perished in the storms of the sixteenth century. Those whose feast days were known find a place in the body of the work; the others, who are now mere names only, are given in an appendix. There is another appendix, containing a list of those Englishmen who have been reputed saints—received some kind of popular canonisation, as it has been inaccurately called—who have not been deemed worthy of a place in the body of the work. This catalogue will be most useful to readers of mediæval history. It contains some striking names, among others Remigius, the founder of the see of Lincoln; Richard Scrope, the murdered Archbishop of York, who had a shrine in the minster; and Thomas

of Lancaster, who was beheaded at Pontefract, and whose burial-place on St. Thomas's hill near that borough seems to have been a place of pilgrimage. His prayer-beads were preserved at Durham; and on the orphrey of a chasuble discovered in Warrington Church there is an embroidered figure of this son of the great house of Plantagenet with a halo round his head and palm branch—symbols of martyrdom—behind him.

Mary of Scotland appears as a martyr under February 8. We fear that this may cause controversy. Holding the exact contrary to what Mr. Froude has affirmed so vehemently concerning her, we cannot but express extreme pleasure in finding her name where we hold that it has a right to be; but the character of Mary is a subject on which men still differ with passionate fervour, and we should not be surprised if those who cling to the foul traditions so cruelly fabricated and so pertinaciously handed on from age to age should condemn the book because it contains a name they have been taught, or taught themselves, to execrate.

It was until recent days the custom of most of those who took upon themselves to write concerning the saints of the Middle Ages to leave out the records of their reputed miracles. This was a foolish practice, whatever our belief may be on the subject. The wonders that were told were believed at the time by all, and we give a distorted and colourless picture if we suppress one great section of evidence. Mr. Stanton has dealt with the subject with much discretion. He is careful to tell his readers that "when any miracle or vision or event beyond the common laws of nature is recorded, it rests only on ordinary historical evidence." It was necessary to say this, for there are yet simple folk among us who believe that to a Catholic every tale in the *Magnum Speculum* or the *Golden Legend* is as much a matter of faith as are the several clauses in the Apostles' Creed.

Mr. Stanton has executed his work with much care and thoroughness. We think further research will enable him to add a few more obscure names to the list of reputed saints (appendix ii.)—James Berkeley, Bishop of Exeter (1327), for instance, we are told by the historian of the house, "for the holyness of his life, was reputed a saint"—but it is a very full catalogue already. To those who are working on mediæval history, the book will be most useful. Every student should have by him an interleaved copy in which to jot down notes and additions; for it is obvious that this Menology will become a standard book of reference, and it is important that future editions should be made as nearly perfect as may be.

EDWARD PEACOCK.

NEW NOVELS.

Loyalty George. By Mrs. Parr. In 3 vols. (Bentley.)

Bernard and Marcia. By Elizabeth Glaister. In 3 vols. (Hurst & Blackett.)

Philip Alwyns. By J. Knox Sherrard. In 2 vols. (Sonnenschein.)

They Took. By Mary H. Pickersgill-Cunliffe. (The London Literary Society.)

Queen Money. By the Author of "The Story of Margaret Kent." (Boston: Ticknor; London: Trübner.)

The Dusanter. By Frank R. Stockton. (Sampson Low.)

Lotus. By the Author of "A New Marguerite." (George Redway.)

In Anarchy's Net. By Edward John Baxter. (Smith & Botwright.)

Mrs. PARR belongs to that select class of novelists who never write unless they have something to say. She does not fling a book before the public every few months, and expect to find them, if not interested, at least tolerant and long-suffering. Consequently we do not remember a work by this lady, since her charming portrait of *Dorothy Fox*, which has not some claims to a more than ephemeral existence. In certain respects, *Loyalty George* will not compare in lightness and grace with its predecessors; but in the riper literary qualities, and in the power of dealing with human experience and human suffering, it is an advance upon them. It might well have taken for its motto the poet's refrain, "'Tis better to have loved and lost than never to have loved at all." And yet the lesson is not one to be easily either learned or fully appreciated; because, if the nineteenth century believes in anything, it is in present sensuous enjoyment. *Loyalty George* is a girl with a history, sad in its origin, chequered in its course. She is the offspring of strong, but illegal, love, and blends in her own person the best of her paternal and maternal characteristics. She grows up with a beautiful, frank, and open nature, covering—yet not always concealing—a wealth of love beneath an unsophisticated and uneducated nature. Twice she saves the life of her lover, Roger Coode: once in his youth, when he is unable to appreciate the depth and strength of her affection; and, again, in his manhood, when she rescues him from the devouring sea. But, on the second occasion, she sacrifices her life for his own, after he had gone from her with distrust in her sublime faith and love, and believing her false. The closing scenes of the novel, depicting a storm at sea and the wreck of Coode and his master, are very powerful, and far beyond the capacity of most living writers of fiction. The scene of the whole story is fixed on the coast near Plymouth Haven, and the narrative is fresh and salt as with the brine of the ocean which it follows and graphically describes. In addition to the two chief characters, there are several fisher-folk who will touch the reader by the naturalness and pathos with which they are drawn; while Miss Anne, who is higher in the social scale, only differs from the angels in not having wings. Then there is Coode's old "Methodist" mother, who, when her son tells her that the devil has not got hold of her as he has of himself, sadly replies, "Oh! don't make no mistake there, Roger; the devil knows where I lives." The evangelising work of the Wesleys in Devonshire and Cornwall is described episodically in this clever and fascinating story.

From the sprightly observations on the average heroes and heroines of poetry and fiction with which *Bernard and Marcia* opens, we hoped to be treated to a clever and un-

conventional story. But we were doomed to disappointment. The novel is not above the level of the commonplace, and it is much too long for the actual material there is in it. The first volume drags, and is tedious; the second promises to be more lively, as it opens with the shooting of his stepmother by the hero; and the third is mainly devoted to the sorrows entailed upon Bernard Vallance by an unfortunate marriage. An accident happens to his wife (who is the victim of dipsomania) which sets him free, and ultimately he marries Marcia. The story is entitled one of "middle age," and it is not altogether destitute of good passages. Its moral seems to be conveyed in one of the early chapters of the last volume, where we are told that while youth is best for pleasure, for dreams, for beautiful new beginnings, and the like, "a maturer age is really the nobler period of existence, for then we can see more clearly and walk more wisely, while there is also a certain satisfaction in picking up our mistakes."

The plot in *Philip Alwyne* is not badly constructed; and the work generally, without being at all striking or distinctive in style, is fairly entertaining. The fickleness of early loves is once more demonstrated; but whereas as a general rule the delinquent is the male, it is in this case the female. Alwyne, the hero, remains true to the last—many people will think almost superhumanly so; and he dies in a halo of glory, giving up his own life for others under the hardest and most painful circumstances. After his departure for India his affianced, Muriel Arlington, is thrown into the society of one George Fergusson, and discovers that she has never really loved Philip. She is not a bad kind of girl, however, and will meet with some sympathy. There are several subsidiary characters, equally divided between the sheep and the goats, who act and scheme accordingly. One lady endeavours to become an author, but her first work—a crude and ill-digested story based on women's rights—gets rejected by as many publishers as Carlyle's *Sartor Resartus*. We need scarcely say that this is the only point of resemblance between the two. Mr. Sherrard, if young, may yet do good work; but if he be of mature years, then we fear he will never be of mature powers.

From the literary point of view we cannot say anything for *They Twain*, nor is it noticeable from any other aspect. It is just such a story as the average woman of good impulses might write. Why the title-page should bear the designation of "They Twain" and the whole body of the work should be called "After the Honeymoon" does not appear. But neither is there any reason why Mrs. Pickersgill-Cunliffe should detach the "e" from the poet Rowe's name where it is wanted, and insert it in that of T. H. Bayly, where it is not wanted. The purpose of the narrative apparently is to show how the affections of a wife may ultimately become wholly concentrated upon her husband, even when it was not so during the honeymoon—and after. But as there is no talent perceptible in such books as this, and no overmastering purpose calling for their production, it seems a waste of time to write them.

We cannot make the same complaint of *Queen Money*, which is written in a style that

is now and again brilliant and full of *verve*. It is a smart picture of American life and people. The Yankees range lightly and quickly from the music of Wagner to gold-prospecting, and from the poetry of Théophile Gautier to that of the ball-room. Our author sketches her characters vividly, though some may take exception to her delineation of Colonel Carver, whose pet phrase is that "Talk is talk, but money buys the land." He has a little money which he should like

"to lay up in the Kingdom of Heaven, where stocks were not corrupted by shrinkage in values, and speculating thieves could not break through nor steal. But, then, he had never been able to get into direct communication with the Kingdom of Heaven, and he was unable to put the strictest confidence in those men who claimed to be Heaven's representatives, and held out missionary boxes and the like."

There is at least plenty of go in *Queen Money*; and the writer has her own views upon men and things.

Another clever American sketch of a different order is *The Dussantes*, by Mr. F. R. Stockton. There is an amusing vein of comedy running through it, as we might expect from its author, for Mr. Stockton is an adept in the creation of humorous situations. Here he places his characters in a perilous position—in fact, they are very nearly finding a snowy grave, if we may coin the expression; but they are rescued in a highly ingenious manner, which will afford the reader much amusement, from a great mountain snow-drift. The method each one must find out for himself. The character-drawing in this little story is crisp, life-like, and vigorous.

Lotus is a psychological romance. It is not destitute of ability or novel ideas. But when authors quote well-known passages from the poets, and build arguments upon them, why will they not learn to quote correctly? In this volume we read that Shakspeare says, there is "a Providence that shapes our *lives*, rough hew them as we will." He says nothing of the kind. A man may shape his *life*, but he knows little of his *end*; and this makes all the difference in the idea, both in Shakspeare and in this latest work which misquotes him.

Wonderful exceedingly is *In Anarchy's Net*. It is a story of Anarchist plottings, which come to grief as they ought to do; yet it is not these which are remarkable, but the author's style. On p. 1 we are assured that "Father Sol, having lifted an unclouded face above the horizon nearly an hour ago, now lavishes abroad his benign salutations like a glorious Nebuchadnezzar in dignified procession." When the reader has thoroughly mastered this and some other singular passages, he can go on to p. 42, where he will meet with a character who, during a fit of inactivity, gives a long whistle "sliding chromatically from E of the *in alt.* octave up to C sharp and down again." The book is full of curious things; but the most curious thing of all, as it seems to us, is how it came to be written and published. Many recent works of fiction have dealt with the Anarchist movement with real power and genius. This volume

is superfluous: it has no plot worthy of the name, and exhibits no talent whatever.

G. BARNETT SMITH.

RECENT THEOLOGY.

The Story of the Psalters: a History of the Metrical Versions of Great Britain and America, from 1549 to 1885. By Henry Alexander Glass. (Kegan Paul, Trench & Co.) Mr. Glass has here exposed to view an interesting page in literature, as well as in ecclesiastical history. The chance acquisition of an old copy of "Tate and Brady" led him to enquire into its bibliography; and to this accident we are indebted for a volume that does credit to his research and is never likely to be superseded, though it might have been fuller in many points. He has confined himself to complete metrical versions of the whole of the Psalms, English and American, of which the total appears to be 123. This, of course, is the number of independent versions, not of editions. Of Sternhold, no less than 601 different editions are to be found in the library of the British Museum; of Tate and Brady, 303; of Rous (or the Scotch version), 98; of Watts, 97. Throughout the last century, Sternhold fairly held its own by the side of Tate and Brady; but since 1800 only twenty-one editions of the former has been issued, as compared with 159 of the latter. The very latest Sternhold was printed at Cambridge in 1828. Considering that no modern version has gained more than a *succès d'estime*, it is curious to find that the nineteenth century has already produced 70, or considerably more than half the total. Among the best known names are those of Joseph Cottle, James Montgomery, Bishop Mant, Henry F. Lyte, John Kable, Mr. Edgar A. Bowring, C. B. Cayley, Lord Massarene, Prof. Kennedy, the Marquis of Lorne, and Mr. Digby Seymour. Mr. Glass's method has been to quote the first verses of Psalms i. and xxiii. from each version, and to give some biographical notice of the versifier. It is in this latter respect alone that we should have liked more information. Reference to vol. i. of the *Register of the University of Oxford*, edited by the Rev. C. W. Boase for the Oxford Historical Society in 1884, would have enabled him to have made the following corrections: Robert Crowley, the author of the earliest version of all (1549) is here described (p. 63) as a fellow of Magdalene College; as a matter of fact, he took his degree from Magdalen, Oxford, in 1540. John Hopkins, the coadjutor of Sternhold, we are told (p. 18), "is supposed to have been a graduate at Oxford in 1544"; he did take his degree in 1545. So again, of William Whittingham, another coadjutor of Sternhold, "educated at Oxford about 1540" (p. 19); the date of his degree is 1545. These, no doubt, are small points, and only deserve notice because the book is, on the whole, so carefully done.

Lectures on the History of Preaching. By the late John Ker. (Hodder & Stoughton.) This work is fragmentary. It contains a portion only of the lectures on the history of preaching, delivered by Dr. Ker to the students of the Theological Hall of the United Presbyterian Church during the years 1876-1886. The first nine chapters give a hurried sketch of the general history of preaching from the days of the Apostles to the Reformation; the last twelve are devoted to a history of it in the German Lutheran and evangelical churches from the Reformation to the present day. There is no account of the great French preachers, and no mention of German Roman Catholics; but we are told in the preface that Dr. Ker in other lectures paid great attention to the orators of the former school—both Protestant and Catholic. The lectures were addressed to

students at the beginning of their course, and they are therefore elementary. They do not in any way attempt to form a manual of Christian oratory as a handbook for the historian. Preaching is considered far more in its theological and practical than in its rhetorical aspects. Everywhere Dr. Ker gives more consideration to matter than to form. His object evidently is to form sound evangelical divines rather than brilliant orators. His endeavour is to influence character rather than style, or at least to mould style by means of character. Hence arise both the merits and defects of this volume. We are impressed by the genuine and lofty earnestness of Dr. Ker, as we are impressed by the saintly character of Cardinal Newman, and the chastened moral sweetness of Dean Church, in every line they write; but there is little technical help to the formation of a true style. Rhetoric as an art is almost ignored. Its leading principles are not laid down, nor does our author seem to recognise them in his criticism of the preaching of others. Excellent as a practical training for Christian usefulness, and for forming preachers of evangelical piety and earnestness, fruitful as their influence may be in this direction on the ministry of the United Presbyterian Church, these lectures furnish little help towards a history of preaching considered as an exposition and criticism of different styles, or as an historical analysis of the arts of Christian oratory.

University and other Sermons. By the Right Rev. James Fraser, second Bishop of Manchester. Edited by J. W. Diggle. (Macmillan.)

Parochial and other Sermons. By the Right Rev. James Fraser. Edited by J. W. Diggle. (Macmillan.)

THESE two volumes are the outcome of a manly heart, of broad and kindly sympathies, and of simple and earnest purpose. The undergraduates at St. Mary's and the village folk of Uholderton must each have felt the stimulus of the moral energy of James Fraser. But from the intellectual standpoint, the sermons scarcely rise above mediocrity. There is an off-hand treatment of difficult problems that fails to satisfy the more thoughtful; there is a deficiency in even correctly grasping some of the modern difficulties that he attempts to deal with. But those that can remember the bishop will know that even a commonplace seemed to be invested with weight and significance when uttered by him.

Sermons. By the late W. Binnie. (Macmillan.) This is another memorial volume, and will, doubtless, be welcomed by Prof. Binnie's friends. But outside that circle we doubt whether these sermons are not destined speedily "to go over to the majority." They are thoughtful and kindly, but in no marked way distinguishable from scores of volumes of sermons that yearly issue from the press. The most elaborate of these discourses is one preached at the opening of the Reformed Presbyterian Synod, Edinburgh, on the first Christian Synod. The text, Acts xv., 22, 23, which speaks of "the apostles and elders and brethren," is cited and argued upon, with, apparently, entire oblivion of the fact that the best textual critics, e.g., Lachmann, Tischendorf, Tregelles, and Westcott and Hort, to whom, indeed, we may add the revisers of the Authorised Version, read "the apostles and the elders, brethren," i.e., "the apostles and our brethren the elders." The sermon, we observe, was preached as long ago as 1861; but those responsible for its issue in the volume before us should not have allowed it to appear with such a blot.

A Short History of the Council of Trent. By R. F. Littledale. (S.P.C.K.) Dr. Littledale

has undertaken a difficult task—to write a short history of the Council of Trent: a history which bears a different aspect from the standpoint of each European nation, and of each phase of Roman Catholicism, or of the Reformation doctrine, from which it is regarded. But what Dr. Littledale has done he has done well. To a great extent he has avoided taking a special standpoint, and has given us a kind of *précis*, a condensed *procès-verbal* of the history of the council, and of its sittings. The great use of the book will be, we think, as a companion and guide to the ordinary editions of the "Canones et Decreta." With the aid of this little work the student will readily see the date at which each canon or decree was passed, by whom it was propounded, what opposition it met with, and the number of fathers present at the voting. Many a reader will be surprised to learn by what small numbers some of the most momentous decisions were arrived at. Hence the real utility of the work. We are not so confident as is Dr. Littledale that the seminary education (given the fact of forced celibacy—and especially the fact that the bulk of the Roman Catholic clergy are drawn from a lower level than our own, though not the lowest) will prove a source of weakness to the Roman Catholic Church in her future struggles with society.

Words of Truth. By R. F. Littledale. (Kent.) This pamphlet consists of nine controversial essays, which have appeared in the *National Church*, in defence of the Church of England against the attacks of Roman Catholics. Dr. Littledale takes the ground of the old historical High Church school. Her appeal as to what constitutes catholicity is to antiquity. The papers are temperately written. There is a commendable absence of abuse of opponents, and of the mere *odium theologicum*. Dr. Littledale maintains, what we believe to be an historical fact, that transubstantiation is really not a theological doctrine at all, but a metaphysical explanation, which should stand or fall with the philosophy on which it is based. On page 26, the second quotation from St. Augustine is so much more forcible in the original Latin that we think it is a pity that it was not so given either in the text or in a note. The argument in number five—Why God permitted the Reformation?—is a very dangerous one. It may be asked in reply, Why were the churches of Athanasius, of Cyprian, and of Augustine, destroyed? A better apology seems to consist in the fact that parallel disorders, culpable in themselves, attended the meeting even of some of the Oecumenical Councils, and that the conduct of Roman Catholic sovereigns, even of Philip II., in temporals of the church was not very dissimilar to that of Henry VIII. In discussing the claims of St. Peter, no mention is made of the fact that there was no separate festival in his honour in the early Roman Church, but only in conjunction with St. Paul.

A Serious Call to a Devout and Holy Life. By W. Law. (Griffith, Farran & Co.) This forms volume ten of the cheap and excellent "Ancient and Modern Library of Theological Literature," now in course of publication by Messrs. Griffith, Farran & Co. It is well worth a place in such a series. Law's work is distinguished from its many rivals by the reasonableness and the steady force of its argument. In style it belongs to a good period, and has the distinct Addisonian flavour of the age of Queen Anne and the first George. Its pages are lightened by sketches of typical characters, which picture for us a very different England to that of the present day. An England of thrift and leisure contrasted with an England of prodigality and of worry; a time when a woman could be in full fashion in London, or do untold good as a lady-bountiful in the country, on two hundred

pounds a year! Charity to the poor could still be spoken of as condescension without giving offence to the recipient. Law had never lived in the whirl of business, nor even felt the pressure of the cares of a large parish. His work supposes too much of leisured ease and modest competence. Hence many a detail would be difficult to carry out in the present day; but none the less are its strictures needed now. And the subdued and old-world flavour may give it an interest with some who turn away from the more purely emotional, almost sensational, books of devotion of the present day.

NOTES AND NEWS.

MR. BROWNING has to some considerable extent revised his earliest book, *Pauline*, for the new edition of his works. Without changing the form or thought of the poem, he has removed several blemishes of expression, and strengthened occasional phrases. He has not yielded to the urgent solicitation of some members of the Browning Society, that he should prefix an "Argument" to his chief poems, after the manner of Spenser and Milton.

SIR RICHARD BURTON's friends will be glad to hear that he has just returned in improved health to Trieste, after nearly three months spent *amid snow* at Abbazia, whither he had gone in search of a warmer climate. He hopes to arrive in England in the early summer, passing slowly through Switzerland on the way.

ON March 20 he wrote the last words of the translation of the sixth and concluding volume of his "Supplemental Nights." He is now writing a sort of biography of the work that has occupied him for so many years, in which will be given not only a collection of appreciative notices, but also a reply to his critics—somewhat similar to the "Reviewers Reviewed" appended by Lady Burton to his translation of Camoens. This will be printed as a concluding chapter to the sixth volume; and it will include the reviews of Lady Burton's "household edition" of *The Thousand Nights and one Night*, which is now complete.

SIR RICHARD has further resolved to set to work at once, with the help of his wife, upon a regular autobiography, which, however, will not see the light just yet.

MESSRS. W. H. ALLEN & Co. will publish next week a new book by Sir Richard Temple, descriptive of his tour in the Holy Land a few years ago. It is entitled *Palestine Illustrated*; and it will have 32 coloured plates, reproduced by chromo-lithography from the author's own drawings, together with four maps.

MESSRS. KEGAN PAUL, TRENCH & Co. will publish immediately a new volume by Mr. J. J. Aubertin, entitled *A Fight with Distances*, being an account of his recent journey through the States, the Hawaiian Islands, Canada, British Columbia, Cuba, and the Bahamas.

MR. WALTER RYE has just completed a manual for genealogists and topographers, entitled *Records and Record Searching*, in which much new information is specially indexed. It is announced for early publication by Mr. Elliot Stock.

A NEW standard illustrated Cookery Book, by Mrs. A. B. Marshall, is announced for publication. It will contain chapters on the art of dinner-giving, a vocabulary of cookery terms in English and French, a list of foods in season, &c., as well as a large number of original recipes in every department of the cuisine.

MR. JOHN MURRAY announces a cheap edition of the works of George Borrow, in five volumes. The first, *The Bible in Spain*, will

appear in April, and the rest will follow at intervals of a month.

A SECOND edition of the *Recollections of Lord Wriothesley Russell and Chenies* will be published immediately by Mr. Elliot Stock.

We understand that a few large paper copies may still be obtained of the facsimile reproduction of Thomas Dingley's MS. account of the first Duke of Beaufort's progress through Wales in 1684, which was announced in the ACADEMY of last week.

THE following are the lecture arrangements at the Royal Institution after Easter: Dr. Charles Waldstein, three lectures on "Ruskin"; Mr. Walter Gardiner, three lectures on "The Plant in the War of Nature"; Mr. Sidney Colvin, three lectures on "Conventions and Conventionality in Art"; Prof. Dewar, six lectures on "The Chemical Arts"; Prof. T. G. Bonney, three lectures on "The Growth and Sculpture of the Alps"; Mr. Carl Armbruster, seven lectures on "The Later Works of Richard Wagner" (with vocal and instrumental illustrations); Prof. C. E. Turner, three lectures on "Count Tolstoi as Novelist and Thinker." The following are the probable arrangements for the Friday evening meetings after Easter: Prof. Flower, "The Pygmy Races of Men"; Sir William B. Grove, "Antagonism"; Mr. James Wimshurst, "Electrical Influence Machines"; Prof. J. K. Laughton, "The Invincible Armada: a Tercentenary Retrospect"; Mr. W. H. Barlow, "Building the New Tay Bridge"; Mr. Francis Galton, "Personal Identification and Description"; Prof. J. A. Ewing, "Earthquakes, and how to Measure them."

THE sixth working meeting of the west branch of the English Goethe Society took place last Saturday, March 24, at Mr. Rogers's residence, 30 Clanricarde Gardens, when Mr. Rogers read a paper on Goethe's "Westöstlichen Divan." The branch will not meet next month, but will resume their evenings in May.

ORIGINAL VERSE.

A SONG OF EASTER.

As a leaf in the waning autumn
This outward form decays;
It falls, and the earth receives it
In the dark December days.
And when, in the depth of winter,
The tree stands stripped and bare,
No life in its wasted branches—
Does it yield to a dead despair?
Not so—for the spring returneth,
And the skeleton-trunk is rife,
At the breath of the wind of Easter,
With the stir of awakened life.
And we—though we seem as dying,
Still yearn for a future bliss,
To awake to a life unfading
In a fairer world than this.

WALTER W. SKELT.

OBITUARY.

THOMAS WESTWOOD.

A MAN of considerable literary power and much amiability of character has recently died at Brussels, which had for many years been his adopted home. As a boy Thomas Westwood enjoyed the privilege of dipping into Charles Lamb's "ragged regiment" of books—"a regiment," he adds, "I was permitted to manoeuvre at will, though not much taller at the time than its tallest folio." Perched in an apple tree at Enfield, in Elia's garden, he made his first acquaintance with Walton's *Compleat Angler*—a book which he was destined to associate in later life with his own name and fame. Here, too, he naturally met all the poets and wits of the

time—Coleridge, Wilson, Wordsworth, Hazlitt, Hunt, Hood, Barry Cornwall, and Landor; while the links of this shining poetical chain were continued to the day of his death by his intimacy with Mrs. Barrett Browning and the still living and graceful poetess, Miss May Probyn. Always a devourer of books, his first library largely consisted of quaint and curious books on fishing, which were more easily procured forty years ago than they are at present, owing to the prevailing rage for them. This fine collection of angling books he sold before leaving England; but it became the parent of a much larger and more varied library, for which he was celebrated on the Continent, owing to the great discrimination with which he had selected it. Works on natural history, and especially on English rural life, together with some of the rarest of angling works, formed its staple. Thus, in the latter feature only, it will bear comparison with the late Mr. Alfred Denison's famous angling library, inasmuch as it contained, to name but one feature, a copy of every known edition of Izaak Walton. These have recently been catalogued at more than a hundred, while the earlier editions are well-known *bonnes bouches* to bibliophiles.

Mr. Westwood's literary career may be said to have begun with putting together the modest list of angling works issued from the Field office in 1861. This was founded on Mr. Russell Smith's catalogue, which had described 264 books. Mr. Westwood extended it to 646. In 1883 appeared his much more perfect *Bibliotheca Piscatoria*, in which he was largely aided by the late Mr. T. Satchell. This book is an indispensable companion to the literary angler, and contains the description, often with very felicitous notes, of no less than 3158 editions and reprints of 2148 distinct works. Always a skilled and enthusiastic angler, Mr. Westwood had been early fascinated by the *mitis sapientia* of Izaak Walton; and in 1864 published his best prose work, *The Chronicle of the "Compleat Angler,"* a large paper copy of which, "with cordial greeting from his brother Piscator, the Author," now lies before me. At the first blush few subjects could seem less promising of which to make an interesting book than a record of the different editions of Walton. His admirer's genial nature and careful pen have resulted in a volume which, by its exact typographical details, will always satisfy the bibliographer; while the general reader is amused, touched, and delighted by turns at the play of humour, fancy, and poetry, which runs riot in these pages. *The Chronicle* is essentially a book for May and the brook-side; indeed, a trout stream might almost be said to ripple through its pages, while its leaves are resonant with the songs of spring. It was reprinted, with additions, in 1883, describing fully no less than ninety-seven editions of Walton; and is a book which, while Englishmen love country scenery, will never lose its charm. In 1883 Mr. Westwood contributed a genial introduction to Mr. Satchell's reprint of *The Secrets of Angling*, by J. D., the seventeenth-century poet of angling.

As a poet Mr. Westwood may claim a high place among minor bards. His *Foxglove Bells* (Brussels: Briard, 1856) is a collection of sonnets, most of them dedicated to his wife, to whom he was devotedly attached. They were inspired (it can be no breach of confidence to say) by her influence, when we read:

"All loved thee—I, a dweller in the town,
Used to coarse faces, common souls, and worn
And fretted with inclement fortune's frown,
A weary man, love-famished and forlorn,
How could I choose but own thee sweetest, best,
And give my poor, sad heart up, like the rest?"

Many of these verses were reproduced, together with "The Quest of the Sangreall, and other Poems," in a volume printed by Russell Smith

in 1868. "The Quest" and half a dozen more idylls found their motive in the cycle of Arthurian romance, and in form and measure challenge the Laureate's "Idylls of the King." This is not the place to compare them; but the following passage may be quoted, as it shows the strong love of spring which always possessed Mr. Westwood, and is a fair sample of his song.

"The snowdrop pierced the snow; with balms of fire
The crocus lit the borders; spring o'erran
The earth, fleet-footed, till the whitethorn bush
Broke into milky blossom of the May.
Queen Guinevere, with absent eyes, and cheeks
Love-pallid, paced her pleasure to and fro,
And twisted posies of red gilly-flowers,
Pansies and purple-globed anemones,
Then tossed them from her in a storm of sighs."

In 1883 appeared a dozen sonnets on angling subjects, to be laid as a garland of song on Izaak Walton's tomb upon the two-hundredth anniversary of his death. These are marked with much strength and sweetness; indeed, his angling songs (one of which was published in the *Newcastle Fisher's Garland*), are exceptionally spirited. These, and a final collection of his poems, were published under the title *Gathered in the Gloaming* (Chiswick Press, 1885). Until almost the end Mr. Westwood wrote verses. About a year and a half ago he was prostrated by a paralytic seizure; but, till the last few months, he was able to amuse himself with his favourite books. His last letter to me broke off abruptly, and had to be finished by an amanuensis. About the beginning of this month his illness increased, and he passed away calmly at midnight on March 12.

Mr. Westwood was a busy man. Besides his books and his garden, he was for many years administrator of the Tournai-Jurbise and other railways, and from a boy had been a devoted lover of nature. He was buried at the cemetery of Boitsford on March 15, near which he had purchased a delightful villa, and where, with his devoted wife (who survives him), he was ever foremost in works of charity and kindness. A large number of villagers showed their respect for one who had dwelt among them for many years by their attendance at the funeral.

With the poet, prose writer, and book collector, who has just been laid to rest, many literary memories have perished. It may be hoped that he has left behind some recollections of a long and scholarly life. A large circle of friends will sincerely mourn his geniality, sympathy, and wide-reaching kindness. These, with a strong religious and contented disposition, formed the chief characteristics of Thomas Westwood. Dying as he did, just as the season which he so deeply loved was budding around him, a friend may be permitted to lay a few verses on his grave, the last which during his life were frequently exchanged.

"Tu decus omne tuis."

DELAY awhile here, Spring, and o'er him strew
White blooms to match your lover's purity;
Spring was his joy; he celebrated thee
With verse and fond conceit—thy comrade true,
Who now sleeps restful 'neath this sombre yew;
Come, Fancy, scatter primroses with me,
Mild Learning weep—come gentle Poesy,
Leave me no rather garlands mid the holy dew.
Life hurries; time slips past; distractions cling
Like burrs round earnest souls. But musing stand

A space; his honest worth, his kindness sing.
And write his epitaph in this strange land—
"Here scholar, poet, angler, hopeful lies;
Nature he loved; he waits for Paradise."

M. G. WATKINS.

MR. EDWARD REID VYVYAN, a nephew of Sir Richard Vyvyan, who took a leading part among Tory politicians at the time of the Reform Bill of 1832, died suddenly, on March

20, at 231, Elgin Avenue. His father, Edward Walter Vyvyan, is still alive in his eightieth year. His mother, from whom he inherited his second name of Reid, died about two years ago. Mr. Vyvyan was born at Dorset Place, Portman Square, on September 4, 1854, and was educated at Clifton and Cheltenham Colleges. After leaving school, he lived for some time in Paris, where he became a good French linguist and a master of its literature. In 1878, he edited a reprint of *Dover's Annalia Dubrensis*, to which he had been attracted by his love of the Cotswolds. To the pages of *Notes and Queries* he was a constant contributor, and the last of his notes—dated from Naples and describing a ludicrous advertisement in English which he saw in the *Via Toledo* of that city—appeared in the number issued four days after his death. His love of literature was unbounded, and he meditated the compilation of a history of English dramatic biography. Unlike most of his family, he was a Liberal in politics, and in 1880 he contested, but without success, the borough of Bridgnorth in that interest.

THE Rev. John Coker Egerton, rector of Burwash, in Sussex—a parish of lofty hills and picturesque woods, with a peasantry not yet reduced to the dull level of conventional men and women—died on March 20, aged fifty-eight. He was of Brasenose College, Oxford, taking his degree of B.A. in 1852; and, after holding several curacies, he was instituted to the rectory of Burwash, a living in his own gift, in 1867. He loved the people of the Weald on which he lived, and he described their characteristics in several papers in the *Leisure Hour* and the *Sussex Advertiser*. These were afterwards printed for a more extended public in a delightful volume of *Sussex Folk and Sussex Ways*: or, *Stray Studies in the Wealden Formations of Human Nature* (Trübner, 1884). It abounded in good stories of what he had seen and heard among the simple, but shrewd, parishioners to whom he ministered.

MAGAZINES AND REVIEWS.

SOME of our readers may be glad to know that Mr. Leslie Stephen's lecture on "Coleridge," recently delivered at the Royal Institution, is printed in full in the last number of the *Reflector*, which is published by Mr. James Stephen, at 27 Chancery Lane. We may also take this opportunity of remarking that our interesting weekly contemporary continues to pursue the even tenour of its way.

MM. BOUSSOD, VALADON & Co. are now issuing an English edition of their magnificent periodical, *Art and Letters*, with even the titles on the plates printed in English. The April number, which begins a second volume for the present year, is rendered exceptional by some sixteen extra pages, containing M^{me}. Sarah Bernhardt's play, "The Confession," which was obtained too late to be included in the table of contents. We confess—without any imputation on the translator—that we should prefer to read the original French. The number also contains a story of lust and crime in mediæval Italy by Vernon Lee; a canonnet by Mr. Oscar Wilde; a continuation of M. Francisque Sarcy's papers on the "Comédie Française," this time treating of M^{me}. Baretta and M^{lle}. Müller, with photographs; and an account of the Mirlitons Club, by M. Jollivet. The illustrations to this last article comprise some half dozen photogravures, after pictures by M^{me}. Gérôme, Detaille, Delort, &c., which were exhibited at the annual show of the club this spring. Altogether, this review has succeeded marvellously in maintaining its early promise, though it may not be welcome in all drawing-rooms. Our own special complaint is that the table of contents does not sufficiently identify the illustrations.

CORRESPONDENCE.

BISHOP COLENSO'S HYMNAL.

London: March 23, 1888.

I have just found among my books this morning one of Bishop Colenso's Hymnals. I am not certain, at this distance of time, whether it is a duplicate of the one I gave Mr. Sharp more than twenty years ago, for two or three varying editions were published. This one is entitled *Psalms and Hymns for Use in the Cathedral Church of St. Peter's, Maritzburg*, and the imprint is "Piettermaritzburg: P. Davis & Sons, Longmarket-street, 1866." It contains 152 hymns—not classified or distributed under special heads, but a table at the end of the volume distinguishes some of them as "Hymns suited for Special Occasions."

It so far differs from my description given from memory that it contains four Trinitarian hymns, one of which is Heber's "Holy, Holy, Holy," and two of which end with Trinitarian doxologies. Three of these, with a fourth which is indecisive, are assigned, in the special table to Trinity Sunday; but, as I stated, the names "Jesus" and "Christ" never once appear in the book. There are only two references to Christ discoverable—one of them being the line, "Forgive me, Lord, for Thy dear Son," in Ken's Evening Hymn, the other being one of the doxologies already mentioned. Three hymns in the table of special hymns are assigned to Christmas Day, four to Easter, and four to Whitsuntide. In none of them is there any reference, even of the most indirect character, to the events usually commemorated in hymns for those seasons; and, in fact, hymn 109, which is merely a metrical paraphrase of Psalm xcvi., is appointed for all three; 110, another of those for Easter, is Psalm xcvi.; 111, a third of the Easter pieces, is a paraphrase of Isaiah xlii., 10-12; and 84, the remaining one, is a cento from Psalm cxviii. No distinctively Christian idea is suggested in any of them. This hymn, 84, is also one of the four Whitsuntide pieces; and the two others are general hymns, not containing a word even indirectly referring to the occasion. There are no hymns for the communion; and altogether the book exhibits marked and wide departure from precedent, connoting equally wide departure from the usual Anglican standards.

RICHARD F. LITLEDAL.

Scrayingham Rectory: March 26, 1888.

I need add nothing to what Mr. Owen has said on the spirit of many hymns in the collection of *Hymns Ancient and Modern*, which are "surcharged with the mention of names of Christ, but destitute of the minutest shred of His spirit and teaching." This is a matter of which more will be heard hereafter. I wish now only to make a statement of facts.

In his letter, published in the *ACADEMY* for March 17, Dr. Littledale says that the Bishop of Natal "compiled a Hymnal for use in his diocese, from which he rigidly excluded every mention of the very name of Christ." The italics are mine.

I have before me a letter from the bishop, dated April 2, 1866, in which he speaks of an attack made upon him

"with reference to my new Hymn Book, which,

strange to say, I find does not contain the name Jesus or Christ from one end to the other. This was quite unintentional on my part, and has merely arisen from the fact of my having rejected hymn after hymn which contained prayers to Christ, which I do object to on scriptural and apostolical grounds, and others in which the name of Jesus is used familiarly and irreverently."

This is decisive as to the bishop's motives. There was, therefore, no purposed rigid exclusion of the name.

Dr. Littledale goes on to say of this hymn-book that

"It did not merely, like Unitarian Hymnals, omit Trinitarian Hymns, and hymns of worship to Christ, but there was absolutely no allusion to such a being as Christ throughout the volume."

Bishop Heber's hymn, "Holy, holy, holy, Lord God Almighty," with its invocation of "God in Three Persons, Blessed Trinity," is, I suppose, a Trinitarian hymn. Bishop Ken's evening hymn contains, I suppose, in the lines:

"Forgive me, Lord, for Thy dear Son,
The ill that I this day have done,"

a very clear "allusion to such a being as Christ."

Dr. Littledale adds that the hymn-book "was soon suppressed as impolitic." It was never suppressed. The original collection was put out again in 1868, with additions, containing first the hymns in the Book of Common Prayer, and then a series of forty-one hymns, of which twelve appear in *Hymns Ancient and Modern*, including Nos. 24, 207, and 328.

GEORGE W. COX.

London: March 24, 1888.

The columns of the ACADEMY are not a suitable place for theological controversy, and I am not inclined to enter into a debate of the kind with Mr. Owen.

But I may fairly correct a grave error of historical fact, and another error of logical reasoning, in his letter of March 17, without following him into polemical matter. The former occurs in this sentence: "It was pointed out at the time that the bishop's opinion"—as to the propriety of addressing hymns and prayers directly to Christ—"was only novel as being a reversion to early Christian usage."

Without dwelling on the circumstance that the Hymnal in question, as I have since verified, does not merely omit hymns of worship or address to Christ, but excludes every mention of His Name, we have the most explicit and unimpeachable contradiction of Mr. Owen's assertion in the famous letter of Pliny the Younger to the Emperor Trajan (x. 97) on the customs of the Christians within the Pontic province, A.D. 103—a piece of testimony which most surely informs us of the usage within the first century of Christianity, as there is no hint discoverable anywhere of a change immediately afterwards. Now here is what Pliny says:

"Adfirmabant autem hanc fuisse summam vel culpae suae vel erroris, quod essent soliti stato die ante lucem convenire, carmenque Christo quasi Deo dicere secum invicem."

I do not know where to look for rebutting evidence prior to this as to "early Christian usage."

The error of reasoning is that Mr. Owen represents me as objecting to all hymns which do not contain the name of Christ as unfitted thereby for Christian use. Apart from such details as that I have not said or implied anything of the kind; that such a statement would oblige me to call for the rejection of the Psalter; and that I have myself compiled and published a Hymnal which contains numerous hymns of the sort. Mr. Owen has directly inverted the real issue, which is that the structure of Bishop Colenso's Hymnal suggests that the occurrence of Christ's name in a hymn unfits it for Christian

use; for no other plausible reason can be offered for its careful elision from his Hymnal, this being a new departure, and an innovation upon the settled usage of eighteen centuries of Christianity, dating at least from the time of the Apocalypse (chap. v. 12-14).

RICHARD F. LITTEDALE.

ARNAUT DANIEL AND THE "TERZA RIMA."

London: March 17, 1888.

In a discussion—in the essay upon the genesis and growth of the *Divina Commedia*—as to the reasons for Dante's choice of the *terza rima*, Dean Plumptre incidentally suggests (as he had done before elsewhere) that this form of verse was borrowed from the Provençal poet, Arnaut Daniel, "who had originated the yet more complicated and unmanageable *sestina*." That Arnaut did invent a particular form of *sestina*, of which he has left a specimen, appears to be unquestioned; but there seems no ground for supposing that he ever made use of the *terza rima*, even if it existed in his time.

It is improbable that Dante was acquainted with any poems of Arnaut Daniel other than the eighteen which have come down to us; for all of those from which he quotes in the *De Vulgari Eloquentia* are comprised in that number. As may be gathered from the subjoined analysis of the rime-system of these eighteen poems, there is no trace in them of the sustained *terza rima* used by Dante.

The poems are here numbered according to the order in which they are given by Sig. Canello in his *Edizione Critica* of Arnaut (Halle, 1883).

If the formula ABABCBCDCDED be taken to represent the *terza rima*, the rime-sequence of Arnaut's poems will appear as follows—the index being employed to denote the number of times the same rime occurs consecutively, and the comma to denote the division into stanzas: i. A¹, B³, C³, D³, E¹ (five single-rimed stanzas of nine lines each and envoi). ii. A³B³CD³C (six stanzas), CD³C (envoi). iii. ABAB³CBC (and so for seven stanzas, the sequence of rimes being the same in each stanza, but not the rimes themselves), BCBC (envoi). The rime-system in iv.-xvii. is one of which Arnaut was the originator. Its peculiar feature is that a certain number of lines in each stanza do not rime within the stanza, but find their rimes in the corresponding lines of the succeeding stanzas. This system is gradually developed in iv.-ix., until in x.-xvii. the rime within the stanza disappears altogether. In each poem of this series (iv.-xvii.) the individual rimes are repeated in the same sequence throughout the poem. iv. ABCDEF²E (six stanzas with same rimes and same sequence), EF²E (envoi). v. ABABCDE (six stanzas), CDE (envoi). vi. AB³ACDE (five stanzas). vii. ABCDEF²G²H² (six stanzas), G²H² (envoi). viii. ABCDE²FGH (six stanzas), FGH (envoi). ix. ABCDEFGHB²KCLMNOO (six stanzas), KCLMNOO (envoi). Of x.-xvii. it will suffice to give one model, e.g., x. ABCDEFG, ABCDEFG (and so for six stanzas), EFG (envoi). xviii. The remaining poem is the *sestina*, in which the rime-system is the same as in x.-xvii., while the sequence is varied according to a fixed law, the key to which is the repetition of the last rime of each stanza at the end of the first line of the succeeding stanza, thus: ABCDEF, FAEBDC, CFDAEB, ECBFAD, DEACFB, BDFECA, ECA (six stanzas and envoi).

It will be observed that of all these rime-schemes the only one which at all approaches the *terza rima* in structure is iii.; and in this the chief characteristic of the former, namely, its continuity, is entirely wanting. It is evident, therefore, that the origin of the *terza rima* must be looked for elsewhere than in the poems of Arnaut Daniel.

PAGET TOYNBEE.

P.S.—I may take this opportunity of correcting another error with regard to Arnaut Daniel,

to which Dean Plumptre has given currency. He says (vol. i., p. 328, note 116): "He (Arnaut) also wrote a romance of Lancelot of the Lake, which may have been that read by Paolo and Francesca." Though this opinion was at one time held by several distinguished Dante scholars—Witte and Blanc among the number, as well as by Diez—it has recently been conclusively shown by M. Gaston Paris, in *Romania* and elsewhere, that Arnaut did not write a Lancelot romance. Nor is there any need for the hypothesis that he did so, since the version of the romance alluded to by Dante was in the *lingua oil*, old French, as I pointed out more than two years ago in the ACADEMY, as well as in a paper on the subject printed in the Fifth Annual Report (1886) of the Cambridge (U.S.A.) Dante Society. T.

THE "FORTNIGHTLY REVIEW" ON LORD HERBERT OF CHERBURY.

London: March 25, 1888.

Mr. Benson's reply justifies my former letter. The personalities in which he indulges, after the immemorial habit of pleaders in a bad cause, cannot confuse the issue. My contention was, and is, that the man who publishes in a leading review what he calls a "study" of any subject, while in ignorance of the work of avowedly competent predecessors, deserves the severest censure if he repeats gross errors which have been already removed and is guilty of new errors which a reasonable knowledge of the recognised authorities must have obviated. To dispute so self-evident a proposition is to abnegate all pretensions to scholarship. This Mr. Benson does. I showed that four books of recent date fully and accurately expounded Herbert's life and work, among them being Rémusat's exhaustive volume (1874), with which I should have coupled Lechler's *Geschichte des Englischen Deismus* (1841). Neglect of these standard works accounts for all Mr. Benson's misrepresentations, among which I still reckon his singular criticisms of Herbert as "an undeniably feeble" poet and "a nearly contemporary" historian of Henry VIII. That the article was written in 1885 is an unavailing plea, since all but one of the authorities were published earlier. Mr. Benson not only admits his fatal ignorance, but has the strange hardihood to speak with contempt of books that he has never seen.

Were I to consult my own inclination, I should have now done with a writer who so effectually demolishes himself; but, after the charges he has brought against me, it is only fair to your readers that I should briefly restate my case. Of the eighteen counts in the indictment, Mr. Benson pleads guilty to four. I stand by the other fourteen. Mr. Benson's main line of defence is the reasonable one that his article was not intended to be exhaustive. My argument was that the space filled by Mr. Benson gave every opportunity of producing a recognisable portrait of Herbert, but that it was woefully misused. To omit all account of the sole work on which Herbert's pretension to his admitted fame as a philosopher depends; to leave wholly out of the reckoning, when estimating Herbert's character, the critical part he played in the civil wars—the many omissions of this calibre, to whatever causes due, could not fail to reduce Mr. Benson's "general picture of an interesting man" to the level of an empty caricature. And the evil is aggravated by the fact that Mr. Benson found room for a statement of the ludicrous claim of the Herbert family to descent from Pepin, for a pointless excursus on "the uncertain origin" of the Deists, for some inaccurate remarks on the eighteenth-century Deistical controversy, and for an irrelevant description of Col. Hutchison's character,

In two cases Mr. Benson seeks to acquit himself by accusing me of gross blunders. He has supplied no more startling examples of his habitual inaccuracy. I showed with all possible clearness that Herbert's *De Religione Gentilium* "appeared in a volume by itself in 1663." I added that another work, *Religio Laici*, was not published with it, as I understood Mr. Benson to imply; but that the *Religio Laici* formed an appendix to Herbert's logical treatise, *De Causis Errorum* (first edition, 1645). This is perfectly accurate. The *De Causis Errorum* was not mentioned at all by Mr. Benson. I am now told, amid much sarcasm, that I have identified, owing to some similarities in their titles, the *De Religione Gentilium* with the *De Causis Errorum*! The latter Mr. Benson characteristically warns me is "a different treatise altogether, published seven [it should be eighteen] years before." But all this was the very point of my own observations. A second attempt to convict me of gross blundering, disingenuousness, and I know not what, is stranger still. I took it for granted that Mr. Benson had read Herbert's autobiography with care enough to know that Herbert went to the Low Countries in 1614, and, after an extensive tour, returned home in the winter of 1616-17. But, in crediting Mr. Benson with such obvious knowledge, I assumed too much. Mr. Benson detects "a gross error" in my statement that Herbert returned home in 1617, and had subsequently his first interview with Villiers. Mr. Benson insists that between January and May, 1615, Herbert was in England, and that in the latter month, after an introduction to Villiers, he left to become English ambassador in France. Such remarks make it difficult to treat Mr. Benson seriously. He can be refuted at every turn out of Herbert's own mouth. Herbert distinctly states that, while the Savoyard envoy, Scarnafissi, was employed in London in certain diplomatic negotiations, he (Herbert) was staying with the Prince of Orange in the Low Countries; that he was then bringing his foreign tour to a close; and that he came home (for the first time since 1614) after Scarnafissi's negotiations were well advanced in the course of a very stormy winter. The date of Scarnafissi's negotiations is the essential thing, and this is fixed with absolute certainty in the autumn and winter of 1616-17 (Gardiner's *Hist.*, iii. 49-52). The period of Herbert's return is thus ascertained beyond question. Herbert proceeds to tell us that after his return he was ill for nearly a year and a half; that, before his recovery was complete, he met Villiers, who secured the French embassy for him, and that, on the very day of Queen Anne's burial (i.e., May 13, 1619), he left for Paris to assume his office. External evidence render these dates indisputable. They are amply corroborated by Herbert's original instructions (dated May 7, 1619), and by the many letters printed in the Old Herbert Papers (of the Powysland Club)—that volume where Mr. Benson found one solitary misdated letter, which he deems capable of subverting an impregnable chronological fortress. The date of the letter which Mr. Benson quotes should run May 22, 1619, not 1615. The error is quite obvious.

Mr. Benson's powers as a controversialist may be further estimated by his allegation that I disapproved of his use of the harmless word "threaten" when he wrote that Herbert "threatened" a certain treatise. This is mere trifling. Mr. Benson said that Herbert threatened a treatise on a trivial topic. I objected that Herbert threatened a treatise on quite another, and a really important theme; and that, far beyond threatening, he completed the work which is now in print: a crucial fact which Mr. Benson unwarrantably (if he was aware of it) concealed from his readers.

Mr. Benson practically admits his misrepres-

entations of Herbert's educational system. He allows that the divinity of the Schoolmen is not recommended there, but insists that "it is implied throughout." It would be quite as rational to credit Bacon's *Novum Organon* with scholastic leanings. It appears that Mr. Benson used words implying that Herbert belonged to an organised body of persons called Deists, because such is "the language of the French writer Viret." Mr. Benson had already quoted this "Viret" in his essay; but what are "Viret's" antecedents? I have discovered that a theologian, the only person of the name of any eminence, flourished in France in the sixteenth century, but he had certainly no concern with seventeenth- or eighteenth-century Deism. I am, in fact, driven to the hypothesis that "Viret" is Mr. Benson's way of quoting Alexandre Vinet, the Swiss Protestant (1797-1847)—a not unknown religious writer who wrote about Deism, but whose works have no authority whatever beside those of Lechler and Rémusat.

Mr. Benson's recklessness outdoes itself when he seeks to vindicate his remarks on Herbert's critics. I denied that Herbert was known to his contemporaries as "the patron of Deism." Mr. Benson replies that Thomas Halyburton called him so, and that Halyburton was born in Herbert's lifetime. This is (in the language of Mr. Benson's friend, Leslie) "not only a precarious but a guilty plea." Halyburton was born, according to every authority, in December, 1674—twenty-six years after Herbert's death, and his criticism of Herbert (*Natural Religion Insufficient*) was first published in 1714—another forty years later. It is this criticism which Mr. Benson thrusts before his readers as the work of Herbert's contemporary. Halyburton, moreover, calls Herbert "the first inventor of this Catholic religion [i.e., Deism]—the first who lick'd Deism and brought it to something of a form," and the like—but never, so far as I have read him, "the patron of Deism."

Mr. Benson's blunders in chronology do more than reflect on his knowledge of the simple rules of arithmetic. He is clearly ignorant of the wide interval—not merely chronological, although that is important—which separates an isolated writer like Herbert, who published his chief philosophical treatise in 1624, from the definite school of Deists who sprang up with the Revolution, who owed the main development of their doctrine to Locke's philosophy, and whose relations with Herbert lie very much below the surface. Blount is certainly a sort of connecting link, but his position is not a mere extension of Herbert's, and he was more a disciple of Hobbes than of Herbert. It is futile on Mr. Benson's part to think to fuse Herbert and the recognised school of Deists into what it pleases him to call "an organic whole." Herbert's true affinity is with the Cambridge Platonists rather than with the rationalists of any eighteenth-century school. It was not with Herbert, it was with contemporary writers of a more advanced and clearly defined type that Leslie, Hill, and Balguy wrestled. Balguy, in his *Letter to a Deist* (1726), dealt only with Shaftesbury; Leslie, in his *Short and Easy Method with the Deists*, mainly with Blount and Toland. Locke, to whom Mr. Benson fails to give adequate prominence, established Herbert's chief fame when he discussed Herbert's metaphysical theory of innate ideas in his *Human Understanding*. Leland, in his *View of the Principal Deistical Writers* (1754), went somewhat out of his way to expound and contest Herbert's purely religious views in full detail. In this respect Leland stands almost alone. When a writer, dealing with Herbert and his critics, hopelessly confounds Leslie's *Short and Easy Method* with Leland's *View*, he rouses suspicions as to his

real acquaintance not only with either book, but with the whole course of seventeenth- and eighteenth-century free-thought.

It is in the interest both of scholars and of the general public that writers in the leading reviews should recognise their responsibilities. In Herbert's case there was no need to consult "private papers" and "family records" to arrive at a fair estimate of his life and work. Printed books supply all the information. When these fail, one's errors are excusable. A resolution on a writer's part to instruct himself before he affects to instruct others would enable him, if of ordinary intelligence and literary skill, to produce within the obvious limits of a review article an adequate and accurate "study of the life and work" of so interesting a figure as Lord Herbert of Cherbury.

SIDNEY L. LEE.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, April 2, 5 p.m. Royal Institution: General Monthly Meeting.

THURSDAY, April 5, 8 p.m. Linnean.

8 p.m. Chemical: "Researches on the Constitution of Azo and Diazo Derivatives. III., Compounds of Naphthalene β -Series," by Prof. R. Meldola and Mr. F. J. East.

FRIDAY, April 6, 7.30 p.m. Civil Engineers' Students' Meeting, "Coke Making," by Mr. G. E. J. McMurtrie.

8 p.m. Philological: "The MSS. and Versions of Hampole's *Pricks of Conscience*," by Dr. P. Andrewe.

8 p.m. Geologists' Association: "The Influence of Geology on Early Settlements and Roads," by Mr. F. J. Bennett; "The Discovery of *Elephas primigenius* associated with Flint Implements at Southall," by Mr. J. Allen Brown.

SCIENCE.

Irish Texts mit Uebersetzungen und Wörterbuch. Herausgegeben von W. H. Stokes und E. Windisch. Zweite Serie, 2. Heft. (Leipzig.)

THE previous part of this series was noticed some time ago in the ACADEMY, and how many more parts there are to be I know not. The more the better; but I am particularly anxious to see the dictionary that is to follow them. The following are the contents of the present volume: 1. The history of Philip and Alexander of Macedon from the Speckled Book, with a German translation and excerpts from the Book of Ballymote, by Dr. Kuno Meyer. 2. The death of the sons of Uianech from the Glenn Maeán MS., with an English translation by Dr. Whitley Stokes. 3. Four short *Táins*, or cattle-spoils, forming stories preliminary to the Táin Bó Cúailnge, with a German translation by Prof. Windisch; the titles of the four stories referred to are: Táin Bó Dartada, Táin Bó Flidais, Táin Bó Regamain, Táin Bó Regamna. Nearly one half of the book is occupied by the text edited by Dr. Meyer. His introduction is well worth reading, and the text contains some valuable old forms of Irish. Moreover, the whole treatment of the Macedonian story by the author of the Irish version is very instructive, as throwing light on the state of classical knowledge in Ireland in his time, and the way he and his race looked at the world around them. Otherwise, it is most tiresome reading; and it is rather a pity that the editor did not know in time of the Ballymote version, which would seem to have better deserved publication in full than the one here printed.

After a careful introduction and bibliography, Dr. Stokes gives a version of the

well-known story of the death of the sons of Uisnech from the Glenn Masáin MS. This is the property of the Highland Society, now deposited in the Advocates' Library in Edinburgh, and it is supposed to have been written in the fifteenth century. It differs in very important points from the two versions published by Prof. Windisch in his *Irische Texte*. For instance, it gives a widely different account of the slaughter of the sons of Uisnech, and it leaves out the curious references to the mysterious music of the three brothers. Among the various writers who have handled this story in English may be mentioned Macpherson, whose treatment of it in his *Fingal* (London, 1762), pp. 155-171, is characterised by Dr. Stokes as "a bombastic fabrication, in which the author mixes together incidents belonging to the two cycles of Conchobar and Find." The whole paragraph will interest the readers of the ACADEMY, so I venture to quote the rest of Dr. Stokes's words, as follows:

"He proves his ignorance of Gaelic by the following notes: 'Nathos [macphersonese for Náisi] signifies youthful: Ailíhos [macphersonese for Ainnle] exquisite beauty: Ardan, pride.' 'Dar-thula or Dart-huile [macphersonese for Deirdre] a woman with fine eyes.' 'Seláma' . . . 'The word in the original signifies either beautiful to behold, or a place with a pleasant or a wide prospect.' 'Lona a marshy plain.' 'Slis-seamha soft bosom.' He proves his ignorance of old Gaelic manners and customs by making the sons of Uisnech (macphersonese for Uisnech) fall by the arrows shot by 'Cairbar's' bowmen. On this O'Curry is worth quoting (*Manners and Customs of the Ancient Irish*, ii. 272): 'It is remarkable that in none of our more ancient historical or romantic tracts, is there any allusion whatever to bows and arrows.'"

The translation of the story into English is followed by brief but very instructive notes; but with regard to one of them I would venture to suggest a somewhat different view. I refer to l. 635: *A fir thochlas an fearáin*, which Dr. Stokes renders "O man, that diggest the tomb," in harmony with another reading *thochlas*; but the only emendation I should venture to suggest would be into *thoobhas* or *thoghbas*: the rendering would then be "O man, that buiddest the tomb." Then as to *thochlas*, Dr. Stokes refers this to a root "*gal*, Welsh *palu*, to dig," and adds that "*the Latin pála 'spade' is perhaps borrowed from one of the cognate Italian dialects in which *q* becomes *p*."* Unless, however, other instances of words of this origin are to be found in Irish, I should prefer to regard *thochlas* as derived in some way or other from the same root as *claidim* "I dig." The preterite passive of this verb was *ro clas* and Windisch gives the passive participle (in the plural) as *claisi* "defossi"; there was also a noun *class* "*Graben*," which is in Welsh *clas* "an enclosure," and is similarly related to the Welsh verb *claddu*, which in the Middle Ages meant "to dig up." The root of the Celtic words was possibly *solad* or *sorad*, to which may also, perhaps, be referred one or both of the words *scratch* and the German *kratzen* of the same meaning. Practically, there is no objection to either reading, as the Irish *fert* appears to have admitted of both digging and building; for one reads of *feris* with doors and *feris* without doors to them.

The short cattle-spoils are exceedingly interesting, especially that called after Regamain, who appears here as a sort of king or chief of the Fir Bolg. This story throws light on the surnames of some of Medb's sons, who indifferently bore the name *Maini* or *Maine*, which I have attempted in my Hibbert Lectures, just published, to connect with that of *Menyw*, son of Teirgwædd, Arthur's man of magic and illusion. It also mentions three daughters of Regamain, called *Dunanna* or *Donanda*, genitive *Dunann* or *Donand*, which give us the plural of the name of the dark divinity, from whom the Irish gods were known as the *Tuatha Dé Danann* or the tribes of the goddess Danu. I have for some time believed *Danu*, genitive *Danann*, to be the same name as that of the Welsh goddess *Dôn*; the form *Donann* or *Donand* was already known in Irish; but I further wanted one with *u*, which the text from the Yellow Book of Lecan, now published by Prof. Windisch, supplies. Elsewhere we read of Danu having one sister; but here we have three in all bearing that name. *Danu*, *Donu*, or *Dunu* is to be referred to the same origin as the dialectal English word, to *dwine*, "to fall into a swoon," Anglo-Saxon *dwīnan* "tabesce"; and it probably meant death—a supposition which is supported by Irish mythology, making Danu mother of the *tri déa dána*, or the three gods of Fate, whom Lug, the sun-god, slays, though *dána*, the genitive of *dán*, "gift, profession, also destiny," Welsh *daun*, "gift, talent," Latin *donum*, is not etymologically connected with the name *Danu*, *Donu*, or *Dunu*. For the stem implied by these last appears to have been *duen* or *dwan*, which has also yielded the Celtic languages their word for man, homo, *ánθρωπος*: these are Welsh *dyn*, Irish *duine*, plural *dóini*, with which one should compare in point of phonology the Irish *cois*, "quinque."

I only hope that other students of Irish may find the texts and notes now before me as interesting as I have. JOHN RHYS.

SCIENCE NOTES.

DR. GLAISHER will deliver an address in commemoration of the bicentenary of the publication of Newton's *Principia* in the antechapel of Trinity College, Cambridge, on Thursday, April 19, at 4.30 p.m.

MR. E. T. NEWTON, of the Geological Survey, has recently described a remarkable skull of a pterodactyle, or so-called "flying reptile," from the alum-shales in the Lias of Lofthouse, near Whitby. The specimen was obtained by the Rev. W. D. Purdon, of Wolverhampton, after whom it has been named. Skulls of pterodactyles are extremely rare, and the present specimen displays parts which were previously unknown. The skull has a close affinity to that of a typical lizard, its resemblance to the bird's skull being only superficial. But while the cranial characters are decidedly lacertilian, the brain, as shown by the cast which Mr. Newton has ingeniously taken, exhibits considerable divergence from the reptilian type, and presents characters approximating to those of birds, such especially as the American fossil *Hesperornis*. Yet it seems impossible to regard the pterodactyle as representing an intermediate link between reptiles and birds. The author concludes that the Pterosauria, or group to which the pterodactyle belongs, may be viewed as highly specialised reptiles, with modifications

in the direction of birds; and he holds that birds, pterosaurians, and lizards were probably all derived from a common ancestor possessing the general characters of all the three groups, yet with none of their specialisations.

MEETINGS OF SOCIETIES.

ARISTOTELIAN SOCIETY.—(Monday, March 19.)

SHADWORTH H. HODGSON, Esq., president, in the chair.—Mr. G. F. Stout read a paper on "The Scope and Method of Psychology." As sources of psychological data he enumerated and discussed (1) the products of mental process in their relatively incomplete phases of evolution, and (2) the study of mental process itself, by means of introspection and retrospection in oneself, and by observing the outward signs of it in others. The various psychological hypotheses were grouped by him under three heads: (1) The treatment of class concepts of mental phenomena as if they were real forces producing these phenomena; (2) the application of the theories of physiologists to the explanation of conscious processes; and (3) the assumption of unconscious or subconsciously factors, which operate according to the same laws as definitely discriminated presentation. Of these three modes of procedure he considered the third the most useful for psychological purposes.—The paper was followed by a discussion.

ROYAL SOCIETY OF LITERATURE.—(Wednesday, March 21.)

DR. W. KNIGHTON, V.P., in the chair.—A paper was submitted from the pen of Dr. Leitner, upon "The Legends, Stories, and Songs of a Fairyland in Central Asia." Owing, however, to the absence of Dr. Leitner, through sudden indisposition, and to the technical character of a considerable portion of the paper—dealing, as it did, with the origin and intricacies of a language almost unknown, except to a small knot of travellers or students—it is impossible to do more than give a few of the leading points. The principal aim of the author appeared to be to show that Hunza, the chief district referred to, was probably the birthplace of the Huns; and that their language, though possibly a peculiar development in the Turanian group, might still have unsuspected relationships with an Aryan prototype.—After some remarks from the chairman, a discussion ensued, in which Mr. J. W. Bone, Dr. Phené, the Rev. R. Gwynne, and Mr. E. Gilbert Highton, the secretary, took part.

BROWNING SOCIETY.—(Friday, March 23.)

DR. RICHARD GARNETT in the chair.—Dr. Furnivall read a paper by Mr. Kineton Parkes, on "Ferihtah's Fancies," which gave an account of the book, its prologue, twelve fancies, and epilogue. The poems in blank verse are sceptical; the lyrics reassuring; both together bring out the truths of faith, love, the value of humanity, God's purposes in pain, &c. The whole is a philosophical work, scientific in the sense of ethics. Its great question is, Why should things be? Its note is optimism; the answers to the question indicate a happy view of life. Many of its passages have the impress of the great master.—The chairman thanked Mr. Kineton Parkes in the name of the society for his sound and sensible analysis of "Ferihtah's Fancies." He (Dr. Garnett) wished to call the attention of members to the influence of Eastern poetry on our literature. Our contact with it is frequent. All read and enjoy the Arabian Nights; and yet, except in the case of Moore and Southey, the phase of Eastern life which we find in that book has but little entered into our literature. The wisdom, aphorisms, and parables of the East have influenced us more. Oddly enough, younger poets have been attracted by Oriental wisdom, while older ones have turned to Oriental gorgeousness. It was in his old age that Goethe wrote his *Eastern Divan*. Browning, however, had turned to the wisdom in his old age; and it is to be regretted that he did not take to it earlier, as *Ferihtah's Fancies* might then have been better marked by the characteristics of true aphoristic writing, which should be clear, pointed, direct, as was Leigh Hunt's "Abou Ben Adhem." Dr. Furnivall regretted that the paper spent so

much time in sketching the poem. He felt that there could never be so much interest for men and women in Browning's later didactic works, as there was in the earlier poems which dealt with men and women. As for the doctrine in *Perishah's Fancies* which holds that love cannot exist without pain, the distress of others, he believed that to be false philosophy.—Miss Whitehead believed pain to be needed on earth because of its curative effect, in heaven the necessity for it will be done away with. The curled dandies of Bond-street became heroes under the hardships of the Crimea. Some of us are always asking why pain is permitted, especially when it is seen in children and animals, and Mr. Browning's optimism gives us again and again the answer.—Mr. Revell admitted that if the society was rather overdosed with theology, it is because it is the supreme interest in life, and this justifies Browning in insisting upon theological subjects. He considered that many of the earlier poems showed Browning's interest in oriental life, and instanced such poems as "Rabbi Ben Ezra," "A Death in the Desert," "Saul," and others.—Dr. Berdoe considered the paper as too much occupied with a description of the poem. On the whole, *Perishah's Fancies* is a fairly easy poem for Browning. The discussion of why things are is very interesting to analytical minds. We grow more Eastern as we grow older; approximate gradually to the dervish style of thinking. He believed in the profitable uses of pain. Were it removed, we should be a set of brutes; as it is, those who feel it least inflict it oftenest. Mr. Gonner did not think Browning had grasped the question of pain and its purposes. John Stuart Mill asked—Why should pain be needed to evoke good? The question has to be solved rigidly, not evaded. Browning flings a veil of words over his answer; and all that is clear is just—things are right because they are. Mr. Kington Parkes had treated Browning as if he were a poetical Herbert Spencer. He (Mr. Gonner) objected to this continual treatment of literary subjects from a moral point of view. Browning is too rarely discussed as a literary artist.—Mr. Slater considered some criticism of the literary character of *Perishah's Fancies* desirable. He felt, however, very careful about accusing Browning of being wanting in meaning, as he could not but remember that the fault might lie in his own slowness of apprehension. He believed in the useful functions of pain. One of these was its education of the young. The child who burnt his fingers needed no further telling not to put his hand in the flame.—Mr. Kingsland asked why, if *Perishah's Fancies* contains so little of value to us, it reached a third edition in so short a time? Browning speaks in it as a theologian, as a man who believes in a personal God, and believes that we may have relations with Him.

FINE ART.

COLLECTORS OF PICTURES, CHINA, &c., can insure against Fire in the best offices at reduced rates and upon a special system which provides a guarantee (which an ordinary policy does not) of full payment in the event of claims, by applying to the FINE ART INSURERS PROTECTION SOCIETY, 43, BOLDING-LANE, EASTCHEAP, E.C.

GREAT SALE OF PICTURES, at reduced prices (Engravings, Chromes and Oeographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. REES, 115, Strand, near Waterloo-bridge.

The Church Bells of Kent. By J. C. L. Stahlschmidt. (Elliot Stock.)

CAMPAOLOGISTS will soon come to consider themselves ill-used if a year passes without the publication of a volume upon their subject by Mr. Stahlschmidt. The *Surrey Bells and London Bell-founders* (1884) was succeeded last year by *The Church Bells of Hertfordshire*, and now our indefatigable author has turned his attention with like excellent result to the county of Kent.

The last volume is built up on the same lines as the other two, and consists of three parts: the first an account of the bells and their founders in order of date, the second on the local uses of bells, and the third a cata-

logue of the bells arranged under the names of the parishes and churches in which they hang. Surrey contains 1,030 church bells, Hertfordshire 712, Kent about 1,952. The chief antiquarian interest of course attaches to the most ancient bells. Of pre-Reformation bells Surrey contains 22, Hertfordshire 31, Kent 98. The corresponding numbers of Elizabethan bells are, for the three counties, 13, 21, and 38. The greater amount of material to be dealt with in the present volume is therefore apparent. Mr. Stahlschmidt informs us that counties farther away from London are, as might be expected, much richer in "ancients" (i.e., bells cast before 1600) than the home counties. This, he says,

"may be attributed to two causes: firstly, the excessive energy of the local founders of the seventeenth century; and, secondly, to the mania for peals for change-ringing which obtained during the early part of the eighteenth century."

These two causes have, without doubt, sent many a ring of three or four heavy "ancients" literally to pot, to provide a light set of six or eight bells for the local ringers. The oldest bells are usually marked by a very long waist, and a simple inscription with the letters widely spaced out so as to occupy the whole length of the inscription band. Inscriptions in Lombardic letters, if with stops between the words, are earlier than 1400. Black letter began to be used about 1390. Lombardic letters without stops were used again in the second quarter of the sixteenth century. Certain alphabets, however, were in use for centuries, and may be traced from hand to hand. Foundry stamps are rare with Lombardic bells, and only came into general use about the beginning of the fifteenth century. The two earliest bells in Kent are a quaint pair at Iwade, made probably early in the thirteenth century. They are abnormally long-waisted, with cylindrical crowns and plain sides. Other archaic bells are at Coldred, Lullingstone, Sutton by Dover, Snargate, and Stodmarsh.

In conclusion, it may be said generally that the book contains much interesting miscellaneous information, and is well printed and illustrated. Campanologists will of course at once add it to their libraries.

W. M. CONWAY.

MR. HAYNES WILLIAMS'S FRENCH INTERIORS.

THE Castle of Fontainebleau—rich in its exhibition of all styles of decorative art, from the time of the Renaissance to the time of Napoleon—has given to Mr. Haynes Williams enough material for a couple of years' work; and it is quite remarkable with what variety and success he has treated very dissimilar themes offering themselves to the painter, the one within a stone's throw of the other. Mr. Haynes Williams, in the series of pictures now at the Goupil Gallery, has avoided any attempt to deal with great events. Once, indeed, it is a personage no less illustrious than Napoleon himself who sits by the fire in an apartment the artist has portrayed; but, generally, it is some one more engaging, if less famous—some slim maid of honour, it may be, some brisk or gracious court lady—who brings into the splendid chambers the interest of human association, and reminds us that Mr. Williams can

paint not only marbles and rock crystal, tapestries and *or moulu*, candelabra and cabinet, but likewise the folds of a gown and the light on shining hair. To the part that humanity plays in the places he has depicted it was wise of the artist to set bounds. We did not want to study Fontainebleau—its charm and splendour—as a mere background. The true chronicler of the place could only be a painter alive to the sufficiently absorbing beauties of stately gallery or exquisite boudoir—recognising, no doubt, the interest that lay in that making of history which these rooms had witnessed; but recognising, too, that spots so endowed by art had a life of their own deserving of record—a life due only to engaging combinations of line and texture, and to illumination and to admirable hues. We have nothing whatever to say against the presence in this picture of a grave janitor, in that of a couple of romps, in that of a studious lady. But Mr. Haynes Williams's canvasses commend themselves more specially as possessions by reason of the courage with which he has attacked and overcome the difficulties which the record of Fontainebleau itself was bound to present. The artist has painted interior after interior with singular freedom and certainty. Now, as in the "Galerie Francois Premier" (No. 6), it is an immense and striking perspective; now, as in the so-called "Salle du Conseil" (No. 8), it is a room for intimate meetings, decked only with dainty furniture, and its rose and blue panels the work of Van Loo and Boucher; now it is a bedroom in which the great square bed, very low and richly covered, stands in a great space of floor, the walls all hung with the finest stuffs on which light can pass or shadows gather. It is impossible, of course, to speak in detail of the thirty-three pictures the painter exhibits any more than of the associations which they recall. But, besides those works which we have signalled already, there must be seen particularly the "Salle des Gardes" (No. 13), with its wonderful Henri Quatre chimney-piece; and the "Salle d'Attente" (No. 32), in which the artist has dealt with extraordinary technical skill with the pictorial difficulties of gold ornamentation. It is an admirable harmony in gold and grey. "Gone!" again (No. 16), is an almost exceptionally delicate study: a graceful person in a pale pink Empire dress sits on a long, peach-coloured sofa. The show is altogether so good that it will enhance and extend Mr. Haynes Williams's reputation as an artistic draughtsman of architecture and as a rich and subtle colourist.

F. W.

OBITUARY.

W. THOMPSON WATKIN.

MANY readers of the ACADEMY will share our regret at hearing of the death of Mr. W. Thompson Watkin, for it was in these columns that he was pleased to give to the public information of new discoveries of Roman antiquities in England, which rarely failed to reach him first. Archaeological societies will also miss the more ample reports that he used to make from time to time on the same subject.

Beginning as a self-taught local antiquary, Mr. Watkin raised himself, by force of undivided enthusiasm and conscientious accuracy, to take rank among trained scholars, and to become the trusted English correspondent of Prof. Hübnér. His two great works—*Roman Lancashire* (1883) and *Roman Cheshire* (1886)—will long keep his memory in honour as the most solid contributions made by an Englishman to the history of the Roman period in this island. And it should never be forgotten that these handsome volumes, with their numerous illustrations, maps, and plans, were produced by him at his own risk. We hope that he has

left materials, in a form sufficiently advanced to be seen through the press by a literary executor, upon some of the neighbouring counties of England and Wales, to which he is known to have devoted much time and labour. But however that may be, the loss which the scientific study of Roman Britain has suffered by his premature death can never be made up.

Mr. Watkin was, we believe, engaged in business in Liverpool. He died there, at his residence, 242, West Derby Road, on Friday, March 23, in the fifty-second year of his age.

NOTES ON ART AND ARCHAEOLOGY.

Mrs. TIRARD—who has just returned from Egypt, where she has had the opportunity of seeing the excavations in active progress—will give two courses of lectures to ladies on "Ancient Egypt," at the British Museum, beginning on April 13. Half the proceeds will, as usual, be given to the Egypt Exploration Fund, of which Mrs. Tirard is a local Hon. Secretary. A syllabus, &c., may be obtained, by letter only, from Miss C. Goldsmid, 3, Observatory Avenue, Kensington, W.

THE following have been elected members of the Royal Society of British Artists: Messrs. H. S. Tuke, S. Llewellyn, J. J. Shannon, H. M. Paget, J. Bromley, H. B. Hollingdale, V. P. Yglesias, L. Cowen, J. Smart, A. W. Strutt, and T. B. Kennington.

YET another Japanese exhibition was opened last week—at the Japanese Fine Art Association, in New Bond Street. It consists of some sixty paintings, including a few of the very earliest time; a small collection of "makimono" picture rolls; a few drawings by Hokusai and others, and artistic chromo-xylographs.

THE March number of the *Journal* of the Society for Preserving the Memorials of the Dead (Norwich: Cubitt) completes vol. i., and supplies a title-page and full index. It also gives five lithographed plates of sixteenth-century tombs. Among the contents are the presidential address delivered last year by the bishop-suffragan of Nottingham; a popular paper on "English Monuments—Mediæval, Jacobean, and Georgian," by Mr. J. Lewis André; and another on "Chronogrammatic Epitaphs in England," by Mr. James Hilton. There are also a number of minor papers and valuable notes. The secretary of this modest but useful society is Mr. William Vincent, Bellevue Rise, Norwich.

THE STAGE.

"SWEET LAVENDER."

PEOPLE who see little merit in Mr. Pinero's comedy as it is played to-night, and will be played for many nights at Terry's Theatre, are, for the nonce at least, hopelessly out of sympathy with the best and most natural taste of the playgoer. "Sweet Lavender" is not a faultless piece by any means. Its construction leaves something to desire. The interest, which in the first act is aroused in, and in a measure concentrated on, the love affair of Clem and of Lavender Rolt—the little human flower in the garden of the Temple—gets transferred, in the second act, to the love affair of Minnie Gilfillian and of Horace Bream—a delightful young lady and an admirable American—and, in the third act, the stage waits almost—certainly the public waits—while interest fails to be aroused, though it tries to be, in the long past intimacy

of Lavender's mother with Mr. Wedderburn, the banker. From the literary point of view—judged, that is, as one judges construction in pure literature—that is, of course, a grave mistake; but in a drama much may be forgiven to a device which provides opportunity for the display of some fresh excellence in acting; and when the tale, which has been begun so skilfully by Mr. Bernard Gould and Miss Rose Norreys, is taken up by Mr. Kerr and Miss Maude Millett, and, later, by Mr. Brandon Thomas and Miss Addison, one feels at all events that it is capable performers who are getting their chance. All this time, too, the character of Dick Phenyl—the shiftless, bibulous, kindly barrister, who has long ceased to expect a brief—is being developed. Mr. Edward Terry is embodying one of the wittiest and most thorough of Mr. Pinero's creations with the charm and quaintness which are the actor's own.

This, then, seems a case in which it is absurd to dwell too hardly on the fault of construction, which is nevertheless apparent. Mr. Pinero, even in his mistakes, shows the instinct of the theatre—reminds us that a long and practical connexion with the boards preceded his connexion with literature. But his new comedy abounds in proofs of how little he is to be classed with the merely practical playwright without literary talent—the gentleman who adapts himself to the scene-painter and scene-shifter, and caters for either stalls or gallery with an adroit imitation of what has been successful before. That is not Mr. Pinero's function. There is a remarkable play of humour and fancy about his dialogue. His characters are unconventional. They are studies from the life, just happily exalted—with "the ideal light," as Wendell Holmes says; that is, they are things of art. It is objected to some of them, however, in some quarters, that they are farcical. Dick Phenyl and the artist who interprets him are "exaggerated." What a *terre à terre* comment! Is any comedy—whether literary or of the stage—mere reproduction of the actual: mere photography? In the proper heightening of the thing the art of the theatre alone exists and appears. Its very spirit is misunderstood by—and must for ever elude—the faultfinder who wants in art only fact. The very business of art, and its one condition, is to depart from fact happily.

The whole of the action of "Sweet Lavender" passes in the rooms of the gentleman of whom it has been truly said that he is only "on the fringe of the story"—in the rooms of Dick Phenyl. That this is so, and that it appears natural, not at all forced, that it should be so, speaks volumes for the dexterity with which Mr. Pinero manipulates his material. It proves, too, how entirely superfluous is the attraction of scenery in a comedy in which the real attraction is the briskness of incident and the vivacity of character and dialogue. Would that one or two of our managers, eager to-day to clog literature with spectacle, anxious, as it seems, to be the rivals only of Mr. Augustus Harris, the magician of pantomime, would learn a lesson from what I am convinced will be the steady triumph of this piece!

The acting of the play does justice to the play's good qualities—displays its brightness,

throws into high relief its genial humanity. Rarely has a cast been better chosen. Not one part is badly played; and to Mr. Pinero's credit it must be added that only two parts can be throughout ungrateful. These are the parts of Minnie Gilfillian's aunt, and of Mr. Wedderburn the banker; yet these are dealt with not unskilfully by Miss Victor and Mr. Brandon Thomas. A smaller part than theirs—that of a cockney barber who is accustomed to call at the chambers "to go once over Mr. Hale's chin"—is, notwithstanding its sketchiness, a much better one; and Mr. Valentine does not fail to make the most of its capacity.

But I should have begun with the more important. Mr. Terry's Dick Phenyl—for all its presentation of laxity and weakness, for all that it shows us of *débrillé* and undone—has the charm of the actor's personality and the interest of a variety of method, which, after allowing for certain perfectly obvious mannerisms, is still very great. Mr. Terry has for years been wont to be amusing and welcome, but in no other part has he been quite so fertile in resource. His impersonation is singularly true: almost constantly funny, yet not wanting at the right moment in the happy suggestion of pathos. Though he is but on the fringe of the story, it is his opportunities that are the greatest and the most continuous, and he neglects none of them. Next to Mr. Terry's, I should say that the best part is Miss Maude Millett's, for in Minnie Gilfillian the author has conceived and the actress has interpreted that which is rare in English and unknown in French dramatic writing—an *ingénue* who has got some character. It is a question, indeed, whether Miss Maude Millett can go beyond what she is now playing—whether depth and range can belong to her. Personally I am uncivil enough to doubt if passion and dramatic intensity will come within the horizon of her art; but she plays with steady care and delicacy as well as with freshness, and enters certainly into, and exhibits with charm, every mood of the young heroine of gentle life. Miss Norreys's part—that of "Sweet Lavender" herself—begins very promisingly and then collapses. Hence she is at a distinct disadvantage with a public who know what she can do in comedy, but are not yet quite ready to receive her in parts of pathos. After the first act, in which nothing can be better—nothing, one may even say, more poetic—than her appearance and her bearing, Miss Norreys has scarcely an opportunity. Of the juvenile heroes, both are treated more fortunately. Mr. Bernard Gould as Clem is manly and affectionate: a loyal friend and a sufficiently tender lover. Mr. Kerr, as the American admirer of Minnie—pursuing her with cool pertinacity, under the firm and justified conviction that she is "worthy of our side," and may profitably grace New York—is as brisk and vigorous as he is effective and, at bottom, sympathetic. America may thank the actor—and may thank Mr. Pinero too—for the faultless moderation, the artistic veracity, of this sketch. Mr. Alfred Bishop's character-study of the good physician is very genial and pleasant. He makes up like the late Mr. Thackeray, and speaks genially, with the accent of Ireland.

FREDERICK WEDMORE.

MUSIC.

RECENT CONCERTS.

M. PETER TSCHAIKOWSKY, a Russian composer, who enjoys considerable fame in his own country, conducted two of his works at the second Philharmonic Concert last Thursday week. M. Tchaikowsky has written operas, symphonies, overtures, concertos, pianoforte pieces, and songs. His Pianoforte Concerto in B flat minor, performed by M. E. Dannreuther, at the Crystal Palace in 1876, and the "Romeo and Juliet" overture given there in the same year, attracted a considerable amount of attention; but, with the exception of a few minor pieces, M. Tchaikowsky's music is still unfamiliar in England. The production of two works, therefore, under the composer's direction, seemed an excellent opportunity for making further acquaintance with him. But his selections were both open to this objection—that they did not show him at his best. Granted that the first and last movements of the Serenade for stringed orchestra displayed ingenuity; that they were piquant in rhythm and bright in colour: still a commonplace Valse, and a tame Elegy (second and third movements) gave an unsatisfactory tone to the work. And, then again, why should a composer who has written at least four symphonies bring forward a Serenade? The title itself indicates a work of a light character, not one in which the writer is supposed to display his full strength. If we refuse to accept the Serenade as a strong specimen, still more is that the case with a second piece, "Tema con Variazione," from the third orchestral Suite: only a part of a whole, and, let us hope, not the best part. Of course, M. Tchaikowsky has counterpoint at his fingers' ends, and many of his effects are pleasing; but we failed to notice any marked originality. The closing variation showed what the composer could accomplish in the way of noise rather than music. M. Tchaikowsky is an excellent conductor, and met with a hearty reception. Herr Ondricek played Mendelssohn's Violin Concerto and an Ernst Fantasia, and was highly successful in both. Miss E. Rees was the vocalist. The programme commenced with a delightful symphony in G of Haydn's—an early work only lately published; and concluded with a Svendsen Rhapsody.

THE Popular Concerts have come to a close, and the two last (Saturday and Monday) proved the most brilliant of the season. At the former, the programme commenced with Schumann's characteristic Quartet in A (Op. 41, No. 3), led by Herr Joachim. Schumann's Romance in B major (Op. 28), two Lieder of Mendelssohn (Bk. 7, No. 1; Bk. 6, No. 4), and the Frühlingslied as encore, were Mdme. Schumann's contributions to the afternoon's enjoyment. Her tender tone and crisp touch gave to these trifles an inexpressible charm. The programme concluded with Beethoven's Trio in E flat (Op. 70, No. 2) by Mdme. Schumann, and Messrs. Joachim and Piatti. What more could one wish for? A great work, interpreted by three artists whom it would be difficult to match, impossible to surpass. On Monday evening Mdme. Schumann played Schumann's "Carneval," and for the first time for many years, the whole of it. One would like to have read the lady's thoughts while she was interpreting the wonderful tone-pictures which spoke to her of days long by; which recalled memories of home, memories of the illustrious dead, and of the struggles of Robert Schumann against the Philistines of fifty years ago. The performance was listened to with breathless attention, and Mdme. Schumann added one more to her series of triumphs. There is but one wish, which is that she will feel strong enough to pay us another visit next season. The

programme included Brahms' Sextet in B flat (Op. 18); a Bach Concerto for two violins interpreted by Mdme. Norman Néruda and Herr Joachim, and accompanied by Miss Fanny Davies; and three of the Brahms' Hungarian Dances rendered by Herr Joachim and Mdme. Janotha. Miss L. Lehmann was the vocalist. We omitted to state above that on Saturday Miss F. Davies also played three dances from the same set with Herr Joachim. Thus the names of the three lady pianists who have been so prominent during the season—Mdme. Schumann and her two pupils—were fittingly brought together in the programme of the closing concert. The same may be said of Mdme. Néruda and Herr Joachim.

The young ladies of Mrs. Trickett's Academy of Music gave a concert at Steinway Hall last Thursday week, a special feature of which was the good choral singing under the direction of Mr. H. F. Frost. The Academy appears to be prospering, for three scholarships are announced for competition at Whitsuntide next.

Miss E. Shinner gave a concert, by permission of the Hon. J. Balfour, at his residence on Friday, March 23. The Shinner Quartet played Schubert's A minor Quartet. Miss Shinner gave in her best manner Beethoven's Romance in G. Mdme. Janotha played Schumann's Carneval: some of the numbers exceedingly well, others with too much vigour. The concert concluded with Brahms' F minor Pianoforte Quintet. The room was crowded.

Otto Hegner gave a second recital at Prince's Hall on Wednesday afternoon. Bach's English Suite in G minor was a severe ordeal, through which he passed successfully. Some of his Chopin playing was exceedingly good, but what pleased us most was his refined and vivid reading of Mozart's variations in G on a Gluck theme. The programme concluded with Tausig's monstrous travesty of Weber's "Invitation." It is a pity the boy should be taught such a piece. The hall was crowded, and the enthusiasm great. J. S. SHEDLOCK.

OBITUARY.

It is with deep regret that we record the death of Mr. Walter Bache. He passed away last Monday, after only a few days' illness. He was the fourth son of the Rev. Samuel Bache, and was born in 1842. After studying with Mr. J. Stimpson, organist of Birmingham Town Hall, he went to Leipzig, and afterwards became a pupil of the late Abbé Liszt. He settled in London in 1865 as a teacher. His annual concerts have often been commented on in these columns; and, while we were never able fully to sympathise with the mission to which Mr. Bache devoted his life—viz., that of pressing on the public the works of Liszt, his master and friend, we were always ready to acknowledge his earnestness and to admire his patience. Liszt has some adherents amongst us, and among these Mr. Bache stood foremost. As a man he was generous and kind-hearted and obliging, and his loss will be mourned by all who knew him. We speak from personal experience; for we can recall many a kind action shown to ourselves—a good return indeed for the many hard words we have felt it our duty to write about some of Liszt's works on which he set high value.

A SEASON IN EGYPT, 1887.

By W. M. FLINDERS PETRIE,
Author of "Pyramids and Temples of Gizeh,"
"Tanis I-2," "Naukratis," &c.

Illustrated.

Contents:—Rock Inscriptions of Assuan—Rock Inscriptions below Assuan—Historical Data—The Horus-name or Ka-name—Funeral Cones, &c.—Pyramids of Dahshur—Earliest Column—Fayum Road—Weights of Memphis, &c., &c.

Price Twelve Shillings.

London: FIELD & TUBER, The Leadenhall Press, E.C.;

LITERATURE.

The City of Dream: an Epic Poem. By Robert Buchanan. (Chatto & Windus.)

THERE is no sounder critical canon than that which rules that any sustained literary production must be judged from the author's standpoint, despite the prevailing tendency to arraign every work at the bar of a strictly orthodox criticism, to be condemned or to be honourably discharged in strict accordance with the merit or demerit of its appeal to a rigid tribunal. More especially should this canon guide the reviewer when he has to deal with a poem of epical proportions, occupied with so abstruse a subject as the evolution of a typical human soul through all the phases of spiritual faith, belief, negation, and unformulated expectancy. Such an epic or epoch-poem it is that Mr. Robert Buchanan has written; and lest any should misapprehend his poetical principles, he has prefixed an "argument" and appended a prose note to "*The City of Dream*."

This poem in fourteen books is scarcely an epic as commonly understood, though the author has not hesitated to apply the term to "a poetical work which embodies, in a series of grandiose pictures, the intellectual spirit of the age in which it is written." It is Mr. Buchanan's aim to make "*The City of Dream*" an epic of modern Revolt and Reconciliation, as the Homeric epics are the epoch-poems of the heroic or pagan period, as the *De Rerum Natura* is the epic of Roman scepticism and decadence, as the "*Divine Comedy*" is the epic of Roman Catholicism, the "*Jerusalem Delivered*" of mediæval chivalry, and "*Paradise Lost*" of the so-called Protestant epoch. It is a daring enterprise to write an epic nowadays; for so urgent and multiform are the poetic strains from all sides that we are apt to be repelled by magnitude, just as the ordinary newspaper reader now prefers his political or social news paragraphically rather than in "leader" or essay form. There is no poetical failure so absolute as that of the early-defunct "epic" in a dozen or more books; nor is there any literary limbo so dire as that wherein obliviously abide "*The Pleasures of the Imagination*," "*The Course of Time*," and all their dreary kin. Yet when an epic is animated by an epical motive and by dignity and beauty of matter and manner it is its own justification. It then justly ranks as the royalist of poetic vehicles. That "*The City of Dream*" belongs to the scanty company of justifiable epics I am well inclined to believe; but in what degree, and with what chances of general acceptance, it were not easy to surmise. As an allegorical record of the heartburnings, doubts, and experiences of a human soul in its progress through all the possible phases of belief and unfaith, from the blind acceptance

of an orthodox creed to atheism, thence again to a baffled and half indifferent agnosticism, and finally to a "large" but vague hope—as such a record it must seem to many neither typical nor logically sequent. There are few who, once in the shepherdly of Evangelist, journey thence to the city of Christopolis; fewer still who, having sought and found refuge in that modern Babylon, pass again into its gloomier half (Presbyterianism, and kindred "isms"), and thereafter traverse the wastes of revolt, dally in the "Groves of Faun" and drink the Waters of Oblivion in the Vales of Vain Delight, go shudderingly through the Valley of Dead Gods, rest for awhile in Nature, climb the hills of mysticism wherefrom may be seen the "Spectre of the Inconceivable," enter and dwell in the City builded without God (Humanitarianism), seek death in Chaos and find it not, and finally gain the margin of the Celestial Ocean. On the other hand, the author might reasonably expect that none of his more thoughtful readers would take this chronicle to be the story of a single soul. As an abstract record of the spiritual vicissitudes of the unrestful, enquiring human soul it has genuine interest; but probably there will be some, at any rate, among Mr. Buchanan's admirers (among whom the present writer includes himself) who will agree with me in finding that, unlike most epics, "*The City of Dream*" cannot be satisfactorily read in parts. Its impressiveness is the result of ordered narrative and of culminating interest. Save, perhaps, in the two sections, entitled "*The Groves of Faun*" and "*The Amphitheatre*," the "Books" would greatly lose in effect if read out of order, or if but one or two were indiscriminately selected for perusal. The gain or loss here, however, is rather a matter of opinion than for dogmatic assertion. The prototype of "*The City of Dream*" is *The Pilgrim's Progress*, but there is one striking distinction. In Bunyan's poetic allegory everything is clearly defined: the contrasts are sharp, and there are no gradations, no illusions of mental mirage, and the conclusion is absolutely definite and decisive. In Mr. Buchanan's epic not only are the personifications occasionally very vague (as in the instances of "*Masterful*," "*Nightshade*," &c.), but the conclusion can leave little definite impression on anyone's mind save the somewhat illogical one that since God is indiscoverable in earth or heaven, in any human or natural temple, in the mysteries of nature or in the heart of man, he is probably to be found on the further shore of the Celestial Ocean of Death. One may cling to this hope, and even may, with Mr. Buchanan, find solace and certainty on the brink of this Celestial Ocean, and yet scarcely be consistently able to propound his vague hope as a serene and assured faith. I have been duly impressed by the frequent beauty of the story of the pilgrim Ishmael's God-quest—as every reader must be who has experienced in any degree and in whatever sequence the like spiritual phases—yet I cannot but feel that in the fine closing lines there is a mere playing with the wind so far as the apprehension of any definite conception is concerned:

"But those who sleep shall waken and behold,
Yonder across those wastes whereon they sail,
God and the radiant City of my Dream."

"And as I spake the ether at my feet
Broke, rippling amethystine. Far away
The mighty nebulous Ocean, where the spheres
Pass'd and re-pass'd like golden argosies,
Grew phosphorescent to its furthest depths:
Light answer'd light, star flash'd to star, and
space,
As far away as the remotest sun
Small as the facet of a diamond,
Sparkled; and from the ethereal Deep there rose
The breath of its own being and the stir
Of its own rapture. Then to that strange sound
Stillier than silence the pale Ship of Souls
Moved from the shore; I stood and watched it
steal
From pool to pool of light, from shade to shade,
Then melting into splendour fade away
Amid the haze of those caerulean seas."

Regarded in its literary aspect, "*The City of Dream*" seems to me a poem which, while full of fine lines and beautiful passages, is no advance upon the author's previous work. Personally, I find the "*Book of Orm*"—with all its incompleteness and faults of excessive mysticism—superior; and "*Balder the Beautiful*" has more of the white-heat glow of genuine poetry, while its purely lyrical portions are unmistakeably finer than the rhymed interludes in the blank verse of "*The City of Dream*." There seems to me also a certain want of balance, or lack of judgment, in the insertion of the retrospective book x., "*The Amphitheatre*"—an opinion which I retain in the face of Mr. Buchanan's appended note:

"The entire poem represents the thought and speculation of many years. How much has been attempted may be seen in such a section as that of '*The Amphitheatre*,' where an effort is made to adumbrate the entire spirit of Greek poetry and theology. No man can live entirely in the past; but a modern poet must at least have paused in it, and learned to love it, before he is competent to offer any interpretation, however faltering, of the problems of religion, literature, and life."

Nor does "*The Amphitheatre*" at all justify its inclusion by any supremacy of merit. It certainly is far from being the best of the fifteen books which make up the volume.

The foremost point of interest for the poetical critic is the literary expression of the work he happens to be reviewing; and, speaking generally, I feel constrained to say that Mr. Buchanan's style in this blank verse epic is disappointing. There is, moreover, very considerable need of revision, for there are too many passages which—like the prose^e note just quoted, with its three "entires" in close conjunction—betray signs of undue haste. For the form and style of the work he makes—he asserts—no apology.

"It illustrates once more the theory of poetical expression that has guided me throughout my career—the theory that the end and crown of Art is simplicity; and that words, where they only conceal thought, are the veriest weeds, to be cut remorselessly away."

In principle this is excellent, and I certainly would be the last to take objection to it; but precept and practice, like husbands and wives, occasionally fall out. In his effort to be simple Mr. Buchanan is too often bald; in his wish never to be ornate he not infrequently becomes prosaic. No ear keenly sensitive to rhythmic music could find delight in lines requiring such unexpected licence in accentuation as

"I, casting down my gaze upon the Book,
Read these things, and was little comforted."

or,
 "And whatever man is born on earth
 Is born unto the issues of that sin,
 Albeit each step he takes is predestined."

It is with pleasure, however, that I turn from these too frequent unsatisfactory lines and passages to others of genuine beauty. The whole of the "Groves of Faun" (a section that may easiest be defined as exemplifying the phase of belief in the Beautiful and the Beautiful only) is animated by poetic conception and rhythmic versification. Here are some picturesque lines descriptive of the Eros-guided pilgrim as he passes through the Vales of Vain Delight and floats adown the stream that leads to the mystical hills:

"And now I swam
 By jewell'd islands smother'd deep in flowers
 Glassily mirror'd in the golden river;
 And from the isles blue-plumaged warblers
 humm'd,
 Swinging to boughs of purple, yellow, and green,
 Their pendent nests of down; and on the banks,
 Dim-shaded by the umbrage and the flowers,
 Sat naked fauns who fluted to the swans
 On pipes of reeds, while in the purple shallows,
 Wading knee-deep, listen'd the golden cranes,
 And walking upon floating lotus-leaves
 The red jacana scream'd."

Ere long the twain come upon fallen Pan
 brooding by the margin of a river-lagoon:

"Thus gliding, suddenly we floated forth
 Upon a broad lagoon as red as blood,
 Stained with sunset; and no creature stirr'd
 Upon or round the water, but on high
 A vulture hover'd dwindled to a speck;
 And on the shallow marge one silent Shape
 Hung like a leafless tree, with hoary head
 Dejected o'er the crimson pool beneath;
 And no man would have wist that dark Shape
 lived;—
 Till suddenly into the great lagoon
 The shallow sail'd, and the white swans that
 drew it
 Were crimson'd, oaring on through crimson
 pools
 And casting purple shadows. Then behold!
 That crimson light on him who drave the bark
 Fell as the shafts of sunset round a star,
 Encircling, touching, but suffusing not
 The shining silvern marble of his limbs;
 And that dark Shape that brooded o'er the
 stream
 Stirr'd, lifting up a face miraculous
 As of some lonely godhead! Cold as stone,
 Formlessly fair as some upheaven rock
 Behung with weary weeds and mosses dark,
 That face was; and the flashing of that face
 Was as the breaking of a sad sea-wave,
 Desolate, silent, on some lonely shore!"

I would like to quote several of the more grandiose passages, particularly that where Ishmael finds his townsman Faith laying stark in death in the desolate Valley of Dead Gods; but this being now impracticable I will confine myself to one brief extract from book viii. ("The Outcast, Esau"):

"Beneath us lay
 A mighty Valley, darken'd everywhere
 With woods primeval, whose umbrageous tops,
 Roll'd with the great wind darkly, like a sea;
 And waves of shadow travell'd softly on
 Far as the eye could see across the boughs,
 And upward came a murmur deep and sweet,
 Such as he hears who stands on ocean sands
 On some divine, dark day of emerald calm.
 And when we rode into the greenness stretch'd
 Beneath us, and along the dappled shades
 Crept slowly on a carpet mossy and dark,
 It seem'd still as if with charmed lives
 We walk'd some wondrous bottom of the deep.
 For pallid flowers and mighty purple weeds,
 Such as bestrew the Ocean, round us grew,
 Soft stirring as with motions of the ooze;
 And far above the boughs did break like waves
 To foam of flowers and sunlight, with a sound
 Solemn, afar off, faint as in a dream!"

Of the numerous "songs" scattered throughout "The City of Dream" none seems to me likely to add to Mr. Buchanan's reputation as a master of lyrical measures. There are one or two whose absence would certainly not markedly detract from the charm of the poem as a whole. For myself, I like best the double lyric, in book xii., of the pilgrim and the little herdboy, with its questioning as to the cloud-girt City of God:

"'Tis a City of God's Light
 Most imperishably bright,
 And its gates are golden all;
 And at dawn and evenfall
 They grow ruby-bright and blest
 To the east and to the west."

"Here, among the hills it lies,
 Like a lamb with lustrous eyes
 Lying at the Shepherd's feet;
 And the breath of it is sweet,
 As it rises from the sward
 To the nostrils of the Lord!"

This simple strain is vaguely suggestive of the "colossal innocence" as well as of the subtle music of one of Blake's childhood-songs.

WILLIAM SHARP.

Napoleon and his Detractors.. By His Imperial Highness Prince Napoleon. Translated and Edited, with a Biographical Sketch, by Raphael Ledos de Beaufort. (W. H. Allen.)

ENGLISH readers of the articles lately written on Napoleon I. in the *Revue des Deux Mondes* by M. Taine should, as a counterpoise, read this reply by the emperor's nephew, Prince Napoleon. Neither work must be taken too seriously. Both will attract readers, but neither can effect the estimate that will in the long run be made of the emperor's character and policy. Prince Napoleon, after attacking certain of M. Taine's assertions, assails the trustworthiness of some of his favourite authorities—the *Memoirs of Prince Metternich*, of *Bourrienne*, of *Mdme. de Rémusat*, of the *Abbé de Pradt*, of *Miot de Melito*. He complains that M. Taine quotes all kinds of authorities as equally good, that he only finds in books what he looks for, that his references are confused and his quotations incorrectly made—that, in short, he has taken a brief against Napoleon, and that there is neither impartiality nor completeness in his method of proceeding. M. Taine even quotes the unpublished memoirs of an unknown writer:

"He borrows the worst and most disgraceful calumnies, such as make the emperor appear in the light of an assassin, and his ministers in that of his accomplices, from the unpublished memoirs of M.X.—a source of information easy to verify and criticise indeed! Who is this M.X? Talleyrand or Bourmont, Fouché or Peltier, Pasquier or Sarrazin, a pamphleteer in the pay of England, a minister who betrayed his country, or a general who deserted his flag? Where are these memoirs? Who detains them? In whose possession are they? Who fabricated them? We have a right to know. M. Taine is not justified in simply referring to any name—any M.X.—that chance may suggest to him."

This is severe, but it is not unfair. M. Taine should not appeal to unknown sources. Englishmen acquainted with the libellous character of our own literature after the restoration of Charles II. will sympathise

with the Prince when he is indignant that the unsubstantiated statements of every memoir writer who sought to curry favour with the Bourbons, or, at the best, was under the influence of a strong tide of reactionary sentiment, should, without further question, be accepted as good evidence against the character of his uncle; and it is no doubt true that even such comparatively respectable personages as Metternich, Bourrienne, and *Mdme. de Rémusat* are all, so to speak, witnesses for the prosecution. With regard to the *Abbé de Pradt*, the Prince tells us that he has in his possession the copy of the *Histoire de l'Ambassade de Pologne* read by Napoleon at St. Helena, and containing his autograph notes. Where the abbé makes Napoleon talk bombastically Napoleon writes on the margin "False," "False and absurd," "Never did a prince utter such nonsense"; and it must be admitted that under the circumstances the defeated emperor deserves as much credence as the vain and upstart abbé. Prince Napoleon has more difficulty when he seeks to call in question the trustworthiness of *Miot de Melito*. He writes as follows:

"That work is not the personal contribution of M. Miot. It was published in 1858, many years after his death, by his son-in-law, M. de Fleischmann, a German general most hostile to Napoleon. . . . The mere fact that these *Mémoires* are from the pen of a German officer, avowedly an adversary of Napoleon's memory, lessens their historical value."

It appears, however, that Prince Napoleon is quite ready to accept Miot's evidence (pp. 292-3) where it agrees with his own views, although the memoirs are, as he says, "from the pen of a German officer." From internal evidence there seems no reason for casting an imputation on the honesty of Gen. de Fleischmann, who expressly asserts in his preface that the memoirs were written by Miot from his own notes, and that they have been published in an ungarbled form. Their spirit, as Prince Napoleon himself admits, is not hostile to Napoleon; and as Miot was a painstaking, conscientious administrator who was in the habit of making notes, his testimony, when he relates what he himself heard or observed, is of more value than that of persons of more brilliant abilities, like *Mdme. de Rémusat*, writing from recollection merely. Prince Napoleon, who alludes to what Miot has to say regarding the negotiation which preceded the breach of the treaty of Amiens, is apparently not aware of the recent publication by Mr. Oscar Browning of the despatches of the English ambassador, Lord Whitworth. With this volume in his hand, he may, if he likes, test the accuracy of Miot's account, which will be found correct not merely in its main outline, but in such small details as the dates of days and the names of intermediary agents, and could hardly have been written long after the events without the aid of notes.

There is no matter on which Prince Napoleon can speak with more authority than on the publication of the *Correspondance de Napoleon I.*, of which he was the chief editor. M. Taine has accused him of only publishing 30,000 out of some 80,000 documents, 20,000 being put aside as repetitions, and 30,000 for the sake of propriety or for political reasons. The Prince replies by

calling on M. Taine to give his evidence for these figures. He admits that repetitions of orders and letters containing personal allusions were in some cases omitted for the sake of the feelings of the families concerned; others because the families in whose possession they were did not care to transmit them; but he denies that any document of historical interest was purposely left out. "I declare on my honour that no document casting any light on history has been omitted." It is certain that letters even of a private character which reveal the working of Napoleon's mind must have a historical interest, on the other hand such omissions may be for the present justifiable enough; and between the Prince and his accusers in this respect time and fuller knowledge must finally decide. One letter, addressed to Louis when King of Holland, which was kept back the Prince here publishes.

"Seeing," he says, "that I have been twitted with having deprived history of documents injurious to my family, I shall publish here the only letter that, in accordance with a feeling which everybody will appreciate, I did not deem it advisable to insert in the *Correspondance*, under the reign of the son of the ex-King of Holland. That letter is magnificent. It is both grand and touching."

These adjectives will, perhaps, seem to some of the Prince's readers a little out of place, but all will doubtless agree that the letter ought to be published. It is exceedingly characteristic of the writer, and no words can show more plainly the exalted point of view from which Napoleon regarded the kingdoms that he founded round France.

Prince Napoleon treats in a contemptuous spirit the emperor's detractors, as though they were hardly deserving of an answer; but he falls very far short of vindicating his uncle's character. He denies some of M. Taine's assertions, and shows that others rest on very weak evidence. Unfortunately it is equally possible to deny his own assertions, and even to point out peculiarities in his mode of reasoning. For instance, on p. 159, we find the following argument to show that Metternich was wrong in asserting that the army held in readiness at Boulogne was intended solely to act against Austria:

"The incorrectness and puerility of that assertion are self-evident; for in 1805, the presence of the army assembled at Boulogne aroused in England unmistakable fears. The debates in the English parliament at that time bear witness to the state of bewildered excitement attained by the public mind. . . . Pitt, then prime minister, declared that 'the enemy's progress could thus be retarded only for a few days, so as to avoid, perhaps, the destruction of that capital' [London]. The emperor was then watching with special eagerness the preparation of his great undertaking; and, far from thinking of Austria at that time, he pressed on his armaments so as to make it plain that his object was really England."

This is a fair specimen of the style of the book, and of the method of argumentation pursued in it. Prince Napoleon may be in the right; but whom is such reasoning meant to convince? It seems almost puerile to remark that, under the given circumstances, neither England nor her prime minister could judge fairly of Napoleon's purposes. Probably, however, Prince Napoleon very well

knows what he is about. Napoleon I. is throughout glorified as the upholder of democracy in France, as the conqueror on whom the hand of an Austrian Princess was by her father eagerly pressed, as the ruler who sought to maintain the peace of Europe, but whose policy was defeated and overthrown by the treacherous combinations of statesmen and princes whom he had sought by all means in his power to bind to himself by bonds of gratitude. M. Taine's articles and Prince Napoleon's defence will, no doubt, be widely read, and will in each case produce their effect on the class of readers for which each is meant—a fact which brings vividly before the mind how completely all that pertains to Napoleon I. must still, on the other side of the Channel, lie outside the range of purely historical controversy.

BERTHA M. GARDINER.

Life in Corea. By W. R. Carles. (Macmillan.)

In the second chapter of his charming book, *Chosön: the Land of the Morning Calm*, Mr. Percival Lowell, speaking of the long seclusion of Korea from the rest of the world, said:

"I ask you to go with me to a land whose life for ages has been a mystery—a land which from time unknown has kept aloof, apart, so that the very possibility of such seclusion is itself a mystery, and which only yesterday opened her gates. For cycles on cycles she has been in the world, but not of it. Her people have been born, have lived, have died, oblivious to all that was passing around them. They might have been denizens of another planet for aught they knew of the history of this. And the years glided into centuries, and the centuries grew to be numbered by tens, and still the veil remained as tightly drawn as at the beginning. It was but last year Korea stepped as a *débutante* into the society of the world."

This very isolation, so long continued, so marvellous in itself, and the suddenness with which the veil was lately withdrawn, combine to give a special interest to the Far Eastern peninsula—the "Forbidden Land," "The Hermit Nation"—and to all that is being written about it.

Mr. Carles is already favourably known to the public by his interesting paper, "Recent Journeys in Korea," read before the Royal Geographical Society on January 25, 1886, in which he gave an account of parts of the country never before visited by foreigners, and which was welcomed by geographers as a solid contribution to our knowledge of a hitherto unexplored land. It would, perhaps, have been well to have retained the name, "Recent Journeys in Korea," as that of the book, which is little more than an amplification of the lecture; for, although Mr. Carles lived altogether about eighteen months in the country, the "life" of the book only comprises the two journeys he undertook, each occupying forty-three days. And in this connexion it may also be pointed out that, while in the lecture the correct and accepted form, "Korea," was used, the author in his book has unfortunately relapsed into the antiquated and obsolete "Corea."

The author's first visit to the peninsula was made, in a private capacity, towards the end of 1883, when the late Sir Harry Parkes was negotiating the treaty that was

shortly afterwards signed between Great Britain and Korea. Under the auspices of Messrs. Jardine, Matheson, & Co. he accompanied Mr. Paterson, the head of their Shanghai house, and Mr. Morrison, the well-known engineer of the ill-fated Shanghai and Wusung railway, on a trip to the capital, Söul, and the mining country between that place and Gensan. His second visit was made in the following year as H.M. vice-consul in Korea. Starting from Söul on September 27, he travelled in a north-westerly direction by the ancient and interesting city of Ph्यों-yang to the mouth of the Am-nok river (the boundary between Manchuria and Korea). Thence he followed the course of the Am-nok for 180 miles to Wi-won; thence eastwards for 120 miles to Chang-jin; and thence in a southerly course to Gensan, and so back to Söul, having traversed a distance of over one thousand miles.

Travelling in Korea is of a very rough kind, and those who undertake it must be prepared to undergo a terrible amount of discomfort. All who have made personal acquaintance with the Oriental cockroach, and who know the misery caused by even one of these beasts raging about a room at night, can judge of what the author suffered at the extreme north of his journey:

"Cockroaches swarmed in my night's lodging. I turned them out of my portmanteau by the pint. My boots and everything that would hold one cockroach at ordinary places held a dozen here. Luckily the roof was low, and when they fell from the ceiling on to my bed their bodies had gathered no great momentum; otherwise I should have been bruised all over" (p. 250).

Bad roads, deep mud, and filthy quarters for the night await the weary traveller. Besides,

"There were many obstacles, also, to riding. The grooms had to be taught everything; shoeing was impossible until a farrier was brought over from Shanghai; sore backs were constant; and there was no possibility of getting saddlery altered or repaired. Except for riding to and from Söul, ponies, therefore, were of little use" (p. 94).

The natives do not use milk, for

"cows, though only employed on light work in the fields, such as carrying manure and the like, were not used for dairy purposes, as the Koreans have not learnt the art of milking" (p. 109).

Unpleasant as moving about in Korea still is, travellers were till lately subject to even greater annoyances. For,

"close to the same site there formerly stood the stone placed by the ex-regent's orders, bearing an inscription calling upon all Koreans to put to death any foreigners who landed on their shores" (p. 34).

Travellers are now received with kindness by the inhabitants and the officials. The latter in particular evince a strong desire for information as to the outside world:

"The magistrate had paid me a long visit soon after my arrival, and waited but a short time, after I returned his call the next morning, to come again. His desire for knowledge was perfectly insatiable. Whitaker's *Almanac* by that time was at my fingers' ends, and I could answer pretty accurately any questions as to statistics regarding the armies, trade, and population of any country on the face of the

globe; but at Kang-ge I felt the want of an enlarged edition. I began at last to feel some sympathy for the many officials whom I had pestered with questions during the whole time that I had seen them, and who, for want of a Korean Whitaker, had failed to take honours in their examination" (p. 240).

The author throughout his journey was possessed with two very strong desires: one being to catch a glimpse of some of the women; the other, to shoot a tiger. Unfortunately for him both species remain very closely concealed during the daytime, and only venture out after dusk to pay their visits. At Kang-ge, however, his first wish was most unexpectedly gratified:

"A striking novelty at Kang-ge consisted in the presence of women among the magistrate's retinue. When I returned his call, I found that he had comparatively few men in attendance upon him, and none of the boys who generally swarm about a Korean *yamén*; but half-a-dozen women with unveiled faces were among his retainers. To my great astonishment he asked my opinion of their beauty, and the girls seemed as anxious for my verdict as the magistrate himself. Fortunately, it was easy to speak favourably of their looks, for they were tall, well-shapen, held themselves well, and had oval faces unpitted by small-pox. Of Korean women they certainly were the best specimens I have seen" (pp. 241-2).

His second quest was a failure; and, on pp. 185, 186, an amusing description, too long unfortunately for quotation, is given of his attempt to get a tiger. The tiger figures on the Korean flag in the same way that the dragon does on the Chinese ensign; and, although both the Chinese and the Koreans are firmly convinced that these formidable creatures are quite plentiful in their several countries, the tiger in Korea seems to be nearly as difficult to meet with as the dragon is in China. Both the author (pp. 231, 232) and Ernest Oppert, in his *A Forbidden Land* (p. 168), state distinctly that there are no wolves in Korea. Whitaker, on the contrary, states emphatically that they abound; and Mr. Carles must be left to fight the question out with his favourite almanack. Authorities differ also very considerably as to the population of the country. Mr. Carles, in his lecture, gave it at eight millions. In his book (p. 116) he estimates it at ten millions. Mr. Lowell gives it, on a Japanese estimate, as twelve millions. The Rev. John Ross, in his *History of Korea*, p. 371, reckons it at from fourteen to fifteen millions; while Ernest Oppert, in *A Forbidden Land*, p. 23, says:

"According to reliable information, collected from persons in the country well able to judge, the total number of inhabitants of the peninsula and of all the islands under Korean rule may be computed at some 15,000,000 to 16,000,000 souls, and this estimate is rather below than above the mark."

For some mysterious reason, the author refuses to allow that Korea is a peninsula; and, in the following most obscurely worded passage, he utterly scounts the idea:

"The road runs nearly due south, across what forms the narrowest neck between sea and sea. As the distance is nearly 200 miles, the claim to the title of peninsula seems hardly well-founded; but as such Corea is almost always regarded, and will probably continue to be, despite my protest" (p. 280).

This, it may be noted, is in the book; for geographers were spared this shock to their feelings in the lecture.

It is a very striking thing to find so large and populous a country almost entirely without a religion. There is a small remnant of an unreformed and ancient phase of Buddhism to be met with in country places, as also some Taoism, some ancient nature worship, and some traces of fetichism; but of religion, as we understand it, there is none, and what little there once was has been dying out for ages. Mr. Lowell in his *Chosŏn*, p. 182, says:

"There is not a single religious building in the whole of Sŏul, nor is any priest ever allowed to set foot within the city's gates; and, what is true of Sŏul, is true of every walled city of the land."

And old Hendrik Hamel, writing so long ago as 1668 from the experience of a fifteen years' residence in Korea, says:

"As for religion, the Koreans have scarce any. The common people make odd grimaces before the idols, but pay them little respect; and the great ones honour them much less, because they think themselves to be something more than an idol. The nobles much frequent the monasteries, to divert themselves either with common women which they find there, or others they carry with them . . . ; but this is to be understood of the common monasteries, where the religious men love to drink hard."

Except for its abundant and fine timber, Korea seems to offer but little prospect to foreign trade; and what the governor of Phŏng-yang said to Mr. Carles about it is doubtless true: "Corea is a very poor country. There is no money in it, and no produce. We cannot afford to buy foreign things." M. BEAZELEY.

A Calendar of the Tavistock Parish Records. By R. N. Worth. (Privately Printed.)

THE documents in the parish chest at Tavistock have been used, to some slight extent, by local historians, but the public has hitherto been ignorant of the great antiquity and value of the collection. It appears from the preface to Mr. Worth's edition that for the last half-century these records have lain by neglected and forgotten, until they were brought under the notice of the vicar of Tavistock on the death of the churchwarden who had the keeping of them. The vicar of Tavistock, finding that the churchwardens' account began in 1345 and comprised what is believed to be "the oldest warden-roll in existence," brought the matter before the Duke of Bedford, to whose liberality is due the appearance of the present edition, comprising a full calendar and abstract of the documents here calendared.

The earliest record is a deed of 1287, conveying certain lands near the meadows of the abbot of Tavistock. This is followed by several other conveyances of nearly the same antiquity, which contain several valuable details as to the condition in the thirteenth century of the unincorporated "borough and village of Tavistock," and of the religious fraternities which owned considerable property in that neighbourhood. A release of the next century by Robert David, burgess of Tavistock, appears to have dealt with town property in the hands of a trustee, the deed being witnessed by the "portreeve,"

as others are witnessed by the "senior," and expressed to be made "by our common council and consent." A conveyance of 1325 is interesting as being made by Walter Callyng and three others named as brothers and wardens of St. Mary's light in the parish church "and all the other brethren and sisters of the said fraternity." The persons named as conveying were trustees or "parish feoffees" of the lands which formed the endowment of one or more of the numerous lamps which were kept burning in the Church of St. Eustachius. One of the leases by these trustees affords an example of the plaited rush-rings imbedded in the wax, which were tokens of the delivery of possession. Other examples of this practice have been observed at Barnstaple and Ipswich; in some cases the same object was attained by sewing a straw to the paper or parchment. One of the leases is noteworthy for a covenant to keep up the "hags, grips, and cats," or, in a more modern English, the "hedges, ditches, and gates"; another document keeps up a phrase now disused in this country in a description of the "Maudelen Parkes" belonging to the Leper Hospital. These town-parks were, in 1535, leased by the "bretheryn and susteren" of the lazar-house, for the term of 1000 years, to Mr. Fytz and the eight men chosen by the parish to be managers of the property of the church and parish. These trustees from time to time granted out the property on leases for lives on payment of a fine, or "incombe," and yearly rent. In the year 1700 the trustees, then called the Masters and Governors of Tavistock, made a lease of this kind of a house and garden with lands containing about fourteen acres, called Church Park. Among the documents which were in the chest in 1827, but which have now disappeared, we may notice a muster-roll for the Stannary of Tavistock, of which an account was given by Mr. Kempe in the *Gentleman's Magazine* for 1830, and a petition apparently presented to the Duke of Bedford about the year 1677 from "your portreeve and the masters of your towne and borough of Tavistocke."

The churchwardens' accounts are imperfect; but Mr. Worth points out that they comprise no less than eight rolls earlier than the churchwardens' roll of 1425 which commences the records of St. Petrock at Exeter, "hitherto regarded as the earliest preserved." These early accounts of the Wardens of the Lights commence with items as to rents received, followed by detailed entries as to buying wax, making the great candles, "link-money and wax-money," and tallow for the mortuary-lights on tombs. There are many curious entries as to the rush-strewing on the Feast of St. John, and the binding of the missals or "mass-books," a wedding-veil provided for the use of the parish, and "flagons of ale for the exsequies of the benefactors of the Church." The accounts for the sixteenth and seventeenth centuries are very complete, and contain much curious information as to the subjects of "briefs" and charitable collections, the rewards for killing of wild cats and other "farments" and for whipping the dogs out of church; and many interesting details as to the various feasts, rejoicings, and beer-drinkings for which appropriate occasions were so frequently found by our ancestors.

C. ELTON.

"Great Writers."—*Life of Robert Burns*. By John Stuart Blackie. (Walter Scott.)

THIS is not so much a new biography of Burns as, in its author's own words, an attempt

"to make a judicious selection from existing materials, and to pronounce an equitable judgment on a remarkable man, the complex character of whose genius and life demands a calm consideration equally remote from patriotic idolatry on the one hand, and pharasaic severity on the other."

Emeritus Professor Blackie should be thanked for this frank confession, which adds to, rather than takes from, the value of his book. It may be considered as morally, if not absolutely, certain that, after the work of the late Mr. Scott Douglas, there is nothing fresh to reveal about Burns—no undiscovered poetical flirtation to misconstrue, no extra glass of a convivial evening to magnify into a bottle. Burns—man and poet, moralist and peasant-aristocrat, lover and prophet—should now be considered as a subject not for the biographer, but only for the popular lecturer or essayist; or, rather, he should be regarded as a kind of strong drink, to be taken, refrained from, or mixed, according to the constitution and condition of one's peptics. Perhaps it is safest to take him "neat," in medicinal doses, of the strength prescribed by modern American doctors. Most of his countrymen take him diluted with the cold water of good sense. For other folks there is Burns and Carlyle—Scotch Seceder toddy, perhaps the best beverage that has yet been brewed, and always leaving the drop of pity in the eye when quaffed; or Mr. R. L. Stevenson and Burns—maraschino, trying, but not quite successfully, to combine with Glenlivet, or Shairp and Burns—good tea "laced" with good spirits, a wholesome mixture, which, when taken, leads one to think what a pity it was that poor Robert did not marry Mary Campbell, settle down as a Carrick farmer, and die at seventy-five of a cold caught when hurrying into Edinburgh to attend the General Assembly as the lay representative of his kirk session. And here is Burns and Blackie—not Blackie and Burns—spirits, thoroughly rectified and mixed with ginger-beer, a trifle frothy, perhaps, but not so frothy as might have been expected.

In other words, while there is no Carlylian profundity, no Stevensonian sparkle, in Mr. Blackie's estimate of Burns, it is sound, sane, and marvellously free from those eccentricities of its author's which have so often in the past made even an admirer inclined to pounce upon his mind, and do to it what Pancks did to his employer's head. Unless I am mistaken, Mr. Blackie does not once in this volume speak of the poet as "Rab," "Rob," "Rabbie," "Robbie," or even "Bobbie." If his judgment of Burns, both as a poet and as a man, is not distinguished by originality, it is catholic and well balanced. He is not content to make out Burns to be simply a song-writer, a masculine Scotch Sappho—there is a great deal of commonsense, by the way, in what Mr. Blackie says of the erotic element in poetry, although he takes far too many sentences to say it in—but he does ample justice to the Aristophanic and Wordsworthian elements in the author of "The Jolly Beggars" and "The Daisie." Then, while Mr. Blackie extenuates nothing

in regard to Burns's life and conduct, he insists that, from first to last, the poet showed no baseness. Not only does he not indulge in the hissing, groaning, cat-calling of pharisaic or thin-blooded critics of Burns, he seldom falls into the minor but scarcely less irritating mistake of lecturing. I say "seldom," because sometimes Mr. Blackie seems to regret that Burns "went too far"; and towards the end of his book appears to incline to the opinion of the late Dr. Guthrie that, if Burns had come under the influence of some warm-hearted evangelical clergyman, he might not have "gone too far." The regret is vain; the opinion is based on a misconception of Burns's character. Had he not "gone too far," had he not been "a bit of a blackguard"—in head, not in heart—he would not have been the power for good that he is to-day, for otherwise he could not have sounded the depths of human nature. Nor could anyone have tamed Burns, or taught him prudent, cautious self-control, but his own familiar, *moi-même*; and that consummation so devoutly wished by himself was prevented by the accident which brought his life to a close before the battle of the spirit was over.

It was hardly possible for so careful and loving a student of Burns as Mr. Blackie has been all his life to make many mistakes as to matters of fact, in writing of his favourite's life or works; and he has made few worth mentioning. In treating of the Armour episodes, however, he might have given greater prominence to the fact (for he is evidently not ignorant of it) that Jean had a second lover, which Mr. Robert Chambers mentions, and which Mr. R. L. Stevenson has made more of than any other writer on Burns. Then, in dealing with Clarinda's letters to Sylvander, Mr. Blackie somehow ignores the suspicion, reasonable enough in itself, that Mrs. Maclehoose, in spite of what her latest admirer terms rather curiously her "virtuous habits," contemplated marriage with Burns in the event of her obtaining divorce from her worthless husband. There is Scotch piety and principle and prudence, in her letters, no doubt; but is there not also a little French coquettishness, if not sweet reluctant amorous delay, quite compatible with all three, and quite justifiable under the circumstances? Mr. Blackie appears painfully, if not comically, conscious of English ignorance on the subject of Scotch life, otherwise he would hardly have been at the pains (p. 40) to describe an ordinary parish minister as, "in the language of St. Paul (Titus i. 5-7), the presbyter or bishop of the church at Mauchline." It is to be regretted therefore, that he has not devoted a little more space to dispelling a popular delusion, which even so fair-minded and able an English critic as Mr. John Morley—who would probably object to Goethe being characterised offhand as "sensual, selfish, and at heart a major-domo"—has given his authority to, when, in his essay on Carlyle, he describes Burns as "drunken, and unchaste, and thriftless." The third of these epithets cannot be justified, unless, indeed, thrift is identified with parsimony. Burns was thriftless as Carlyle was thriftless, who lent his brothers hundreds of pounds, and yet had to be temporarily indebted to Jeffrey.

WILLIAM WALLACE.

A History of the English Church. Third period, from the Accession of the House of Hanover to the Present Time. By G. G. Perry. (John Murray.)

READERS of this concluding volume of Canon Perry's history will find in it the same good qualities with which they are familiar in its predecessors, and will pronounce it, as a summary of the ecclesiastical history of England during the last two centuries, the best work on the subject. Clearness, accuracy, and impartiality characterise it throughout; and, although the author by no means conceals his own preferences, he does justice, on the whole, to those whose views are different from his own. The only omission of importance that we can detect is that so little notice is taken of the rise and influence of the Broad Church school of thought during the present century. The name of Archbishop Whately occurs only in a passing allusion, those of S. T. Coleridge and F. D. Maurice do not appear at all. Hence, the student who comes upon the account of *Essays and Reviews* and upon that of Bishop Colenso will ask how such opinions could have appeared full blown, as they do in the pages appropriated to them; for the explanation here given—that they were a mere reaction after the excitement caused by the teaching and subsequent secession of Dr. Newman—is surely very inadequate.

Dean Stanley remarks somewhere that councils and conferences are the pitched battles of ecclesiastical history. Of these there are none in this volume, unless we except the two Pan-Anglican conferences, in which there was little fighting. But the eristic instinct of mankind is amply gratified by what we may call brilliant single combats in the many "cases" and trials on doctrine and ritual questions here recorded. These are narrated with clearness and sufficient fulness; and, as all schools of thought were attacked in turn, the reader will have plenty to interest him wherever his sympathies may lie.

The first of these described at length is the Gorham case. Apart from its doctrinal interest, this was important from the monstrous assumption of Bishop Philpotts to have power to refuse institution to any clergyman otherwise legally qualified whose opinions did not agree with his own. The rights of every lay patron, and those of every clergyman who expected preferment except from his own bishop, were attacked; and here we must take exception to what we think a false impression given by the narrative. One would suppose from Canon Perry's account that the whole Church was on the side of the Bishop of Exeter, as when he says, describing the composition of the court, "the only hope of Churchmen was in the Bishop of London"; for "Churchmen" here read "High Churchmen." Those who remember those times must recollect that a very large number of the clergy, and probably the great majority of the devout laity of the period, wished success to Mr. Gorham; and that, while Bishop Blomfield was regarded as rather a trimmer, no prelate of the day was more respected or more popular than Archbishop Sumner, otherwise there would be no meaning in the Bishop of Exeter's taunt in his letter to the archbishop that, in the opinion of many persons, the judgment was corruptly influenced by the

fear "that if a true judgment [*i.e.*, one on his side] were given, a large number of clergymen would be driven to resign their benefices and to leave the Church." We cannot now tell how far this was the case, nor, of course, if so, will anyone defend the judges. Bishop Philpotts himself, we may be sure, would have faced this or any other danger in what he regarded as the cause of truth. But it was a time when people were familiar with the idea of secession. The great disruption of the Church of Scotland was fresh in men's minds; and, however wrong the bishop may have been in his conclusion, yet, if his premise were right, the Church of England was saved from a great danger. If so, he must have regarded his own side as less sternly conscientious than that of his opponents; for, when the decision was given against him, the great body of his party contented themselves with meetings and protests, though two or three not undistinguished persons left the Church.

Canon Perry is no admirer of the judicial committee of the Privy Council; and we have the familiar complaints about laymen sitting in judgment on ecclesiastical matters, as though the possession of orders conferred the purely intellectual power of comparing documents, and of seeing whether an opinion expressed in sermon or pamphlet could be harmonised with a statement in a given formula. It is added, as an additional grievance, that the judges need not even be lay members of the Church—a complaint which involves the peculiarly clerical assumption that no man can be expected to act fairly towards a religious body to which he does not himself belong. Thus, in the Williams and Wilson trial, we read:

"Their lordships ruled that, the proceedings being penal, a verbal contradiction between the impugned statements and the articles and formularies must be established; that the spirit, scope, and objects of the essays went for nothing."

This Canon Perry calls "a transparent absurdity." It was a happy absurdity for the clergy.

It is curious to look back twenty-seven years to the story of *Essays and Reviews*, and see the storm aroused by opinions that are now held without offence by so many Churchmen, lay and clerical, and, if report speak true, in some orthodox dissenting circles. Never, perhaps, did a book of poorer ability and less originality make such a noise in the world. It fell all but still-born from the press; and it would have excited no more attention than an ordinary volume of parochial sermons, had not Bishop Wilberforce taken it up in one of those fits of injudicious fussiness to which he was liable. Then came debates in Convocation and a "synodical condemnation." Many people, we remember, hoped that the troublesome volume would have been "publicly burned" in the good old fashion, but the public was not gratified by this spectacle. However, Mr. Mudie, it is said, ordered 10,000 copies, *Essays and Reviews* was for a season a household word, and smart young gentlemen caused much affliction to their orthodox elders by free quotation of the least judicious passages of Dr. Rowland Williams.

Then came the turn of High Church, when Mr. Bennett had to answer for his writings on

the Eucharist; and we may ask how he would have fared before a bench of Sumners and Musgraves, with possibly the calm wisdom of Lord Shaftesbury as lay assessor. Such a court would, we may be sure, not have confined itself to a dry comparison of passage with passage, giving every doubt in the defendant's favour. It would have gone very freely into questions of "spirit, scope and object"; but he, too, had the benefit of the legal principle now firmly established, and got off with a rather contemptuous admonition from the bench.

But if we wish to see how purely clerical bodies would have settled these questions, we have only to turn to the proceedings at Oxford in the cases of Hampden, Tract XC., and Dr. Pusey. Here the judges were all ecclesiastics. And were ever bills of attainder, in the worst times of English history, rushed through Parliament with more heat, haste, and partiality, than these censures? "It will be observed," says Canon Perry, "that in all the judgments given by the Judicial Committee in matters of doctrine the decision has been uniformly on the side of liberty." He does not add "*Deo gratias*." Let us do it for him.

There is an interesting chapter on the disestablishment of the Irish Church, in which our author shows his impartiality; for he does not pass over in silence, or attempt to excuse, the tergiversations of his favourite, Bishop Wilberforce. He gives us two extracts from that prelate's correspondence which deserve preservation. Writing of the statesman who led the movement, the bishop says:

"I am afraid Gladstone has been drawn into it from the unconscious influence of his restlessness at being out of office. I have no doubt that his hatred to the *low* tone of the Irish branch has had a great deal to do with it."

But a few months later he writes:

"You have in Gladstone a man of the highest and noblest principle, who has shown unmistakably that he is ready to sacrifice every personal aim for what he has set before himself as a high object."

The account of the efforts of the half-ruined Church towards reorganisation is very interesting; and it is worth noting that, while in England the laity were in danger from the fanaticism of the clergy, in Ireland the clergy were in danger from the fanaticism of the laity. Had men like Master Brooke and Lord James Butler had their way the Irish Church would have almost sunk into another sect of Presbyterianism. In both cases the wisdom and moderation of the bishops were mainly the source of safety, showing, as indeed does the whole history from the Revolution down, the advantage of having the chief rulers of the Church appointed by the civil power, and so raised above the heats and prejudices of popular and elective bodies.

From these topics, however, Churchmen will turn with pleasure to the record of progress and improvement in the Church both at home and abroad. The growth of missionary effort, the revival of Convocation, and the reforms effected by the Ecclesiastical and Cathedral Commissions, show a Church alive to her mission and lay powers willing to help her. These last have hardly had justice done them here or elsewhere; and yet, if we were asked

what man and what work has been most beneficial to the Church in this century, we should be inclined to answer Bishop Blomfield and the Ecclesiastical Commission, though these are not so picturesque as Bishop Wilberforce and the Oxford movement.

As the Reform Bill of 1832—so fiercely opposed and grudgingly conceded—saved the constitution from contempt and ruin, so the reforms wrought by these commissions saved the Church from the same. They were kindred movements, and somewhat prosaic ones; but never was there a more critical time for the Church than when Lord Grey gave the bishops the famous advice to "put their house in order"; never can she be too thankful that she found the men and the means to take it.

H. SARGENT.

SOME BOOKS ON EDUCATION.

Addresses. By Edward Thring. (T. Fisher Unwin.) This little book, Miss Thring tells us, was sent to the press by her father before his fatal illness, and the task of editing has been finished by her. It contains seven addresses, delivered at short intervals—simple, earnest, outspoken, and not without an honest consciousness of good work done. Edward Thring was always the same good fighter; and even those who never knew the man in the flesh will feel, as they read these spoken words of his, that whether he was working in a Cambridge lecture-room, or in the National Schools at Gloucester, or with his Sixth at Uppingham, it was work that he was doing, and with his whole heart. The most interesting of the addresses here collected is, perhaps, the first, which is partly autobiographical, and contains a statement of Thring's pedagogic faith, and demand for liberty. His address on education, delivered at St. Albans, is a discourse on the text that "The perfectly educated will be Jack-of-all-trades and master of one." To the teachers of Minnesota he says:

"First break down the knowledge-idol. Smash up the idolatry of knowledge. Frankly and fairly admit that the majority of mankind cannot get much knowledge; and that any attempt to make them get it is a manufacture of stupidity, a downward education."

"A Workman's Hints on Teaching Work" is most characteristic of the author's manly humour and boylike directness. It is further remarkable for an admirable demonstration of the value of "the much maligned subject of Latin verse, the most useful literary tool that ever was invented, but nothing more than a tool." In his address to the Teachers' Guild, he fearlessly asserts and proves "that intellect-worship and the banner of knowledge set up in a kingdom mean death to true progress, death to the welfare of the vast majority, if unchecked." One might make an excellent list of pedagogic aphorisms out of this little book. "What everybody knows nobody thinks about." "It is hard to escape something of the pig if cooped in a sty." "Knowledge-hunting is one thing, and the seeing eye and active mind another." "Think in shape, get out of ghostland." As for the speech delivered at the High School for Girls at Leamington, it is worthy of a place by the side of *Sesame and Lilies*, which may have inspired it.

Practical Education. By Charles G. Leland. (Whittaker.) It would be hard to find anything in Mr. Leland's book to praise, and we have struggled through it and cast about with the best intentions. It is distinguished as little by accuracy and clearness as it is by modesty. In the very preface the author makes ducks and drakes of the common words "fact," "factor,"

"faculty," which he may possibly regard as synonymous. Before he has been many pages embarked, he notes, after mentioning the "thousands of letters which I have received," that "the first article ever published on my school in Philadelphia was in the *New York Herald*, in a leading editorial of a column. For this purpose the editor had sent a reporter expressly to examine the classes." There are very few pages indeed in which Mr. Leland does not pay himself similarly handsome compliments. For one piece of information we confess ourselves in his debt. We have frequently heard of "lines of beauty"; and we have often wondered who of gods or men could explain what they were. We gather from Mr. Leland that they are forms "approximating to an S." The following is a not unfavourable specimen of Mr. Leland's ordinary style, illustrating very well his mental attitude to boot:

"When a boy or girl from ten to fourteen years of age can look at all the arts which I have here described in operation without any sense of wonder, and feel perfectly confident that he or she can execute any of them at once, is not that child in a more advanced industrial condition than if its skill did not extend beyond sawing and fitting boards, or filing iron in a small way?"

Yes, Heaven help it! To this follows an attack on the principal of a rival technical school "who politely informed the public in print that the brass plaques, &c., executed in my school, were all *trash*." Why does Mr. Leland write "Copt" for the more usual "Copt"? Why does he put in inverted commas "the dim and remote future"? And what is an *atelier*? His book professes to treat of "the development of memory, the increasing quickness of perception, and training the constructive faculty." He states his task fairly—the propounding of a system whereby *all* children can be trained from infancy to industry; but his task is yet undone.

Education et Instruction. By Oct. Gréard. (Hachette.) The writer of the essays contained in these four volumes has certainly done well to gather together the thoughtful work of twenty years which he has devoted to the study of the "educational problem," as it is called. Much of the various discussions has, to be sure, an interest chiefly historical; but M. Gréard rightly holds that a trustworthy solution of our current difficulties is only to be attained after a proper understanding of the processes through which we have effected reforms of permanent value, or blundered into serious errors. Although he naturally writes with an especial eye to and acquaintance with the progress of education in France, he is usually well informed in regard to the course pursued in other countries; and it is no serious disparagement of his work to say that he has occasionally made characteristically French mistakes in important passages dealing with England. The four volumes deal successively with primary, secondary, and higher education—method first, and then programmes. It is only too true that in the discussion of programmes it has mostly been forgotten that the end of teaching is education; and it is perfectly certain that the permanent value of teaching varies inversely with the money-making results immediately attainable. The volume dealing with primary instruction begins, of course, with infant-teaching as carried on in the "Salle d'asile" or "école maternelle." Of this section by far the most instructive part is that dealing with the causes of the unsatisfactory results of early efforts and imperfect comprehension of the Froebelian method, which may very easily—and indeed sometimes does—turn infant schools into technical training schools for babies. And here it may be worth while to note that M. Gréard forsees what has often struck us as the peculiar danger of "technical" schools proper. In dealing with "écoles

d'apprentissage," he suggests that we may well fear lest the interests of the patrons result in injury to the apprentices. Without due caution, our own technical schools may conceivably become mere workshops, and bad ones too. We remember a certain well-known and active member of a Northern school board, an artisan of forty years' experience himself, commenting rather strongly on the condition of a grinding-wheel in a Paris technical school, "with three or four professors about." After a careful review of what has been done in this matter in France and elsewhere, M. Gréard is of opinion that his countrymen have nothing to learn from foreigners, seeing that it is in France that the enterprises fittest to prepare a solution of the question have been conceived. And certainly it is hard not to agree with him when one reads the account of what has been done, for instance, at Havre. We English people, who are about to venture on what is certain to be a very costly experiment in the way of technical education, may get what comfort we can from the assurance of M. Fichet—a great authority—that a technical school like that of Havre, where the highest attendance has been 115, may be established for £800, and kept in material for a hundred and fifty pupils on £120 a year. This first part of M. Gréard's work may be profitably consulted by all who are likely to have any part in the establishment of the technical schools for which the English government is now making provision. In his long examination of the subject of secondary education our author does not make out that France has much to boast of in comparison with other countries. The question of "programmes" is the first to be discussed. It is a noteworthy fact in the natural history of officialism in education that while "la question de la surcharge," and "die Ueberbürdungsfrage" have caused pother enough elsewhere, it is only in England, where an official code rules in elementary schools alone, that serious complaints have been confined to elementary teaching. M. Gréard gives a history of successive plans of study and development of programmes in France from the sixteenth century to our own day, and states the general educational problem from the five points of view severally represented by Messrs. Spence, de Laprade, M. Arnold, Herzen and the Swiss school, and Bain. For his own suggested solutions we must refer readers to his admirable book. It is likely enough that they will be attempted in their entirety where the philosophers are kings, or the kings are philosophers. Meantime, Mr. Matthew Arnold figures oddly as "un pédagogue anglais considérable"; and it is odd to read of the sylvan surroundings of the colleges of Oxford, St. Paul's, &c. And "reformatory schools" is only excusable by the aid of "Parcels Post," and that, being official, does not count for grammar. The volume dealing with higher education, though not without some general interest, is chiefly a technical examination of the conditions and results of the *baccalauréat*. We feel bound to add that Appendix xiv. is a delightful account of a visit paid officially to Edinburgh in 1885 by M. Gréard and other representative Frenchmen.

Cyclopaedia of Education. Parts I. & II. (Swan Sonnenschein.) It is impossible not to compare this specimen of what is to be our English cyclopaedia of education with the splendid dictionary of pedagogy and primary instruction recently published in France under the editorship of M. Buisson. M. Buisson's really monumental work is a "dictionary," and Mr. Fletcher's a "cyclopaedia." M. Buisson's contains about ten thousand closely-printed pages; Mr. Fletcher's will, if the design be carried out, boast fully six hundred pages, each containing about half the matter contained in

a page of the French dictionary. Putting corresponding articles side by side, the books bear no sort of comparison. There are several honoured names on the list of contributors to the cyclopaedia; but they have certainly not been allowed much latitude, or else they are to contribute to later numbers only. The short notes on psychology and physics are as good as space permit, but of other articles little should be said. Their general characteristic is extreme weakness, and we cannot conceive to whom they are likely to be of much service. It is curious in the article on biology to find Huxley and Martin's *Practical Biology* and Dr. Aveling's *General Biology* noted side by side, the latter "specially adapted for the South Kensington examination"; and one cannot easily find for what reason the writer mentions Huxley's *Anatomy of Invertebrated Animals*, but says nothing of his *Anatomy of Vertebrated Animals*. The article on chemistry is equally weak. What can be the conceivable use of the following "article"?

"Bullying as a school term may be taken as the opposite of 'fagging' in many respects, only that 'fagging,' or the acting as a drudge for another, is recognised as a normal part of school life, whereas bullying is strictly repressed. It is the brutal tyranny of elder boys over the juniors."

In fact, we cannot congratulate Mr. Fletcher. A cyclopaedia should be a cyclopaedia. We should call as much of his work as we have seen fragments of an "unclassified" book.

The Realistic Teaching of Geography. By William Jolly. (Blackie.) This little book (pp. vi. 56), by one of Her Majesty's Inspectors of Schools, is an important contribution to one of the pressing educational questions of the day. Most of the papers and lectures which have hitherto appeared on the subject have either merely bewailed the prevalence of bad methods, or at most indicated in a general way how geographical teaching ought to be done. Mr. Jolly is, on the other hand, altogether practical, detailed, and definite; and for young teachers his peckful of clear, methodically arranged hints and directions is worth bushels of talk at large. Not that we are prepared to agree with him on all points—realism, like every other "ism," can be made a hobby of and ridden hard; and the light of etymology may be a will-o'-the-wisp, and dangerous accordingly. But we confidently affirm that anyone who wishes to teach geography well will have some difficulty in finding, on the whole, a safer, abler, or more experienced guide.

Schools, School-books, and Schoolmasters. By W. Carew Hazlitt. (Jarvis.) In this small volume the author has brought together a considerable amount of gossiping information—as a bibliographer of his erudition and experience could hardly fail to do. But while the book is not without interest, it is not of great importance as "a contribution to the history of educational development in Great Britain." Occasionally the statements are wanting in that precise accuracy supposed to be the first virtue of a bibliographer. Thus, on p. 177, we are told that "Bright was nearly a century before the more celebrated Rich, who flourished about the Restoration of the Stuarts." The fact is that Bright's *Character* was printed in 1588 and Rich's *Character* in 1646. The final chapter, on "The Origin and Spirit of Phonography," shows that Mr. Hazlitt still clings to some old notions which are now generally discarded by competent philologists.

Educational List and Directory. (Sampson Low.) We wish this publication all success, and willingly testify to its clearness and "get up"; but, in the only instance in which we have been able to test its accuracy, we find it sadly wanting. In the large town to which we are alluding, the Directory registers one

public elementary school (out of about eighty) under the head "Colleges and Schools." Why? No doubt, as time goes on, the means of acquiring information will be made more satisfactory.

We have also received the second annual issue of *The Schoolmaster's Calendar* (Bell)—a modest little volume, which is sufficiently recommended by its sub-title as a "handbook of examinations and open scholarships."

NOTES AND NEWS.

MESSRS. MACMILLAN will publish shortly a volume of the Prose Remains of Arthur Hugh Clough, edited by his widow, with a selection from his letters and a memoir.

THE next volume in the series of "Twelve English Statesmen" will be *Cardinal Wolsey*, by Prof. Mandell Creighton.

MESSRS. LONGMANS announce a volume of essays on social questions, by the Rev. S. A. Barnett and Mrs. Barnett, to be entitled *Practicable Socialism*.

THE fourth volume of the Comte de Paris's *History of the Civil War in America* will be published by Messrs. Porter & Coates, of Philadelphia, towards the end of this month.

MESSRS. CHAPMAN & HALL will publish in a few days, a volume of essays by Mr. W. L. Courtney, of New College, Oxford, entitled *Studies, New and Old*.

MESSRS. VIZETELLY & Co. have made arrangements for issuing a series of translations of some of the French illustrated books that were fashionable in the latter part of the last century. The volumes will have reproductions of the original copperplate engravings from designs by Eisen, Marillier, Cochin, Le Barbier, &c. The first to appear will contain *The Kisses and The Month of May*, by Claude Joseph Dorat, musketeer of the king, with forty-seven illustrations.

MR. DAVID NUTT will issue in the course of the spring *Five Fairy Tales*, by Mr. Oscar Wilde, with three full-page illustrations by Mr. Walter Crane, and vignettes and tail-pieces by Mr. Jacob Hood. There will be a limited large-paper issue in addition to the ordinary one. Also, *Studies on the Legend of the Holy Grail*, with especial reference to its alleged Celtic origin, by Mr. Alfred Nutt. This volume, which will also be issued by the Folklore Society to its members, will comprise detailed summaries of all the leading forms of the legend, an attempt to fix their date and relation one to the other, a comparison of the oldest forms with Celtic tradition, and a discussion of the moral and spiritual ideas embodied in the romances. Mr. Henley's poems are almost ready for delivery, as are also the new volumes of the "Bibliothèque de Carabas."

AMONG the forthcoming publications of the Clarendon Press are: *A New English Dictionary*, edited by Dr. J. A. H. Murray, part iv. (BBA—CAT); *A Catalogue of English Fossils*, part i., "Palaeozoic," by Robert Etheridge; *A Catalogue of the Mohammedan Coins in the Bodleian Library*, with facsimiles, by Stanley Lane-Poole; *The Morphology of Knowledge*, by B. Bosanquet, in 2 vols.; *Selections from Polybius*, by J. L. Strachan-Davidson; *A History of English Sounds*, by Dr. Henry Sweet; *A Concise Dictionary of Middle English*, by the Rev. A. L. Mayhew and Prof. Skeat; *Sounds and Inflections in Greek and Latin*, by J. E. King and C. Cookson; *An Essay on the History of the Process by which the Aristotelian Writings arrived at their Present Form*, by the late Richard Shute; *Clarendon's History of the Rebellion*, edited by the Rev. W. D. Macray, in 6 vols.; *A Class-Book of Chemistry*, by W. W. Fisher;

The Minor Poems of Chaucer, edited by Prof. Skeat; a reprint of Hume's *Treatise of Human Nature*; Johnson's *Life of Milton*, edited by O. H. Firth; *An Old High-German Primer*, by Dr. Joseph Wright; Xenophon, *Oxyrhynchus*, book i., edited by the Rev. Dr. C. Bigg; *Hellenica*, books i. and ii., edited by G. E. Underhill; and *Anabasis*, book iii., edited by J. Marshall.

THE English works of Raja Rammohun Roy, dealing principally with the Hindu religion and its relation to Christianity, have just been printed at Calcutta, and will shortly be issued in this country by Messrs. Williams & Norgate.

MR. AARON WATSON has nearly ready an historical romance, under the title of *Through Lust of Gold*.

MR. WILLIAM ANDREWS, of Hull, author of "Modern Yorkshire Poets," is preparing for early publication a work entitled *North-Country Poets*, consisting of biographies and poems of natives or residents of the six northern counties.

DR. REGINALD SHARPE has in type over four hundred pages of his *Calendar of the five thousand earliest wills in the Hustings Roll of the City of London at the Guildhall*. Three thousand of these wills will be included in part i. of Dr. Sharpe's *Calendar*, which will probably be ready by August. At present, all the wills calendared are in Latin, and many contain interesting illustrations of city customs and localities. It is much to the credit of the Guildhall Library Committee and the Common Council that they have authorised the preparation and printing of this *Calendar* of their early wills. We only wish we could persuade them to print the most valuable *Calendars* of their journals, letters, books, and repositories which their deceased librarian, Mr. Alohin, made for them, and which Dr. Furnivall assures us contain a most remarkable picture of city life in the sixteenth and seventeenth centuries. The whole of these MSS. materials were classified by Mr. Alohin under headings; and the mere reading of entries like Pastimes, Misdemeanors, Hospitals, Prisons, &c., is a treat to anyone with an antiquarian turn. Were Mr. Alohin's *Calendars* but printed and made accessible to the public, a great boon would be conferred on all students of history and social life. A Manuscript Department, as at the British Museum, ought to be added to the present Printed-Book Department of the Guildhall Library; the eight or ten volumes of Dr. Sharpe's *Catalogue of the Hustings Deeds* also need to be put in type; other *Calendars* of the whole city records should be made; and justice at last done to the wealth of material that the city owns for the history of itself and England. The task is well worthy of any chairman of the Library Committee or Lord Mayor desirous of coupling his name with those of the great patrons of history and literature.

TOMO IV., Volume I., of Menéndez y Pelayo's *Historia de las Ideas Estéticas en España* has just appeared. It consists of an introduction of over 500 pages, giving a historical sketch of the development of aesthetics during the nineteenth century. (1) In Germany. The theories of Kant, Schiller, Goethe, the Schlegels, Fichte, Hegel, and minor writers down to Wagner are analysed and discussed. If like space be given to other nations, this introduction alone will form a work of no inconsiderable size and importance.

NUMBER 3 of the scholarly "Bibliographical Notices," which Mr. Willard Fiske is issuing privately from the Le Monnier Press, at Florence, deals with Petrarch's Latin Treatise, *De Remediis Utriusque Fortunae*. The total number of copies here catalogued is ninety-four, of which by far the majority are in Mr. Fiske's

own unrivalled collection. They are thus classified: (1) The Latin text—in the collected works, in independent editions, and in incomplete editions; (2) translations, in no less than nine European languages. Of the translations, it is curious to note that the earliest appeared in Bohemian (1501); and that Mr. Fiske was fortunate enough to acquire "for an insignificant price" the only known copy of the only Dutch version (1606). We are glad to find that, in his opinion, the English rendering of Thomas Twyne (1579) "compares most favourably with the versions in other tongues"; and that the typography of Richard Watkins is "in every way excellent." It is odd, however, that so skilled a bibliographer should apparently be puzzled by the device on the title-page, which he describes as including a pelican, the letter R, and the "motto Jugge (P)." A pelican was the trade mark of Richard Jugge, the well-known printer to Queen Elizabeth, who died in 1577. Regarding the unique Spanish translation in the British Museum, dated 1505, Mr. Fiske inclines to the opinion that the date may be a printer's error for 1510, as the two editions differ in no other particular. It is impossible to praise too highly the painstaking accuracy with which Mr. Fiske has accomplished his labour of love.

ORIGINAL VERSE.

COMFORT OF DANTE.

Down where the unconquered river still flows on,
One strong free thing within a prison's heart,
I drew me with my sacred grief apart
That it might look that spacious joy upon;
And as I mused, lo! Dante walked with me,
And his face spoke of the high peace of pain,
Till all my grief glowed in me throbbingly,
As in some lily's heart might glow the rain.
So like a star I listened, till mine eye
Caught that lone land across the waterway
Wherein my lady breathed—now breathing is;
"O! Dante," then I said, "she more than I
Should know thy comfort, go to her I pray!"
"Nay!" answered he, "for she hath Beatrice!"

RICHARD LE GALLIENNE.

MAGAZINES AND REVIEWS.

THE principal articles in the *Revista Contemporánea* for February are:—"The Pontifical Jubilee and the Government of Italy," by Sanchez de Toca. The writer maintains the necessity of an independent domain for the Pope, and the impossibility of his accepting the guarantees of Italy. In "Ginés Pérez de Hita," Señor Acero attempts to prove that he was a native of Mula, born in 1548, a twelve-month only after Cervantes. R. de Rivas, discussing "The Jury and Agriculture in Spain," considers that it would greatly add to the insecurity of the country districts, as no jury would dare to convict a criminal of their own neighbourhood. The "Letters from Paris," of Garcia-Ramon, are a lively denunciation of current pessimism from the standpoint of a disciple of Montaigne. Cristobal Botella continues his chapters on "Socialism," and Catalina Garcia his "Brihuega and its Fuero."

IN the *Boletín* of the Real Academia de la Historia for February, Dr. R. Beer gives a detailed account of the palimpsest of the *Lex Romana Visigothorum* lately discovered by him at Leon. He considers it to be one of the six originals made at Toulouse by Anianus in 506, and consequently superior to all other known MSS. In "The Supposed Birth of a Supposed Queen," V. de la Fuente clears up a minor mystery, attested by a document in the Archives and a monument in the Church of Ledesma, concerning a Queen Juana, and a son born to her in 1302. Manuel Danvila has

a careful historical report on the property of the order of Calatrava, and the tenure by which it was held, in order to guide the government in the settlement of still outstanding claims. Padre Fita prints three inedited Bulls of Alexander III., in one of which (March 23, 1176), "pardon of all sins, on repentance," is promised to all who fight against the *Massamutos*, a tribe of the Almohades who had just invaded Spain. Mention is made of the superb work of the brothers Siret—*Les Premiers Ages du Metal dans le Sud-est de l'Espagne*—and of a cheaper edition to be published at Barcelona.

TOMO V., No. 5, of the *Revista de Ciencias Históricas* opens with Cap. VII. of the defence of Gerona in 1809, by F. Manuel Cundaro. Then follow some interesting Catalan documents of the thirteenth century, by J. Coroleu. F. Fernandez y Gonzalez gives short biographies of three Spanish-Arabic poets of the ninth century, two of whom sing of war, the third of love. Conde de la Viñaza continues his additions to the Dictionary of Cean Bermudez, exhausting the letter D. The rest of the number is occupied with the prospectus of MM. Siret's work (mentioned above), with an article on the antiquity of money, chiefly taken from Mr. Gardner, with reviews, and with the usual bibliographical notices of articles on Spanish archaeology, both in home and foreign reviews. A useful feature is the *compte-rendu* of the sittings of the Real Academia de la Historia. This is not given in the *Boletín* of the Academy.

A SCHOOL FRIEND OF FANNY BRAWNE.

[We have been permitted to publish the following reminiscence of Fanny Brawne, so intimately associated with the last days of Keats, by a lady who died only in the present year. It has been placed at our disposal by Mr. Robinson Ellis, the son of the lady in question.]

My mother, Miss Caroline Robinson, was a pupil of Mme. Zielsky's in (to the best of her belief) 1817-18. There she was an intimate friend of Miss F. Brawne, who was invited more than once to stay with Miss Robinson's family, first at Chingford in Essex, afterwards at Havering atte Bower. The two friends occasionally wrote to each other after they had left Mme. Zielsky's. Miss Brawne was very fond of reading, but at that time knew no foreign language but French. She was a Liberal in politics, and my mother could remember a letter (but on this point she could not trust her memory) in which her friend ridiculed one of the royal dukes, perhaps on the occasion of the coronation of George IV. At Chingford she and Miss Robinson once scandalised the family by not going to church, both being found reading in an adjoining field. Miss Robinson, on a subsequent visit to Mme. Zielsky's, accompanied her (Mme. Zielsky) to Mrs. Brawne's house at Hampstead, and in the evening was introduced to the poet Keats and Mr. Dilke.

CORRESPONDENCE.

TWO MORE SOURCES OF CHAUCER'S WORKS.

Oxford: March 28, 1883.

To the sources to which Chaucer is known to have been indebted we may add two more, which I do not remember to have seen noticed. These are *Les Remonstrances ou La Complainte de Nature à l'Alchimiste Errant* and *Le Testament de Jehan de Meung*. Both are by Jean de Meun, author of a part of the *Roman de la Rose*, and are included in M. Méon's edition of that poem. The former is one of the sources of the Canon's Yeoman's Tale, and contains numerous hints on alchemy. For example, we have the lines:

"Miel te vaudroit faire autre office
Que tant dissoudre et distiller
Tes drogues pour les congeler
Par alambics et descensoires,
Cueurbitas, distillatoires," &c.; ll. 36-40.

Compare Cant. Tales, Group G, 792-4. The resemblances are slight, but, I think, they are sufficient to prove the point. The most interesting passage is the following, which refers to gold:

"C'est le fin et bon et potable,
L'umide radical notable;
C'est souveraine médecine,
Comme Salomon le decline," &c., ll. 979-982.

Here follows a reference to Ecclesiasticus, cap. 38, then some talk about doctors, and a little further on:

"Ne tant louable médecine
Qui guarist toute maladie . . .
C'est médecine cordiale"; ll. 1012, 1013, 1029.

This explains how the Doctor of Phisik knew that gold "in phisike is a cordial." The reference to Eccles. xxxviii. is to the fourth verse: "The Lord hath created medicines out of the earth; and he that is wise will not abhor them"; which is an excellent reason for "not abhorring" gold, and the Doctor seems to have laid it to heart.

Le Testament, at any rate, gives us a hint as to the striking rime of *cloistre* with *oistre* in the description of the Monk. The author describes "les bon Religieux" after this sort (l. 1165):

"Ne se font mie trop par les rues congnoistre,
Qui les voldra trover, si les quiere en leur cloistre;
En riens, fors en bien faire, ne se veulent acroistre,
Car ne prisent le monde la montance d'une oistre."

WALTER W. SKERT.

THE CODEX AMIATINUS.

Jever (Oldenburg) Germany: March 26, 1888.

The discussion on the Codex Amiatinus in the ACADEMY seemed to be closed by the ingenious letter of Prof. Hort, in the number for June 11, 1887. Prof. Hort examined the investigations of Prof. Browne into the origin of the preliminary matter of the MS.; and, though restricting Prof. Browne's results in some points, and modifying them in others, he yet accepted them on the whole. It seemed firmly established that the first quaternion of the MS. had a different origin from the rest, and that it had been taken out of the very Bible of Cassiodorus which Ceolfred brought from Rome to Jarrow. To have a sample of the original writing and painting of Cassiodorus's scribes and painters would, of course, be of no common interest to all students of art and palaeography. I myself was all the more glad of Prof. Browne's discovery, because it confirmed certain ideas of my own. And who is not pleased to be shown that he was in the right?

I am sorry to say that I am going to reopen the discussion, in order to prove that Prof. Browne's otherwise very valuable paper, so far as it concerns the question of the origin of the first eight leaves of the Codex Amiatinus, points in a false direction, and that the step we seemed to have advanced has simply to be retraced. I had an opportunity a short time ago of examining the MS. anew, and I am now thoroughly convinced that Prof. Browne was misled in his appreciation of the first quaternion. It will be difficult for me to give the reader, who cannot have the MS. before him, the same conviction; but still I hope to raise some objections, which may be taken into consideration without seeing the MS. itself, and through them to find credit for those which can only be accepted on faith.

I shall not follow Prof. Browne on the ground on which he pleaded his cause. His interesting remarks upon the difference in the drawing and colour of the pictures of Ezra and the temple, and of that representing Christ on his throne in heaven, surrounded by the evangelists and their symbols, are certainly worth discussion. Still, I can by no means see the necessity of the conclusion he draws from this difference. Neither shall I make any use of another argument, which I know will soon be developed with far higher authority and profounder judgment by that great Roman scholar whose never failing perspicacity and learning discovered at once the birthplace of our famous MS. This concerns the difference between Bede's description of the temple and the picture in the Codex Amiatinus. Bede says that, according to the picture of Cassiodorus in his Pandect, the temple was surrounded with a triple porticus, while in the Codex Amiatinus only a single row of columns is drawn on each side. With good reason Prof. Hort deduces, from the way Bede talks about the picture, that he had seen it himself. This Prof. Browne is inclined to doubt, because Cassiodorus, in his commentary on the Psalter, where he mentions his picture, and to which Bede is also referring, says nothing about the triple porticus. But this can only serve to corroborate Prof. Hort's opinion. It is of no avail to say that Cassiodorus might

well have had a picture of the temple as well as of the tabernacle, for it is evident that both Cassiodorus and Beda are speaking of one picture, and that the one attached to the great Bible, which had come to Jarrow, and was, therefore, close at hand for Beda and his disciples. Now, as Cassiodorus refers to his picture without giving any details of it, Beda can speak only from having seen it.

But I will leave this, and attack another point of vital importance for Prof. Browne's hypothesis.

Of all the folios of the first quaternion, as Prof. Browne very rightly remarks, every two and two form one sheet, except ff. 4 and 7. These two are now united by a guard. They have either been separated from each other, or they never belonged to the same piece.

On the front of f. 4 is written the preface of Cassiodorus to his great Old-Latin Bible, on the back the contents of Codex Amiatinus. There can be not the slightest doubt that the handwriting on both sides is absolutely the same, nor has this been questioned by Prof. Browne. The writing on f. 7 is the same as on f. 6 and f. 8. F. 6 belongs to the sheet of which the second half contains the picture of Ezra. The contents of the Amiatinus could surely not come in before the MS. itself existed. Therefore, if f. 7 and f. 4 once formed one sheet, it is pretty certain that, except the picture of the temple, none of the first eight leaves can ever have formed part of Cassiodorus's Bible.

I shall try to show that they have only very lately been separated; but I say at once that I cannot prove it with mathematical demonstration. But, where certainty fails us, we have to follow probabilities; and we shall acquiesce the more willingly the less is left to be said on the contrary side.

Prof. Hort has touched the very point I am now aiming at. However, he thinks it impossible to determine when the two leaves (4 and 7) were mounted on a guard. I believe it can be affirmed with certainty that the present guard is modern, although the two leaves may have been united in a similar way before.

The binding of the Codex Amiatinus has been at least twice renewed, for the last time not many years ago. We know how the leaves were arranged before this, their old numbers being still written on them. Though this arrangement was not the original one, still it is necessary to pay attention to it.

PRESENT ARRANGEMENT.	PREVIOUS ARRANGEMENT.
—1 v. Donation ver- ses.	—I. v. Donation ver- ses.
{ 2 v. Temple, left side.	—II. v. Temple, left side.
{ 3 r. Temple, right side.	—III. r. Prologus.
—4 r. Prologus.	v. Contents of Amiatinus.
v. Contents of Amiatinus.	—IV. r. Picture of Ezra.
—5 r. Picture of Ezra.	—V. r. Hieronymic list.
—6 r. Hieronymic list.	—VI. r. Old-Latin list.
—7 r. Old-Latin list.	—VII. r. Temple, right side.
—8 r. Augustinian list.	—VIII. r. Augustinian list.

The previous arrangement was clearly made without an understanding of the meaning of the picture on ff. ii. and vii. Still, from a technical point of view, if I may say so, it was properly done. No regard was paid to the contents, but the sheets lying within each other form a quaternion in a natural way. To all appearance none of them were cut asunder. The modern binder apparently followed the opposite method. He was aware, or he had been made aware, that f. ii. and f. vii. belonged together. He therefore felt obliged to reunite them. Had he considered the nature of a quaternion, he would have seen at once that they must have

been originally the inmost part of it. Instead, he left f. ii. in its place and bethought himself how he might place f. vii. next to it. Supposing ff. iv. and v. had always been in the middle, ff. iii. and vi. would have come in wrongly. By a slight cut between ff. iii. and iv., which would separate ff. iii. and vi. from each other, he might remove these intruders. Then ff. iv. and v. would easily come off, and f. vii. might be carried back to f. ii. By making f. vii. the third, any natural rearrangement of the quaternion became impossible. Even without regard to ff. 4 and 7, a guard would have been necessary to hold the loose sheet ff. 2, 3. The present guard can therefore not be older than the present binding. It appears on the back of ff. 2 and 7, holding together ff. 2, 3, 4 and 7. So the binder made a sort of ternion out of the quaternion, leaving the sewing between ff. 5 and 6, as being the middle of the whole.

This I suppose to have been the process of the binding. I met the binder himself in the Laurentiana. The honest man recognised his work instantly; but nobody will wonder that in the course of years he had forgotten in what condition he had found ff. iii. and vi., and also why he arranged the preliminary matter as he did, and not otherwise.

But even if my supposition be unfounded, the fact remains nevertheless highly probable that ff. 4 and 7 (formerly iii. and vi.) are of one piece. First, the parchment of one leaf is in no respect unlike that of the other, except in the colour. F. 7 seems a trifle smaller, but this is only because a portion of it is attached to the guard. Secondly, there is no apparent reason, as Prof. Hort very well remarks, why Ceolfrid should have discarded the old leaf and replaced it with a new one (f. 4.) We should have to suppose that the old leaf had got damaged. This might have happened if, as Prof. Hort suggests, it had been originally the first. But it remains to be seen whether this is likely.

Prof. Browne very justly remarks that f. 8 must originally have followed f. 6, the pigment of the verses at the top of f. 8 having come off on the back of f. 6. This cannot have happened in consequence either of the previous or of the present binding; therefore, as there is no proof of yet another binding, it must have come from the first. If f. 8 followed f. 6, f. 5 must have followed f. 1. It may be added that the colour of the frame of the picture on f. 4 has left traces on the back of f. 1. But there is no external evidence for the place of f. 4 and f. 7. They may have been either the first and last, or the third and sixth. Still, I think we can ascertain something about their place from internal marks.

Above the list of the holy books on f. 6 there is the picture of the lamb, above that of f. 8 that of the dove, from which one line runs to the books of the Old Testament, another to those of the New, indicating the source from which the Scriptures sprang. At the top of the third list is to be seen a human bust in gold with a beardless face. The drawing is not very clear nor very well preserved, so that there is a difference of opinion whether the figure be male or female. Bandini thought it likely to be either the picture of Pope Gregory, under the supposition that to him the Codex Amiatinus had been offered, or that of Servandus, whom he supposed to have presented it to the pope. Garrucci, making light of Bandini's reasoning, declares it to be a female head representing the Church (*Arte Cristiana*, iii., t. 126). I myself, following the steps of Bandini, thought it represented Cassiodorus as the author of the great Bible to which the list belongs. I mentioned my opinion to the learned and amiable prefetto of the Laurentiana, but he very rightly pointed out the analogy of the

other lists. I do not quite clearly remember whether he explained it to me in the same way as Garrucci, or as the representation of God; but I am now sure that the rude drawing is the latter. We should then have to arrange the lists according to their headings, and the Old-Latin list would lead the others—the same arrangement as that proposed by Prof. Browne.

A strong point was argued against it by Prof. Hort. F. 7 bears circles on its back, with a sort of argument of the five books of Moses. They would, indeed, stand best immediately before the Pentateuch. But their being on f. 7 v. can be explained in some way or other; and, at all events, I think the reasons I put forward in favour of the other order stronger. If the reader should be of a different opinion, I have another argument, which has still more weight with me.

If we put f. 6 at the end of the quaternion, it follows (supposing that we have originals before us) that Cassiodorus left the second leaf blank on both sides, because f. 8 would become f. 7, and consequently f. 1 the second. What could have induced him to adopt this odd arrangement? Why did he not write the prologue on the second leaf and leave the first blank as a cover for the whole? If all these pages have been copied, I ask why the donation, which ought to stand in front of the book, should have been almost hidden on the back of the second leaf behind the prologue? So in either case it seems equally probable to me that f. 1 (i.) and f. 8 (viii.) have never changed their place. Then, in the second binding, f. ii. and f. vii. would have changed places with f. iv. and f. v., while f. iii. and f. vi. kept theirs.

This being so, nothing but a forced and unfounded reasoning could adduce any argument to prove that f. iv. is a substitute for another leaf, and this circumstance deprives all other leaves of their pretended authenticity.

I think it fit to add a few further words to justify the original arrangement. The picture of Ezra stands properly first. We are introduced into a library; the open bookcase shows us the "bibliotheca"—that is, the series of the holy books lying on the shelves. Each volume bears its title on the back, still legible in the main, though partly faded away. Bandini deciphered them not altogether well. I can give them somewhat more correctly. They run as follows: OCT LIB—REG LIB—HEST LIB—PSAL LIB—SAL . . .—PROP . . .—EVANGEL IIII.—EPIST AP XXI.—ACT AP APOCA. These titles, with one exception, which is probably due to the fault of the painter, correspond to the nine MSS. which Cassiodorus had written for his library. Of *Instit. divin. litter. praeft.* and c. i.-ix.:

"C. I. Primus scripturarum divinarum codex est Octateuchus. C. II. In secundo Regum codices. C. III. Ex omni igitur Prophetarum codice tertio. C. IV. Sequitur Psalterium codex quartus. C. V. Quintus codex est Salomonis. C. VI. Sequitur Hagiographorum codex sextus. C. VII. Septimus igitur codex scripturas divinae . . . quattuor Evangelistarum superna luce resplendet. C. VIII. Octavus codex Canonicas Epistolas continet Apostolorum. C. IX. Nonus igitur codex Actus Apostolorum et Apocalypsin noscitur continere."

Above the picture the following verses are written:

"Odicibus sacris hostili clade perustis
Ezra deo fervens hoc reparavit opus."

which occur also in one of the poems of Alcuin (*vide Dümmler, Poetae Latini mediæ ævi*, T. i., 292 Carmen lxix., v. 201). These verses are rather carelessly put too far to the left, and seem to have been added later. But to all appearance they come from the MS. of Cassiodorus, and express the meaning of the picture. Cassiodorus, however, appears to identify himself with Ezra, who is represented sitting before the bookcase and occupied in

adding new books to those already finished, having by him all that was needed in the Middle Ages for writing and adorning books.

Thus introduced into the workshop of Cassiodorus, in the "scriptorium" of Vivarium, we naturally come next to the prologue of the present book—I mean the great Old-Latin Bible.

Then follows the picture of the temple. Why was it inserted in this particular place? What has it to do with these preliminary matters referring to the Scripture in general? We shall learn this by reading Beda's description of the temple. The temple has not only a literal, but also a figurative sense (*vide* Beda, *De templo*, c. i.: "Domus dei quam aedificavit rex Salomon in Hierusalem in figuram facta est sanctae universalis ecclesiae"; and *De tabernaculo*, ii. 1: "Tabernaculum praesentis aedificium ecclesiae . . . templum futurae requiem designat"). Now Cassiodorus, in his prologue, tells his disciples not to be puzzled by the various divisions of the Scripture, because all of them conduce to the construction of the celestial Church: "Nam licet haec calculo disparia videantur, doctrina tamen patrum ad instructionem caelestis ecclesiae concorditer perducunt." So the last words of the prologue are immediately taken up by the picture of the temple understood to represent the church built on the Scripture, the books of which are exhibited hereafter in three lists as the revelation of Father, Son, and Holy Spirit.

This must have been the arrangement of the original as well as of the copy. That the leaves preserved are only the copy, I hope that I have made probable. If a doubt still remains, I will now bring forward those arguments, which have the advantage of being more conclusive, but which need verification by examining the manuscript itself.

The lists do not seem to have been written by the same hands that were employed in writing the text of the Codex Amiatinus. But in vain would one strive to recognise a difference of more than a century in the style of the two handwritings. The writing of the lists is less stiff and regular, the letters vary in size, the *e* has the minuscule form, others are occasionally more freely dealt with; but it is to be borne in mind that in its peculiarities it agrees remarkably with the corrections and marginal notes of the text.

Finally, there is no difference in the quality of the parchment of the first eight leaves and those of the rest of the manuscript. The parchment of the Codex Amiatinus is, so far as we know, different from that usually employed—and especially in Italy—in the sixth century. It is by no means so coarse and rough as that of many Irish manuscripts of the eighth century, but well polished and accurately pointed and ruled. However, it is rather too stout and strong for the time of Cassiodorus.

Prof. Browne's inference from the difference in the manner of the picture of Ezra and that of Christ would only stand if the latter had been copied from Cassiodorus. Now there is every reason to believe that its pattern was not Cassiodorian.

It cannot be too strongly urged that, except the preliminary matter, the Codex Amiatinus is wholly independent of Cassiodorus. So long as one thought that the Codex Amiatinus was written by successors of Cassiodorus, one might have doubted whether its text had not been influenced by that of those manuscripts which seems nearest related to the Vulgate—the Hieronymic as the Bishop of Salisbury suggested (ACADEMY 1887, p. 112). But there is no longer room for any such supposition. We know that only one of the three Bibles of Cassiodorus came to Jarrow, and just that one which must have differed the most from the Codex Amiatinus. It had the Old

Testament according to the LXX, while the Amiatinus contains the version from the Hebrew. It had another order and number of books.* Not only was Peter put before James, but also neither the epistle of Jude nor the second of Peter and the second and third of John were admitted into it.

But Ceolfrid wanted the revision of Jerome and he was fully aware of the difference. At the bottom of the page that contains the contents of the Codex Amiatinus these verses are written, which have been differently interpreted in the ACADEMY:

Hieronyme interpres variis doctissimo linguis
Te Bethlehem celebrat te totus personat orbis,
Te quoque nostra tuis promittit bibliotheca libris,
Qua nova cum prius conditis donaria gazis.

Mr. Rule, who out of a wrong interpretation of an unmistakable† text constructed a fantastic list of books of Ceolfrid, to which Mr. White very justly objected, is nevertheless right, I think, in his comment on these verses (ACADEMY 1887, p. 131). I came by chance upon the verses by which Ceolfrid apparently has been inspired—Prosper, "Carmen de Ingratis," i., v. 55; Migne, *Patrologia Lat.*, li., col. 98:

Tunc etiam Bethles praecleari nominis hospes
Hebraeo simul et Græco Latineque venustus,
Eloquio, morum exemplum mundiue magister,
Hieronymus libris valde excellentibus hostem
Dissecuit . . .

"Te tuis libris nostra bibliotheca promittit" is, to be sure, not a very happy expression; but it can scarcely mean anything else but "libros tuos nostra bibliotheca promittit"—"our library will henceforth contain also the books of Jerome." Jerome's books in this place are, of course, the books of the Holy Scripture as translated and revised by Jerome. "Quoque" gives us to understand that the library contained already another translation of the Bible. This is more fully explained in the last verse. "Condere" is the very word for putting books into a library (*cf.* Cassiodorus, *Inst. div. litt.*, c.v.; Migne, lxx., col. 1116 B—"Hic tantos auctores, tantos libros in memoriae suae bibliotheca condiderat"); and "gazae" and "donaria" are common expressions for books in the language of the Fathers. The library of Jarrow is like the treasure of the householder, which contains things old and new (Matt. xiii. 52)—a place often referred to in a similar connexion.

It must be concluded from these verses that the Codex Amiatinus was not originally written in order to be presented to the pope, but that it had belonged for some time to one of the two monasteries, and only afterwards was destined to be carried to Rome. Accordingly, the donation verses have been added later, and the MS. itself must have been executed rather in the beginning than at the end of Abbot Ceolfrid's career. This conclusion perfectly agrees with Beda's statement, which is somewhat clearer and more correct than the narrative of his anonymous predecessor.

P. CORSEN.

* It must be mentioned that there is a startling contradiction between the list of contents of the Codex Amiatinus and the heading of the list. The list contains only sixty-seven books, while the heading speaks of seventy-one. One arrives at the number of the heading only by doubling Samuel, Malachias, Paralipomena, and Ezras; but with all these books the scribe was at a loss whether to divide them in two or not (*Vide Biblia Lat. Veteris Testam.*, ed. Heyne et Tischendorf, pp. 292, 325, 362, 369, 429, 476).

† I say unmistakable, though I have my doubts whether *geminavit* be right. It is no fit opposite to *cepit*. Has anybody read *minare*, "push," so common in later Latin, in a more general sense of "carrying on"?

DANISH PLACE-NAMES AROUND LONDON.

London: March 27, 1888.

Mr. Stevenson styles my batches of identities between English and Danish place-names "fallacious parallels." But is not this begging the whole question? His detailed statement of what he considers was the derivation of the names of certain Danish places may or may not be correct, and I will frankly admit that I am not qualified to follow him into that field of philology wherein so few men tread the same road. My theory is (1) that most of the Danish place-names in England were reproductions of names of the villages (never mind what such names meant) whence the settlers came, and (2) that some, at all events, of them were introduced here *before* the Roman invasion. This, I contend, is shown by the Roman termination being sometimes grafted on the Danish root-word. As to (1), Mr. Stevenson admits I may be right "in a few cases"; but I venture to think, as in my *History of Norfolk* (pp. 4-6) I give a list of seventy-eight places in that county alone identical, or partly so, with the names of existent Danish villages, that the *onus* is at present rather with him than with me.

As to his criticism, he is hard to please. In one place he says in effect that it is ridiculous "to believe that the original Danish names and their English reproductions have preserved their original likeness to one another undisturbed by the natural or linguistic changes of 2000 years," while in another he falls foul with me for identifying "Tjørneholme" with "Turnham." If it is wrong for me to identify our Norfolk Barmer, Horning, and Horstead with Danish places of identically the same spelling, because the spelling is identical, why should I be debarred from the *idem sonans* argument of certain place-names not spelt the same?

All I contend is that it is more likely that Danes coming over here to settle did just what our own people do now—call their settlements after the places whence they came, than invent new names for localities out of their own heads. While, as to his argument that the place-names of Denmark and England are not likely to agree in spelling or pronunciation after 2000 years, all I can say is that, if he will go to the quay at Yarmouth when a Danish ship is unloading, it will puzzle him to tell the modern Dane on the deck from the modern Yarmouth beachman by looks only; and, if personal appearance has stood the test, surely pronunciation may have done the same. If Mr. Stevenson, before he talks about "sweeping historical deductions drawn by local historians," had taken a tithe of the trouble I have done to make a collection of the surnames of my county, and to compare them with the surnames in the Icelandic Landnambok, he would not have been so astonished as he seems to be at my statement that "the bulk of such of our Norfolk names as we can trace to have been borne at an early date are Danish."

I know, and am content to accept, the fate of anyone who ventures a very prosaic explanation of some of the marvellous puzzles in which philologists delight; and I know how delightful it is to wander away into the realms of fancy, and to say positively that such a word means such a thing in such a language, and, therefore, it cannot mean anything else in any other. Mr. Stevenson's argument is weak when he says that the "house" in "Limehouse" is a corruption of "oast," and that neither "house" nor "oast" could have yielded a modern Danish "ose." This is a dogmatic assertion pure and simple, without a fragment of argument. For Mr. Stevenson to seriously quote the Domesday spelling of a locality as a correction of the present name will only provoke a smile among those who know how the Norman scribes

mangled our place-names. He should remember how they put down "Nicol" for Lincoln.

WALTER RYE.

"AUCASSIN AND NICOLETTE."

Glasgow: April 2, 1888.

Referring to my letter in the ACADEMY for February 11 (p. 98) I find I was right in my conjecture that the tale of "Aucassin and Nicolette" had been done into English even before the first edition of Way's metrical renderings of some of Le Grand's versions of *Fabliaux* was published (1796). It occurs in the first of the three books which I mentioned (p. 99)—namely, "*Tales of the Twelfth and Thirteenth Centuries*," from the French of M. Le Grand (London, 1786), which was reprinted by Messrs. Reeves & Turner, in 1873, under the editorship of Mr. W. Carew Hazlitt, who has changed the title (not very happily, as I think) to "*The Feudal Period illustrated by a Series of Tales, Romantic and Humorous*," from which no one could guess that it is a collection of *fabliaux*.

W. A. CLOUSTON.

M'MURDO'S "HISTORY OF PORTUGAL."

Public Library, Boston, U.S.: March 14, 1888.

I beg to call your attention to a literary curiosity. This library has lately acquired what is called "*The History of Portugal, from the Commencement of the Monarchy to the reign of Alfonso III.*" (compiled from Portuguese histories). By Edward M'Murdo." For cataloguing purposes we investigated the sources, and found that the work in question was a literal translation of Herculano's *Historia de Portugal*. The make-up of the English version, the chapter divisions, &c., is in exact imitation of Herculano. The latter died in 1877 leaving his work unfinished, so that if the English editor wishes to carry the history down to later times, he will be compelled to seek some other authority, to whom it is hoped he will give the credit not awarded to Herculano.

A. P. C. GRIFFIN.

[The book has been published in this country by Messrs. Sampson Low, with the same title-page. The preface states that it is a translation of "*records available at Lisbon*," made by Miss Mariana Monteiro, "to whom all the credit of the present volume is due." The name of Herculano is nowhere mentioned.—Ed. ACADEMY.]

MOLTKE, "THE GREAT DANE."

London: April 2, 1888.

Misstatements are immortal, especially if originally started with malice aforethought—as Napoleon I. said, who was himself an expert in the matter. Years ago, Moltke, "the Dane," was thus set afloat. Ever since he has gone on swimmingly as such in France and in this country, in spite of refutations made a hundred times.

It is to be regretted that in last week's ACADEMY, in a review by Mr. William O'Connor Morris, the same mistake should by inadvertence have been again committed. Moltke is not "the great Dane." He is the son of German parents, his father having been, like himself, a German officer. He was born at Parchim, in Mecklenburg, where the Moltkes have been settled for hundreds of years. At Parchim, therefore, his monument stands. As a boy he passed a few years at Copenhagen. All the rest of his life has been spent in the German army. It was he who drew up the plan of the campaign for the Schleswig-Holstein war of 1863-64. Other Moltkes, I may add, took the German side upon that question long ago.

KARL BLIND.

BRADLEY'S "HISTORY OF THE GOTHs."

Benwell Lane, Newcastle-on-Tyne: April 4, 1888.

Allow me to withdraw the mark of interrogation appended by me to the following sentence in my quotation from Mr. Bradley's *History of the Goths* (ACADEMY, March 31):

"The Visigoths were provided with lands in Thrace and the Ostrogoths in Asia Minor [?]."

As a student of Claudian I ought not to have forgotten the passage in that author's invective "In Eutropium" (ii. 153-155), where Mars sends Bellona to stir up the Ostrogoths of Phrygia against the empire:

"Ostrogothis colitur mistique Gruthungis
Phryx ager. Hos parvas poterunt impellere
causae

In scelus: ad mores facilis natura revertit."

THOS. HODGKIN.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, April 9, 8 p.m. Society of Arts: Cantor Lecture, "Milk Supply and Butter and Cheese Making," I., by Mr. R. Bannister.

5 p.m. Victoria Institute: "Investigations in the Science of Language and Ethnography," by Dr. Leitner; "The Glacial Period on the East Coast of Canada," by Prof. Hoxeiman.

8 p.m. Aristotelian: "Heraclitus and his Philosophy," by Dr. Clair J. Greco.

TUESDAY, April 10, 8 p.m. Royal Institution: "Russia," I., by Dr. C. Waldstein.

8 p.m. Civil Engineers: Monthly Ballot for New Members; "Compressed Oil-Gas and its Applications," by Mr. A. Ayres.

8 p.m. Colonial Institute: "South Africa," by Sir Donald Currie.

8.30 p.m. Anthropological: "Some small highly-specialised Forms of Stone Implements, found in Asia, North Africa, and Europe," by Mr. J. Allen Brown; "The Early Ages of Metal in South-East Spain," by M.M. Henri and Louis Siret.

WEDNESDAY, April 11, 8 p.m. Society of Arts: "Recent Legislation concerning the Pollution of Air and Water," by Mr. Alfred Fletcher.

8 p.m. Geological: "The Lower Beds of the Upper Cretaceous Series in Lincolnshire and Yorkshire," by Mr. W. Hill; "The Cae Gwynn Cave, North Wales," by Dr. Henry Hicks, with an Appendix by Mr. C. E. De Rance.

8 p.m. Microscopical: "Faold's Test Plates," by Dr. R. H. Ward.

8 p.m. Shelley Society: "Julian and Maddalo," by Mr. H. S. Salt.

8 p.m. Gymnastical: "Welsh Folk-Medicine in the Middle Ages," by Mr. E. Sydney Hartland.

THURSDAY, April 12, 8 p.m. Royal Institution: "The Chemical Arts," I., by Prof. Dewar.

4 p.m. Archaeological Institute: "Some Churches in South Gothland," by the Rev. Sir Talbot H. B. Baker; "Mural Paintings in Churches," by Mr. J. L. André.

8 p.m. Mathematical: "Symmetric Functions," by Mr. R. Lachlan; Second Paper on "Simplexism," by Mr. J. C. Sharp; "Law of Attraction which might include both Gravitation and Cohesion," by Mr. G. S. Carr.

8 p.m. Telegraph Engineers: "Central Station Lighting—Transformers v. Accumulators," by Mr. R. S. Crompton.

8 p.m. Society for the Encouragement of the Fine Arts: Musical Lecture, by Mr. E. F. Jacques.

FRIDAY, April 13, 8 p.m. Society of Arts: "The Experiences of Twenty Years in conducting Agricultural Inquiries in Southern India," by Mr. W. R. Robinson.

8 p.m. New Shakespeare: "The Earls of Southampton and Pembroke and Shakespeare's Helpers and Friends," by Mr. H. Brown.

9 p.m. Royal Institution: "The Pygmy Races of Men," by Prof. Flower.

SATURDAY, April 14, 8 p.m. Royal Institution: "The Later Works of Wagner," with Vocal and Instrumental Illustrations, I., by Mr. C. Armbruster.

8 p.m. Physical: "The Measurement of the E.M.F. of Dynamos," by Prof. W. E. Ayrton and Prof. J. Perry; "The Variation of the Coefficients of Induction," by Mr. W. E. Sumner; "Some Experiments on Soap Bubbles," by Mr. C. V. Boys; "Electromotive Forces by Contact," by Mr. C. V. Burton.

8.45 p.m. Botanic: General Meeting.

SCIENCE.

The Story of the Creation: a Plain Account of Evolution. By Edward Clodd. (Longmans.)

MR. CLODD has undertaken a task of no ordinary difficulty in attempting to give a clear exposition of the doctrine of evolution as now understood within the compass of a small

octavo volume. The difficulty has been greatly—and at first sight one might feel disposed to add, needlessly—increased by not confining himself to the strictly Darwinian or biological section of the subject, but boldly embracing the whole field of inorganic, organic, and social evolution. Nevertheless, the result shows that too much has not been attempted, for calm judgment will allow that he has executed his task with marked success.

That he has shown wisdom in dealing with the new philosophy in its widest sense there can be little doubt. When Darwin broke down fixity of species—that secular barrier to all intellectual advancement—he, so to say, opened the floodgates of the fertilising waters that can never be closed again. It was soon felt, at first instinctively, then consciously, that with fixity of species must also go fixity both of the material and of the moral order. Then a great fear arose in many minds—otherwise fully disposed to receive the truth—that all landmarks were being uprooted, and that these teachings must end in universal chaos. They looked back, and saw nothing but crass materialism lurking in a theory which, without the intervention of an *ens supremum*, evolved organic out of inorganic stuff by the play of natural laws alone. They looked forward, and saw nothing but black pessimism in a system which proclaimed the essentially evanescent character of religious and ethical standards, which held that creeds had a beginning and must have an end, that everything is the inevitable outcome of predisposing causes, that all must change or perish. To far-seeing leaders of thought it thus became evident that biological evolution could not stand alone, or rather, that it would never be heartily accepted by the "respectable middle classes" until the dangers supposed to be inherent to it were shown to be phantoms. When men refused to discuss the question of organic development on its merits, and argued against it on moral grounds, it became necessary to supplement essays on physiological and palaeontological subjects with disquisitions on the properties of formless matter, on codes of ethics and social institutions. Hence Mr. Clodd naturally felt that "a plain account of evolution," if restricted to the animal and vegetable kingdoms, could serve no intelligible purpose; and that a work on the subject appealing to a popular audience must necessarily deal also with the material and moral aspects of the question.

By strict adherence to a simple and methodic arrangement of the subject matter, combined with a studied sobriety of language, he has contrived to treat in orderly succession a great variety of topics, ranging over the whole ground from the assumed primeval condition of matter to the highest phases of mental evolution. These multifarious contents are disposed under two broad divisions, which may be briefly described as the facts and their explanation. There is little direct controversy or polemical discussion, whereby much valuable space is saved, and all sense of aggressiveness avoided. This, in fact, has been rendered unnecessary by the very arrangement itself, which, in the second part, quietly substitutes the evolutionary for the orthodox explanation of the facts as set forth in the first part and as generally accepted by both sides. A logical position is thus taken,

by which the issues are narrowed down to the acceptance of the explanation given, or its rejection for the creative theory, there being confessedly no alternative.

One instance may be given of how the plan works. At p. 54 (first part), the successive forms are shown of the equidae, whose geological record is now all but complete, thanks to the discoveries of Cope and Marsh in the North American fossiliferous beds. Here we see the Eohippus with four toes and an atrophied fifth, followed in due order by the four-toed Orohippus of the Lower Eocene, and this by the three-toed Anchitherium of the Upper Eocene and the Hipparion of the Miocene, still with three toes, but two of them already useless, leading directly to the Pliocene and existing one-toed horse and its congeners. Thus the oldest type, no bigger than a fox, coincides with the oldest rocks, the intermediate with later, the modern with the more recent and present formations. These are the *facts*, the obvious *explanation* of which, on Darwinian principles, is given at p. 196 (second part). The creationist has thus the option of accepting this explanation or selecting some one link in the series as the created form or starting-point. If he selects Eohippus, the earliest, he can account for the living one-hoofed animal only by some such gradual modifications as, in fact, are here set forth, and thus becomes a sound evolutionist despite himself. If he selects the present horse or any middle link, then their ancestry remain *in nubibus*, for creation cannot work backwards. And if, lastly, he falls back on a succession of creations, he becomes, with Cuvier, an unorthodox theologian, for the Mosaic cosmogony knows only of one creation, not of a series repeated at intervals during the millions of years represented by the stratified rocks 3,000 feet thick, ranging from the Lower Eocene to the Pliocene formations. But the orthodox creationist will himself probably allow that between an unsound theologian and a sound Darwinian there can be little to choose from the dogmatic standpoint, though much from that of common-sense. All this is not stated *ipsisimis verbis*, but it will be read between the lines by the thoughtful student of these highly suggestive pages.

Probably with most people the greatest difficulty in the way of a frank acceptance of the new doctrines is their supposed irreligious, or, at all events, immoral, tendency. Hence, it is satisfactory to find the ethical and social sides of the subject treated, no doubt very briefly, but, one feels almost inclined to say, with consummate ability. Some points are discussed in quite admirable language, and this section should have the effect of convincing the unprejudiced reader that "Excelsior" is the watchword of evolution, if possible, even more decidedly in the psychological than in the purely physiological order. Huxley's statement that the gap between civilised and savage man is greater than that between the savage and the man-like apes, need not be taken *au pied de la lettre*; and our author certainly exaggerates in asserting that races such as the Fuegians are much nearer to the ape than to the European (p. 185), for our missionaries have of late years had some success in evangelising or, at least, educating the Kahgans—that is, the very

lowest branch of these islanders. But he does not exaggerate when he argues, in a general way, that past and present social, political, and religious institutions reveal, on the whole, such a decided upward tendency that a pessimistic evolutionist should be regarded as an anomaly. Pessimism may justly be the standpoint of those Calvinistic predestinarians who, in cold blood, condemn nine-tenths of mankind to everlasting fire and brimstone. But the philosopher who holds that the doctrine of after-punishment is blasphemy, and that a moral system based not on fear but on a highly developed sense of duty is the goal of the coming generations, must necessarily be an optimist.

"Morals," Mr. Clodd eloquently writes, "are relative, not absolute; there is no fixed standard of right and wrong by which the actions of all men throughout all time are measured. The moral code advances with the progress of the race; conscience is a growth; that which society in rude stages of culture approves, it condemns at later and more refined stages. . . . Among many savage peoples it is worse to marry a girl within the tribe than to murder one of another tribe. . . . What dead weight of care do morals, thus regarded, lift from the heart of man! What new energy is given to his efforts! Thought becomes fixed on the evolution of goodness instead of on the origin of evil; time is set free from useless speculation for profitable action; evils once deemed inherent in the nature of things, and therefore irremovable, are accounted for and shown to be within our power to extirpate" (p. 220).

And again:

"Especially is science a preacher of righteousness in making clear the indissoluble unity between all life—past, present, and to come. We are only on the threshold of knowledge as to the vast significance of the doctrine of heredity, but we know enough to deepen our sense of debt to the past and of duty to the future. We are what our forefathers made us, plus the action of circumstances on ourselves; and, in like manner, our children inherit the good and evil, both of body and mind, that is in us. Upon us, therefore, rests the duty of the cultivation of the best and of the suppression of the worst, so that the future of the race suffer not at our hands" (p. 223).

This is worth a whole volume of Hegelian subjectivities. It knocks the ground from under the feet of all the metaphysical rhapsodists, and shows how problems connected with the existence of free will, good and evil, and sociology in general must henceforth be studied, like biological growth itself, not from the *a priori* standpoint of *das Ich*, but from that of observation, *domina scientiarum omnium et finis totius speculationis*, as old Friar Bacon clearly saw six hundred years ago.

And now the pruning knife, which, indeed, might here be well dispensed with, but that the book is likely to run through many editions, and be widely consulted by readers to whom larger works are inaccessible, but who yet seek an accurate presentment of the grandest generalisation of modern science. Much stress is laid on a distinction drawn between two forms of power—*force* and *energy*—apparently corresponding respectively to the somewhat old-fashioned expressions *centripetal* and *centrifugal* force. But the distinction will scarcely commend itself to such physicists, for instance, as Saint-Venant

and Tait, who, on different grounds, seem disposed to suppress the term *force* altogether. Anyhow the argument does not appear to be much furthered by the discussion of these somewhat metaphysical points, about which, perhaps, the best thing said is that "perchance these three—matter, force, and energy—are one" (p. 231). On consideration the author may possibly see his way to abandon the whole of this doctrine, and simply take his stand on the safer ground that all change is due to motion, as already finely expressed by Lucretius:

"Sic ipsa in rebus item jam materialia
Intervalla, vias, connexus, pondera, plagas
Concursus, motus, ordo, positura, figurae
Cum permutantur, mutari res quoque debent."
(II. 1020.)

At p. 145 Mr. Clodd writes: "It is agreed that there was an 'azoic' or lifeless period in the history of the earth—therefore that life had a beginning." This is stated too dogmatically, and certainly would not be admitted by Caporali, for instance, whose voice has, for the last three or four years, been "crying in the wilderness," or at least in *La Nuova Scienza*, enforcing the doctrine with singular vigour and learning that life is eternal, that is, inherent in matter from the atom upwards. The theory is pregnant with stupendous consequences; and, although it may not be accepted right off, it has already found so many adherents that it is no longer correct to say all are "agreed" on a beginning of life.

Several smaller details seem to need revision or modification, such as the statements that charcoal and the diamond are both pure (equally pure?) carbon (p. 83); that water was originally condensed on the crust of the earth, "probably at the temperature of a dull red heat" (p. 146); that hares and rabbits have interbred in France (p. 204); that there are tribes of such imperfect speech "that they cannot understand each other in the dark" (p. 215); that the earth "is probably solid throughout" (p. 26); that the earliest known mammal was probably marsupial, Marsh having discovered placentals quite as old (p. 44); that plant life (algae) has existed on the earth for "millions of centuries" (p. 78); that the age of plants may be calculated by their concentric rings of growth (p. 83); that the common ringed snake may become a viper in confinement (p. 166); that the remains of a saurian have been found in North America computed to have been "more than one hundred feet in length, and above thirty feet in height" (p. 45). Is this Cope's *Atlantosaurus*, and, if so, what is the authority for these dimensions?

The book is beautifully printed, furnished with an index, a profusion of excellent illustrations, and some useful tables, showing the sequence of geological epochs and life-forms. But the table of human races (p. 132) needs considerable revision. A. H. KEANE.

CURRENT SCIENTIFIC LITERATURE.

Living Lights; a Popular Account of Phosphorescent Animals and Vegetables. By C. F. Holder. (Sampson Low.) It cannot be said that Mr. Holder throws much light on his subject. Phosphorescence, he tells us, is probably electrical; and there are in many cases of animal luminosity obvious reasons for the endowment. In some cases it tempts creatures

closer to their devourer, as in many deep-sea fishes; or it may guide winged insects to wingless mates, as the common glowworm. Such a *a priori* reasoning, however, is not very trustworthy. Just as the reader hopes to find more definite information, Mr. Holder says "It must be evident that a practical application of the general features of phosphorescence would be extremely valuable"; and, after hinting at possible writing fluids and paints in the future, devotes the rest of the chapter to an account of Balmain's and other luminous paints. As he only professes to popularise phosphorescence, causes of all kinds may be left out of sight; and we must be thankful that the enumeration of phosphorescent creatures and substances here is carefully performed, that it is illustrated by some very striking pictures, and that it may well be used to show a pupil something of the marvels of nature. Each department of the animated world is passed under review. Many of the protozoa, medusae, molluscs, radiata, and tuniculata furnish examples of phosphorescence. An excellent account of the pyrosoma, whose radiance so often cheers the sailor on the Atlantic, is given. The fishes which live at great depths, such as the Stomiatidae, Stomias-boae, and Chauliodi, are treated with much care. Thence Mr. Holden advances to luminous birds, monkeys, and human beings, and so to flowers and figures, which at certain times glow with a flickering light, though it possesses no heat. It is a curious survey, and may prompt enquirers to investigate whether the luminosity in all these cases is due to electricity, or to various causes, or whether it proceeds from a more subtle power as yet wholly unknown. The author tells us that this year the French Academy of Science offers a prize of three thousand francs for the best essay upon animal phosphorescence. A bibliography here given of books on phosphorescence, which we have tested with success, is an important help for the student. *Living Lights* is printed in good type and on stout paper, and is just the book to give as a present to any young naturalist of an enquiring turn of mind.

Tenants of an Old Farm; Leaves from the Note-Book of a Naturalist. By H. C. McCook. (Hodder & Stoughton.) Dr. McCook is well known as a careful student of American ants and spiders, and this work was originally published in Philadelphia for Americans. He now comes before an English audience to give them the latest results of scientific research on these insects, and on moths, crickets, and such like creatures, which are naturally found in a New England homestead. Gracefully has Sir J. Lubbock, the great English patron of ants, brought his friend before us in the introduction which he has contributed to this book, while an abundance of natural history drawings in it is diversified by some clever comical illustrations of insects, the work of Mr. D. Beard. We cannot but deplore the unwise counsels which led Dr. McCook to throw his researches into a colloquial form, and bring in the native humour of the servants and "hands" on the farm among scientific accounts of the insects of which he treats. He hesitated long before seasoning his facts with fiction, and Sir J. Lubbock appears to deprecate it, in spite of the wide popularity which the work has attained on the other side of the Atlantic. The comic element distracts the reader, while the introduction of amusing woodcuts bestowing human traits upon spiders and caterpillars tends to confuse him. We pay a just tribute of praise to these comic cuts, but they are sadly incongruous where they are. Amusing too as is much of the conversation of the "helps," it is out of place in a scientific book. The stories which the author tells of the humble creatures which are so dear to him are of great interest.

His whole account of the familiar "katydid" is exhaustive and admirable. The economy of the clothes-moths pests on this side of the Atlantic as well as on the other is also related excellently. Some of the Americanisms might have been excised with advantage. We do not ordinarily speak of "exodes," and "scalpage"; or use "wastage" for "waste," and "snare" for "a spider's web." Here and there the thoughts as well as the style are affected, while the village schoolmistress is a great deal more philosophical than her English counterpart. But the book does ample justice to the insects of common life, and will teach many, it may be hoped, to use their eyes and brains to advantage on the common sights and sounds of country life in England.

THE PUBLICATION OF TIBETAN LITERATURE.

We quote from the annual address to the Asiatic Society of Bengal, delivered by the President, Mr. E. T. Atkinson, on February 1, the following account of the progress made in the publication of Tibetan literature, under the auspices of the society:—

"Last year, I stated that steps had been taken to furnish aids to those who might be disposed to undertake the study of Tibetan; and I now have the very great pleasure of placing on the table the first fasciculus of the first Tibetan manuscript printed in India, due to the energy and industry of our member, Bābu Pratāpa Chandra Ghoshā. I trust that it may be the pioneer of a long series of Tibetan issues from our *Bibliotheca*, opening up a new field of great philological and literary interest which has too long been left neglected. The fasciculus before you contains the commencement of the '*Shea-rab-kyi-pha-rol. tu-phyin-pa*' (by contraction '*She-phyin*' and pronounced '*Shor-ahhin*'), which is itself a translation made in the ninth century, into Tibetan, from the Sanskrit of the Buddhist work entitled *Prajñā-pāramitā*, forming, according to Osoma de Kőrös, the second division of the sacred books of Tibet. There are, however, twenty-one different works under this head, and the principal one amongst them is the *Shor-ahhin* of 100,000 *s'lokas*. The first five of the series of twenty-one works above mentioned are abridgements of more or less authority of the *Shor-ahhin* itself, the second being the 20,000 *s'lokas* abridgement, the third that of 18,000 *s'lokas*, the fourth that of 10,000, and the fifth that of 8,000, the Sanskrit text of which under the name *Akṣatāhaarikā Prajñāpāramitā* is now being brought out for us in the *Bibliotheca* by Dr. Rājendralāla Mitra. This last is taken from Nepālese manuscripts, and three fasciculi appeared in 1897. It is also the first work of its character printed in India, nor has any edition or translation of it ever been made or attempted, to the best of my knowledge, in any European country. The society has undertaken the publication of the 100,000 *s'lokas* text; and, as already stated, since there is only the one text available, the efforts of the editor will be devoted to faithfully reproducing the text as it stands, leaving it to others hereafter with better materials to make such corrections as will doubtless be found necessary, for there are evident traces of mistakes made by the copyist. It may be possible also to omit many of the tedious repetitions with which the manuscript abounds.

"The entire work is in prose, and forms twelve volumes, comprising 303 divisions (*dam-po*), each containing 300 *s'lokas* or rather their equivalent in prose, and occupying each about twenty-one leaves of the manuscript. In preparing the work for the press, Bābu P. C. Ghoshā has separated the several words by spacing them out, and has also arranged the sentences in paragraphs for more easy reference, and, only so far, has not followed the manuscript which gives neither divisions nor paragraphs. The numbering of the pages of the manuscript is also reproduced in the body of the text now printed. The *Shor-ahhin* is devoted to Buddhist philosophy, theoretical and practical, and, as stated by Osoma de Kőrös, contains the psychological, logical, and metaphysical terminology of the Buddhist faith, without entering into or reconciling conflicting

views on any particular subject. There are 108 subjects or *dharmas*, regarding which, if any predicate be added to them, affirmative or negative judgments may be formed. All these contain the substance of the teachings of the great teacher himself delivered on the Grīdhraakūṭa Hill at Rājagriha in Magadha. To the student of the earlier systems of philosophy and religion in India the *Shor-ahhin* should be of much interest, for a Buddhist philosophical work is very uncommon in India, and most of the information that we possess on the subject is at second-hand and comes through those who hated the very name of Buddhism.

"In continuation of the same project, our Associate Member, Bābu Sarat Chandra Dās, is bringing out for the society a hitherto unpublished work by the poet Kāshemendra, entitled *Avadāna Kalpalatā*, of which we have the complete Sanskrit with an interlinear Tibetan version in a manuscript recently acquired from Tibet. It is intended to publish the Sanskrit and Tibetan texts in parallel columns, and the first fasciculus is in the press. The manuscript is in verse and was translated into Tibetan by Lochchhava Shōnton Dorje and the Indian pandit Lakshmīkara at the *dhāra* of Gedron Shīdē in Mañyul under the orders of Ponchhen Shākya Sempa, ruler of Tibet in A.D. 1279. The blocks from which the print used was taken were engraved by the direction of the Dalai Lama Nāgwañ Losaṅ in A.D. 1645. The work consists of 108 *pāṭalas*, of which 107 were written by Kāshemendra and one by his son Somendra. The copies hitherto procured and now deposited in our library and that of the Cambridge University are imperfect, containing only the second part of the work, and a fragment of the first, so that the publication of this Sanskrit and Tibetan version of the entire poem will restore to India a portion of a valuable Buddhist work that has been lost to it for some eight hundred years. Kāshemendra is said to have been the court poet of Ananta, Rāja of Kashmir, and undertook the work at the instance of his Buddhist friend Nakka. It is a veritable store-house of the legends as to Buddha's life and acts according to the Mahāyāna School of Northern Buddhism, and is written in a simple, elegant style, quite free from the turgid verbosity and tedious repetition usually characteristic of Buddhist Sanskrit works. The arrangement of the original and Tibetan version in parallel columns should give an impetus to the study of classical Tibetan and afford an accurate basis for further research.

"In my address, last year, it was brought to your notice that Bābu Sarat Chandra Dās was also engaged upon a vocabulary of Tibetan Buddhist terms. Since then he has procured several manuscript dictionaries in Sanskrit-Tibetan and Tibetan-Sanskrit; and it is now intended to enlarge the scope of the proposed work and give a Tibetan-Sanskrit-English dictionary, with an appendix containing the Sanskrit-English portion with a reference to the Tibetan equivalent. This work, when completed, should serve as a key to the great collections of manuscripts in St. Petersburg, Paris, and London, which written, as they are, in classical Tibetan require more aid to understand them than is afforded by the dictionaries of Osoma de Kőrös and Jäschke. It is not unreasonable to expect from the works now in progress under your auspices a flood of light on the history of northern Buddhism, regarding which our knowledge at present is so mixed with conjecture. Learned Indian Buddhist pandits travelled to Tibet and communicated to the Lochchhavas there the received interpretation of the phrases and terms used, which were subsequently embodied in the dictionaries prepared in Tibet and found in the *Betan-kyur*, so that we, perhaps, could not reasonably expect a more authoritative interpretation than that afforded by these manuscripts. It should be a subject of congratulation to this society that, as it was the first in the field in bringing to the notice of European scholars the Sanskrit literature of India, it is again the first to open up this new source of knowledge, clearing away yet another cloud from the mists overhanging the history of the dark middle ages of India."

SCIENCE NOTES.

MESSRS. WILLIAM BLACKWOOD & SONS announce an English translation by Mr. W. Rae Macdonald, of Napier's *Mirifici Logarithmorum Canonis Constructio* (1619). This is not the treatise in which the discovery of logarithms was first announced; that is generally known as the *Descriptio* (1614), and was translated into English at the time. But it contains the account of the manner in which the canon is constructed, and it possesses the additional interest of being the earliest book in which the decimal point is systematically employed. The present translation will be in the same format as the original, with facsimiles of the title page, &c.

PHILOLOGY NOTES.

THE forthcoming number of the *Babylonian and Oriental Record* (David Nutt) will contain "The Old Babylonian Characters and their Chinese Derivates," by Prof. T. de Lacouperie; "The Nethinim," by Mr. Joseph Jacobs. A future number will contain: "The Real Chronology and True History of the Babylonian Dynasties," by Prof. J. Oppert; "A Contract of Apprenticeship from Sippara," by Prof. F. Révillout; "Ethnological Photographs from Egypt," by Mr. W. M. Flinders Petrie.

DR. FRANZ BEYER'S *Lauteytem des Neuf-
französischen*, noticed last year in the ACADEMY, has been quickly followed by his *Französische Phonetik für Lehrer und Studierende* (Cöthen), with which he completes his labours in the difficult field of French phonetics. The former work was almost exclusively analytical; the present is mainly synthetical, and therefore somewhat more interesting to the general reader. But both are alike indispensable to a thorough study of the subject, of which Dr. Beyer here shows himself to be a consummate master. The value of the "Phonetik," both for scientific and practical purposes, can scarcely be overrated. It is certainly not the first attempt to elucidate the many obscure problems connected with the French phonetic system, having been preceded by the tentative studies of such writers as Passy, Horne, Trautmann, and Viator. But it may justly claim to be the first comprehensive treatise on French pronunciation in the concrete sense. The sections dealing with such matters as articulation, quantity, stress, tone, assimilation, and timbre, will be found peculiarly interesting and instructive. The clear and clean character of French vocalisation is well contrasted with our slovenly English habit of slurring over the vowels in unaccented or untuned syllables.

MEETINGS OF SOCIETIES.

ANTHROPOLOGICAL INSTITUTE.—(Tuesday, March 13.) F. GALTON, Esq., president, in the chair.—Mr. G. Bertin read a paper on "The Races of the Babylonian Empire," illustrated by many diagrams. He gave first a description of the various types represented on the monuments of Babylonia and Assyria. In Babylonia there are four principal types: (1) the old Akkadian, (2) the Babylonian proper, (3) that represented by the portrait of Marduknadinakhe, and (4) a low one. In Assyria, also, by the side of the well-known Ninevite type, this same low one is found. In Syria four or five types are represented: (1) the so-called Jewish, (2) the Hittite, (3) the Phœnician, and (4) various specimens of lower races, some even showing negroid features. In Elam the greater part of the population was composed of the race of the lowest type, but Akkadian and Babylonian influences are also found. After noticing what is said in the classical authors and in the Bible about these populations, Mr. Bertin remarked that the history of Western Asia, recovered by Assyriological studies, gives us the origin of the various types,

and shows how they sprung out of four or five primitive races: (1) the Akkadian or Guric; (2) the Sinitic, represented by the ancient Arabs; (3) the Nairic, represented by the Armenians; and (4) a low race, which he calls "the ground race." Their mixture can easily be traced historically, and the formation of the new types explained. The most curious results of this investigation are the Armenian origin of the chief features of the so-called Jewish type, and the fact clearly demonstrated that the Semitic family is purely philological and not ethnical. The Ninevites and the Babylonians, who spoke the same language, exhibit two distinct ethnical types, having even little likeness.

ROYAL ASIATIC.—(Monday, March 19.)

COL. YULE in the chair.—Mr. E. Delmar Morgan read a paper on "The Customs of the Ossetes and the Light they throw on the Evolution of Law." The Ossetes are a people of Aryan race, inhabiting the central Caucasus, including the Darfel Pass, Mount Kazbek, with its glacier, and the defiles of the Terek and its tributaries. The Ossetes number more than one million souls, and are therefore the most numerous and geographically the most important of the tribes of the Caucasus. They are a fair people, with blue eyes and light hair, and of medium height. They are addicted to brigandage, but respect the laws of hospitality. Recent investigations have proved their Iranian origin. They are, in fact, identical with the Alani of mediæval travellers, the Asai or Yassi of Russian chronicles; and they were in ancient times distributed over the plains north of the Caucasus, between the Volga and the sea of Azof. The main fact of their history that has come down to us is their conversion to Christianity by St. Neiva, the apostle to the Georgians in the fourth century. But this only refers to the Ossetes south of the main range; those north of the Caucasus did not become Christians till several centuries later. The Northern Ossetes, known as Digorians and Taghaurians, came under the influence of their powerful neighbour Kabarda, from whom they received feudalism, and eventually the faith of Islam. When Russia annexed their territory in the early years of the present century, village communities had almost ceased to exist, and the peasantry were under complete subjection to the landowners. Russia took every measure in her power to destroy the influence of the privileged class, dividing the country into magistracies, and instituting local courts and officials with powers of summary jurisdiction. By these measures blood reprisals and other barbarous customs were stopped and a great improvement was effected. The Ossetes settlements, called Kan, are founded on the agnatic tie, and comprise about 40 members in each. The domestic arrangements and customs of the people were then described, with special reference to their commemorative ceremonies in honour of departed relations.

FINE ART.

COLLECTORS OF PICTURES, CHINA, &c., can insure against Fire in the best offices at reduced rates and upon a special system which provides a guarantee (which an ordinary policy does not) of full payment in the event of claims, by applying to the FINE ART INSURERS PROTECTION SOCIETY, 43, Botolph-lane, Eastcheap, E.C.

THE ART COLLECTIONS IN THE
GOETHE HOUSE AT WEIMAR.

II.

(Continued from the ACADEMY of January 14.)

WE find our opinions confirmed when we inspect the objects of art in the adjoining room. Not only do we see here the collection of Majolica completed by another series, but also that the glass case in the centre of this room contains bronze figures worthy of notice. On the one hand, we have a continuation of the select collection before mentioned in the Saal—statuettes of Greek and Roman gods and heroes, which are conspicuous for their fineness of form and the beauty of the old ware. Even pieces of larger dimensions are not wanting, either representations on a small scale of celebrated antiques or copies of the Renaissance period. We perceive the Medici

Venus beside the so-called "Accroupie," and an antique flying Victory beside a miniature Moses of Michel Angelo. A small Japanese Buddha of good workmanship surprises us among rough Roman images and amulets, and shows that even Oriental art was valued by Goethe as forming a supplement to universal art.

The objects placed in the glass cases at the side are of special interest. They are personal souvenirs of the poet: miniature paintings, silhouettes, album leaves; his own sketches and those of artist friends—among these a pen-and-ink sketch by Tischbein, which gives us Goethe *en negligé* in his Roman studio, trying in vain to arrange his drawing table, a pillow in his way, and bending forward he loses his slipper. The scene is by no means artistic, but it is depicted with much humour in a few strokes. This sketch gives us a sample of the rich collection of authentic drawings which will shortly appear in a new and complete edition of the *Italian Journey*.

As it is not my intention to encroach upon the rights of the editor of the Goethe Archives, the following notes are therefore given only as a general survey. The new illustrations will, in the first place, be composed principally of the artistic attempts which Goethe made during his Italian sojourn—studies from nature and art—to which he refers at different times. Secondly, there will be figure and landscape drawings, designed by Tischbein and Kniep, which likewise owe their origin to the instigation of the poet. The portfolios in which Goethe collected these souvenirs of his Italian journey, dedicated to him by artists, are not yet accessible to the public. One of the reasons is that their condition is such that the continual touching of fragile sketches, pasted on bad paper, would soon destroy them; another is because these manifold subjects are soon to be published with an authentic explanation. To me, to whom the favour was shown of seeing these portfolios, it remains only to remark that this sample of Tischbein gives a perfect idea of what the other remaining Italian sketches are; while the Kniep landscapes do not in any way differ in technique from the famous pictures to be found in the Decken Zimmer. These are, properly speaking, not paintings, but large coloured drawings, in which the local tone takes a subordinate part. On the whole, a disappointment would be experienced by those who expect from this collection of sketches an artistic impression, or a contribution to the history of German art in the latter part of the last century. The companions who assisted Goethe in his artistic performances were of a very simple nature; and it is touching, on the one hand, to observe the affection with which he clings to these Roman friends, as, on the other, it seems unnatural that he, who possessed such deep knowledge of art, should give so high praise to landscapes such as those of Kniep. These portfolios do not, therefore, really belong to the art collection; yet it is evident that the personal value attached to these sketches is great. In the above-mentioned hastily designed sketch of Tischbein we make an accurate acquaintance with Goethe's room in Rome. Here, with a few strokes, the antiques are brought before us: the Juno Ludovici, a Venus bust, the so often mentioned cast of a foot which the poet tried to draw—and all these objects in a true artist's home, placed on a board resting on a pile of books, Winckelmann's works, &c.—the Roman lamp, beside it a vase on a little table, and the well-known Gatto, who paid, as it is said, such devotion to the Jupiter bust of Otricoli. In short, we gain an insight, through this and other similar sketches in Tischbein's portfolio, into Goethe's Roman life. The personal interest increases, while the aesthetic

expectations are seldom fulfilled. But how often may these insignificant strokes of the pen have been the germ of some of Goethe's thoughts worked out at a later period, and the source of inspirations which flowed from the stimulating power of this artistic circle? With regard to Goethe's own sketches, we are likewise unable to form here a complete idea, although, on the whole, a sufficient impression is given. Numbers of them are scattered over the walls of the above-mentioned room. We must, of course, make a difference between the extempores which passing objects offered and the premeditated artistic compositions—between the immature sketches of youth and those of later years. If Goethe, for instance, attaches value to his portrait sketches, which immortalise the personal remembrance of his beloved ones and of his friends, he does not, for all that, consider them works of art. Or, is this intimated, perhaps, by the pencil drawings with the likeness of his sister Cornelia, and the water-colour with the head of Wieland? The point of view, of course, changes, when we consider the numerous landscapes done at different periods of his life. During his student days, while under the tuition of the painter Oeser, he showed a preference for this branch of drawing. The so-called Garden Room in Goethe's House has been lately enriched with two etchings by the young Goethe, the technique of which shows, so far as the representation of nature is concerned, a close resemblance to the affected style of his master. Then follow drawings done by the poet during his first years at Weimar. In the glass case we see one of these sketches representing the Castle of Dornburg, near Jena, which was intended for Frau von Stein. Although the landscape is somewhat clumsy, it is characterised by a simplicity and clearness in the working out which shows how much truer a comprehension of nature the poet had now attained. Two epochs are noteworthy as having influenced Goethe in his art: the one when he was in Italy and made the water-colour drawings and the view of Rome which hang in the Decken Zimmer; the other, when, tired of studies in the theory of colour, he returned to the subject in connexion with nature, and designed the series of water-colour landscapes which are to be seen here collected into one volume. At Rome he was doubting whether he might not, after all, be a born painter rather than a poet. More than thirty years later, when he put together his book of sketches at Weimar, he acknowledged with resignation that he "treated drawing as other people do the smoking of tobacco." But was Goethe right in this low estimate of his artistic powers? With regard to his Roman studies, most certainly not. The drawings in the Decken Zimmer, with a view of the banks of the Tiber opposite to the Ripa Grande, a glimpse of Rome with the Vatican and the back of St. Peter's, not only do not fall short of the works of the artists who were his advisers, but even exceed them in delicacy of feeling. Of course, we here refer only to the pen-and-ink sketches, which were painted over, and the light and shade slightly indicated; for another hand, as Goethe himself confesses, often put the finishing touches, as may be seen unmistakably in a remarkably good view of the Capitol. Nevertheless, one feels when looking upon these works that they are from the hand of one who had as thorough a knowledge of the practical side of the painter's art as any of his own circle, and that he completely abandoned himself to realistic impressions—a quality of which his later sketch-book in the year 1810 cannot boast. There we not only find that the colours are often symbolical, but also that the landscape is drawn from memory—nay, even sometimes from descriptions. What we prin-

cipally lay stress on is that artistic criticism is not the standard by which these sketches should be judged. Goethe was impelled to his artistic activity by inward necessity, just as his occupation with natural history induced him to write his well-known treatises on zoological and botanical subjects. And, as we admit that his knowledge in the history of art was not superficial, but according to the systematic choice of his collections very special and far beyond his time, so his drawings and paintings are closely connected with his theoretical acquaintance with art. They are also the source from which spring preferences for particular epochs and works of art. Goethe is here stimulated by the circumstances surrounding him; for they are Roman views which his sketches show us—Rome and the classical sculptures there, as well as the Raphael frescoes, which remained for him the standard for all his subsequent criticism on art. In order to better understand the antique, he gave himself the trouble to make careful drawings from casts. He ordered, on the other hand, copies from the old masters, and especially Raphael; and even, at one time, while expressing his opinion on this subject, got into controversy with the representatives of modern art. That, at least, is the impression we receive when, returning to the entrance of the museum, we turn to the left of the so-called Saal and enter the Juno Room. Omitting the interesting drawings and engravings from the German school, it is mostly Roman remembrances that decorate the chief room in Goethe's House—the cast of the "Juno Ludovisi" near the window, a good copy of the so-called "Aldobrandini Marriage" which hangs over the sofa on the left side of the room; water-colours by his artist friend, H. Meyer, with scenes from Raphael's Loggia ("Joseph before Pharaoh" and "Lot's Banishment"), at the entrance of the room. Who would not be reminded, while looking at the first antique painting of Goethe's dissertation on Polygnotus and the Philostratic paintings, of his practical endeavours as director of the Weimar drawing school to make the style and works of the antique the foundation for modern art. After this, Meyer's questionable copies from Raphael's pictures are grievously disappointing; but they were sufficient for Goethe as personal souvenirs, and this characteristic of the great connoisseur and collector is still more marked when we come to look at the objects of art in the Urbino Room. This, as well as the Decken Room, had already been chosen in Goethe's time to hold his art collections. Here stood, and still stands, his cabinet, which contains his engravings. Here hangs the big portrait of a Duke of Urbino (by a later Italian "Manierist," who seems to have learned something of the Venetian school). Here are small oil paintings, none of them remarkable, but interesting from their classification, consisting of specimens of Giotto, Correggio, Domenichino, Baroccio, Guercino, the old German school, and some of Dietrich, Hackert, Klenze, and the inevitable Tischbein.

The collection of plaster casts shows Goethe's preference for the antique in the strongest light. When, in 1819, it was proposed to raise a statue to Blücher, Schadow (the Berlin sculptor to whom the commission was given) consented, out of complaisance to Goethe, to represent the field marshal in classical costume, as is shown here in a precious little wax model. A glance at the Rauch statue of Blücher at Berlin proves how much more reasonable this sculptor was in representing him in the garb of his time, and how false Goethe's conception appears, in which the historical Blücher is shown as Hercules, a lion skin on his shoulders and his cavalry sword in his hand. It was against Schadow's wish that he adopted Goethe's

views, and there arose later on a controversy between his narrow opinions and the free views of modern artists. Yet it is interesting to see the question decided by Goethe's expressed wishes with regard to his own portrait, as exemplified by the many designs for a monument made before his death. In Rauch's design of 1824, we see Goethe wrapt in a toga, leaning against an altar; again in the same costume, sitting in an antique chair, but without a tunic, so that the classical cloak leaves the upper part of the body uncovered. A monument of the poet, designed by Bettina von Arnim, is very similar, except that a certain air of inspiration takes the place of classical calm. Then we find a model of Rauch's in the year 1828, which brings before us the historical Goethe in a frock coat, the authentic costume of later years. Thus, the poet seems to have come to the conclusion, that a living man (to use his own phrase) lives on in our memory as he appeared to us last; in other words, that the statues which please us most ought to be those which are the truest to nature.

I must refrain from describing the rich number of paintings and busts in the Goethe House, which show us the poet at different periods of his life by different artists—a valuable series of original works, beginning with Melchior's handsome medallion portrait of the young Goethe (1775), and ending with the miniature of the aged Goethe on the Sebbers cup (1826). The collection of casts in the so-called Bust Room can only be shortly summed up. Enough that here we find it confirmed that Goethe understood how to keep pace with the progress of art; and that his interest for Greek originals increased, in contrast to his early admiration for creations of Graeco-Roman art. We see the beautiful frieze from the Lysikrates monument at Athens, the "Apotheosis of Homer," and the beautiful real Greek Ilioneus in the middle of the room. Moreover, his opinions with regard to contemporary art become freer. By the side of the ideal works (Achilleus and Penthesilea) by the Berlin sculptor Tieck (1826), we are astonished to see the strictly realistic portrait medallions of the Frenchman David d'Angers; and the same surprise awaits us when we enter the so-called Garden-Room. Here hang on the narrow side of the walls casts of the reliefs from the pedestal of Blücher's monument at Berlin, worked out in direct opposition to Goethe's conception. This proves more than anything how Goethe by degrees took part in the development of higher views of art, always rising to the furthest point attainable, and maintaining himself there. The very fact of his change of views and his ready acceptance of new ideas in art prove, what we said before, that Goethe was the first modern art historian.

L. VON SCHEFFLER.

BABYLONIAN TABLETS FROM UPPER EGYPT.

Brindley: March 30, 1893.

THANKS to the kindness of M. Bouriant, director of the French Archaeological School at Cairo, I can now give further details concerning the Babylonian tablets which, as I mentioned in a previous letter, have been found in large quantities at or near Tel-el-Amarna, in Upper Egypt. Before I left Cairo, M. Bouriant placed in my hands more than a dozen which belonged to himself, those purchased for the Boulak Museum having been locked up by the director, M. Grébaud, in his private house, and so rendered inaccessible to scholars. Most of the tablets contain copies of despatches sent to the Babylonian king by his officers in Upper Egypt; and as one of them

speaks of "the conquest of Amasis" (*kasad Amasi*), while another seems to mention the name of Apries, the king in question must have been Nebuchadnezzar. The conquest of Egypt by Nebuchadnezzar, so long doubted, is now therefore become a fact of history. One of the tablets is addressed to "the king of Egypt," the name of Egypt being written *Miteri*, as in the annals of Nebuchadnezzar, and not *Muteri*, as in the inscriptions of Assyria. In others the Babylonian monarch is called "the Sun-god," like the native Pharaohs of Egypt. Mention is also made of "the country of Nuqu," or Necho.

The most curious of the tablets I have copied is a large one of which M. Bouriant possesses two fragments. It contains an inventory of the government property of which the Babylonian satrap had charge. The objects of stone alone amounted to 6840, and included two colossi and a "kukupu," the name of which is *namgar*. Now that Babylonian tablets of clay have been discovered, there seems no reason why papyri inscribed with cuneiform writing should not also be found.

The ill-advised action of M. Grébaut, however, in enforcing the strict letter of the Turkish law of antiquities against the *fellahin* has placed a serious obstacle in the way of any such discovery becoming known for the purposes of science. From the nature of things, it is the *fellahin* to whom the discovery of antiquities in Egypt is in the first instance generally due, and the preservation of *antikas* depends upon the belief of the *fellahin* that they can be turned into money. When, on the contrary, the *fellah* finds that the antiquities he has discovered are taken from him by a government official, without compensation, and that he himself is liable to fine and imprisonment, he will naturally conceal the fact of the discovery, and either destroy altogether what he has found, or break it up into small fragments, which can be sold easily to the uninitiated tourist.

The bar placed upon the free sale of antiquities by the *fellahin* is almost as injurious as the prohibition to discover them. Numberless relics of priceless value to science have been lost irretrievably because the *fellahin* did not know that they had a marketable value. Only the other day I came across a *sebak*-digger at Memphis who had in his hand a fragment of a demotic papyrus. His surprise was great when I offered him half a piastre for the fragment; and he immediately brought me another fragment containing cursive Greek, regretting that in his ignorance he had already destroyed many others like it. Henceforward he and his fellow-workers will preserve the papyri they find in the mounds of Memphis, where it is evident an ancient library has been lighted upon. The first duty of the Boulak Museum is to protect the existing monuments of Upper Egypt, which I am told have already suffered considerably since Prof. Maspero's departure, rather than attempt the impossible task of preventing the *fellahin* from discovering and the tourist from purchasing the archaeological treasures that lie beneath the soil.

A. H. SAYCE.

EGYPT EXPLORATION FUND.

MR. F. LLEWELLYN GRIFFITH, acting for the Egypt Exploration Fund, has recently visited the rock-cut tombs of Siût (Lycopolis), in Upper Egypt, and has made a series of careful transcripts of all the extant inscriptions, not only correcting all which have been previously published, but copying many hitherto unrecorded. Mr. Griffith has determined the date of the great tomb known as Stabl-Antar, having found that it was excavated in the reign of Useresen I., XIIth dynasty. He has also discovered that the upper ranges of tombs in the same cliff belong to the hitherto unrepresented dynasties of Heracleopolis (the IXth and Xth

dynasties of Manetho). These are important facts acquired for science. The inscriptions will probably be published by the Egypt Exploration Fund.

M. Naville, accompanied, as last year, by Count d'Hulst, recommenced the excavations of the great Temple of Bubastis on February 25, and was joined the same day by Mr. N. Llewellyn Griffith, who arrived from Siût. During the six weeks which have elapsed since that date, the work has made rapid progress. Some two-thirds, or more, of the temple area are now laid bare, and the discoveries of inscriptions, statues, and bas-relief sculptures are of the highest historical interest. That Bubastis was a Hyksos capital is what no Egyptologist or historian could have anticipated; but the recent discovery of two black granite statues of the unique Hyksos type, the lower part of a seated statue of a Hyksos king with the hitherto unknown name of Ra-Ian, or Ian-Ra, and a fine architrave carved with the cartouches of Apepi, establishes this important fact beyond reach of doubt. Scarcely less important are two statues of a scribe of the time of Amenhotep III., and a fragmentary inscription with the cartouche of Aten-Ra, the chosen god of the heretic Pharaoh Khuenaten, which show the XVIIIth Dynasty, and even the great Aten heresy, to be at last represented in the Delta. Other finds supply fresh links in the history of the temple, beginning as far back as the VIth Dynasty, with the discovery of another fragment of Pepi, and ending with a fine Greek inscription of the period of Ptolemy Epiphanes. A statue of Apries, the Hophra of the Bible, and parts of statues of Ramesses VI. and Nectanebo I. have also come to light, besides innumerable statues, and parts of statues, of Ramesses II. To the Hypostyle Hall of Ramesses II., and the Festival Hall of Osorkon II., are now added the remains of a hall of Osorkon I. The western end of the temple, containing the sanctuary, is at present in process of excavation. We are promised a detailed report of these discoveries from the pen of M. Naville next week.

OBITUARY.

THE REV. C. W. KING.

On Sunday evening last, the Rev. C. W. King, Senior Fellow of Trinity College, Cambridge, died, after a very brief illness, in London, of a bronchial cold. With him has passed away almost the last of the links which connect the present generation with the days of Hare and Thirlwall. Mr. King was an example of the saying that literary men owe their genius to their mothers. His father was a plain plodding man, well known to some men of business in Cambridge as a shipping agent in the iron trade at Newport (Monmouthshire). From childhood the son showed the energy and taste in collecting which led him later in life to form perhaps the most notable private cabinet of antique gems in Great Britain. He entered Trinity College in October, 1836, as a Sizar. The Tripos Lists of 1840 have his name as sixth in the first class of the Classical Tripos, and twenty-seventh Junior Optime. Elected a Fellow in 1842, Mr. King soon began those studies of ancient art which, encouraged by successive winters spent in Rome and Etruria, led him to publish, in 1860, his first work, entitled *Antique Gems, their Origin, Uses, and Value*; this was followed, in 1864, by *The Gnostics and their Remains* (second edition, 1887); in 1866 by the *Handbook of Engraved Gems* (second edition, 1885). The next year saw him produce the *Natural History of Precious Stones, and of the Precious Metals*, and the *Natural History of Gems*. In 1869 he brought out a charming

edition of Horace, illustrated entirely from antique gems in his own and other collections. The descriptive notes are a perfect model of graceful learning. The text for this edition was carefully revised by the late H. A. J. Munro. The year 1872 saw the publication of what he considered his *magnum opus*, *Antique Gems and Rings*, in two volumes, upon the preparation of which he had concentrated a wealth of lore and observation. His sight had long shown signs of weakness, and now began to fail him for all but the nearest objects. Of these he retained to the last a microscopic power of discernment. His sensitive nature, though keenly susceptible of all the highest pleasures of friendship, shrank from anything approaching to official show and publicity. Always free and generous in communicating from his stores of curious lore, he never delivered a lecture within or outside of his university. But as a typical scholar, a genial coenobite of the olden style, his memory will long be treasured by a few loving hearts both here and in the Greater Britain.

THE FORTHCOMING EXHIBITIONS.

SIR JAMES LINTON'S works for the summer exhibitions are three in number, and are all single figures. The largest—a life-size portrait, presumably, though in the character of Miss Wardour in *The Antiquary*—is an oil picture, and it goes to the New Gallery. The water-colour drawings, which, of course, will be exhibited at the Royal Institute, are, firstly, a standing figure, three-quarters length, of a comely brunette, arrayed superbly in satin and pearls, and announcing herself as Lady Peveril, in *Peveril of the Peak*; and, secondly, a blonde, in rich brocade and old gold colour, who comes from no romance, but is doubtless fair enough to be the occasion of one. This is "Sacharissa," a young lady of the days of George II.; her raiment, of the Pompadour type.

WE are sorry to learn that neither Mr. Onslow Ford nor Mr. Alfred Gilbert—two of the most brilliant and solid of the younger associates of the Academy—will be able to send any important ideal work this year. But Mr. Hamo Thornycroft has finished a "Medea," elaborately conceived and wrought with untiring patience of study. Mr. Roscoe Mullins's appreciation of the grace of our first years finds vent in the production of a sweet little group of naked children, called "Pail o' Water"—two little damsels of seven or eight holding between them, and about to dip, a dimpling infant of two. Mr. Samuel Fry carries out in marble, with many alterations—including the addition of a measure of drapery—a conception of "Hero," which, though it has never been publicly exhibited, some of us have beheld in the statuette in plaster. The new "Hero" is life-sized; the right arm is further raised; increased energy is bestowed upon the torso. Altogether, it is by far the strongest work which Mr. Fry has yet accomplished.

THE loves and the hatreds of Centaurs form the subjects of two small pictures recently completed by Mr. Arthur Lemon. In one, two lovers rush into each other's arms; in the other, a Centaur is rearing and falling back, struck with an arrow from an enemy just seen against the evening sky. Both are full of imagination. More in his accustomed manner is a romantic landscape, with horses drinking.

MR. FRANK DILLON will send to the Academy an afterglow scene at Assouan, on a creek of the Nile. The effect of light is at once powerful and delicate. His water-colour drawings for the Institute comprise a sunny view of Madeira, and some pretty corners in Cairo.

MR. SARGENT has sent over from America, where he is still busily engaged, two portraits of American ladies, both painted with great skill. The most agreeable and the finer work of the two is of an old lady, dressed in black, with a white lace cape half hiding a delicate yellow rose in its folds. Her face, which is exquisitely drawn, is full of refined character.

MR. F. D. MILLET's picture of "The Lovelatter" shows us a room handsomely furnished as in the days of our grandfathers, with an old gentleman absorbed in his paper after breakfast, while his pretty daughter waits for a favourable moment to convey certain intelligence, the nature of which is indicated by her attitude and the letter in her hand. The picture will be popular for its sentiment, and admired for its skill in execution. The sideboard, with its plate, is a picture in itself, and the damask tablecloth is a marvel.

NOTES ON ART AND ARCHAEOLOGY.

MR. W. MARTIN CONWAY has resigned the Roscoe Professorship of Art at University College, Liverpool. Intending applicants for the chair must send in testimonials before the end of this month.

MESSRS. HENRY GRAVES & Co. will have on view next week, at their gallery in Pall Mall, a series of water-colour drawings of views in Egypt by Lady Butler (Miss Elizabeth Thompson), together with most of her famous military pictures, which have been lent by the several owners.

THE other exhibitions to open next week include that of the New English Art Club at the Dudley Gallery; and a collection of foreign pictures at Mr. Koekkoek's, in Piccadilly, of which the special attraction is three of M. Munkacsy's latest pictures.

MR. JOHN E. PRICE has in hand the compilation of a complete index of Roman remains in London. When finished, he will, from the information contained therein, reconstruct, so far as possible, the plan of the Roman city, which, together with the results of his researches, will be published in the *Archaeological Review*.

MESSRS. W. A. MANSELL & Co., of Oxford Street, have published an English translation of Dr. Rudolf Menge's *Introduction to Ancient Art*, together with thirty-four sheets of woodcuts. The letterpress and the illustrations must be taken together; for the author has attempted little more than a running commentary, while the pictures are only described by their original German titles. But, despite this drawback, the work is one of great educational utility. Within a small compass, and at a low price, it gives a general survey of the whole history of architecture and sculpture in ancient times, beginning with Egypt and Babylonia, not omitting such minor matters as vases and coins. Dr. Menge has been careful to include the results of the German excavations at Olympia and Pergamos. The woodcuts are roughly drawn, but adequate for their purpose.

CONCERNING the late Mr. W. Thompson Watkin, whose death was recorded in the ACADEMY of last week, a correspondent mentions, as an example of Mr. Watkin's wide and untiring research, that he possessed "many cwts. of MS. extracts on Britanno-Roman subjects, relating to the whole kingdom." It is to be hoped that these will pass to some one capable of utilising them in a manner worthy of their collector.

MUSIO.

MUSICAL PUBLICATIONS.

Addresses and Lectures. By G. A. Macfarren. (Longmans.) This volume contains the annual addresses delivered to the students of the Royal Academy of Music from 1878 to 1887, and three papers read at the Musical Association—one on the Lyrical Drama and two on Handel and Bach. To the students Sir George gave much excellent advice. He was not satisfied with mere progress in music, but always impressed on them the necessity of mental culture and gentle manners. In the address for the year 1882, the Principal skillfully reviews in very brief compass the history of music from the earliest times down to Mendelssohn and Schumann. In 1883 reference is, of course, made to Wagner. Sir George could admire neither the dramatic construction, nor the form, nor the orchestration of the music-dramas of the Bayreuth master; and he spoke his mind in plain and honest language. In style he is clear, and in many ways he shows solid acquaintance with literature, the sciences, and other arts besides that of music. The Musical Association papers are instructive and interesting. This book, with its maxims, its admonitions, and its honest criticisms, may be recommended both to teachers and scholars.

The Prima Donna. By H. Sutherland Edwards. (Remington.) The prima donna has always been an object of interest to the public. Such charm does she exercise over ears and hearts that every detail connected with her life is eagerly sought after. Mr. Sutherland Edwards, the well-known *littérateur*, has met this demand by giving the history and surroundings of many a famous queen of song who flourished from the seventeenth to the nineteenth century. There are, among others, the famous names of Cuzzolin and Faustina, who gave Handel so much trouble; Sontag and Malibran, who achieved triumphs early in this century; and coming down to later times, we have Jenny Lind, Patti, Nilsson, Albani, &c. It is difficult and, indeed, unnecessary to give quotations from pages so full of interesting and amusing matter. The book will be found light and pleasant reading, and, as we have said, the class of readers to whom it appeals is a large one.

The Philosophy of Music. By W. Pole. (Trübner.) This is the second edition of a remarkably interesting work which appeared nearly ten years ago. Its striking merits were then fully acknowledged, so that we need only call attention to its second appearance. There is an important note in the appendix. Mr. Pole, following the authority of Burney, Fétis, and Westphal, had in his description of the later Greek modes described them as mere transpositions of one of the ancient octave-forms. Mr. J. F. Rowbotham's *History of Music* has, however, convinced him that the later modes were of varied character, and really retained all the original octave-forms.

François Liszt. Translated from the French of Janka Wohl. By B. Peyton Ward. (Ward & Downey.) This interesting book contains the recollections of one of Liszt's fellow-countrywomen, who knew him since she was ten years of age. He was the hero of her childish dreams. He often talked to her of his life and of its romantic episodes, knowing well that she intended to commit everything to writing. We have, then, the conversations of Liszt recorded, though not always the actual words used by him. Once, indeed, Liszt's own words are attributed to someone else. "It has been happily said of his *Messes* that 'they are prayers rather than compositions,'" says our author. But that is the expression used by Liszt in a

letter to Wagner in reference to his "Gran" Mass. Liszt talked about his pupils—the famous Russian countess, who published *The Memoirs of a Cossack*, Sophie Menter, the one-armed Zichy, Tausig, and others. A whole chapter is devoted to the *liaison* with the Countess d'Agoult; and no one understood the woman better, nor could anyone, we imagine, have described her in more life-like language. In another chapter we read about another woman, who, like the Countess d'Agoult, devoted herself to literature, but whose name became far more famous—this was Miss Evans (George Eliot), who with Mr. Lewes visited Liszt at Weimar. Liszt describes her; by quotations from her letters and diaries she also describes Liszt. The two French writers, George Sand and Alfred de Musset, are also presented to our notice. Of course, Liszt had something to say of Wagner, though not much. It was a subject of conversation which he appeared to avoid. This one sentence which we quote will show what he thought of his friend and of his art-work. "His genius triumphed, so to speak, in spite of him; for nobody put so many spokes in his wheels as Richard Wagner." Liszt's marked preference for anything Russian comes out strongly in the book. "From there," he said, "will come innovations in every branch of science, of the fine arts, and of literature."

George Frederick Handel. By J. Cuthbert Hadden (W. H. Allen.) This is the first of a series of biographies of the great composers. A small book, on a great subject, and issued at a very moderate price. Of course, one does not expect to find anything original in such a work. The only question is—Is it reliable? The author seems to have been most careful in his facts and dates; and he has given a clear account of Handel's life and principal works. He is perfectly justified in making the most of his hero, but goes, perhaps, a little beyond the mark in saying that "Handel is still the greatest as he is the favourite composer." In the catalogue of works at the end of the book, some of minor importance are omitted; to have given all would have been more useful, and occupied very little more space.

MUSIC NOTES.

THE Handel Festival is announced for the last week of June next, at the Crystal Palace. The Great Rehearsal is fixed for the previous Saturday, June 22; the Messiah for Monday, June 25, and "Israel" for Friday, June 29. On the Wednesday, June 27, there will, as usual, be a selection from Handel's works. The overtures to "Samson" and "Semele" will be given for the first time. Also choruses from "Belshazzar," "Alexander Balus," and an aria for baritone from "Ottone," recently found by Dr. A. H. Mann among the treasures of the Fitzwilliam Museum, at Cambridge. The principal vocalists engaged are Mesdames Albani, Nordica, Valleria, Patey, Trebelli, and Messrs. Lloyd, Santley, and Barton McGuckin. The chorus and orchestra of 4,000 will be under the direction of Mr. A. Manns.

No. 832, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscripts.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Correspondence of Sir Henry Taylor. Edited by Edward Dowden. (Longmans.)

EDITORS of correspondence are often persons to be pitied; but Prof. Dowden is a person to be congratulated, for the labour of love performed in the compilation of this pleasant volume has been unattended by any of the difficulties which generally harass the soul of the man to whom such a task is entrusted, or by whom it is rashly undertaken. There have probably been few eminent men of our century whose entire correspondence might have been published with less risk to their own reputation, or to the equanimity of their friends, than that of Sir Henry Taylor. In any large and miscellaneous collection of letters there must, however, be a good deal of matter which is either too private or too trivial to be presented to the public eye; and in 1884 Sir Henry himself reduced the labours of his editor to a minimum by going through the mass of his correspondence, selecting those letters which he considered worthy of preservation, and cancelling passages which for any reason seemed unsuitable for publication. Prof. Dowden's task has, therefore, been to pass the already sifted matter through a still finer sieve which should separate, not the suitable from the unsuitable, but the more interesting from the less interesting; and it is obvious that the second sifting must have been more laborious than the first. Of course, it is not likely that any critic of this volume can know the nature of the material that the editor has set aside—he can only know what has been retained; but even this knowledge is sufficient to enable him to appraise Prof. Dowden's labours with confidence and without presumption. Whatever may be the quality of the letters withheld from us, it is exceedingly improbable that they can be of greater value and interest than those here published; and if it can be said—as I think it can—that this large volume of over four hundred pages contains no single letter which an ordinary reader would willingly miss, such saying is a verdict of emphatic praise.

The title of the book is to be taken literally; its contents consisting not merely of letters written by Sir Henry Taylor to his friends, but by his friends to him. It was, the editor tells us, Sir Henry Taylor's own opinion—one of the many opinions which he shared with the majority of sensible people—that

“a letter-writer is seen best in a correspondence, not in a succession of letters written by himself alone. He appears surrounded, as he was in life, by a group of friends. The force of his character and the play of his mind are felt indirectly, as well as directly; and, if his correspondents be eminent persons, or persons worth

knowing for their own sakes, a double service is rendered by the publication.”

Did a view so obviously sound stand in need of practical illustration, such illustration would be sufficiently provided by the present volume. The letters of such correspondents as Wordsworth, Sir James Stephen, James Spedding, Miss Fenwick, Mr. Gladstone, and Mr. Aubrey de Vere—to mention only a few names out of many—are not only interesting in themselves, they confer a reflex interest on the letters which they elicited, or to which they were replies, one friend illuminating this or that facet of Taylor's mind which another failed to reach.

Considered as letters simply, some of these outside contributions are among the best things in the volume. Sir Henry Taylor was undoubtedly what Prof. Dowden calls him, “a connoisseur in the fine art of letter-writing”; but, on the evidence provided by this correspondence, I should incline to say that in mastery of the art he was excelled by one or two of his friends. There is no letter of his quite equal in beauty to that of Mr. Aubrey de Vere (p. 280), or in bright, realisable descriptiveness to any one of the three letters from Mrs.—now Lady—Pollock, the first of which is to be found on p. 273. Mr. Aubrey de Vere's letter is too long to give entire, and would be spoiled by mutilation; but I cannot resist the temptation to quote Lady Pollock's charming description of the experiment by which Prof. Tyndall illustrated his lecture on “sounding and sensitive flames.”

“These flames—delicate, bright, tender, feminine in aspect, and I may say in behaviour—seem endowed with human characteristics. Some poet has said somewhere of women, ‘Their spirits are to ours as flame to fire.’ The gentleman who said it should have witnessed the palpitations, the exaltations, and the depressions; the exquisite sensibilities, the visible pulsations, the flutterings and faintings of the spirits which Tyndall invoked on Friday night. The most tender of them responded to his lightest breath at last; was sensitive to every soft sound he uttered; lifted up its head to listen; dipped and rose and turned to look at him; and, like the affectionate lady in the Scotch song, found music in the very creaking of his boots, and throbbed in time to their strides. It was very pretty to see the demeanour of the creature while he repeated to it one of Spenser's most melodious stanzas; how it seemed to listen and love, picking out the sounds specially pleasing to its instincts, and bowing to their beauty. It addressed itself to motion as about to speak but would not speak; it only reflected with a gentle movement what it heard, as you sometimes see poetry which you recite given back to you by the shifting expression of a sensitive countenance. You are familiar with such indications as these in a soft feminine audience; but can you imagine talking with such effect to a flame out of a gas-pipe?”

Sir Henry Taylor's own letters are inevitably the centre of interest; and in attempting to appraise them there is one respect in which a critic who had not the privilege of knowing their writer is at a disadvantage. He cannot decide how far they are characteristic, to what extent they represent the nature behind them. In the case of some letters no reader feels any doubt upon this matter. Sharp angles of character, strong lights and shadows of temperament are reflected in every

sentence, and there can be no mistake as to the essential character of the reflection; but here there is no such decisiveness of line, no such depth of chiaroscuro. The impression I derive from Sir Henry's part in this correspondence is of a man of lofty character, large endowment, and eminently genial disposition, who was wanting in passion and impulse, and who, therefore, though both admirable and likeable, had never in store any of those happy surprises which make a personality really interesting. We know that the gods approve the depth and not the tumult of the soul; but though the wisest men are on the side of the gods in looking askance upon tumultuous emotion, they nevertheless feel an inspiring enjoyment in contemplating the indications of emotion fervid enough to become tumultuous were it not held in by bit and bridle. There are no such indications in these letters. Sir Henry Taylor's mind seems to have been eminently well balanced; and its equipoise is most naturally explained not by the hypothesis of the mutual action and counteraction of this strong force and that strong force, but of a natural good behaviour on the part of all his forces—an entire absence of any tendency to aggression or usurpation. He lacked eagerness—lacked it even in that region where we should most certainly expect to find it, for in a letter to Southey he confesses that he has never been an eager reader. After lamenting the smallness of his knowledge, or what he conceived to be its smallness, he writes (p. 8):

“It is not that I have not applied myself to reading—at times I have read laboriously. Often, when nothing has been over agreeable to me, reading has been as agreeable as anything else; but I have wanted that curiosity and lively interest in the pursuit which makes reading turn to account. And the feeling of *Cui bono?* (feeling, I call it, for it is temperament that suggests the question, though reason cannot well answer it) has mingled itself much with my existence almost as far back as I can remember.”

In the same letter—a most careful and interesting piece of self-portraiture—Sir Henry Taylor goes on to speak of the formation of opinion, and to contrast Southey's eager vivacity of mental action with his own hesitating inertness.

“From some observation of the habitual action of your mind and its laws and customs, I can easily imagine how your opinions were first formed—the eager and rapid grasp with which every system congenial to a happy nature was caught, the fond and firm belief with which it was held; how all knowledge was devoured and digested, and how the busy absorbents opened their mouths upon the chyme, taking up all that would nourish and support the system, rejecting all that would undermine it. Looking back to the formation of opinions in myself as far as such an operation can be said to have taken place, I perceive from the first a watchful distrust of every good feeling which arose in my own or appeared in other minds, a captious scrutiny of any notions which presented themselves in a confident shape. I see sentiments, ideas, and opinions float and fluctuate; subjects of doubt and speculation, and of reasoning and counter-reasoning, which showed them in all lights and consigned them back to darkness.”

If, however, such a nature misses seizing the fine elusive veracities attained by quick insight, it is all the more likely to take a firm grasp of those solid, practical veracities.

which yield themselves up to slow, serious, questioning thought; and, if these letters are not the letters of a seer, many of them are unmistakably the letters of a sage. It is inevitable that the lighter passages in a book like this should lend themselves more readily to quotation than those dealing with serious themes; and I must content myself with a mere mention of such letters as those on the intellectual limitations induced by lack of religious belief and feeling (p. 30), on the expression of contempt in controversy (p. 42), on the true test of poetical effects (p. 159), and on the real nature of the obligation to be truthful in the expression of opinions (p. 367). I do not single out these as the most important passages, but simply as those which have been found specially suggestive by one reader; for, if a book of this kind be at all worthy, much of its worth lies in the fact that almost every page is just the page which somebody will think the most interesting and valuable of all.

The correspondence contains, perhaps, fewer references than might have been expected to the many distinguished contemporaries with whom Sir Henry Taylor was brought into contact; and, if Sir Henry ever indulged in ill-natured criticisms—which seems improbable—he has evidently been careful not to give them a chance of permanence. The only really severe things to be found here are the references to De Quincey and Jeffrey; and probably their tone is largely to be accounted for by Sir Henry's loyalty to Wordsworth. Referring to Wilson's description of De Quincey as "a gentle, courteous creature," he remarks with quite unusual bitterness, "I suppose he is one of those gentle creatures who don't care what they do to you behind your back." The sketch of Lord Jeffrey looks at first sight more calmly judicial; but the judicial deliverance which it most closely resembles is a strong summing-up against the prisoner at the bar.

"The Lord Rector [of the University of Edinburgh] was worth seeing in order to understand by what small springs mankind may be moved from time to time. There came from him, with a sort of dribbling fluency, the very mincemeat of small talk, with just such a seasoning of cleverness as might serve to give it an air of pretension. Nevertheless, I believe, the little man has his merits. I believe him to be good natured and, in his shallow way, kind hearted. I have always considered that such things as he has done in literature are much more likely to be the result of vanity and ambition than of malice, and I dare say he thought it a fine thing to be a clever man of the world, and care for nothing but making effect. But when one looks at the clever little worldling, and remembers that for twenty years he was enabled to 'keep the sunshine from the cottage door' of a man of genius, one cannot but wonder how so small a man should cast so large a shadow" (p. 68).

Carlyle had the merit—for, of course, from the Taylorian point of view it was a merit—of being very different from Jeffrey; but he evidently failed to win Sir Henry's admiration, though we have the admission that "Carlyle talks more bright and forcible nonsense than man ever did before"—a not valueless contribution to the conversation of a world where nonsense is apt to be lacking in either brightness or force, if insufficient to

constitute a claim to be considered a guide and teacher. With some of the sentences in the letter from which I have just quoted (p. 184) many will find themselves in very hearty agreement.

"His [Carlyle's] opinions are the most groundless and senseless opinions that it is possible to utter; or rather they are not opinions, for he will utter the most opposite and contradictory and incompatible opinions in the most dogmatic language in the course of half an hour. The real truth is that they are not opinions but 'shams.' And, I think, it is the great desire to have opinions and the incapacity to form them which keeps his mind in a constant struggle and gives it over to every kind of extravagance. It is wonderful that a man of no opinions should exercise such an influence in the world as he appears to do; but I suppose it is an influence of concussion and subversion rather than any other. This is not the sort of influence which the world seems to want at present."

Whatever the point at which a reviewer of this volume brings his comments and quotations to a close, he must feel that he has not half reaped the harvest of noteworthy material, and when all the reapers and binders of sheaves have done their work the gleaners will find the field far from empty. Items of interest occur on almost every page. Those of us, for example, who are only in early middle age, and who were not given to critical reading in the year 1852, will learn—not with surprise, perhaps, but certainly with bewilderment—that the laureate's magnificent "Ode on the Death of the Duke of Wellington" was greeted with a unanimous howl of depreciation from the literary tasters of the day. It is also interesting to learn that the line of Sir Henry Taylor's which is most often quoted—indeed, the only line of his which has become a stock quotation, "The world knows nothing of its greatest men"—states a proposition which, instead of being the writer's own opinion, was always regarded by him as "very questionable." Then, too, one would like to quote some of Sir Henry's strokes of pleasant humour, and to say more about the letters of his friends, especially those of James Spedding, who has been described to me by a voice of authority as "one of the greatest and most lovable men of the century." But regrets of this kind are needless, for within the next three months the book will probably have been read by the great majority of those who read this article, and its readers will have had the pleasure of finding out all the good things for themselves.

I may make a note of an error, the discovery of which I owe to a quick-sighted friend. The letter (p. 253), addressed to Mr. Sidney Herbert, relating to the opening of Mazzini's letters at the Post Office by order of Sir James Graham, must be post-dated some twenty years. In 1865 (the date given) both Herbert and Graham were dead. This curious slip of Sir Henry Taylor's pen seems, however, to stand alone. There are certainly no equally obvious errors; and the book, as a whole, appears to be no less accurate than interesting.

JAMES ASHCROFT NOBLE.

Poems. By Stopford A. Brooke. (Macmillan.)

THESE are hard times for the poet. There are so many pretenders to his office that the public, once credulous, and perhaps too eager to discover merit among the newcomers, is now disposed to give them scant hearing.

Mr. Stopford Brooke is hardly a newcomer; but, if he were one, this book would conciliate the most exacting critic. It is modest and unpretending, but its matter is of the genuine sort. Poetic feeling, the sense of music, of beauty, of colour—all these qualities, with the far more important one of imaginative thought, we already knew Mr. Stopford Brooke to possess. But evidence of their combination in poetic work was scanty until this volume supplied it in full measure; for though modest in appearance, its scope is as wide as the human affections. They, with very few exceptions, form the subject of these sixty or seventy poems. Sometimes it is love crowned with happiness, as in the series called "Six Days" with which the book opens, every day witnessing the gift of a lover's song and the sweeter renewal of a maiden's love. Sometimes it is love sanctifying affliction and making hardships endurable, as in "The Sempstress" and "The Crofter's Wife." And sometimes it is love forlorn of earthly hope, and living upon the memory of happiness that comes no more. Mr. Stopford Brooke depicts every phase of the ruling passion of the heart with skill inspired by an intensely human sympathy. And with the same force, also, does he portray the other passions dependent on that of love—jealousy, hatred, revenge. Perhaps the finest poem in the volume—"The Lioness"—is one in which all these are brought into play. It is a story told at the point of death by the wife of the keeper of a wild-beast show, who herself performed as the lion-tamer. Pierre, her husband, was a devoted creature; but a desperate woman who envied her his love, failing to come between them, became her fate in almost a worse sense:

"Oh, sir, my joy was fateful; on the day
Our show was opened, she, my enemy,
Came fluttering in with smiles, and sat her down
In the first row, and stared; and when I saw
Her eager, cold, and curious light blue eyes
Fixed on my lions, then on me, as if
I were another animal, and not
A woman like herself, a shudder ran
O'er me like wind across the mountain grass—
I lost my head a moment, and fell back,
Staggering, with wavering sight, against the
cage,
And Pierre, as white as dust with terror, cried
'Beware'—for missing now my steady look,
The lioness drew inward on her haunch
Her mighty shoulders, and her eyes, half-shut,
Blazed; but I gathered up my heart, and strode
Straight to the beast, and beat her down, and set
My foot upon her throat, and all the folk
Cheered, and the woman, leaning forward,
smiled,
And clapped her hands together, as the snake
Clatters his rattles ere he strikes for death."

The woman continued to visit the show, and she set herself to inflame the temper of the lioness, the only beast in the den that gave the poor tamer any difficulty:

"The great beast abhorred her, and one day,
Trembling with rage, launched like a thunder-
bolt
Her body at the woman who had pushed
An arm within the bars, and had not Pierre

Seized her, and whirled her from her place, her flesh

Had been ripped down from shoulder to the wrist. I thought that this would fright her, but she said—

'Afraid! No, no. I love all dangerous beasts, But most of all the mighty cats, for they Have power at the back of subtlety. Their step is velvet, like the night, until, As sudden as the lightning stabs the dark, Their claws flash forth and hatred drinks its fill; So would I wait, so spring—if I were wronged'— And then she ceased, but o'er her face there ran So black a wind of passion, that I quailed, Seeing her heart—but while it came it went, And all the woman smiled as smooth as steel."

The lioness was daily maddened by the intruder's arts, and the danger to the poor tamer became ever greater.

"I felt like some wild creature in a net That waits the hunter's knife."

Pierre, in fear for his wife, begged the woman to come no more.

"I am afraid," he said, "the lioness Is devil-stung; revenge and hatred watch Within her, like two murderers in a wood; One slip, one error, and my wife is slain."

The woman's answer was as devilish as the sting with which she had wrought on the beast:

"Why that," she laughed, "is hers to guard against;

Her fame is more, the more enraged the brute."

Bidden now by Pierre to "go and return no more"—

"At that the woman Paled to the lips, and then a flame ran up From throat to brow, and in her eyes I thought Wrath lay outstretched, and like the lioness In act to spring. 'Insolent!' so she said, 'I will see your face no more, but are we part, You shall receive my legacy; I'll leave My anger in the heart of that huge cat.'"

She had already done this, but she did it now more effectually, the exhibition of her own passion and of the resentment which she stirred in the lioness being described in a remarkably graphic passage. Then:

"But as she went the lioness stood still, And watched her, growling low, with eyes Full of gray hate, and then she snarled at me So fiercely, that I read her thoughts, and knew She held me guilty of the woman's work; And I—I could not help it—cried aloud, 'I have not done you wrong,' at which the beast Laughed loud, or seemed to laugh, for now my head

Swam, and my heart was sick, and in my brain A harp-string seemed to snap, and shameful fear Came on me like a sea and drowned my will."

The tragic ending was inevitable, but the tragedy was not quite that which the fiendish witcheries of the woman had been employed to bring about. The poor wife's life was saved by the sacrifice of her husband's:

"And I am waiting for the heavenly call To meet my husband; patiently I wait, For I have seen him often in the night Stretch forth his arms to me, and call my name Out of a wondrous light."

Mr. Stopford Brooke is as happy in lighter touches, and especially in descriptions of natural scenery, as in these more powerful descriptions of human feeling and experience. Here are a few pictures taken almost at random:

"Rough boulders lay Couched on the daisied grass in sun and shade, Like cattle resting in the noon, and seemed To listen to the tidings that the brook Told of the hill-tops where its springs were green."

"And midst the tangled roots the hyacinths Stood with the white starflowers, hand in hand; While nestling everywhere, sweet violets, The simplest hearted people of the woods, Stole their dim odours through the grateful air."

"Close to the hall, from a great eminence, Over a milky sea the sun descend, Ruddy as David's hair, and ovalled large Behind a fortress wall of cloud engrailed With battlement and tower. The evening Heaven Was stiller than the Ocean, and faint clouds, Like long-forgotten thoughts tinged with the rose Of sudden recollection, slept therein, Islands, untouched by storm, in azure seas— And shed on us the perfect peace that passeth All understanding, and the beauty held In everlasting purity and love."

The duty of a critic in reviewing a book like this is a very simple one. It is his business not to stand between the author and the reader, but to introduce one to the other. So far as possible he is bound to let the author speak for himself. For that reason I venture to add to the extracts I have given one of the shorter poems complete:

"THE QUIET STREAM."

"Seven miles I drove to find a stream That leaped its rocks among; But I found only one that made A little lulling song."

"O'er pebbly shallows soft it ran, And in its quiet breast, The fresh-born beechen leaves of May Were mirrored and at rest."

"Among its little island stones The water birds were gay, And all the trees along the banks Bent down to see it play."

"And I remembered her whose life, So many years ago, Beside my restless heart was wont In quietude to flow."

"Her voice was even, and her soul Reflected love, and where She moved in grace, the hearts of all Bent down to look at her."

"O happy hour in which I thought Of one so sweet and wise; And blessed be the stream that made Her memory arise."

That, I think, is as lovely a bit of verse as Wordsworth could have written.

GEORGE COTTERELL.

History of the Jews. By the Rev. H. C. Adams. (Religious Tract Society.)

HISTORY must needs be written by partisans; but no history can afford so little to be unpartisan as Jewish history, for its practical issues are still deciding themselves, and its interest has never broken continuity to our own day. We must then regard all ordinary histories of the Jews as partisan statements of a case still unsettled. A short time ago the ACADEMY noticed a post-biblical history of the Jews from their own standpoint, the author being an English Jewess. Whatever fault one might find with her references, her work is valuable as setting forth intelligibly a complex matter which most English people know very little about, but on which they may reasonably be supposed to be curious. We have now a no less satisfactory book written from another point of view—that of orthodox Anglican Christianity, setting forth the same history with uniform temperateness and generosity, but at greater length and

with more detail. Mr. Adams comes to his task equipped with a great knowledge of modern authorities, he displays the grace and ease of an accomplished writer, and he is properly impressed with the importance of the practical issues of his narrative.

One who has read the little book compiled by Lady Magnus and the larger record of Mr. Adams will notice a marked difference of tone in one point only—a very significant one, though entirely appropriate and magnanimous in each case. Lady Magnus, whose book was published under the bequest of a pious Jew, is chiefly concerned with the strength and confident hope of what she takes to be Judaism; Mr. Adams, whose book is published by the Religious Tract Society, dwells chiefly on the cruelty and reproach of Jewish persecution and the spirit in which amends should be made. It is something to the credit of human nature, after all, that Lady Magnus seems to know very much less about the persecutions than Mr. Adams does.

His account, although he expressly tells us it is a "popular history," is solid and substantial enough. There is only one complaint to make about it, though that, to be sure, is one to which all histories of the Jews are liable—it is undoubtedly, in parts, monotonous. About three-fourths of such histories are accounts of persecutions and sufferings. Full half of these deal with onslaughts provoked by false charges trumped up for the occasion. In most of such cases the real culprit is discovered, and the innocent sufferers are not only not indemnified, but they are practically told to go and sin no more. Until we get the whole case stated frankly and dispassionately, as it is by Mr. Adams, no one can rightly understand how irredeemably barbarous has been the treatment of Jews at the hands of their Christian brethren—their patient forbearance, their dignity, their forgiving spirit, their love of their adopted countries, their sense of gratitude for the favours of simple humanity. We have received warnings from quarters which might have been better informed not to "patiently accept the oft-repeated slander that the Jew is what the Christians have made him." It certainly is a slander—on the Jew. He should have had all humanity crushed out of him if he really had been what the natural effect of Christian persecution should have made him. We may think what we like of his social exclusiveness, and my vote, I own, goes with Mr. Goldwin Smith; but his debt to mediæval Christianity is just whatever is due to those whose nerveless cruelty supplies material for the exercise of heroic virtue—no more.

It is not Roman Catholicism, as such, which is so largely responsible. The un-Christian spirit of the Middle Ages made religion the tool of the greed and envy which are confined to no particular race or creed. Indeed, at Rome itself the Jews were generally treated with wise kindness, though, to be sure, their patrons were not always the holiest of Holy Fathers. They had generally little to complain of outside the necessity of listening to conversionist sermons, and (worse) submitting to "collections." To the Reformation spirit they owed much; to some of the greatest Reformers exceeding little. Frank du Jon and Voss were exceptions; in Calvin's eyes to treat them with favour was

to offend God; by Luther they were grossly abused and blackly slandered. Yet they were the chief witnesses against what the Protestant Reformers condemned as Roman unreason. What Christian, for instance, had suffered as the Jews had suffered over the very doctrines of the Corporal Presence, which had acquired such picturesque verisimilitude from the stories of the wafer, stabbed by an impious Jew, bleeding?

Mr. Adams's history carries us from A.D. 7 to our own day. It is true that he imparts no new discoveries—except for those who think the Jew-baiters of all times are much to be pitied for their sufferings at the hands of the cruel Jews; but his text, at least, contains no reference to untrustworthy authorities without proper cautions, while writers so prejudiced as the narrators of Polycarp's martyrdom are properly allowed to whisper only in footnotes. The particular note, however, which I have in my mind contains a statement of authority for the charge brought against the Jews of taking part in persecuting Christians of "the new superstition." As soon as the distinction between Judaism and Christianity became understood it was rightly recognised that Christianity was the more serious enemy; for the kingdom of God was, certainly, to most of the early Christians who thought it was at hand something by no means compatible with existing political arrangements. And there is nothing in the preceding history of the turbulent Jews which makes it at all unlikely that they were perfectly ready to help Polycarp and his fellows out of the way as notorious blasphemers; indeed, they were bound to do it. The Arian dispute, again, was certainly of no great practical moment to them (though they took the side natural to them), but they were beyond doubt always ready to help the schismatics to sack orthodox churches. The Gothic empire, of course, treated them with almost uniform brutality.

Mr. Adams gives its proper place to the appeal of Manasseh ben Israel; but he might, I think, have noted on p. 276 Mr. S. L. Lee's account of Dr. Lopez, the physician who suffered death in 1594 on the charge of attempting to poison the queen. It shows, at least, that the presence of Jews in England was connived at before the days of Cromwell.

It is not easy to find blameworthiness in Mr. Adams's book; but one could wish that there were more dates, especially at the page-heads, and a full chronology. He is usually very temperate, as I have said, and modest in his comments; but he lacks the necessary authority for applying to Spinoza the saying of St. Paul—"Without faith it is impossible to please God." It is better, as he himself adds, to say, "Cum talis sis, utinam noster esses." There are very few famous names in the later history of the Jews which do not find a place in Mr. Adams's book and index; and five valuable appendices deal with statistics of Jewish population, the Talmuds, the Targums, Massora, Cabala, Sepher Yetzira, the book of Yehar, and the monstrous blood-accusation. The author lays both Jews and Gentiles under a great obligation: he has written what should become a "standard" popular book.

P. A. BARNETT.

Malabar. By William Logan. In 2 vols. (Madras: R. Hill.)

THIS is decidedly one of the most attractive of the series of district manuals issued by the Madras Government. Partly from its position, and partly from the variety of its products, as well as from its close association with European history, the Malabar coast has special interest above most other districts; and its various aspects are here excellently treated. The author had qualified himself by a previous task of importance—a collection of treaties, engagements, and other papers relating to British affairs in Malabar; and the experience has borne good fruit, especially in the historical chapters of this manual, although he modestly disclaims credit for this portion, casually and regretfully mentioning, by way of comparison, that the late Dr. Burnell had for years been collecting in his library every work bearing on the Portuguese period alone, and with this view had been picking up volumes in almost every European tongue.

In his preface Mr. Logan claims attention for what he calls the central point of interest in an account of Malabar—the position occupied for many centuries by the Nayar caste in the civil and military organisation of the province, a position so beneficial, unique, and lasting, that but for foreign intervention it might have endured for centuries to come. Until the British occupied Malabar, the Nayars, who are at present about 320,000 strong, were the militia of the country and the leaders of the people. Originally, they seem to have been organised into "six-hundreds," each group of six hundred having assigned to it the protection of all the people in a *nād*, or county, the *nād* being in turn split up into village republics called *taras*, a Dravidian word applied to a street. The assembly of the *nād*, or county, was a representative body of immense power which, when necessity existed, set at nought the authority of the raja, and punished his ministers when they did "unwarrantable acts." These are the very words used by the Company's representative at Calicut when describing certain civil commotions in 1746:

"These Nayars," he wrote, "being heads of the Calicut people, resemble the parliament, and do not obey the king's dictates in all things, but chastise his ministers when they do unwarrantable acts."

Besides being protectors, the Nayars were also supervisors or overseers of the *nād*, and collected the government land revenue. Sir Hector Munro, M. Mahé de la Bourdonnais, and others speak highly of their fighting qualities; but nowadays their martial character is dying out, and comparatively few of them even engage in hunting. With a large increase in their numbers and comparative poverty for a large body of them, the race is fast degenerating.

The Malabar collector's charge lies scattered over four degrees of latitude and more than four degrees of longitude, with an aggregate area of upwards of six thousand square miles, and a climatic condition varying from the bright, frosty nights experienced amid the mountain peaks of the Ghats, 8000 feet in height, to the radiant lagoons, the perpetual

summer, and coral reefs of the Laccadive islands. The numerous rivers and the curious backwaters of Malabar had much to do with the development of the country in the early days of foreign intervention, for these afforded the cheapest and almost the only means of communication when wheeled traffic and pack-bullock traffic were unknown; and, accordingly, it is found that the foreigners (Portuguese, Dutch, French, English, &c.) settled most thickly close to, or on, the rivers, and selected sites for their factories so as to command as much as possible these arteries of traffic.

Malabar may be said to be always hot, sometimes hotter, but never very hot, the temperature being peculiarly uniform on the whole. But few people, except habitual residents, would be prepared to know how regularly the rains may be expected.

"It once happened to the present writer to be asked one day in the month of February or beginning of March as to the likelihood of rain coming on soon, and the reply given on the spur of the moment was that, on March 22, at 2 p.m., the first shower would fall. As a matter of fact, the shower did come on that day and at that hour, within ten minutes or so. This was not altogether a haphazard guess, for March 22 is the vernal equinox, and 2 p.m. in the day is precisely the hour at which most frequently the daily battle between sea-breeze and land-wind begins. In some seasons, though not in all, the first distant rumble of thunder along the line of Ghats betokens that 2 p.m. has just struck, or is about to strike."

A very remarkable and well-known feature of the Malabar coast consists in the mud banks at Calicut, Alleppey, and elsewhere, which enable ships to load and discharge cargo in calm water on the open coast all through the south-west monsoon. The characteristic of the banks is that an unctuous mud rises from the bottom of the sea, becomes dispersed in the water, and effectually stills the surf. The ultimate cause of this curious feature has never yet been set at rest; but the recent researches of Dr. King, of the Geological Survey, have conclusively proved that a sensible amount of oil exists in the mud, and that this may, in part at least, account for the quiescence of the sea. The oil, he thinks, is derived, to some extent, from the decomposition of organisms in the mud, but principally from the distillation of oil in subjacent ligniferous deposits, belonging presumably to Warkilli strata. The mud, however, is not implicitly to be relied on as a breakwater, for in 1793 the East India Company's vessel, *Morning Star*, was induced to lie under its protection, but very heavy weather being experienced the sea broke through the bank and the ship was wrecked.

The fauna and flora of Malabar are described by Mr. R. Morgan in a special chapter in this book, and excellently has this gentleman done his task. He takes the reader on a trip inland from Calicut, on the sea-coast, to the frontier of Mysore—the first part of the journey being by boat along the backwater. The surrounding vegetation, animal life, and the general scene are colloquially and yet most graphically pictured. After landing, the author and reader are supposed to mount on horseback and penetrate into the forest.

"Two elephants are passed going to their day's work with awful sores on their jaws, the

result of making them drag huge logs of timber with their teeth. To an elephant the loss of his teeth is a far more serious matter than to a human being with a dentist to repair to. The poor beast cannot chew his food nor digest it; he loses condition and dies. His pig-headed owner will not listen to reason when you suggest that he might use harness, and adopt a more rational method of having his timber dragged. His only reply is that it is the custom of the country and that his father did it."

In ascending the Ghat range the following passage gives some idea of the scene:

"The booming note of the black langur (*Presbytis jubatus*) now resounds through the forest; and presently we see him, his wives and children, bounding from branch to branch as they approach to have a nearer look at us. He is a truculent-looking old fellow, this patriarch; and, as he balances himself on a branch and barks angrily at us, we cannot help noticing his enormously long and sharp canines, with which he can rip up a dog as with a razor. We again cross the stream, and here the gigantic size of the trees strikes us with wonder. But be careful what you are about, for overhead is the terrible *Laportea crenulata*, or devil's nettle; the petioles of the leaves are hispid with poisonous hairs, the sting of which, once felt, will not be forgotten by you in a hurry; and yet another vegetable abomination, in the shape of *Mucuna pruriens*, or cowhage, a creeper, the pods of which are covered with a velvety armament of stinging hairs."

We are sorely tempted to quote more passages from this most enlivening and picturesque chapter, but must perforce leave the reader to peruse it line by line, for it will amply repay attention. The concluding episode of an evening fishing adventure, culminating in the capture of a sixty-four pound mahsir, is quite exciting.

Calicut, one of the largest ports in the presidency, besides being a commercial place of importance in ancient days, was the spot where the notorious pirate, Captain Kidd, commenced his career of crime. He began by pretending to keep in check the buccaneers who had their rendezvous in Madagascar; but he soon threw off the mask, robbed right and left, and eventually put himself at the head of five ships armed with 180 guns. After a short but brilliant career he returned to St. Mary's Island, off Madagascar, and partitioned his gains among his crew, and thence sailed for the West Indies. He was, however, arrested in America by one of the noblemen (Lord Bellamont) who had helped to fit him out on his first legitimate enterprise, was tried, condemned, and hanged in chains at Tilbury on May 23, 1701.

An account of the country would be incomplete without some description of the cultivators. The Hindu Malayali's austere habits of caste purity made him in former days flee from the pollution of towns and villages; and even now he loves to settle on the margin of a fertile valley or ravine, with the bright green fields of rice in front of his door. From the bank of the level paddy flat a stair or a ladder leads up to the outer gateway or gatehouse, with flanking defence in the shape of earth banks, topped by a fence of dry prickly bamboo thorns. Within the gate some coco-nut palms, jacks, plantains, and other umbrageous trees lend a cool shade and lead up to a substantially-built and neat house, built round

an open yard and divided into three or four rooms, corresponding to the points of the compass. The surroundings generally consist of a cattle shed, a well of water at the rear of the cooking room, an excavated tank for bathing purposes, often full of fish and water lilies, and, in the better class of houses, a chapel of the household deity. The indigenous Brahmin or Nambutiri is most hospitable and charitable, and often the number whom he daily feeds is limited only by the measure of his affluence. His preference for a country life may be gauged by the fact that it is difficult to say where one of the municipal towns begins and where another ends. From end to end of the low-lying land near the sea there is an unbroken belt of coco-nut palm groves, and the description which Shaikh Ibn Batuta gave of the country in the fourteenth century is equally applicable now.

"We next," said he, "came into the country of Malabar, which is the country of black pepper. Its length is a journey of two months along the shore from Soudabeer to Kawlam. The whole of the way by land lies under the shade of trees, and in all the space of two months' journey there is not a span free from cultivation. For everybody here has a garden, and his house is placed in the middle of it; and round the whole of this there is a fence of wood up to which the ground of each inhabitant comes."

Mr. Logan's second volume contains a variety of statistical information, including lists of birds, butterflies, and timber trees, vocabularies, glossaries, and other miscellaneous data. Amid detailed accounts of the taluks and other territorial divisions are to be found descriptions of some of the Laccadives and other outlying coral islands off the Malabar coast, which from their low and unprotected situation are not unfrequently devastated by hurricanes. One of these in 1847 swept over the island of Kalpeni, destroying all the coco-nut plantations, and leaving only 450 survivors out of a population of 1642. A curious bit of history in this appendix records the fact, not generally known, that the French own a *loge* (or *comptoir*, this being the name given to factories or isolated establishments, comprehending one house with the adjacent grounds where France had the right to fly her flag) in Calicut. The *loge* is *occupée par un gardien*, and consists of about six acres on the sea-shore. The exact facts connected with the foundation of the factory are involved in doubt. It was apparently obtained from the Zamorin; but it seems not improbable that that potentate meant to concede nothing more than commercial privileges within the *loge*. However, Mr. Logan has made diligent enquiry as to the limits of the territory and shown them approximately in a map; and as the landed property and houses therein are untaxed, in virtue of a concession made in 1819, there can be no doubt now as to the validity of the claim from an international point of view. The French settlement of Mahé, about thirty-eight miles to the north, is much better known, and boasted in 1871 a population of 8492. It is celebrated for its fertile soil and healthy climate, and is governed by a *chef de service* subordinate to Pondicherry.

C. D. E. BLACK.

NEW NOVELS.

King or Knave? By R. E. Francillon. In 3 vols. (Chatto & Windus.)

Timar's Two Worlds. Translated from Maurus Jokai by Mrs. B. Kennard. In 3 vols. (Blackwood.)

Narka. By Kathleen O'Meara. In 2 vols. (Bentley.)

For Freedom. By T. Hopkins. In 2 vols. (Ward & Downey.)

The Premier and the Painter. By J. Freeman Bell. (Spencer Blackett.)

The Shadow of a Life. By J. L. Hornibrook. (Sonnenschein.)

The Romance of the Canoness. From the German of Paul Heyse. (New York: Appleton.)

The Cliff Mystery. By Hamilton Aird. (Bristol: Arrowsmith.)

THE very first book of Mr. Francillon's that we ever read (and that is a great many years ago) gave us the impression of something that was within an ace or so of being something very good indeed; and we hardly know a book of his since which has not produced on us very much the same impression. It may be left to reviewers in the abstract to decide whether it is better to have done many things that are nearly excellent, or one or two things that are quite excellent. In our present capacity we are only too thankful to get near excellence at all. *King or Knave?* has that spice of the fantastic about it which all Mr. Francillon's books, or, at least, all his best books, have. The double life of a man who is, on one side, an honourable and prosperous citizen has been frequently handled, but never with greater boldness than in the case of Sir John Heron, mayor and earthly providence of the ancient city of Marchgrave, and of Adam Furness, forger, coiner, murderer, and so forth. The quick changes which enable this person to keep up his duality almost to the last (indeed, quite to the last, except in the knowledge of two or three people) are managed with a great deal of dexterity; but the man's own character and nature are not made very plain. Perhaps Lucretius and his English paraphraser were right in holding that "two-natured is no nature." Some of the minor personages are much better; and the enigmatical "Cynthia"—a young person who in some respects might have echoed her elder sister's rejoinder to Peter Simple, "My honour, Peter? The less we say about that the better," and who yet is an exceedingly pleasing young person, and much better than a great many honourable young women—strikes us as one of the happiest sketches that Mr. Francillon has ever done. His Bohemian second good hero (the first is a kind of modern Frank Osbaldistone or Henry Morton, and is worth nought), Draycot Morland, pleases us less; and if the consummation which is shadowed in the last lines came off, he must have got in Cynthia a wife much better in all except conventional senses than he deserved. In the same way Marion, the first heroine, is very milk-and-watery compared to Cynthia; but somehow the whole book is interesting. At the end Mr. Francillon describes it as "a story of things that never were"; and in a rather different sense it has,

like much else of his work, the curious fantastic charm of lifelike impossibility.

By a very odd coincidence, the *donnée* of what is, we think, the second, if it is not the first, long novel of the most popular and prolific of Hungarian novelists that has been translated into English is not dissimilar to Mr. Francillon's—to wit, the double life of a man who is partly criminal and partly not. The criminality, however, of Timar, the Danube skipper, is not of a very serious character. At any rate, it is nothing like Sir John Heron's, for the Jove of novels does not frown very hard at bigamy; and though Timar is also guilty after a fashion of robbery under trust, it is only "after a fashion," and a casuist of some liberality might make it out to be no robbery at all. The story is somewhat intricate, and it would be a pity to give an outline of it. Speaking generally, the hero has rather better fortune than he deserves, and the second heroine, the would-be murderess Athalie Brazovics, a good deal worse fortune than she deserves. The author has spent much pains on the Greek-Turkish girl, Timéa, whom Timar marries and who loves him not; but the type is too remote to be made thoroughly living except by a great poet. The book, however, was worth translating, and nobody will read it far without perceiving how diligent a student Maurus Jokai has been of Victor Hugo. The whole first part—the voyage of the *Santa Barbara* up the Danube—is conceived on Hugonic models and worked on those models with not a little skill.

If we must have Russian novels (which question fate and metaphysical aid seem to have settled for us after a manner which makes simple resignation the only thing) we are not quite sure whether it is better to have them from Russians or not. On general principles we should prefer "French of Paris" and Russian of Moscow. But in Miss O'Meara's hands, at any rate, the thing is so much shorter and so much less grimy than the native article, as well as so much less dull, that we are inclined for once to vote for the imitation instead of the reality. The three girls—Sibyl, Marguerite, and Narka herself—are very well drawn, though the angelic Marguerite is a little, a very little, too much of the regulation saint. The men are less good. But the whole story—inevitable Nihilism and all—is readable enough, and the general tone is in excellent taste.

Almost the whole of the interest of *For Freedom* depends upon its account of the Garibaldian invasion of the two Sicilies. There is, of course, a certain amount of fictitious and personal incident mixed in with the history, and the book is fairly written; but it will hardly be read through by anyone who has not "red-shirt" proclivities, which are perhaps not so common (other forms of red having come into favour with the amateurs of that colour) as they were five-and-twenty years ago.

It is impossible for anyone who has a feeling heart to read Mr. Freeman Bell's book without a pang. The author is really, in his way, clever; and he evidently has a fluent pen and a ready fancy—such as it is. Unfortunately, both the Prometheus of natural

taste and the Epimetheus of acquired criticism have sternly refused to have anything to do with him; and the result is a kind of imitation of the political novels of the late Lord Beaconsfield as it might be imitated by one of the less practised contributors to a cheap comic paper. When one remembers the effect that the mere word "Briggsville" has had, *teste* the victim, on a distinguished man of letters of the present day, and reflects that in the five hundred tight-packed and small-printed pages of *The Premier and the Painter* an outrage ten times as hideous as "Briggsville" may be said, on an average, to lurk in every five lines, the thought of the toxic effects of such a book becomes very serious. Even to thicker skins and less delicate constitutions than Mr. Arnold's the perusal of any considerable part of it might be trying but for the critical interest (critical interest fortunately carries one through almost anything) of the experience. If Mr. Freeman Bell is very young, and if he can contrive to mark, learn, and inwardly digest the fact that Thackeray confined *George de Barnwell* to exactly ten pages, each of about the same contents as Mr. Bell's, and even in that short space touched upon everything with the lightest and most flying finger, he may some day do something. But if he has the faculty of ever seeing this, it is not quite clear how he came to write *The Premier and the Painter*.

It is not often that we criticise a book solely by giving a very few very short extracts, but no other plan can be so good for *The Shadow of a Life*. "Some spark of nobleness still lingered in his depraved nature." "I was coward enough to lift my hand against a woman." "'Tis well, he lives." [N.B.—*The Shadow of a Life* is quite a serious book.] "I love you, not with the ardour of boyhood, but with the resolute and enduring passion of a man." "Both shall rue it—bitterly rue it!" "On, on, infamous count! Cast your trembling victim back into his noisome cell." "I little deemed what a viper I had nourished." After the viper, *sat prata*, surely.

If *Der Roman der Stiftsdame* is not Herr Paul Heyse's best novel it is very fairly characteristic of his method, and in this English (or, at least, American) version it is unusually well translated. Why German novels are, as a rule, better done into English than French novels are we do not positively know. Probably it is because everybody is not supposed to know German, and because it is not so deceptively "easy" even at its easiest.

Mr. Hamilton Aidé has given us a very fair shilling dreadful. We have heard it said that you know who did the mystery too soon; but, then, unless you are an idiot you always know who did the mystery at about the second chapter. It is fair to say, moreover, that it is quite possible for persons not idiots to mistake by anticipation some details of Mr. Aidé's way of working out his plot—a thing which is said to be fatal on the stage, but which is rather advantageous in a novel. Some minor points of writing or press-correction might have received more attention. "Château Margot" is a very new and fonetik manner of spelling that admirable liquor; though our grandfathers had an odd

fancy for spelling it "Château Margout." This is less remarkable, however, than the fact that the hero has "some delicious Jargonelle pears" set before him "after the middle of October." The deliciousness of Jargonelle pears is undeniable; but as the lovers of them are wont to complain that unless you sit up all night on the particular day in August when they ripen they are spoilt, we cannot but think that the preservation of them in a delicious condition for two months was the real "Cliff Mystery."

GEORGE SAINTSBURY.

HEBREW LITERATURE.

Chrestomathia Targumica quam collatis libris manu scriptis antiquissimis Tiberiensibus editionibusque impressis celeberrimis e codicibus vocalibus Babylonicis instructis edidit adnotatione critica et glossario instruxit Adalbertus Merx. (Berlin: Reuther; London: Williams & Norgate.) That the printing of all editions of the Targums is most unsatisfactory, because variable and irregular, is admitted on all hands. At the fifth Oriental Congress, held at Berlin in 1881, Prof. Merx read an instructive paper saying that we should go back to the manuscripts, and, above all, to the oldest, and there seek for those rules and principles which have hitherto been wanting. An important place among these documentary sources must of course be given to those manuscripts which present the Targums punctuated on the Babylonian system. As Dr. Merx truly observes, it would have been hopeless to correct the text from the manuscripts, because in the manuscripts themselves the utmost confusion prevailed, and a critical treatment of them was impossible. As a preliminary to a really critical edition of the Targums, Dr. Merx here presents a chrestomathy of passages taken from the Babylonian codices in the British Museum, with notes containing the chief readings of manuscripts of the Palestinian school. He also gives specimens of certain more recent Babylonian texts with compound vowel-points, now in the Imperial Library at St. Petersburg. Appended to the texts is a glossary in which all the grammatical forms are conspicuously set forth and to some extent illustrated by philological remarks and references to grammars and published Syriac texts. It should be added that, instead of any specimens from the Targums on the Hagiographa, which would have increased the size of the book too much, Dr. Merx has given us a specimen of the dialect of Palestine. He intends hereafter to edit the Song of Songs separately from two Babylonian and two Palestinian manuscripts, with various readings. We can well believe that the preparation of this work was a tedious, difficult, and intricate task, but Dr. Merx may count upon the warm gratitude of all philological students of the Hebrew Bible. The passages in the Chrestomathy are admirably selected (Judges v. is followed by Buxtorf's commentary), and the glossary is compact and full of matter well adapted to the wants of the learner—altogether a welcome addition to the useful series called "Porta Linguarum Orientalium." A word of praise is also due to the singular care bestowed upon the typography, which does honour to the firm of Druggin.

Joma; der Mischna - traktat "Versöhnungstag." Herausgegeben und erklärt von Hermann L. Strack. (Berlin: Reuther.) Prof. Strack, one of the most distinguished living Christian Talmudists, and one may well add Hebraists, has given here a critical and yet a student's edition of a short Mishna treatise similar to his *Pirke Aboth* (1882).

Would that all students' editions were as carefully done! The references to the literature of the subject in the notes almost double the value of the book. The dedication, however, is painful reading. One regrets that Prof. Strack should have had to complain of a periodical which certainly does not seem to us, upon the whole, a partisan journal. We suppose that Prof. Strack's views on Biblical criticism appear to some of his colleagues wanting in clearness and consistency. Can he be right in holding that "the position of the individual in reference to religion" (which religion?) must determine his view on numerous questions of criticism and exegesis? At any rate, this would have been better unsaid. We ourselves do not regard Prof. Strack as an obscurantist, but as an earnest, though somewhat too cautious, progressive scholar.

Das Hohelied in seiner Einheit und dramatischen Gliederung. Mit Übersetzung und Beigaben. Von Dr. J. G. Stickel. (Berlin: Reuther.) The author of a book on Job which, though not of the first rank, is still named with respect, presents us here, forty-six years later, with a freshly written and not unoriginal treatise on the Song of Songs. Whatever may be the final verdict of scholars on some of the views which it advocates, it will, at any rate, recall attention to this beautiful poem, which has, perhaps, been unduly neglected by lovers of the sacred literature. One expects to find the author conservative in some respects. He holds, for instance, that the text of the Song is throughout correct, that no interpolations or transpositions need be supposed, and that the poem is an artistic unity. It was composed, he thinks, in the north of Palestine, before 920 B.C. It is a drama (more strictly, a melodrama), and was intended to be actually performed. Prof. Stickel has, however, a private heresy, which he here communicates, viz., that there are two pairs of lovers, the Shulamite and her "Dōd" (we follow our author), and a shepherdess and her swain. The two stories are quite independent: the one pair of lovers know nothing of the other; but the poet has so interwoven the scenes as to produce the greatest possible variety of situations, and so at once to amuse and sometimes, by the force of contrast, to instruct, the public. It is not possible to argue such a point. Prof. Stickel states that pupils of his, devoid of a theory themselves, have been on the verge of professing this theory—which reminds us of Prof. Harnack's now famous "student." Time will show. It is not impossible even for a theorist to read a familiar poem with fresh eyes, provided that he is already accustomed to give up theories at the bidding of truth. Let us add an appreciative word for Prof. Stickel's character-sketches, not the least interesting of which is that of Solomon, who is perhaps treated with some unfairness by most commentators.

Studies on the Book of Psalms: the Structural Connexion, both in Single Psalms, and in the Psalter as an Organic Whole. By John Forbes. Edited by Rev. James Forrest. (Edinburgh: T. & T. Clark.) The title of this carefully-written volume will express its purport. The author holds that

"the Psalter, in the order in which we now possess it, does not consist of a number of unconnected psalms strung together by a sort of haphazard (in the way suggested by Dr. Delitzsch in his *Symbolae ad Psalmos illustrandos isagogicae*), according as some similar expressions, occurring in two psalms, struck the compilers as a reason for placing them together," but "forms a grand organic whole, arranged and connected together with consummate art."

The key to this arrangement Dr. Forbes finds in the significance which the Hebrews attached to their sacred numbers and their obscured

relations, as set forth in a former work of his, called *The Symmetrical Structure of Scripture*. None will deny that Dr. Forbes shows a knowledge of, and enthusiasm for, the Bible which some more pretentious and brilliant writers might envy. He has employed the leisure of his well-earned retirement to good purpose, though his individuality is too prominent for us to criticise the book with much advantage.

Papers read before the Jews' College Literary Society during the Session 1886-7. (Office of the *Jewish Chronicle*.) This is a varied collection of essays on learned subjects treated in a popular style. A paper by Dr. Neubauer on the Jewish sects opens the volume, and, like all that the author writes, will be valuable for future reference. The Samaritans and the Karaites are treated with especial fulness. Dr. Neubauer observes in passing that the name Ashima, given to an idol which the Samaritans were said to have worshipped, is really nothing else but the familiar *Sh'mo* "name" (= the God of Israel). Mr. Schechter's essay on Rabbi Nathan Krochmal, one of the most eminent Jewish scholars (died 1840), will interest many to whom he has been little more than a name. The writer of this paper has a singular talent for combining critical sincerity with sympathetic insight. Dr. Gaster, treating of Jewish folklore in the Middle Ages, opens to the public a subject very successfully handled of late by Israelite scholars. Mr. Montefiore's width of reading and historical view of religion are abundantly revealed in his lucid and elaborate paper on "The Wisdom of Solomon," a work which, combining Greek and Hebrew elements, should have a special interest for Western scholars, both Jewish and Christian. We may hope soon to have a useful body of notes in the too long delayed Speaker's Commentary on the Apocrypha. But Mr. Montefiore's essay will suit excellently as an introduction to the religious and philosophical contents of the book. He says,

"Though neither of these doctrines [the all-pervading Holy Spirit and the Immortality of the Soul] are original to himself, he [the pseudo-Solomon] was, so far as we know, the first Jew to emphasise and lay stress upon them, and the first to give them a Jewish and monotheistic colour. Upon these two corner-stones of his teaching must rest his claim to honour and renown."

Dr. Friedländer discourses on Spinoza; the Rev. S. Singer on the Messianic idea in Judaism; nor do these exhaust the interest of a necessarily unequal, but altogether creditable, collection of college essays.

SOME BOOKS ABOUT BOOKS.

MR. ELLIOT STOCK, the publisher of the "Book-lover's Library" and of so many other bibliographical works, has just issued a volume that will be valued by all those who possess, or hope to possess, a library worthy of the name. It is called *Book Prices Current*—perhaps not a very happy title; and it is composed of priced catalogues (with buyer's names) of all the auction sales of books which took place between December 1886, and November 1887. As no explanatory preface is given, we may state that the sales are placed according to date, and the books in each in alphabetical order without regard to sizes—no doubt the most convenient arrangement, especially when an elaborate index to the whole is given at the end. The principle adopted seems to have been to quote those lots only which fetched as much as £1. The total number of lots recorded is 8122; and the index alone fills forty-two pages of closely printed double columns. Last year was not remarkable for any sale so historic as those of the Sunderland

or the Beckford Library; but it included the first portion of the Earl of Crawford's collection (of which it is now understood that no second portion will come to the hammer), the final portion of the great Hartley collection (chiefly of genealogical works), as well as several others of more than ordinary interest. The most memorable event of the year for bibliopoles was that day in June when Mr. Quaritch gave £2,650 and £1,025 for two successive lots in Lord Crawford's sale—the so-called Mazarin Bible, and the first Bible with a date (Mentz, 1462). Next, perhaps, may be mentioned Caxton's *Game and Playe of Chess*, from "an old Essex library," which also fell to Mr. Quaritch for £645. A fairly good copy of the first folio of Shakspeare fetched £255, while a miserably mutilated edition of the same went for £20. Only one first edition of the *Compleat Angler* was submitted for competition during the year; but this, together with the second part, brought no less than £195. Another extraordinary price was the £64 that Mr. Quaritch had to pay for a Tennyson of 1842 at the sale of the late Master of Trinity's books, whereas the earlier edition of 1830 brought only £26. But it is needless to go on picking out the plums, when almost every page would furnish material for literary gossip. The low prices are no less instructive than the high; and perhaps the most important lesson is to observe the cheap rates at which a most desirable library might be acquired, if only one of the crowd could hold his own against the great dealers. We cannot all buy incunabula; but who would grudge £4 10s. for the Pisa *Adonais*, or £4 12s. for the first edition of *Endymion*, or £3 15s. for Wordsworth and Coleridge's *Lyrical Ballads*? Despite a few *coquilles*, such as Evelyn's "Dairy" (p. 134), the volume is most carefully printed; and we trust that the publisher will receive sufficient encouragement to continue his laudable enterprise for years to come.

The Enemies of Books. By William Blades. Revised and Enlarged by the Author. (Elliot Stock.) This latest addition to the "Book-lover's Library"—a series, by the way, of somewhat unequal merit—is an enlargement of the essay which our most scholarly of printers published in more expensive form early in 1881. The number of illustrations is, we believe, increased; and the writer's personal experience of book-worms has been carried down to date. Perhaps we may be allowed to transfer to our own pages the following characteristic passage:

"In July, 1885, Dr. Garnett, of the British Museum, gave me two worms which had been found in an old Hebrew Commentary just received from Athens. They had doubtless had a good shaking on the journey, and one was moribund when I took charge. . . . The other seemed hearty, and lived with me for nearly eighteen months. I treated him as well as I knew how; placed him in a small box with the choice of three sorts of paper to eat, and very seldom disturbed him. He evidently resented his confinement, ate very little, moved very little, and changed in appearance very little, even when dead. . . . He resigned his life with extreme procrastination, and died 'deeply lamented' by his keeper, who had long looked forward to his final development."

But, oh Mr. Blades! was it kindly done to put, as the first entry in the index to a book bearing so evil a title, "*Academy, The, 23*"?

Ballads of Books. Edited by Andrew Lang. (Longmans.) The original New York edition of this anthology was reviewed at length in the *ACADEMY* of October 22, 1887. The poems then "chosen" by Mr. Brander Matthews have now been re-edited by Mr. Lang, who has omitted some of his own work (already published in this country) and given us new trans-

lations instead. Here is his rendering of an epigram (iii. 2) of Martial:

"To whom shalt Thou be dedicate?
Get thee a patron e'er it's late—
My Book—ere thou, without a friend,
Into the kitchen's deeps descend,
To wrap up spices for the pot,
Or shroud a fish *en papillotte*!"

"Faustinus! Him for friend you've found?
Wise book that shalt go bravely bound,
Fragrant, with painted bosses graced,
In dainty purple all embraced,
And with red title-page! My Book,
Fear neither Critics nor the Cook!"

Perhaps Mr. Lang's attention was not drawn in time to the volume of poems published at Liverpool last year by Mr. Le Gallienne, under the title of *My Ladies' Sonnets*, which contains three "Booklover's Songs" not inferior, in our opinion, to some of those by contemporaries here included. Or did he think these too long—a fatal fault for an anthology?

We may also fitly mention here that Mr. E. A. Petherick has begun, in the April number of his new Colonial Book Circular entitled the *Torch*, a bibliography of Australasia, dealing with New South Wales down to 1808. Among the curious items that he records is a proposal by Capt. John Webbe, a fellow voyager of Dampier (1703-1706), to establish

"a company by the name of the London Adventurers for carrying on a trade to (and settling colonies in) Terra Australis, and working and improving the gold and silver mines which there abound."

This proposal, which Mr. Petherick prints in full from the unique copy in the Bibliothèque Nationale, is notable as containing the name "New Wales" fifty years before Capt. Cook's discovery of New South Wales. The *Torch* forms an attractive record of current literature, quite apart from its colonial interest.

NOTES AND NEWS.

MESSRS. KEGAN PAUL, TRENCH, & Co., will publish immediately a biography of General Reynell Taylor, late Governor of Sandhurst, known in Anglo-Indian history as one of Lawrence's staunchest lieutenants in the Punjab. It was he who held unaided the Trans-Indus province during the second Sikh war, and who afterwards maintained order in Kangra at the time of the Mutiny. And it was he who was chosen to bear Lawrence's coronet at his funeral in Westminster Abbey. The biography has been written by Mr. E. Gambier Parry, the anonymous author of *Suakin*, 1885; and it will be illustrated with a portrait and a map.

The papers on "The British Army," which the author of "Greater Britain" has been contributing to the *Fortnightly Review*, will be published in volume form early in May.

STEPNIAK'S important work on the Russian Peasantry, the result of some years of labour, is at length ready for publication, and will be issued in a few days by Messrs. Swan Sonnenschein & Co.

MR. PERCY FITZGERALD'S forthcoming book will be called *The Chronicles of Bow Street Police Court*. It will be in two volumes, with numerous illustrations.

THE next volume in the series of "Twelve English Statesmen" will be *Henry II.*, by Messrs. J. B. Green.

WE learn that Mr. Coventry Patmore has given permission for the second part of the *Angel in the House*, called the "Victories of Love," to appear as vol. 122 of Cassell's National Library, which will be published on April 23. It may be remembered that the first

part of the *Angel in the House* was issued as vol. 70 of this Library, and passed through four large editions in a few weeks.

UNDER the title *Romantic Ballads and Poems of Phantasy*, a small volume of poems by Mr. William Sharp will be published about the beginning of May.

THE publication of Canon Venables' *Life of Bunyan*, which was to have formed the April volume of the "Great Writers" series, has been unavoidably postponed owing to the author's indisposition.

MESSRS. CHAPMAN & HALL announce a second novel by Canon Knox-Little, entitled *The Child of Stafferton*.

Nature's Fairyland; or, *Rambles by Woodland, Meadow, Stream and Shore*, is the title of a book by H. W. S. Worsley-Benison, Lecturer on Botany at Westminster Hospital, which will be published immediately by Mr. Elliot Stock.

MESSRS. OLIPHANT, ANDERSON, & FERRIER have in the press, for early publication, *Our English Shores*, being recollections of visits to watering-places on the coast of England, by Mr. William Miller. The volume will be illustrated with numerous pen-and-ink sketches by the author.

Chronicles of the Stage is the title of a new volume, nearly ready for the press, by Mr. Sidney W. Clarke, secretary of the Hull Literary Club.

THE Selden Society has issued an elaborate prospectus of its "objects and work," which may be obtained by non-subscribers from Mr. Bernard Quaritch, who has been appointed agent for the sale of the society's publications. The volume representing the subscription for the year 1887, which is now ready, is *Select Pleas of the Crown in the Thirteenth Century*, from the Eyre Rolls in the Public Record Office, edited, with a translation and complete indexes, by Mr. F. W. Maitland, reader in English law at Cambridge. The volume for 1888 will be a *Selection from Manorial Rolls of the Thirteenth Century*, by the same editor. Prof. Skeat has drawn up a scheme for the collection of materials for the dictionaries of Anglo-French and of law terms, based upon the rules adopted for the Philological Society for Dr. Murray's New English Dictionary. This ought to be one of the most valuable results of the society's work. The hon. secretary of the society is Mr. P. Edward Dove, of Lincoln's Inn, with Prof. J. B. Thayer as general secretary for America. Local secretaries have also been appointed for several of the States of the Union, as well as for Canada and Australia. What the society needs is more subscribing members, for the amount of documents, &c., awaiting publication is immense.

WE trust that the Lincolnshire Record Society, of which we received a prospectus a few days ago, will shortly be in a position to announce what will be its early issues. The records at Lincoln are an almost unexplored mine of wealth for the historical student. We hope, however, that the new society will not confine itself entirely to one class of documents. The churchwardens' accounts of Louth are among the most curious records of their class in existence. These ought to be put in type at once. We understand that they have already been transcribed, and only await the printing press to give us a most remarkable picture of the fluctuations in religion and ritual which took place in the sixteenth century.

ON next Thursday, April 19, Messrs. Sotheby will begin the sale of the library of Mr. R. B. Stewart, of Glasgow, which contains several

rare theological works and books relating to Scotland. We may specially mention the *editio princeps* of Augustine's *De Civitate Dei* (Mentelin, circ. 1468); the Primer of Sarsbury Use (Rouen, 1555); a copy of Laud's Prayer Book (London, 1636), which differs from any other known edition; and that rare Scotch book, Zacharie Boyd's *Last Battell of the Soule in Death* (Edinburgh, 1629). To show, however, that Mr. Stewart's library was not limited to one class of books, we may add that it also contains a copy of the spurious letters of Shelley, with the introduction by Mr. Browning, which was rigorously suppressed. On an earlier day of the same week Messrs. Sotheby will sell, in another collection, a series of first editions of several of Mr. Browning's poems, with his autograph, being presentation copies.

THE FORTHCOMING MAGAZINES.

THE May number of the *Classical Review* will contain a paper on "The Declensions in the Italic Dialects," by Mr. W. M. Lindsay; "Philological Note," II., by Mr. F. W. Walker; a paper on "Forgeries in Terra Cottas," by Salomon Reinach (concluded); and the following reviews: Jebb's "Antigone," by Prof. Tyrrell; Roscher's "Mythological Dictionary," by Mr. L. Farnell; Conway's "Verner's Law," by Mr. J. E. Moulton; and Abbott's "Olynthiacs," by Prof. Butcher.

THE May number of *Time* will contain the following articles: "High School Education," by Mrs. Henry Fawcett; "State Colonisation," by the Earl of Meath; "The Old Emperor and the New," by Dr. Karl Blind; "Leg before Wicket," by Mr. Randolph Stewart; "Lord Beaconsfield as a Landscape Painter," by the editor; and a story by Mr. J. M. Barrie.

THE *Selborne Magazine*, the organ of the Selborne Society for the Protection of Birds, Plants, and Places, will in future be published by Mr. Elliot Stock.

A TRANSLATION.

DEATH AND THE MAIDEN.

(From the German of Claudius.)

The Maiden.

Must it be so?

Nay, leave me. . . . I am fair. . . .
See, I am fair and young. Ah, cruel Death,
Back . . . back! Draw in thy hot and blasting
breath,

A furnace in my hair.

Ah, go. . . . Ah, go!

Death.

Give me thy hand,
Thou lovely child, and lean
On Death, who only of all gods is kind,
On Death, who left his realm of rest to find
And crown thee the fair queen
Of a fair land.

I am thy friend.

I do not come to-night
To scare, nor terrify thee, nor oppress;
Nay, but with love, and with all gentleness,
To keep thee pure and white
Unto the end.

Thou art too fair
To yield thy flower-like face
To any kiss that is less pure than this,
Or let, his passion fleeting as his kiss,
A lover's breath displace
Thy golden hair.

It must be so.
Wilt thou not trust and rest?
Because I love thee do I take thee hence
Before the world has stolen thine innocence.
Sleep, darling, on my breast.
Come, we will go.

MAGAZINES AND REVIEWS.

THE *Antiquary* for April is a good number, but too many of the articles are continuations. It has surely been a mistake to sever Mr. Wheatley's excellent "Land of Tin" into two sections. It would be far better that any one number should contain fewer articles, and that we should have the whole subject before us at once. Mr. Haines continues his reprint of the highly curious churchwardens' accounts of Stanford-in-the-Vale, Oxfordshire. As we before pointed out, he has not given any annotations to help the reader on his way. We trust when he comes to the end of the original document he will add a body of notes. Such words as "Jobbe," "Fryson," "Hame," and "Perchill," are not to be interpreted by the light of nature. We should be glad if anyone could tell us what was the function that font-wives discharged. We do not remember ever meeting with them before. Here, under the year 1569, it is recorded that

"Eliza Yat, the wyeffe of John Yat the younger gent. and Elenor Sauere were chossen fount wyeffs this yer but the[y] gatheryd nothing this yer."

Mr. Redgrave's paper on Mont St. Michael is excellent, but why does he call St. Michael "the prince of the powers of the air"? St. Paul gives that title (Ephesians ii. 2.) to a potentate of a very different character.

CORRESPONDENCE.

THE DATE OF CHAUCER'S "LENVOY A BUKTON."
 Cambridge: April 9, 1888.

The date of this poem has hitherto only been guessed at. Dr. Furnivall suggests 1394 or 1395. This is an extremely good guess; for there can be little doubt that it was written in the winter of 1396. This is ascertained from an allusion which the commentators have never regarded. In the third stanza Chaucer tells his friend that it would be better to be taken

prisoner in Friesland than to be married for a second time.

There is only one year in the whole of our history when this allusion could have had any point, viz., at the close of the year 1396. The question is, of course, why it should be any more dangerous to be taken prisoner in Friesland than anywhere else. Fortunately, the answer is easy enough; for Froissart gives us the fullest information on this point in his *Chronicles*, book iv., chaps. 78-9 (I use Johnes' translation).

The Counts of Hainault and of Ostrevant raised a large army to invade Friesland. They asked Richard II. for assistance. Very few Englishmen went on this expedition; but there were a few: "Some men-at-arms, and two hundred archers, under the command of three English lords; one was named Cornewall, another Colleville, but the name of the third, who was a squire, I have forgotten." The expedition started "about the beginning of August of the year 1396." They landed in Friesland near the end of the month, and stayed there about five weeks, i.e., till the beginning of October; then they were driven home by stress of bad weather.

That there were peculiar difficulties about the prisoners taken in this war we are expressly told; for if an Englishman fell into the hands of the Frieslanders it was not very easy for him to escape with his life, because no exchange of prisoners could be effected.

"It was seldom they [the Frieslanders] would surrender, but fought until they were slain, saying they preferred death and liberty to being under the subjection of any lord whatever. Their friends or relations never brought any ransoms for those who were taken, but let them die in prison. The Frieslanders offered their prisoners in exchange, man for man, but when their enemies had none to give in return they put them to death."

Besides the especial danger thus incurred by one who was taken prisoner, it may be observed that the campaigners had to face all the miseries of an exceptionally severe season in an inclement climate. "The weather began to be very cold and to rain almost daily; there were also great tempests at sea."

We may also conclude that Chaucer wrote while these things were still quite fresh in men's minds, as we have not had much to do with Friesland in general, except at a very early period of our history. Hence, also, the Wife of Bath's Tale, mentioned in this poem, was certainly written before 1396; how many years before then, I will not undertake to say.

WALTER W. SKEAT.

IS ENGLISH A LOW GERMAN DIALECT?

Hamilton College, Clinton, N.Y. U.S.A.:
 March 2, 1888.

Prof. Skeat in his *Principles of English Etymology*, protests with much zeal in several places, e.g., p. 78 and 80, against the deeply rooted popular error of deriving English from German. But this error is almost pardonable, if we look at its source, which is not difficult to find. In Max Müller's *Science of Language*, in Whitney's *Life and Growth of Language*, and in the last volume of Max Müller's *Biographies of Words*, which from its attractive style and for other reasons is sure to become very popular, the classification of the Teutonic languages is Gothic, Low German, High German, Scandinavian. Says Max Müller, p. 89:

"There is a continuous growth in every language, which enables us to say, even in so motley a language as English, that it is Low German, whether it is spoken by Celts, Saxons, Danes, Normans, or by Zulus, Malays, or Chinamen."

Skeat himself speaks, p. 77, of "continental Low German." Does not this imply that there is somewhere a non-Continental Low German

dialect? Yet there is none, unless we mean the dialects on the small islands off the coasts of Hanover, Oldenburg, and Holland. It is true that saying English is a Low German dialect is not saying that English is derived from either Low or High German; but the statement is misleading, and I question the fact.

When the Jutes, Angles, &c., crossed from the continent to Britain and settled there, the languages that they spoke had still the general Teutonic consonant-system—that is, that stage reached by all the Teutonic languages by the first or prehistoric shifting according to Grimm's law and Verner's law. This stage did not differ much from the Gothic consonant-system of the fourth century as extant in Ulfila's Bible. The only Teutonic languages that have preserved the consonants essentially as the first shifting left them are (1) Gothic and (2) the Scandinavian languages, which form together the East Germanic group, and (3) English alone out of the West Germanic group. English, though a member of the West Germanic group, really stands on account of its consonants between this group and the East Germanic. Its geographical separation from the rest of the group was one factor that preserved it against the second or the German shifting according to Grimm's law, which was partial and fortunately historical, so that we can follow the various steps in point of time and geographically. The Continental West Germanic languages, i.e., the German dialects, one of which developed into the literary language of Germany and another into that of Holland, all shifted more or less, some early and some late. The South or Upper German dialects first and most, the Middle German shifted next and less, and the Low German shifted last of all and least of all, viz., *th* into *d*. This shifting of *th* into *d* we can trace from its beginning in the Bavarian dialect about 800 to its end in the Middle Frankish about 1200. All the German dialects, Low, Middle and High, have gone through this one shifting of *th* into *d*. The definite article is *de* in Sleswic, Dutch, Plattdeutsch, in Swiss, Austrian, and Alsatian German, but *the* in English. "Low German," as understood by German "Germanisten," is a theoretical name that covers a multitude of different dialects, but never English (Anglo-Saxon). Let us be careful then in the use of terms, and then neither the public nor our students will say English is derived from German.

Many grammars and teachers are afraid of Grimm's law as something exceedingly difficult and never to be ventured upon, lest they confuse the minds of students. Yet they will teach their students so-called "correspondences" between English and German sounds. They start about as follows: To German *d* corresponds English *th*, to German *t* English *d*, to German *p* English *f*, &c. How easily this leads to putting the cart before the horse and saying: German *d* becomes in English *th*, German *p* and *f* become in English *p*! This leads to thinking that German is the older language, and that English is derived from it. My experience has been that, when my students have reached such a stage of progress that they feel in their reading and in the study of the grammar that German is really related to English, that by comparing certain corresponding sounds they can identify very many words, then a few generous scientific doses of Grimm's law clear up for good and all any foggy notions they may have imbibed about the relation of English and German.

H. C. G. BRANDT.

THE CODEX AMIATINUS.

Stanbrook, Worcester: April 9, 1888.

Dr. Corssen will not allow that *bibliotheca* in Bede's "*bibliothecam geminavit*" means an

Old Testament; and, apparently in reply to the argument that a library cannot be doubled by the accession to it of a single volume, suggests that "*geminait*" may be a corrupt reading. If he can prove this, well and good; if not, let us make what we can of what we have.

Beda wrote his account of Ceolfrid's benefactions with even more than his usual care, for he wrote it in correction of the anonymous biographer. Every word in it is precious, and "*geminait*" is the most precious of them all; for it provides us—as I thought from the first, and still think—with, at least, a tentative theory which has not been disproved thus far, and may yet turn out to be the right key to the puzzle. Let me state my case.

Two old-version Old Testaments were begun by Benedict. Ceolfrid may have finished them or found them finished. But he provided each of them, when finished, with a twin companion in the shape of a Hieronymian Pandect, or complete Bible. Surely, there is no lack of balance, of antithesis, to *coepit* in this.

But Ceolfrid did more. He twinned or companioned (*geminait*) an old-version Pandect, which he had brought from Rome, by a third Hieronymian Pandect—the present Codex Amiatinus.

Now, the present Codex Amiatinus, in order to be *geminus* to its elder brother, must have resembled it—I am still re-stating my theory—in (1) the size of its leaves; and must also, one would suppose, have resembled it in (2) the lineation of its pages and (3) the character of its script; otherwise it would be *geminus* when standing closed on the shelf, but not when open and in use.

If, then, as seems to be allowed, the writing of Amiatinus be that proper to a much earlier age than Ceolfrid's, I may have caught the right clue; for, having determined the age of the character simulated, we get to the date of the Pandect which Ceolfrid brought from Rome.

Again, as to the pictures. If Amiatinus be *geminus* in script to its elder brother, may it not be similarly *geminus* in ornamentation? Here, too, we have a tentative hypothesis which it might be well to put to proof. As regards text, Amiatinus was an entirely distinct version from the Pandect brought from Rome, but it was made to resemble it in the *technique* of pagination and of character. And so, I apprehend, of the pictures. Surely, Ceolfrid could only carry out his purpose to the full by having his drawings executed in the same style as those of the "*pandectes vetustae translationis*" to which his new volume was to be a companion; but, as surely, it would have been idle to adorn the younger *geminus* with mere copies of pictures already in the elder *geminus*. The subjects might or might not be the same; the style would (*ex hypothesi*) be the same; but, if so, the treatment of common subjects would (*ex hypothesi*) be different.

MARTIN RULE.

PRIVY COUNCIL JUDGMENTS.

London: April 7, 1888.

I think Mr. Sargent has scarcely estimated aright the various grounds upon which objectors to the Privy Council as a court of final appeal in ecclesiastical causes base their resistance. These grounds are four in number.

1. The court (and Lord Penzance's court also) was unconstitutionally set up, no assent of the spirituality being had. It is customarily forgotten that the spirituality is an independent estate of the realm, co-ordinate with the Lords and the Commons; and the erection of a court for spiritual causes without the assent of this estate was in contravention of the Constitution and beyond the powers of Parliament, just as

it is beyond the power of the Lords or the Commons to enact a statute validly in one chamber only. It is precisely because the Church of England is established that the Privy Council and Lord Penzance's court are not lawful Church tribunals. The State might erect courts to try all Roman Catholic or Protestant Nonconformist spiritual causes; and such courts, however politically inexpedient and morally indefensible, would be legally valid. But the Church of England has its own legislature and courts, which the civil power is bound to respect; and courts set up in the fashion of the two at the bar are null and void.

2. The court has never possessed valid spiritual jurisdiction. The Crown is not the fountain of jurisdiction in spiritual causes, and can merely give civil sanction for coercive purposes to ecclesiastical tribunals. The same holds good of Parliament. Given such a court with true jurisdiction, the State can clothe it with additional powers, enabling it to enforce its decisions by temporal penalties; but it cannot bestow the original commission for the trial of spiritual causes.

3. The court has never been competent, in the sense of adequate knowledge of the subject-matter before it in such causes. I assert, from minute familiarity with all the leading ecclesiastical suits of the last forty years, that in each and all the judgments there are rudimentary blunders on elementary matters of fact which would have led to the ignominious plucking of the judges had they been students under examination in the subjects handled. I can give chapter and verse for this charge should it be challenged, but I wish to be brief now.

4. The court has almost never done justice, but has repeatedly misinterpreted the law it professed to administer, ruling directly in its very teeth.

I can produce evidence here also, if called for. I will content myself now with quoting a phrase from Mr. Gladstone, who has described Privy Council law as a "*lead rule*," bent at pleasure, and with reminding Mr. Sargent that in respect of the Gorham judgment, it is to be remembered that, after Mr. Gorham had got possession of Bramford Speke by means of it, he turned round and publicly repudiated the tenets it had ascribed to him and declared tenable; for it did not acquit his opinions at all—that would have been something too barefaced, for he admits that they all but prevented his ordination in 1811, long before the days of the Oxford movement—but invented an entirely new doctrine, fathered it on him, and acquitted that. Nor is it true that the Privy Council judgments have been always in favour of liberty. The Heath, Purchas, Mackonochie, and Ridsdale findings were one and all in restriction of liberty—unjustly, too.

RICHARD F. LITTLEDALE.

HOME ARTS AND INDUSTRIES ASSOCIATION.

London: April 11, 1888.

May I be allowed to state that the peculiar system of design advocated by Mr. Leland, in his book reviewed in the ACADEMY last week, is not taught by the Home Arts and Industries Association.

Persons interested in the work of the association can obtain accurate information from the secretary, at the Royal Albert Hall.

Mr. Leland, in a footnote, thanks the giver of a large donation "in the name of the association." It is perhaps needless to say that this was a work of supererogation, our thanks having been conveyed to the gentleman in question some months ago.

M. McCALLUM.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, April 16, 8 p.m. Society of Arts: Oantor Lecture, "Milk Supply and Butter and Cheese Making," II., by Mr. R. Bannister.

8 p.m. Victoria Institute: "Mystical Buddhism in connexion with the Yoga System of Philosophy," by Sir Monier Williams.

TUESDAY, April 17, 8 p.m. Royal Institution: "Ruskin," II., by Dr. O. Waldstein.

7.45 p.m. Statistical: "Progressive Taxation: some Examples from Switzerland," by Mr. R. H. J. Palgrave.

8 p.m. Society of Arts: "A Hundred Years' Progress in New South Wales," by Mr. W. F. Buchanan.

8 p.m. Civil Engineers: Discussion, "Compressed Oil-Gas and its Applications," by Mr. Arthur Ayres.

8.30 p.m. Zoological: "Some New Species of Heterocera collected by Mr. C. M. Woodward in the Fiji Islands," by Mr. Herbert Druce; "Atavism," by Mr. T. D. A. Cockerell; "The Vocal Pouches of *Echinoderm darwini*," by Prof. G. B. Howes; "A New Genus and Species of Rat from New Guinea," by Mr. Oldfield Thomas.

WEDNESDAY, April 18, 8 p.m. Society of Arts: "Telescopes for Stellar Photography," by Sir Howard Grubb.

THURSDAY, April 19, 8 p.m. Royal Institution: "The Chemical Arts," II., by Prof. Dewar.

8 p.m. Lanes: "Influence of Temperature on the Composition and Solubility of Hydrated Calcium Sulphate and of Calcium Hydroxide," by Mr. W. A. Shenstone and Mr. J. Tudor Oundall.

8.30 p.m. Historical: "Historical Evidence gathered from the Traders' Tokens of the Seventeenth Century and from the Minor Currency," by Mr. G. O. Williamson.

8.30 p.m. Antiquaries: "The Sped-Trials of the latest Addition to the 'Admiral' Class of British War-Vessels," by Mr. D. S. Capper.

8 p.m. Philological: "Old-Teutonic Syntax, II., the Early Oathisms and Paternosters and the Eleventh-century Translations," by Prof. Kuno Meyer.

9 p.m. Royal Institution: "Antagonism," by Sir W. R. Grove.

SATURDAY, April 21, 8 p.m. Royal Institution: "The Later Works of Richard Wagner," II., with Vocal and Instrumental Illustrations, by Mr. Carl Armbruster.

SCIENCE.

Geology. By Joseph Prestwich. Vol. II.: Stratigraphical and Physical. (Oxford: Clarendon Press.)

It is but rarely that the student of geology has the good fortune to receive a treatise so solid in substance, yet so elegant in form, as that which Prof. Prestwich issued on the eve of his retirement from the Chair of Geology at Oxford. The second volume of his great work, though sufficient to represent the labour of half a lifetime, has followed its predecessor at an interval of only two years. While the first volume was devoted to the chemical and physical aspects of geology, the present instalment of the work—according to the subordinate title—is essentially stratigraphical and physical. It deals, indeed, with what is often conveniently termed "*Historical Geology*." Starting from the very beginning of things—or, at least, from the time when the molten globe was first crusted over by the consolidation of its cooling surface—it traces the successive physical changes which have affected this crust throughout the course of geological time. And parallel with this physical history there runs a sketch of the development of life upon the earth—so far, at least, as the story of this development can be recovered from the time-worn record of the rocks. Finally, the author rises into the region of speculative geology, and in his closing chapters enters on the discussion of certain physical and cosmical problems, full of fascination, but beset with the gravest difficulties—such problems as those relating to the cause and duration of

the glacial epoch, to the nature of the earth's interior, and to the primitive condition of our planet.

One of the features that immediately strikes the reader of this volume as being specially noteworthy is the prominence which the author gives throughout to foreign geology. It is true the average student is often compelled to rest satisfied with a knowledge of British stratigraphy, and is apt to feel oppressed by details descriptive of equivalent rocks in other countries. But the advanced student, bent on compassing the science on all sides—and it is for such that this work is primarily intended—will not fail to value the excellent sections in which Prof. Prestwich takes a world-wide survey of the successive formations, tracing their distribution and comparing them with corresponding strata at home. With the view of enabling the reader to follow the details of continental geology, a large folding map of Europe has been introduced as a frontispiece. This map—prepared by Mr. W. Topley and Mr. J. G. Goodchild—has been coloured, for the most part, in accordance with the recommendations of the International Geological Congress. The result is a singularly effective map; while its accuracy is vouched for by the fact that it has been compiled from the most recent official surveys, supplemented by unpublished information drawn directly from continental geologists of high authority.

It needs but a slight examination of Prof. Prestwich's volume to see that—as is commonly the case in similar works—certain subjects are discussed in much greater details than others which appear to be of equal importance. Thus, the Cretaceous rocks are treated with more than average fulness, the Archæan rocks with less. To the origin of the Chalk an entire chapter is devoted; yet the reader will not be disposed to begrudge this space, inasmuch as the chapter is unquestionably one of the most valuable in the volume. While admitting the general resemblance between the Chalk and the Globigerina-ooze, the author has done good service by insisting on the great differences between these deposits. As the work has been avowedly written in a spirit opposed to uniformitarianism, the writer naturally dwells, wherever possible, on the unceasing variation in the play of terrestrial activities throughout the earth's history; and in the Cretaceous section he does not fail to emphasise the fact that the present deep-sea deposits do not exactly match any of the older strata, just as—on the other hand—the deposits of the ancient Chalk sea were not precisely paralleled at any other period of geological time.

"In no period of the past," says Prof. Prestwich, "do we find deposits exactly of the character of the abyssal 'red clay' and 'Globigerina-ooze,' nor do we meet at the present day with the exact homologue of the Chalk. The conditions under which it was deposited were peculiar and special; and though it presents many points of analogy to the calcareous ooze, there are none of identity, and the Chalk stands alone among the British strata, in its peculiar structure and origin."

With reference to the sections on the Tertiary and Quaternary periods, it is sufficient to remark that, being written by a master acknowledged to be without rival in these

departments, they possess an authority which can hardly be claimed by the corresponding sections in any other treatise on geology in the English language. Speaking of the well-known sands which immediately overlie the London clay around the metropolis, Prof. Prestwich expresses his opinion that instead of associating them with the Bagshot series, as is usually done under the name of "Lower Bagshot sands," we should rather group them with the London clay, from which they are but obscurely separated, since the upper part of this clay, becoming sandy, gradually passes into the unfossiliferous quartzose sands without any sharply-drawn dividing line. In a paper recently read before the Geological Society Prof. Prestwich has suggested that these beds should be called the "London sands"—a suggestion which immediately commends itself to the geologist, inasmuch as the new name connotes their intimate relationship with the underlying London clay.

Of the many excellent chapters which fairly deserve distinctive mention attention may be specially called to those in which the author, rising from the discussion of details, takes a general palæontological review of each of the great periods—the Palæozoic, the Mesozoic, and the Kainozoic. Throughout the work great care has been taken in selecting the most characteristic forms of life to be enumerated under each formation. The student will gain much assistance in recognising his fossils from the figures of common species, beautifully executed as woodcuts and distributed through the text with no illiberal hand. In addition to these scattered figures there are sixteen lithographic plates of illustrative genera, depicted with singular fidelity by the skilful crayon of Miss Gertrude Woodward. The general excellence of the illustrations is, in fact, one of the many merits of the book. A crowd of works, more or less similar in general scope, are already before the student, each soliciting attention by its peculiar merits; but in this crowd Prof. Prestwich's treatise should have no difficulty in wedging its way to the front by sheer force of its excellence and originality.

F. W. RUDLER.

OBITUARY.

PANDIT BHAGVANLAL INDRAJL.

Bombay: March 22, 1888.

MANY readers of the ACADEMY will be grieved to hear of the death of Pandit Bhagvanlal Indrajil. He died on Friday last, March 16, at his house in Walkeshwar.

I have seen him from time to time during his last illness; and two days before his death I had the sad pleasure of paying him a visit along with M. Senart, to whom he was well known, and who, like every one else who knew Bhagvanlal, held him in great regard and affection. We had previously taken steps to learn if our visit then would be agreeable, and were met on the way by a note, dictated by the Pandit, pressing us to come. His bodily state, he said, was getting worse and worse, and we must come quickly. I was told afterwards that he hoped each step on the stair might be that of the distinguished scholar who was coming to him with news about the recent discovery of an Asoka inscription. M. Senart will, I know, be glad that we did not yield to the fear we had that a visit at such a time might be out of place. Bhagvanlal rallied to greet

his friend in a way none of those who were present will forget. It was too painfully obvious to all that the end was a matter of hours. But his eye kindled as he listened to all M. Senart had to tell him. The only murmur of impatience which escaped him was when he heard that his friend had been to Junaghar—"my native place"—and he not able to accompany him there. "I am so sorry, so sorry." He pressed my hand warmly when we took leave of him, and I was glad to feel sure that we had given him a moment's pleasure. His death was to himself a relief. "I am quite happy to go to God" were his words to me some days before. But more than one of your readers will feel with his friends here that the world is poorer to them now that so simple, so true, and so pure a soul has gone from it. A man greatly beloved, in whom was no guile.

His body was burned the same evening in the Walkeshwar burning ground close to his house. In a will written shortly before his death he had left directions which were for the most part faithfully carried out. All the ceremonies for the dying had been performed by himself in anticipation of death. They were not to be repeated now. When the end came near, earth, brought by himself from a holy place, was to be spread on the ground, and he was to be lifted from his bed and laid on it. His body was to be covered, up to the mouth, with the sacred sheet he had provided. The name of God was to be said repeatedly in his ear as he lay dying. When the breath was seen to be departing, the holy water he had brought from the Ganges was to be sprinkled over him, and a few drops put into his mouth. At the moment of death the sheet was to be drawn over his face and not again removed. Four friends were to carry him to the funeral pyre, and no weeping was to be made for him. Only the name of God was to be ever repeated. The women were not to come. When all was over his friends were to return to his house and disperse, first sitting together for a little time, if they so chose. He had no son or heir to take objection to the absence of the usual rites. Let his friends bethink them of the great sin they would commit if in any of these things they disregarded "the wishes of the previous owner of what would be then a worthless corpse." His caste people must not be allowed to interfere. The friends who should do his will were his true caste people.

Bhagvanlal left the history of Gujerat he was writing for Mr. Campbell's Gazetteer unfinished, but he worked hard up to the last day or two to perfect the fragment he had commenced. He finished his account of the Kshatrap coins in his possession in the draft of a paper dictated by him in Gujerathi, in which he has also given a full account of the lion pillar capital with its inscriptions in Bactrian Pali which he brought from Muttra. This paper will, in accordance with his wish, after it has been put in the form he would himself have given to it, be offered to the Royal Asiatic Society. His coins and inscriptions, including the Muttra one, are to be offered to the British Museum on terms which I do not doubt the authorities there will gladly agree to. His MSS. he has left to the Bombay branch of the Royal Asiatic Society, asking only that they may be placed near the MSS. of the late Dr. Bhao Daji. I cannot yet say in what state his papers, other than that to which I have referred, have been left. But his friend and executor, Mr. Karsandas Valubhdas, has asked me to look over them; and I undertake that nothing which can be published shall be lost. I hope at all events that we shall be able to bring together in a volume all the published papers of the Pandit, alongside of those of his revered master and friend Bhao Daji. Bhagvanlal, I know, would have wished for just such a memorial.

I hope I have not written at too great length for your columns. I have myself lost a dear friend in Bhagvanlal; and I know that the details I have given will have a melancholy interest for a wide circle of scholars. They will join me in bidding him a last farewell—nay, rather, in the words with which we parted, *Punar darsanāya* ("Auf wiedersehen!").

PETER PETERSON.

CORRESPONDENCE.

THE ETRUSCAN SUN-NAME "USIL."

Barton-on-Humber: April 3, 1888.

On one side of the bronze of Piacenza (which represents a "Himmelstempel") are written the words *Tivs* (= *lunae*) and *Usils* (= *solis*). There is no other writing on this side, one-half of which is allotted to each luminary respectively. The connexion of the sun-name is as follows:

1. The first syllable—U.

As. Turkic	— u-d-u-n	= "day."
Mongolic	— { u-d-ü-r u-d	= "sun."
Akkadian	— { u-d u-t-u	= "dawn," "sun," "eye," "to rise."
Ostiak	— { x-a-t k-a-tj	= "sun."
Akkadian	— { u-t u-t	= "dawn," "sun," "eye," "to rise."
Yenisei-Ostiak	— { i i-ga	= "sun."
Kamacintzi	— i-gao	
Arintzi	— ei-ga	

2. The second syllable—Sil. The words mean "sun," except as mentioned.

Akkadian	— { s-a-l s'-a-l	
Ersa-Mordvin	— ts-i	
Lamuti	— ts-i-ugga (Strahlenberg).	
Samoid	— { c'-i-l tj-s-l	
Uigur	— j-o-l-a	= "light."
Tchagatai	— { j-a-l-au = "flame." s-i-l-i = "hot."	
Finnic	— s-i-l = "bright."	
Samoid	— s-i-l	
Ostiak	— s-i-l	
Tzerkaesi	— sch-ia-l-l	
Tomskoi Ostiak	— k-ia-l-da	(From Strahlenberg.)
Ozuwaschi	— k-ue-ll	
Tobolski	— k-iu-n	
Jakuti	— k-u-nn	
Kolbal	— k-ü-n	
Samoid	— { k-ou k-u-ja k-ai-ja h-a-jor	

3. The combination.

North Ostiak	— x-a-ll-s-l (xall) = "sun."
Permian	— a-s-a-l = "morning" (= "Rising-light").
Etruscan	— u-s-i-l = "Rising-sun."
Sabine	— au-s-s-l = "sun" (Festus, a loan-word).
Hésychios	— αὐ-κ-η-λ-ος = ἥλιος, ὁ πρὸς τοὺς ἡνῶντες.

Cf. the Etruscan *Noven-siles*, "heaven-gods" (vide *ACADEMY*, November 12, 1887, p. 323).

The final *s* in *Usils*, *Tivs*, *avils*, &c., which, according to Pauli, is the "Genetiv auf -si," represents the Ugric pronominal suffix -s, -si, -se, "he," "his" (cf. Lapponic *atja-s*, "his father"; Turkic *ata-si*, "his father"; Zyranian *sy*, "his," &c.; vide Taylor, *Etruscan Researches*, p. 205), and exactly corresponds with the English possessive case. So *Usils* = "Sun+his" = "the Sun's."

It thus appears from philology that *Usil* might mean either "Rising-sun" or "Bright-dawn," and be at one time a Sun-god, at

another a Dawn-goddess; and, when we turn to Etruscan art (the Mirrors), we find that such is actually the case. There is depicted a male Usil, an analogue of Apollo, and a female Usil, an analogue of Aurora. The latter Usil accompanies Upruni ("ἡρῆων," "the Rising"-sun), so that Festus and Hésychios are both quite correct; and a Turanian language, like the Sumero-Akkadian, with its want of gender and fullness of meaning in a single term, supplies the ultimate explanation of what seems to be, but is not, contradictory.

ROBT. BROWN, JUN.

TIBETAN LITERATURE AND THE BENGAL ASIATIC SOCIETY.

British Museum: April 10, 1888.

I am sure I express the feelings of fellow-students of Oriental literature when I thank you for reprinting interesting documents published in distant countries, such as the valuable Presidential address to the Bengal Asiatic Society reproduced in last week's *ACADEMY*.

I venture to call attention to a few points suggested by its perusal. First, as to the chief Tibetan text now commenced. We are told that there is "only one text available"; and yet my honoured friend, Mr. Brian Hodgson, perhaps the greatest of donors to the Bengal Asiatic Society, as to so many other institutions, gave to the India Office a complete copy of the *Kah-gyur* and *Btan-gyur* in 334 volumes. But I infer from a letter just received from Dr. Rost that no application for the *Sher-chhin* in this collection has come from Calcutta. I may also mention that Mr. Hodgson gave to the Royal Asiatic Society in London the Sanskrit text of the *Prajñāpāramitā* in 100,000 verses; and this, as I found some years ago at the society's rooms, is in a more complete state than appears from the published catalogue. He also gave a copy to the *Société Asiatique*. Though thankful for all assistance, I cannot but regret that more is not done, especially in India, towards the elucidation of these often very difficult philosophical books. We need commentaries and translations to supplement the useful abstracts already published by Dr. Rājendralāla Mitra, and the text referred to in the address as in course of publication by the same scholar. The Bengal Society itself possesses a MS. of a commentary on this text (the "*Ashtasahasrikā*"); and I may add that I saw (and have elsewhere described) another fine MS. in the *Mahārāja's* library at Kathmāndū.

The *Avadāna-Kalpālātā* will be of much interest. Its exact date is given in the Cambridge MSS., and corresponds to A.D. 1059.

OEOIL BENDALL.

SCIENCE NOTES.

A *Practical Treatise upon Modern Printing Machinery* will be shortly published by Messrs. Cassell & Co. The work is written by Messrs. Frederick J. Wilson and Douglas Gray, the former a printer and the latter an engineer. It will be illustrated with numerous engravings.

PHILOLOGY NOTES.

UNDER the title of *World English*, a new work by Mr. Alexander Melville Bell, author of "*Visible Speech*," &c., will be shortly issued by Messrs. Trübner. It aims at demonstrating the fitness of English for adoption as the universal language, to the exclusion of Volapük or any other artificial language. The great drawback to the extension of English hitherto has been its difficult and unsystematic spelling. *World English* introduces an amended alphabet, with new letters for unrepresented sounds; ordinary orthography remains unchanged as "*Literary English*." The aspect

of words is so little unlike in both systems, that readers of either will decipher the other without special instruction.

MR. E. J. RAPSON, of the British Museum, Fellow of St. John's College, Cambridge, is engaged on an English translation of the *Daçakumaracaritam* of Dandī, which will be published in Messrs. Trübner's "*Oriental Series*."

MEETINGS OF SOCIETIES.

ENGLISH GOETHE SOCIETY (MANCHESTER BRANCH).—(Saturday, March 24.)

THE REV. F. F. CORNISH in the chair.—Prof. A. S. Wilkins read a paper on "*Goethe's 'Iphigenia,'*" in which he dealt mainly with the question, so differently answered by various critics, as to how far we have in Goethe's play a reproduction of a Greek tragedy—a work from which those who are not familiar with the masterpieces of the Athenian drama may form a just conception of what that was to those for whom it was written, or, more exactly, played. Prof. Wilkins first gave a full account of the material Goethe had before him in the work of Euripides, and pointed out that in the Greek play the interest turns almost entirely on the skilful development of the plot, which kept the minds of the audience alternating between the extremes of hope and fear by the sudden and unexpected shifting of circumstances. Of development of character there is little or none; moreover, in all the leading personages there are serious flaws, which go far to hinder our perfect sympathy with them in their critical positions. The revengefulness and deceit of Iphigenia, and the combination of discretion with valour in Orestes, if very Greek, are not very heroic. Turning then to Goethe's play, Prof. Wilkins showed how unhappy was Mr. Donaldson's description of it as "*a singularly beautiful reproduction of Euripides*." Goethe entirely eliminated from his drama the two features which are always present in the Greek tragedy, as representing the two originally distinct elements whose union formed the drama—viz., the choric odes derived from the Dorian worship of Apollo, and the narratives of messengers lineally descended from the Ionian stories of the sufferings and the victories of Dionysus. The famous chant of Iphigenia, "*Es fürchte die Götter das Menschengeschlecht*," and one or two other semi-lyrical monologues in no way take the place of the elaborate odes sung by the chorus of Greek maidens; and although there are several splendid passages of narrative, these deal with the past, and not with action which, but for the conventions of the Greek drama, would take place before the eyes of the spectators. In the form, then, of Goethe's "*Iphigenia*" there is nothing distinctively Greek. Still more striking is the difference between the work of the Greek and of the German poet when we turn from the form to the spirit. In Euripides the interest centres mainly in the plot, the incidents of which have no connexion with the characters of the *dramatis personae*; with Goethe the climax of the interest is reached in the struggle of contending forces in the hearts of Iphigenia and of Thoas. That this struggle is one which would have been inconceivable by a Greek is only one more point of essential and fundamental difference. The Iphigenia of Goethe, with her tender heart and her un-Greek passion for truth, represents an altogether higher type of womanhood than that conceived of by Euripides. The troubles, too, of Orestes come rather from within than from without. He is tormented more by the abiding consciousness of his sin than by the pursuit of the Furies, which could find no place on the modern stage. The characters of Thoas and Pylades, too, are recast and lifted to an altogether higher plane. Yet, un-Greek as are many elements in the German play, we cannot accept Prof. Mahaffy's rather hasty criticism, that it is "*a somewhat unfortunate mixture of Greek scenery and characters with modern romantic sentiment*." As Mr. Lewes justly points out, Goethe only did as Euripides had done before him. Both chose a period remote from their own in order to set forth the ideas of their time under conditions free from the confusing complications of contemporary scenes and characters. Is, then, *Mdme. de Staël* as wrong

* The North Ostiak *sat-l*, like the Etruscan *u-sil*, combines the forms, i. e. *sat* (= *us*) + *l* (cf. Samoid *tel-ga*, inf.).

† Vide Lenormant, *Étude Syl. Osm.* 33.

as has often been assumed, when she says that "this tragedy recalls the kind of impression one receives in contemplating the Greek statues"? One element which has given its permanent power to the higher Greek art is that it puts aside the temporal and the accidental, and gives us that which is best and most beautiful in the humanity common to us all. Hence, we prize it not for its historical accuracy, but because it reveals to us possibilities of nobleness and grace which are ideals for all times and countries. And so it is with the lofty thoughts, the tender pathos, the loyal and unswerving truth of Goethe's "Iphigenia." If they are not Greeks, they are human. But, again, a second element in Greek art, as Mr. Mathew Arnold has often taught us, is the manner in which the parts are subordinate to the whole, so that the mind rests satisfied in the contemplation of the artistic unity. And, here too, Mr. Lewes justly says of "Iphigenia" that we have "the perfect unity of impression produced by the whole, so that nothing in it seems made, but all to grow; nothing is superfluous, but all is in organic dependence; nothing is there for detached effect, but the whole is effect. The poem fills the mind; beautiful as the separate passages are, admirers seldom think of passages, they think of the wondrous whole."—A short discussion followed, after which the secretary drew attention to the account in the *Wimarerische Zeitung* (March 11), of the identification by Dr. Kuhn of the final resting-place of Goethe's wife with a spot in the St. Jacobskirchhof, which will, it is hoped, be marked by a tablet.—Mr. Towers then read the poem by Carey, which, as had been mentioned at a former meeting, had suggested to Goethe his "Goldschmiedsgezell," and gave further particulars as to its composition.

CLIFTON SHAKSPEARE SOCIETY.—(Saturday, March 24.)

Mrs. C. I. SPENCER, president, in the chair.—The Rev. H. P. Stokes sent some "Notes on John Marston," calling attention to the confusion as to his personal history, to the feuds between him and Ben Jonson, to the ecclesiastical censure passed upon him by Whitgift and Bancroft, to Henslowe's description of him in 1599 as "the new poete," to the allusions to him in *Skialetheia* and in "The Return from Parnassus," &c.—Some "Notes on 'Antonio and Mellida'" were sent by Miss Emma Phipson, who said that the play is not much more than a series of episodes and intrigues, for the most part highly improbable, enacted by a set of persons who have little besides their names to identify them. The language is strained and affected; pompous, harsh-sounding words mar the smoothness of the lines, and scraps of learning are brought in with no other purpose than to show the author's erudition. As Marston's mother was an Italian, perhaps the sudden breaking out into that language of several of the characters was not so affected as it seems, but it must have tried the patience of his English-speaking audience. Marston is specially happy in his descriptions of natural phenomena, though in some of his expressions we may trace the influence of Chapman; but his heroes and heroines possess little individuality. Marston, whose satires were keenly felt, might himself have sat to Shakspeare for the portrait of Jacques. Mellida, in the hands of another writer, might have developed into a fine character; but here she is chiefly the sport of circumstances. Rosaline, who has been said to be a weak imitation of Beatrice, is really more like Nerissa. Some passages in the play which we might hastily call plagiarisms were, if our dates be correct, written before their supposed patterns.—Mr. S. E. Bengough read a paper entitled "The Dramatic Defects of 'Antonio and Mellida,'" saying that it was difficult to fix a standard of excellence by which dramatic works may be tested, seeing that they vary from a Greek tragedy to a Christmas pantomime. With all the differences that exist between the subjects of Elizabeth and Victoria, there is yet such a community of moral and intellectual nature between them that the works bearing the name of Shakspeare appeal powerfully to both. Here, then, is a standard of dramatic excellence by which to test the work of other playwrights. Guided by this we expect (1) that the plot or action of a drama shall possess unity and interest, (2) that its characterisation shall be

natural and consistent, (3) that its thoughts and sentiments shall be fresh and striking, and (4) that the expression shall be on a higher level than ordinary converse, either ideally beautiful or else distinguished by attractiveness of wit and humour. Painful experience, however, tells us that in other authors we look in vain for all these; and, if we find a high degree of excellence in one of these departments, we are willing to be blind to shortcomings in the others. "Antonio and Mellida" fails to come up to our test in any of the respects mentioned. The most that can be said of it is that here and there is a flash of genius; but, in order that one may be gratified with it, one has to suffer one's good taste to be perpetually shocked by insipid coarseness, gross sensuality, and extravagant bombast. The unequal character of the play is so remarkable that it makes one think that more than one hand was employed upon it. In some of the later scenes there are vigorous and subtle thoughts expressed in a garb of metaphor that reminds one now and then of the great master himself.—Mr. L. M. Griffiths read a paper called "The Story of 'Antonio and Mellida,' and some of its Shaksperianisms." He directed attention to the similarity between many of its incidents and those in Shakspeare. The resemblances of character are most marked. In much detail it was shown that there are strong likenesses between many of the characters in the play and some of Shakspeare's well-known people. There is no need to accuse Marston of copying from Shakspeare in the characterisation. Most of the *dramatis personae* are portraits of men and women common enough in Elizabethan times, and in their representation by two shrewd observers there would, of course, be much alike. In this play there is occasionally a fine thought or expression, which it seems not unlikely that Shakspeare may afterwards have elaborated. Altogether the play, while disfigured by much rant in the heroic parts, is in its lighter portions both clever and interesting.

PHILOLOGICAL SOCIETY.—(Friday, April 6.)

A. J. ELLIS, Esq., vice-president, in the chair.—Dr. Percy Andrae read a paper on "The MSS. and Versions of Richard of Hampole's *Pricks of Conscience*" in the British Museum. The museum, the writer said, has in its possession eighteen MSS. of Hampole's poem, only four of which prove complete, and these four unfortunately, all containing later and considerably modified texts. These eighteen MSS. form four distinct groups, traceable to four different versions of the poem. Three of these versions, A, B and C, comprising no less than sixteen MSS., are again derived—more or less indirectly—from a common source Q, rarely differing from the text of the fourth version Z, as represented by the two remaining MSS. Harl. 4196, and Cotton Galba E IX. Proof of this was afforded by a comparison of the three shorter and considerably altered versions A, B, and C, with the text of version Z. The result of this comparison, which extended over 500 lines taken from various parts of the poem, was to show that the reading of version Z, on which Dr. Richard Morris based his excellent edition of the poem, is in all essential particulars invariably corroborated by the reading of at least one of the three other versions. Slighter points of difference from Z, common to all the three versions, A, B, and C, only serve as evidence of their common origin in a source Q. The reasons for the innumerable alterations of the original text, which characterise the sixteen MSS. belonging to versions A, B, and C, are, for the most part, of a metrical kind. Metre and rhythm were not Hampole's strongest points. His verse was often barely distinguishable from rhymed prose. The number of feet in each verse varied between four and seven; and as to rhythm, it was sometimes only attainable by dint of an accentuation which rendered the language almost unrecognisable. These faults—and various other peculiarities, such as constant reiteration of the same words and phrases, a favourite practice of Hampole's—versions A, B, and C, had been at pains to modify. Dialectal considerations, on the other hand, were rarely the cause of textual alterations. Indeed, the midland version B had, curiously enough, taken less liberties with the original text

than the two northern versions A and C. Yet the usefulness of this midland text for clearing up certain textual and dialectal obscurities of the original poem is not to be denied. In allusion to the intention of the Early English Text Society to bring out a new edition of Hampole's poem, Dr. Andrae pointed out that a better text than that from which Dr. Morris had edited his work was not likely to be found. However, in a new edition, the Q text, which was the original source of versions A, B, and C, should be taken into account. Possibly the Q text itself might still be discovered among the thirty or forty, if not more, MSS. of the poem still extant in the various public and private libraries of the country. If not, the editor's task would be to reconstruct it from the texts of versions A, B, and C. The paper concluded with a brief account of the interpolations peculiar to some of the MSS., and a reference to the inadvertent omission of fourteen lines in Dr. Morris's edition.

FINE ART.

GREAT SALE OF PICTURES, at reduced prices (Engravings, Chromos and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. HARR, 115, Strand, near Waterloo-bridge.

Memorial Catalogue of the French and Dutch Loan Collection, Edinburgh International Exhibition, 1886. (Edinburgh: Printed at the University Press by T. & A. Constable, and published by David Douglas.)

FOR all visitors to the Edinburgh Loan Exhibition of 1886—for all of them, at least, to whom art is anything—the gallery of French and Dutch pictures which was then brought together is one of the most unforgettable of memories. Organised by the knowledge and enthusiasm of Mr. Hamilton Bruce, collected by his single-handed efforts—aided by the ready co-operation of collectors in this country, on the continent, and even in America—this gathering of about two hundred choice examples of the productions of the Romantic School in France, and of its aftermath in Holland, was something unique of its kind. In Paris, indeed, an important exhibition—including many works coincident in period and similar in aims to the art which Mr. Bruce made it his business last year to illustrate and to introduce in comprehensive sequence to a British public—was brought together in 1883; but the gathering in the Galerie Petit of the Rue de Séze was less extensive than the Edinburgh one, and, at the same time, it traversed a more extended field of art. It included old masters as well as modern—and, among the latter, the productions of men as widely apart as Delaroche and Delacroix, so sacrificing unity and concentration of aim to breadth and extent of view. It could not be justly styled a representative or typical exposition of the work of the Romanticists; and a hint of the difference between its aims and those of Mr. Bruce may be caught from the terms of the announcement of that publication which recorded it in plates by the most accomplished modern etchers and in letterpress by M. Wolff, from the emphasis which is therein laid—an emphasis most marked and exclusive—upon the productions of M. Meissonier, "le maître incontesté de notre époque," a master who did not at all fall within the scope of Mr. Bruce's scheme.

In our own country it has hitherto been impossible to obtain a just idea of the Romantic art of France, except by a prolonged and diligent search for such isolated examples of

the school as from time to time occurred in sale-rooms, or by a laborious and not easily attained house-to-house visitation among private collectors.

It was no more than just and fitting that an exhibition which, for the first time in our country, disclosed the results of a most important modern school of art—a school, too, which, from its concentration upon the finest and most distinctively painter-like qualities of technique, from the mastery which its leading members have gained over their material and the pure delight which they manifest in the display of its capabilities, is well fitted to correct some of the most easily besetting sins and weaknesses of our British painters—that an exhibition of such works should find some adequate and permanent memorial; and such a memorial, one thoroughly adequate and satisfying, is presented in the volume now before us.

It consists of a reprint of the catalogue of the gallery, with added descriptive notes upon each picture; a general preface and sketches, biographical and critical, of the painters represented from the pen of Mr. W. E. Henley; a series of page etchings from the chief pictures in the collection, the work of Mr. Hole and M. Zileken, with a supplementary plate by M. Blommers from his own water-colour; and a number of *croquis* by the two former artists, printed along with the text—helpful hints and jottings from many of the minor exhibits.

Mr. Henley seems, in the first instance, to have approached the Romanticism of France mainly from the side of its results in literature, in drama, and in music; and thus his view of that graphic art which was another of its developments, and upon which he has bestowed close and appreciative, if more recent, study, has gained in breadth and completeness, in aptness of illustration, and power of extended generalisation. His preface gives an excellent *résumé* of the history and significance of

“what is called Romanticism—the change, that is to say, in the material, the treatment, and the technical methods and ideals of art which operated in the France of Charles X. and Louis Philippe, . . . the protest and the achievement of a generation rich in strenuous and potent individualities.”

It is a movement—as we should judge from Mr. Henley's former literary productions, as is proved by this present preface—which possesses a powerful fascination for him personally, and he has bestowed upon his subject thoroughly appreciative exposition. By original make and constitution, by instinctive and irresistible sympathies of mind, he is himself a Romanticist—all men, as Hippolyte Flandrin used to say, are born “Romantiques” or Classicists—and his preface, in its rush and impetuosity, in its “whirling words” and its strenuous resolve to produce its calculated impression, its designed result—anyhow, but to obtain it—to drive home its conclusions, as with vigorous mallet-strokes, into the consciousness of the reader, is itself an example of the art of the Romantic school, as certainly a bit of Romanticism in printer's ink as was ever sketch of Delacroix's a bit of Romanticism in pigment. And it is remarkable, one may notice in passing, how informative, and how closely specific in its infor-

mation, the writer has succeeded in making his paper amid all its picturesqueness; its pages bristle with dates, they positively teem with proper names, and yet, throughout, they never fail of literary interest, or drop the charm of vigorous and effective style.

The notices of individual painters which succeed the preface are distinguished by similar qualities, are valuable in their record of facts, but are no less searching and sympathetic in their examination and estimate of artistic qualities. As an example of the vivid and accurate word-analogues which their writer presents of the styles and characteristics of the various painters with whom he deals, take the following on Monticelli:

“Delacroix and Turner used, it is said, to amuse themselves with arrangements in silks and sugar-plums; and what they did in jest, or by way of experiment, was done by the Marseillais in sober earnest, and as the last word of art. True it is that he has a magic—there is no other word for it—of his own; that there are moments when his work is infallibly decorative as a Persian crook or a Japanese brocade; that there are others when there is audible in these volleys of paint, these orchestral explosions of colour, a strain of human poetry, a note of mystery and romance, some hint of an appeal to the mind. As a rule, however, his art is purely sensuous. His fairy meadows and enchanted gardens are, so to speak, ‘that sweet word Mesopotamia,’ in two dimensions; their parallel in literature is the verse that one reads for the sound's sense only—in which there is rhythm, colour, music; everything but meaning. If this be painting, then is Monticelli's the greatest of the century. If it be not, if painting be something more than dabbling exquisitely with material—then, it has to be admitted, these fantasies materialised, these glimpses of the romance of colour, are only the beginnings of pictures—the caprices of a man of genius gone wrong.”

This is exquisite and vivacious description. It is discriminating—though certainly not quite final—criticism as well.

Occasionally, indeed, we find passages that are open to question or dissent. In the assertion that Daubigny possessed an “insight into the beauty” of the River Seine “entirely wanting to Turner,” we seem to catch a glimpse of “the one-eyed man”; and the statement that the draftsmanship of Delacroix, “though often loose and incorrect,” is “always expressive and significant,” proves that the writer has never seen that master's etching of the “Juive d'Alger,” or has seen it with that kind of sight which is none. There is little, however, in the letterpress that we can quarrel with. It forms a trustworthy handbook of modern Romantic art—one not likely to be soon bettered or superseded.

In turning to the illustrations of the book, it is natural and, indeed, almost inevitable that we should compare them with the plates which record the Rue de Sèze collection of 1883. These latter were the work of the most accomplished etchers of the time; of men, for the most part—Braquemond was an exception—to whom etching had been the one life-business; who had mastered the technicalities of copper and acid-bath with a completeness that was absolute. We find, accordingly, in their illustrations a certain nimble dexterity, a *finesse*, a dainty precision, and also, probably, a closeness of literal tran-

script and absolute fidelity—a fidelity strictly formal and measurable—which is wanting to the plates of the present book. But these, again, have their own counterbalancing qualities. They are freer and more painter-like as a rule, more vigorous and direct, and, therefore, really in deeper and more essential sympathy with the distinctive capabilities of their process.

Mr. Hole's version of Matthew Maris's “He is coming”—certainly one of the most fascinating plates in the book—aims at no servile accuracy of merely literal transcript. The picture is throughout far lower in tone than the print, it shows no absolute equivalent for the spaces of white, sun-lit background wall that appear in the plate, no accurate synonym for the etcher's most effective touches of black in the girl's gown. But the plate is all the finer—in a sense, all the more faithful—for the changes introduced, quite consciously, by the transcriber. It is a painter-etcher's memory in light-and-shade of Matthew Maris's coloured canvas, and as such it is a fine artistic success. Indeed, as an example of modern figure-etching, thoroughly vigorous, spirited, and unmechanical, we feel inclined to parallel it (different, in many ways, as are the two works) with Wilkie's plate—his finest—of the “Gentleman at his Desk,” remembering, too, that Wilkie, judging from most of his finished work on the copper, would probably have lost not a little freshness and spirit of handling had he carried his plate to such a pitch of completion as is reached in the etching now before us. Another of Mr. Hole's illustrations—from Monticelli's “Ravine”—may be named as an excellent rendering of a picture singularly difficult of transcript on account of its arbitrary form and the subtle fascination of its colour; while his “Evening in Normandy,” after Corot, reproduces in a manner most sympathetic the characteristics of this “poet in a minor key,” this painter of tender leaves that fluctuate against heavens of delicate silver and pale gold.

M. Zileken's plate from James Maris's “Souvenir de Dordrecht” is notable for its unpretending simplicity, and technically interesting for the bold leap taken by its tonality from blackest shadows of the foreground barges to the clarity of the withdrawn and brightening sky of evening. His transcript of the “Sleeping Child” of Israels is unlaboured and accomplished, and in quite singular sympathy with the painter's own autographic work upon the metal plate.

The smaller *croquis* are for the most part helpful and welcome. That after Israels, at p. 103, is especially remarkable for the vigour and freedom of its expression by line; and that from Daubigny, at p. 17, is as representative of the master as such work could well be. The transcripts, however, at p. 121, from Matthew Maris's ornamental panels, are both spoiled as decoration and rendered false to their originals by the entirely undue force with which the involutions of the patterned background tell against the figures; and the *croquis*, at p. 26, is so unrepresentative, so unsuggestive even, of Delacroix's work—the sketch for his “La Barque de Don Juan,” which we all know in the Louvre—that it should certainly have been omitted from the volume.

In spite, however, of such little blemishes, the book is an admirable one, honourable to all concerned in its production; and we can only hope that the example of the exhibition of which it is the record, and to which it gives an extended publicity, may lead to some similarly representative gathering of the productions of the Romantic school being brought together before long in London.

J. M. GRAY.

EGYPT EXPLORATION FUND.

THE EXCAVATION OF THE GREAT TEMPLE OF BUBASTIS.

THE work of the Egypt Exploration Fund has been carried on now for nearly two months upon the site of Tell Basta, the ancient Bubastis. Readers of the ACADEMY will remember that we had already excavated there last year, and had discovered the buried ruins of a considerable part of the temple. We then dug chiefly in the oldest part of the temple, among the remains of a hall which contained blocks engraved with the cartouches of Pepi Merira of the VIth Dynasty, and Useresen III. of the XIIth. The hall itself itself had undergone several transformations, the last to remodel it being Osorkon II. of the XXIIId Dynasty, who called it the Festive Hall, and sculptured on its walls the representation of a great festival, which must have been one of the most important events of his reign. Further west stood a Hypostyle Hall with beautiful columns, with palm and lotus-bud capitals, as well as Hathor-head capitals, these last surmounting square pillars.

When we arrived at Tell Basta in February last—being a party of four, consisting of Mr. Griffith, Count d'Hulst, the Rev. W. MacGregor (who joined our camp as a volunteer), and myself—we at once began operations on a large scale. We went on excavating the two halls discovered last year, going north and south to the limit of the blocks, so as to lay bare the whole width of the building. On the east, we dug out another and a yet larger hall, which was the entrance to the temple. On the other side, we entirely cleared away the Hypostyle Hall, and began clearing the western part, which is the widest, and which seems to have been built, not by the Ptolemies, as I thought at first, but by Nectanebo I. We removed all the mounds of rubbish which divided the different parts of the temple, so that nearly its whole length, from east to west, is now visible. This large area, covered with huge granite blocks, interspersed with fragments of columns and broken statues, has certainly a very striking effect, and reminds one strongly of the ruins of the great temple of Tanis.

Some of the historical results of this year have been most unexpected. Last year I went to Bubastis chiefly to ascertain whether, as in all other localities of the Delta except Benha, the XVIIIth Dynasty was totally absent; and this problem I did not then succeed in solving. This season, however, we have found (in the Eastern Hall) two very interesting statues of an official named Amenophis, inscribed with the cartouches of Amenophis III., besides the torso of a woman of the same epoch. The official, evidently a great man, was governor of the "Marshy Nomes"—a very unusual way of designating the Delta. Amenophis III. is the same king of whom a monument has been found at Benha; and I much doubt whether before his reign there was anything like a settled organisation of the Delta. Curiously enough, we have also found traces of his strange successor, Amenophis IV. (Khuenaten), the name of his patron deity

having been discovered on a block in the Eastern Hall.

Though the XXIIId Dynasty is said to be of Bubastite origin, only two kings of this line seem to have worked at Bubastis—namely, Osorkon I., whose name appears frequently with that of Rameses II. in the Eastern Hall, and Osorkon II., who built the Festive Hall, and who, unlike Osorkon I., has sedulously erased the cartouches of Rameses II. and substituted his own. In order to economise the labour of bringing granite from Assouan, he also cut to pieces the numerous statues of Rameses II., which already adorned the temple, and built them into the walls of his Festive Hall. The great ceremony there celebrated was not in honour of Bast, but of Amon, and it took place in the twenty-second year of his reign. Sheshonk I., the chief of the dynasty, appears only on a small limestone figure discovered a few days ago.

The most interesting historical discovery of the present season is the fact that Bubastis, like Tanis, was an important Hyksos settlement. At the eastern entrance, built into a kind of bad Roman wall, we have found a colossal head of black granite broken in two at the height of the eyes. The projecting mouth, the aquiline nose, the high cheek bones, the sharp modelling of the cheek, are so exactly like the Tanis sphinxes at Boolak, that it is impossible not to recognise at once a Hyksos head. At a short distance were the feet and the colossal base of the statue showing erased cartouches. Last week we began the difficult work of hauling the base out of the water; and when the men cleared the surrounding earth, they came upon another colossal base of exactly the same type as the first, but in a much better state of preservation, the figure being perfect as high as the knees. Other fragments lie scattered around, so that we may hope to find another Hyksos head.* These two colossi evidently stood close together by the entrance to the temple. The cartouches being erased, I fear we shall not discover the name of the king; but I presume that it was Apepi; for, on turning a heavy architrave in the Hypostyle Hall, we found a large cartouche of this great Hyksos ruler.

It is to the Hypostyle Hall, also, that we are indebted for the choicest reward of our labours this winter. At a very short distance from the architrave of Apepi, I observed a projecting corner of black granite, which looked like the base of a statue. After we had dragged it out of the mud, we found that it was the lower part of a statue of natural size, executed in the style of the XIIth Dynasty, with the feet resting on the nine bows. On the front of the throne, at each side of the legs, the cartouches and standard are in a perfect state of preservation. The inscriptions read as follows: "The divine Horus who embraces the lands, the good god Userenra, the son of Ra, Raian, loving his Ka, everliving." In the first cartouch there is a doubtful sign which I read User. That he should be the worshipper of his Ka (i.e., of himself) is a very curious circumstance. Thus we have an absolutely new and unknown Pharaoh. I shall not anticipate the discussions to which this name will give rise, but Arab tradition says that Raian ibn Weleed was Joseph's king. Unfortunately, everything is so much destroyed and smashed at Bubastis, that we cannot hope to find the torso and head of Raian. We shall, however, be very fortunate if we discover another head of Apepi.

We are now clearing the western part of the temple, and rolling the blocks of the Festive

Hall, in order to discover the successive strata of names. Another fragment of Pepi has turned up, as well as the name of another king, who belongs to the XIIth Dynasty.

Between the Hypostyle Hall and the western part we have found no less than three statues of Rameses VI., more or less broken. I also discovered a monument of this king at Benha last year. These, I believe, are the first occasions upon which he has been met with in the Delta.

EDOUARD NAVILLE.

Regarding the name of Raian as the Pharaoh of Joseph, we quote the following letter from the *Times*:

"The name of King Raian, recently discovered by M. Naville at Bubastis, is all but identical with the name which Arab tradition gives to Joseph's Pharaoh. Mas'ûdi, who has been followed by all the later historians, says in the *Morûj ud-Dahab* that the Hamites who peopled Egypt had been for some time ruled over by women, in consequence of which kings from all quarters were lusting after their land. An Amalekite king named al-Walid invaded it from Syria and established his rule there. After him came his son, Rayyân ibn al-Walid, in whose time Joseph was brought to Egypt.

"It is hard to believe that so striking a coincidence should be due to mere chance. But the question it raises cannot be finally settled until the Arab tradition shall have been traced to its source. Meanwhile, the alien character of the dynasty may be noted as an additional point of resemblance.

"CH. RINU."

NOTES ON ART AND ARCHAEOLOGY.

THE picture season is now beginning in earnest. The exhibition of the Royal Society of Painters in Water Colours does not open until the week after next; but on Monday, April 16, no less than four collections of more than ordinary interest will be on public view. These are (1) the paintings, drawings, and etchings brought back by Mr. Mortimer Menpes from his recent visit to Japan, at Messrs. Dowdeswell's new gallery in New Bond Street; (2) pictures and drawings illustrative of "The Duchy of Cornwall," by Mr. Alfred East of the Institute, and by Messrs. T. C. Gotch and W. A. Ingram of the British Artists, at the Fine Art Society's, also in New Bond Street; (3) watercolours painted by Mr. W. L. Wyllie on a cruise from Hoo to the Islands of Zealand, Brabant, and the Zuyder Zee, entitled "Netherland Waterways," at Mr. Robt. Dunthorne's, in Vigo Street; and (4) Irish pictures and sketches by Miss Jane Inglis, at St. George's Gallery, near Hanover Square. We may also mention that Messrs. Bellman & Ivery will exhibit next week a collection of sculpture, to which Mr. E. Onslow Ford contributes, in Piccadilly.

RECENT numbers of the *Nation* have contained full accounts of the excavations now being carried on in Attica by the American School of Classical Studies at Athens. The spot chosen was an old ruined church, on the lower slope of Mount Pentelicon, which bears the name of Dionysos. The discovery of numerous inscriptions and other remains seems to prove decisively that this is the site of Icaria—a hitherto unidentified deme of Attica, closely associated with the worship of Dionysus and with the first beginnings of the drama. Icaria was the birthplace of Thespis, the father of Athenian tragedy; and we learn from the Parian chronicle that the first comic chorus was composed of Icarians. Apart from this historic interest, the excavations have yielded a number of archaeological objects—notably a colossal head of Dionysus, bearded in archaic fashion, which is assigned to the sixth century B.C.;

* A telegram from M. Naville, dated Zagazig, April 9, adds this additional news: "Second Hyksos head, nearly perfect."

and a duplicate (except as to the face) of the celebrated bas-relief commonly known as the "warrior of Marathon." The present director of the American school is Prof. Merriam; but these excavations have been carried out under the supervision of Mr. Buck, of Yale college.

The address which the late Robert Herdman, R.S.A., had promised to deliver, a few days before his death, to the students of the School of Art at Edinburgh, has been published from his MS. as a pamphlet by Mr. David Douglas.

THE STAGE.

THE ST. JAMES'S AND THE NOVELTY.

THE late Mr. Lovell's once very favourite play, "The Wife's Secret," has been brought out at the St. James's Theatre. This is manifestly a departure from the plan announced at the beginning of the season—that the final period of the Hare and Kendal management would be devoted to revivals of the pieces with which the management and their great emotional actress had been associated. There is no part in "The Wife's Secret" for Mr. Hare, nor do we know that Mrs. Kendal has ever until now appeared in it. Certainly she has not appeared in it at the St. James's. The continuity of the revivals is therefore broken, and this, it seems, without affording either to Mr. or to Mrs. Kendal any exceptional occasion for the display of their art. But the piece is evidently intended to run for a good many weeks, as it is provided with a scenic luxury the like of which it never previously knew. Mr. Mackintosh and Miss Fanny Brough are, perhaps, the only performers of any note who appear in the play with Mr. and Mrs. Kendal. Maud's is a good part and Miss Brough contrives to be lively. Let us trust the performance—which the sterling, if somewhat old-fashioned, merits of the play must forbid to be a failure—will be followed by a revival of "The Money Spinner" and of "The Squire." These are dramas in which, while there is yet time, Mrs. Kendal should unquestionably be seen again.

MR. GEORGE GIDDENS—an exceedingly rising comic actor, with a pretty gift for being pathetic into the bargain—has, in association with Mr. Warren, taken the Novelty Theatre, where he is amusing in "Nita's First," and where, in "Fennel," he compels tears. "Fennel" is an adaptation, by Mr. Jerome K. Jerome, of one of the best pieces of François Coppée—"Le Luthier de Cremonne." It deals with the loves of two young violin-makers for the daughter of an older luthier, who engages to award the desired lady to the maker of the best fiddle. The best fiddle is made by the ill-favoured suitor, whom the girl does not love. His rival, doubting not that this would be the case, has in a moment of temptation—which even the pretty poetry of M. Coppée can hardly justify—substituted it for his own, thinking thus, of course, to win the prize. But the ill-favoured, though generous, one has been beforehand in this matter, and, knowing he was not loved, he has secretly given the *bel homme* the benefit of his excellent workmanship. Thus the *bel homme's* selfishness threatens to defeat its own ends. Nevertheless the more skilled luthier persists in his resignation of the young lady; and, leaving rival and maiden to their loves, he departs into other lands with the consolation of music. Needless to add that it is Mr. George Giddens who, at the Novelty, plays the magnanimous, though deformed, hero. The translation is good, but it is impossible, of course, not to feel rather keenly the absence of the French poet's dulcet verse.

FREDERICK WEDMORE.

WORKS BY THE LATE REV. C. W. KING, M.A.,

Senior Fellow of Trinity College, Cambridge.

- JULIAN the EMPEROR.** Containing Gregory Nazianzen's Two Invektives and Libanius' Monody, with Julian's extant Theosophical Works. Translated by the late Rev. C. W. KING, M.A. Small post 8vo, 5s. [Just published.]
- PLUTARCH'S MORALS.** Theosophical Essays. Translated by C. W. King, M.A. Small post 8vo, 5s.
- HORACE.** Illustrated from Antique Gems by C. W. King, M.A. The Text Revised, with an Introduction by H. A. J. MUNRO, M.A., Fellow of Trinity College, Cambridge, Editor of Lucretius. Large 8vo, £1 1s.
- ENGRAVED GEMS.** Revised Edition, with more than 600 Illustrations. 1 vol., imperial 8vo, 16s.
- EARLY CHRISTIAN NUMISMATICS,** and other Antiquarian Tracts contributed to the *Archæological Journal* and other papers. Demy 8vo, Illustrated, cloth gilt, 18s.
- NATURAL HISTORY of GEMS or DECORATIVE STONES.** With Index and Illustrations. Small post 8vo, 6s.
- NATURAL HISTORY of PRECIOUS STONES,** and of the PRECIOUS METALS. With Index and Illustrations. Small post 8vo, 6s.

LONDON: GEORGE BELL & SONS, YORK-STREET, COVENT-GARDEN.

BLACKETT'S STANDARD LIBRARY OF POPULAR AUTHORS.

3s. 6d., cloth, with plates (post 5d.).

PRISON CHARACTERS, DRAWN FROM LIFE.

By F. W. ROBINSON, Author of "Grandmother's Money," &c.

LONDON: SPENCER BLACKETT (Successor to J. & R. MAXWELL), 35, ST. BRIDE STREET, E.C.

THIS DAY, AT ALL LIBRARIES.

THE BLACKSMITH OF VOE.

A NOVEL.

By PAUL CUSHING,

Author of "Misogyny and the Maiden," "A Woman with a Secret," &c.

3 vols., post 8vo, 25s. 6d.

THIS DAY IS PUBLISHED.

TIMAR'S TWO WORLDS.

By MAURUS JOKAI.

Authorised Translation by Mrs. HEGAN KENNARD.

3 vols., post 8vo, 25s. 6d.

"Timar's Two Worlds" may not only be regarded as its author's masterpiece, but as a masterpiece of European literature.—"Athenæum."

"A work which is certain to obtain wide popularity. It is strong in incident, graphic and picturesque in its descriptions of scenery or events, intensely dramatic in construction, and contains much vigorous character-drawing."—"Scotsman."

SCOTLAND AND SCOTSMEN IN THE EIGHTEENTH CENTURY.

Edited from the MSS. of John Ramsay, Esq., of Ochtertyre.

By ALEXANDER ALLARDYCE,

Author of "Memoir of Admiral Lord Keith, K.B.," &c.

2 vols., 8vo, 31s. 6d.

"This is the best book which has appeared on the Scotland of the past—a Scotland not too remote or barbarous to be now uninteresting.... It embodies the experiences of a shrewd, sagacious, rollicking Scotsman, who lived in times when events happened that were worth observing."—"Scotsman."

"The reader may turn to what chapter he will, and wherever he pauses be sure of good entertainment."—"Athenæum."

"Altogether these volumes form the most interesting addition that has for some time been made to Scottish social, personal, and anecdotal history."—"Scotsman."

A New and Cheaper Edition of

POOR NELLIE.

By the AUTHOR of "MY TRIVIAL LIFE and MISFORTUNE."

Complete in 1 vol., crown 8vo, 6s.

"It is a very powerful and remarkable book."—"Spectator."

"Poor Nellie," though it follows on a work so vigorous as "My Trivial Life," has in it the wherewithal to make its readers go on asking for more."—"Athenæum."

"A work of great ability and of absorbing interest."—"St. James's Gazette."

"The triumph of the book is poor Nellie herself. Alike in the earlier and later scenes her presentation is faultless."—"Saturday Review."

LITERATURE.

The Letters of Charles Lamb. Newly arranged, with Additions. Edited, with Introduction and Notes, by Alfred Ainger. In 2 vols. (Macmillan.)

THESE volumes conclude the series of Lamb's works by the same editor, and crown it. However great the pleasure derivable from the essays and pieces published by Lamb, their interest is mainly dependent on his varying, yet stable, personality—firm and brilliant as a diamond under changing lights. This view has been insisted on in that biography (in the "Men of Letters" series) which is the fittest companion to the works; and these Letters amply confirm it. Not that, taken by themselves, they are thin sown with profit or delight. Of reading for mere amusement here is foison plenty—a rich mine of quaint surprises, good to recall as to encounter, their after-gust as pleasant (if not so pungent) as their first shock. There are those charming exaggerations, really the artistic insistence on points of character or humour (salient to his keener sense) by which our duller nature remembers what else would have been completely fugitive.

Among the specifically new things in this edition may be noted the complete recension of the Manning and Barton correspondence—a set of letters to young Dibdin, grandson of the song writer, a letter or two to Chambers and Dodwell ("fine merry fransions" of the India House), and some odd fragments of wit embedded in the appreciative preface and in the notes. There is also a new portrait, with its interesting history.

Perhaps Lamb's character is nowhere more fully displayed than in the opening set of letters to Coleridge. With all his mental range and power, Coleridge was lacking in appreciation of his younger friend, of his ardent admiration and faithful service. Lamb has to plead for his dues: "Friendship, and acts of friendship, should be reciprocal and free as the air. A friend should never be reduced to beg an alms of his fellow; yet I will beg an alms: I entreat you to write." His veneration was proof against "unkindliness—by which I mean the diminutive of unkindliness," he adds, with tremulous sensibility. He was even dull from excess of feeling—"It was kind in you all to endure me as you did." And again: "You cannot believe how I love and long always to hear about you." It is not to Coleridge's credit that these appeals should have been so frequently renewed. Even so trivial an attention as the return of a great-coat has to be begged for twice. The gentle spirit bears and loves on, and taxes itself with impatience and lack of humility. Yet the force of Lamb's judgment is not abated by this discipline. "I

hope you are only Coleridgising when you talk of finishing your tragedy in a few days. Shakspeare was a more modest man." Coleridge's plight, with his "genuine talent struggling against a pompous display of it," was very visible to Lamb, whose practical good sense was shown in his declining, on his sister's behalf, the invitation that went to his "very heart." She must be with "duller fancies and cooler intellects." He rebukes Coleridge for neglecting Lloyd, and makes the monitory (but vain) assumption, "Your idle propensities have, of course, given way to the necessities of providing for a family." Young as he was, Lamb had already, at the call of duty (and at the cost of temporary madness), severed the bonds of his early love. "Thank God, that folly has left me for ever!" he writes. So resolved a mind did not shrink from the crisis which was menacing his highly prized intercourse with Coleridge. When he received the extraordinary and insulting message, sent in sheer exaltation of priggism—"Poor Lamb! if he wants any information, let him apply to me"—he did not hesitate. He had considered Coleridge as his guardian angel. Long after, when this early storm had given way to life-long peace, Lamb playfully wrote of Coleridge as "an archangel a little damaged." This association borne in mind, we shall see how terribly sharp was the punishment administered in the *Theses quaedam theologicas*, almost every question striking at a weakness of the philosopher, and ending with the suggestive query whether "an immortal and amenable soul may not come to be damned at last, and the man never suspect it beforehand?" No wonder that a two years' silence ensued.

The value and interest of Lamb's criticism is set forth in the pages—"alas, too few!"—of the introduction. But the personal—the involuntarily humorous—side of that criticism is quite as noteworthy. Take the struggling honesty of the comments on *Jean of Arc*, the shrinking from the imputation of absurdity, and then the determination not to leave his friend to the ridicule of others; the vigorous setting to work at the analysis of faulty construction or inadequate expression; and, finally, the propitiation of the personal feelings of the author by "delicate flattery, indirect flattery." Again, to a careful reader it is "nuts" (the expression is Lamb's, and, therefore, classical) to note the beginning of his letter to Southey anent the eclogue of the latter (the italics are not Lamb's):

"I have read your eclogue repeatedly, and cannot call it bald, or without interest . . . it is as poetical as the subject requires, which asks no poetry. . . . 'I do not much prefer this eclogue to the last. Both are inferior to the former.'"

A further experience was reserved for Lamb in his critical capacity—the dealing no longer with real poets, but with the amiable, fossilised pedantry of George Dyer, to whom all poems (his own included) were poetry, and every writer a fine genius. Here with unfailing good nature and good judgment Lamb recognises the presence of that power against which the very gods avail not:

"George, speaking of the dead Ossian, exclaimeth, 'Dark are the poet's eyes.' I humbly represented to him that his own eyes were dark, and many a living bard's besides, and

recommended 'Closed are the poet's eyes.' But that would not do. I found there was an antithesis between the darkness of his eyes and the splendour of his genius; and I acquiesced."

The subtle commendation, gravely and earnestly enforced, of Lloyd's poems—"your verses are as good as prose"—shows Lamb at his best in making the best of things. After such home-pressing of truth, yet with avoidance of all shadow of offence, his dealings with Bernard Barton's muse may delight, but not surprise. He had constantly to bear in mind the value of these writings to their author, in assuaging the misery of his servitude to the "deak's dead wood"—a value quite independent of the worth of the verses themselves. He recognises all the good he can, with hearty sympathy and generous allowance. Then he affords himself all tolerable frankness for the rest. "Religion is sometimes lugged in, as if it did not come naturally. It seems as if you were for ever losing friends' children by death, and reminding their parents of the Resurrection"; and Barton, having supposed that Lamb did not relish scriptural poems, received the assurance which in the implied comparison would have been a trifle disconcerting to most people:

"So far from poetry tiring me because religious, I can read, and I say it seriously, the homely old version of the Psalms in our Prayer-books for an hour or two together sometimes without sense of weariness."

Lamb's loyalty to his friends was unfailing. Any injustice or slight from one of them to another he was prompt to resent. He reproved Southey for scanting his praise to the "Ancient Mariner." He remonstrated with Coleridge for thinking to spoil "that most splendid ornament of Southey's poem by a cock-and-a-bull story of Joan, the publican's daughter of Neufchatel; and for "that most bare-faced, unfounded, impudent assertion that Mr. Rogers is indebted for his story to 'Loch Lomond,' a poem by Bruce." His resolute standing-up for the "Ancient Mariner" against Wordsworth brought upon him "the northern castigation," itself castigated in a letter to Manning, now first printed—one of the most important of the additions. Even of Hazlitt he could remark, "W. H. goes on lecturing against W. W., and making copious use of quotations from said W. W. to give a zest to said lectures."

Of the delicacy which characterised Lamb, a new and charming illustration is afforded in his earnest request to Barton to expunge the epithet "broad-brimmed" from his lines; "because, though you and yours have too much good sense to object to it, I would not have a sentence of mine seen that to any foolish ear might seem disrespectful to thee." But this quality of Lamb's intercourse is repeatedly exemplified.

Of drollery there is, of course, no lack. Harvey is "the man who found out that blood was red." Of a widow not inconsolable: "She'd make a good match for anybody."

"If he bring but a *relief* away,
He is happy, nor heard to complain."

Shenstone.

He meditates an attack on Gifford, "which shall appear immediately after any favourable mention which Southey may make in the *Quarterly*. It can't in decent gratitude

appear before." Hinting, apropos of Fauntleroy, that Barton might have his temptations, he adds, as a deterrent, "think of the effect it would have on the sale of your poems alone!" His profession of hospitality to (i.e., detention of) his friends' books is in his happiest vein, as is the touch about the rows at his town lodgings, the whole family beating one another till the son knocked the father down, "which, though my morals could not but condemn, yet my reason did heartily approve. . . . I am now all harmony and quiet, even to the sometimes wishing back again some of the old ruffings. There is something stirring in these civil broils."

The keen thrust at Godwin, "I cannot imagine how you, who never in your writings have expressed yourself disrespectfully of any one but your Maker, can have offended Rickman," is one of the novelties of this edition, as is also the delicious Simonides story (too long to quote and too good to spoil by curtailing) in the preface.

The absence of all sentimentality is wonderful in the author of *Rosamund Gray*. "What a nice holiday I got on Wednesday by favour of a princess dying!" is his comment on the death of Charlotte of Wales. On Byron's death, he says: "I daresay I do him injustice, but I cannot love him, nor squeeze a tear to his memory." If anybody supposes that this frankness argues insensibility in Lamb, let him read these words on Monkhouse's death: "We have none of us to count upon many years. That is the only cure for sad thoughts. If only some died, and the rest were permanent on earth, what a thing a friend's death would be then!"

The editor truly says that the letters themselves contain the story of Lamb's life. There are some wide intervals of silence, and one great gap of time from January 29, 1807, to February 18, 1808. But we may trace the ups and downs of the writer's moods and fortunes pretty continuously. Not that letter-writing, much as he excelled therein, was congenial to Lamb. In our enjoyment of the product, we may ignore his complaints of the cost of production; but they are many and serious, especially in the second volume. This may have been one result of the monotonous quill-drudgery of the India House, with its harsh restrictions—"even half-hour absences are noted," he says. His judgment might approve this "close but unharassing way of life" in contrast with the alternative dependence on literature, but the chains of his captivity galled him severely. The fever-fit of exultation at his release was fierce and brief. In April, 1825, he went home for ever. In September he writes, "My sufferings have been intense, but are abating. I begin to know what a little sleep is." He even made a sort of return to Egypt, by working at the Museum from ten to four on the Garrick Plays—two hundred in a few weeks. But the four-and-thirty years of slavery had told fatally upon him. His income, which had seemed ample, did not suffice. "I must scribble to make up my *hiatus crumenas*." Life, too, was failing. A nervous desire of country quiet alternated with a hatred of country dullness. In respect it was not in the town, it was a vile life. The once joyful eternity of having all one's time to oneself

became a terror. "We do not live a year in a year now." In the dimmest letter of the series, he says: "I am a sanguinary murderer of time, and would kill him inch-meal just now. But the snake is vital." The curse of loneliness was upon him, from Mary's frequent illnesses. "One does not make a household." His powers were unabated and his temper always amiable. Out of the strong came forth sweetness. When "in tolerable health and spirits," he wrote that striking letter about the rick-burnings—to dear "unincendiary George," of all people. He had said: "I will live another fifty years; or, if I live but ten, they will be thirty, reckoning the quantity of real time in them." He had lived but nine, when he breaks up his home and takes his sister to their last residence at Edmonton. "Thus ends this strange eventful history," as he all too prophetically says. Soon after, Emma, his adopted daughter—his "seven years, nearly inmate"—is gone, and Coleridge is dead. He walks daily nine or ten miles, "always up the road, dear Londonwards," and "saunters to the Red Lion daily." Sometimes there is a dinner at the Museum with Cary, and once the good wine there is too mighty a consoler. Then the end comes mercifully swift and sudden.

The reader, as he wistfully lays aside the volumes, will gratefully remember the second name on their title, and by whose service his enjoyment has been so often enhanced, and never interrupted. That the guide and companion of his journey has been so sparing of his discourse, he may a little regret. And not unreasonably. He may well desire to profit to the utmost by a conjunction that comes not every day. For here, at last, is an editor speaking in sober judgment, yet ever keeping in touch with the swift-glancing movements, in harmony with the subtly changing modulations of his mercurial, quintessential author, so that, with loving labour and with honour due, has been rendered to Charles Lamb's immortal part the unobtrusive, invaluable ministration of a kindred spirit.

R. C. BROWN.

"Statesmen" Series. — *Beaconsfield*. By T. E. Kebbel. (W. H. Allen.)

It was a difficult task that Mr. Kebbel laid upon himself when he took in hand to write a biography of the Earl of Beaconsfield of this kind and at this time. So brief a compass as a little over two hundred pages imposed restrictions upon the treatment of a life so important, so long, and so varied, which it needed no little skill to overcome. Nor was it easy to deal with Lord Beaconsfield, both fully and impartially, so soon after his death, and almost before he has ceased to recur to the mind's eye as a familiar and inevitable figure in every political situation. Mr. Kebbel had, however, great advantages in the case. By his *History of Toryism*, his edition of Lord Beaconsfield's speeches, and his *Life of Disraeli* in the *Dictionary of National Biography*, he has for the present almost appropriated the subject as his own; and he possesses the further advantage of having personally known the subject of his memoir. To write anything new about one of whom so much has been written already

was neither to be hoped nor expected, and Mr. Kebbel has already made familiar to his readers his philosophic but rather paradoxical presentation of the Tory idea. But he has dealt fairly by Lord Beaconsfield and fairly by the public. If he was not in sympathy with the statesman he would hardly be his biographer. A biographer is not a judge, still less is he an accuser; and in him partiality without partisanship is a virtue. Mr. Kebbel admires and even reveres Disraeli; but he is not blind to his faults. He has adapted himself to the limitations of his space without being cramped, and has produced a very agreeable life of Beaconsfield, which, until the long-deferred *opus magnum* of Lord Rowton at last appears, will continue to be read with interest.

Interest is, indeed, as Mr. Kebbel himself remarks, the word most proper to the life of Disraeli. The gallantry with which he overcame hostility and prejudice, the tenacious patience which moulded the most obstinate portion of the old Tory party into a docile following, the brilliant ending to a well-fought battle, please even the most hostile spectator. His career is more than commonly dramatic; his character is almost uniquely individual and interesting. It is partly due to Mr. Kebbel's desire to do his best for his hero, partly to the inevitable contrast between the bright speculations of a young novelist and the sordid struggle of a defeated and outnumbered Parliamentary tactician, that the early part of this book is the most striking and the best. The political system of *Coningsby* and *Sybil* may be a vision or a paradox, a reversion to a better time which never existed at all, or a defence of a polity that never could be imposed upon the English people. Still, the strong monarchy, the purified aristocracy, the territorial system, the loyal peasantry, the bonds of mutual service and care that bind together landlord and tenant, constitute in Disraeli's view of them a connected and even philosophic whole, and, still more, a pleasing picture. But to the ordinary mind the reasoning which makes Disraeli the novelist the heir of Pitt, and Disraeli the statesman the pupil and follower of Disraeli the novelist, seems wholly paradoxical and forced. Neither his defence nor his abandonment of protection, neither his opposition to reform nor his extension of the franchise, are really the fruits of the system of philosophy expounded in his novels; and no amount of ingenious reasoning will persuade the bulk of political readers that they are. Of course, it is easy to discover coincidences between Disraeli's fictions and his policy. The sympathy with the hard lot of the working classes, which appears in *Sybil*, appears no doubt in "sanitas sanitatum omnia sanitas" and the "policy of sewage"; and the aged Beaconsfield was not so much estranged from the young Disraeli as not often to express much the same opinions and to exhibit much the same prejudices. But, after all, it is not as the political thinker that he interests us; it is as the valiant and resourceful gladiator of debate, the cunning lapidary of polished phrases, the imaginative though bizarre statesman—above all, in an honourable sense of the words, the successful adventurer. There is no reason in the world why a young man should not put his foot upon the bottom rung of the ladder

of politics and make up his mind that he will climb to the top; and, if he does it without compromising his integrity and in the service of his country, it is a laudable enterprise. The feat of getting to the top Disraeli certainly accomplished. Mr. Keibel points out, and rightly, that there has been some exaggeration about the social obstacles against which he had to contend; probably, in this regard, he was no worse off than Canning. It is clear from Disraeli's letters that he very early got access, and on equal terms, to society quite as good as any young man of his means could expect to enter, and that he was esteemed there as the brightness of his wits deserved. Such prejudices as existed against him on account of his race belong rather to a later period of his career, when his indubitable success was stirring up his enemies to make any and every attack upon him. Undoubtedly, however, he fought a long, hard, and uphill fight, the intrinsic difficulty of which it is impossible to overrate; and he fought it with a tenacity and patience that must always win for him a great deal of admiration. And, Mr. Keibel shows that there is, as politicians go, a very fair case to be made out for his integrity in the course of the contest. No champion comes out of such a life-long fight without some dirt about him and many dents in his armour. Disraeli was certainly loyal to his friends and followers, if not to his chiefs; and, as to the devious and even contradictory course of his policy, it is impossible to help feeling that he stands rather outside of the ordinary rules upon such matters. To bring him too strictly to the test of the approved canons of political integrity, to judge him as Althorp or Grey might be judged, is to deal out to him hard measure, and to expect too much. His interest in Toryism was rather a literary interest. If ever any man had an excuse for regarding the field of politics as a chessboard, with dukes and squires for pawns, it was he; and, if the pawns found themselves to their amazement playing a very erratic game, they must be content with having won it—supposing that they count the administration of 1874 as a victory. Like all Disraeli's faithful apologists, Mr. Keibel is staunch in denying that he ever was a Radical; but, in truth, a good deal too much has been made of the matter. The crime of Radicalism is not a heinous one. Disraeli was at the time a youth and a beginner; even a Tory may well admit that a venial sin, followed by sincere repentance, deserves pardon; and, if an energetic recantation, followed by five and thirty years of abstinence from any repetition of the offence, is evidence of repentance, that evidence Disraeli gave. Perhaps he was more truly a Radical in 1867 than in 1832; perhaps it is enough to say that in 1832 he was an anti-Whig; but it was a strong thing then for a politician, who was not a Whig and not a Radical, to solicit the recommendation of O'Connell, as Disraeli did; and in a very amusing letter to his sister in 1832, he tells her expressly that at a dinner-table "I sat between Peel and Herries. . . . Peel was most gracious. I reminded him by my dignified familiarity both that he was ex-Minister and I a present Radical." But perhaps there was an emphasis on the word "present."

Two other matters there are on which Mr.

Keibel seems inclined, perhaps, to dwell too much. It is to the mutual misunderstandings between Disraeli and the High Church clergy, and especially to the Public Worship Regulation Act, that he is disposed to trace much of the disaster which befell the Conservative party in 1880. Now, no one claims for Disraeli either that he was particularly felicitous in his ecclesiastical appointments or that he had any deep understanding of the clergy, whatever he might have of the squirearchy. But, deep as was the offence given by his anti-Ritualist policy, and grave as are the difficulties that have since arisen from it, the offence was not widespread. A vast part of the clergy were not touched by his ecclesiastical policy at all; and many of those who did not agree with it were content to treat it as a special subject, and not to allow their differences of opinion to go beyond. The clergy may not have understood Disraeli's mind; but, if they did not, they at any rate understood that they did not, and, without being able to comprehend the motive, or the whole of the drift of what they saw him doing, they accepted him frankly as their appointed leader. With every respect be it said for those who did not follow him, they were, though influential, not very numerous; and probably half of them would have opposed him in any case, irrespective of his ecclesiastical policy.

Exactly what importance is due in a book of this kind to Disraeli's novels depends on the question, how far the views expressed in them are really those which he endeavoured to carry into effect in his policy. To anyone who thinks that his policy was a very different thing from his opinions in the novels they will seem but an unimportant episode in his life. For his political stories are his best; and as novels none of them, whether political or not, is very good. They are certainly full of brilliant points, and contain many witty and some wise things; but the characters are not great creations. They are rather lay figures talking politics or what passes for religion, than living flesh and blood like ourselves. Nobody ever lost his heart to Sybil, and if Sidonia were not so unintentionally funny he would be rather a bore. A great part of them—and the best part—are satirical social sketches, which singularly often take the form of detached scraps of conversation, quite unconnected with one another, such as a man might overhear in strolling through a drawing-room. These are very clever, but not much more. From his point of view, however, Mr. Keibel did right to dwell upon the novels, for he thinks them the key to much of Disraeli's opinions, and thus he has made his life of Disraeli both coherent and interesting. He had not room, nor perhaps materials, for a finished picture of the man; but he has produced a justificatory sketch of his career, and has done it well and with fairness.

J. A. HAMILTON.

History of Prussia under Frederick the Great.
By Herbert Tuttle. In 2 vols. (Longmans.)

THIS is a well-informed and very instructive book. After the elaborate and copious work of Carlyle, it might be supposed that little

remained to be learned about Frederick the Great and his age. The hero-worship of Carlyle, however, made him a singularly partial and unfair critic of the career and the acts of the King of Prussia; and the detestable doctrine that might is right simply renders him blind to a great deal that history condemns in Frederick's conduct. Immense, too, as is the display of knowledge paraded in Carlyle's bulky volumes, there is reason to believe it by no means so exhaustive as is commonly thought; and, in any case, since his book was published, the archives of Europe have largely added to our information upon the subject. Prof. Tuttle's work is a mere episode compared to the *magnum opus* of his predecessor; and it bears no traces of the genius and power which, many as are the defects and blemishes, distinguish Carlyle's most graphic narrative. It is marked, however, in a high degree by impartiality and the judicial spirit; it has skilfully put together what has been collected from state papers and documents of the kind by recent students of this part of history; and it may be fairly described as a very able *résumé*—just, candid, and abounding in research—of the first years of the reign of Frederick the Great. The author's estimate of Frederick as a leader in war, a statesman, or a ruler at home, is careful, complete, and well summed-up; and it more nearly approaches the truth than Ranke's, Macaulay's, or Carlyle's judgments. It is also a special merit of the book that it contains a well-digested and full account of the institutions and the national life of the Prussian monarchy at this period; and to the English student, at least of the time, this chapter of history will appear new. The volumes before us, we should add, though a continuation of a learned work on the annals of Prussia from its origin as a state, form, nevertheless, a separate book, and when complete will supply the reader with an excellent description, in a compressed form, of an important episode in the affairs of Europe. As for the faults of the work, these chiefly consist in the accumulation of minute details; and Prof. Tuttle might have drawn more boldly, and set before us in more distinct outline, the characteristics of the diplomacy of the time.

These volumes comprise the first part only of the military career of Frederick the Great, and have not reached the period of his most famous exploits, the memorable campaigns of the Seven Years' War. Frederick, however, stands out on the stage of history most conspicuously as a master of war; and Prof. Tuttle's estimate of the King of Prussia in this respect is truthful and just. This renowned soldier was not distinguished for the rare mental gifts of the greatest captains. He showed little original genius in command; he never formed those grand combinations which make Gustavus, Turenne, and Napoleon immortal. His first essays in the art were even devoid of the skill and insight possessed by ordinary chiefs; he was out-generalled by Traun and Charles of Lorraine; and to the last hour of his life he was not a great strategist. This criticism is intelligent and correct:

"I should not enumerate among his gifts an instinctive talent for strategy. There was not a campaign in these two wars—either in 1741

or 1742, in 1744 or 1745—in which he did not commit the gravest errors, such as ought, in all military calculations, to have brought inevitable disaster. . . . His campaigns were often badly planned, his strategy deplorable. If he had been opposed by troops as good as his own, and by generals as enterprising as himself, he would have lost nearly every battle of the Silesian wars, because the strategical advantages were nearly always against him."

As a tactician Frederick stands in a much higher rank, though even as a tactician he made many mistakes, and his most brilliant victories reveal a kind of mannerism dangerous had he had really great antagonists. He possessed, besides, the immense advantage of having, in most instances, a much better army, more easily handled and quicker in movement than the cumbrous Austrian and Russian masses; and to this circumstance the frequent successes of his "oblique order of attack" was mainly due. But when this has been said, the fact remains that the king possessed in the highest degree the *coup d'œil* of a great chief on the field, and understood how to arrange and dispose the three arms that make up an army more skilfully than any general of his age. We agree with Prof. Tuttle:

"His mind, apparently despising the slow precautions of foresight and preparation, was roused to irresistible activity by the actual presence of difficulties. He seized the points of a situation with marvellous sagacity. . . . It was his conduct of a battle, not of a campaign, his demeanour in the face of the enemy, not his skill in the creation of favourable conditions, that gave him the fame of a great general."

It was less, however, for intellectual gifts than for constancy and marvellous strength of character that Frederick has attained his high place as a warrior. In these qualities he has never been surpassed; and the only commanders to be compared with him are William III. and his own pupil Blücher. Prof. Tuttle has only glanced at this excellence, for it was not developed to its full extent until the period of the Seven Years' War, but he lets us see that he bears it in mind:

"His conduct at many great crises resembles that of an enraged tiger, who, surrounded by his exulting foes, coolly surveys the situation, and then, gathering his energies, springs with magnificent courage upon some part of the circle, and triumphantly fights his way to freedom."

The qualities that made Frederick great in war were conspicuous in his conduct of foreign affairs. He was deficient in patience and large combinations. He showed none of the prescience and skill by which Richelieu extended France to the Rhine, and made her the dominant power of Europe, supreme in material and moral influence. But he was daring and tenacious in the highest degree, quick to seize advantages, and to profit by them; and he made conquests and annexed provinces with the rapidity he displayed on the field of battle. Respect, however, for international right is more necessary in politics than in war; and the policy of the king in his relations with Europe was marked by a cynical contempt of justice, and by a rapacious and callous selfishness, which well-nigh led to his complete ruin.

The standard of his age was, indeed, not high, and Frederick should be judged by the standard of his age; but no statesman of the time, it must be allowed, was so treacherous, grasping, and false alike, as the invader of Silesia, the ally who played a game of double-dealing with England and France, and the lifelong foe of Maria Theresa. The conduct of the king in the first part of his career made him justly detested throughout Europe; and, though he emerged triumphant from the Seven Years' War, Prof. Tuttle truly remarks that statesmanship of this kind is not wisdom. The readiness, the perseverance, and the boldness of Frederick stand, nevertheless, in marked contrast with the hesitation of Fleury and Louis XV., the ever-shifting policy of British ministries, and the irritated unskilfulness of the Empress Queen; and, in mere ability, he certainly towered above the diplomatists of 1740-56. It is very remarkable that the greatest statesman of the period of the Seven Years' War made an alliance with Prussia the corner-stone of his system of continental politics; and Chatham, who never mistook his man, thought Frederick a real power in Europe. Prof. Tuttle properly refutes a notion maintained in Germany, and propagated by Carlyle, that the king had German interests constantly in mind, and had ever an eye to German unity. Nothing can be more certain than that, from first to last, Prussia was the only object of his thoughts; and though he made France feel that he was no mere satellite, he never dreamed of making himself the head of a Germany independent of French influence. This, indeed, remained the policy of his House for years; and it is absurd to say that the Prussia of the Peace of Bâle, of Austerlitz, and of the Bund of 1814, contributed to the marvellous events which have created the existing German Empire.

One of the most valuable parts of this work is Prof. Tuttle's learned *résumé* of the rise and progress of the Prussian Monarchy, and of the character and spirit of the Prussian Government, under Frederick and his immediate ancestors. The monarchy, composed of widely scattered provinces, and put together by war and statecraft, required from the first a large army; and, from the day of the Great Elector onwards, Prussia was a military camp, well prepared and disciplined. The government, formed out of the decay of feudalism, became a kind of bureaucratic despotism, sustained by a dependent noblesse, but resting on the sword in the last resort; and in this respect it did not widely differ from the governments of the houses of Bourbon and Hapsburg. But the Prussian state fell under the control of a series of able and hard-headed rulers—ambitious, diligent, frugal, and prudent; and, while the absolutism of France and Austria yielded to the influences of the eighteenth century, that of Prussia became more complete and rigid. In no country in Europe was the authority of the Crown so far-reaching and thoroughly centralised; in none was the army so supreme; and nowhere else were the different classes that formed the nation, so to speak, so regimented, so tutored and drilled to their parts as subjects, so kept in their places by a system of discipline. This certainly gave the state strength, and impressed the

public mind with a sense of duty, of subordination, of willing obedience; but the events that followed the rout of Jena show that this structure of power had a weak side, and we do not agree with Prof. Tuttle that it favourably compares with the constitution of England even under the regime of Newcastle and Pelham. Frederick did not change the institutions of Prussia, but he made them in some degree more civilised; he accepted but improved his inheritance; and history justly records to his praise that he was tolerant, if he had no religious faith; that though a despot he revered law; that he had a taste for literature and the fine arts, engrossed as he was in the life of the barracks. Prof. Tuttle gives us a fair estimate of the qualities of the king, as a man of letters; his manner and style were essentially French, but we see in his writings the German love of truth and also the heavy German pedantry; and they give additional proof of the cast of his intellect—keen, ready, active, but not profound. Their most distinctive features, however, we think, are their cynical frankness and contempt of mankind.

WILLIAM O'CONNOR MORRIS.

SOME BOOKS ON NON-CHRISTIAN THOUGHT.

Christian Apologetics. By J. H. A. Ebrard. Translated. Vols. II. and III. (Edinburgh: T. & T. Clark.)

The Ancient World and Christianity. By E. de Presensé. Translated. (Hodder & Stoughton.)

Non-Biblical Systems of Religion. (Nisbet.)

Non-Christian Religions of the World. (Religious Tract Society.)

Non-Christian Philosophies of the Age. (Religious Tract Society.)

Present-Day Tracts. Vol. IX. (Religious Tract Society.)

THE attention bestowed on non-Christian religions and schemes of thought is among the most interesting of the many striking phenomena of recent speculation. The books above enumerated form but a small proportion of those lately published in England, and a still less proportion of those which have issued from the continental press on this specific subject. Supposing we could estimate the interest excited by the copious and varied aliment provided for it, the ordinary modern Christian would seem in a fair way of becoming more enlightened as to the genesis and qualities of non-Christian faiths than of his own creed—a consummation not inconceivable, however undesirable. Doubtless the symptom, as denoting a tendency, is good and healthful. Nothing can be worse than the exclusiveness which forbids, or the stagnation which disdains, the consideration of alien modes of thought. But such consideration, to be worth anything, should be sympathetic and reasonably impartial; and I may say at once that all the works above named not only possess the impartiality, but are—to a certain extent in spite of themselves—carried away by a fair outflow of sympathy. Naturally, and not unbecomingly, the position chosen by them is apologetical and, in varying extent, polemical. To expect a Christian to regard all creeds alike, or even a chosen

few, as equally true and equally binding is to expect him virtually to renounce his faith, at least to deprive it of all *raison d'être*. Probably the time will never come when Boccaccio's story of the Three Kings will be accepted as a Christian presentation of the claims and excellencies of Judaism, Islam, and Christianity; and we are still removed by a more than measurable distance from the period when most Christians will, like Novalis, be prepared to admit: "There is no religion which may not be Christianity."

It is enough that the gross injustice and fanatical intolerance of Christian thinkers in respect of alien beliefs is becoming a thing of the past. Dr. de Pressensé in his introduction strikes a note on this point, which we may take generally as the key-note of all the other books on the question of sympathetic tolerance:

"We utterly repudiate the apologetics which dismiss all the virtues of paganism as *splendida vitia*, and its often sublime intuitions of moral and religious truths as the *mirage* of the desert. We are deeply convinced, like the Alexandrian Fathers, that Paganism retained and developed important elements of truth, and we are very far from saying that these can have been only the residue of an inspired tradition."

Taking the books in the order above given, the space at my disposal does not permit of more than a brief description of their distinctive characteristics.

Readers of Ebrard's work will be aware that the vigorous polemic of its first half against Darwin, Haeckel, and other modern thinkers, gives place in the second volume to a consideration of Christianity in connexion with the general history of religion. In this portion of his book the author manifests an amplitude of historical research as great as his copiousness of philosophical erudition. If sometimes he seems inclined to insist unduly on "the seamy side" of non-Christian faiths, the tendency may pair off with the occasional exaggeration and acrimoniousness which detracts from his polemic with modern philosophy. Still the book is learned, acute, and very able, and will doubtless form a veritable armoury for Christian apologists for some time to come.

Dr. de Pressensé's work is a more suave, dignified, and philosophical contribution to the same subject. His insight into and appreciation of alien conditions of thought and civilisation are fuller than Ebrard's, and the contrast between the two authors in this particular shows the necessity not only of intellectual keenness but of emotional depth in a critic of religions opposed to his own. As an instance of this sympathetic profundity and exemplifying the general tone of the work, I cannot refrain from quoting the following description of the difference between Hellenic and Egyptian art (p. 306):

"The next period (Perikles to Alexander) was the great art era of Greece. Aeschylus and Sophokles then gave in their poetry sublime expression to the ideal of the Hellenic race, while Phidias immortalised it in marble, gold, or ivory, and lent it a yet deeper and purer meaning. The statue is not only mobile as in the previous period, it becomes positively living under the chisel of the great artist. It has the suppleness, the natural charm, the freedom of life, and an indefinable grace never since equalled. The marble breathes, as says the

poet. We have only to compare the Greek statue with the Egyptian to appreciate the difference in the two orders of civilisation. Humanism sets free the human form divine. It advances; it moves at will; the hands are no longer bound to the side, the feet no longer rigid and motionless. Life throbs in the once inert body, man treads as with the step of a conqueror the earth on which he was formerly a slave."

But, although Dr. de Pressensé proves himself here as elsewhere gifted with large and acute sensibilities on all questions of culture and philosophy, as well as religion, he is never forgetful of his avowed standpoint as an advocate of evangelical Christianity—though I need scarcely add that such a standpoint in a Continental thinker will generally be found to be much broader than in Englishmen of similar views.

The papers in the volume placed third on our list consist of reprints from the *Homiletic Magazine*. They are of varying degrees of excellence; but as they profess to constitute a symposium, it would be incongruous to subject them to the test of comparisons and contrasts.

The three last volumes form part of the very useful series of "Present Day Tracts," issued by the Religious Tract Society. The aim of the series seems to be the popularisation of useful knowledge on all subjects relating to Christianity. Occasionally aggressive and somewhat narrow, they are, nevertheless, well adapted for their purpose. For the future, with such lavish sources of information lying close at his hand, the Christian who still remains in ignorance of the relation of his creed to other schemes of faith and thought will have only himself to blame.

JOHN OWEN.

NEW NOVELS.

Gentleman and Courtier. By Florence Marryat. In 3 vols. (White.)

Joy cometh in the Morning. By Algernon Gissing. In 2 vols. (Hurst & Blackett.)

The Trance of Fittures: a Tale of Two Centuries. By Alfred Fitzseer. (London Literary Society.)

The Poisoned Chalice. By W. Pryce Maunsell. (W. H. Beer.)

Lady Stella and her Lover. By Henry Solly. In 3 vols. (Ward & Downey.)

The Voice of Urbano: a Romance of Adventure on the Amazons. By James W. Wells. (W. H. Allen.)

Out of the Fog. By William M. Hardinge. (Bentley.)

The American Marquis. By R. H. Sherard. (Simpkin, Marshall & Co.)

Mrs FLORENCE MARRYAT has in her latest novel made rather a new departure as regards the plot, and it may honestly be said that her success justifies an experiment which might have been rather a risky one. For the passionate adoration by a middle-aged widow of a man almost young enough to be her son would not, under ordinary circumstances, be a pleasant subject for contemplation. But, then, it may be granted that the circumstances under which Elsa Carden and Jocelyn Yorke were thrown together were very far from

being ordinary; added to which, the sweet womanliness of the one and the chivalrous nature of the other remove the main idea from the slightest approach to a coarseness which, with less skilful treatment, might have attached to it. It was also rather a novel conceit to make the man who had been one of Roland's chief abettors in folly and vice the instrument of bringing about such a measure of reformation as that most objectionable young gentleman can be said to have compassed; but the notion was ingenious, especially as the mentor himself mended his ways—partly through shame of his wasted youth, but mainly, no doubt, to find favour in the eyes of his lady. Of course, Elsa did not marry Yorke. In spite of his protestations and sincere love for her, she had far too much commonsense not to see how inevitably misery and disappointment must spring from such a union as the years rolled on, leaving her an old woman when her husband was still in his prime. But while one must commend her action in the matter, it is impossible not to sympathise, to some extent, with Jocelyn in his rejection. His affection for Mrs. Carden was perfectly genuine, even if it was, to some extent, the romantic survival of his boyish adoration of the beautiful, sorrowing stranger whom he had succoured in her need; and his own large fortune removed him from all suspicion of sordid views in the prosecution of his suit. In fact, we like Mr. Yorke so much, with all his faults, that we cannot but wish that a happier fate had been prepared for him than such a disaster as a marriage with selfish, frivolous Sybil—whom we much doubt whether such a man *would* have married—with its natural sequel. We suppose his death was inevitable, and there can be no doubt that the scene describing it is one of much power and pathos. Perhaps it might be objected that most of the actors in this little domestic tragedy are not much better than puppets; but then the interest centres itself so entirely in the persons of the hero and heroine, that one feels almost as if any side interest would have been an impertinence. May we suggest to the author that Scotswomen of the humbler classes do not talk broad Whitechapel?

A fairly good novel—probably a first one—with a moderate amount of sensation, is *Joy cometh in the Morning*, the scene of which is laid in the Midland Counties in the early part of the present century. It treats of the adventures of one Roland Westgarth, a well-to-do young man whose origin is unknown to him, and who ultimately solves the mystery while helping to establish his unknown half sister in her rights. The whole story of parentage, and of the inheritance of Cotswold Manor, is cleverly devised, and the crowning secret not divulged too soon. Mr. Westgarth is not a very promising hero, being a weak, fickle man whom the good rector was perfectly right in mistrusting, and who simply behaved like a scoundrel to Mary and Lena Bransford. Mr. Copeland and Reuben Wyatt are the two best men in the book, and we really wonder that neither of them—the latter especially—found a convenient horsewhip lying about when Roland called. Old Turville's character is well imagined, and the most original feature of the novel; but the women are all of them rather

colourless. As has been said, this is probably a first work, and it shows decided promise. The chief faults are those of carelessness or inexperience, and may easily be avoided in the future. We will point out to Mr. Gissing the three most salient: at the date of the publication of *Woodstock*, neither young squires nor mail-coach guards wore moustaches—the Crimean war being still in the dim future; Christmas trees had not been introduced into this country; and, lastly, the mails were carried in four-horse coaches. We hardly dare think what would have been the feelings—to say nothing of the language—of the driver, had he been asked to take the ribbons with only a pair.

Yet another specimen, and far from a bad one, of the semi-mystical romances which have become quite a feature of the present day. Mr. Fitzerse is supposed to relate his own experiences, and does so, on the whole, very well; although the narrative drags somewhat at times—notably in the American portions, owing to the introduction of totally irrelevant matter. In a story like this the action cannot be too brisk, and the minutest details should in some way bear upon the main purpose of the plot. The hero managed, through the instrumentality of a mysterious Hindoo friend, to be thrown into a trance in Stuart times, and the same convenient necromancer restores him to life in the present century, whence arise divers entanglements, some of them described with a good deal of humour. By the by, we are not quite sure whether it is likely that a Hindoo would, at that date, be studying at the University of Padua. Mr. Fitzerse, on asserting his original personality, is promptly put into a madhouse—for which one can hardly blame his relations—and some of the scenes incidental to this episode are impressive, and probably the outcome of personal observation. In short, there is enough in the book to warrant us in encouraging its author to persevere.

Notwithstanding its rather sensational title, *The Poisoned Chalice* is an extremely simple story of men and manners in the south of Ireland some eighty years ago, and will repay perusal by those who care to know how people behaved in those days. The name of the book, taken from a passage in "Macbeth," refers to the career of Mr. Reginald Elton, who wanted to marry his pretty cousin Annabel, but managed, by his own vicious conduct, to ruin all his prospects in a way which it is not necessary to particularise, while she threw herself away in a most unintelligible manner. But the book is written, evidently, in high good spirits, replete with anecdote, much of which will be new to most readers, and gives a lively sketch of the Anglo-Irish society of the time. Old Mr. Elton's device for keeping the rats from the oats is a particularly good story, probably a true one. Richland stands, of course, for Limerick.

It would seem that, in order properly to enjoy Mr. Solly's novel, it would be necessary first to have made acquaintance with a former work, *Charles Dayrell* by name, of which we must confess we never heard. A considerable portion of the first volume is, in consequence, almost unintelligible. The remainder is chiefly occupied by enthusiastic

defences of Byron. We sympathise most entirely with the author; but, surely, any apologies at the present day for one of the greatest of British poets are uncalled for. We thought Mrs. Stowe had unintentionally assured his fame years ago; also, we should have imagined that there was no need in these times so elaborately to combat the dreary theories of Atheism, as expounded by Lady Stella, who must have been a fearful trial. Fancy being talked to at a garden party by a young lady in the style in which she talks to Dayrell for pages! The latter part of the book, beginning with Wilfrid's departure for the South Seas, is by far the best, and this for a curious reason—it is highly sensational. Now, sensation novels appear to be, in common with burlesques, parodies, and reviewers, the special objects of Mr. Solly's reprobation. As to what he says about critics, we will only remark that it is a pity when people talk about matters of which they know nothing whatever. Burlesques and parodies may be left to take care of themselves—they will probably survive the denunciations launched at them; but those sensation novels—surely here is a sad backsliding! Is it possible that the author dimly perceived that his book was getting deadly dull—as indeed it was—and sacrificed his own convictions? Be that as it may, the most interesting parts of the book are Dayrell's experiences on the desert island, and Lady Stella's as a dressmaker in Shadwell—especially the part in which she shoots the nefarious Tarling, and the trial at the Old Bailey. Mr. Solly seems not very well versed in the ordinary language of polite society. People do not, to the best of our knowledge, use such phrases as "I tell you, fair lady," or "Know you not, dear mother." It is almost strange that Miss Rachael Pye did not cry "Unhand me, villain!" We should really like to know whether the author believed himself to be quoting Scott at p. 158 of the second volume, or if it is to be taken as one of those naughty parodies.

The Voice of Urbano is a book which we most heartily recommend not only to all boys, with whom it ought speedily to become a prime favourite, but to all who are not what Dickens called "too grown up" to enjoy a thoroughly healthy, breezy romance of wild life, such as most of us have dreamed of and a few have experienced. The story deals with the adventures of four friends: Warren and Rollinson, both Englishmen; Tim Matson, a typical Yankee of the genial type; and Peter Petersen, the Swede, who supplies, and very successfully, the comic element. He is the funniest compound imaginable of bravery, abject terror, superstition and good fellowship. This band of four start for the interior with a double object—viz, to make their fortunes by collecting india-rubber, and to take revenge upon a rascally Brazilian, Souza Miranda by name, who has swindled one of the party, and is now the terror of the rubber-growing districts. How they accomplished both objects must be left to the reader's own discovery. The book is full of exciting action, and it would be too long to name all the scenes which specially make one hold one's breath; perhaps, however, we may particularly note the running fight on the river, which ends in Ignacio's death. The meeting with

Macuté and his Indians is also excellent; One understands so entirely what were Rollinson's feelings when he ejaculated: "I wish I had one of Fenimore Cooper's novels now, it would be a perfect *vade mecum* how to talk to these braves!" Of course the story ends happily, as such stories ought to do, and poetic justice is fully dealt out. All we can say in conclusion is that we mean to read *The Voice of Urbano* over again.

That all the greatest miseries spring from small causes is the moral of Mr. Hardinge's pleasant and witty little story. To this might be added that young husbands do well to pay their wives some little attention, however busy they may be. It is a tale of the trouble that very nearly came between Jack Calthorpe and his wife Clara, owing to his carelessness and the thoughtful care of his friend Mainwaring. Fortunately all came right in the end. The plot is good, and ingeniously developed. There is a touch of the true Sophoclean irony in the scene where Jack goes through Tom Donnithorne's cases.

The American Marquis is a poor attempt to combine a feeble sensation-novel with a satire on the ways of some upstarts among our Transatlantic cousins. It calls for no further notice.
B. MONTGOMERIE RANKING.

SOME BOOKS ABOUT EASTERN EUROPE.

Bulgaria, Past and Present. By James Samuelson. (Trübner.) This book is divided by the author into two parts. The first part deals with the history of Bulgaria; the second with the national and official life of the people, and their land customs and agriculture. The last two chapters are devoted to present-day politics. Unfortunately, though Mr. Samuelson is a painstaking, he cannot be called an entertaining, writer. From the first page to the last there is nothing in the book that was not well known before. Even his accounts of his interviews with the late and the present Prince of Bulgaria are absolutely colourless and uninteresting. As to his conversation with the latter, we are informed that "not a word was mentioned of a political character." The reader is no better off as regards Prince Alexander. Mr. Samuelson, who is nothing if not discreet, informs us that what "passed between us in regard to the position and prospects of Prince Ferdinand was of a private nature." We agree with the author in thinking that there are grave misconceptions about Prince Ferdinand abroad. That he has had no opportunity of showing, and probably does not possess, the military genius of Prince Alexander is no evidence that he is not far better fitted to fill the throne of Bulgaria. The author of *The Growth of Freedom in the Balkan Peninsula*, writing in Bulgaria, and (as it were) on the very top of the wave of enthusiasm which brought about Prince Alexander's return, extols him to the skies; but it is difficult, in the light of later events, to defend the famous (or rather infamous) telegram which the prince sent to the czar on his landing at Rustchuk, on Sunday, August 29, 1886. That telegram simply meant that if the czar would allow him to live comfortably on his salary, secure from midnight conspiracy, Bulgaria should be a province, and he the vassal of Russia. It was the message of a would-be Charles II. to the Grand Monarque. It might be well if the journalists, English and German, would modify their praise of the late, and their sneers at the present, "boykotted Prince of Bulgaria." Mr. Samuelson does not

sneer at Prince Ferdinand, but he over-estimates the present influence of "the hero of Slivnitsa." His influence was boundless, but it is doubtful whether he could now summon to his standard a corporal's guard if he landed at Rustchuk. His supporters now are the venal friends of Russia, who do not love him, but hate him less than they do Stambouloff. Mr. Samuelson's account of early Bulgarian history is little more than an abstract of Jirecek's well-known history. He refers briefly, too briefly, to the Bogomiles, the Puritans of Bulgaria. There was no necessity for a crusade to destroy these Eastern heretics, as the Turks came and enlaved all Bulgarians, heterodox and orthodox alike. Had the Eastern empire not crumbled away before the attacks of the caliphs, the Reformation might have taken place some centuries earlier, and the part of a Martin Luther been played by a Bulgarian. *Dis aliter visum*. Part 2 is even more disappointing than part 1. The author has nothing new to tell us about the Bulgarian cities—Sofia, Philippolis, and Tirnova—which he visited, and cannot be recommended as a cicerone. His notes on the leading politicians are very meagre; but his likenesses of Karaveloff, Mutkouroff, Stambouloff, Radoslavoff and others, are interesting and suggestive. No one could possibly trust Karaveloff—"the omnibus politician" as the Russians call him—after seeing him. It is to be regretted that the book contains no portrait of Zankoff. "I am sure I shall be pardoned for leaving Zankoff in his obscurity." However wrong and even criminal Zankoff's conduct may have been, it is ridiculous to speak of him as obscure. Zankoff is proud of being called "the Grand Old Man" of Bulgaria, and he is without question better known in Europe than any other of his countrymen except Stambouloff. Of what has happened in Bulgaria since Prince Ferdinand's arrival, this book tells us nothing. From some interesting letters written by the Vienna correspondent of the *Times* in the spring of 1887, we learnt that unfair and even violent means were resorted to by Stambouloff to crush out all opposition. We were told that the members of the Opposition were flogged; but, while we are regaled with particulars of the cruelties of Basil, the slayer of the Bulgarians, Mr. Samuelson has nothing to say of the misdeeds of those now in office at Sofia. If the *Times* correspondent—who is a very friendly witness to the Bulgarians—on this point wrongs Prince Ferdinand's advisers, Mr. Samuelson should have said so; but his silence on the subject seems to corroborate the accuracy of the correspondent's statement. In his last chapter Mr. Samuelson reads a lecture to his countrymen on their many enormities—especially in Ireland, where we "incarcerate our lord mayors and members of Parliament." As the subject of his work is not Ireland, but Bulgaria, it is to be regretted that the author did not enquire into the very grave charge, not merely of "incarcerating," but flogging "members of Parliament," which not the Russian press alone have brought against Stambouloff. Mr. Samuelson, like most visitors to Bulgaria, has never visited the coast line from Varna to Bourgas, which is, indeed, more or less a Greek coast; and his book contains no information about the social life or habits of the Greeks in that country. He speaks of them as "the quasi-friends of Russia." This is an error, if he speaks of the Greeks of the Principality, and even the Greeks of the kingdom have no desire for Russia to occupy Bulgaria. When Macedonia is brought into the field of practical politics, Greece will have a word to say, and (if necessary) a blow to strike, for the Aegean sea-board; but, as the Macedonian question is not raised in this book, we need not stay to discuss it here. We often flatter ourselves that we live in days of general

enlightenment, when religious prejudice is dead. From this agreeable dream there is a rude awakening. Even in the most orthodox Liberals there are remnants of the old Adam. Mr. E. A. Freeman has told us with brutal honesty that to the rule that all men are brethren there is one exception—the negro. If Mr. Samuelson were to speak out what lies deep down in his heart, he would say that to the rule that all men are brethren there is one exception—the Jew. We had always understood that, to the credit of the Bulgarians, there was no Jewish question—no *Judenhetze*—in Bulgaria; but the latest writer on Bulgaria informs us this is not so. The Jews, he says, are unfairly treated in Sofia; and then he goes on to extenuate this religious persecution by asserting (without one tittle of evidence) that the Jews are "extortionate," and to sneer at the efforts of their English co-religionists to improve their condition. The map of the book before us cannot be recommended for accuracy. It makes a branch line run to Shumla, whereas that town stands some miles from the railway. The bibliography might have been more comprehensive—for instance, the obviously inspired article "The Bulgarian Plot" in the *Quarterly* of October 1886, should have been included. A still stranger omission is that of Soboleff's *Der Erste Fürst von Bulgarien*. This book gives the orthodox Russian version of the course of events in Bulgaria, and should not be passed over in silence by anyone who writes on the country. We wish however to part with Mr. Samuelson with a hearty word of praise, and that we can give to his colotype plates, which are excellent.

Slav or Saxon. By W. D. Foulke. (Putnam.) Rarely does a book repay perusal as this does. In the first place the style is terse, clear, and incisive; and in passages—notably towards the close—rises into eloquence. Then the consciousness with which the past history and present development of Russia is told is, to say the least of it, very unusual and singularly praiseworthy. From the first page to the last there is not one unnecessary sentence. The book is a closely-knit chain of well-reasoned arguments. Padding or even digressions never occur; and, although the writer is rightly indignant with the inhuman cruelties practised by a despotic government upon political prisoners in Russia (see his reference to the Troubetzkoi zavelin, where the political prisoners, "covered with vermin and eaten up with scurvy, emit an odour like that of a corpse"), he never runs into exaggerations or forgets the warning—*Pas trop de zèle*. Always calm and collected, Mr. Foulke is a safe guide for those who wish to learn something of the tendencies of Nihilism—the great omission in Mr. Wallace's book. If we were to select any one particular chapter from the nine in the book, we should take chap. viii., entitled "The Present Despotism." Men are so sensitive to pain that anything like personal suffering appeals to us all. We are up in arms to right the wrongs of those who are "beaten twice a day and fed once." But cruelty, though it drives mad five prisoners in fourteen, does not touch the spirit of the remaining nine. As Mr. Foulke truly says, "There is no limit to the power of endurance of a mind exalted by a principle which it deems great." Where despotism is most to be feared is where it attacks not an individual, but a language or a national institution. In 1876 a decree of the censor forbade the millions of inhabitants of Little Russia to print, sell, or circulate any works in their own tongue, either original or translated (p. 118). A whole literature was thus annihilated. The much-vaunted *zemstvos* have been able to do little good, owing to the withdrawal of the powers entrusted to them. Better sanitary

measures being required for the country, and the means at the disposal of the *zemstvos* being very slight, female physicians were employed by these local assemblies. The central government, however, regarded these women as instruments of revolutionary propaganda, and limited the number which might be employed. Then, again, the *zemstvos* began to have a very beneficial effect on education. The Russian *mujik* had an earnest desire to learn. This, so far from being considered praiseworthy, was checked in every possible way by the minister of public instruction. In the primary schools the teaching of geography and Russian grammar is forbidden. In the schools of Finland and Poland no language is permitted to be taught save the language of St. Petersburg and Moscow. The motives for this are obvious enough, but it is difficult to understand the jealousy of the government of instruction in geography and grammar. Inspectors were also appointed for the purpose of suppressing instruction. In 1879 the *zemstvo* of Riazan thanked the inspectors for having "abstained from using the means at their disposal to thwart the *zemstvo* in their efforts to promote primary instruction and increase the usefulness of the village schools" (p. 115). In 1884 the primary schools were taken from the *zemstvos* altogether, and placed in the hands of the ignorant Russian clergy. Despotism is as relentless with the press as with education; but we must refer the reader to Mr. Foulke's pages for illustrations of the manner in which all individual rights are trampled upon. Mr. Foulke, like most Americans, is a warm admirer of the Russian nation, and as their admirer he thinks it "time for the Russian autocracy to die." The coming struggle between England and Russia—Saxon and Slav—he regards as "not very far away."

"The struggle is to be avoided, not by establishing a scientific frontier, nor by seizing this or that military post, but by a disintegration of those forces in the dominions of the czar which threaten the future peace and well-being of mankind" (p. 10).

He marshals the forces on either side, and comes to the conclusion that in a war with Russian despotism English liberalism must be beaten. Such an issue Mr. Foulke regards as disastrous to civilisation and progress all the world over. The hope, therefore, of mankind lies "in the establishment of civil liberty in Russia, and in the substitution of industrial methods for its present military system."

The Decline of British Prestige in the East. By Selim Faris. (Fisher Unwin.) We have read this book with care, and own to some disappointment. In his introduction, the author claims to be a friend of England; but, as is usual in such cases, "he doth protest too much." Selim Faris is a Turk, and when he speaks "of the immense and unlimited influence that the Sultan possesses over the Egyptians" (p. 73), he speaks from his brief; and, though we may not agree with him, we admit that he is clear and logical. But when he argues that if we wish to govern Egypt for the Egyptians, and to keep the Russians out of India, we must form a close alliance with Turkey, "of which Egypt is an integral part" (p. 127), he reminds us of the famous cartoon in *Punch* of the lion and the fox. The author does not love the Armenians, and his first chapter—which is quite the best in the book—is a very severe criticism of Nubar Pacha's administration. He is not destitute of humour, as the following passage shows:

"The Armenians say, 'The Roumanians are a nation, and have their king. So have the Servians. The Montenegrins have also a prince, and his crown is now being made by one of the jewellers at St. Petersburg. The Bulgarians also have the blessings of civilisation—they have had one prince, and are now seeking for another'" (p. 69).

Chapter iii. deals with the rivalry between England and Russia, and gives a succinct account of Russia's progress from an area of 4,000,000 English square miles in Asia in 1725 to her present enormous area of 14,000,000 square miles. The facts are interesting, though we may differ from Selim Faris as to the remedy. Chapters iv. v. and vi. might have been omitted. The author writes in clearer English than many Englishmen.

A Summer's Cruise. By Alfred Colbeck. (Fisher Unwin.) The writer of this account of a summer cruise in the waters of Greece, Turkey, and Russia, is evidently a man of wide information, but nothing in his 410 pages was not already known. He has studied Gibbon and Smith's Classical Dictionary to some purpose, but lacks the humour and the spirit which have made some travellers' books such delightful reading. To tell the truth, Mr. Colbeck might have written his narrative in the British Museum. His work is too much made up of other books, and smells too strongly of the lamp.

The Isles of the Princes. By Samuel S. Cox. (Putnam.) Rarely have we met with a more diffuse and padded volume than the one before us. It is difficult to find a page in it which justified its publication. The air of the Greek roundelay is pretty, and the following sentence passable—"If the orthodoxy of the Greek Church is a justified religion, it is a justification which is monumental." Mr. Cox was the United States Minister in Constantinople, and is apparently a prolific writer. If his other works resemble the present one, they cannot be regarded as ornaments of the "spoils" system. We must also protest against the manner in which illustrations from Curzon's *Monasteries of the Levant* have been reproduced in this volume without acknowledgment.

NOTES AND NEWS.

We understand that Lady Brassey has left sufficient materials in MS. to make up a volume descriptive of her last voyage, which she herself was never destined to complete. It will be published early in the autumn, with abundant illustrations, by Messrs. Longmans.

DR. A. BAIN, of Aberdeen, is about to bring out a revised and greatly enlarged edition—practically rewritten—of the second part of his *Rhetorica*, dealing with the Emotional Qualities.

We hear that Sir Julius Vogel will shortly superintend the production of a large illustrated work on the Pacific Islands and the Panama Canal, which will be dedicated to M. de Lesseps.

MR. WALTER SCOTT has in the press a selection of religious verse, entitled *Sacred Song*, edited by Mr. S. Waddington. Among the authors represented in the volume are Dr. George Macdonald, the late Dean Stanley, Mr. Gladstone, Archdeacon Farrar, Miss Christina Rossetti, Mr. Palgrave, Cardinal Newman, Prof. Dowden, Mr. R. L. Stevenson, Dr. Horatius Bonar, &c.

MR. REDWAY is about to publish another volume of poems by Mr. H. G. Hewlett (including some which have appeared in the ACADEMY), entitled *A Wayfarer's Wallet: Dominus Redivivus*.

MESSRS. W. H. ALLEN & Co. will issue immediately a second series of Col. W. F. B. Laurie's *Distinguished Anglo-Indians*, which will include, among others—Col. G. B. Malleon, Sir John Morris, Sir Joseph Fayrer, the Hon. Sir Ashley Eden, Sir Auckland Colvin, Henry Woodrow (the "Nestor of Education in Bengal").

THE May volume of the "Canterbury Poets" will consist of a selection from the poems of the late Philip Bourke Marston, with a biographical and critical memoir by Mr. William Sharp. The editor has chosen what have seemed to him the best and most representative sonnets, lyrics, and longer poems in Marston's three volumes—*Song-Tide*, *All-in-All*, and *Wind-Voices*. The book will be divided into five sections—Early Poems, Selected Poems (chiefly from *Wind-Voices*), Sonnets, Garden-Fancies, and Love Lyrics. Of the sonnets there will be a hundred examples, fully representative of the poet's best achievements in this species of composition. The title of the collection will be *Song-Tide: Poems and Lyrics of Love's Joy and Sorrow*.

MR. ELLIOT STOCK will shortly publish *The Catherine of History*, by the author of "De Nova Villa," being the first volume of an intended series of biographical sketches of celebrated women classified under their Christian names.

THE delegates of the Clarendon Press have the following works ready for early publication: Mr. Henry Sweet's *History of English Sounds*, a remodelled and rewritten edition, brought up to date, of the work first issued by the Early English Text Society some fifteen years ago; a treatise on *The Principles of Sound and Inflection in Greek and Latin*, by Mr. J. E. King and Mr. C. Cookson, masters at St. Paul's School, dedicated to Mr. F. W. Walker, the high master; Xenophon's *Cyropaedia*, book i., edited by Dr. Charles Bigg, on the same scale as his edition of book ii.; *A Concise Dictionary of Middle English*, by Prof. Skeat and Mr. A. L. Mayhew, of Wadham College, with a preface by Prof. Skeat, in form and size uniform with Prof. Skeat's *Concise English Etymological Dictionary*.

THE following new editions will also be issued very shortly: A third edition of Mr. Oscar Browning's *Lives of Cornelius Nepos*, revised by Mr. W. R. Inge; a fifth edition of the *Treatise on Heat* by the late Prof. Balfour Stewart; a fifth edition, carefully corrected and revised to date, of Sir William Anson's textbook on the *Law of Contract*; and a second edition of Cicero's *De Oratore*, book i., by Prof. A. S. Wilkins, of the Owens College, Manchester, who announces that the issue of the third book, which has been much delayed, may be expected shortly.

THE late Abraham Holroyd's unique collection of Yorkshire ballads have been handed over by his executor to Mr. J. Horsfall Turner, of Idel, Bradford, who proposes to issue the best of them by subscription.

MR. BLADES'S *Enemies of Books*, which has been re-issued by Mr. Elliot Stock in the "Book Lover's Library," has already run to a second edition.

THE *Yorkshire Genealogist*, which has hitherto been a separately paged section of the *Yorkshire Notes and Queries*, commences as a distinct illustrated quarterly with part xiii., the beginning of the second volume. Messrs. Triebner, Ludgate Hill, are the London publishers.

THE Committee on Contractions in Writing for the Press, appointed by the International Shorthand Congress of last year, have issued a *Standard List of Contractions recognised by Printers in MSS.* (Cassell), which ought to prove very useful to amateurs. We may here give the following most common contractions, as opposed to abbreviations proper, which do not, perhaps, explain themselves: / = the, t = that, f = for, o = of, h = have, y = you, and w = with.

PROF. ANGELO DE GUBERNATIS has just issued the first part of his *Dictionnaire Inter-*

national des Ecrivains du Jour (Florence: Niccolai), which may be regarded as an augmented and revised edition of the similar work—then written in Italian, and with numerous portraits—which he published some eight years ago. The character of the work may be gathered from the fact that, in 112 pages of double columns, it completes the letter A. The total number of authors recorded is 476, of whom 134 are Italian, 128 French, 34 English, and 31 German; while the minor nationalities are proportionately represented. The English and American part, which alone we have tested, seems carefully done. The mode of publication is in twelve monthly parts, at a total subscription price of 20 frs.

THE FORTHCOMING MAGAZINES.

THE late Mr. Matthew Arnold's Address on Milton, delivered on the occasion of the unveiling of a window in St. Margaret's, Westminster, will appear in the *Century* for May.

THE May number of *Scribner's* will commemorate the two hundredth anniversary of the birth of Alexander Pope (May 21, 1688) by two contributions from Mr. Austin Dobson—one is a prose essay; the other is a critical estimate of Pope, written in heroic couplets after his own manner. These will be illustrated with portraits of Pope, of his mother, and of Martha and Teresa Blount; and with views of Pope's villa, garden, and grotto. Mr. R. L. Stevenson's essay in this number will be on "Gentlemen."

THE *National Review* for May will contain a reply by the Earl of Selborne to the late Mr. Matthew Arnold's paper in the March number on Disestablishment in Wales.

MR. J. G. FRAZER will conclude his examination of the myths on the language of animals in the next number of the *Archaeological Review*. The working of the Ancient Monuments Act will be examined by Dr. Joseph Anderson; Mr. J. Romilly Allen will set forth his plan for establishing a museum of Christian Archaeology for Great Britain; and Miss Toulmin Smith will finish her transcript of the ordinances of the Bakers' Guild at York. Among the other contributors to the same number are Mr. Sidney Hartland, Mr. Gomme, Mr. J. H. Round, Mr. H. H. Howorth, Dr. Robert Brown, and Prof. Kuno Meyer.

THE May number of the *Antiquary* will contain some important articles. Mr. Edward Peacock contributes "Notes on Holy Bread"; the Rev. S. Oode Hore a comprehensive paper on the antiquities of "Vases and Weather-cocks"; and Mr. William Rendle, the South-west historian, carries on his series of antiquarian reminiscences in a paper entitled "Reminiscences and Remarks," wherein he sketches his life as an antiquarian student during half a century.

TO the May number of the *Bookworm*, Mr. A. L. Humphreys will contribute an article on "Lackington and his Memoirs"; Mr. Blades will conclude his account of the Ooster-Gutenberg controversy; a further paper on the First Folio Shakspeare will be given; and the first of a series on "Dr. Johnson's Tavern Resorts and Conversation," by Mr. C. A. Ward.

ARCHDEACON FARRAR has written a Whitsuntide Hymn for the May number of the *Church Monthly*, which will also contain the opening chapters of a new serial tale by Mrs. Linnaeus Banks.

Art and Letters for May will contain: "Faëlla I," by Th. Bentzon; "The Sphinx," by Count Witthum; "History of a Duel," by P. Hervieu; "Rachel at Three Periods," by A. de Pontmartin; "The Centenary of the Times," by M. Blowitz; and "Round the Salon of 1888," by G. Jollivet.

AMONG the articles in the forthcoming number of the *Scottish Review* will be "Emerson, the Thinker," "Charles Darwin," "The Founder of Modern Pessimism," "Songs and Rhymes from the Dialects of South Italy," and "The Anglicising of the Scottish Universities."

St. Nicholas for May will contain "Little Josef Hofmann," by E. L. Price, with portrait; and "The Advice of Miss Alcott," by J. P. True.

ORIGINAL VERSE.

MATTHEW ARNOLD.

Died April 15, 1888.

WITHIN that wood where thine own scholar strays,
O! Poet, thou art passed, and at its bound
Hollow and sore we cry, yet win no sound
But the dark muttering of the forest mase
We may not tread, nor pierce with any gaze;
And hardly love dare whisper thou hast found
That nestful moonlit alope of pastoral ground
Set in dark dingles of the songful ways.

Gone! they have called our shepherd from the hill,
Passed is the sunny sadness of his song,
That song which sang of sight and yet was brave
To lay the ghosts of seeing, subtly strong
To wean from tears and from the troughs to save;
And who shall teach us now that he is still!

RICHARD LE GALLIENNE.

Liverpool.

OBITUARY.

MATTHEW ARNOLD.

THE sudden death of Mr. Matthew Arnold at Liverpool, on April 15, has removed from the English world of letters perhaps its most conspicuous figure. As poet, he yields the palm only to the two veterans who still survive from the generation older than his own; and as a prose writer—whether we consider the polish of his language or the interest of his matter—no other name can be mentioned by the side of his. He won the distinction of being recognised as a classic in his own lifetime.

Matthew Arnold was born in 1822, being the eldest son of Dr. Arnold, of Rugby. His birth-place was the riverside village of Laleham, in Middlesex, where his father was at the time taking private pupils; and to Laleham his body has been taken back for burial. After a year "in Commoners" at Winchester, in the very beginning of Dr. Moberly's rule, he passed to Rugby under his father, where he was a little junior to Clough, and a little senior to Conington. From Rugby he was elected to an open scholarship at Balliol, which was then beginning to be reckoned the blue ribbon of schoolboy attainment. In 1843 he gained the Newdigate, with a poem on "Oliver Cromwell," which he has not thought fit to republish. In the classical schools he was placed in the second class (like the late Mark Pattison); but this comparative failure was soon redeemed by his election to a fellowship at Oriel, his father's college, and at that time—at least in its commonroom—the premier college of the university. On the completion of his probationary year, he left Oxford for London, and was thus saved from becoming a don, though none has surpassed him in love for his Alma Mater. After serving for some four years as private secretary to the Marquis of Lansdowne, then Lord President of the Council, he was nominated in 1851 to an inspectorship of schools, the duties of which office he continued to discharge until he retired on a pension in 1886.

In 1849 Matthew Arnold published his first

book, *The Strayed Reveller, and other Poems*, with no further mark of authorship on the title page than simply "A." This was followed in 1852 by *Empedocles and Etna, and other Poems*, also anonymous. A year or two later, when he brought out under his own name a selection from his poems, these two volumes were withdrawn from circulation, and have now become exceedingly rare. Last July, at the sale of Mr. Smalley's library, the former fetched £7 2s. 6d., and the latter £5 17s. 6d. Matthew Arnold's reputation was now so firmly established that in 1857 he was chosen professor of poetry in Oxford, and re-elected for a second term in 1862. If his name will always be associated with this chair, it is no less true that this chair will always be associated with his name. The three famous volumes—*On Translating Homer* (1861), *Essays in Criticism* (1865), and *Celtic Literature* (1868), which were all the results of Oxford lectures—represent almost the sum total of his contribution to literary criticism. Henceforth he turned his attention chiefly to popular theology, and poured forth in rapid succession *St. Paul and Protestantism* (1871), *Literature and Dogma* (1873)—which he has himself described, in the preface to the popular edition (1883), as "more in demand than any of his other prose writings"—*God and the Bible* (1875), and *Last Essays on Church and State* (1877). Space forbids us to enumerate his minor writings, and his numerous magazine articles, continued up to the very month of his death; but it would be unjust to pass over the elaborate reports on education in France and Germany, which he compiled from time to time in the course of his official duty.

Matthew Arnold's recent activity as a polemical writer in the magazines has, perhaps, tended to obscure his earlier fame as poet and critic. With the exception of three or four short pieces, all his poetical work was done before 1868. Unlike the two veterans alluded to above, and some of his younger rivals, he has not since ventured to challenge the public approval every year or two with a new book of verse. But the "complete edition" of his poems in three volumes, published by Messrs. Macmillan 1885, will suffice to preserve for him high rank among the bards of the Victorian era. There future generations will find the most characteristic embodiment of the strength and the weakness of our time—wide intellectual sympathies, saddening spiritual doubt, but also "unconquerable hope"; and, as the vehicle for these, a refined choice of language, a subtle melody, and a sustained dignity, which he drew from his master, Wordsworth.

Matthew Arnold's prose style is marked by the same qualities as his verse; and, at its best, may be called a model for precision and grace. But, while his exquisite taste never failed him in poetry, it must be admitted that some at least of his later prose writings are disfigured by faults, caused partly by the exuberance of his own wit, partly by the necessities of controversy.

As a literary critic, Matthew Arnold's influence can hardly be exaggerated. His example was yet more stimulating than his precept. He has founded, fortunately, no school to adopt servilely his every dictum, and to emphasise his own half-truths. But, from his chair at Oxford—where theology and classics had hitherto reigned supreme—he set up a modern standard for judging both books and conduct, and directly inspired the numerous band of writers in all departments who have since issued from that university. Even if his lectures should cease to be read—which it is difficult to believe—his life's work as the strenuous enemy of ignorance and superstition will keep his name in permanent remembrance, by the side of his father's.

MAGAZINES AND REVIEWS.

THE *April Livre* contains two articles, each of some length, of very great interest to the bibliophile and of some to the lover of literature—a distinction which we trust is not invidious, as, after all, there is no reason why a man should not be both. The first, by M. de Saint-Heraye, is on "La Balle d'un Comporteur d'Antan"—a curious survey of the literature of the eighteenth century, in which, it need hardly be said, the books best known to the stilted historian of literature do not figure. The other is on the collection of the Baron De La Roche-Lacarelle, with a portrait of that amateur and a representation of a copy of *La Fontaine*, of which M^{me}. de Pompadour once and the baron recently have been possessors. This collection, its owner being dead, is going to be sold; and if any generous capitalist would like to buy it whole and give it to some one who would appreciate it, the editor of the *ACADEMY* will, we have no doubt, for this occasion only, reveal the name and address of the writer of this notice.

In the *Political Science Quarterly* (London: Frowde) for March, Prof. Richmond M. Smith shows the urgency of the immigration question and the need of some sort of control; Prof. Munroe Smith discusses codification from a new point of view, that of the nation *versus* the state; Mr. A. C. Bernheim describes the actual working of New York party primaries under the law of 1887; Prof. J. W. Jenks (of Knox College) sketches the history and estimates the influence of the Michigan salt monopoly; Prof. F. W. Taussig (of Harvard) explains how the tariff of 1828 was established; and President Francis A. Walker (of the Mass. Technological Institute) examines the bases of taxation.

CORRESPONDENCE.

"THE CITY OF DREAM."

Southend: April 12, 1888.

In noticing my *City of Dream* the *Saturday* reviewer, who is nothing if not clerical, but who, in this one instance, is very unusually goodnatured, seems to be amused at some of my blunders. Now, I never assume to be a

correct writer, either morally or literally; but when I talked of "Christ the Paraclete" I was fully aware of the fact (which my critic has apparently forgotten) that the word *παράκλητος* is distinctly applied by St. John, in the second of his Epistles, to the Second Person of the Trinity; and this, despite the fact that the same word is used—in chap. xvi. of St. John's Gospel—in reference to the Third Person. But what are we to say, asks my critic, about "Kratos and dark Bias"? The lines in the poem refer to Prometheus, and run, as printed:

"As when by Kratos and dark Bias nail'd
To that hard rock!"

It may amuse the reader to be told that this is actually a clerical error, and that the lines, as I wrote them, were:

"As when by Kratos and dark Bias *snail'd*
To that hard rock!"

I can conceive the horror of the Tory reviewer if the horrible new verb, "to snail," had been actually printed. The printer's devil knew better, and corrected the barbarism at the last moment. Yet, alas! I like my own barbarism well enough to restore it if ever my epic reaches a new edition.

Here, says the critic, is another barbarism:

"—a waste
With never wood or gentle *cynosure*."

"Does Mr. Buchanan know that *cynosure* means a dog's tail?" Just as well, perhaps, as Milton knew it, when he used the word in "L'Allegro," and talked of the "cynosure of neighbouring eyes."

Your own friendly critic makes a more serious charge—that my poem culminates in merely "a vain hope," instead of "a serene and assured faith." I presume, then, after all, that I have written in vain; though I was foolish enough to fancy that the faith I put in the mouth of the old man Masterful was serene and assured enough. Does the rejection of all formulated dogma imply the absence of all spiritual certainty? If so, my work is indeed a colossal blunder, and I have lost all power of expressing my own ideas. I am encouraged to hope, however, that less hasty critics will acquit me of preaching a creed of mere nescience, and understand that I base my final philosophy on the certitude of the Human Soul, which—

"Knowing itself, beholds *within itself*
The inspiration it has christened 'God,'
And which *alone* betokens it divine!"

ROBERT BUCHANAN.

"IL RE GIOVANE" IN THE "INFERNO."

London: April 14, 1888.

The subjoined quotations may be of interest to Dante students in connexion with the vexed question of the reading in *Inf.* xxviii. 135. The majority of MSS. and printed editions are in favour of the reading *Giovanni* in preference to the historically correct *giovane*. There is not the slightest doubt that the young King Henry, "Henricus Rex junior, filius Regis Henrici," who was encouraged by Bertran de Born to rebel against his father, is the person intended. The question is whether Dante, though acquainted with the facts, was ignorant of the name of the prince, and really thought he was called John, thus confounding Prince Henry with his younger brother; or, whether he actually knew that the prince in question was the young king Henry, "il re giovane."

I may give, to begin with, the striking passage from the poem in which Bertran de Born, the Provençal troubadour, of whom Dante is speaking in the line referred to above, laments the death of his friend, Prince Henry—

a poem which was, perhaps, known to Dante:

"Si tuit li dol el plor el marrimen
E las dolours el dan el caïtïvier
Que hom agues en est segle dolen
Fosson ensem, sembleran tuit leugier
Contra la mort del jove rei engles."

Which may be rendered as follows:

"If all the grief and bitterness and woe,
And all the pain and hurt and suffering
That in this world of misery men know,
Were massed in one, 'twould seem but a light thing
Beside the death of the Young English King."

The extracts given below have not, so far as I am aware, been quoted before in this connexion:

"Chil rois [Henris] . . .
Ot. I. si qui ot nom Henris;
Cou fu Henri li Jouenes rois
Qui mult fu sages et cortois."

"Henris . . .
Avoit souvent guerre as françois
Et à son fill le jouenes roi,
Avoit grant guerre et grant annoi."

"Li jouenes rois tant guerroia
Que il mourut, puis commença
Le roi de France à guerroier
Le roi Henri cel aversier."

The above passages occur in a short poem appended as a continuation to Wace's "Roman de Brut" in a thirteenth-century MS., and printed by Le Roux de Lincy in his edition of Wace, vol. i., pp. cxv.-cxvii.

The following are from a thirteenth-century poem on the life of Thomas à Becket, where the coronation of the young king holds an important place, as being the event which led to the murder of the archbishop:

"Le pere fiat au fiz grant feste.
Ne oïmes en chançon n'en geste
Ki fust de riche home servi
Oum fu le jofne rois Henri.
Li peres li fiat joie si grant
K'a ceu jur li fu sergant,
E, oïans plusurs, gei
Ke sul fu rois jofne Henri,
Ne mie cist ki dunc servi."

"Mult en vint mal e encumbrer
Par le jofne roi coruner,
Sanc de arcevesque espanduz,
Autres eveques suspenduz
Et li autre escumengez
E cunfunduz e exillez,
E guerre entre fiz e pere
Meïe mortele e amere.
Enmi les anz de sa juvente,
Es anz poi plus u meïns de trente,
Murut li jofne rois Henri,
Dunt veuz e jofnes sunt mariz."

(*Fragments d'une Vie de Saint Thomas de Cantorbéry*, ed. Paul Meyer, Paris, 1885).

Similarly, in the twelfth-century poem on the same subject by Garnier de Pont Sainte-Maxence, the prince, after his coronation, is always alluded to as the "young king":

"Li homme l'arcevesque en Engleterre alèrent;
Les lettres al veil Rei al jufne Rei portèrent."

And so in the long harangue addressed to the archbishop by his murderers:

"Les custumes del règne vols abatre et oster.
E al jufne Rei vols sa corone tolr."

It is hardly likely that Dante, who was not unacquainted with English history, should have been so ignorant of the main facts in the famous struggle between Henry II. and his archbishop as to confound Prince Henry, the "young king" of the chroniclers and poets, with Prince John, who never received the title of king, at any rate of England, during his father's lifetime. It is much more probable

that the ignorance was on the part of the commentators (one of whom speaks of John as the son of King Richard!), and of the copyists (Boccaccio among them), who, not understanding the allusion, garbled the line, and altered *giovane*, without more ado, into *giovani* = *giovanni*.

PAGET TOYNBER.

"HUER"—"PALINGMAN"—"GRILLE."

Wimbledon: April 20, 1888.

An old word that does not appear in our glossaries is "huer." In the parliament of 1483 regulations were passed concerning the making of "Huers Bonettes and Caps" in fulling mills (Rot. Parl. vi. 223). On the margin, and in ordinary editions of the statutes, the word is rendered "hats," and such it probably was (22 Ed. IV., c. 5). The word occurs again in the Record edition of the statutes (1 Rich. III.) With "huer" we have the derivative "hurer," a maker of huers or hats. The word is obviously derived from the French *hure*; but Littré does not seem to give hat or cap among the meanings of *hure*, now best known in its gastronomic application—*Hure de sanglier*, boar's head.

"Palingman" is given by Halliwell as = fishmonger; but the statute 22 Ed. IV., c. 2, seems to limit the word to the eel trade. "Merchauntes, as other sellers of Elys, called Palyngmen," &c. (Rot. Parl. vi. 221). Can anyone give the origin of the word?

In the same enactment we have the following: "Among the grete Samons [they pack] small fyssh called Grilles." The word occurs several times, and is always spelled in the same manner. I gather from this that our "grilse" is really a plural form, and that sportsmen ought to speak of killing one "grille" or several "grilles." J. H. RAMSAY.

THE SHERIFF THOROLD.

London: April 16, 1888.

Students of the Norman period may be glad to have their attention called to an unlooked for allusion to this personage in the Pipe Roll of 1165 (Ed. Pipe Roll Society, p. 37). He plays, as Mr. Freeman has pointed out, an important part in the problems connected with "the Countess Lucy." This entry refers to the payment of twenty marks by her grandson, the Earl of Chester, "pro feodo Turoldi vicecomitis." It is not mentioned by Mr. Kirk, in his elaborate essay on the countess.

J. H. ROUND.

HOME ARTS AND INDUSTRIES ASSOCIATION.

London: April 17, 1888.

I beg to be allowed to state, in reference to Mrs. McCallum's letter of April 11, that it was not written by request of the committee.

Mr. Leland is the author of a leaflet on Design, for a series edited by Mr. Redgrave, which has been, and still is, used by those classes which have adopted his system. There are other leaflets used by other classes which do not adopt that system. Mrs. McCallum, as hon. secretary for Scotland, has never distributed the leaflet.

A. DYMES, Secretary.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, April 23, 8 p.m. Society of Arts: Cantor Lecture, "Milk Supply and Butter and Cheese Making," III., by Mr. R. Bannister.
8 p.m. Aristotelian: "Conscience Theories," by Mr. Pasco Daphne.
8.30 p.m. Geographical: "Unexplored Basuto Land," by Lieut.-Col. Sir Marshall Clarke; "The Island of Fernando de Noronha in 1887," by the Rev. T. S. Lea.
TUESDAY, April 24, 8 p.m. Royal Institution: "Ruskin," III., by Dr. O. Waldstein.
8 p.m. Society of Arts: "Craftsman and Manufacturer," by Mr. L. F. Day.

8 p.m. Civil Engineers: "The Distribution of Hydraulic Power in London," by Mr. E. B. Ellington.

8.30 p.m. Anthropological: "Recent Anthropometry at Cambridge," by Dr. J. Venn; "Head Growth of Cambridge Students," and "Remarks on Replies by Teachers to Questions respecting Mental Fatigue," by Mr. Francis Galton.

WEDNESDAY, April 26, 8 p.m. Society of Arts: "The Physical Culture of Women," by Miss Oshreiman.

8 p.m. Geological: "The Recent Work of the Geological Survey in the North-west Highlands of Scotland, based on the Field Notes and Maps of Messrs. Peach, Horne, Gunn, Clough, Hinxman, and Odell," by Dr. A. Geikie; "The Horizontal Movements of Rocks, and the Relation of these Movements to the Formation of Dykes and Faults and to Denudation and the Thickening of Strata," by Mr. W. Barlow; "A Recent Discovery of *Stigmatis Aoides* at Clayton, Yorkshire," by Mr. S. A. Adams.

8 p.m. Cymmrodorion: "The Possibilities of Welsh Music," with Choral Illustrations, by Mr. Joseph Bennett.

8 p.m. Microscopical: Conversazione.

THURSDAY, April 26, 8 p.m. Royal Institution: "The Chemical Arts," III., by Prof. Dewar.

8 p.m. Telegraph Engineers: "The Risks of Fire Incident to Electric Lighting," by Mr. W. H. Preece.

8 p.m. Society for the Encouragement of the Fine Arts.

8.30 p.m. Antiquaries.

FRIDAY, April 27, 9 p.m. Royal Institution: "Electrical Influence Machines," by Mr. J. Wilmhurst.

SATURDAY, April 28, 8 p.m. Royal Institution: "The Later Works of Richard Wagner," III., with Vocal and Instrumental Illustrations, by Mr. Carl Armbruster.

8 p.m. Physical: "Electromotive Force by Contact," by Mr. O. V. Burton; "A Theory Concerning the Sudden Loss of Magnetic Properties of Iron and Nickel," by Mr. H. Tomlinson; "The Graphic Treatment of the Lamont-Frühlich Formula for Induced Magnetism," "The Conditions of Self-Excitement in a Dynamo Machine," and "The Conditions of Self-Regulation in a Constant Potential Dynamo Machine," by Prof. S. P. Thompson.

8 p.m. Society for the Protection of Ancient Buildings: "Collegiate Architecture at Cambridge: its Origin, Development, and Mutation," illustrated with Drawings, by Mr. J. Willis Clark.

8.45 p.m. Botanic: General Meeting.

SCIENCE.

R. ELLIS'S EDITION OF ORIENTIUS.

"Corpus Scriptorum Ecclesiasticorum Latinorum," Vol. XVI. — *Postea Christiani minores*. Part I. (Vienna: Tempky.)

AMONG the various methods by which foreign governments contribute to the endowment of research, not the least effective is the foundation and maintenance of the *Academiae Litterarum*, or societies for the advancement of learning, which flourish in most European countries, and especially in Germany. Besides publishing regular reports and journals, these "academies" are often sufficiently well endowed to subsidise great literary or scientific works which lie outside the scope of private enterprise, and which in England are usually undertaken by some private society or university press. Thus we owe to the Prussian *Akademie der Wissenschaften* the great collections of Greek and Latin inscriptions, the ancient commentaries on Aristotle, and the "*Monumenta Germaniae*." The volume before me is another example of the same thing. The "*Corpus Scriptorum Ecclesiasticorum Latinorum*" was undertaken by the Vienna Academy more than twenty years ago, and is intended ultimately to include all Latin ecclesiastical literature down to A.D. 800. So far there have appeared some able reports on the MS. material available for the work, and sixteen volumes of text, including such writers as Minucius Felix, Arnobius, Orosius, and Salvianus. The series runs to some extent parallel to the "*Monumenta Germaniae*" alluded to above; and this is much to be regretted, for, when there is so much to be edited, one can dispense with rival editions of Eusebius or Victor Vitensis. But in itself it

is a great undertaking, and has been carried out in a manner which does much honour to the Vienna Academy and to the individual editors.

The present volume includes the works of Paulinus Petricordianus, edited by Petschenig; Orientius, by Mr. Ellis; Paulinus Pellaenus, by Brandes; and Claudius, Marius Victor, and Proba, by Schenkl. The last named was probably an Italian poetess, who lived about A.D. 350, and her "Cento" is one of those curious poems constructed wholly out of fragments from Vergil, which are familiar to the ordinary reader through Ausonius. The other four writers belonged to Gaul, and date from the earlier part of the fifth century. Everyone, I feel sure, will welcome correct texts of these poets, especially as the gain, in one case at least, is considerable. The present edition, apparently, is the first in which Victor's "*Commentarii in Genesis*" are given their proper title—*Alethias*, and are printed in a fairly accurate shape, free from the wilful omissions and interpolations of Gagneius, their earliest editor. A further correction is made in reference to the same poet by the discovery that the interesting *Epigramma*, or Letter to the Abbot Salmon on the manners and condition of fifth-century Gaul, is not by Victor, but by one Paulinus. The value of the little tractate—it is only 110 hexameters—would be heightened if we knew the date of this Paulinus. Schenkl refers it (very dubiously) to a Paulinus who in A.D. 400 was Bishop of Béziers, but Paulinus is not an uncommon name.

It is impossible to summon up much enthusiasm in dealing with these poets. The most passable of them is certainly Orientius; and I think I shall best satisfy the patriotic and literary instincts of readers of the ACADEMY if I confine the rest of this article to him and to Mr. Ellis's editing of him. Of the man himself we know very little beyond the fact that he was a native of Gaul and alive in A.D. 406. The few references to him in literature are collected in his preface by Mr. Ellis, who omits and thereby, I presume, condemns the statement of the Bollandist biographer—accepted by Teuffel—that "*pontificalis Auxio civitate cathedrae dignitatem ascendisse*," and that in 439 he, as an old man, went on an embassy from Theoderic to Aëtius. His works consist of the *Com-monorium*, or "exhortation to a pious life," in two books, together just 1000 elegiacs, and of some shorter pieces, which, it is to be hoped, are not genuine. I regret that neither the matter nor the manner of the *Com-monorium* seems to me very admirable. The matter is very much what might have been expected—warnings against certain deadly sins, an explanation of the "Two Commandments," a description of the Last Judgment, and so on. The whole is treated in a commonplace fashion. According to Teuffel, it is based on the *Institutiones* of Lactantius, and I could wish Mr. Ellis had dealt with this question, for the resemblance is not at all obvious to the casual reader. The ground covered by the two writers is seldom the same and is never covered in the same manner. Both, for instance, discuss marriage, but Lactantius approves it, Orientius condemns. Both describe the end of the world, but in utterly different ways. I should prefer to

believe—what is the most natural conclusion about platitudes—that Orientius borrowed from nowhere in particular. And, if the matter is second rate, the style is equally so. It is, indeed, flowing and intelligible, but monotonous in the extreme. Its two chief features are the very long and simply constructed periods, which might almost serve as examples of *λέγεις ελομένην*, and the numerous lines composed entirely of adjectives or nouns, such as

"lascivum miserum fallax breve mobile vanum."

Or,

"mors dolor exordium strages incendia luctus."

There is an infrequency of leonine verses and of false quantities. How little power of description the poet had, may be judged from the following average specimen:

"mandata cum iussu Tuo superaverit omnem
naturam nostra voce loquens asina
atque sua stimulis subigentem terga Balaam
terruerit miro quadrupes alloquio,
qui magno trepidi regis crebroque rogatu
dura super sanctum verba parans populum,
non potuit proprie motam sibi subdere linguam,
ore aliud dicens, corde aliud cupiens."

Of course, there are now and then better lines, but there is only one really worth remembering, and that one possibly a plagiarism, the pentameter describing the Vandal raid of A.D. 406.

"uno fumavit Gallia tota rogo."

The worst of it is that the poem contains very little of extraneous interest. The Latinity is not remarkable in any way. Apart from a few variations in prosody, I have noted only one *addendum lexicis*, and that I believe to be corrupt. The line just quoted has, it is true, a certain historical interest; and the student of fifth-century Gaul will notice that the deadly sins at which Orientius girds most eagerly—drunkenness, sensuality, and avarice—are just those which are mentioned as typical in the *Epigramma Paulini*. But these things are "drops in the desert," and I can find only one real virtue with which to credit the poet. When one reflects that Orientius could, in his facile monotonous style, have written three or four thousand lines more without any difficulty, one appreciates fully the quality for which an ancient writer praises him, "*suave brevisloquium*."

It is, perhaps, because I take so low a view of Orientius that I occasionally, to my dismay, find myself at variance with Mr. Ellis in textual questions. The Reader in Latin Literature at Oxford has lavished on this poor poet his unique erudition and his splendid critical abilities, and there is not the least likelihood of his text being superseded. My only fear is that he has done the work too well. The problem, indeed, is not a complex one. There are only two known MSS., and both of these are often corrupt. In consequence conjecture has to be plentifully used; and, though Orientius has been decently edited before, Mr. Ellis has produced a large number of excellent emendations, nearly all of which must have a permanent place in the text. The only critics who will possibly doubt about any will be those who, like myself, think that Mr. Ellis writes better Latin than did Orientius. Thus, in ii. 255, *liquidum* is certainly neater than *licitum*; but

the latter is possible, and so with *cauti*, in 329. In particular, I should defend some of the readings inserted *nigriore atramento*, for example, *metuendis* ii. 171, or *oruciat* 194. As it is, Mr. Ellis accepts a good many of these "blacker ink" readings. I may add here my own fancies about three passages in the second book. In the corrupt lines 215, 216, I would suggest for the pentameter *atque illud* (MSS. *illu*) *visit qui modo mille, simul*, joining *simul* with *interuunt* in 215, and taking *modo* as in ii. 364, 384. In 228, for the unknown *praemaduisse*, read *permaduisse*, a fairly common word in later Latin. In 276, *tunc* may, perhaps, represent *cunctum*, which at least has more point than *tenuis* or *torrem*.

It is, however, the shorter poems which I think Mr. Ellis has most overrated. I cannot believe that these poems are by Orientius, or are anything like so early. The style is far worse, the vocabulary less classical; indeed, they contain several words unknown to Georges—e.g., *pārifoare* (iii. 19), *diremptor* (37), *habitabilis* (= *qui habitat*). In consequence, I should accept a variety of readings, and, in particular, a number of accentual scansion, which Mr. Ellis obelizes. There are a good many of these latter, and it is quite impossible to correct all. Mr. Ellis allows *plenitudo*, *margārita*, *diremptor*, *prōtoplastus*. Why should he reject *ecolesia*, *ecolorum*, *pestifer detulit*? Again, I fear that *rutrum* and *maeculum* (iii. 108, 128) are much too good for a versifying monk—such the author clearly was. In iii. 43, *plectitur* is, again, is too classical; besides, the second person future is wanted, and it is easy to read *plectēris*. In 87, for *aqua*, read, perhaps, *aquae*. In 165, the MS. text is right, for *oanna* has *o* in Iuvenius, and can undoubtedly be scanned as a molossus.

I am happy to be able to give some value to this article by adding three unpublished conjectures by Prof. Nettleship which, I hope, will meet with the attention they deserve:

i. 433 "Respice quod paucis floret nec permanet annis."
For *floret* *nos*, read *flora aetas*.

ii. 315. "Intereunt decies qui ternos vixerit annos atque illum vixit qui modo miselle fim."
For *intereunt*, read *interimit*, and for the last words *vis similis*.

iii. 219, 220, for *et vita*, read *nec vita*, "not even."

But, though Orientius has caused scholars like Mr. Ellis and Mr. Nettleship to propose admirable conjectures, I confess the result to me is not pure satisfaction. In noticing Mr. Ellis's *Avianus* in a contemporary, I said that Avianus had not lived in vain, since he had caused Mr. Ellis to write a commentary. Orientius, alas, has also lived to some purpose, for he has delayed Mr. Ellis on his way to more important studies! It is good that English scholars should have a part in the great work of the Vienna Academy; it is good, too, that they should be represented by so great a scholar; it would be better still if that great scholar would now undertake some task more worthy of him.

F. HAVERFIELD.

CORRESPONDENCE.

THE FINNIC ORIGIN OF THE ARYANS.

Oxford: April 12, 1888.

I have had lately brought to my notice a paper by Canon Isaac Taylor, entitled "The Origin and Primitive Seat of the Aryans," which appeared in the *Journal of the Anthropological Institute*, February 1888. In this paper the author attempts to establish on scientific grounds the hypothesis of the primitive identity of the Aryan and Finnic races; to show that the Finns were the progenitors of the northern Aryans; and to prove that there is no language except the Finnic from which the Aryan speech could have been developed. In order to demonstrate the derivation of the Aryan or Indo-Germanic *Ursprache* from the Finnic *Ursprache*, the writer opens Prof. Skeat's Etymological Dictionary, finds in that useful Koran the list of 461 primitive Aryan roots, mainly compiled from Fick, and of these takes for investigation the eighteen tri-literal roots in *k*, Nos. 41-58. He then proceeds to compare these eighteen Aryan roots with the Finnic *k*-stems to be found in Donner's *Vergleichendes Wörterbuch der Finnisch-Ugrischen Sprachen* (Helsingfors, 1874). The result of the comparison is that Dr. Taylor affirms that "every one of these eighteen Aryan roots in *k* is also found in Finnic with the same meaning." May I be allowed to offer a few brief criticisms on some of the evidence for this statement produced in Dr. Taylor's "Comparison of Verbal Roots"?

1. \sqrt{KAK} , "to cackle." This is an onomatopoeic root, and is, therefore irrelevant for Dr. Taylor's purpose. It is absurd to connect as co-radicates *cack* with Finnic *kuk*. The word *cock*, "gallus," is not a primitive word; it is not Aryan, not even Italic, Romanic, or Teutonic. It is a comparatively modern word, a bit of onomatopoeic slang.

2. \sqrt{KAK} , "to surround, gird." Dr. Taylor compares Finnic *kok* with English *hook*, and Finnic *kak-la* with German *hals*. But the etymology of *hook* is quite unknown—see Kluge's *Etym. Germ. Dict.* (s.v. *haken*). German *hals* is certainly not derived from \sqrt{KAK} . The primitive Teutonic stem was *halsa*, with which we may compare Latin *collum* (= "colsum," see Kluge).

3. \sqrt{KAK} , "to hang," hence English *hang*. Does Dr. Taylor really maintain that this Aryan root is identical in meaning with the Finnic \sqrt{KAO} , "to gaze at, to see"?

4. \sqrt{KAT} , "to cover, protect." Dr. Taylor equates Finnic *kota* with English *hut*. But *hut* can hardly be derived from this root; it might rather be connected with Skeat's \sqrt{KUDH} (No. 77)—see Kluge (s.v. *hütte*) and Brugmann, *Vergleich. Gram.*, § 469.

5. \sqrt{KAD} , "to fall, to throw down." Does Dr. Taylor really mean to say that this root is identical in meaning with the Finnic \sqrt{KAT} , "to seize"? He compares Finnic *kitta* with English *hand*; but the derivation of *hand* from \sqrt{KAD} is not one of the certainties of Aryan etymology. Kluge gives a good account of the difficulties which stand in the way of connecting this word with English *hand* and the \sqrt{KAD} .

6. \sqrt{KAN} , "to sing, to ring." Neither in form nor in meaning is this root identical with the Finnic \sqrt{KAN} , "to roar" (of thunder). Does Dr. Taylor really think that Latin *gemo* can be derived from \sqrt{KAN} ?

7. \sqrt{KAP} , "to contain, hold, seize." Dr. Taylor compares Finnic *kuppi* with English *cup*. But *cup* cannot be derived from \sqrt{KAP} ; it is borrowed from Latin *cupa*, and is derived from Skeat's \sqrt{KUP} (No. 78)—see Brugmann, § 430.

8. \sqrt{KAP} , "to move to and fro." The only derivative Dr. Taylor gives from this root is Greek *κάρτω*, "to hew, to strike." But the

primitive root-form of this word seems to have been *SKAP*—cp. Oh. Sl. *shopiti*, castrate; see Curtius, No. 68 b.; see also Skeat (s.v. *capon*).

9. \sqrt{KAM} , "to bend." English *combe* is not a derivative from this root. The Old-Celtic form was *cumba*—cp. Greek *κύβη*, "a cask"; Sanskrit *kumbhās*, "a pot"; see W. Stokes, *Celtic Declension*, p. 92, and Curtius, No. 80. English *hump* cannot come from \sqrt{KAM} ; it may possibly be a cognate of the Celtic *cumba*. How English *kink* can come from \sqrt{KAM} one would like Dr. Taylor to explain.

10. \sqrt{KAM} , "to love." Donner gives no corresponding Finnic root. The only Latin derivative given by Dr. Taylor is *amo*, an impossible etymology, as there is no sure example of an Aryan initial *k* being lost in Latin. The only Teutonic derivative vouchsafed is English *home*, which is usually connected with \sqrt{KI} , "to rest." Skeat, No. 72, see Brugmann, § 84. Donner tells us that Thomson is inclined to derive the Finnic *heimo*, "family," from Old-Norse *heimr*.

11. \sqrt{KAR} , "to make." Donner gives no \sqrt{KAR} , "to make, to work." The Teutonic *carve* (Anglo-Saxon *ceorfan*) cannot be derived from \sqrt{KAR} . This is treason against the majesty of Grimm's Law.

12. \sqrt{KAR} , "to hurt, destroy." Donner gives no \sqrt{KAR} , "to hurt." He gives under No. 186 Finnic *kärs-i-n*, "to suffer," with stem *kärs*. The only Latin derivative given by Dr. Taylor is *gladius*, the etymology of which word has not yet been discovered.

13. \sqrt{KAR} , "to run." The root of *horse* and *curro* is not *KAR*, but *KRS* (with sonant *r*), the stems being respectively **hrussa-* and **kurs-*, see Kluge (s.v. *ros*) and Brugmann, § 295. The Celtic *corac* cannot be derived from \sqrt{KAR} ; the Old-Irish form was *curach*, see Windisch, *Irische Texte* (glossary).

14. \sqrt{KAR} , "to project." There is no satisfactory evidence of the existence of this Aryan root. Donner makes no mention of a Finnic *holm*, "a hill."

15. \sqrt{KAR} , "to curve." Dr. Taylor gives as derivatives *garden*, *hortus*, *χῆρος*, and *χρῆς*; one would suppose that he had never heard of Grimm's Law! Latin *vermis* (= Gothic *waurm*) is not a derivative of \sqrt{KAR} , see Brugmann, § 431. The loss of initial *k* in Latin has not been proved.

16. \sqrt{KAR} , "to call." It will hardly be believed that Dr. Taylor connects the Teutonic *call* with Latin *clamo*. He has still to learn the elementary lesson that a Teutonic initial *c* does not correspond to a Latin initial *c*.

I think that students of philology will agree that the writer in this "Comparison of Verbal Roots" has not gone very far in proving the primitive identity of Aryan and Finnic speech. What he has proved is quite another thing—his own splendid courage in assaulting a difficult position with so little preliminary training and so poorly equipped for the undertaking. A philological controversialist who brings together as cognates *rair*, *vidr*, English *boy*, and Latin *filius* (see p. 262), and derives this motley group from a Finnic root represented by Ostiak *poh*, is rash almost to a fault.

The brilliant and versatile author of *Words and Places* would have been more prudent, I think—he would certainly have produced a more plausible case—if he had confined himself strictly to anthropology and archaeology, and had left linguistic specialists to deal with the philological portion of his argument.

A. L. MAYHEW.

St. John's College, Oxford: April 10, 1888.

Having now obtained, through Canon Taylor's courtesy, an off-print of his paper on "The Finnic Origin of the Aryans," from the *Journal of the Anthropological Institute*

(February 1888), may I be allowed again to hazard a few remarks upon it?

The issues to philology and archaeology are so serious that a theory of this sort ought not to be accepted without the most convincing proofs; and I venture with all humility to suggest that those which Canon Taylor has given us are not of such a character. His argument from the parallel roots in Aryan and Finnic languages would, if found to bear examination, prove, if not the derivation of the former from the latter, at least an undeniable affinity between them. But a mere glance at the lists, as found in Skeat and Donner, shows that the roots and words as arranged in Canon Taylor's parallel columns differ considerably from both. For instance, Donner's words (Nos. 19-24) are not referred by him to any root, whereas the Canon refers Nos. 20-25 to a root *kak*. Again, Nos. 34-37 are not classed by Donner, but the Canon includes them in the root *kat* (= *kant*). Nor do the derivatives arranged under the Aryan roots always agree with Skeat. Thus *hook* is only doubtfully assigned by the latter to the root *kak*, and the German *hals* is not given by him at all; but it is just these two words upon which the whole proof of the supposed identity between the Aryan and the Finnic root *kak* (= to bend) depends. Again, had Latin *gemo*, as given by Canon Taylor, been assigned by Skeat to the Aryan root *kan*, there might perhaps have been some ground for identifying the latter with the supposed Finnic root *kam*. Examples of this kind might be multiplied.

The Canon's arguments from relationships seem singularly weak. If the words *sister* (or *sözer* as the Canon gives it) and *tyttir* (or *tyttö*) are really the equivalents of *sister* and *daughter*, they represent more debased forms than those found in almost all other Aryan languages, whereas we should have expected to find the fuller and purer forms. Is it not too a most singular fact that such words as *father*, *mother*, *brother*, which have their equivalents throughout practically the whole range of Aryan languages, should be unrepresented in the Finnic group? The supposed *mamma* and *daddy* Finnish words form a very poor substitute for *mother* and *father*, and certainly have no general Aryan usage to justify them. The same may be said of the *boy* words, but why no mention of the Swedish *pojke*? The latter is practically identical with the Finnish word, which can hardly be anything else but an importation from Swedish.

The discussion of the Finnic numerals is certainly interesting anthropologically. The derivation of *yh-dekaan* (nine), and *kah-dekaan* (eight), from the first syllables of *y-ksi-ka-ksi* (one, two), compounded with a word meaning "ten," can hardly be questioned; but is not the very fact of such a half-savage method of counting itself a stronger argument against an Aryan affinity than any supposed resemblance between one or two numbers? Dr. Tylor tells me, on the authority of Pott (*Sprachvertheilung in Europa*, p. 108) that a similar method of counting is common to all the northern tribes of Asia; and the Ainos in Yezo, it seems, even count backwards from 10 as far as 6. Thus 6 is "four-ten," 7 "three-ten," 8 "two-ten," 9 "one-ten." Singularly enough, while with the Ainos six and seven are compounded with the ordinary word for ten, *wa[n]*, eight and nine are, as in the Finnic languages, compounded with another word, namely [*pe*]san. On the whole, we should have a far better chance of testing the philological side of the question if Canon Taylor would point out some definite rules, like Grimm's Law, which govern the letter-changes in the Finnic group as compared with several Aryan languages. That such laws exist between Swedish and Finnish, for what I

believe to be loan words, is evident, as I endeavoured to show in my letter to the ACADEMY of October 8 of last year; and that *kulta* (gold) comes under this law makes it highly probable that it is as much a loan word as *kenraali*=Sw. *general*, or *katu*=Sw. *gata* (a street).

But the greatest difficulties, perhaps, to Canon Taylor's theory arise from archaeological grounds, some of which I have already mentioned in the ACADEMY of December 17. They may be shortly stated thus:

1. The oak and the beech are *ex hypothesi* part of the flora of the cradle of the primitive Aryans. Even at present the first of these has its northernmost limit in the extreme south of Finland, where it is only occasional. The limit of the beech lies far south, and considerably west, of Finland; and that tree is found in no regions adjacent to the Baltic except the south of Sweden, Denmark, and part of North Germany. But 6000 years ago, the time when, as we are told, our Finnic-Aryan ancestors were still in their cradle, the limit of the beech, and probably of the oak also, was far further south, and could not have nearly reached any Scandinavian or Baltic countries.

2. The Aryan character of the Scandinavian aborigines can hardly be settled so easily as Canon Taylor would have us think. He writes: "About 10 per cent. of the prehistoric skulls are of the Lapp type, which may be explained as the result of slavery." It is true, no doubt, that it may; but when we consider that these skulls are confined to the Stone Age, is it not far more probable that they are, as Dr. Montelius and others believe, the traces of an original Lappish people gradually pushed northwards by the Aryan immigrants?

3. This is further rendered almost certain by the fact that stone relics of a Lappish character, but belonging to the Bronze Age, are found all over the north of Sweden.

4. The antiquities in Finland itself point to the same general results. By far the larger part of the stone implements are similar in character to those of the Lapps and the aborigines of Russia. Those of a Scandinavian character are confined, or very nearly so, to the south and west; but we find the Scandinavian influence gradually extending itself, till by the Earlier Iron Age there is hardly any distinction in type between the antiquities of Finland and Sweden (see *Bidrag till vår odlings häfder*, part i., by G. Retzius, Stockholm, 1881).

5. The state of civilisation to which Canon Taylor's arguments point does not agree with the state of civilisation (so far as it is proved by archaeology) in Northern Europe at the time to which he refers it (6000 years ago), or, indeed, any other time. There is no archaeological evidence that gold or copper was known there till about 3000 years later. No bones of either reindeer or geese have been there found among relics of the Stone Age, though the former have been found in France and Belgium. On the other hand, the bones of dogs, sheep, and horses, which Canon Taylor says "seem to have been as yet untamed," are found in abundance. This new discovery, if true, will revolutionise archaeology as well as philology.

F. H. WOODS.

Settlington, York: April 13, 1888.

It would have been more generous, if not more just, had Mr. Mayhew made some reference, however slight, to the prefatory note appended to my paper by the editor of the *Anthropological Journal*, which runs as follows: "It should be explained that the author, having been abroad while this paper was passing through the press, has not had an opportunity of revising the proof." This note is scarcely an adequate statement of the case. I was ordered abroad by my medical adviser at a

few days' notice, and was unable to complete, much less properly to revise, my manuscript. The first portion had been written out in a sort of way; but the philological part, to which Mr. Mayhew confines his remarks, existed to a great extent only in the form of rough notes. I expressly stipulated that the MS., as well as the proofs, should be sent to me in Egypt for revision. I heard nothing of them, and a letter of inquiry was left unanswered. Returning to England, after an absence of four months, I was aghast to find, not only that the inchoate and chaotic MS. had been printed as it stood, but that the type had been broken up, so that there was no opportunity of correcting glaring misprints, or of reconsidering comparisons which had been merely jotted down for future examination. Many, I may say most, of Mr. Mayhew's criticisms would have been forestalled if I had been afforded an opportunity of revising the rough draft of my paper. Not a few of Mr. Mayhew's points admit of argument; but it is not worth while to occupy the valuable space of the ACADEMY, as the whole of the comparisons to which he takes exception, and many more, are only *obiter dicta*, mere illustrations which might be struck out without affecting the argument, and enough would remain to establish a *prima facie* case for the primitive identity of the verbal roots in the Aryan and Finnic vocabularies.

Mr. Wood's anthropological objections apply chiefly to my summary of Penka's arguments in favour of a Scandinavian cradle for the Aryans, a solution which I definitely reject.

None of the objections affect, so far as I see, the real point at issue: Is there any other race, except the Finnic, out of which the Aryans could by any possibility have been developed? and do not the Northern Aryans, both from an anthropological and a linguistic point of view, approximate sufficiently to the Western Finns to raise a presumption in favour of such an origin? Till some other solution of the problem is suggested, I claim that my own may provisionally hold the ground.

ISAAC TAYLOR.

SCIENCE NOTES.

MR. J. LOGAN LOBLEY, professor of physiography at the City of London College, has in the press a new volume on popular lines, called *Geology for All*. Messrs. Roper & Drowley will be the publishers.

THE last number of the *Mineralogical Magazine* contains a number of technical papers of much interest, including three short communications from Mr. L. Fletcher, the president of the society. Mr. J. J. H. Teall announces the discovery of delicate needle-like crystals of rutile, or oxide of titanium, in various clays. Some general questions concerning the origin and composition of clays are discussed by Mr. J. H. Collins, who publishes a large number of original analyses. While arguing against the formation of kaolin, or china-clay, from feldspathic minerals, on a large scale, by means of carbonic acid, he favours the well-known views of Von Buch and Daubrée, who long ago suggested the agency of various compounds containing fluorine. Such a mode of formation is rendered probable by the author's experiments on the artificial production of kaolin by the operation of hydro-fluoric acid on felspar.

PHILOLOGY NOTES.

A BILINGUAL inscription, Phœnician and Greek, has recently been found at the Piræus, and is now in the museum of the Louvre. It is a honorific decree of the Phœnician community of the Piræus (ἡ κοινὴ τῶν Πειραιῶν), dated the fifteenth year of the people of Sidon

(i.e., 96 B.C.), and decreeing a golden crown to Shama'ba'al (= Diopetithes) for his services.

THE first part (*a-niſhe*) of Prof. Ascoli's long-looked for *Lexicon palaeo-hibernicum* has just appeared, together with the glosses on the Old-Irish codex of the Ambrosian Library, fo. 88^a—120^d.

THE new part of the *Journal* of the German Oriental Society contains two papers interesting even to mere Occidentalists—one, by Prof. Hübschmann, on the sagas and beliefs of the Ossetes; the other, by Prof. R. Roth, entitled "Wergeld im Veda."

MEETINGS OF SOCIETIES.

ARISTOTELIAN SOCIETY.—(Monday, April 9.)

SHADWORTH H. HODGSON, Esq., president, in the chair.—Dr. Clair J. Grece read a paper on "Heraclitus." After indicating the chronological position of Heraclitus, he pointed out that the pre-Socratic schools of philosophy had two local centres—Ionia and Lower Italy—and that the striving after unity in multiplicity, which is the source of science, sought in the former school its realisation in some material substance, and in the latter in an abstract or intellectual unity. The Italian school culminated in Zeno the Eleatic, and his dialectics against the reality of motion. Heraclitus's system was the polar antithesis to this Zenonic position, inasmuch as he made motion the principle of all things. Heraclitus was the prince of philosophers, he being the first to grasp this principle, and to develop its essence as a conflict of contraries. His manner of exposition, however, was inadequate and obscure, because, being the pioneer of the idea, no adequate expression existed ready made in language, which can be only the vehicle of ideas current at the time; and his effort was, by multiplying symbols for his idea, to eke out the incompleteness of each. The paper then dwelt upon the limits of the principle of contradiction. Valid for all from which motion, becoming, or genesis was abstracted, it was invalid for everything in movement or progress, that is, for all living realities. Movement involves a succession of phenomena, but an orderly not a rhapsodical succession. The pervading nexus is reason or causation, causality being the analogue in the region of the unconscious to reason in the sphere of consciousness, and *εἰς αὐτὴν* or necessity being common to both. Science is the translation into the region of consciousness or mind of the reason which exists in a latent state in the sphere of the unconscious or of things. The individual man is the seat of a continual interaction, physical and mental, between himself and nature; where this process is checked there is, upon the physical side, disease; upon the mental or moral side, error or immorality. The paper then made a leap of more than 2000 years to point out how the Zenonic dialectics reappeared in the antinomies of Kant to be again solved by Hegel, the Heraclitus of modern philosophy.—The paper was followed by a discussion.

NEW SHAKSPEARE SOCIETY.—(Friday, April 13.)

THE REV. W. A. HARRISON in the chair.—A paper, entitled "Baconmania," was read by Mr. Lawrence G. Holland, who began by saying that the general interest taken in the present Bacon-Shakespeare controversy must be his best excuse for treating the subject at length. He had been induced to write the following paper with a view of summarising the chief objections to the Baconian theories as propounded by Mr. Donnelly and others previously, from observing how many practical persons, with an ordinary amount of commonsense, were complacently prepared to take in this new sensation and believe there was something in it. Historical facts cannot be too often repeated when fiction and fancy have such an extraordinary licence and attraction. Shakespearians could not compete in originality with their opponents; but must wait for the discovery of a Shakesperian cipher running through *The Advancement of Learning*, or any other literary firework to satisfy the craving for some new thing. So much for the cipher history as had been given us in the

Nineteenth Century magazine in 1886, and in the *Daily Telegraph* of last December, struck him as overshooting the mark of telling too much—like a too willing witness—awaking our distrust by its too precise details, rather than convincing us by its fullness. Against the farrago of nonsense, elaborated out of the cipher secret history, we had to oppose facts and commonsense. He would endeavour to prove that the whole cryptogram theory was (1) technically impossible, (2) historically incompatible, (3) intrinsically (from the evidence of both author's writings) incredible. He ridiculed the conclusions of the Bacon Society on the question, and indignantly repudiated Prof. Davidson's "endorsement" of Mr. Donnelly's attack on Shakspeare's moral character. If Bacon bribed Shakspeare to keep quiet as to the real authorship, was not the briber as guilty as the bribed? All that was known of Shakspeare was that he was a most respectable citizen, while the stories to his discredit rested on nothing but hearsay and gossip. However, he could not see what the professor's endorsement of "moral" character had got to do with it. Was immorality incompatible with play-writing, or morality essential to ciphering? First, these technical objections had been made to the cryptogram. That, if inserted by Bacon, it must have been placed in the MS. Now the 1623 folio being full of errors, transpositions, and omissions, how can it be possible to count accurately from one given word to another? The reader instanced some lines in "Romeo and Juliet," of a hopeless mixture of Romeo's and the Friar's speeches in the next scene. It had also been remarked that Mr. Donnelly assumes the cipher-writer to have seen the proofs (now the vile printing of the folio is sufficient evidence to the contrary). But at that period no one but the printer saw the proofs, and if so, Bacon must have been the printer, which has not yet been assumed. Mr. Marshall has authoritatively stated that the folio does not differ in the way of italicising, hyphenation, &c., from scores of books at that time. The weakness of the case is shown by Mr. Donnelly's attempt to reconcile the differences between the quartos and the folios by saying Bacon wrote the plays originally on sheets for a prospective folio, and cut out here and there or inserted a page, to disguise his cipher. Now the first quarto with Shakspeare's name on was brought out in 1598. Truly a far-seeing "prospective" view to a folio twenty-five years afterwards! Then, historically, the secret history did not tally with facts. "The stampede of the players and search for Shakspeare by poets from Elizabeth during the Essex revolt." Why, that time was the zenith of the company's prosperity! Shakspeare's company was continually acting before the court, or when he was absent from London he was openly buying up titles and settling his earnings in Stratford; and, moreover, in proof that the players did not lose the Queen's favour from the performance of "Richard II." in the streets, as ordered by the Essex conspirators, they were playing before Her Majesty on the eve of Essex's execution, February 7, 1601. The assumption of the Baconians rests on nothing but suggestion and inference, not a shred of contemporary evidence. They set up an imaginary Shakspeare, "an illiterate immoral butcher's son," and then proceeded to knock him down as incompetent to write the plays. And as to proof against Bacon being the author, we have only to look at what he was known to be employed on in 1623. Why, in recasting *The Advancement of Learning* in Latin. His one idea was that Latin was the permanent language of literature. He writes: "For these modern languages will at one time play the bankrupt with books; and since I have lost much time with this age, I would be glad if God would give me leave to recover it with posterity." Hence he left his name to "foreign nations," and not "after some time" which, as Sir Theodore Martin has shown, does not exist in Bacon's mystic will, on which Mr. Donnelly relies as pointing to his cryptogram. The reader said the Baconians were unfortunate in their choice of plays to ascribe to their idol. "Richard II." was mentioned; "Henry IV." with its undisguised Warwickshire names and allusions; "Love's Labour's Lost," with its humorous country characters of schoolmaster, person, Dull, and Costard; and "Troilus and Cressida," with its hopeless anachronisms of Trojan heroes talking like Elizabethans, and its

very pointed allusions to the actor and his art. In fact, when Dr. Theobald discovers a Latin epigram disguised in the princess's speech in "Love's Labour's Lost," and that "out of question" means Bacon, because he often uses that phrase for "certainly," they must be hard pushed for analogies. In fact, while Bacon was translating his English into Latin, they would make out that he was masking his Latin in English. That he wrote some masques is one of the most convincing arguments against his writing the plays. His masques are tedious and turgid specimens of affectation. Shakspeare's name does not occur as author of any of the obsequious, fanciful masques that met Queen Elizabeth and King James on every turn in their numerous progresses. Where Shakspeare has introduced them in his plays, they seem to have been mere interpolations from the weakest authors of such fashions of the time. Far closer analogies could be shown, identity of thought, phrase, and expressions in the poems, as yet unchallenged by the Baconians, and in the disputed dramas, than any quoted by Mr. W. H. Smith and other Baconian discoverers. The writer proceeded to compare these at some length; and asserted, on Dean Church's authority, that the two things Bacon lacked in his writings were "fitness and melody," in obvious contrast to the happy wit of the dramatist or the poetic beauty compressed in the sonnets. They were a priceless heirloom, and surely it was more difficult to trace the prosperous, practical burgher of Stratford in the passionate and despondent sonneteer, which is undisputed, than in the close observer of nature and character of the dramatist. Love, again, was a passion that Bacon utterly failed to understand. His cold uncongenial matter-of-fact mind could not appreciate it. "Love was as foreign to his nature as lyrical poetry" (Kuno Fischer)—and could he have written "Romeo and Juliet"? To quote Ben Jonson as not appreciating Shakspeare, as Mr. Donnelly does, is simply puerile, as we all know he stamped the folio 1623 with warm approval in his well-known lines. The notion that Shakspeare was not appreciated by his contemporaries has been long ago exploded, and very remarkable evidence to the estimation in which he was regarded is to be found in the praises both of his poems and his dramas in *The Return to Parnassus*, lately re-edited by Mr. MacOray. To doubt the players' preface seems almost sacrilege, as they were carrying out their sacred trust to a dead friend, against their own pecuniary interest in the valuable copyright of the plays. Shakspeare had named them in his will for legacies as trustees, and their own frank words bear the impress of truth. To suppose they were acting a deliberate lie, or to have been under such a gross delusion as transmitting to posterity the secret works of Bacon under the cover of Shakspeare's name, is an impossibility. No one was more careful of his own writings than Bacon, ever revising and correcting, just as no one had a stronger belief in his own powers, and vanity or ambition to be the foremost man of his time; while Shakspeare was apparently content to gain the local esteem of his fellows, and, though very careful of his name not being traded on to father spurious works, left the compilation of his writings till too late for personal revision. Not looking upon himself as a great founder or revolutionist in literature, he dies in simple trust on that "divinity which shapes our ends, rough hew them how we will." Contrast the discontented retirement of Bacon, ever striving to get back to court favour, with the calm retirement of Shakspeare, with his purpose achieved and his ends gained—enjoying the fruits of his labours. Bacon was engaged, in his own words, in "experimental philosophy" at Twickenham, not in play writing or ciphering. He says he had "no time for fulfilling his great purpose of a compilation of the laws of England." We may emphatically repudiate the whole theory of his authorship of the plays, in the words of one of the most profound Bacon scholars of the day (Dean Church). "Bacon could no more have written the plays than Shakspeare could have prophesied the triumphs of natural philosophy."—The chairman, after remarking on the difficulty in discussing a theory so improbable, and so far apart from ordinary rules of evidence, gave a short history of the rise and progress of this mania, of which the first public exponent might be said to be Miss Kitty

Olive, in Drury Lane Theatre, on October 31, 1779. He noticed that these theories were all agreed in beginning with a fabulous account of Shakspeare's early life. He disproved, by quoting instances of many famous public men of the day who were also dramatic authors, the idea that Bacon feared that the publication of his authorship of plays would be a bar to his advancement. As to the famous Aristotle quotation, Bacon was about the last person to commit such an enormous anachronism as to make Hector quote Aristotle.—Dr. F. J. Furnivall had been inclined to share the opinion of certain distinguished literary men whom he had written to on the subject, that such a craze should be passed by in absolute silence, and that it was insulting an audience to bring it before them. But seeing how the stupidity had spread, and how, as Mr. Holland said, many practical and commonsense people appeared to be quite prepared to receive it, he felt obliged to him for bringing the matter forward in his paper. It was owing to the great and pervading ignorance of Shakspeare that such ideas found acceptance, none of these people being able to see that in Shakspeare's works there is a strong individuality revealed, quite the opposite of what is found in Bacon's works. But as some people were colour-blind, so some were character-blind, and it was from such, doubtless, that this theory found support. Had they studied their Shakspeare in the only right way, in the chronological order of his works, and seen how the man grew under their eyes, his small beginnings, the poverty of material in his early plays, its gradual increase, and the progress of his art, they would have found themselves at last in the presence of a distinct individualism, henceforth indestructible for them. But one must trust to the progress of education and knowledge. Some years hence such a craze will be impossible.

FINE ART.

Early Christian Art in Ireland. By Margaret Stokes. (Chapman & Hall.)

A soon popular account of Early Christian Art in Ireland was unquestionably needed, and Miss Stokes has supplied the want in a manner which deserves the highest praise. The 200 pages of a "South Kensington Handbook" afford but narrow space in which to deal with so extensive a subject; but notwithstanding the small size of the volume a careful reader will find it possible to obtain from it an excellent idea of what was achieved by Irishmen down to the thirteenth century in the allied arts of illumination, metal-work, monumental sculpture, and architecture, and will, moreover, know where to look for more detailed information respecting each of these branches of the subject. Hitherto the materials for the study of early Irish art have been accessible only by consulting many books, and a general view of the entire field has not been easy to obtain; and the subject is one in which a comprehensive mode of study is more essential than in most others connected with the archaeology of art. The same elements of decorative design which are characteristic of the work of Irish workers in metal are found also in the illuminations of Irish MSS., and again in Irish monumental sculpture. The three arts appear to have influenced each other throughout the whole course of their history, features of ornamentation which were originally due to the mechanical conditions of one branch of art having been copied and modified by the artists who worked in different materials; so that it is impossible adequately to understand the development of any one of the three without a close comparative study of the other two. It is quite possible that this handbook, unpretending as it is, may not only fulfil its

intended purpose of rendering the outlines of its subject familiar to the general public, but may even contribute in a considerable degree to the settlement of some of the questions still in dispute among archaeologists. Probably most persons who have worked at any branch of historical science will acknowledge that the true significance of facts long well known has sometimes first revealed itself to them when they saw them presented side by side in some brief popular epitome.

A large portion of the interest of the volume is due to the beautiful illustrations, of which there are more than a hundred. Eleven of the woodcuts are taken from Dr. Anderson's *Scotland in Early Christian Times*; and it is high praise to say that those drawn originally for the work are not inferior to these in excellence of execution.

Miss Stokes has for the most part wisely confined herself to the statement of ascertained facts, and has but little to say on controverted questions. She is probably right in maintaining that the so-called "trumpet pattern" has a better claim than any other feature of Irish decorative design to be considered as of native Celtic origin. On the other hand, the statement that the use of interlaced patterns and zoomorphic ornament is due to foreign and Christian influence may perhaps be too sweeping. Thoroughly trustworthy conclusions on this point can scarcely be reached except by an exhaustive comparison of individual forms of Irish decoration with those found in Continental art. With regard to the dates to be assigned to the Irish monumental sculptures, the writer follows those authorities who assign the earliest of the "high crosses" to the tenth century. The grounds upon which this conclusion is based appear to be satisfactory; but Miss Stokes goes on to draw a further inference which it is not easy to accept. She says:

"The evidence for the age of the Irish inscribed crosses being such as we have stated, they may be considered as giving a key to that of monuments in Scotland and the North of England which exhibit sculpture of a similar character; and we are therefore inclined to question the very early dates that have been assigned to such examples as the stone crosses at Alnmouth, Lancaster, Collingham, York, Hartlepool, Bewcastle, and Ruthwell, which have been attributed by Stephens to the years 600, 651, 670, 680, some of which have Runic inscriptions."

As eleventh-century monuments these crosses of Ruthwell and Bewcastle would fall naturally into their place in the development of the arts of sculpture and design during this period, while as seventh-century monuments they are abnormal and exceptional. The reader has only to compare the beautiful art and good drawing of the scrolls and figures on the Ruthwell Cross with the rude outlines and letters on the coffin of St. Outhbert—a work which all authorities allow to be of the seventh century—to realise how unlikely it is that they could be contemporaneous.

Miss Stokes seems to have overlooked the fact that the Bewcastle obelisk is a dated monument. The Runic inscription states that it was raised "in the first year of Eogfrith, king of this kingdom"—i.e., A.D. 670—in memory of Alehfrith,* the son of Oswiu; and

* I should be glad to know from any person skilled in Runic, who has seen the monument, whether it is at all possible that the characters usually read EAN KYNING may be read as EANLENDING.

it contains, also, the names of historically known contemporary persons, Cyneburh the wife of Alehfrith, and her brother Wulfhere, king of the Mercians. To maintain that this inscription is a forgery of the eleventh century would surely be preposterous. The Collingham monument contains the name of a King Onswini, who can scarcely be anyone else than the "Oswinus" of Beda, murdered in 651. It must be acknowledged that there is no similar evidence bearing on the date of the Ruthwell Cross. But the close resemblance in the style of art between this monument and that at Bewcastle seems inconsistent with the theory that they are several centuries apart in date. From the philological point of view, also, it is difficult to suppose that the Northumbrian dialect of the Ruthwell inscription is not considerably earlier than that of the gloss on the Lindisfarne Gospels, which is believed to have been written about A.D. 950. The argument from comparison with St. Cuthbert's coffin does not appear to be of great force. There is no reason to suppose that the number of artists capable of producing work like that of the Ruthwell cross was large; and it is quite conceivable that, however anxious the monks of Lindisfarne may have been to do honour to the remains of their master, they may have chosen to employ the services of some member of their own community in preference to importing a more skilful workman from a distant part of the kingdom. The monument of Bishop Trumbercht at Yarm—certainly a seventh-century work—is, indeed, of far ruder character than the Ruthwell cross, and in style has little in common with it; but it may be noted that its ornamentation includes both interlacings and spirals, though in neither case precisely of the Irish type.

One of the arguments used by Miss Stokes to prove the late date of the Ruthwell cross seems, when considered alone, to have a good deal of weight. She points out that the delineation of subjects of sacred legend on this monument agrees with the instructions contained in the eleventh-century manual which served as a guide to subsequent Byzantine painters. To estimate the precise value of this reasoning, it would be necessary to know how far the directions given in the work referred to embody the traditions already acknowledged by Eastern artists of preceding centuries. I must leave this question to be dealt with by those who are better acquainted with the history of Byzantine art; but the reasons for assigning the Ruthwell monument to the eighth century at latest appear to me to be of such force as to necessitate some other interpretation of the facts than that which Miss Stokes advocates.

The chapter on "Building and Architecture" is of great interest, especially as the subject is popularly much less known than those of the other chapters. Probably few persons, except special students of architecture, have any acquaintance with the remarkable specimens of Irish Romanesque which are here figured. The history of the art of building in Ireland is briefly sketched from the pre-Christian age to the thirteenth century. With regard to the famous round towers, Miss Stokes very lucidly states the evidence in favour of the theory that regards these structures as survivals of a type that

was at one time widely prevalent throughout Continental Europe.

Appended to the volume is a carefully-compiled chronological table of those monuments of Irish art in all departments which admit of being approximately dated; and each division of the work is accompanied by a list of books and articles from which the reader may obtain further information on the special subject treated of.

HENRY BRADLEY.

MASPERO ON THE EGYPTIAN HIERARCHY.

HAVING lectured last year at the Collège de France on the social fabric of Ancient Egypt, Prof. Maspero is about to follow up the subject by contributing an important paper on "The Egyptian Hierarchy" to the *Journal Asiatique*. For a sight of the first proof of this paper, and for permission to place a sketch of its contents before readers of the ACADEMY, I am indebted to the kindness of the author.

The lecture and the article are based upon a papyrus originally in the Hood collection, and now the property of the British Museum. This document consists of two sheets of papyrus, the first containing sixteen, and the second seventeen, lines of cursive hieratic writing, so full of abbreviations, and so largely interspersed with demotic forms, that many parts need only to be transcribed upon a small scale in order to come under the head of demotic MSS. It purports to be written by "The Scribe of the Sacred Books of the double Treasure-House, Amenemaph, son of Amenemaph"; and it is referred by Prof. Maspero to that somewhat obscure period which lies between the XXist and XXVith Dynasties. The MS. is complete, for there is a large space of blank papyrus at the end; but the work is a fragment breaking off abruptly at the bottom of the second page.

Oriental works are famous for long and bombastic titles; but this is more than commonly pretentious:

"Commencement of Instructions for making known to the ignorant as well as to the learned all that Ptah hath created and all that Thoth hath recorded, the Heavens and the Stars, the Earth and all that it contains, the Springs, the Mountains, the Inundation, the Great Waters, as also the things which are under the canopy of Ra, and all the Hierarchy which is established in the world."

Beginning with a catalogue of celestial bodies and phenomena, as the sun, moon, planets, light, darkness, &c., and thence passing on to things of this world, as rivers, lakes, reservoirs, islands, plains, plateaux, hills, sands, cultivated and uncultivated lands, and the like, our scribe ends with what may be described as the earliest Table of Precedency known to science. This list (which begins with the God, the Spirit, the King and the royal family, and ends with the Shoemaker) is so curious and so novel, being now published and translated for the first time, that I give it in its entirety:

"God. Goddess. Male Spirit. Female Spirit. King regnant. Royal Wife. Mother of the King-God. Royal Children. Prince. Count. Sole Friend. King's Son. Eldest Son. Commanders-in-Chief of the body-guard. Secretaries of the House, the powerful Bull [i.e., the Pharaoh]. Grand Masters of the Household of the Good God [i.e., the Pharaoh]. First Royal Herald of His Majesty. Fan-bearers at the right hand of the King. Directors of the works of the Lord of the Two Worlds [i.e., the Pharaoh]. Officers of the Palace of the Victorious King. Masters [of the Ceremonies] of the Audience Chamber of their Lord. Royal Scribes of all the Stores in the Royal Palace.

"Counts nomarchs. Scribes of the Militia. Lieutenant of Militia. Officers of the Double White

House of Silver and Gold [i.e., the Treasury]. King's Messengers to foreign countries. Superintendents of oxen. Superintendents of the King's slaves. Superintendents of horses. Lieutenants of war-chariots. Drivers [of war-chariots]. Fighting men [of war-chariots]. Parasol-bearers. Chiefs of the Scribes of the Table of all the Gods. Officers of the Prophets of the South and the North. Commandants of towns and boroughs. Superintendents. Chiefs of the *serais* of the King's workmen.

"Chiefs of the Experts of the Royal Palace. Chiefs of the whole land. Lieutenants of the Superintendents of the Seal of the Marine Customs. Superintendents of the Provinces of Syria and Ethiopia. Scribes of the Direct Taxation. Scribes of the Register. Superintendents of the Canals of the Lower Provinces. Collectors of taxes of the whole land. Majordomos of the Kings of Egypt. Chiefs of the Scribes of the Rolls of the Supreme Court. Chiefs of the Guardians of the Registers of the Marine Customs.

"Scribe in office of the Horus [i.e., the Pharaoh]. Scribe of the Double White House [i.e., the Royal Palace], skilled in his duties, acting for the King of Lower Egypt. First Prophet of Amen in Thebes. High-Priest of Ra and Tum. Chief of the work of Kisanbouf, servant of Neferho [titles of the High Priest of Memphis]. Superintendent of the Double Granaries of the South and the North. The King's butchers in his palace. Superintendents of the interior of the royal palace. Superintendents of the Pantry of the Lord of the Two Worlds [i.e., the Pharaoh]. Scribes of the goods of all the Gods. Prophets. Holy Fathers. Priests. Officiating clergy. Scribes of the Temple. Scribes of the Books of the God. Chapel-masters of the Hypostyle Hall. Guardians [of the Temple]. Bearers of Offerings. Shrine-bearers. Officials charged with making green the path of the God. Soldiers [of the Temple]. Slaughtermen. Servants of the Sacred Boat. Bakers of rolls. Bakers of puff-cakes. Biscuit-bakers. Bakers of cakes for [burning on] the altar. Bakers [in general]. Makers of incense-pistils. Cake-makers. Makers of preserves. Preservers of dates. Makers of wreaths and bouquets. Milk-carriers. Carpenters. Engravers. Stone-cutters. Sculptors. Blacksmiths. Goldsmiths. Chasers. Porters. The King's Shoemakers. Makers of . . ."

Here the document breaks off; but we have evidently a list of nearly the whole staff of the Temple service, as of the Royal Household; and, however interesting it might have been to trace the further grades of the social scale, especially in what related to the agricultural classes, we may, at all events, be content that the most important part of this curious catalogue has been preserved.

Barren as it is—a mere enumeration of titles and offices—this antique table of precedence furnishes Prof. Maspero with the text for a very valuable and interesting historical treatise. One by one, from the Pharaoh to the shoemaker, he reviews this quaint procession of bygone personages, analyses their titles and functions, and reconstructs the entire fabric of society as represented in Egypt by the court and the priesthood some 2800 years ago. Want of space forbids me to do more than note a few out of the many instances in which Prof. Maspero throws a new light upon old familiar titles and long-accepted interpretations. Of "Ropait" or "Ropat" (otherwise "Repa" or "Erpa"), signifying hereditary prince of a nome and head of a clan, he suggests that it is a title of higher antiquity than "Suten" or king—a fact which he considers proved by the protocol of Seb, the very ancient earth-god, who is described as "Ropa Nuteriu," prince of the gods, whereas Amen of Thebes is described as "Suten Nuteriu." Now, without affirming that Seb is more ancient than Amen, it is certain that, like all deities of cosmogonies, he belongs to one of the earliest forms of the Egyptian religion; and, if he is styled "Ropa" or "Erpa," it is because that title was the highest dignity belonging to that remote epoch.

It points, in fact, to the prehistoric period, when Egypt was governed by independent chiefs before the advent of Menes. Amen, on the other hand, did not rise to importance till historic times, when the monarchy was established, and "Suten" (king) was the first title in the land. In each case, the sovereignty of the god over all other gods was naturally indicated by the word which signified the sovereignty of one man over all other men. Again, the well-known title of "Merket," or, as Prof. Maspero writes it, "Miron Katou," does not mean "royal architect," as hitherto supposed, but a person charged with the direction of all or any of the king's works, whether of architecture, engineering, boat-building, quarrying, mining, or the like. Turning to a less elevated functionary, the title of "the Superintendent of the Double White House of Silver and Gold" gives rise to one of those interesting illustrations of the survival of ancient customs which appeal so forcibly to the imagination of all who know modern Egypt.

"This designation of the 'double house' is in no wise surprising as regards Egypt," writes Prof. Maspero. "The division of the country into two kingdoms, that of the North and that of the South, is everywhere present. The Pharaoh himself is described as 'the Great of the Double House,' and all that related to his service was double. There were double granaries to contain the corn of the South and the corn of the North, double white houses, &c. Each nome had at least one of these double granaries, and one of these double houses, or government buildings. The epithet 'white,' which we find applied to them, is readily apprehended by those who have seen the Egypt of our own day. In every little town and village of Upper Egypt, the private houses built of crude brick are either not plastered at all, or are coated with a mud-wash of a yellowish-black hue; while, on the other hand, all houses belonging to the public service, or occupied by government agents, are whitened outside with lime-wash. Except, in fact, the post-office, the police-office, and the excise-office, the houses of Europeans, or of very rich natives (who are for the most part attached to the Civil Service), are the only buildings white-washed. It was the same in the olden time; and the 'Double-house' of the Scribes of the Treasury, which was probably the only one coated with white amid the dark-walled huts by which it was surrounded, owed its name of the 'Double White House' to this circumstance."

In some instances, not merely a custom, but a name, with its ancient meaning unchanged, survives to this day. The "double granaries," in which the corn of the South and the corn of the North was stored, were called in Egyptian *shunit*, and a granary is *shunch* in the vernacular of the modern Arab. "The Superintendent of the Scribes of the Table of all the Gods" is a high-sounding title, which pertained to a very responsible office. The service of the table of the gods meant literally the offerings made to all the gods worshipped in a certain nome, and consequently in all the temples of that nome. These offerings were of two kinds—namely, those which were irregular and voluntary, and those which were founded by solemn contract, being the donations of kings and nobles. The former were casual gifts presented by private persons; the latter consisted of lands, slaves, flocks and herds, tithe-charges and the like. Hence the service of the table of the gods gave employment to a vast number of scribes, whose duty it was to register, value, and divide this mass of offerings; and to each nome there was appointed a superintendent of these officials.

I have quoted but three or four of Prof. Maspero's valuable commentaries on the titles enumerated in the hierarchal list of the Scribe Amenemaph. Of these titles there are upwards of ninety, and there is scarcely one among the ninety of which he has not something new and interesting to say.

AMELIA B. EDWARDS.

NOTES ON ART AND ARCHAEOLOGY.

A POPULAR handbook to the National Gallery has been compiled by Mr. E. T. Cook, who has for several years edited the little catalogue in connexion with Mr. Barnett's Whitechapel exhibitions. Mr. Cook has obtained permission to incorporate the notices of pictures in the gallery scattered throughout Mr. Ruskin's writings; and Mr. Ruskin has also contributed a preface. The handbook will be published next month by Messrs. Macmillan.

THE *Magazine of Art* for May will be notable for giving an account of the exhibition of the Royal Academy, before its doors are opened to the public. It is written by the editor, and will be illustrated from Sir F. Leighton's original studies for his picture of Andromache. Among the other articles will be Prof. A. H. Church's report on "Light and Water-Colours"; "J. J. Henner," by Mr. Wedmore, with five engravings; "The English School in Peril": a reply by Mr. George Clausen to Sir James Linton and M. Cheneau; and "Christie's," by Mr. M. H. Spielmann. The illustrations will include an etching by Mr. Dobie, after Mr. Langley's picture, "Betrayed"; and a full-page engraving of Mr. Watts's new portrait of Sir F. Leighton.

MESSRS. CASSELL will also publish later next month, as an extra number of the *Magazine of Art*, a permanent illustrated record of the principal pictures and sculpture exhibited at Burlington House, entitled "Royal Academy Pictures, 1888." On the list of those who have permitted their work to be reproduced we notice most of the most popular artists, excepting Sir J. E. Millais, Mr. Orchardson, and Mr. Alma Tadema.

THOUGH Mr. Alfred East's contributions to the Duchy of Cornwall show, at the Fine Art Society's, are individual and interesting, he devotes to the greater exhibitions his more important landscape; and we may fairly hope that he will be represented well at no less than three chief galleries—the Academy, the Grosvenor, and the New Gallery. The scenes of Mr. East's work will be found to be laid both in Scotland and in the West Country; and, from what we have seen, it is clear that that element of always poetic realism which has distinguished him heretofore will not fail to be perceptible in his latest labours.

MR. AUBREY HUNT will have one very striking work at the Grosvenor Gallery. It will go far to popularise a painter whom the critical have for some time delighted to accept. This picture is entitled "The Last Boat Up." It shows an effect of evening at Greenwich; the scene, near the Hospital and on the little quay, all hurry and bustle; the town-bound steamer from Woolwich will be off in a moment. The artificial lights, white and red, on mast and quay, tell sharply against the quiet, roseate grey of the evening sky. This is unquestionably a remarkable "impression."

THE Royal Society of Painters in Water Colours, and the Royal Institute of Painters in Water Colours, both hold their private view to-day (Saturday), and open to the public next week.

ON Tuesday next, April 24, Mr. Thomas R. Macquoid will have on view at Nevcrn House, Nevcrn Square, Earl's Court, an exhibition of water-colour and black and white drawings, and also some sketches and studies in oils. The exhibition will only remain open for a week.

PROF. SIR CHARLES NEWTON is delivering a course of six lectures at University College, Gower Street, on "The Greek and Roman Stage." The time is Fridays, at 4 p.m., begin-

ning on April 20, when the introductory lecture is free to all.

MR. J. WILLIS CLARK has undertaken to assist the Society for the Protection of Ancient Buildings, and to augment its funds, by delivering a lecture, at the South Kensington Museum, on Saturday next, April 28, at 3 p.m., on "Collegiate Architecture at Cambridge: its Origin, Development, and Mutilation," illustrated by drawings and diagrams.

ON Wednesday of next week Messrs. Sotheby will begin the sale, which will continue for nine days in all, of the second and concluding portion of the unrivalled collection of mezzotint engravings, formed by Mr. John Chaloncr Smith for his *British Mezzotint Portraits Described*. As before, the catalogue is arranged alphabetically according to the names of the engravers, and also gives a list of the personages. Omitted from the first sale are some rare examples of Ludwig Von Siegen and Prince Rupert. Under the circumstances, it is painful to add that Messrs. Sotheby also announce for sale the remaining copies of Mr. Chaloncr Smith's book at a greatly reduced price.

DR. SCHLIEMANN has been up the Nile as far as the second cataract at Wady Halfa, in company with Dr. Virchow, and seen all the chief monuments of Egypt and Nubia. The journey was made amid repeated danger of attacks from native insurgents, under the leadership of dervishes. The last letter of Dr. Schliemann came from Thebes, when he was on the point of starting for Abydos for a few days, and then exploring the Fayum. The heat had risen to 38° C. in the shade.

THE STAGE.

STAGE NOTES.

WE breathe again freely. And that not so much because Mr. Irving is once more among us—a thing to be glad of, nevertheless. Not so much because Miss Ellen Terry is here again, in excellent health—also a satisfactory matter. The particular burden lifted from the future of the London playgoer consists in the fact that in the Lyceum programme, as Mr. Irving announced it on Saturday night, not one word was said about "Werner." "Werner," it would seem, is no longer hanging over us. We received it with respect—at all events, with courtesy—when Mr. Irving chose to revive it on the occasion of the benefit of the most distinguished of our elder dramatists. Indeed, the experiment was interesting. But once was enough; and it is very gratifying to hear that, after "Faust" has gone on but a little longer, Mr. Irving will appear as Robert Macaire, and Miss Terry in a piece of poetic intention—the "Amber Heart"—in which it is perfectly true to say that she made a great impression at the *matinée* at which it was first produced. Still better news is it to be informed that, not later than next October, we may expect that revival of "Macbeth" which the wiser admirers of Mr. Irving—those who recognised his force and individuality in that character even a dozen years ago—have long been looking forward to.

THE play called "Dorothy Grey," which Miss Hawthorne produced at a *matinée* at the Princess's early last week, and which we had an opportunity of seeing at Brighton on Thursday, is a fine old crust'd melodrama, decanted for present use by Mr. Nesbit. Though the materials are old, the piece is really not badly put together. Originality is lacking to the conception of the characters, and literary art to the dialogue; but a certain measure of interest is aroused in the story. Furthermore, the piece, in many of its passages, was extremely well acted. In the character of the heroine—a

hardly-used young woman—Miss Hawthorne herself found a part giving her, perhaps, greater opportunities than any of which, upon the English stage, she has hitherto possessed herself. And, though in her performance conventional methods were now and then apparent, there was an element of unforced pathos visible in the best scenes. Much in the piece that might have caused a wholly conventional actress to rant was made the occasion by Miss Hawthorne for successful resistance to temptation, and for a more or less artistic temperance. Again, there was at least one opportunity, which the actress utilised, of showing that she could deliver a long *récit* with judgment and variety. The characters of the sympathetic and the unsympathetic lovers are drawn with little definiteness. Mr. Abingdon has somehow less opportunity than Mr. Frederick Harrison—the unsympathetic one, the "snake in the grass" (to adopt the diction of the playwright); and certainly Mr. Harrison, with an excellent and well-managed voice, and a method already incisive and individual, must by this performance have roused the expectations of the critical observer. Miss Maud Milton, who likewise appeared in the piece, is not only a handsome and exceedingly well-arrayed young woman, but a good deal of an artist to boot. And Miss Cicely Richards lends her distinctly sympathetic personality to a part in itself by no means significant.

MUSIC BOOKS.

Ferdinand David und die Familie Mendelssohn-Bartholdy. Von J. Eckardt. (Leipzig: Duncker & Humblot.) The lives of all who attain eminence are worth studying; but time is short, and public attention must, for the most part, be fixed on those alone who have reached the highest round of the ladder. Ferdinand David was a distinguished violin player and teacher; the pupil of Spohr, and the master of Joachim. His successes as a *virtuoso* scarcely interest the present generation. His earnest and exemplary life, though it may teach many a profitable lesson, has no special romance about it; but as the life-long friend of Mendelssohn he claims our notice.

It is the Mendelssohn family, rather than Ferdinand David, that constitutes the real subject of the volume before us. The letters of Mendelssohn, of his mother, and of his sister, are the chief matter; the events in the life of David are subordinate. Mendelssohn and David were born in the same house in Hamburg; the former in 1809, the latter in 1810. David, after enjoying two years' study under Spohr and Hauptmann (1823-4), returned to his native city. But he soon started on a concert tour with his gifted sister Louise (afterwards Frau Dulchen). At Leipzig he was introduced to the Mendelssohn family—the parents on both sides being old acquaintances. In 1826 the young David writes from Hamburg to the young Mendelssohn asking his advice about settling in Berlin. Mendelssohn's answer, which is here given, shows that on the shoulders of a boy he carried the head of a man. Herr Eckardt rightly describes it as wonderful and characteristic. David went for a short time to Berlin; but in 1829 he entered the house of a nobleman at Dorpat in Russia, where he remained for six years. A long and friendly letter of Mendelssohn's, dated 1830, is given, in which he sends a budget of home news and asks for Dorpat news in return. In 1832 Mendelssohn's sister Rebecca writes to David, and the mother Lea adds a long postscript; from both we learn how proud they were of young Felix. His travels and his compositions are the chief points

touched upon. In a letter of 1833 the mother writes that Felix's talent as a composer is only beginning to be recognised, but that as a player he is universally praised. This reminds her of a criticism on Beethoven in the *Leipzig Musikalische Zeitung* of 1805, in which his music was found fault with. "As a composer," said the writer, "Beethoven will do nothing, but he is a first-rate pianist." In 1836 Mendelssohn became conductor of the Gewandhaus concerts at Leipzig; and through his influence David obtained the post of leader of the band (*Concertmeister*), which he kept until his death in 1873. A letter from Mendelssohn, in reference to this matter, shows how zealous he was on behalf of his friends. There are some charming letters or extracts from Lea Mendelssohn to David. She writes to him in an affectionate strain as to one of her own children. The one in which she regrets not being able to attend the Düsseldorf festival in 1836 is as practical as it is pathetic, and through it runs a refreshing vein of humour. The festival itself has been graphically described by Fanny Hensel in a letter published in the *Mendelssohn Family*. In 1838 Mendelssohn writes to David that he has in his mind a violin concerto, which he intends to write out for him. "If that be true," answers David, "I will practice it so as to make the angels in Heaven rejoice." David came to England in 1839 and again in 1841. Herr Echardt gives some long and very interesting letters from David to Mendelssohn, in which we are favoured with a peep at musical life in London at that time. What should we say now to a performance of Beethoven's Choral Symphony with the recitative in second part played by a single double-bass, organ used in the "stürzet nieder Millionen," and many changes made in the vocal parts! Yet that, according to David, is how the work was given at the Philharmonic Society under Moscheles' direction in 1841.

In 1841 Mendelssohn went to Berlin, and thenceforward a constant correspondence was kept up between the two friends. The letters on both sides are extremely friendly. Mendelssohn gives, among other things, a long description of the preparation for the performance of "Antigone" at Potsdam, and of the performance itself. At the beginning of the year 1842, he heard Liszt play pieces by Bach, Handel, and Beethoven, "in such an untidy and unintelligent way that he would have much rather had them interpreted by an ordinary player." This agrees with what competent critics have said about Liszt being most unequal in his playing. He was not always in good form. In one letter David gives an amusing account of an evening at Schumann's house. He arrived too late for the music, but not for the wine, the cigars, and the dancing, in which Schumann himself took part. In 1844 Mendelssohn writes a long letter about his Violin Concerto, asking David's advice about passages in the *cadenza* of the first movement, and about the *adagio*. He originally intended the theme to be accompanied *pizzicato*; and, in a later letter, he thanks David for his suggestions and alterations, which he gratefully accepts.

Towards the end of the volume there are some interesting letters from Schumann to David, and a characteristic one from Liszt, after the *fiasco* of his "Mazeppa" at the Gewandhaus in 1857.

A translation into English of Herr Eckardt's book would be welcome to many.

J. S. SHEDLOCK.

MUSIC NOTES.

DVORAK'S Symphony in F major (No. 3, Op. 78) was given for the first time in England at the Crystal Palace, on Saturday week, under

Mr. Manns' direction. The late *opus* number is misleading, for the work was written in 1875. The opening Allegro is interesting, but lacks homogeneity; the principal theme is not of sufficient importance, and the working-out section appears laboured. The Andante is Mendelssohnian in character. The Allegro *scherzando* is lively but not particularly original. In the finale the composer appears in his true colours, and the movement is remarkable for vigour and wildness. The work was admirably performed, and much applauded. Herr Hans Wessely, from Vienna, played an uninteresting Spohr Concerto. He has very good technique. Mme. Valleria sang "Elsa's Dream," but the band parts were apparently not in the best order. The programme commenced with the "Oberon," and concluded with the "Tannhäuser" overture.

BERLIOZ's "Faust" was given for the first time at the Crystal Palace last Saturday. It is strange that Mr. Manns, who has always found Berlioz such an attraction, should only now have included this work in his *répertoire*. Mme. Nordica was the Marguerite, and Mr. B. Foote the Mephistopheles. Mr. Lloyd was unable to sing, and at the last moment Mr. Banks was engaged, who interpreted his part in an artistic manner. The orchestra was of course able to do justice to the instrumental music, but the Crystal Palace choir found the choruses by no means easy. Mr. Manns, indeed, had frequently to let them hear as well as see the *bâton*. There was a very large audience.

A MEETING of the Cymmrodorion Society will be held on Wednesday next, April 25, at 8 p.m., at Bloomsbury Mansion (late Neumeyer Hall), Hart Street, W.C., when Mr. Joseph Bennett, the well-known musical critic and writer of "librettos," will read a paper on "The Possibilities of Welsh Music," with choral illustrations.

TWO NEW NOVELS AT ALL LIBRARIES.

A NEW NOVEL by LADY WATKIN WILLIAMS.

EVEN SUCH IS LIFE.

By LADY WATKIN WILLIAMS.

3 vols., crown 8vo. [This day.]

A NEW NOVEL by JOHN DALBY.

THE MAYROYD OF MYTHOLM:

A ROMANCE OF THE FELS.

By JOHN DALBY.

3 vols., crown 8vo.

"Mayroyd of Mytholm" is in many ways an uncommon book.....The style is excellent in the narrative passages, homely and vigorous, and entirely free from any literary pretence.—*Athenæum*.

"Mr. Dalby writes with spirit and vigour."

"In all respects is sufficiently original to mark it off from common-place fiction.....The power and the originality of the novel are undeniable, and it possesses a freshness of interest all its own."—*Scotsman*.

LONDON: CHAPMAN & HALL, LIMITED,
11, HENRIETTA STREET, W.C.

LITERATURE.

FRENCH HISTORY IN MEMOIRS.

The Court and Reign of Francis the First. By Julia Pardoe. In 3 vols. (Bentley.)

A Gentleman of the Olden Time: François de Scépeaux, Sire de Vieilleville, 1509-1571. Portraits and Stories of the Sixteenth Century during the Reign of Henri II. By C. Coignet. In 2 vols. (Bentley.)

Memoirs of the Princesse de Ligne. Edited by Lucien Perey, translated by Laura Ensor. In 2 vols. (Bentley.)

THERE is something of enterprise, I think, in the publication of these books. For though Francis I. be a good name to conjure with, yet three handsome volumes, with portraits, and a cover copied from a design by Diane de Poitiers, are not, as the French would say, a "slender affair"; and as for the *Princesse de Ligne* and the *Sire de Vieilleville*, though each may take a place respectively in the ranks of "fair women and brave men," yet I doubt if their name and fame are very well known to the English "general reader." Let Messrs. Bentley receive due acknowledgment and thanks accordingly.

Miss Pardoe's book carries us some little way back—I do not mean here by its subject, but by the date of its publication. She herself died, twenty-five years ago, on November 26, 1862, after a pretty active literary career, in the course of which she had written a good deal of history, some books of travel, some fiction, and a little verse; and this book was published thirteen years before her death, in two volumes, and with the same portraits, and the same cover, but minus certain extracts from earlier books. Thus *The Court and Reign of Francis the First* has now reached the very respectable age of thirty-eight; and it has a double interest, not only in virtue of subject and treatment, but also as showing what was the form of popular history in favour with the last generation.

Looking at the book from this point of view, we may, I think, conclude that our fathers and mothers liked to be interested; for which I most certainly shall not, in unedifying wise, cast at them the stone of blame. To say that Miss Pardoe's style was that of the great masters in the literary art would be an obvious exaggeration; but she wrote pleasantly, in a manner quite sufficiently graphic, and with enough of pen-craft to give flow, and even force, to her narrative. She had a distinct faculty for marshalling facts effectively, and even clearly; and altogether this history of hers is a readable book.

That something has not been sacrificed in the attempt to breathe life into the dry bones of a past now four hundred years dead, I will not affirm. There are in these volumes

certain conversations which are given verbatim, though they must have been held under circumstances that would render the presence of a reporter at least unlikely. There are scenes that seem described with such full detail as to the inmost thoughts and emotions of each actor as to suggest imagination rather than knowledge. I do not mean that Miss Pardoe was altogether without warrant for her statements. Anyone accepting Brantôme as guide, philosopher, and friend, would learn a great deal, perhaps too much, as to life behind the scenes in the sixteenth century. Its the "too much" to which one feels here a little inclined to object.

Thus it happens that there are passages in this history that rather remind the reader of the novels, once popular enough, of the late G. P. R. James. Here, for instance, is an interview between Queen Eleanor of France and Montmorency:

"The wife of Francis I. was seated at an open casement overlooking the bright current of the Loire. Her head rested upon her hand, and an expression of acute suffering was visible on her fine features; but her eyes were tearless as they followed unconsciously the course of the sparkling ripples upon which they lingered. She started, however, from her reverie when Montmorency was announced, and extended towards him her hand, which he raised to his lips. 'You here M. le Maréchal!' she exclaimed, '... I heard that the whole court were at Chambord.' 'Your majesty is at Amboise,' was the abrupt reply. 'True,' said the poor queen, forcing a smile. 'I, as you are aware, am unequal to such an exertion, either of strength or skill, as that of a royal hunt. But you, monsieur—?' 'No, madame, no,' interposed Montmorency; 'his majesty did not decline my attendance; and I am as keen a sportsman as even your august husband himself; but, nevertheless, I have not followed the hunt.' 'And wherefore?' demanded Eleanor absently, as she passed her hand across her brow. 'I will tell you, madame,' said the maréchal with an unsteady voice, as he fixed his eyes earnestly upon her, 'because your unhappiness is destroying my existence. Because you are at once the most admirable and ill-used of your sex; because—ay, wither me if you will, madame, with your frown, but I have already suffered for months, and I must now speak or die—because I love you, and would rather expire here at your feet than live on longer in the same torment.' 'Do you know to whom you speak, sir?' asked the queen, rising from her seat as the maréchal sank on his knee before her. In another instant the maréchal had disappeared; and, while the brilliant train which followed Francis through the woods at Chambord filled the echoes of the forest-paths with the clamours of their joyous revelry, his deserted wife flung herself back upon her seat, and, with her face buried in her hands, wept the hot tears of mortification, wounded pride, and that unutterable anguish which not even tears can solace."

But it would be quite unfair to weigh unduly upon the part which the imagination of someone must have played in the composition of such scenes as these. Rather is it right to insist upon the real skill with which Miss Pardoe has ordered and arranged a mass of complicated facts. Her history, conceived in no niggard spirit, begins long before the time when Francis ascended the throne in January 1515, and takes us pleasantly to March 31, 1547, when he breathed his last. His was the Renaissance reign in France, the

reign that saw the dawn of the Reformation. There are few periods of more commanding interest.

And with François de Scépeaux, the Sire de Vieilleville, the "gentleman of the olden time" whose life is recorded in the two volumes next upon my list, we are still well within that same interesting time. De Vieilleville was born in 1503, when Louis XII. was still on the throne; lived through the reign of Francis I.; was present at the fatal tournament on June 29, 1559, when Henry II. received his death wound, and tended that dying monarch; and finally himself died in November 1571, not without the usual suspicion of poison.

A fine historical figure this François de Scépeaux—a man evidently "good at need," as soldier, administrator, or diplomatist. We find him battling pretty well everywhere—at sea on the Mediterranean, in Italy, in Alsace and Lorraine, and in the civil wars against the Huguenots. He is sent on important missions of state to London and Vienna. He occupies important posts, such as the governorship of Metz; and in everything he acquits himself as a wise and valiant gentleman, brave in battle, moderate in victory, repressing all disorder and licentiousness among his men—no easy or grateful task with the hireling soldiery of the sixteenth century—and, as between the fanaticism of Papist and Huguenot, keeping a sane and statesmanlike course. Moreover, in an age of shameless rapacity, he is singularly disinterested.

No doubt he gains somewhat from the manner in which his portrait has come down to us. For it was painted by his secretary, Vincent Carloix—a "loyal servant," like the one who wrote the story of Bayard, or the lady-in-waiting who recorded the virtues and saintliness of Eléonore de Roye; and perhaps some slight deduction should be made from the good secretary's praises. But, even then, there remains more than enough of the salt of uprightness and honour to keep Vieilleville's name fresh from all taint. The worst thing one can find against him is his conduct towards certain grey friars who had treacherously endeavoured to introduce the enemy into Metz. He promised to spare their lives, and so far kept his promise that he did not execute them himself; but, going to Paris for a holiday, he left no instructions as to their disposal, and heard of their death on his return with some complacency. Perhaps, however, on the whole it may be regarded as a sign of grace that, in the sixteenth century, he had any scruples about executing them at all. For the rest, the book is an interesting book, and fairly translated.

Of the first volume of the *Memoirs of the Princesse de Ligne*, I think even a stronger adjective may be used, and that the word "charming" would not be misapplied. Nor has more than a fair portion of the charm evaporated in the translation.

What a pretty, quaint, old Sèvres-china world that volume introduces us to! I remember, a few years ago, seeing at Messrs. Christie's rooms the picture of a little child *marquise*, aged some eleven years perhaps, and dressed with all daintiest care in hoops and brocade. It was a picture by Watteau, a very beautiful one, and seemed, as I looked

at it, like the reflection in a convex mirror of the whole life of the generation, so artificial and yet so full of grace, to which that little lady belonged. Something of the same kind of feeling comes over one in reading the little Princess Massalska's record of her child and school-girl life at the convent of the Abbaye-aux-Bois, Rue de Sève (not then Sèvres), Paris.

M. Lucien Perey, who has had her "Memoirs" in his hand, and is, therefore, in the best position to judge, considers that they were written from day to day when she was between the ages of nine and fourteen. It is difficult to imagine that any portion of them was composed by anyone quite so young as nine; and their form seems to suggest, in most cases, reminiscence rather than actual daily record; nay, seems to suggest an occasional doubt as to their authenticity. But, as I have said, M. Perey should know best. At whatever age written, however, they afford a most graphic picture. Many a practised penman might envy the faculty which this child possessed of making words stand for real living persons, actual circumstances, events, and things.

We can see it all so clearly. The pretty Polish child taken by her uncle and M^{de}. Geoffrin, "first to the abbess's parlour, which is very handsome, for it is painted white with gold stripes"; her introduction to the mistresses and to her schoolmates—who bear the best names in France, for this convent school is the most aristocratic of schools; her wanderings over the convent buildings; her difficulties with her handwriting; her punishments—the donkey's ears and red tongue; her quarrels, which ended, I regret to say, in slaps and other indignities; the masqueradings on St. Catherine's Day, when, by a curious custom, "the pupils were allowed to assume the dress, occupation, or rank of all the ladies of the convent, from the abbess down to the simplest nun"; the theatricals; the practical jokes, ink poured into the holy water, and tamperings with the chapel bells; and then a barring-out—yes, a real, genuine, old-fashioned barring-out—possession taken of the kitchen and store-rooms, ejection of their regular occupants, except "M^{de}. de Saint-Sulpice, who was sixteen years old," and lay-sister Clothilde, who was prudently retained, because, as M^{de}. de Saint-Sulpice shrewdly observed, without a lay-sister there would be "no supper." On the whole, one does not quite wonder to come across this entry in the diary: "All the pranks M^{lle}. de Choiseul and I played had considerably retarded the ceremony of my first communion."

There is a certain high-mettled charm of good spirits about the whole thing, distantly suggestive of a paddock full of well-bred fillies; and among the most skittish was certainly our young friend the Princess Massalska. Not for nothing had her grandmother, as Frederick the Great told the old Prince de Ligne, done gunner's duty at the siege of Dantzic, and pointed cannon with the best. But dare-devil as the child might be, there was one person in the establishment for whom she entertained the greatest reverence and affection. This was M^{de}. de Roche-Chouart, the *Maitresse Générale*, the "Miss Temple" of the school, one of those women who by force

of character and intellect so impress the higher type of school-girl. The story of her death is graphically told in these memoirs; and on the day when our princess was married she stole away from the throng of friends to kneel in solitary prayer beside the loved mistress's grave in the convent chapel.

But mingled with all the pure girlish high spirits of the school life come strange revelations of the state of manners and morals in the outside world.

"It happened about that time that M^{lle}. de Lévis one day publicly taunted M^{lle}. de Choiseul before the whole class with the fact of her mother's being kept in confinement on account of her having been in love with an actor."

This was voted very "bad form" on the part of M^{lle}. de Lévis—a point on which I think we may agree with the school feeling; and when M^{lle}. de Choiseul's "sister, born of the adulterous intercourse in question, afterwards came to the school," the former earned great credit among her companions for the generous way in which she acknowledged and treated her. M^{lle}. de Choiseul's own marriage took place under circumstances which we should now consider at least singular. She was married, as a school girl, at the age of fourteen, and came back to the school again, after a fortnight, "madly in love with" her husband, "though they had never been left alone together."

With the end of the Princess Massalska's school life the interest of the book pales very considerably. She was married on July 29, 1779, after much diplomacy, to the Prince Charles De Ligne. Her first impression of him, when taken down to the school parlour for the introduction, was, that "he had a noble mien, but was too serious, and had something German about him." In truth, with all his excellences, he never won her heart; and when he fell, shot through the head in the forefront of the battle while attacking the French at Argonne, on September 14, 1792, her only feeling was one of relief that his death left her free to give full rein to her passion for Count Vincent Potocki.

But into the sad story of that love—for the man on whom she lavished the full treasure of her heart seems to have been simply cold, calculating, and mercenary—it is not my purpose here to enter. With her marriage to him—he had been twice divorced—the book ends.*

The portrait of the princess given in this book, as in the French edition, is an indifferently executed woodcut from a picture in the museum at Berlin. That picture, a pastel, has been greatly photographed, and represents a woman of singular loveliness, with a face all sweet and feminine, framed in an opulence of hair, and in whose eyes there lingers a sort of wistful sadness, such as came, we may suppose, into the eyes of Eve after she had eaten the fruit of the Tree of Knowledge. It is a beautiful picture, and one would be glad to associate it with the little princess who wrote these memoirs, if so be that she really did write them, and even with the woman who threw away her

* Since the above was written, M. Perey has published the story of her later life, under the title of *Une Grande Dame au XVIII^e Siècle, la Comtesse Hélène Potocka*.

love so unwisely, and yet so passionately. Unfortunately it is the portrait of a quite different Countess Potocka, whose story, perhaps even more romantic, may be read by the curious in an article in *Scribner's Monthly* for November 1877.

FRANK T. MARZIALS.

Scotland and Scotsmen in the Eighteenth Century. From the MSS. of John Ramsay, Esq., of Ochertyre. Edited by Alexander Allardyce. In 2 vols. (Blackwood.)

THIS is as good a book of its kind—a somewhat superficial and artificial kind, it must be allowed—as has yet been published on Scotland in the eighteenth century. For Scotland in the Wordsworthian, subjective sense, for the emotions and aspirations of those Scotsmen—mostly mute, inglorious, and humble—who, through their sons and the education they were able, by practising such thrift as James Carlyle's, to give them, really made the history of their country a hundred years ago, one must read Allan Ramsay, Ferguson, Burns, perhaps even the unbowlerised "Collection" of Herd. But, on what seemed Scotland to the English visitor of Samuel Johnson's time, and even of Samuel Johnson's calibre; on Scotch habits in eating, drinking, dressing, reading, writing, ploughing, preaching, marrying, dying, and burying, John Ramsay of Ochertyre—the host of Burns, the friend of Skinner, and the mentor of Scott—is, perhaps, as reliable, and certainly as agreeable and chatty, an authority as is to be found or is needed. One does not learn much about the man himself from the two volumes into which Mr. Allardyce has boiled down his tent, or from the introduction which precedes them. A Scotch laird, with the training of an advocate and not embarrassed with too much wealth, he devoted himself to managing his property and to cultivating such literary society as he could find. Being naturally of a kindly and tolerant disposition, he was a general favourite in Scotch society. For the rest, he seems to have taken views of life of the length recommended by Sydney Smith; to have sipped the Gallic heterodoxy of his time, and so to have developed into a Broad Church Presbyterian; and to have been a very willing recipient and an indefatigable retailer of after-dinner wisdom and gossip.

Mr. Allardyce (who, it is to be hoped, has not altogether abandoned original literary work for the rôle of executor to defunct Scotsmen) has done his work as Ramsay's editor carefully and well. In other words, he has allowed Ramsay to prattle about Scotch judges, professors, clergymen, gentry, ladies, landlords, "worthies," and "men of genius and taste"—and it is of such prattlings that this book is composed—after his own fashion and in his own language. No doubt that fashion will seem to most readers a terribly prosy one. One gets wearied of page after page, or rather acre after acre, of historical statements like this:

"The civil wars that broke out in the reign of Charles I. gave a fatal check to the useful and liberal arts. People's money and attention were, in those wretched times, engrossed by very different considerations. Indeed, a very great proportion of the nobility and gentry

were either ruined or reduced to straits. Nor did the restoration of the royal family, and with it the blessings of peace, render them easy in their circumstances. Whatever was the cause, a very mean style of architecture, both in public and private buildings, prevailed in Scotland between the Restoration and the Union."

This is Ramsay all over, the gold leaf of good sense beaten out to almost intolerable tenuity. Mr. Allardyce, it may be said—and, indeed, in many quarters it has been said—ought to have reduced Ramsay's literary gossip to a much greater extent than he has done. But in that case he would have been guilty of injustice to his hero. Ramsay, without his garrulity, would not be Ramsay at all. But, in truth, these volumes are easy to read and digest, especially with the admirable sauce their author provides in footnotes, which contain by far the liveliest and most characteristically Scotch anecdotes that have appeared since the days of his namesake, the Dean, and like the Dean's, are steeped in alcohol. Ramsay, too, although much more of a social photographer and *raconteur* than a critic, not infrequently gives utterance to sound criticism, as when speaking of Scotch Border minstrelsy he says:

"To portray in lively and delicate colours, though with a hasty hand, the hopes and fears which, by turns, agitated the breast of the amorous swain, afforded ample scope to the rural poet. Some love songs of which Tibullus himself need not be ashamed might be composed by an uneducated shepherd whose learning was confined to the Book of God and the book of nature."

Contrast this platitude with Crabbe's

"Shepherds' boys their amorous pains reveal,
The only pains, alas! they never feel!"

in his denunciation—as true as it was bitter—of "the sleepy bards" of his day, who could give to the world nothing better than "mechanic echoes of the Mantuan song." The pith is all on Crabbe's side, but the truth is all on Ramsay's, as Burns proved the very year this trenchantly inaccurate criticism was published.

This is a book which can be safely commended, and from which it would be at once an easy and an agreeable task to quote largely, but which cannot otherwise be criticised. In it the Edinburgh of the eighteenth century—the Edinburgh that was a literary capital, not as now a Scotch South Kensington—figures as a kind of Row. There are to be seen riding or driving Scotch clergymen who drink and pray divinely; Scotch judges who write metaphysical treatises or trifle with literature between trials; and excellent Scotch ladies who can hardly spell and whose reading is confined to the *Tatler*. They are watched and criticised by their acquaintances, with whom they occasionally exchange scandal and comments on agriculture, politics, and literature. Ramsay was not one of the performers in the Edinburgh Row of his time; but he was on bowing, hand-shaking, and anecdote-retailing terms with the best of them. Mr. Allardyce's volumes show what such folk were made of. It is but fair to add that Ramsay was a progressive agriculturist and a humane, though wideawake, landlord. His remarks on all questions bearing on land are marked by his usual sagacity, and are free from his usual prolixity.

WILLIAM WALLACE.

TWO INDIAN STORY-BOOKS.

Folk-Tales of Kashmir. By the Rev. J. Hinton Knowles. (Trübner.)

Folklore in Southern India. By Pandit S. M. Natésa Sāstrī (Bombay: Education Society's Press; London: Trübner.)

WHATEVER may be the origin of the popular myths and fictions which are found to be almost identical in all parts of the world—whether those of simple forms have not been independently developed or invented by different races, and those of more complicated construction diffused from a common centre or centres—it is not for lack of materials that comparative mythologists and traditionists fail to agree. The folklore and folk-tales of nearly all the eastern and great part of the western hemisphere have now been diligently collected and published; and it may be questioned whether there can be much still left for future gleaners that will throw any new light upon the vexed question of the origin and diffusion of popular tales. The "solar" or "nature" myth theory seems now to be well-nigh obsolete, and the "anthropological" is rapidly gaining adherents; yet there is much to be reasonably said in support of the theories of the so-called Bentley school—of the Indian origin of many oral, as well as written, European fictions. It is not, however, my present business to discuss this question anew, but to offer some remarks on the two story-books whose titles head this article.

Mr. Knowles is a most intelligent and industrious collector of folk-tales current in the "Happy Valley"; and he has improved as a story-teller since he published his *Dictionary of Kashmiri Proverbs and Sayings*—perhaps improved rather too much, since, among other ornamental touches, we occasionally meet with in this new book such G. P. R. James-like expressions as "the next morning the king might have been seen," &c., which is altogether out of place in a folk-tale; and such as this: "the quickly found lovers," referring to a king meeting a strange wandering damsel and forthwith taking her to wife. He is fond of using native terms when the English equivalents would do quite as well, or even better, since they would save readers the trouble of looking at the foot of the page, or in the glossary, for their meaning. For instance, on p. 11 the term *woni* occurs, and on referring to the glossary we learn that it means a shopkeeper. Moreover, his plan—or want of a regular plan, rather—of explaining such words is extremely annoying, some being explained in footnotes, others in the glossary, for no apparent reason, and some not at all. They should all be explained either in one place only or in both places. In the preface Mr. Knowles expresses a hope that his work will be useful to students of comparative folklore from the notes he has appended referring to certain other collections where similar tales are to be found; but, unfortunately, most of these works (and they are few, after all) are also Indian story-books of precisely the same kind as his own, comprising tales communicated by word of mouth, such as Miss Frere's *Old Deccan Days* and Miss Stokes's *Indian Fairy Tales*; and others are all but absolutely inaccessible in this country, such as the *Indian Antiquary* and

Indian Notes and Queries—two most excellent and useful journals, which ought to be found in every one of our larger public libraries. But enough of fault-finding. The collection is a very good one. The tales are, with one or two trifling exceptions, highly entertaining, and I shall glance at a number of them.

In the story of "All for a Pansa," a father, in order to test his son's mental ability, gives him a small coin and bids him get for it five things—something to eat, to drink, to gnaw, to sow in the garden, and to serve as food for the cow; and a clever girl advises him to buy a water-melon. There is a somewhat similar story in the Talmud, of a man who gave a boy a *pruta*, telling him to buy with it something that he might eat, leave, and take home; and the shrewd urchin brought him a quantity of salt. In the same Kashmiri tale, the noodle-hero falls into the toils of a gambling courtesan who always wins by her trained cat at the right time overturning the lamp. This occurs in one of the legends of the renowned Rājā Rasālū, found in Capt. R. C. Temple's valuable *Legends of the Panjāb*, and also in the romance entitled *Gul-i Bakāwālī*, translated into Urdu from the Persian. The story of "The Ivory City and its Fairy Princess" not only resembles that of "The Minister's Son" in the *Vetālapanchavinsati* (i.e. Twenty-five Tales of a Vampyre)—why does Mr. Knowles always refer to the Hindi version, *Baitāl Pachisi*, instead of the Sanskrit original?—but also the story of "The Painter," found in some Arabic texts of the *Seven Vazirs*; and, in part, is like that of the "Officious Father-in-Law" in the Persian *Sindibād Nāma*. "Shabrag, Prince and Thief," is a capital story. The incident of stealing the eggs from beneath a bird occurs in one of the *fabliaux* and in the "Four Clever Brothers" in Grimm's collection; while in M. Rivière's *Contes Populaires de la Kabylie du Djurdjura* one of two brothers, apprenticed to an old thief, takes a sparrow out of its nest without waking it. The story of "Saiyid and Said"—in which he who eats the head of a certain bird finds 10,000 *muhrs* under his head every morning, and he who eats its breast becomes a king—has analogues in the *Dravidian Nights* (a translation, by Mr. Natésa Sāstrī, of a Tamil romance entitled *Madanakāmarājankadai*); in a Manipuri tale of two brothers, Turi and Basanta (given in the *Indian Antiquary*, vol. iv.); in the Kalmuk *Siddhi Kūr*; and in Miss Busk's *Folk-Lore in Rome*. Variants of the "Day Thief and Night Thief" are found in the Norse tale of the "Master Thief," the Gaelic tale of the "Shifty Lad," and in Mr. Gibb's translation of the Turkish tales of the *Forty Vazirs*. The story of "The Wicked Queens" is an interesting version (and the fact is strangely overlooked by Mr. Knowles) of the tale, familiar to every schoolboy, of the "Envious Sisters" with which our common version of the *Arabian Nights* concludes, and the main idea of which—the substitution of puppies, &c., for the victim's infants—I have elsewhere traced to a Buddhist story. In the tale of "The Four Princesses" we have a variant of the Tamil *Alakēsa Kathā*, as well as of "Strike, but hear!" in Lāl Bahārī Day's *Folk-Tales of Bengal*. The "Lach

[why this spelling?] of Rupees for a Bit of Advice" finds an analogue in Jacques de Vitry's *Sermones*, &c., whence it was probably taken into the *Gesta Romanorum*; and similar tales occur in the *Forty Vazirs*, the *Bagh o Bahar* (a Hindî work derived from the Persian *Kissa-i Chehâr Darwesh*), and in *Buddha-ghosha's Parables*. Interwoven with this story is that of the Merchant and his Faithful Dog, which occurs in the *Alakésa Kathá*; and there is something like it in the Burmese collection—*Decisions of the Princess Thoo-dhamma Tsari*. It has also a variant of the Parrot that brought the youth-renewing fruit, which is found in the Persian *Túti Náma*, the Kanarese collection, *Kathá Manjari*, and the *Alakésa* story. The clever damsel who told the reason "Why the Fish laughed," which is one of the best in the book, has a brother in the lad who told the king the meaning of his dream—that he was drinking with a frog out of the same cup—in a story in a Persian collection by Al-Káshifî, entitled *Lat'ûyif at-Tawa'ûyif*, the answer being the same in both—to wit, that in his majesty's harem there was a man in woman's clothes; and in her "figurative language" she has a sister in No. iv. of M. Le Grand's *Contes Populaires Grecs*, and another in "The Clever Girl" in Prof. Crane's *Italian Popular Tales*. I had almost omitted to remark that there is a striking resemblance between the opening of the tale, "Pride Abased"—in which a king is in the habit of daily asking his courtiers whether there exists in all the world a monarch so powerful as he, until one day a counsellor, to check his foolish boasting, tells him of another king who is mightier—and that of the story of Dambhodbhava in section 95 of the Fifth Book (*Udyoga Parva*—Effort Book) of the *Mahábhárata*. The Kashmiri story is a variant of the tale of "The King who lost his Kingdom, Wife, and Wealth," which is found in the Breslau printed Arabic text of the "Thousand and one Nights," and has many European and Asiatic analogues. Altogether, Mr. Knowles's book will prove a valuable addition to the library of the folklore student, and I trust he will ere long favour us with a companion volume.

Not less interesting and valuable is the third and concluding fasciculus of Mr. Natésa Sástri's *Folklore in Southern India*. The work is very appropriately dedicated to Capt. R. C. Temple, "who has done so much for the cause of Indian folklore." In the preface we are told how the Pandit—a native of the Trichinopoly district—in his childhood greedily devoured and treasured up in his memory the numerous tales of mirth and marvel which the superannuated women of the family delighted to tell him; and how, after leaving college and becoming one of the staff of the Indian Government Archaeological Survey, Capt. Temple's interesting folklore contributions to the *Indian Antiquary* suggested the idea of his turning into English some of his own abundant stores. Thus he was pre-eminently qualified both by his birth and education for the task which he has so well accomplished; and it is fervently to be wished that the same kind of work were done for other Indian countries and districts by educated native gentlemen. The Pandit writes English well, and tells his stories lucidly and readily.

My remaining space will barely admit of some brief comments upon a few of those in this concluding fasciculus. In the tale entitled "Good will grow out of Good" we have a curious version of the well-known and wide-spread story of Fulgentius in the *Gesta Romanorum*, which had been told long before that famous monkish collection was made in the *Nugae Curialium* of Walter Mapes, and of which I have elsewhere adduced many variants, from the banks of Ganga to Norway. The story of "The Five Cups," in which the same magical object that is a blessing to the good man proves a curse to the churl, recalls similar tales from such different lands as China, Tartary, Russia, Scandinavia, and Ireland. In No. 19 I was charmed to meet with a Tamil variant of the diverting story of the Bad Wife, of which four Italian versions are known to me, by Brevio, Machiavel, Straparola, and in Miss Busk's *Folklore in Rome*; one French, in La Fontaine; one Turkish, in Mr. Gibb's *Forty Vazirs*; and one in Mr. Ralston's *Russian Folk-Tales*. Moreover, it forms the plot of the play of "Grim, the Collier of Croydon"; only here it is not a scolding wife the demon is afraid of, but a bad musician who made such a "dreadful dissonance" with his *nágasvara* pipe as to torture beyond endurance a Bráhmárakshasa who lived in a tree close by the piper, and whose name was Gánapriya, which means "a lover of music." In No. 21 we have the familiar mediæval story of the scholar who by "art magic" called up the Devil, who was thus (as in *Faust*) constrained to be the scholar's servant in all things, but conditioned that the scholar should keep him constantly employed at his peril. The fiend built bridges, clove hills, and did all sorts of wonderful things "in less than no time," and the scholar was at his wits' end as to what he should next give the fiend to do, till the happy thought occurred to order him to make a rope of sand. In the Tamil version the demon (a Bráhmárakshasa) is given a long curling hair of a woman's head to straighten, which proves too much for him.

There is a similar story in the great Sanskrit collection—"Ocean of the Streams of Narrative" (*Kathá Sarit Ságara*), in which a Bráhman suffering from an incurable sore is taught a *mantra*, or charm, which called up a Rákshasa to cure it, and the demon having quickly done so demanded to be set other tasks, else he would devour him. In the sequel the poor Bráhman gives him somewhat to do which he could not, and which, though funny, cannot be told here. In No. 22 we have a capital version of the "Silent Couple," on which is based the Scotch song of "The Barrin' o' the Door," and which forms part of the plot of "No Song, no Supper." It is also known in Italy, Sicily, and Arabia, and there is another Hindî version in the tale of "The Four Simple Bráhmans." Perhaps the best tales in this part are "The Four Good Sisters" and "The Satchel-Bearer." Both are new to me, and will probably prove so to many others. They are the longest, and are told with much spirit. I confidently commend the Pandit's little book to all lovers of good stories, as well as to my story-comparing brethren.

W. A. CLOUSTON.

ERASMUS IN ITALY.

Erasmus en Italie: étude sur un épisode de la renaissance, accompagnée de douze lettres inédites d'Erasmus. Par Pierre de Nolhac. (Paris: Klincksieck.)

M. de NOLHAC has chosen as the subject of this latest addition to Erasmusian literature one of the most interesting, and at the same time one of the least known, portions of the life of the great Dutch scholar—viz., the three years spent by him in Italy; and he claims to have thrown fresh light upon this period by means of several hitherto unpublished letters. This visit of Erasmus to Italy is a fact of some importance in the history of the revival of letters in Europe. To his influence must be ascribed in a large measure the spread of Humanism north of the Alps; and it was in Italy, during his residence among the scholars of Bologna, Padua, Rome, and above all of Venice, that he himself had become thoroughly imbued with the spirit of the Revival. Erasmus, it is true, affirmed more than once in after years that he had learned little in Italy, and one of his most recent biographers goes so far as to assert that he learned nothing. It must be borne in mind, however, that this statement was made by Erasmus in the heat of controversy, at a time when his recollections of Italy were embittered by the violent attacks made upon him from that quarter; and it is, moreover, at variance with what he himself said on other occasions.

To visit Italy had been from early youth one of Erasmus's most ardent desires; but the means to pay for the journey were lacking—"sine pennis volare haud facile est," he laments to a friend. At last, when he was close upon forty, the long-wished for opportunity came. Boerio, or Boyer, the physician to King Henry VII. of England, asked him to accompany his two sons to Bologna; and in the summer of 1506 Erasmus found himself for the first time south of the Alps. At Turin he took the degree of D.D.—not that he himself valued the distinction, but because, as he said, nobody thought anything of a man's learning unless he could claim to be addressed as "magister noster." From Turin he proceeded to Bologna, but his visit to that city was cut short by the warlike operations of Pope Julius, and he was driven to cross the Apennines and take refuge in Florence. It is disappointing to find how little he was impressed with what he saw in the Tuscan capital; he says not a word of Michael Angelo, nor of Leonardo, nor of Raphael, not a word of Machiavelli. In writing about Florence, many years afterwards, he is chiefly interested in recalling the details of a terrific explosion of gunpowder, which took place during his visit. "Everyone," he says, "was in great alarm at the portent, and thought that the end of the world was at hand." The matter-of-fact Dutchman, however, saw no portent in it at all, but merely the natural consequence of neglect on the part of those who had charge of the gunpowder.

After a stay of only six weeks in Florence, Erasmus returned to Bologna in time to witness the triumphal entry of Julius into the city. Here misfortunes again awaited him. Not only did he fall out with the governor of his two young charges (who

appears to have exasperated him to such a degree that even after a lapse of twenty-five years he still calls him *monstrum* and *porcus*), but he also nearly lost his life through an outbreak of the plague. The epidemic itself he managed to elude; but he twice narrowly escaped being killed by the panic-stricken mob, who mistook him for a pest-infected physician. It appears that his monkish dress in some way resembled the costume of the plague doctors, who were liable at any time to be stoned if they ventured openly into the frequented streets. Erasmus is said, in consequence of this, to have obtained leave from the Pope to dispense with his religious garb; but, though he undoubtedly did receive permission to wear lay costume, it is by no means so certain as M. de Nohac assumes that it was on this account.

At Bologna Erasmus made the acquaintance of the celebrated Scipione Fortiguerra (or Carteromachos, as he preferred to be styled in the pedantic fashion of the day), as well as of Paolo Bombasio, in whose house he studied Greek. During this time he was at work upon new editions of his *Adagia* and of his translations from Euripides, with the intention of getting them printed at the celebrated Aldine press. The letter in which Erasmus begs Aldus to undertake them is one of four, written to Venice from Bologna and Padua, which M. de Nohac has brought to light for the first time. It is exceedingly interesting as not only showing in what high esteem the Venetian printer was held by the Dutch scholar, but also as giving evidence of the great reputation already acquired by the Aldine press. The success of a work printed by Aldus was assured—"existimarim lucubrationes meas immortalitate donatas," writes Erasmus, "si tuis excusae formulis in lucem exierint, maxime minutionibus illis omnium nitidissimis" (i.e., in the so-called aldine or italic type). To a request preferred in such flattering terms Aldus readily acceded, and he wrote inviting Erasmus to pay him a visit at Venice. After some further correspondence (given in *extenso* by M. de Nohac) regarding the printing of his works, Erasmus decided to go to Venice, and we find him at the beginning of 1508 domiciled as a member of Aldus's household.

Of his life under the printer's roof he has left us a picture in one of his Colloquies. He does not appear to have been altogether happy. Of learning there was no lack; but he laments bitterly that he found very little to stay his stomach withal, and that little was not altogether to his taste. The wine, he complains, was vapid, the bread like clay, the eggs stale, the meat not fresh, and the broth only fit for pigs—"jusculum suibus dignum." Finding that this diet disagreed with him, he consulted the family physician, who gravely cautioned him against excessive eating. Erasmus, however, took the cure into his own hands, and arranged to provide his own meals, and to take them in his own room during the remainder of his stay with Aldus. The firing appears to have been as scanty as the food, and he suffered greatly from the cold. The only means of warmth was a fire built of damp sticks and roots, which gave out volumes of smoke, but little enough flame. He was not much better off in summer, he says, on account of the swarms of vermin which in-

festated the house, and gave him no peace, day or night. However, in spite of these and sundry other discomforts, he managed to do an immense deal of work; and he astonished Aldus by his power of writing in the midst of the noisy printing-presses, which were kept busy striking off his compositions as fast as he wrote them.

We find Erasmus, as a matter of course, among the members of the celebrated Aldine Academy, where he had the advantage of meeting some of the most brilliant Hellenists of the day, including the Greeks—Demetrius Doucas, John Lascaris, and Marcus Musurus, whose beautiful handwriting was taken by Aldus as the model for his Greek type, just as he had chosen that of Petrarca as the model for his celebrated italic type. M. de Nohac enumerates the principal scholars with whom Erasmus came into contact in Venice, and warns us to accept with caution the list of the Neacademicians given by M. A. Firmin-Didot in his fascinating work upon Hellenism at Venice.

From Venice Erasmus went to Padua, where, at the request of the Scotch king, James IV., he taught rhetoric to his natural son, the youthful Archbishop of St. Andrews, who was at that time studying law at the university. Here he renewed his relations with Marcus Musurus, and continued to work at Greek texts. Rumours of war, however, again disturbed his labours, and he was forced to leave Padua with the young prince. After a short stay in Ferrara and Bologna, he arrived in Siena, where he devoted himself almost exclusively to the instruction of his pupil. But he was impatient to get to Rome; and at the beginning of 1509 we find him there, once more in the midst of a brilliant assemblage of scholars. As at Florence so at Rome he appears to have been curiously indifferent to the works of art he saw around him. He does not even mention the Laocöon, which had only recently been discovered, and which had aroused the enthusiasm of every one with any pretensions to taste. He had many friends, especially in the Vatican, where he made the acquaintance, among others, of the Cardinal Giovanni dei Medici, who afterwards, as Pope Leo X., afforded him a generous support against his calumniators. The residence of Erasmus in Rome gave him ample opportunity of observing the decrease of religious faith, the licence, the ostentation, and the avarice of the Papal court, and no doubt influenced him powerfully in the part he subsequently played in the Reformation. Catholic as he was, he could not but sorrowfully admit the truth of Luther's picture of Rome.

Meanwhile an event had occurred in England which caused the Dutch scholar to hasten back to the North. A letter from his patron, Lord Mountjoy, announced the death of Henry VII., and the accession to the throne of the young prince who had already been specially gracious to him. Erasmus was urged to return without delay, to share in the favours which were to be showered by the new sovereign upon men of letters. In spite of the entreaties of his friends in Rome, in spite of hints of certain and high preferment, Erasmus decided to go; and, at the beginning of July, 1509, he was back again in England. He never revisited Italy, but his longing to

return ceased not to the day of his death. "My heart is at Rome," he wrote in his old age, "and at no other place would I more willingly put off the burden of this poor body of mine."

At the end of the work M. de Nohac prints fifteen letters of Erasmus. Of these twelve have never before been published. The four addressed to Aldus—which are of great interest and importance, as throwing light upon the relations of Erasmus with the Venetian printer—have already been mentioned. Of the others, four were written on business matters to Francesco d'Asola, Aldus's wife's brother; three, principally as letters of introduction, to Pietro Bembo; and the remaining one to a Roman prelate, who is supposed by M. de Nohac to be Barbirius, the chaplain of Adrian VI. It should be mentioned that the book is provided with an excellent index.

We are glad to learn incidentally from a note that M. de Nohac has in preparation a work upon the correspondents of Aldus. It ought to prove an attractive volume.

PAGET TOYNBEE.

NEW NOVELS.

The Lindsays. A Romance of Scottish Life. In 3 vols. By John K. Leys. (Chatto & Windus.)

Mayrold of Mytholm. A Romance of the Fells. By John Dalby. In 3 vols. (Chapman & Hall.)

A Teacher of the Violin: and other Tales. By J. H. Shorthouse. (Macmillan.)

Marahuna. A Romance. By H. B. Marriott Watson. (Longmans.)

Throttle Island. A Tale of Adventure. By Julius Medley. (Remington.)

It may perhaps, without considering too curiously, be regarded as a sign of the new departure in fiction that of these five works three are described by their authors as "romances" rather than as "novels," and that to the remaining two the word "romance" might be applied with equal or greater appropriateness, their interest being unmistakably of the romantic order. The description is least appropriate to *The Lindsays*, which, though a capital story of its kind, is not the kind of story which we are led to expect by the description on the title-page. In characters and incidents alike Mr. Leys sticks close to the familiar realities of life; and the book is good with the kind of goodness which is achieved not by romantic invention, but by life-like portraiture. Mr. Leys is probably a Scotchman, for it is hardly likely that any one not native and to the manner born could render the essential aspects of rural Scottish life as they are rendered in the first volume of *The Lindsays*, where we have a reproduction not merely of details, but of atmosphere. The Rev. Hector McTavish, D.D., who looked upon the introduction of the organ as "the thin edge of the wedge"—a metaphor dear to the theological mind—and who was careful to explain that he "had no objection to the Lord's Prayer" when used in a haphazard, informal manner, is a capital portrait; and there is a fund of shrewd observation and quiet humour in the description of the service

in the little country kirk, where Hubert Blake made his first acquaintance with a new phase of religious life. Equally good are the chapters dealing with Alec Lindsay's life as a student at the University of Glasgow; and though here, as elsewhere in his book, Mr. Leys comes into competition with Mr. George Macdonald, he does not subject himself to any odious comparisons. Probably most critical readers will be of opinion that the first half of the novel, which is devoted almost entirely to portraiture, with a very slight modicum of incident, is more successful than the latter half, which concerns itself with the machinations of the two villains, Semple and Beattie. The story of their scheme to tamper with the will of Mr. James Lindsay, and so to manage things that suspicion must necessarily fall upon poor Alec, is conceived and worked out with a good deal of ingenuity, and no definite fault can be found with it; but one reader, at least, has found it somewhat wanting in that imaginative grasp of reality, which gives such a charm to the rest of the book. The characters throughout, especially those of Alec's father and sister, and his college friend Cameron, are vividly conceived. The episodical descriptions—that of the curling match for example—are excellently done; and, indeed, *The Lindsays* is, from every point of view, a good novel.

In writing of *Mayroyd of Mytholm*, one cannot repeat this verdict without large reserves; or, rather, one must vary its form, and say that the book contains a number of good things. Unfortunately, the good things are spoiled by somewhat serious faults; and the total effect is, therefore, a little unsatisfactory. The scene of the story is laid in a rural—a very rural—district of Cumberland, and many of the chapters prove that the author not only knows his country well, but has a very pretty descriptive gift. A thoroughly successful novel cannot, however, be constructed out of a series of landscapes and figures, be they painted ever so deftly; and *Mayroyd of Mytholm* is rendered a tantalising book for the ordinary reader by a superfluity of difficult dialect, and a plot the complexity of which is very much in excess of the interest. There is a mystery connected with the parentage of a child, who is introduced to us in the first chapter—one of the best of the many good descriptive studies; and as this mystery hangs over our heads throughout the work without our being permitted to see what depends upon its solution, the reader sometimes forgets it altogether, and when he remembers it finds that it has become a trifle, or more than a trifle, tiresome. In fact, there are two or three mysteries which turn out in the end to be all connected together, and the element of mystery is one which needs to be economised more skilfully than it is economised here. Some of the chapters are bits of Dutch painting, so good of their kind that they could not be easily beaten; but the book, as a whole, leaves a somewhat blurred impression upon the mind.

I am inclined to think that the peculiar charm of Mr. Shorthouse's work is more abundantly manifest in his short stories than in his more elaborate romances; and the five tales in his latest volume represent his most

characteristic artistic virtues, while leaving no room for the intrusion of the faults which do something to mar their effect. Mr. Shorthouse's creative achievements give a certain impression of remoteness which is pleasing for a time, but is apt to become a trifle wearisome and tantalising; and probably few readers of *John Inglesant* and *Sir Percival* retain to the end the gusto with which they read the opening chapters. A single dream scene in a play, where the actors in the vision are seen with softened outlines through a veil of gauze, has a charm of its own which is almost entirely dependent upon its unfamiliarity; but an entire drama acted behind gauze would pall upon the spectator, and Mr. Shorthouse's treatment produces an effect somewhat similar to that produced by the stage veil. His long romances resemble the hypothetical play, his shorter tales are the isolated dream scenes. The characters in the stories here are, like all the author's characters, somewhat shadowy; but their shadowy quality is given by a skilfully managed remoteness, not by careless, unimaginative work. We do not realise them as we realise the characters in the works of the great masters of fiction, but we have the feeling that we might realise them if we could only get near enough—if we could go behind the gauze. To change the image: landscape and figures are seen as they are seen in moonlight, and moonlight has both its special charm and its special defect of revelation. The princess in the title-story and the Baroness Helena Von Saarfeld are essentially moonlight people; and the Marquis de St. Palaye in the story which bears his name—one of the most movingly beautiful of recent ideal creations—is almost the only character whom we see with the distinctness given by familiar sunshine. The book is rich in work of a very exceptional loveliness of conception and execution, and those who in its pages make the acquaintance of Mr. Shorthouse for the first time are people to be envied.

The curious romance, *Marahuna*, is dedicated to the author of *Elsie Venner*, but it recalls most strongly the work of a very different person, the author of *King Solomon's Mines*. The early chapters, which take us on board H.M.S. *Horward* to the solitary ocean which surrounds the South Pole, with its wonderful sea of flame, are suggestive both of Mr. Rider Haggard and M. Jules Verne; and Marahuna, the heroine, who appears mysteriously out of the heart of the fire, is a personage whom in all probability we should never have known had we not previously known the wonderful "She." Indeed, though Marahuna is altogether a smaller and less impressive creation, we are reminded too constantly of "She" to have that special pleasure which is born of freshness of invention; and Mr. Marriott Watson's human or non-human salamander lacks not only the impressiveness but the peculiar fascination either of her famous prototype or of the heroine of the romance mentioned in the dedication. Among the characteristics of which Marahuna is denuded are the very characteristics which make a creature in the form of humanity interesting to us. She does, indeed, arouse our curiosity, but only in the same utterly unemotional way in which it is aroused by a geometrical or arithmetical puzzle; and when, by the sudden birth of human passion, a new interest

is awakened it soon develops into an interest of repulsion, not of attraction. There is a great deal of intellectual ingenuity in the book, especially in the account of the attempts made to bring Marahuna and those by whom she is surrounded into mental and emotional touch with each other. But the story is inventive rather than imaginative; and, without adding another to the many recent stupid charges of pliarism, one must say that even the invention has a derivative quality. Curiously enough, on p. 143 we have an entirely erroneous description of the book which is such a special favourite with the author. *Elsie Venner* is anything but correctly described as "the story of a girl who is bitten by a snake in her childhood"; and such a description is more than a mere error of detail: it misrepresents the central *motif* of the work—the imaginative presentation of one of the many problems suggested by the doctrine of heredity. In justice to Mr. Watson it must be said that the error is made by one of the characters in the story, not by the author in his own proper person; but as he leaves it uncorrected he is certainly responsible for it.

Though not avowedly a burlesque, there can hardly be much doubt that *Throttle Island* has been written with a burlesque intention, the objects of its satire being *Treasure Island* and similar stories of romantic adventure. If this be so, the story is a very clever *jeu d'esprit*; if not, it is a mass of the wildest absurdities. The air of dead earnestness throughout may incline some readers to the latter hypothesis; but in adopting it I should say that they are certainly mistaken, though the author may not be free from accountability for their mistake. In the grotesque incredibility of its coincidences and its horrors it certainly out-shocks any shilling shocker that I can at this moment remember.

JAMES ASHCROFT NOBLE.

RECENT VERSE.

The Poetry of South Africa. Collected and arranged by A. Wilmot. (Sampson Low.) It is significant of newly aroused interest in the colonies that this volume should follow so hard upon Mr. Douglas Sladen's collection of *Australian Ballads and Rhymes* (ACADEMY, February 11). It would be unjust to press the coincidence too closely. The Cape and Natal together have a total population of about 340,000 whites, while Australasia has nearly tenfold that number; and of the white population in South Africa perhaps one half speak Dutch as their mother tongue. But if Australia can boast her Gordon and her Kendall, the Cape owns one poet whose name deservedly stands in a class above theirs—that of Thomas Pringle, the immigrant from the Scotch border, who drew his inspiration directly from Sir Walter—or rather, from the same fountain as Sir Walter. Of his famous reverie beginning "Afair in the desert I love to ride"—which everybody used to learn by heart many years ago, but which we miss from recent anthologies—it must suffice to quote what Coleridge said of it: "I do not hesitate to declare it among the two or three most perfect lyrics in our language." We have heard, too, that it has won, in a Dutch translation, equal popularity from the older race of colonists, about whom the poet himself did not hesitate to speak unwelcome truths. In 1881 a collected edition of Pringle's South African poems, with memoir

and notes, was published by Messrs. Longmans; and to that volume we must refer the curious reader, for the present book gives no biographical or other information. Mr. Wilmot has been industrious in collecting what we assume to be the most favourable specimens from "The Poet's Corner" of South African newspapers and other sources not specified. We know not how local partiality may rank them; but the English verdict, we fear, can only be—Pringle first, and the rest anywhere. It is impossible for a stranger to sympathise fully with the parodies and echoes of English song which constitute the staple of this collection. "The Defence of Rorke's Drift" has inspired one not inadequate ballad, signed with the name of Bertram Mitford; and there is both pathos and melody in Mr. G. Longmore's "The Faded Photograph," of which we may quote the first stanza:

"Your portrait hangs upon my wall,
Among my treasures highly classed,
For it is potent to recall
Old days that we have passed
In close communion, heart and mind,
Where Avon's placid waters wind.

But, in our judgment, the most sustained note of genuine poetry is to be found in the religious hymns contributed by the Rev. F. J. Ochsee. We have only room for a single stanza, again the first, of the piece entitled "Contentment":

"I am content to be
What God has made me; honour and renown
I seek not from this world; nor fear its frown.
God knows and honours me, His child and heir
He made me; then what matters it if here
Unknown and poor I live—a little while
And I shall bask in his eternal smile
To all eternity."

Caesar Borgia: a Tragedy, and other Poems. By W. Evans. (Maxwell.) Mr. Evans's volume consists of two dramas and a miscellaneous collection of lyrical and other short poems, each of the dramas occupying about one third of the total number of pages. It gives evidence throughout of a genuine poetic instinct, and is free from the bathos which often characterises the productions of our minor poets. It also seldom errs in the direction of overstrained sentiment, or the subordination of meaning to the mere music of well-chosen words. It is therefore worthy of respectful treatment at the hands of a reviewer. It was courageous of Mr. Evans to choose Caesar Borgia as the subject of a drama; because the hero, if he may be so called, had no excellences of nature to redeem his unscrupulous ambition, and because there is no woman who wins or appeals us in the plot of the drama. Notwithstanding these difficulties, the attempt has, we think, been distinctly successful. It is certainly somewhat surprising to find Lucretia Borgia a soft, repentant, and somewhat weary woman, who has seen the hollowness of all human things; but, then, most of us only know her through the opera of Donizetti. The lesson of the drama is not a very deep one, viz., that the ambition of an evil nature is likely to end in disaster for itself; but with such a subject Mr. Evans could not import any other moral. We have no space to notice the other dramatic composition—"A Fair Reward"—which is built on a lighter framework. Of the shorter poems we find several pleasing, and one, "Antigone," especially so. The restraint imposed by a classical treatment of a classical subject is very beneficial in these days of over-ornamental or encrusted workmanship. Our poetical vocabulary is too rich as a rule for the matter which it expounds. "Antigone" is on the way to Lander, but he would have been more marmorean still. We cannot deal in detail with the contents of this little book, which are very varied; but we would pick out, by the way, "Kilsano" as a good sonnet, "Valentine's

Song" as an instance of the over-languorous modern style, and "Waiting," especially the three first stanzas of the five, as a poem which shows the temperate soundness of true poetry, giving a clear-cut picture which the eye can conjure up at once, and all the better in that it contains no florid or superfluous phrase.

Fires of Greenwood. By Francis Prevost. (Kegan Paul, Trench & Co.) Concerning this modest volume we are compelled to use the trite criticism—that the performance falls short of the promise. The author's most sustained effort, which, without doubt, was latest in date, is printed first, "The Whitening of the Thorn Tree"; but this falls off towards the end. After plodding through a most indifferent "Fragment of a Drama," and some most unblushing imitations (or parodies?) of Browning, we are surprised to discover a poem of so much originality as the concluding one, called "Hand and Heart":

"Clean heart—clean hands," he said, and looked
at mine;
And caught them ere unclasped; for one was red
That had besprinkled his white lips with wine.
'Clean heart—clean hands,' he said."

The entire poem is unfortunately just too long for quotation. But it is undoubtedly of a high order.

The New Purgatory. By E. R. Chapman. (Fisher Unwin.) Miss Chapman has already shown herself an energetic and thoughtful thinker in her prose studies of *A Comtist Lover*, *A Tourist Idyl*, and *The New Godiva*. She now comes before us as the author of a considerable volume of poems, under the title of *The New Purgatory*, consisting of translations and original verse. We cannot speak so highly of the latter as of the former. A bold paraphrase of *Purgatorio*, Cantos xxx. and xxxi. (fatally excused by a note), though it flows for the most part easily and is deserving of attention, does not seem to warrant a continuation. There is a very happy rendering of a fragment of Victor Hugo's *Chants du Crépuscule*, under the title of "The Bird's Faith":

"What matters it though life uncertain be
To all? What, though its goal
Be never reached? What, though it fail and
flee?
Have we not each a soul?

"A soul that quickly must arise and soar
To regions far more pure,
Arise and dwell where pain can be no more,
And every joy is sure?

"Be like the bird that on a bough too frail
To bear him, gaily swings!
He carols—though the slender branches fall—
He knows that he has wings."

A Lawyer's Leisure. By James Williams. (Kegan Paul, Trench & Co.) In *A Story of Three Years*, which Mr. Williams published in 1883, he proved himself a close student of Dante. In *A Lawyer's Leisure* he shows us that, like Ulysses, he has been in many cities and known the thoughts of many men. Mr. Williams's leisure has been employed in musing over the cities and men of three peninsulas—in giving us "Rhymed Thoughts" of Greece, Scandinavia, and Portugal. He has won laurels in more than one other field; but he has done well to give up, in his poetic moments, his rôle as sonneteer, of whose productions he spoke not perhaps too harshly when addressing his critic in his earlier volume:

"The sonnets here are maimed and halt—
I was not born to verse."

No one henceforth can accuse Mr. Williams of want of modesty. In the present volume, however, he has gained a more complete mastery over his instrument, and often

sings very happily of his subjects. What we complain of in his writings is that he has treated throughout of great subjects in too trivial a manner, and we fear that Mr. Williams's leisurely habits have prevented his bestowing all the care that he should upon the happy inspirations which have visited him. Yet his "King Björn"—too long to quote—will bear comparison with many a more pretentious poem. We do not remember to have seen before quite such a good example of inverted alliteration as Mr. Williams gives us:

"Over vale and lea
Like measured dirge of distant mourners crept
The wailing of the sea."

David Westren. By Alfred Hayes. (Simpkin Marshall.) Mr. Hayes has already won repute by felicitous imitation of Lord Tennyson, and in *David Westren* he shows us that he has neither lost his faculty nor changed his ideal. *David Westren* consists of the most charming and faultless blank verse, but the author has forgotten one thing—that he should have a story to tell. In the volume by which in 1886 he first made his name—*The Last Crusade*—he had a very fine if not too imitative a subject, in the death of Louis IX. But in *David Westren* it is only too apparent that he has no motive for song. Mr. Hayes has a quite marvellous gift of song within his power, and it will be a pity if he does not use it to better purpose. As to his position, it seems to be like his diction, Tennysonian:

"Our living faith
Is what we love and suffer; and the truth
That changeth not with man, we cannot know,
And blunder when we guess at."

We feel that Mr. Hayes has erred in choosing a less exalted subject for his lyre. His verse loses something which he would have gained by taking a worthier theme.

Poems of many Years and many Places. (Longmans.) It is not easy to characterise this little collection. Although a first appearance in poetry, and published anonymously, it is evidently the work of a man of much experience and wide, if not deep, reading. A good deal of the English verse is unmelodious, and some of the Latin verse is far from blameless. But a vein of originality crops thinly through, as when Her Majesty is bidden to console her widowhood by the thought that the Prince Consort might have turned out badly if he had lived much longer; and the lament over General Gordon's death is varied by this odd reflection:

"Alas! he Freedom's banner ne'er unfurled,
Fighting for tyranny he always stood;
Though Peace was on his lips he left the world
In seas of blood."

From internal evidence we gather that the author entered the Bengal Civil Service nearly half a century ago, and saw much of India both before and after the Mutiny. He is sternly orthodox in his religious convictions, and apparently an accomplished linguist. He was educated at Eton, and some of his Latin elegiacs are worthy of one who was at the same school as Wellesley and Canning. In his alcaics he is given to a practice which they would hardly have countenanced—that of beginning his fourth line with the second half of a pentameter, such as "cordis in arce mei." His sapphics are often marred by an unpleasantness of *cæura*; and it may be remarked that one of them is an unacknowledged translation. The piece will be found on p. 192, under the title "Omnia Vincit Amor," and is translated, closely enough, from an unpublished poem by the late Henry Sherer. Enough has, perhaps, been said to show that this is no common volume, however uneven in point of workmanship.

Borrowed Plumes. By James Gribble. (Trübner.) This pretty little book seems to raise a spectre which one could wish to see laid once for all. From the days of Lord Roscommon there has always been a latent suspicion as to the rendering of foreign poetry in English verse. When people began to translate Heine doubt became certainty. In the preface to Mr. Gribble's volume—about one-third of which is devoted to renderings from this poet—we are told that the rule is to express oneself as Heine would have done had he been an Englishman. But is not that a startling assumption? Nothing can be more utterly different from Heine's tone than the rough, blunt, pitiful English humour; and that is really why the task undertaken by Mr. Gribble is so evidently impossible. The difficulty does not lie in the mere language: Heine's style is perhaps the simplest and most pellucid ever used by a German. It is the whole world of character that lies between the English intellect and that mocking egotism that does not spare anything—neither love, nor life, nor death, nor even self—and which conveys itself to the reader in an almost magical use of rhythm and phrase. No translator can hope often to surprise such secrets; once or twice, perhaps, with great luck, skill, and sympathy—but none through eighty pages. It would not be fair to blame Mr. Gribble if he has failed where success has been so often found impossible. He might, however, have been more faithful. The remaining versions are mostly from modern German poets, with a few pieces from Goethe and from Schiller. These are graceful, and often show care in dealing with verbal problems. But, after all, it takes a poet to translate poetry. The want of that incommunicable touch is felt in such a line as this:

"The oak-trees rustle, the clouds drive o'er,"

where the words are almost all weakened from the celebrated original. The book is printed in Germany—a fact which may help to explain the presence of sundry curious *coquilles*, both in spelling and in punctuation.

SOME of our readers may be glad to have their attention called to two volumes of verse which, though privately printed, can be obtained on application in the proper quarter. One of these is the latest issue of Mr. H. Daniel's hand-press at Oxford; and it consists, like a former issue, of the by-work of Canon Dixon, the historian of the English Church. It is entitled *The Story of Eudocia and her Brothers*. To students of English metre it possesses a special attraction, for it represents a second attempt to restore a form of verse that has long been disused among us. It is now some years since Canon Dixon proved by his *Mano* that a long narrative poem can be read with pleasure when written in strict accordance with the rules of *terza rima*. He has now addressed himself to the task, scarcely less difficult, of writing a short narrative poem in the five-beat couplets of Chaucer. The dainty little quarto which embalms this interesting metrical experiment is limited to an edition of fifty copies, of which twenty-five have been placed for sale with Mr. Gee, High Street, Oxford.

THE other privately printed volume comes from the Chiswick Press; and the poet is Mr. Thomas Ashe—the editor, if we mistake not, of Coleridge—who has already made several ventures in the more common mode of publication. The present collection he styles *Songs of a Year*; and the contents are bound together by the modern note of self-consciousness, which finds its best representative in Amiel. Mr. Ashe's address is 10 Worcester Street, S.W.

NOTES AND NEWS.

SOME of the contributors to the *Dictionary of National Biography* propose to dine together on Wednesday, June 13, as they did before about three years ago. Mr. Leslie Stephen, the editor, has promised to take the chair.

WE understand that one of the most important articles in Mr. Quilter's new review will be from the pen of Sir Charles Dilke. The subject is the state of Europe, and the article will contain some important statements on the secret policy of Italy at the present time.

THE May number of the *National Review* will contain the opinion of nearly every eldest son of a peer who sits in the Commons on the question of the necessity for reforming the Constitution of the House of Lords. Among these will be the Marquis of Hartington and Viscount Cranbourne.

PROF. HENRY DRUMMOND has a new book in the press, entitled *Tropical Africa*, which will be published immediately by Messrs. Hodder & Stoughton. It will contain an account of the author's recent travels in Central Africa, with one or two chapters of natural history, and notes regarding the latest phases of the slave trade, and African politics generally. We hear that *Natural Law in the Spiritual World* has now reached the extraordinary sale of 75,000 copies.

MESSRS. SAMPSON LOW & Co. have in the press an account of his explorations in New Guinea, by Capt. Strachan, who is at present in this country.

MESSRS. SWAN SONNENSCHN & Co. will publish next week an important work on Irish history, entitled *Ireland in '98*. The book is based on the late Dr. R. R. Madden's "Lives of the United Irishmen," and contains the substance of those bulky volumes, besides much additional matter extracted from his unpublished MSS. It is edited by Dr. J. Bowles Daly, and illustrated with several portraits and reproductions of popular contemporary cartoons.

THE next volume in the "Badminton Library," to be published in May, will be *Boating*, written by no less authorities than the Rev. Dr. Warre, of Eton, and Mr. W. B. Woodgate, and illustrated with instantaneous photographs and drawings by Mr. Frank Dadd. In June we are promised the volume on *Cricket*, to which Mr. A. G. Steel, Mr. Andrew Lang, Mr. R. H. Lytton, Mr. R. A. B. Mitchell, and Dr. W. G. Grace, will all contribute.

MESSRS. TRÜBNER & Co. announce a translation of Prof. Diodato Lioy's work on the philosophy of law (*Della Filosofia del Diritto*) from the Italian. A third edition of the work, revised and enlarged, has just appeared. It has already been translated into German and French, and a translation into Spanish is also in preparation. The English translation will be made by Mr. W. Hastie, the translator of Kant's *Philosophy of Law*, &c.; and it will contain an introduction on the development of the philosophy of law in Italy.

MISS ANNIE THOMAS'S new novel, *Love's a Tyrant*, will be issued in a few days by Messrs. Swan Sonnenschein & Co.

MR. T. FISHER UNWIN announces for the spring publishing season: *Jewish Portraits*, by Lady Magnus; *Philaster, and other Poems*, by Aston Clair. In the "Story of the Nations" series: *Assyria*, by Zénaïde A. Ragozin; *The Turks*, by Stanley Lane Poole; *Holland*, by Prof. Thorold Rogers; *Medieval France*, by Gustave Masson. *Tin*, a novel dealing with village life in a Cornish mining district, by Edward Bosanquet; *A Cloud on St. Angelo*, by Cyril Bennett; a manual on *Practical Politics*, by A. F. Robbins; a popular edition of *The*

Lives of Robert and Mary Moffat; *Natura Causation*: an Essay in four parts, by C. E. Plumptre; *Dearly Bought*: a Novel, in 3 vols., by E. Fitzroy Cole; and *The Down Grade Controversy*, by the Rev. J. Guinness Rogers.

MR. ELLIOT STROCK will shortly issue in this country, by arrangement with the American publisher, Whitmore's *Ancestral Tablets for recording Pedigrees*.

WE have received the prospectus of a new Slang Dictionary, which will aim at exceptional completeness by enlisting the co-operation of specialists in different departments. The editors in chief are Prof. Albert Barrère, of Woolwich, author of *Argot and Slang*; and Mr. Charles G. Leland (Hans Breitmann); and among the contributors are the names of the Earl of Suffolk, Sir Patrick Colquhoun, Major Arthur Griffiths, Dr. Charles Mackay, and Mr. John Hollingshead. The character of the work may be judged from its sub-title—"a dictionary of unconventional phraseology, embracing English, American, and Colonial slang; tinkers', Yiddish, Pidgin, and Anglo-Indian slang; quaint expressions, vulgarisms; their origin, meaning, and application." It will be issued, in two volumes, to subscribers only, who should apply to Mr. G. May, 2 White Hart Street, E.C.

WE may also mention another privately printed book—a translation into English of the exceedingly rare Latin work known as "The Chronicle of Clemendy; or, the History of the IX. Joyous Journeys," which was written in the seventeenth century by Gervase Perrot, evidently inspired by Rabelais. The translator is Mr. Arthur Machen, to whom we already owe an English version of the *Heptameron* of Margaret of Navarre. Subscriptions will be received by Mr. T. Marvell, 98 Great Russell Street, W.C.

THE annual meeting of the Camden Society will be held on Wednesday next, May 2, at 4.30 p.m., at Messrs. Nichols, 25, Parliament-street, S.W.

MESSRS. MACMILLAN are publishing in quick succession a series of their standard novels in what (for want of a more intelligible description) we must call "yellow covers." As a matter of fact, the covers bear no sensational pictures, but are designed by Mr. Lewis Day with a profusion of floral ornament. The quality of both print and paper are necessarily determined by the length of the works, so that there should be no material difference in bulk between what originally appeared in three and in two volumes. Among the latest additions to this series are three by Mrs. Oliphant, Mr. Christie Murray's pretty idyll *Aunt Rachel*, and Mr. W. E. Murray's sketch after Thackeray's manner, *My Friend Jim*. As soon as copyright has been gained in the United States, we cannot doubt that all novels will first appear in some such cheap form.

A STILL more remarkable example of the popularity of good literature is afforded by Sir John Lubbock's collection of lectures on *The Pleasures of Life*, issued by the same publishers. From a note on the back of the title-page, we learn that this was first published in June 1887, that it had to be reprinted no less than five times before December, and that three more editions have already been called for this year. Though it is stated to have undergone "alterations," it is somewhat startling still to find, in the famous discourse on "The Choice of Books," Hesiod included among epic poets, and (on the same page) the Nibelungenlied described as "our great Anglo-Saxon epic."

MR. RIDER HAGGARD may be interested to know that the new number of the otherwise very exact *Orientalische Bibliographie* enters his *King Solomon's Mines* as a contribution to "Alttestamentliche Literatur."

UNIVERSITY JOINTINGS.

IN accordance with expectation, Sir Thomas Francis Wade, the president of the Royal Asiatic Society, has been elected to the newly-founded chair of Chinese at Cambridge. Sir Thomas, who is now resident at Cambridge, recently presented to the university library his valuable collection of Chinese books and MSS.

THE university of Cambridge has appointed the following representatives to be present at the celebration, next June, of the eight hundredth anniversary of the foundation of the university of Bologna: Justice Denman, Prof. Adams, Prof. Jebb of Glasgow, and Prof. Denman.

THE Cambridge Antiquarian Society propose to hold a second exhibition of university and college portraits in the Fitzwilliam Museum during the present term.

THE Rev. Dr. Hatch, reader in ecclesiastical history at Oxford, is delivering his Hibbert Lectures at Oxford as well as in London. The general subject is "The History of the Influence of Greek Ideas and Usages upon the Ideas and Usages of Early Christianity."

MR. RÜCKER—the newly appointed professor of physics at the Royal School of Science at South Kensington, and himself an Oxford man—will give a lecture to the Junior Scientific Club at Oxford on Saturday next, May 5, upon "Action at a Distance."

THE Oxford branch of the Teachers' Guild was to be inaugurated by a public meeting this day (Saturday), when Mr. F. Storr, of Merchant Taylors, and editor of the *Journal of Education*, was to deliver an address on the objects and methods of the guild. The president of the Oxford branch is the Rev. Dr. Magrath, provost of Queen's.

MR. ERNEST GARDNER, the director of the English school at Athens, who has also been conducting archaeological explorations in Cyprus during the past winter, has been re-appointed for a second term to the Craven studentship at Cambridge.

THE University College Literary Society will give a *soirée* in Gower Street on Thursday, May 17, when Mr. J. Churton Collins will read a paper on "Sophocles and Shakspeare."

THE *Oxford Magazine* of April 25 (London: Henry Frowde) gives a long obituary notice of the Rev. Thomas Henry Sheppard, of Exeter, for many years a familiar figure at the university, who died during last vacation at the age of seventy-three; and also prints in full, as it has done before, the Latin speech of the senior proctor on resigning office.

THE last issue of the publication agency of the Johns Hopkins University—which usually deals in severer literature—is a pretty little quarto pamphlet, containing an account of the proceedings at a commemoration of Sidney Lanier, held last February. Sidney Lanier, it may be as well to state, was lecturer in English literature at Johns Hopkins until his death in 1880; and it is evident that he inspired a personal enthusiasm in those with whom he came into contact at Baltimore somewhat like that which Oxford continues to feel for Arnold Toynbee.

OBITUARY.

DR. J. H. STODDART.

THE death of Dr. J. H. Stoddart, so long associated with the *Glasgow Herald*, came upon his many acquaintances, both in Scotland and England, as a sad shock. When he retired from active editorial duty, but a few months ago, he was in indifferent health; but it was hoped that, with rest, leisure, and congenial literary work, he would shortly be himself again. This hope has been disappointed; and

now his colleagues and friends can only look back with regretful pleasure on the many years of pleasant intercourse they had with as warm-hearted a man, and as loyal a friend, as they have ever had, or expect to have.

Stoddart gave the best of his life to journalism, and he was one of the most successful journalists of his time. Not that, latterly at all events, he wrote much—it must be difficult for a man who has, as he had, the literary management of three newspapers on his shoulders to find time for writing—but he possessed, in a marked degree, the true newspaper instinct. He had a rare measure of sagacity; he knew what things his readers wanted, and he acted accordingly. He was professionally conservative, in the sense not of being averse to change, but of being averse to spasmodic or ill-considered change. When he did make a new departure, he threw himself into it with all his heart. Of a kind and tolerant disposition, he encouraged moderation and discouraged bitterness in controversy. The gospel according to Murdstone was never preached in the columns of his newspapers. He was absolutely fearless and, if need were, indignantly independent of party organisations and social wire-pullers.

As a poet Stoddart had, in his busy life, but scant time to do justice to the genuine faculty he possessed. *The Seven Sagas of Prehistoric Man* is his most ambitious work, and in it he gives full play to his Darwinism—a Darwinism rather of temperament than of formulated creed. But he is seen at his best in his *Village Life*, which, as a set of photographs of Scotch life, coloured here with love, there with a pensive melancholy, is the most important volume of the kind that has been published for many years. He was a warm admirer of the literature of his native country; and it is to be hoped that what he is known to have written on Scotch ballads at intervals during the last few years will yet be published. W. W.

ORIGINAL VERSE.

BEYOND THE MIST.

Out of the mist the river glides to us,
Glides like a phantom strange and marvellous
Out of the mist.

Into the mist the river passes on,
With inarticulate murmur flows anon
Into the mist.

And yet, perchance, upon its infant rills
Fair shone the sun amid the cradling hills
Before the mist.

And when at last the full flood nears the main,
Perchance a glory crowns it yet again,
Beyond the mist.

JOHN W. HALES.

MAGAZINES AND REVIEWS.

THE chief contents of the *Revista Contemporanea* for March are biographical notices of Pero Fernández Lorca, who founded the hospital of S. Catalina in Madrid in 1460; also of the lately deceased Dom Bosco of Turin, the prison reformer and founder of the Order of de Sales, by his fellow philanthropist, F. Lastres, who tells of the marvellous influence over criminals which enabled him to dispense with all restraint. N. Acero y Abad continues his study of Ginez Pérez de Hita as the father of the historical novel, showing his influence over Martinez de la Rosa, Washington Irving, Chateaubriand, and others. F. Pons, in his "Notes of a Journey in Algiers and Tunis," remarks the complete establishment of French civilisation in Algeria, while the name of Frenchman is no more liked now than in the first days of the conquest. A chapter is given

from a forthcoming work by A. de Sandoval on "Catherine of Siena and her Times."

THE *Boletín* of the Real Academia de la Historia for March prints some Hebrew documents, furnished by J. Loeb, on the translation of the body of S. Isidore from Seville to Leon in 1015; also extracts from the Cortés of 1592, voting aid to Mariana for printing his history. For the tercentenary of the Marquis de Santa Cruz Fernández Duro prints an anonymous unpublished narrative of his life, full of interest, on the raising of the siege of Malta, the rebellion of the Moriscos, the battle of Lepanto, &c., down to the summer of 1573. Padre Fita reports favourably on a memoir by F. Creus, throwing light on the crafty parliamentary policy of Ferdinand II. in Catalonia in 1488-93; he also prints, with notes and illustrations, a cantiga of Alfonso the Wise on a miracle said to have occurred to S. Dunstan in the church of S. Augustine at Canterbury. Some inedited portions of a council in Mexico in 1771 show the great care taken lest the sick should be neglected and the hospitals be turned into monasteries by the monks of S. Juan de Dios.

CORRESPONDENCE.

TWO MORE POEMS BY CHAUCER.

Cambridge: April 25, 1883.

I have lately examined all the principal Chaucer MSS. in Cambridge, Oxford, and London, with the express object of ascertaining if there are any more fugitive pieces which can reasonably be ascribed to him. The search has been of much instruction to myself on numerous small points, but these are not of general interest. At Cambridge and Oxford I could find no more poems that satisfied the tests as to language, grammar, and metre. But in the British Museum I was more successful. In turning over the leaves of one of Shirley's MSS.—viz., MS. Addit. 16165—I found excellent reason for attributing to Lydgate the poem called the Complaynt of the Black Knight, which Mr. Bradshaw long ago pointed out as Lydgate's, though he did not indicate to me his authority. On some pages the head-line is "The Complaynte of a Knight, made by Lydgate"; but still more satisfactory is the allusion to the same in a very poor poem of Shirley's own on folio 3:

"Whos complaynt is al in balade
 That daun Johan of Bury made,
 Lydgate the Munk, clothed in blakke;
 In his making ther is no lacke."

Let me hope that this question is now definitely closed.

At folio 256 (back) I suddenly came upon a poem which was new to me. But it is a fact that I had only read about *four lines*, when I at once recognised the true melody of Chaucer's

* *I.e.*, in the ballad-metre, or in seven-line stanzas; which is the fact.

style. I may be wrong in supposing that it has not before been printed. If so, perhaps I may hope to be set right. The copy is rather badly spelt; I denote by italics the letters which the scribe ought not to have added, and I insert between square brackets such as he has omitted. But it is, otherwise, fairly correct; and, in any case, is a gem worth preserving. It is Chaucer's, simply because *no one else* could have written it.

"BALADE OF COMPLEYNTE."

"Compleyne ne koude, ne might myn hert[e] neuer

My peynes halve, ne what turment I haue,
 Thaughts that I shoulde in youre presence ben euer,

Myn hertes lady, as wisely he me saue
 That bountee made, and beaute list to graue
 In youre persone, and bade hem bothe in-feere
 Euer tawayte,* and ay beo wher ye were.

"As wisely he gye alle my loyes here
 As I am youre, and to yowes sadde and truwe,
 And ye, my lyff and cause of my go[o]de chere,
 And dethe also, whan ye my peynes newe,
 Myn heven ho[o]le, and all my souffsaunce,
 Whom for to serue is sette al my plesaunce.

"Beseeching yow in my moste humble wyse
 Taccept[e] in worthe this litel po[v]re dyte,
 And for my trouthe my servyce not despice;
 Myn observaunce e[el]ke haue not in despyte,
 Ne yet to longe to suffre[n] in this plyte,
 I yow beseech, myn hertes lady here,
 Sith I yowes serve, and so wil ye[e] by yere."

The rhyme of *dyte*, though it means "ditty," with *plyte* (plight) is quite right; for *dytes* rhymes with *lyte* in "House of Fame," 622, and, therefore, *dyte* rhymes with *lyte*, or with *plyte*. *Despyte* and *plyte* rhyme in "Troilus," iii. 1037. The close resemblance in tone between the above balade and several passages in "Troilus" will at once be remarked. Note also *sadde and trewe*, "Man of Lawes Tale," l. 2; and the same rhyming of *haue, graue, saue*, in the "Clerkes Tale," l. 681.

I found a similar, but longer, and even better, example of a "Complaint" in another MS.; but any account of this must be reserved for a second letter. WALTER W. SKEAT.

BRITISH MAPMAKERS AND BRITISH POSSESSIONS.

Bothwell, Glasgow: April 14, 1888.

My original object in writing to the ACADEMY under the above heading was not to open up a discussion as to what lands are British possessions, but simply to point out that anyone desiring accurate information on such a subject need not go with any great confidence to a Jubilee Atlas of the British Empire. As Mr. Bartholomew, in his letter to the ACADEMY, assures us that his atlas was correct according to existing knowledge at the time of publication, and as Mr. Williams, the editor of G. Philip and Son's atlas, has informed me by letter that he and his publishers maintain their atlas to be correct, my case may safely be looked upon as established.

Mr. Bartholomew, however, goes on to give a detailed statement of his views on the five points which I selected, and as this statement affords striking confirmation of the justice of my complaint, I am induced to return to the subject. I do so the more willingly because the geographical points at issue are interesting and deserve authoritative settlement. My combative remarks claim to be merely a slight contribution towards this end.

* *I.e.*, to await

† *I.e.*, renew; obscurely written; at first *renove*, then altered to *newe*, and somewhat blotted. But it is quite right.

‡ *I.e.*, to accept.

§ Surely an error of the scribe for *dere*. Compare "my lady dere" in Troil. i. 434, and elsewhere.

1. *The Ellice Islands*.—Mr. Bartholomew insists that these are British, stating as evidence (1) that they are included in the Western Pacific High Commission; (2) that the *Scottish Geographical Magazine* some time ago announced the annexation of them. To the first of these statements, I regret to say, I can attach no definite meaning. I am equally sorry to say that it is of no use to refer to the *Scottish Geographical Magazine* on a matter of this kind. Its notes are confessedly taken from other publications, sometimes, as in the present instance, without any indication of the source; and I have already expressed in the ACADEMY my opinion as to the care and knowledge that are necessary in the editing of such material. The case of the Ellice Islands, indeed, furnishes an excellent example of the possible harm that may arise from want of this care and knowledge. The facts are these: a paragraph appeared in some newspapers telling of the annexation of the islands; the *Scottish Geographical Magazine* copied the paragraph; a mapmaker took the *Scottish Geographical Magazine* for his guide, and altered the colouring of his map accordingly. Shortly after the appearance of the paragraph, a question was put in the House of Commons on the subject, and the Secretary of State's words in reply were:

"I am glad of the opportunity, which the question of my honourable friend affords, of saying that the report which has appeared in the newspapers of the annexation of the Ellice Islands by Great Britain is without any foundation."

The newspapers, being called on by the public to print such official replies, naturally came to do something to counteract the effect of the original announcement. The *Scottish Geographical Magazine* unfortunately did nothing.

2. *British North Borneo*.—Mr. Bartholomew says that at the time of going to press his firm "had not received definite information of the annexation of the territory . . . now called Dent Province." Quite so; but should not his firm have taken note of the fact at least two years before? In a paper, read on May 12, 1885, by Sir Walter H. Medhurst, before the Royal Colonial Institute, and printed in its *Proceedings*—not a recondite source of information—the following statement occurs:

"The Company have lately acquired a further valuable cession of territory from the Sultan of Brunel, extending their boundary from Kimanis on the west coast to Sipitong, a small stream rising in Mount Mirapoke, and which empties itself into Brunel Bay. This acquisition adds about sixty miles of coast line, and 4,000 square miles to the Company's territory, and includes the Kalias and Padas rivers, the latter of which is a fine stream, navigable for over 100 miles."

Further, an abstract of this paper was made by me for the magazine of the *Scottish Geographical Society*, and appeared in the number for June, 1885. The news, with the authority for it, was thus brought to Mr. Bartholomew's own door, he being one of the honorary secretaries of the said society. More striking still is the fact that in the same magazine for August, 1885, the announcement is made from the official *British North Borneo Gazette* that

"the district extending from the Sipitong river to the Kwala Penyu river, inclusive of both rivers, as well as the river and district of Bangawan, and the river and district of Tuwaran, are hereby incorporated in the territory of British North Borneo."

This is the "definite information of annexation" which had not reached Mr. Bartholomew in 1887.

3. *Pisheen Valley, &c.*—Mr. Bartholomew is not inaccurate as to the date of annexation of this district, and I quite agree with him in his remark that "it would never do to consider all territories occupied by British troops as British,"

As a matter of fact, however, the district was not merely occupied by British troops. A clause of the treaty of Gandamak (1879) runs as follows:

"That the districts of Kuram and Peshin and Sibi, according to the limits defined in the schedule annexed, shall remain under the protection and administrative control of the British Government. . . . the revenue of these districts, after deducting the charges of civil administration, shall be paid to His Highness the Ameer."

It is thus seen that the district was on almost exactly the same footing in relation to the British Empire as the island of Cyprus has been and is. Mr. Bartholomew carefully marks the island of Cyprus as British.

4. *Aden*.—In regard to this, I readily confess that I prefer the indications on Mr. Bartholomew's map to those of either of the others. But then I must be allowed further to say that if one British Protectorate is to be marked in words as such, and coloured the national geographical colour, it stands to reason that all the others should be dealt with in the same manner. Now, certain of the Malay states, viz., Perak, Selangore, Sungei Ujong are, according to Mr. Bartholomew and all of us, under British protection; yet Mr. Bartholomew stigmatises them in his atlas with an aesthetic green or a washed-out yellow.

5. *North Somali Coast*.—Mr. Bartholomew affirms that this "is merely a claim," that the coast is not annexed, with the exception of "a small portion at Samavonak." Supposing this to be true, Mr. Bartholomew's map cannot certainly be considered satisfactory, seeing that it indicates neither the extensive "claim" which he speaks of, nor the diminutive annexation. I cannot, however, accept his statement as representative of the real condition of affairs. There is plenty of evidence that a British Protectorate actually exists along a great stretch of the coast eastwards from the entrance to the Bay of Tajurah. It would occupy too much space to give this evidence in full. Two portions of it will suffice. The first is that at a meeting of the Royal Geographical Society in 1885 Captain Stewart King, who had a short time before arrived in London from the coast in question, stated that at that time the British protectorate extended from the head of the Gulf of Tajurah to a little east of Berbera. The second has a special significance, as it clearly shows that our protectorate is not "merely a claim," but is now recognised by at least one great European power. It consists in a statement made by the Under Secretary of State in the House of Commons, viz., "The French government have recently acknowledged in a formal manner the protectorate of Her Majesty's government at Dongarita [*sic*]."

In regard to the last four cases, where a British protectorate in some form or other existed prior to 1887, I would not be understood to desire exactly the same shade of colour or other political sign. My demand simply is that on the maps the actual state of affairs as to government should be represented as nearly as it possibly can be, and that this should be done in accordance with some definite plan.

The discrepancies pointed out in my original letter made me say that there seemed a lack of interest in geography on the part of map-makers. I regret to find that Mr. Bartholomew viewed this as an actual accusation. Such a charge would be entirely without foundation in his case. His interest in geography is well known to me; and many other amateurs besides myself gratefully remember the important share he took in the formation and development of the Scottish Geographical Society, which has accomplished so great an amount of good. I think he cannot but own, however, that there is room for considerable improvement in

the editing of atlases, whether the cause be lack of interest, lack of knowledge, or lack of leisure. Conscientious grumblers will be pleased if pains be taken to raise the next edition of the *British Colonial Pocket Atlas* to the same high level as much of the other work of his firm.

THOMAS MUIR.

"PALINGMAN."

Amsterdam: April 22, 1888.

The word "palingman" will prove to be limited to the eel trade (as Sir James Ramsay suggests) by a comparison with Dutch *paling*, meaning "big eel." The Dutch word, *palingman*, actually means a seller of eels.

TAOO H. DE BEER.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, April 30, 1.30 p.m. Royal Institution: Annual Meeting.

8 p.m. Society of Arts: Oration Lecture, "The Decoration and Illustration of Books," I., by Mr. Walter Crane.

TUESDAY, May 1, 8 p.m. Royal Institution: "The Plant in the War of Nature," I., by Mr. W. Gardiner.

8 p.m. Civil Engineers: "The Distribution of Hydraulic Power in London," by Mr. E. B. Ellington.

8.30 p.m. Zoological: "The Mound-bird of the Solomon Islands," by Mr. C. M. Woodford; "A New Land-tortoise from South Africa living in the Society's Gardens," by Mr. G. A. Boulenger; "The Visceral Anatomy of Birds," and "The Air-space in certain Diving Birds," by Mr. F. E. Beddard; "Fishes of India," I., by Dr. F. Day.

WEDNESDAY, May 2, 4.30 p.m. Camden Society: Annual Meeting.

8 p.m. Society of Arts: "Drawing, a Means of Education," by Mr. T. E. Abnett.

THURSDAY, May 3, 8 p.m. Royal Institution: "The Chemical Art," IV., by Prof. Dewar.

4 p.m. Archaeological Institute: "Jade," by Mr. J. Hilt; "St. Mary's Church, Melbury Bubbe, Dorset," by Messrs. J. Q. and C. A. Buckler.

8 p.m. Linnean: "The Life Histories of *Glycyphagus Domesticus* and *G. Spinipes*," by Mr. A. D. Michael; "Root-Pressure," by Mr. C. B. Clarke; "Orchids of some Lichenopores, &c.," by Mr. A. W. Waters.

8 p.m. Chemical: "The Determination of the Molecular Weights of the Carbohydrates," by Mr. H. T. Brown and Dr. G. H. Morris; "The Action of Heat on the Salts of Tetramethyl Ammonium," by Mr. N. Collie and Dr. Lawson; "The Action of Heat on the Salts of Tetramethyl Phosphonium," by Mr. N. Collie.

8.30 p.m. Antiquaries.

FRIDAY, May 4, 8 p.m. Geologists' Association.

8 p.m. Philologists: "A Dictionary Sub-Editor's Work," by Mr. E. L. Brandreth.

8 p.m. Society of Arts: "The Injurious Effects of Canal Irrigation on the Health of the Population of the Punjab," by Dr. H. W. Bell.

8 p.m. Royal Institution: "The Invincible Armada: a Tercentenary Retrospect," by Prof. J. E. Loughton.

SATURDAY, May 5, 8 p.m. Royal Institution: "The Later Works of Richard Wagner," IV., with Vocal and Instrumental Illustrations, by Mr. Carl Arnbruster.

SCIENCE.

The Flora of West Yorkshire. By F. Arnold Lees. (Lowell, Reeve & Co.)

AMID all the horrors of a grudging English spring, whose east winds have blasted the very yew trees, some comfort is to be found in thinking that it cannot last for ever. Happier lands have got a real spring by this time. Friends who are lucky enough to have business or to take their pleasure abroad tantalise us with letters telling how the salt meadows of South France are white with narcissus, how the hills round Athens are lit up with scarlet anemones and patches of blue or crimson vetches, or how Algeria has long been puzzling the traveller with strange orchids and arums. We must steel our hearts when we think of these pleasant pictures of the present, and be content to look forward and assure ourselves that, in spite of all appearances, there really will be a time when the Yorkshire wolds will no longer be covered with snow, when sheep will cease to be

smothered in the drifts, and when postmen will be able to perform their journeys otherwise than on horseback. One by one the buried flowers will steal back to light and life; the wild tulips must be stirring even now; and presently the rare Linnaea and the Smilacina will show their heads, and even the true mountain plants—the Rubi, the saxifrages, and those plagues of the botanist, the family of hawkweeds—will have their turn.

Not all the Yorkshire rarities come within the scope of Mr. Arnold Lees's book. It is so full, so thorough, in what it undertakes, that there is no wonder he has had to confine its view to the West Riding. He begins by sketching the climate; he passes on to the geology; and then he deals with the flora, which is at least in part the result of climate and soil. His flora is complete—that is to say, it includes cryptogams, as well as phanerogamic plants; charas, mosses, hepaticae, lichens, and fungi, seem all to be as carefully worked up as the showier plants. Mr. Arnold Lees modestly quotes the saying that "he that hath a good harvest may be content with some thistles"; but we can assure him that the thistles are not to be seen, and that his harvest is very full.

The West Riding of Yorkshire is remarkably rich in waifs and strays, come-by-chance plants. These are all entered in this list, with their probable origin or means of transport. The wool business and the importation of foreign grain are agencies through which have come many floral intruders; and some of these have acclimatised themselves, while others no doubt will do so. Human agency, therefore, will count for something in introducing as well as extirpating species. Against risk of extirpation Mr. Arnold Lees is well and wisely on his guard. His indications of where the rarer plants grow are none too full; and, as to the Killarney fern, long extinct at Belbank, he whets our curiosity by saying that it is still in one station in the West Riding, but that he "cannot more precisely indicate the locality."

FRANKLIN T. RICHARDS.

CORRESPONDENCE.

TIBETAN LITERATURE.

London: April 18, 1888.

Will you allow me to make some remarks on the notice of the forthcoming publication of Tibetan works printed in the ACADEMY of April 7?

We certainly cannot praise sufficiently the zeal of the Bengal Society for giving so vigorous a push to the study of Tibetan philology and Buddhist religion. But it is rather surprising that just the most diffuse of the different redactions of the Sher-phyin should have been selected, when the publication of the *Ashtasahasrika* in Sanskrit, now going on, would have made the Tibetan version of the same particularly acceptable, and also when we consider that this difference in bulk is owing less to a fuller exposition of doctrine than to the expansion of the preambles, descriptions of places, &c., and the repetitions, usual in the Buddhist sūtras (see Wassiljew p. 145 f.). So far as we know, the Bengal Society possesses a complete copy of the Kanjur and Tanjur, procured by Mr. Hodgson (*Essays on the Languages, &c., of Nepal and Tibet*, p. 22, note); the same on which Csoma worked his index (*As. Res.* xx.).

And it seems from the description of the "manuscript" (or rather woodprint) given in Mr. Atkinson's "annual address" that it cannot differ from, if it be not identical with, the one found in the "index." This "only one text available" would then be identical also with that at the India Office.

I must protest against the confusion created by the indiscriminate use of the words "manuscript" and "print." For, though these Tibetan woodprints, in the absence of older MSS., take the place and rank of MSS. for the purpose of modern editions, and though the prints of the Kanjur are, on the whole, tolerably correct, and have more authority than modern MSS., older ones certainly exist—though few of them have reached Europe, except, perhaps, St. Petersburg—which might give, in many cases, a more correct reading.

H. WENZEL.

British Museum: April 18, 1888.

In my letter published in the ACADEMY of April 14, as to the date of the Avadāna-Kalpālātā or Bodhisattvavādāna-Kalpālātā, for A.D. 1059 read 1052.

It would be interesting to know whether any of the recently discovered Tibetan MSS. have dates of writing. So far as I have ascertained at present, the only Tibetan book that gives a date or imprint is a block print of Jinamitra's translation of the Suvāna-prabhāsa, of which we have a copy in the British Museum, printed at Peking A.D. 1735.

CECIL BENDALL.

FINNISH NUMERALS.

London: April 21, 1888.

If Mr. F. H. Woods will refer to Prof. Donner's *Die gegenseitige Verwandtschaft der Finnisch-Ugrischen Sprachen* (p. 118), he will, I think, convince himself of the baselessness of the hypothesis of an Aryan origin for any of the Finnish numerals from 1 to 99.

The harmonising vowels in *kahdeksan* 8, *yhdeksän* 9, show we have to do with a suffix, not with a compound. The explanation of the words I believe to be as follows: to the root-forms of *kaksi* 2, *yksi* 1, viz., *kakte*, *yhte*, was added a privative suffix *k*, which softened the dentals to *d*, and, furthermore, a determinative suffix *-sa, -si*. (The *n* is merely the sign of the genitive, as the nominative is not used.) This result gave two words meaning without 2, without 1, which were used for 8, 9. It is true that *k* no longer exists as a privative, but *tak* is still used dialectically as such, and *k* might be the remains of the fuller suffix. As collateral evidence, Vámbéry (*Das Turkenvolk*, p. 361) mentions that the Ozbegs say *iki kem-on*, i.e., 10 less 2, and *bir kem-on*, 10 less 1, to express 8, 9, instead of the usual *sekiz, tokuz*; while, in his *Ursprung der Magyaren* (p. 214), he is inclined to believe that these two words result from (*s*)*eki-siz*, without 2, *tek-siz*, without 1, *tek* being a word that means single.

JOHN ABERCROMBY.

SCIENCE NOTES.

THE Clarendon Press has just issued a double number of the *Annals of Botany*, completing the first volume. At the end is a necrology for 1887, of which the notable feature is the elaborate record of publications—those of Prof. Caspary, of Königsberg, alone fill eight pages. It is sad to recollect that the few months of the present year have already brought the death of two botanists more illustrious than any here recorded. With a separate pagination is given a catalogue of botanical publications during the past year, occupying fifty-seven pages. The following is the classification adopted: (1) books and pamphlets, in all languages, in the alphabetical order of author's names; (2) periodical

literature, arranged according to countries, though it is a little awkward to have to look for the United States and Canada both under "America," and similarly with "Australasia," while Asia has no common heading.

DR. W. KING, who succeeded Mr. Medlicott last year as director of the Geological Survey of India, has published his first annual report. In explaining the recent work of his department, he points out that Mr. Foote has explored the gold-bearing districts of Mysore; that Mr. E. J. Jones has examined the coal-fields of Upper Burma and the metalliferous mines in the Shan Hills; that Mr. Hira Lal, a native sub-assistant, has discovered a tract of coal near Korba, in the Ohhattisgarh coal-field; and that Mr. La Touche has been enquiring for the Kashmir government into the occurrence of sapphires in the Zaskar district. Economic geology is, therefore, well cared for on the Indian Survey.

PHILOLOGY NOTES.

THE new number of the *Bulletin* of the Société de Linguistique de Paris contains some interesting etymologies. In Greek, M. Bréal refers the three verbs *βούλωμαι*, *λάω*, and *θέλω*, to the same root, *vol, vl, vel*; and he attaches the Homeric *γυνάς*, "brother," to the same root as *-γνητός*, *-γνησιος*, comparing the successive meanings of the Latin *germanus*. In Modern Greek, M. Psichari explains the *ou* of *μουστάκι* "moustache," not as the direct descendant of the *u* of *μούσταξ*, but as a *voyel d'appui* inserted in **μούσάκι* from **μούσάκι*, where the first *i* regularly represents *u*. The same scholar explains the relation of *φούχτη*, "fist," with (*χείρ*) *πικτή* by an intermediate **πική*, **πικτή*, comparing for the change of the initial tenuis into the corresponding spirant *χάρτω* for **κάπτω*, *κάπτω*. In Latin, M. de Saussure equates *callis* in its meaning of "forest-pasture," for **caldis*, with O.H.G. *holz*, and (he might have added) Old Irish *caill*. The Low-Latin *campiare*, whence French *changer*, M. Bréal connects with Greek *καμψία*, "case," which passed into Latin, producing *campesaria*, "a retail shop," and *campus*, "banker, moneychanger." But perhaps the most curious etymologies are M. Halévy's explanations of the Hungarian *érdem*, "merit"; *szak*, "era"; and *törvény*, "law." They are, it seems, respectively the Sanskrit *arham*, *Caka*, and *dharm*, in its Tamil form, *taruman*, and were brought from India by the Mongols.

M. L. DUVAU, already distinguished as a Celtic scholar, sends from Rome a paper entitled *Notes Italiques*, in which he shows, first, that the Umbrian accusatives plural, *hapif* and *nerf*, place great difficulties in the way of Brugmann's theory that the transformation of the nasal sonants into *em*, *en*, took place in the period of the Italic unity; secondly, that the Umbrian accusative plural, *manf*, from a consonantal theme *man* "hand," confirms Danielsson's theory that the Latin theme *manu-* had for its point of departure a form of the genitive dual, **manous*, of the theme *man* (in *man-suetus*, *man-ceps*, *mal-luuiae*, &c.); thirdly, that two well-known Oscan inscriptions should be read thus:

"Spedis : Mamerekies : Saipins : anazaket"

(i.e., Spedius Mamercius Saepinas consecrauit), and

"Trebes · Zestes · dedet"

(i.e., Trebius Sextius dedit).

MR. ROBINSON ELLIS's edition of Orientius, reviewed in the ACADEMY of last week, was also noticed in the *Revue Critique* for April 9, and (with conjectures) in the last number of the *Wiener Studien*.

MEETINGS OF SOCIETIES.

ANTHROPOLOGICAL INSTITUTE.—(Tuesday, April 10.)

FRANCIS GALTON, Esq., president, in the chair.—Captain Strachan exhibited a young Papuan boy brought by him from the north-west coast of New Guinea.—Mr. J. A. Brown read a paper on "Some Small Highly Specialised Forms of Stone Implements found in Asia, North Africa, and Europe."—A paper by MM. Henri and Louis Siret on "The Early Age of Metal in the South-east of Spain" was also read.

GYMNOPOREON SOCIETY.—(Wednesday, April 11.)

DR. JOHN WILLIAMS in the chair.—Mr. E. Sidney Hartland read a paper on "Welsh Folk-medicine in the Middle Ages." Mr. Hartland began by describing the book known as that of *Meddygon Myddfai* (published by the Welsh MSS. Society in 1861.) It consists of two old Welsh MSS. on medicine with translations. The first of these was found in the Red Book of Hergest, and dates from the end of the fourteenth century. The other and longer MS. was published from a copy of a transcript made in 1743 from a MS. in the possession of John Jones, the then last descendant of the celebrated physicians of Myddfai. After referring to the legend (that of Llyn y Van) relating to the supernatural parentage of this famous family, Mr. Hartland proceeded to analyse the second MS. (a work independent of the former, though ascribed to a common origin) with the object of showing that it was a growth through a period of five centuries by means of sections added at different times by various persons. He drew attention to the influence of the Greek and Arab physicians on mediæval medicine, and expressed a high opinion of the attainments of the Welsh physicians. What was remarkable was that the more modern MS. showed a great falling-off in this respect. This he accounted for by the fact that the authors had fallen out of the main stream of progress and had sunk to the level of their rustic fellow countrymen. This, however, was what constituted the value of the book to the student of folklore. In it he was able to read the beliefs that were current in Wales among the common people during the Renaissance—the traditional relics of a system of superstition as widespread as the whole human race. Mr. Hartland went on to speak in detail of a number of these practices as found in both manuscripts, illustrating his remarks by reference to the old English Leech-Books, the medical school of Salerno, and to customs in other parts of the world. Charms of various kinds, the doctrine of signatures, the modes of gathering and preparing the medicines and other matters, came under review. In conclusion, he urged the collection and preservation of every item of Welsh medical folklore, and pointed out the importance of calendaring Welsh MSS.—Several well-known folklorists took part in the discussion.—Mr. Gomme laid stress on the importance of an inquiry into the hereditary caste theory as exemplified in the story of the Myddfai physicians.—Dr. Gaster expressed the opinion that folklore was but a reflex of superior knowledge descending in modified forms to a lower strata.—Dr. Isambard Owen pointed out the value of the Meddygon's work as a test of the continuity of Welsh with general European intellectual life in the thirteenth century. Most Welsh mediæval verse was autochthonous, and not open to foreign influence. The prose stories were at any rate Brythonic, with Cambro-Norman modifications only. The historical writings were not of a nature to be much affected from external sources; but this was a work on a subject which was then strongly exciting the attention of the learned in Northern Europe. The freedom of Rhuvallon's work from superstition was noticeable. Besides the few charms quoted by Mr. Hartland there was a list of lucky and unlucky days, to which the sarcastic comment was appended—"Whoso doubteth these things, let him know that he is wiser than they who found them out."

HELLENIC SOCIETY.—(Thursday, April 12.)

SIDNEY COLVIN, Esq., V.P., in the chair.—Prof. Gardner read a paper on an Athenian amphora of the fifth century, found at Vulci, and now in the British Museum. The design represented a

warrior taking leave of wife and child; and Prof. Gardner said the scene might be regarded as one of mere genre, or as a rendering of the parting of Hector and Andromache as described in the *Iliad*. After discussion of the principles which governed the relations between vase-pictures and scenes in the *Iliad*, the writer came to the conclusion that in the case of the vase under consideration the intention of the painter was to represent Hector and Andromache.—Dr. Waldstein expressed general concurrence with the views of Prof. Gardner, and suggested that the destination of the vase might in some cases afford a clue to the interpretation of the figures painted upon it.—Mr. Watkins Lloyd also expressed his approval of the paper, but doubted whether the proposed interpretation of the vase in question could be upheld.—Mr. Cecil Smith read a paper upon the fragments of a red-figured vase of the best period in the British Museum, Catalogue No. 804*. This had more than once been published as representing a scene from the myth of the Argonauts, but Mr. Smith showed that it more probably represented the thanksgiving sacrifice of Athenian citizens. Since its first publication another fragment had been found to belong to the vase, completing a figure of Athene Parthenos, which was evidently inspired by the chryselephantine statue of Pheidias. This and other details seemed to fix the date of the vase to the latter end of the fifth century. The new fragment being found to contain a final ν seemed to justify the reading of the inscription $\Phi\lambda\omega\sigma\kappa\epsilon\tau$ on the original fragment as $\Phi\lambda\omega\sigma\kappa\epsilon\tau$ [or $-\eta\varsigma$ $\epsilon\pi\omega\iota\eta\sigma\epsilon$] ν , which would give the name of a vase-painter hitherto unknown.

EDINBURGH MATHEMATICAL SOCIETY.—(Friday, April 13.)

MR. W. J. MACDONALD, president, in the chair.—Mr. George A. Gibson gave an extension of a theorem of Abel's in summation to integration.—Dr. J. S. Mackay read a paper by Mr. R. E. Allardice on the inscription of a triangle of given shape in a given triangle, and afterwards gave an account of the treatment of the progressions by the ancients as it has been preserved by Pappus.

ASIATIC SOCIETY.—(Monday, April 16.)

SIR THOMAS WADE, president, in the chair.—Mr. J. F. Hewitt read a paper, entitled "Notes on the History of Northern India," in which he attempted to show that the generally received theory ascribing the origin of the religious beliefs, ceremonies, and social institutions of Northern India to the Aryans (from whom the vernacular languages are derived) was inadequate to explain actual facts. He contended that, though the people spoke Sanskrit dialects, the popular religion and the forms of local government were non-Aryan. By an analysis of the customs and beliefs of Kolarian and Dravidian tribes in Central India, he showed how great was their share in the making of the Hindu nation. It was really among them that the popular reverence for Shiva, and his worship under the form of the Lingam, had arisen. It was they who had cleared the country, divided it into provinces, and founded the systems of government and the village communities. He showed that, though forms of Sanskrit became the common language of the country at a very early time, yet the substitution of these languages for the native tongues was not the result of actual conquest, but followed upon an alliance between the Aryan and indigenous tribes. He discussed the origin of caste, and showed how the conclusions advocated in the earlier part of the paper agreed with the accounts given of the countries of Kosala and Videha in early Buddhist literature, and gave reasons why the Buddhist doctrines were so widely and earnestly accepted by the people.

PHILOLOGICAL SOCIETY.—(Friday, April 20.)

E. L. BRANDRETH, Esq., in the chair.—Mr. A. J. Ellis read a paper on "Home and Colonial Cockneyisms," as respects pronunciation. His object was to show that they did not arise in London, that they are all derived from other dialects, mainly the eastern counties, and that so far as home usage is concerned they have no claim to rank as parts of a dialect. The pronunciation of "paper," "shape," "train," as *piper*, *ships*, *trine*, was shown to be a recent introduction, un-

known to Walker, Smart, Dickens, and Thackeray. But there seemed to be some chance of this among other cockneyisms taking root in the Australasian colonies; and he gave the results of the examination of classes of children in Victoria, New South Wales, Queensland, Tasmania, and New Zealand, during 1887, by Mr. Samuel McBarney, for some years principal of the Ladies' College at Geelong, showing that cockney habits prevail very largely even among children of Scotch and Irish parentage.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. RESS, 115, Strand, near Waterloo-bridge.

"The British Museum Catalogue of Greek Coins."—*Attica, &c.* By B. V. Head. (Printed for the Trustees.)

THIS new volume of the great series published by the trustees of the British Museum contains little more than the coins of Athens—Aegina occupies only some dozen pages, Megara hardly more than two or three. The absence of coins representing the latter city is especially remarkable. None are known which appear to belong to an earlier date than the beginning of the fourth century, and no numismatic writer has ever (to our knowledge) found any more archaic pieces which can be ascribed with any probability to the place. Yet their non-existence is most strange. Megara was a great commercial and colonising state in the seventh century, and throughout the sixth was strong enough to make head against Athens. It is true that she was held down by her neighbour for a short period during the Athenian Hegemony, and that she suffered severely in the Peloponnesian war. But these misfortunes do not sufficiently explain the absence of her coins. All her neighbours—Boeotia, Corinth, Athens, Aegina—were coining lavishly in the sixth and fifth centuries, yet we have not a single Megarian piece forthcoming. If we suppose that—like some of the Peloponnesian states—Megara used the Aeginetan stater for her currency during the sixth century, we have still to explain how it was that she did not begin to coin money of her own after the Persian wars, as did the above-mentioned towns. Moreover, when Megarian coins do appear, they are not Aeginetan in weight at all, but appear to have been intended to circulate along with those of Athens and Corinth, so that there is no proof that the town ever used Aeginetan money at any time. We are ourselves quite unable to explain this puzzle of the want of early Megarian coins; but we cannot help hoping that some day pieces may be found among the many unattributed fifth-century issues which may be reasonably attributed to the town.

Aegina and Athens vied with each other in ultra-conservative adherence to their original coin-types in a way quite unparalleled elsewhere. The tortoise of the one and the owl and Pallas-head of the other had each nearly three centuries of existence as the sole designs used by the state. The tortoise, it is true, became a little less smooth and globular as time went on and art improved, while the eyes of Pallas grew a little less fish-like and herears less elephantine; but, nevertheless, the devices of the two towns remained practically unaltered, till the one was ruined by her neighbour in

the third quarter of the fifth century, and the other subdued by the Macedonian in the end of the fourth. When the Aeginetans were restored to their old home by Lyssander, at the conclusion of the Peloponnesian war, they at once reverted to the use of their old badge, and even continued to display on the reverse of their money the now quite obsolete and out-of-date incuse square, instead of any second type. Their condescension to modern improvement only went so far as to place in the quarterings of the incuse square the initial letters of magistrate's names, or small symbols, such as a dolphin or a lamp. Athens, after her conquest by Antipater, in B.C. 320, had a longer period of suspended animation; and when, nearly a hundred years later, she regained the right of coinage, she was not quite so strict in her adherence to old custom. The head of Pallas lost its archaic plainness, and was now adorned with a helmet decorated with prancing horses, evidently copied from the great statue of Pheidias; similarly the owl, instead of standing alone in the field of the reverse with the letters AΘE, now perches on an overturned amphora, and is surrounded by an olive-wreath and the names of two or three magistrates.

Both Athens and Aegina were distinguished for the elaborate system of fractions of the stater which they coined in silver; but, while the island state contented herself with striking values as low as the half obol, and employed for all sizes alike the same device—her usual tortoise—Athens went down to coins so small as the $\frac{1}{4}$ obol—an infinitesimal scrap of silver, which Anglo-Saxon fingers are too clumsy to handle. For each of the different values she employed owls arranged in distinctive attitudes, except in the case of the $\frac{1}{2}$, $\frac{1}{4}$, and $\frac{1}{8}$ obol, where different types were used. Thus the tetrobol and pentobol, which are almost identical in size, are distinguished by the first bearing two owls facing each other, and the second an owl with one wing open and the other shut. Similarly, the obol differs from the one-and-a-half obol piece by showing an owl standing sideways, while the latter has an owl full face beneath an olive-twig. Could not our own government take a hint from this ingenious arrangement, and make the types of our coins somewhat more characteristic than they are at present?

The persistent archaism of fifth- and fourth-century Attic coins robs us of any artistic pleasure from their contemplation. A few struck about the time of the Persian wars are executed in a very refined and pleasing archaic style; but the vast majority are heavy, coarse, and uninteresting imitations. When the new coinage begins, about 220 B.C., on the other hand, Athens had fallen to the opposite extreme, and employed artists who had all the vices of the most modern and debased schools of the time. Their flat, thin, careless work is lamentably inferior to the contemporary style in states of far less artistic renown. It would compare most unfavourably with the art shown on the money of the Syrian kings, and is little better than that of Thrace or Bactria. The only importance in art which the later Athenian money possesses comes from the fact that it often bears, as the symbol of one of the magistrates who signs the coin, a copy of some famous statue.

Among the unmistakable representations of well-known subjects which are thus preserved we find the group of Harmodius and Aristogeiton, the statue of Q. Metellus crowned by Victory, and the figure of Apollo Delius holding in his hand the Charites.

On a yet later class of Athenian coins a number of additional copies of great works of art can be found. These are the copper pieces struck after the final conquest of Athens by Rome. Owing to the privileges which the city still retained by the favour of her masters, an autonomous coinage continued well down into the times of the empire. These bronze coins are executed in a wretched style, but are often interesting from their types—one bears a view of the theatre, another the Acropolis; several of the famous statues of Athenê are found on others; the trophy of Themistocles and the strife of Athenê and Poseidon also appear.

Mr. Head has devoted a considerable amount of attention to the arranging of the series of tetradrachms which lie between the years 220 B.C. and 88 B.C. He has collected the names of a number of magistrates which do not occur on pieces in the museum collection, and has drawn out a rough scheme for placing them in chronological order. This is rendered possible by the lucky fact that a considerable number of the magistrates are men whose names can be found in contemporary Attic inscriptions, or are casually mentioned in history. Such, for example, were Eurykleides and Mikion, Diocles of Melite, Apellikon and Aristion. It is a pity that we have no details of the working of the mint during the period when these tetradrachms appear, for it is evident that the monetary magistrates were men of great importance in the state. Foreign princes sometimes had this position conferred on them as an honorary distinction; thus the names of Eumenes and of Antiochus IV. of Syria figure in the list. One tetradrachm, as well as a unique gold stater (now at Berlin), bears the name of Mithradates the Great, with one of his badges—the sun between two moons. But this coin probably refers, not to the conferring of a monetary magistracy on the King of Pontus, but to the practical possession of the city by him in the years 89-8 B.C. during the revolt against Rome.

Among the Aeginetan coins in the Museum collection one particularly deserves notice. It is a strange piece of the early fifth century, where, besides the ordinary incuse, the reverse displays a triquetra, recalling some Lycian types. The piece is quite abnormal and so strange that we could have wished to hear more about it than Mr. Head tells us in his preface. With it, as a curiosity, may go the much less rare, but still uncommon, Athenian diobol, which displays a Janus-like female head on the obverse instead of the usual Pallas.

We need hardly say that the whole book is quite worthy of its series. Mr. Head's preface is as lucid as ever and contains many useful discussions of difficulties, which we have no space to mention. The phototype plates of coins are excellent; and we can only regret that at Athens the coins themselves were not beautiful, and, therefore, do not make pleasing pictures.

C. OMAN.

MR. MENPES IN JAPAN.

In a paper in the April number of the *Magazine of Art* Mr. Menpes gave us something of a foretaste of his pretty exhibition now open in Bond Street. His own work as an artist, before he went to the flowery land, as well as that of his master, Mr. Whistler, always showed a keen appreciation of certain qualities of Japanese art—its simplicity of motive, its taste in colour, its impressionism; and he was specially well adapted to record for us certain daily picturesque aspects of Japanese life in fragmentary notes with a quick, sensitive, and sympathetic pencil. Notwithstanding, however, his admiration of Japanese artists, and his lesson in water-colour from Chiosî—the finest, he avers, that he ever received in his life—we are glad to see that he has not learnt to despise perspective, or chiaroscuro, or broken colour, or to adopt a calligraphic ideal for the lines of his drapery—in other words, that he has recorded his impressions of Japan in the way we expected and hoped that he would.

It is so many years ago since Mr. Frank Dillon went to Japan to study Japanese Art, and exhibited his drawings of Japan at Messrs. Agnew's, in Waterloo Place, that Mr. Menpes may perhaps be excused for thinking that he was the first artist to visit the flowery land for artistic purposes. Nevertheless, his profession of originality in the *Magazine of Art* for last month is rather hard on Mr. Dillon, especially as it has since been repeated elsewhere. As to originality in style, Mr. Menpes does not make any pretence. His etchings, as well as his pictures in oil and water-colours, clearly follow Mr. Whistler's lead. He expresses his gratitude to him in the catalogue; and even in the decoration of the exhibition room and in the frames of different gold tints, from silvery to coppery, Mr. Menpes seems bent upon showing his allegiance to his master. Yet, for all this, Mr. Menpes is not by any means a slavish imitator. He has the rare gift of colour, and a clearly pronounced individuality of his own—qualities which he showed long before he went to Japan.

To an artist of Mr. Menpes's temperament the streets of Japan afforded an endless field of study. He has been attracted by the shops rather than the temples, by the lanterns and streamers rather than the trees, by the dancing girls and the children rather than their fathers and mothers. He brings for us little that is not pretty and dainty and bright, from "Flamingo Fan" (who is reckoned a beauty among the dancing girls) to "Before the Curtain," where a "little Jap, clinging to its curtain of Venetian red, suggests a Japanese rendering of a baby doge." But there is great variety in these little pictures—in colour, for instance. Mr. Menpes reveals, as might be expected, in the butterfly beauty of the festal costumes, in the gorgeous hues of lantern and umbrella; but many of his drawings, as "Gold Fish," are remarkable for their quiet cool and silvery tones. In illumination, also, his range is considerable. He gives sometimes a strong effect of artificial light, as in "By the Light of the Lantern"; sometimes one of intense sunlight, as in "A Midday Meeting." In "A Blonde Day" we have the white air of morning, in "Night" (a group of children gathered round a juggler's booth) the mystery of the dusk. The last picture is one of the finest. Some of his pictures are very slight, some are carried much further; but they are never too slight to be interesting, and never laboured even when most finished. In short, Mr. Menpes does what he wants to do freshly and decisively, and the exhibition is enough to prove that he is a true artist—a master indeed—if but a "little master."

But it is not only by his accomplishment as an artist that he charms, but also by his taste

and style. Moreover, his subjects, if dictated by love of "art," are never chosen merely because they are "difficult" or "aesthetic." They are nearly always interesting from a human point of view. The babies, with their true baby looks of wonder, the larger children blowing bubbles or intent on sweets, the street groups so naturally massed and so true in attitude and gesture, and all the other glimpses (veracious as well as beautiful) of this far-off land must delight those who care little for "values" or "problems of colour."

COSMO MONKHOUSE.

OBITUARY.

MATTHEW HOLBECHE BLOXAM.

THE friend of Rickman, and five years senior to Pugin, this veteran among ecclesiastical antiquaries passed away on Tuesday night at the ripe age of 83. Fifty years ago *The Principles of Gothic Ecclesiastical Architecture* was passing through a third edition. It was translated into German in 1845. By 1859 in England no less than 17,000 copies had been sold, and Mr. Bloxam looked upon his treatment of the subject as concluded. It was not, however, so to be. At the express wish of Sir Gilbert Scott a further revision was commenced; and it will speak more for the care of the author than any other words can do, that he waited twenty-three years before completing his studies for final reissue. The eleventh edition was published in 1882. (Reviewed in the *ACADEMY*, April, 1883.)

Mr. Bloxam entered his father's house in Rugby School in 1813, a year before his brother, Dr. John Rouse Bloxam, the historian of Magdalen College. In 1821 he became an articled clerk in a solicitor's office at Rugby. His own words will best describe how he became an antiquary:

"In due course I was sent occasionally to villages to examine the registers, or on other business. I then embraced the opportunity of taking, as far as my then knowledge would permit, notes of the village churches I so visited. During the latter part of my clerkship I wrote or compiled in a crude form the MS. of what was destined to be the first edition of my work on Gothic Architecture."

Forming the acquaintance of Mr. Combe, of Oxford, he showed him the manuscript; and in 1829 there appeared *The Principles of Gothic Architecture* (elucidated by question and answer). In a few years Mr. Bloxam's reputation was secure. Yet, though an indefatigable worker up to the last, he did nothing to court popularity. His *Glimpses at the Monumental Architecture of Great Britain*, published in 1834, was never reprinted; and his *Fragmenta Sepulchralia* were never completed.

Mr. Bloxam resided at Rugby all his life. His chief pride was in the school; and every Sunday, through term, he might be seen in his accustomed seat in the school chapel. Every year, up to the last, he went to view his own race run in the school athletics. His door was open, at all hours of the day, to any Rugby boy, "without stint or reserve"—as in good old Elizabethan times—"or question asked." To be a Rugby boy was introduction sufficient. And we understand that to the school he has left his valuable collection of antiquities. It was only last February that he printed privately *A Fardel of Antiquarian Papers*, being a full catalogue of all his published works during the last sixty years, thus, as it were, putting the coping-stone to his life's labours; and a month had not passed before he received a severe paralytic stroke which, though leaving him conscious, deprived him of all powers of reading or writing. He lived just long enough to complete his own work in his own manner. He will be buried to-day, just beyond the noise and

tumult of his native town, in the grounds of the old Norman chapel at Brownsover.

C. E. S.

CORRESPONDENCE.

THE RUTHWELL CROSS.

Cambridge: April 21, 1888.

In his article on Miss Stokes's *Early Christian Art in Ireland*, in the ACADEMY of April 21, Mr. Bradley accepts Miss Stokes's statement that the delineation of subjects on the Ruthwell Cross agrees with the instructions in the eleventh-century "Painter's Guide," but does not accept her inference, and asks for further light. As I examined the grounds for the statement in one of the Disney lectures here last term, and as it seems to me a very grave matter that South Kensington should teach, through its handbooks, an eleventh-century date for our marvellous monuments of the seventh and early eighth centuries, I venture to send a précis of my investigation.

Miss Stokes, to whose admirable works every one who studies the early art of Ireland is under a very deep debt, says:

"The sculptor of the Ruthwell cross has clearly followed the Byzantine guide in his work; we see the raven perched on the tree in one panel, giving Paul the bread in another, and in a third the meeting and embrace of the two saints in the desert."

The "Painter's Guide," in Miss Stokes's own edition of it, says (and this is all it says):

"St. Anthony, having found St. Paul, embraces him. A grotto. Outside, St. Paul the Theban, wearing a hair mat, which covers him from his shoulders to his knees. He and St. Anthony embrace. A raven perched on the top of a tree holds bread in his beak."

The Ruthwell Cross has only one panel referring to Paul and Anthony. Two figures, dressed alike in long mantles, stand facing each other, and hold between them the round cake which they are about to break. Round the panel is incised in the stone in Latin, "Paul and Anthony broke bread in the desert." The other panels which Miss Stokes describes on the cross do not exist. Some eleven feet above the Paul and Anthony panel we reach the top key of the cross head; and in it is a bird, with nothing in its beak, perched on a convex part of the scroll which originally ran into all the keys of the cross, and, doubtless, bore in each key a bird, as in the cross head at Middleton, near Ilkley. There is a Runic inscription on the border of this key of the cross, but nothing about a raven or bread. The other side of this same key has a Latin inscription, "In the beginning was the Word," the commencement of St. John's Gospel; and the subject is St. John and his eagle, not a raven giving Paul bread.

A reference to the story, as told by Jerome 300 years before the Ruthwell Cross, completes the case. Anthony the hermit, after two days journey in the wilderness, found Paul the Theban. They fell on each other's neck. Then they gave thanks to God. Then they conversed. St. Anthony then observed a raven on a neighbouring palm tree; the raven descended gently, dropped a loaf of bread before them, and flew away. They sat down by the edge of a spring, each humbly desirous that the other should perform the function of breaking bread. At last they broke it conjointly.

Thus, (1) Miss Stokes's first scene has nothing to do with this story, and if it had it would disobey the "Painter's Guide" by the absence of bread; (2) her second scene has nothing to do with this story, and if it had it would

represent a scene not given in the "Painter's Guide," namely, the raven feeding Paul; (3) her third scene is not Paul and Anthony embracing, but quite a different part of the story—Paul and Anthony breaking bread; (4) the only scene on the Ruthwell cross which has any connexion with the story of Paul and Anthony is a scene not in the most distant way alluded to in the "Painter's Guide."

On another point, Mr. Bradley wishes to learn from some one who has seen the Bewcastle cross whether *ean kyning* can be read *eanfleding*. As I happen to have seen the cross, and have a rubbing of the inscription before me, may I say that the K is a curious and elaborate character, but has nothing to do with F and L, while the two runes which follow are a modified U and N.

G. F. BROWNE.

THE HYKSÓS KING RA-IAN.

Weston-super-Mare: April 18, 1888.

In the ACADEMY of April 14 we have tidings of most interesting discoveries by M. Naville at Bubastis. Among the rest are some black granite statues of Hyksós kings, one of which seems to bring to light a Manethonian name or title. For Ra-ian is obviously the 'Iavros or 'Iavias of Manetho's XVth Shepherd-dynasty. On this name I wish to make a few remarks.

The element -an appears several times among these shepherd-kings: (1) Possible in Brân (and varr.); (2) in Ndyân (varr.); (3) 'Avras, 'Iavras, 'Avav; (4) Xradê, taken as var. of 3, but I think this may more likely be a variant of 'Aarâh (Set-an=An-set).

Is it not possible that this an is the divine and royal title an (anna) Akkadian? And the variant 'Avav may be the title (Akk.) enan or enana (Lenormant, *Sur quelques Syllabaires*, 14). The star which is the ideogram for an may account (as I have ago suggested) for the singular title of Salatis, the Hyksós king, "star (ideogram) of both worlds or lands."

Ra-ian or -an, may be a good Hyksós title like Ra-set-nub, Ra-nub-neb, &c. (see Wiedemann, *Aeg. Gesch.* 296). I think *ian* may = *an* (see Mr. R. Brown's letter, ACADEMY, November 12, 1887: "Ak. An, In, 'Divine one.'") Why should we not further compare Ianus, which is said to be Etruscan, and (as Mr. Brown does) 'Avvior, an Etruscan king in Plutarch? And I think here may come in the important local name *Ianu*, one of the three great Ruten fortresses taken by Thothmes III., which occurs in the Karnak List of Northern Syria, No. 225, and which I have much reason for tracing to the Euphrates, where I have thought it may be found at Einya, south of ed-Deir. But it is also very curious that Dr. Neubauer finds *Tharatha*, in connexion with the great sanctuary Mabog, explained as *Ianua*. Anyhow, I think Akk. *an* or *ian* may explain our Hyksós title Iannas or Ra-ian conformably with the many indications of "Turanian" race in the traces of these alien lords of Egypt. And I am not willing to set aside off-hand the coincidence of the Arabic er-Reiyan, the traditional title of Joseph's Pharaoh. For our Ianas in Manetho comes next after an Apophis, and George the Syncellus tells us that in the time of Apophis Joseph came into Egypt. Such old drift-pebbles as this name are worthy of careful examination, for all the jumble of chronology or history in which they may have come down to us. It is much to be desired that the upper part of Ra-ian's statue may turn up.

These discoveries at Bubastis are exceedingly interesting, as extending the history of that celebrated city upwards to the Vith and downwards to the XXXth Dynasty, and supplying the missing link of the great XVIIIth Dynasty, including Khu-en-aten; and showing,

moreover, that the Hyksós had not so defiled the sacred places that the Theban successors were averse to occupying the ground from which they had driven them in the Delta.

HENRY GEORGE TOMKINS.

P.S.—I would also compare Iannes (2 Tim. iii. 8). Magicians might easily come of this stock; and, if for Iambres we are to read Mambres or מַמְרֵס, Mamra (Talmud), we find the Amorite name Mamre (Gen. xiv.), which may well enough be also a Hyksós name in Lower Egypt among the Set-worshippers of the XIXth Dynasty.

NOTES ON ART AND ARCHAEOLOGY.

M. MEISSONIER has issued personal invitations for a private view of his work entitled "1807," at Messrs. Tooth's gallery in the Haymarket for to-day (Saturday). Prof. Herbert Herkomer will also have a private view to-day, at the Fine Art Society's, in New Bond Street, of a collection of water-colour drawings which he styles "Around my Home." The private views of the Royal Academy and the Grosvenor will both be next week, the former on Friday and the latter on Saturday. We hear that the attraction at the Grosvenor will be the adhesion—or, rather, the transfer from the British Artists—of Mr. Whistler and his following.

A SOCIETY has been founded, with Mr. Walter Crane as president, for organising an exhibition of the decorative arts—textiles, tapestry, needlework, carvings, metalwork, bookbinding, painted glass, &c. The society hope to hold their first exhibition at the New Gallery during next autumn, for which purpose they are raising a guarantee fund of £500. The secretary is Mr. Ernest Radford, 9 The Terrace, Hammersmith.

SOME years ago a *Graphic* school of wood engraving was established, which has been successful in producing some engravers of talent, now employed on the permanent staff of the *Graphic*. It is now proposed to found a *Graphic* school for artists, who will be instructed in the different methods of producing black and white drawings most suitable for engraving on wood, or for the different processes now employed for illustrations here and on the continent.

MR. F. LLEWELLYN GRIFFITH, acting for the Egypt Exploration Fund, has started on a three weeks' exploring trip, with tent and camels, to El-Arish (Rhinocollura), near the Sirbonic Lake. Mr. Griffith will rejoin M. Naville at Bubastis towards the end of this month.

IN a letter received from Dr. Schliemann at Thebes on his return from his visit to Upper Egypt in company with Prof. Virchow, much regret is expressed that he had not been allowed to make those capital excavations at Alexandria which he had intended. After a careful examination of all the classical traditions, his plan was to dig in the neighbourhood of the Mosque Nebi Daniil, where he assumed that the tomb of Alexander the Great would be found; and at the place where the two obelisks had lain, where he trusted to discover the Caesareum. Unfortunately, the Egyptian Government has refused to grant the necessary permission even for the last-mentioned research, although Nubar Pasha had indicated his willingness for that particular purpose in conversation with the German Ambassador in London last summer. Only on the eastern side of Alexandria was Dr. Schliemann permitted to use the spade. Before the arrival of Dr. Virchow, having three weeks at his disposition, he drew in that part of the

city two great trenches, in which he came upon many graves, and at last, at a depth of 12-14 metres, upon the foundations of a large building. In all probability they are the foundation-walls of one of the palaces of the Ptolemies, which, according to Strabo (xvii. 1, 8), occupied, together with beautiful public grounds, a fourth, or even a third, part of the whole extent of Alexandria.

A SPECIAL illustrated article, giving a full account of the preparation of the Royal Academy Exhibition, from the sending in of the pictures to the day of opening, will appear in the number of *Cassell's Saturday Journal* published on May 2.

THE STAGE.

STAGE NOTES.

AT the St. James's Theatre there is a return to the more habitual programme. To-night a piece, with the success of which the public of to-day is familiar, will be revived, and Mrs. Kendal provided again with a great part, or, to speak by the book, with an emotional part that thoroughly suits her. That is the part of the heroine of "The Iron Master"—the English version of *Le Maître de Forges*, that novel of M. Ohnet's which commended itself, as all his work does, less to the literary than the general public. But never mind the somewhat bourgeois quality of M. Ohnet's labours. They, at all events, provide in this instance our strongest actress with the opportunity of one of her finest impersonations. If, in addition to "The Iron Master," we should be privileged, before the season is over, to see Mrs. Kendal in Mr. Pinero's "Squire" and in "The Money Spinner," the last Hare and Kendal season at the St. James's Theatre will not have been mis-spent.

A PARTIAL change of programme is necessitated at the Novelty by the lamented death of Mr. W. J. Hill, without whom "Nita's First" would be practically impossible. "Fennel," with Mr. George Giddens's sympathetic rendering of the hunch-backed *luthier*, of course remains in the bills. By the death of Mr. Hill we lose a most serviceable, genial actor, whose *physique*, while no doubt it limited very closely the number and character of his assumptions, did likewise distinctly assist him in certain few parts. He was full often of quiet, and sometimes of boisterous *bonhomie*. He could act a character which is much laughed at—not laughed with—and is yet at bottom respected. Mr. Hill, though so exceedingly portly, was not actually an old man. His place in art was a smaller one than John Clayton's—the last high-class actor whose loss we mourn—but in its own way it will be as difficult to fill.

MR. AND MRS. EDMUND RUSSELL, who invited us to a performance of "Phèdre," done into English, and a performance of Mr. Sergeant Talfourd's once famous piece, "Ion"—neither of which was it possible for us to attend—are devoted followers of the method of Delsarte, an old Frenchman, who systematised expression by gesture and voice more thoroughly than, at least, any other professor has ever done. Though we were not able to see the Edmund Russells in their interesting, if curious experiment, we are probably among only a very few people in London who have seen Delsarte himself. Twenty years ago, provided with an introduction which was to be the means of giving us an entrance into some of the secrets of his *travaux*, we waited upon M. Delsarte, in his flat, in the north of Paris. How far his systematised gesture and the philosophy—almost the religion—on which it was founded have been of practical service to

the stage, it is not easy to say; but we perfectly well recollect that at the top of the staircase we came into contact with a somewhat inspired person, who uttered accents of grief, of love, of reverence, in an exceedingly sympathetic voice, and whose whole soul was, without doubt, in his theory.

AT Willis's Rooms last week Messrs. Poel and Berlyn's company—with some temporary additions such as, we believe, they are accustomed to receive—gave a much-appreciated entertainment of "drawing-room comedies" unattended by the vice of scenery. Miss Grace Latham recited between the comedies proper a monologue, "Beside a Cradle," which she gives with studied art, in a method wholly her own. The comedies were first, "Love and Halfpence"—of which, with the humorous performances in it of Messrs. Poel and Hinton Grove, Miss Hepworth Haydon, and Miss Mary Dickens, we were able to speak several weeks ago—and, secondly, "Chiromancy,"—a bright new piece of which Mr. Stanhope Forbes's big picture, at the New English Art Club, might conceivably stand as illustration. Mr. Poel and Mr. Cecil Thornbury were the gentlemen engaged in this performance. One of the ladies was Miss Mary Rorke, whose method is restrained and artistic, and whose voice manages to be very admirable—even without the application of M. Delsarte's theory. And the other lady was Miss Beatrice Lamb—a very promising and charming person, who has been seen hitherto, we believe, only in minor parts at the theatres of Mr. Beerbohm Tree.

MUSIC.

RECENT CONCERTS.

THE programme of the third Philharmonic concert on Thursday, April 19, contained various features of interest. It commenced with Sir G. Macfarren's Overture, "Romeo and Juliet." This work, written so far back as 1837, and for a time associated with Shakspeare's drama, is bold in design, and effective in treatment. It is strange that it should have almost sunk into oblivion. It was admirably performed under the direction of Mr. F. H. Cowen. Mr. Prout conducted his own scena, "The Song of Judith," which was favourably received, although Miss Hilda Wilson, suffering from hoarseness, was unable to do justice either to herself or to the work. The boy pianist, Otto Hegner, was heard for the first time with orchestra, and played an Allegro from Field's second Concerto in A flat—a showy piece for the solo instrument, if not for the orchestra. Josef Hofmann appeared at the Philharmonic last season, so that the new wonder could scarcely be refused a hearing. It would, perhaps, have been wiser on the part of the society if it had avoided anything which savoured of sensationalism, and engaged neither of the boys; but this much may be said in favour of Hofmann's performance, that he selected a work—Beethoven's Concerto in C—which tested his mental as well as physical powers, whereas the Allegro given by Otto Hegner was simply a bravoura piece. The boy played remarkably well, and was of course received with enthusiasm. He was heard afterwards in an Etude by Chopin, and Mendelssohn's Rondo Capriccioso.

The novelty of the evening was M. Widor's "Walpurgis Night," a symphonic poem for orchestra, in three movements. The Finale is dated February 26, 1888, and the work is dedicated to the Philharmonic Society; yet in Brown's *Biographical Dictionary of Musicians*, published in 1886, mention is made of a work bearing the same title. The composer

may possibly have reconstructed his earlier work. In the first movement M. Widor attempts a musical description of certain lines from Goethe's drama: night black with mist—grinding and cracking forests—an infuriate glamouring song; such is the poetic basis. To represent all this the composer employs a very large orchestra, including cornets, trombones, tuba, and many instruments of percussion. There was a great deal of noise, and, indeed, clever noise, but very little music in the true sense of the term. The Adagio, inspired by the appearance of Helena to Paris in the second part of Goethe's "Faust," was more to the taste of the audience; graceful themes with pleasing orchestration came as a welcome calm after the storm. In the Finale we were transported back to the Brocken, and listened to the sound of revelry by night in the palace of Sir Mammon; and here again, in his attempt to be realistic, the composer again appears to forget the true province of music. M. Widor himself conducted with much energy, and at the close was recalled. The second part of the programme included Beethoven's Seventh Symphony, well interpreted under Mr. F. H. Cowen's direction, and Weber's Overture to "Freyschütz."

Mr. Manns' annual benefit concert took place last Saturday afternoon at the Crystal Palace. Herr Carl Formes, who has not appeared for many years in England, sang "In diesen heil'gen Hallen" from "The Magic Flute"; and, if his intonation was not all that could be desired, he managed to show that even at the age of seventy-three he still possesses a voice capable of descending to the lowest depths. He afterwards gave the "Piff! Paff!" from "The Huguenots," with much vigour. He was encored, and sang "The Mill Wheel"—one of his successes in days long gone by. Mme. Recoschewicz—a lady with a strong, though somewhat hard, voice—sang songs by Meyerbeer, Lassen, and Peiser, with moderate success. Nikita made her first appearance at the Crystal Palace, and sang in an affected manner "Deh vieni," from "Figaro." Her voice is decidedly pleasing. For an encore she gave "The Last Rose of Summer"—plucking during the last verse the petals of a rose. One had to look at the programme-book to be sure one was at a classical concert, commencing with Beethoven's "Coriolan," and concluding with Mendelssohn's Scotch Symphony. Mr. Hamish MacCunn's clever ballad for orchestra, "The Ship o' the Fiend," some numbers from the third suite of Dvorák's Slavonian Dances, and a paraphrase for cello and orchestra on Härtel's "Abendständchen," were included in the programme. M. E. Gillet, a new violoncellist, was heard to advantage in solos by Chopin and Popper. There was a very large attendance.

J. S. SHEDLOCK.

MUSIC NOTES.

THE Popular Ballad Concert Committee, formed in 1882 for the purpose of giving cheap and high-class concerts in the East end of London, has laboured with considerable success in a good work, but, with a fluctuating income, finds a steady policy impossible. It is proposed, therefore, to reconstitute the association on a more self-supporting basis. Particulars of the new scheme can be obtained from the hon. secretary, Mrs. Ernest Hart, 38 Wimpole Street.

MESSRS. NOVELLO have just published Dr. Mackenzie's setting of Mr. R. Buchanan's Ode, "The New Covenant," written for the opening ceremony of the Glasgow International Exhibition; and also Mr. F. H. Cowen's "Song of Thanksgiving," written for the opening of the Melbourne Centennial Exhibition.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

The Long White Mountain; or, A Journey in Manchuria. By H. E. M. James. (Longmans.)

TILL recently the least known part of North-east Asia beyond Korea were the Shan-alin highlands, which form the main range between that peninsula and Manchuria, and which are continued under the name of the Sikhotalin between Manchuria and the Russian maritime province of Primorsk. These highlands, known to the Chinese by the name of the Chang-peí-shan, or "Long White Mountains," are described even by the careful M. Reclus as attaining in some of their peaks elevations of 10,000 to 12,000 feet, and consequently rising considerably above the snow line. They also present other points of interest associated with the legendary history of the Manchu conquerors of China, a reported "Dragon Lake" on one of their summits playing much the same part in the national myths as does Titicaca in those of the Peruvian Incas. In Manchu poetry the Shan-alin mountains figure as the sacred home of the race, in whose eyes it is the fairest land in all the world—a land of pleasant woodlands, flowery meads, and sparkling streams, all bathed in the bright atmosphere of perennial azure skies.

Here, then, were attractions enough for an energetic member of the Bombay Civil Service looking round for some useful piece of exploring work that might be accomplished during a well-earned furlough of two years. Mr. James, accompanied by Lieut. Young-husband of the King's Dragoon Guards, and afterwards joined by Mr. Fulford, of the Chinese Consular Service, accordingly set out in May, 1886, in search of these somewhat hazy snow-capped ranges and mysterious Dragon Lake. The result was another pretty bubble burst. The "Long White Mountains" were found where they are well known to exist; but they shrank to the proportions of an irregular border ridge, averaging probably little more than 4,000 or 5,000 feet high. Their whiteness, also, apart from a few streaks still lingering in some of the deeper clefts, proved to be due, not to "a spotless snowy mantle," but to the dazzling limestone crests, which, with some eruptive rocks, appear to constitute the prevailing geological formation of the Shan-alin system.

The Dragon Lake was also found; but, instead of rivalling the Bolivian Titicaca, it turned out to be little bigger than the "Devil's Punch Bowl" of the Killarney Purple Mountain. It is, in fact, merely the flooded crater of the highest summit of the Chang-peí-shan, which stands at an altitude of about 8,000 ft. above sea level, and has a diameter of a mile and a half, with a circumference of six or seven miles. Never-

theless, the Lung-wang-t'an or "Dragon Prince's Pool," as it is locally called, was well worth the trouble of a visit, owing not only to its legendary associations, but also to the peculiar geographical features and enchanting scenery of the surrounding district. It lies about the water-parting of three distinct fluvial basins, and is itself the source of the main eastern branch of the Sungari, the great waterway of Central Manchuria. The lakelet, which is remarkable for its intensely blue colour, is encircled by sheer rocky walls 350 ft. high, from the top of which a superb view is commanded of one of the loveliest prospects on the surface of the globe. The lower slopes of the White Mountain

"are covered with forests of birch and pine; but these gradually grew less dense until we emerged on a delightful grassy plateau dotted with trees. It was like being transported into the garden of Eden. The forests had certainly not been devoid of flowers, and some fine turn-cap lilies and orchids and blue-bells had lit up their gloom. But now we came upon rich, open meadows, bright with flowers of every imaginable colour, where sheets of blue iris, great scarlet tiger lilies, sweet-scented yellow day-lilies, huge orange buttercups or purple monkshood delighted the eye; and beyond were bits of park-like country, with groups of spruce and fir beautifully dotted about, and spangled with great masses of deep-blue gentian, columbines of every shade of mauve or buff, orchids white and red, and many other flowers. One gem of a meadow was sprinkled with azaleas, bearing small yellow flowers, which looked at a distance like gorse."

So, if the great lake and the snowy ranges 10,000 or 12,000 ft. high have vanished, we are at least spared the "pleasant woodlands and flowery meads" of the Manchu poets.

But the White Mountain and Dragon Lake, although forming the main object of the expedition, did not by any means absorb the whole attention of Mr. James and his party. They spent altogether nine months in the country, during which they visited almost every part of Manchuria except the northern and eastern regions skirting the frontier Amur and Ussuri rivers. The actual distance traversed was a little over 3000 miles, which, considering the rugged character of the land and the detestable nature of the roads in most parts, may be regarded as a sufficiently notable performance. The general impression derived from the author's graphic descriptions is that, barring the flowery meads, Manchuria is about one of the least desirable places wherein to spend a summer's holiday. Socially, it occupies that disagreeable transitional position between downright barbarism and true culture, which is in some respects much worse than the savage state itself. The gradual increase of comfort creates fresh wants, which there are no adequate means to supply, and the result is often a condition of things which by the passing observer cannot be distinguished from hopeless misery. When at one point of their journey our travellers crossed the frontier into the domain of the Mongol nomad, who is assumed to stand at a lower grade of culture than his Manchu neighbour, they found themselves in relatively much pleasanter surroundings—boundless rolling and grassy steppes, where locomotion was easy, and where they generally obtained "shelter at night in Mongol farms, which were very clean and comfortable."

But in Manchuria, where most of the arable land is under cultivation,

"the state of the track in places beggars description. The marshes were full of water, and eight or ten mules at a time might be seen floundering on their bellies and sides. Imagine a wet moorside in Scotland, with a boggy old birch plantation running down the burnside; choose the very uncanniest bit of it, and you have a Chang-peí-shan bridle-path in the rains."

And compare the comparatively clean Mongol camping-grounds with the indescribably filthy Manchu towns, where

"the streets are paved with wooden sleepers, which conceal hidden sewers; but as a rule there is no attempt at paving, nor any thought of sanitation. In the high streets the ruts are several feet deep, and during the rainy season the roadway is churned into a slough of fetid black mud, in which carts often stick for hours, and occasionally get overturned. Then the filthy habits of a great part of the population, combined with the accumulation of market and house sweepings in any corner which is handy, and the free flow over the streets of house sullage, which in other parts of China is economically preserved for manure, combine to render a Manchurian town in some respects a pigsty," &c., &c.

Other troubles peculiar to the rural districts are the winged pests, such as gnats, midges, mosquitoes, and wasps, whose capacity for inflicting torture seems to rival that of the officials attached to the local courts of justice. The midges, we are told,

"are worse at night and in the early morning, though they by no means object to the middle of the day also. They come out in countless millions, and bite like fiends. Mules and cattle are picketed at night to the leeward of fires, so that the smoke may protect them. At sundown all the doors and the windows of houses are shut tight, thought the smoke and summer heat are stifling. Often a fire must be kindled on the floor to fill the house with smoke; and when it is filled full with Chinamen also, the atmosphere in the early morning can be better imagined than described. Men at the plough wear circlets of iron on their heads, on which are stuck bits of burning touchwood, and they carry pieces of it in their hands as well! The gadflies were less annoying to ourselves than to our beasts, as they invariably selected any that were sick or tired. They did not appear till seven or eight in the morning, and retired at sundown; so, by marching before daylight a little respite was obtained from their attacks. They were huge fat insects, and, at this distance of time, they seem to me to have been as big as stag-beetles. There are several kinds—one striped yellow and black, like a giant wasp—and the rapidity with which they can pierce a mule's tough hide is inconceivable. In a few moments, before one could go to its assistance, I have seen a wretched beast streaming with blood."

A more dangerous if less irritating plague are the Chinese brigands, who for years have made Manchuria their happy hunting-ground. They are mostly the riff-raff of the northern and central provinces of China, who are banished to this outlying part of the empire, and thus correspond somewhat in the extreme north to the better organised "black flags" of the southern border lands. They hang about the skirts of the forest, where they can take refuge at a moment's notice. They infest all the main highways, and are often in league with the authorities themselves. Occasionally measures of a frightfully drastic character are

taken to abate the nuisance; but it still flourishes, thanks to official corruption and the general poltroonery of their victims.

"To hear all the stories, it is difficult to decide whether the people who are robbed, the brigands who rob, or the troops that pursue the robbers, are the most cowardly."

To the title as it stands at the head of this notice is appended the clause: "With some account of the history, people, administration, and religion of that country." But this "account," which is necessarily in the nature of a compilation, forms about half of the whole book, which thus really consists of two distinct works—the journey and the compilation. The latter, added under the impression that the former "would not warrant the production of a new book of travels," is of an extremely comprehensive character, and has on the whole been executed with much care and desire to be accurate. Its chief fault perhaps is its prolixity, and the introduction of subjects either not at all or only indirectly connected with the land of the "Long White Mountain." There are added several appendixes, some of which might also have been omitted without much loss to the value of the book. But the itinerary, with dates and distances carefully recorded, is a useful feature, as are also the copious index and accompanying map. The orthography of this map is not always in harmony with that of the text, the former giving, for instance, "Mukden" correctly, while the latter has invariably the French form, "Moukden." We have also "Sakhalin" and "Saghalien"; while the map unaccountably gives "Sihota-alin" for "Sikhota-alin."

A. H. KEANE.

Benjamin Franklin as a Man of Letters. By John Bach McMaster. (Kegan Paul, Trench & Co.)

MR. McMASTER has performed his present task with marked ability. His biography of Benjamin Franklin seems to me in most respects quite a model of what a brief biography ought to be. In works belonging to a series of this kind the space to be occupied is necessarily, for publishers' purposes, so strictly defined that writers are often almost compelled to resort to "padding" when their materials are scanty, and to curtail unduly when their materials are abundant. To secure the proper balance between material and space requires peculiar skill; and this skill is displayed here by Mr. McMaster. There is just a suspicion towards the end of the volume that the publisher has warned him that he must draw his work to a close; but, for the rest, the narrative is well proportioned and conveys to the reader not only a clear idea of Franklin himself but a very fair notion of the times in which he lived. Throughout, the signs of careful study and investigation are unmistakable.

The very excellence of Mr. McMaster's work makes more manifest than ever the barrenness of Franklin's career and character. When I say barrenness I mean, of course, not of a certain kind of success, nor even of service to his country and to mankind. Incidentally, Franklin served both; but he lacked those virtues and graces that render life worthy and make the contemplation of a career pleasant and a moral stimulus.

Franklin, as a man, offers nothing that either pleases or stimulates. His story is the story of one who was indifferent to everything but his own aggrandisement, and careless as to his methods; and who, in the long run, did secure his ends by unworthy means. He was lewd, self-seeking, and treacherous; and it never occurred to him to repent, for he knew nothing better. These are hard sayings about one whose memory his countrymen still delight to honour, and whose name they actually link with that of Washington as one of the saviours of his country. Nevertheless, the facts cannot be gainsaid.

Benjamin Franklin was born at Boston in the year 1706. He received little schooling, but early showed a love of books. At twelve years of age he was apprenticed to his brother James, a printer and, soon afterwards, the founder of one of the earliest American newspapers. In the columns of this paper Benjamin exercised his literary talents until, having quarrelled with his brother, he broke through an honourable understanding between them and left Boston. We then hear of him in New York, in Philadelphia, and in London, in which last-named city he hired himself to a printer, and "for a year toiled as compositor, earning good wages and squandering them on idle companions, lewd women, treats, and shows" (p. 40). Then he returned to Philadelphia and took service under Keimer, the printer,

"founded the Junto, wrote his famous epitaph, grew religious, composed a liturgy for his own use, and became the father of an illegitimate son. The name of the mother, most happily, is not known; but, as the law of bastardy was then rigidly enforced against the woman and not against the man, she was, in all likelihood, one of the throng who received their lashes in the market-place and filled the records of council with prayers for the remission of fines" (p. 45).

Leaving Keimer, Franklin commenced business for himself and grew rich, while his less astute and more scrupulous rivals, including Keimer himself, grew poor. He was always ready for whatever offered; in a low sense he was "all things to all men"—man of letters, man of science, printer, philosopher, politician, patriot, reprobate, or moralist—just as the occasion demanded. Of course, his schemes often miscarried; but his adaptability, and his entire freedom from scruples of conscience about the means he employed, gave him success in the long run. He was not a man of original mind. He possessed no genius except that of adapting himself tolerably well to circumstances, and of appropriating and using the work and talents of others. In his character of "Poor Richard," which gave him so much renown, he was only an adapter. He ranks among men of science on the strength of his experiments with electricity; but even here "more than one discovery for which credit has been given to him alone came to him in the shape of a very broad hint from Ebenezer Kinnersley" (p. 152). As Mr. McMaster says, "no one knew how to improve a hint better than Franklin."

At one time of his life and another, Franklin interested himself in politics. He posed as a patriot, and secured for himself various posts of responsibility and honour in the state. In these he displayed "great executive power mingled with traits

which cannot be too strongly condemned. The vicious political doctrine that to the victor belong the spoils he adopted in its worst form; and, though he never sought office, he never, in the whole course of his life, failed to use his office for the advancement of men of his own family and his own blood" (p. 153).

In 1777 Franklin was sent to France by the revolutionary government to try and enlist sympathy and assistance. How he attended to the interests of his country we know, for John Adams, who followed him in a few months, reported the facts to Samuel Adams:

"He loves his ease, hates to offend, and seldom gives any opinion till obliged to do it. I know also, and it is necessary that you should be informed, that he is overwhelmed with a correspondence from all quarters, most of them upon trifling subjects and in a most trifling style, with unmeaning visits from multitudes of people, chiefly from the vanity of having it to say that they have seen him. There is another thing which I am obliged to mention. There are so many private families, ladies, and gentlemen that he visits so often—and they are so fond of him that he cannot well avoid it—and so much intercourse with Academicians, that all these things together keep his mind in a constant state of dissipation" (p. 227).

Mr. McMaster adds that

"Strangers who came to see him were amazed to behold papers of the greatest importance scattered in the most careless way over the table and the floor. A few went so far as to remonstrate. They reminded him that spies surrounded him on every hand, and suggested that half an hour a day given to business would enable his grandson to put the papers out of the reach of prying eyes. To such his invariable answer was that he made it a rule never to be engaged in any business that he would not gladly have generally known, and kept his papers as carelessly as before" (pp. 227-8).

In short, everything must subserve his own self-gratification. Fortunately for America John Adams was a different kind of man, and turning himself "into a drudging clerk" performed the work that Franklin neglected.

Of Franklin's domestic relations the less said, perhaps, the better. The woman who ultimately became his wife he had, years before, seduced and abandoned. He was bound to his home by no ties of affection.

Persons who may freely concede that Franklin was no model of piety will still insist that, nevertheless, in his own particular sphere, he may be properly regarded as an example. He taught some valuable lessons of a practical kind; and, even though his mottoes and famous sayings were not his own invention, at any rate he fitted them for general use and made them popular. He himself, by his own exertions and thriftiness, in the face of many difficulties, rose from obscurity to a position of affluence and power. All this, it will be said, is surely in his favour. Surely it is, so far as it goes. He was energetic in business and enterprising. He was thrifty also; but his was the Jew-thrift that signifies, not self-control or going without, but self-aggrandisement; that puts out everything—money, affection, service, at usury; that observes the commandment—"Thou shalt love the Lord thy God, *that thy days may be long in the land.*" Franklin was thrifty in saving everything he could from others. His passion was for getting. He was,

all his life, more or less, what Mr. McMaster says he was in his youth, "saving even to meanness, yet a spendthrift and a waste-all" (p. 43). Thrift ranks high among the virtues, but only when it justifies itself to the moral sentiment, not as a means of gathering up material or of making provision for the future, much less as an aid to self-indulgence, but from the reverse side as a method of self-discipline. The rule of ethics on this point is not—save that you may have; but be self-reliant, independent of mere possessions. This is a very different thing from the thrift practiced by Franklin.

The attentive student of Mr. McMaster's book will be astonished and, perhaps, a little amused to find that the final judgment pronounced by the biographer is by means sustained by the facts so faithfully set forth in the earlier pages. Perhaps Mr. McMaster felt the damning character of these facts so strongly that he thought a little toning down was necessary. The English reader, however, is more than likely to reject Mr. McMaster's assurance that "fearless truthfulness" was "characteristic of the man" in favour of Capefigue's description of him as "one of the greatest charlatans of the eighteenth century."

WALTER LEWIN.

The First Nine Years of the Bank of England. By J. E. Thorold Rogers (Oxford: Clarendon Press.)

THIS little volume, not two hundred pages in all, will rank as a far more valuable contribution to English literature than its title, taken by itself, would seem to indicate. In amassing the materials for his history of agriculture and prices Mr. Rogers came across a weekly register by John Houghton (a well-known London apothecary with a taste for collecting, in his hours of leisure, statistics illustrative of the commerce of his day) recording the prices of the Bank stock from 1694 to 1703. As there were some difficulties in this document which his own unaided knowledge could not authoritatively settle, Mr. Rogers made enquiries at the Bank, and found to his surprise that the authorities of Threadneedle Street possessed no information about the price of their stock before 1705. On discovering this strange defect in the documentary records of the Bank, Mr. Rogers determined upon reprinting for the enlightenment of the world at large the table of prices and rates which this assiduous apothecary had compiled, and upon composing a narrative to show the reasons for the fluctuations in the weekly prices of the stock. For this resolution most of the students of our history at this period will express their grateful acknowledgments. The republication for general information of Houghton's price list would have been a boon by itself; but the gift becomes doubly acceptable when it is made the foundation for a brief history of the changes in the financial world after the Revolution of 1688, and for a summary of the characters of the city magnates who prospered or who suffered by the rise and fall in the Bank's securities. The weekly price list of such stocks supplies a barometer of opinion, possibly the most faithful that could have been selected, on the durability or weakness of the governments

that ruled England. Most of the city magnates who aided in the establishment of the Bank of England employed their talents and invested their capital mainly for the promotion of their personal interests, but their operations contributed to the stability of the government under which they lived. The careers of many of the city men who thrived under the sway of the Dutch William are not devoid of interest by themselves, and the names of some still flourish in the ranks of the peerage or the country gentry. This work of Mr. Thorold Rogers has drawn to the city life of the age the attention which it deserved, but had long wanted.

The subscription of the necessary capital for the Bank began on June 21, 1694, and the stream flowed rapidly. Queen Mary, either from the dictates of her own shrewd sense, or through the persuasion of her advisers, entered her name as subscribing the handsome sum of £10,000. Within the limits of a week nearly a million of money had been subscribed, and on July 24 the charter of the Bank was granted. The new financial undertaking was planted by the Whigs, and by that party the plant was brought to maturity. The names of the first directors are printed by Mr. Rogers at the commencement of his work. Some of them, like the Houlblons, Sir Theodore Jansen, who married a daughter of the Whig family of Harley, and Samuel Lethullier, were either Protestant refugees from abroad, or the descendants of those who had migrated to England in search of civil and religious liberty. Gilbert Heathcote was Godolphin's staunchest ally in the city, and for one Parliament represented a constituency subservient to the wishes of the Godolphins. Scawen, a man "vastly rich," inherited a name which, during the civil war, was found among the most conspicuous Presbyterian opponents of Charles I. The new institution was soon met by an influential opposition composed of dissentient Whigs (for rarely, indeed, does the whole body of that political party march in time) and Tories. The first class dreaded the growth of the Whig merchants in the city, and feared lest their loans to the government might weaken the Parliament's hold over public affairs. The second division of opinion, as representing mainly the country squires and the rural clergy, distrusted the moneyed interest, and looked with jealous eyes on any proposal which might increase the influence of the town populations. For some time the Bank's operations prospered in spite of the obstacles which such opponents could interpose. Until November, 1694, the price of its stock ruled either at or above par, the lowest being £100 and the highest £103; but at the beginning of the month the value of each share in the Bank was fixed at £60, and with this perturbation in the market the price fell to 3 discount (£57). From that time values rose rapidly; and at the close of January, 1696, the price had advanced to £107. Troublous times were once more at hand, and within a fortnight the value of the stock had receded to £83, and nearly a half of the premium had disappeared. Two reasons are given by Mr. Thorold Rogers for this excessive depreciation. The coin circulating in England had become exceedingly debased, and the weight in many cases fell short by a

third of the nominal value. Amsterdam was still the capital of the financial world, and to it the moneys required for the goods supplied to the English army in Flanders or on the Rhine were remitted; but, in consequence of the depreciation in the English currency, the rate of exchange ruled against this country, and the profits of the English bankers, through the light or inferior gold in their coffers, shrunk heavily. Another and still more serious danger threatened the very existence of the Bank of England. Two millions of money were required for the use of the State, and the House of Commons deliberated in committee on the manner in which the loan should be raised. The Bank of England was ruled out; exchequer bills were proposed and rejected; and, finally, it was agreed that a national land bank should be started by subscription, and such was the jealousy imported into the matter "none concerned in the Bank of England should have anything to do with it." This scheme was projected by Hugh Chamberlain, an accoucheur of some repute, whose evidence in favour of the genuineness of the old Pretender has been recently reprinted in Mr. Percy Thornton's treatise on the Brunswick accession, and also a dabbler in such financial schemes as "banks of credit on land rents." Mr. Rogers doubts whether this charlatan in finance was identical with the physician who wrote the treatise of the *Manuale Medicum*; but the identity is assumed, and probably with ample authority, in the *Dictionary of National Biography*. The absurdity of this scheme is shown in his proposal to lend "at the yearly interest of only twenty-five shillings for every £100, to continue but 100 years," and, in his belief that a lease for a long term of years was worth many times the fee-simple. The land bank was founded, and for some time proved a thorn in the side of the governing body of the older corporation; but a scheme resting on such wild propositions as those just mentioned could not contain the elements of vitality, and it quickly died, with the result that its projector was forced to flee the country. A second Act, mainly for increasing the capital of the Bank of England, was obtained in 1697, and for several years afterwards its proprietors had the pleasing satisfaction of observing that the price of their stock stood at a considerable premium. The stability of the Bank was assured, and its enemies combated against it in vain.

There are many pleasing digressions in the narrative of Mr. Thorold Rogers. At one time he steps aside from his main subject into an account of the origin of the goldsmiths' banks; at another he tells of the price of house rent in the city in 1697, and of the attachment which the citizens then had for cockneydom; and at a third he breaks the thread of his narrative by a description of the general character of the London merchants, and their love of city honours. Everyone knows that Mr. Rogers is a warm party man, and plunges into the political contests of to-day with keen zest; and in the preface to this work he shows us that those feelings of admiration or intense dislike extend even to past ages. Towards Sir Charles Duncombe, a zealous Tory and a not over scrupulous enemy of the Bank of England, he feels "almost as

much loathing . . . as every right-minded person feels towards Oates and Fuller," the latter of whom I may point out is incorrectly indexed as "Thomas Fuller." In 1695 both Duncombe and Godolphin sold their effects in the Bank of England, the value of the former's interest amounting to £80,000, and Mr. Rogers speaks of it as an attempt to discredit the Bank. The transaction may have been carried out with that intention; but I am loth to associate Godolphin—a moderate man, never anxious to provoke animosity—with such a plan; and it is equally possible, I think, that Duncombe wanted the money for the estate of Helmsley, which was then passing into his hands. "The bank will outlive the designs of all the Sir C——s and Sir L——s in England" is a prophecy quoted by Mr. Rogers from a contemporary pamphlet. He recognises that Sir C—— is Sir Charles Duncombe, but the identity of the other passage baffles him. Sir L—— is probably, as is the case with Sir C——, the initial of the Christian name, and may, it is not unlikely, stand for Sir Lambert Blackwell.

W. P. COURTNEY.

Free Field. Lyrics by R. St. John Tyrwhitt. (Macmillan.)

MR. TYRWHITT tells us in his preface that it is unwise to publish verses at a late period of one's life, unless after special experiences; but he has at any rate fulfilled Horace's injunction, and had time, even if he has not had occasion, to correct them *decuss ad unguem*.

The greater part of this volume was written a quarter of a century ago. Readers of that forgotten book, Galton's *Vacation Tourist*, will recognise many of the sentiments which Mr. Tyrwhitt here poetically expresses in his picturesque prose essay on "Sinai." Nearly half the present volume, indeed, is devoted to Palestine and the East—a fact not surprising to those who have known the writer's definitely directed life. Yet the writer of *Hugh Heron* could hardly send out a volume of poems without some reference to things nearer home, and of these, especially to Oxford; and it is not until he speaks of England that he finds his own right harmonies:

"There is a certain English tomb
Where, if God will, I will be laid.
There are sweet waters and deep shade,
And a small weather-beaten church
With lichen'd wall and ivied porch,
And all around faint roses bloom.
'Tis winter storm and summer rain
Fall various, like the tears of men."

Yet of the Eastern verses, many are distinctly good, especially those headed "The Wells of Moses." There is a trope of the setting sun which, in a poem of the East (where, in the days of the early Church, if not still, the sun is regarded as the symbol of Our Lord), we think very happy and appropriate:

"Through the fringe of yon fair cloud
He spreads out radiant hands to bless."

Mr. Tyrwhitt is well known for his lectures upon *Christian Art and Symbolism*, and for his *Pictorial Art*; and, further, through the sincere friendship of Mr. Ruskin, which he has enjoyed for many years. "He has long been my friend," wrote Mr. Ruskin of him in 1872, "and in the early days of

friendship was my disciple." It was Mr. Ruskin who pressed him to deliver the lectures, and when they were delivered he told people to read them "as they would my own." It is not strange, therefore, to find an echo of one friend's views in the other's verses:

"Though . . . all the pleasant streams that run
Be clogged with mills and foul with dyes,
Yet falls the night, and morn doth rise
In glory over all things mean."

Though this is surpassed by a finer passage in "The Wells of Moses."

"Progress treads a narrow way
As strait as Faith's, and marked with graves.
With fiery speed and sick delay:
With sloth compelled, and feverish haste
Uncomforted, across the waste
Which man may pass, but never tame.
He turns not from his deadly game:
He toils from sea to boundless sea:
He prays to rest where he would be:
He leaves the sand-trace called a Name."

Yet Mr. Tyrwhitt has, as we have said, expressed the other side of his nature with equal felicity, in such pieces as "Tiny" (the prettily pathetic tale of a dog), in "The Glory of Motion" (8. Oxfordshire, 1878), and in "Penelope Ann." These represent his lighter muse. But we are instinctively attracted back to his more thoughtful verses, such as "Whitsun Eve," a fine religious poem, and a profound personal lyric of introspection called "Heautontimoroumenos," though his verse is not in these so tuneful as in the descriptive pieces. Who that knows the Cherwell and its "sister floods" will not acknowledge the beauty of this from "Bendmere Stream":

"The rose is faint, the rose-leaves fall;
They drift like tinted scented snow:
Still as the light airs come and go
The full-blown flowers droop, one and all;
The Summer hath stilled the sweet birds' call?"

Though Mr. Tyrwhitt deserves all the praise which we have given him, he yet is again and again guilty of the most heinous metrical crimes. His favourite offence is the introduction of the dactyl in an otherwise evenly flowing trochaic poem. His use of the genitive singular (e.g., "Tiberias' gate") is unpardonable. Again, he is often condensed, obscure, and even confused; and these are grave faults. Yet for them he makes, we think, ample atonement. His line imitative of the rush of the boulder seems to me very good—"And you heard their boulders pounding helpless down his whinstone bed"; as, also, the sense of desolation which he conveys to us in the following (again from "The Wells of Moses"):

"Where barren foam meets barren sand,
And Commerce leaves her wrecks exposed
'Twixt weary sea and weary land."

But I have quoted enough to show the general character of Mr. Tyrwhitt's sedate and rich volume of collected poems. He will win the heart of all who love children by these last:

"(The fountains of our eyes are dry
With care and labour all the years:)
But this we care not to deny,
That, be they shed by girls or boys
For love or pain, or broken toys,
Even idle tears—are always tears."

CHARLES SAYLE.

A Literary and Biographical History or Bibliographical Dictionary of the English Catholics, from the Breach with Rome, in 1534, to the Present Time. By Joseph Gillow. Vol. III. G—K. (Burns & Oates.)

MR. GILLOW's volumes follow one another with most praiseworthy rapidity, and there are many signs of improvement as the work goes on. The volume before us is certainly better than either of its predecessors. It is no easy matter to compile a biographical dictionary of any kind that shall be worthy of the name. English Catholics present an exceptionally difficult field of labour. The terrible pressure of the penal laws caused almost every ecclesiastic to live in secret, and made the adoption of secondary names an almost absolute necessity. It also in a great measure hindered the authorship of books being assigned to their right owners. In the last century, when the more cruel of the statutes were not enforced, the popular feeling against professors of the ancient faith was so strong that it is quite certain that many persons who had no thought of apostasy concealed their religion from the public, and, therefore, find no place in Mr. Gillow's catalogue. For country squires and professional men who dwelt in the provinces this was, of course, impossible; but it was quite easy of accomplishment in London, and a few other large centres of population.

As we remarked on a former occasion, the later portions of Mr. Gillow's biographies are the best. The martyrs and other sufferers for religion in the long and dreary period that elapsed between Henry VIII.'s breach with Rome and the conclusion of the "Popish Plot" murders have had something narrated concerning them in other books of authority. It is for the period beginning with the revolution of 1688 and extending to our own time that those collections are of the greatest interest. Here we find gathered together for the first time notices of men well known in their day, and who did incalculable good in their own communion, whose memory might well have faded away almost completely had not Mr. Gillow devoted his time to this most useful labour. Mr. Philip Hughes, the musician, for instance, whose death occurred in 1880, was certainly worthy of permanent record, although in the sense in which the word is commonly used he was not, we believe, an author. We are grateful to Mr. Gillow for the space devoted to him. The same must be said of John Holden, the Jesuit, one of the most picturesque personalities of that generation which is now becoming a memory only. Holden was, as he used to say, a Lancashire lad, born near Garstang. He was ordained in 1825, and officiated as priest successively at Thetford, Spinkhill, Lowergate, and Lincoln. We believe his only claim to be counted an author rests on a controversial pamphlet long since forgotten. None, however, who once met the hard-working, fearless man, will ever forget the impression he made. When serving at Lincoln so popular did he become that he was for several years successively returned as poor-law guardian by an almost entirely Protestant vote. It is for the short memoirs of persons such as these that we consider Mr. Gillow's pages especially valuable. When dealing

with the histories of persons who took a prominent position in the world of politics he is not always successful. The life of James II. is, from our point of view, not a little too favourable. On the other hand, that of his mother, Henrietta Maria, is an admirable piece of condensation.

As a matter of taste, and because it causes reference to be easier, we wish Mr. Gillow had entered all peers and their wives under the family names, with cross-references from their titles. Surely it would have been far more convenient if all the Howards had come in one place. Space, too, might have been saved by the omission, in the bibliographical portion, of paragraphs which tell well-known facts concerning books not written by the author treated of. For instance, because Edward Jerningham translated some of the orations of Bossuet there was not the least necessity for telling us what were Charles Butler's opinions as to his eloquence.

Mr. Gillow is to be praised in one particular where many have gone amiss. He is most careful in avoiding vituperative language. We have not met with an instance where a person who held strong opinions adverse to Mr. Gillow's faith could with justice complain of his treatment of the subject. In some instances, where it would have been easy to have drawn attention to matters of a painful nature, he has wisely abstained from doing so.

A curious example is given from the Lancashire family of Houghton of two half brothers, each of them bearing the name of Thomas (p. 328). This confusing habit of calling two children of the same parents by an identical name was not uncommon in former days. Two brothers, each named Robert Screwton, are mentioned in the North Riding Quarter Sessions Records of 1622. In Mr. J. Meadows Cowper's extracts from the registers of Holy Cross, Westgate, Canterbury, we are informed that in the year 1625 John Currier had two sons, each bearing the name of John. EDWARD PEACOCK.

NEW NOVELS.

The Devil's Dis. By Grant Allen. In 3 vols. (Chatto & Windus.)

Miracle Gold. By Richard Dowling. In 3 vols. (Ward & Downey.)

In White and Gold. By Mrs. F. H. Williamson. In 3 vols. (Hurst & Blackett.)

The Golden Halcombes. By John Shaw. (Belfast: Olley.)

Doris Cheyno. By Annie S. Swan. (Edinburgh: Oliphant.)

The Golden Hawk. By Clive Holland. (Simpkin, Marshall & Co.)

The Abbey Murder. By Joseph Hatton. (Spencer Blackett.)

The Devil's Dis is not so carefully written as *Babylon*; nor is it so fantastically clever as *For Maimie's Sake*. But it is certain to take with the circulating-library public better than any of Mr. Grant Allen's previous works, partly on account of the exhilarating rush and sweep of its style, but mainly because of the incidents, at once original and melodramatic, with which it is crowded. It sug-

gests, indeed, the possibility that its author—by way of ridiculing the successes achieved on the tragic stage by love, hate, and ignorance—had set himself deliberately to prove that, with the help of the discoveries of science, a daring playwright may produce incomparably more startling effects. Dr. Chichele, the "emancipated" scientist and professor of aetiology, does not trust to such antiquated weapons of murder as the knife or the phial of poison to accomplish his ends. He works with chills and cholera germs. But whether or not Mr. Grant Allen's new book be a satire on science—and perhaps also on America—it contains a larger menagerie of scoundrels than any novelist has exhibited to the public for many a day. Leaving out of consideration Chichele, who, moreover, is really the victim of Evolution, as, when he is at his very worst, he but gives effect to the murderous instincts he has inherited, Chapparall Bill and Monte Joe are the very pink of American ruffianism; and Lizbeth, Chichele's slum-reared domestic, who aids her master (he is the murderer of her mother, but that is a trifle) in his designs against his wife, is the *ne plus ultra* of impish wickedness. Then, surely, there never were such agonies as Chichele's when dying, except, perhaps, those of his friends Ivan Royle and Mohammad Ali, after they had been cast out of the company of Monte Joe and Chapparall Bill, to die of starvation. In fact, everything and everybody is on a fatiguingly tremendous scale. Mohammad Ali denounces the dying Chichele as Miss Cobbe might denounce Pasteurism in a public lecture-room: "In the vain endeavour to make yourself guiltily happy, you have covered with misery, and almost covered with endless shame, the two women who, each in her way, most truly loved you." One of these two women, Seeta Mayne, the eminent novelist, and physically superb as an ideal countess, scolds like a Lola Montez. "You cad! you cur! you miserable sneak, you" (it is her brother she addresses thus), "to take that man's money when you called him a baboo! Why he's worth ten thousand such limp parodies of a man as you are!" In short, when the language of the leading characters in *The Devil's Dis* is not taking one's breath away, their actions are making one's hair stand on end. None of Mr. Grant Allen's characters, moreover, can be said to show him at his best. The most notable of them all, of course, is Mohammad Ali, the Mussulman doctor, Chichele's best friend and worst enemy. But perfection of Arab chivalry, scientific culture, Bond-street, honour, truth, justice, and feline cunning, though he be, his everlasting "Kismet" and his habit of playing the stylist in ordinary conversation become tiresome. Ivan Royle, Chichele's rival, is a poor creature; and, as for Olwen Tregellas, really she ought to have a place in one of Mr. Black's, not Mr. Grant Allen's, novels. Mr. Grant Allen could hardly write ill, though he tried; and there are many passages—especially descriptive passages—in *The Devil's Dis* which are as good as anything he has ever published, being, in point of style, a happy medium between Macaulay's Essays and good unaffected club talk. He pleads guilty to one positive digression; but there are in *The Devil's Dis*

many pages—and these not the least delightful—which are really, though not nominally, digressions, and which seem to prove, among them, that he now loves England more than he does the United States.

Mr. Dowling's new book is singularly unsatisfactory, being tedious, badly constructed, laden with *quasi* philosophy and *quasi* philanthropy, and, in fact, totally uninteresting. There is in it a curious creature, who has a little of Quilp and Quasimodo in, or at least about, him; but he falls off, and becomes utterly intolerable before the end even of the first of Mr. Dowling's three volumes is reached. The love-making in the story—such as that is—which is contributed by two girls, Dora and Grace, and their common lover, is on a par with the rest of it. The only thing in *Miracle Gold* which at all reveals Mr. Dowling at his best is the plotting and counter-plotting of the two secondary scoundrels.

In White and Gold, though not remarkable in any way, is a straightforward story with a somewhat original plot. The heir to some money, which has mysteriously disappeared, suspects his nephew of being the thief, and his own widowed daughter, who ought earlier in her life to have married her cousin, of being his accomplice. She, too, believes in her cousin's guilt, and impulsively marries him in the confidence that the law will not permit her to give evidence against her husband. He is quite innocent, of course, and in due time the real thief confesses. This all takes three volumes, which is rather too much. At the same time, Mrs. Williamson writes agreeably; and though there may be a good deal of unnecessary detail in her volumes, there is nothing of the character of padding. A subsidiary love affair, which has a somewhat tragic ending, is skilfully developed.

Mr. John Shaw can tell a story vigorously, and he is evidently a firm believer in the doctrines of the United Kingdom Alliance. But he has attempted far too much, in the way both of plot and of preaching, in *The Golden Halcombes*. The interest in it shifts so rapidly from England to Australia, and from Australia back to England, and there is so much fighting and drinking, and lecturing against drinking, and quarrelling, and making it up again, and marrying, first between the wrong and then between the right folks, that had Mr. Stiggins met all the characters in one room he would almost have been justified in coming to his sweeping conclusion that "this meeting is drunk." Two things seem certain, that Stephen Halcombe, the exiled son of Squire Halcombe, was Tom Barton in Australia, where he drank too much—of course—but also proved too much for a number of scoundrels, and that he does not marry, as he ought to do, in the end. It would be in the last degree risky for anyone to venture offhand to dogmatise as to the other contents of *The Golden Halcombes*, unless he commits the fatal mistake of trying to read it a second time. This is at once a one-volume and a single-perusal novel, and, therefore, may be found profitable on a longish railway journey—say to Torquay. Whoever is unwise enough to try to read it a second time will learn to his cost that "the glossy blackness of Lady Margaret Halcombe's hair had not been impaired by

time, nor had her lustrous black eyes lost any of the brightness which had played havoc with many hearts before Stephen Halcombe had aroused so much wonder and envy by his successful wooing of the proud daughter of John Markham, Earl of Hayswood," and that "there was a whispered legend in the servant's hall that 'a black Halcombe was a bad Halcombe.'"

The squire and the most of his relations in *The Golden Halcombes* look unreal—as if they had been taken from old fashion-plates, or Mrs. Bray's novels. The Australian ruffianism and the English teetotalism, however, are modern and genuine.

Was *Doris Cheyne* written for the sake of the poor and faded views of the Lake District which appear in it? It is hardly possible not to entertain some suspicion of this kind, for the majority of the characters might quite as well have been placed in Portobello, Cork, or Scarborough, as in Keswick. This suspicion apart, *Doris Cheyne* must be allowed to be at once the most ambitious and the most successful book that Miss Swan has yet written. Her characters are few in number, but they are all drawn with the utmost care. Of Doris Cheyne's two lovers, the rough diamond of a squire is, perhaps, to be preferred to the doctor, for he understands his own feelings, which the other does not. Doris herself, who is compelled, by the death of her father, to become, in almost every sense, the head of a household that has been petted into selfishness, looks as if she had been drawn from life. Self-sacrificing though she is, she has yet strength of character and firmness of purpose. Her "Uncle Penfold," too, is a good example of the grave, sagacious man of business, in whom kindness is balanced, not blunted, by prudence. The plot of *Doris Cheyne* is good of its unpretentious kind. But there is one weak thing in it: the match-making at the end is improbably wholesale and school-girlish.

The author of *The Golden Hawk* says, in his preface, that should his pages "prove the means of pleasantly passing a weary or an idle hour, his object will have been accomplished." This object, at the very least, *The Golden Hawk*, an old-fashioned story—old-fashioned in style as well as in plot—of treasure-hunting, piratical craft, slaughter on a considerable scale, and a hideous black compound of "She" and Meg Merrilees, called Mima, does accomplish. It is a story, and does not pretend to be anything more. The hero does not marry the heroine in the end, as he ought always to do in a novel of the old-fashioned sort.

Mr. Joseph Hatton knows provincial England. He is, if not a remarkable historical romancer, a conscientious historical costumier; and he has a command of what is unhappily termed "nervous English." The Yorkshire scenery, the yeomen, the maids, and the highwaymen, in his *Abbey Murder* are quite up to his usual standard; and the plot moves on successfully till the murder of Squire Bellingham is reached, but after that crime is committed it falls off. Mr. Hatton has not the art of making a story end badly. The tragedy of poor mad Mary Lockwood and Jack Meadows is as unreal as it is painful. The two highwaymen, Parker and Foster—

the "gentleman" and the blackguard—are cleverly contrasted; and there is melodramatic power in the scene in which Mary sees her lover and his accomplice bury the body of the murdered squire. WILLIAM WALLACE.

SOME FOREIGN THEOLOGICAL BOOKS.

Didascalia COCXVIII. Patrum pseudepigrapha, e Graecis codicibus re.ensuit Petrus Battifol, Coptico contulit H. Hyvernati. (Paris: Leroux.) More than a hundred years have passed since Mingarelli published, in 1784, the Greek text of the *Didascalia*; and more than two hundred years since Arnold, in 1685, edited from one single MS. the *Syntagma doctrinae*, which is in part identical with the *Didascalia*. M. Battifol has not availed himself of those editions for his work. He has made use of three Greek MSS., hitherto unknown, to which M. Hyvernati has added the readings of the Turin Coptic MS., omitting, however, to consult the Coptic Codex Borgianus at Naples. Although the materials for a new edition of the *Didascalia* have not been completely used, the present text appears to be far superior to that of the earlier editions. In some instances, quoted by Eichhorn (*Theol. Literaturzeitung*, 1887, No. 24), the true meaning of certain rules imposed upon the early monks, with respect to fasting and to food allowed in case of sickness (*Didascalia*, p. 15), has now, for the first time, been made clear. The *Didascalia* consists of two parts. The first contains the Nicene creed, as well as an interpretation of the same, very similar to *Athanasii interpretatio in Symbolum* (Migne, xxvi., col. 1232). The second part contains rules and regulations drawn up for the benefit of monks and clergy; and this, again, is identical with another so-called Athanasian work, the *Syntagma doctrinae ad monachos* (Migne, xxviii., col. 835). The text of the *Didascalia*, as it exists at present, is a Greek translation from the Coptic; but the Coptic text itself is not, as M. Battifol states (p. 21), a version of the Athanasian *Syntagma* as it exists at present. That treatise, as Revillout has shown (quoted by Eichhorn), formed part of the Acts of the Alexandrine synod 362. It was afterwards revised and made into the separate book which has come down to us. In Alexandria, moreover, those acts of the council of Nicea which had been lost were drawn up afresh. Because the acts of the Alexandrine synod contained those of the earlier council, they themselves were ascribed to the council of Nicea. The *Didascalia*, though evidently not drawn up at Nicea, speaks in the name of "the 318 holy fathers." The *Didascalia*, or rather the *Syntagma*, has drawn, as was first noticed by Prof. Harris, to a considerable extent on the *Didache*. Not only do we find the moral commandments contained in the first six chapters of that book again in the *Didascalia*, but some of the disciplinary rules of the latter—for instance, those enjoining monks not to observe the Jewish Sabbaths (p. 11); to regard the *τετράδα καὶ παρασκευὴν* as fast days (p. 12); to know a handicraft, or to work on the fields (p. 15); and to give the firstfruits to the priests (p. 16)—have been evidently taken over from the "Teaching of the Apostles." The *Didascalia* is a book of the greatest interest, for the information which it gives as to the origin and early growth of monastic institutions; and the manner in which the exhortations, addressed at the close of the first century by an unknown prophet to the primitive Christian congregations, have been in this book changed into rules and regulations imposed in the fourth century on the Egyptian clergy, is both instructive and significant.

Doctrina Duodecim Apostolorum Canones Apostolorum Ecclesiastici Ac Reliquae Doctrinae De Duabus Viis Expositiones veteres. Edidit Franciscus X. Funk. (Tübingen: Laupp. London: Trübner.) The author at first only purposed to include a critically revised text of the *Didache* in a series of the Apostolical Fathers which he is editing. The work, however, which he had undertaken demanded a more especial care and attention in regard to a book so recently discovered, and the result has been the publication of a complete commentary on the *Didache*. The prolegomena deal with the usual introductory questions (eleven chapters), the authorship, the genuineness of the book, and the relation which it bears to other works of the early Christian fathers. Dr. Funk is a very conservative critic. It cannot be said that he has made any fresh discoveries, or that his arguments (pp. 9, 10) have in any way shaken the position of Bryennius and Harnack, who maintain that the Epistle of Barnabas is prior to the *Didache*. He is driven by his theory to assert, that in the passage, "Thou shalt love thy Maker" (Ep. Barnab. xix. 2), the author of the epistle expunged the words, "God thy Maker," *quod absurdum est*. In this edition the text of the *Didache* is published by the side of the Ecclesiastical Canons, the Seventh Book of the Apostolical Constitutions, and the Epistle of Barnabas, chap. xviii.-xx., all of which contain portions of the old Jewish manual, *The Two Ways*; the references to that book are in every case marked by different type. The commentary on the text of the *Didache* is full, and in most cases exhaustive. It is, however, characteristic of the manner in which the investigation of this subject has been prosecuted that, since the publication of Dr. Funk's work, fresh light has been thrown on some of the obscure sayings of this book. The expression (x., 6) *ἡ ἀνὰ τὴν θεῶν δαβὶς*, where the author suspected a corruption in the text, has been almost conclusively proved to be the right reading from Justin Martyr (Dial. 277 B.) compared with Ep. Barnabas (xii.). The most difficult passage of all (xi. 11) where the true prophet is said *ποιεῖν εἰς μυστήριον κοσμοῦ ἐκκλησίαν*, has received light from the same quarter. To judge from parallel sentences in Justin, the passage should be translated, "And any prophet doing (what he does) for an earthly (sign of) mystery of the Church, shall not be judged of you." Altogether, the commentary is valuable, not so much by presenting any fresh elucidation of the text, as by carefully bringing together and comparing with one another the annotations of previous critics. Of these, Dr. Funk will, no doubt, be able, in a second edition, to record a still more recent series. He will also have an opportunity of correcting a number of misprints which we have noticed in this edition.

L'Origine du Péché dans le Système théologique de Paul. Par Prof. Auguste Sabatier. (Paris: Leroux.) In his large work—*L'Apôtre Paul*—published in 1881, the author touched upon the question which he now makes the subject of a monograph. He shows remarkable skill in dealing with the subject. We feel throughout, while reading his book, that we are listening to the argument of a trained controversialist. Prof. Sabatier repudiates emphatically the traditional view held by the Church; but he denounces also, on the other hand, the theologians of Hegel's school, who resolve "the workings of sin and grace into a dialectical process" (p. 32). He himself endeavours to steer a middle course. He confines himself practically to a consideration of the terms "flesh," "law," "spirit," as we find them in the Pauline Epistles, and of the relationship which these three bear one to another. The results at which he arrives are, in the main,

accurate so far they go; but they do not, in our opinion, cover the whole of St. Paul's theology. Whether true or not, the doctrine of the ancient church, which the author attacks with such animus, is co-extensive with the teaching of the apostle; but his own view falls short of either system. It is impossible to pass lightly, as the author does (p. 19), over the last and deepest question regarding the origin of evil; or to deny (p. 11)—in the face of passages like 2 Cor. xi. 3, and 1 Tim. ii. 14—that the Apostle did believe in a first transcendent and efficient cause of all sin. According to the system here propounded, evil is the natural and necessary result of the position in which the flesh, the law, and the spirit are placed towards each other from the beginning of the creation. Transgression is the last act but one in the drama which these three powers enact within the conscience of man, and which must be repeated in every human being, no matter whether his parents be sinful or sinless. If, however, the apostle does not believe that a state where the flesh acts in harmony with the law is conceivable—nay, that our first parents were actually in that state ere “they were deceived”—then the stress which he lays on the words, so often repeated—“by one man sin entered into the world, and death by sin”—is entirely without meaning. The passages (Rom. v. 12 sq., and 1 Cor. xv. 21 sq) are clear and explicit enough. They acquire tragic force from the context in which they stand. According to the author, the conflict between the flesh and the law is overcome by the death of the flesh, “by humanity dying and rising again in Christ” (p. 24); and that part of the Pauline system which rests on the sacrificial ideas of the Old Testament (Rom. iii. 24, 25; 1 Cor. v. 7; Gal. iii. 13) does not in his book receive the position which is due to its importance. Prof. Sabatier endeavours to bring the views of which he treats nearer to modern consciousness. He alters and modifies them in doing so. It is his own system with which he presents us, not that of St. Paul.

M. SABATIER has also sent us a reprint from the *Revue de Théologie et de Philosophie* of his article, entitled “Les Origines Littéraires et la Composition de l'Apocalypse de Saint Jean” (Paris: Fischbacher). It deals with the novel theory advocated some two years ago by Dr. Vischer, with the approval of Prof. Harnack, that the Apocalypse is in its main substance a Jewish document (see ACADEMY, February 12, 1887). M. Sabatier agrees with this theory, so far as to recognise a Jewish kernel in the book, which he would assign to about A.D. 70; but he argues for a much larger share to be given to the Christian editor or adapter, whom he places in the closing years of the century. He refers to an important contribution to the question, from a more conservative standpoint, in the *Revue de Théologie*, of Lausanne, by M. Bovon.

Wissenschaftlicher und praktischer Commentar über den Ersten Petrusbrief. Von Joh. Martin Usteri. Erster Theil, die Auslegung. (Zürich: Höhr; London: Trübner.) “Much study is a weariness to the flesh, and of making many books there is no end,” says the Preacher. The truth of his observation is best borne out by the number of commentaries that have been written on his own short volume. Whoever wishes to add one more to the series of expositions of the Bible must have something more to offer than a compilation from earlier works. The only apology a commentary nowadays can make for its appearance consists in its being new in form or matter. It would be unjust to deny of the work under review that it is novel, at least, in form. Dr. Usteri has had the courage to reverse the order generally observed in books of this character. He gives us in the first part, just published, the exegesis of the

Epistle of St. Peter; and he promises to add in a second part, shortly to appear, the introduction. Such a transposition may be defensible in cases where the introduction deals mainly with the question of the authenticity of the book, and where the answer to that question is given on evidence largely supplied by the text itself. Here, for instance, the author tries to obtain all the information he can from a careful analysis of passages like i. 8, “Whom having not seen ye love,” or v. 2, “I . . . a witness of the sufferings of Christ,” in respect to the Petrine origin of the epistle. He has not overrated the evidential value of such passages. It can be determined, however, only when the second part appears whether the conclusions he draws from them are correct. The commentary itself is of the grammatical and historical type. Its material is largely taken from works that have appeared of late years by Huther, Hofmann, and Weiss. But the matter thus obtained seems well arranged. The arguments for and against the explanation of every important passage are balanced; and the results thus arrived at commend themselves to sound judgment. The author further endeavours to consider—what is so frequently neglected in commentaries of the exact and scientific kind—his subject in its religious and devotional bearing; and the hints which he occasionally gives to preachers in his comment, for instance, on (i. 1), “the elect, the sojourners in the diaspora,” will be found very suggestive. For this part of his work he has drawn largely on the well-known exposition of Archbishop Leighton. Characteristic also is the large and, in the main, happy use Dr. Usteri makes of the early patristic writers. The quotations which he adduces from the Epistle of Clement and the Apostles' Teaching with reference to 1 St. Pet. v. 2, are very much to the point. We are unable, however, to accept his conclusions. It is possible that “the elders,” *πρεσβύτεροι* (*ἐπισκοποῦντες*), in 1 St. Pet. v. 2 are identical with “the rulers,” *ἡγούμενοι*, 1 Clem. i. 3; but the difference the author makes between them and “those that speak the Word of God” is without foundation. The passages he quotes (1 Thess. v. 12; 1 Tim. v. 17; Hebr. xiii. 7) seem to us to prove, on the contrary, that one of the essential functions of the rulers, the elders (the bishops) was preaching.

Das Gespräch Jesu mit der Samaritanerin. Von F. L. Steinmeyer. (Berlin: Wiegandt & Grieben; London: Trübner.) This is one of a series of contributions which the author is making to the elucidation of the Gospel according to St. John. The first part of the series contains “the high priestly prayer” (John xvii.), noticed in the ACADEMY, July 9; this the second, “the conversation with the Samaritan woman” (John iv.), and the third will treat of “the resurrection of Lazarus” (John xi.). The part now under review possesses all the merits which we found in the first. Its style is clear, readable, and even elegant. It abounds with well-chosen similes and with pointed aphorisms. It is not quite free, however, from a certain mannerism, and from the affectation of introducing French words like *connivert*, *avançirt*, *aperçus*, &c., where German would have done as well. There is the same mastery of detail, the same avoidance of what is superfluous, and the same subordination of all the references and quotations, which are necessary to the elucidation of the text, to one leading idea. In his exposition of the conversation as recorded by St. John, the author starts from the right point. His endeavour, however, to work out his view in a thoroughly logical and consistent manner, and at the same time to discard the explanations hitherto offered by all commentators, ancient and modern, leads him eventually into a position which appears to us false. His emphatic asser-

tion (pp. 40 and 42)—that Jesus's purpose was to reveal himself fully as prophet to the Samaritan woman, and later on to her countrymen, but not to seek for them “as for lost sheep”—renders the first part of the conversation (v. 10), “If thou knewest the gift of God,” &c., practically void of meaning. And, according to this theory, the following verse 18, “whom thou now hast, is not thy husband,” was intended to display the supernatural knowledge of the prophet, not to touch the conscience of the woman (pp. 50, 56). Yet, as the author himself admits (p. 43), never have theologians of different schools agreed more cordially than on the fact that as Chemnitz puts it, “Ad agnitionem peccatorum et irae Dei Jesus eam ducere voluit.” In spite of this somewhat serious mistake, the book remains a valuable addition to recent expositions of the Gospel according to St. John.

NOTES AND NEWS.

WE hear that Mr. Browning has gone anew through the whole of his translations from the Greek with their originals, revising them in accordance with the latest criticism. The new edition of his poems is a decided success. All the large-paper copies of it were at once taken by the trade.

PART IV. of Dr. Murray's *New English Dictionary* will be published in a week or two in two sections. Section I. will contain the remainder of the letter B (BRA-BYZ), together with the title-page, preface, &c., to vol. i.; and Section II. will include the opening portion of the letter C, extending to CASS. Mr. Henry Bradley is at work on vol. iii., beginning with the letter E; and there is good reason to hope that the publication of the successive parts will be considerably accelerated by the new arrangements.

MESSRS. BLACKWOOD announce as in the press the long-promised work by Mr. Laurence Oliphant on *Scientific Religion*; or, *Higher Possibilities of Life and Practice through the Operation of Natural Forces*. It will have an appendix by a clergyman of the Church of England.

THE first two volumes of Mr. H. E. Watts's new translation of *Don Quixote*—vol. i. containing the *Life of Cervantes*, and vol. ii. a portion of the text—are announced by Mr. Quaritch to appear early in May.

MR. BERNARD BOSANQUET's new work, *Logic*; or, *the Morphology of Knowledge*, will be published very shortly in two octavo volumes by the Clarendon Press. The conception of logical science by which the author has been guided is that of “an unprejudiced study of the forms of knowledge in their development, their inter-connexion, and their comparative value as embodiments of truth.”

THE next volume in the series of “Philosophical Classics for English Readers” will be *Bacon*, by Prof. Nichol, of Glasgow.

MESSRS. MACMILLAN will shortly publish a volume of selections from Lord Tennyson's shorter poems, edited for educational use by two English professors at the Presidency College, Calcutta. Among the pieces chosen are “Morte d'Arthur,” “the Lady of Shalott,” “Oenone,” “Ulysses,” The ode on the Death of the Duke of Wellington, the ballad of “The Revenge,” and “Dora.” Tennyson is probably the only living author whose works are used for examination purposes in India; and, if so, they certainly require notes. Only the other day we heard that the entire body of candidates at Madras was hopelessly puzzled by the line from “The Princess”:

“Was proxy wedded to a bootless calf.”

Messrs. GRIFFITH, FARRAN, OKEDEN, & WILSH are proposing this year to make a new departure in the manufacture of illustrated artistic gift-books. Instead of going to Germany for them, as heretofore, they are preparing a series to be called the "St. Paul's Series of Monotint Books and Booklets," which will be entirely home productions, designed and illustrated by English artists, under the editorship of Mr. George C. Haité, printed by English printers on English-made paper, and bound by English binders.

Messrs. APPLETON & Co. will publish immediately the fourth volume of their *Cyclopaedia of American Biography*. This volume will bring the work up to the letter P, and include articles on "Gen. McClellan," by Prof. Coppée; "Gen. Sir E. M. Pakenham," by the Rev. George Gleig; "John Lothrop Motley," by Dr. Oliver Wendell Holmes; "Longfellow," by Prof. C. E. Norton; and "James Russell Lowell," by Mr. C. D. Warner.

A NEW history of, and guide to, Trinidad, by Mr. J. H. Collins, Superintendent of the Port of Spain Model School, is announced by Mr. Elliot Stock for early publication.

As a memorial of last year's Mary Queen of Scots tercentenary exhibition at Peterborough, it is proposed to print one of the MSS. from Losely there exhibited. This is an account of "The Examynacon and Death of Mary Queen of Skottes," signed by R. Wynkfield, which is of special interest as identifying Burghley's correspondent, "R. W.," and as differing in some details from the common reports. It will be published, by subscription, by Messrs. Taylor & Son, Northampton.

A CHEAP edition, being the third, of Mr. Holmes's *History of the Indian Mutiny* will shortly be issued by Messrs. W. H. Allen & Co.

THE following will probably be the contents of the first number of the new *Universal Review*, under the editorship of Mr. H. Quilter: "Proem," by Mr. Lewis Morris; "The State of Europe and the Position of England," by Sir Charles Dilke; "M. Zola's *Idée Mère*," by Mrs. Lynn Linton; "Boulanger," by Mrs. Crawford; "The House of Lords," by the Earl of Pembroke; "The Medical Profession and the Medical Press," by Dr. Edward Berdoe; "A Roman of Greater Rome," by Dr. A. W. Verrall; "What the Skull spake," by Sir Edwin Arnold; "The Royal Academy and English Art," by the Editor; "La Musique dans Balzac," by M. Louis de Fourcaud; "English Investors and American Securities," "L'Immortal," by M. Alphonse Daudet; "The World in May," by the Editor. The chief illustrations will be typogravures executed by Guillaume frères, of Paris, from pictures and drawings by the following artists: Sir F. Leighton, Frith, Broughton, Aumonier, Perugini, Colin Hunter, Henry Moore, Logsdail, Waterhouse, Riviere, Poynter, David Murray, Herkomer, Alfred Hunt, Corbett, Blair Leighton, Willy Schlobach, T. Charlet, and Denby Sadler.

BEGINNING the May number, *Colburn's United Service Magazine* (founded in 1829) is amalgamated with the *Army and Navy Magazine*, published by Messrs. W. H. Allen & Co.

DR. A. BAIN will open a discussion at the Aristotelian Society on Monday next, May 7, on the subject "What is the Distinction between Desire and Will?" dealing with some controverted points in recent ethical writings. Mr. W. R. Sorley, Mr. J. S. Mann, and the Rev. E. P. Scrymgeour, will take part in the discussion.

SIR WILLIAM WILSON HUNTER, late director general of statistics to the Indian government,

will read a paper on "The New Industrial Era in India" at the next meeting of the Royal Colonial Institute, at the Whitehall Rooms, Hôtel Métropole, on Tuesday next, May 8. The chair will be taken at 8 p.m., by the Duke of Buckingham and Chandos, formerly governor of Madras.

Shakspeare and Bacon: the Facts and Fallacies of the Case, is the title of a lecture to be delivered by Mr. Gerald Massey on May 13, in the Cavendish Rooms, Mortimer Street, Langham Place, as the first of a course.

THE annual conversazione of the Royal Colonial Institute will be held at the Royal Albert Hall and the adjacent conservatory on Thursday, June 28.

MR. PERCY FURNIVALL has reprinted as a pamphlet (Iliffe & Sons) his paper read before the Society of Cyclists on "Physical Training for High-Speed Competitions."

THE Suomalaisen Kirjallisuuden Seura—which is, being interpreted, the Society of Finnish Literature—has sent us eight neatly printed and paper-covered volumes, each containing a play of Shakspeare, translated into Finnish by M. Paavo Cajander. They are published at Helsingfors, at dates ranging from 1879 to 1887. The excellence of the typography almost persuades us to the task of learning Finnish, which would certainly be more profitable than to search for cryptograms in the first folio. This is how Hamlet's familiar soliloquy—"To be, or not to be"—begins, in what looks like a word-for-word rendering:

"Ollako, vaiko ei, se kysymys:—
Jalompaa onko hengen kärsiä
Kaikk' onnen tuiman iästä sekä nuolet,
Vai käydä miekkaan tuskein tulvaa vastaan,
Lopettain kaikki?—Kuolla,—nukkua,—
Ei muuta;—luulla, uness' että päättyy
Tuhannet kiusat nuo ja sieluntuskat,
Nuo lihan perinnöt,—se loppu hartaast'
Ois halattava."

UNIVERSITY JOTTINGS.

AT an influential meeting held on Wednesday in Jerusalem Chamber, it was proposed—with general acceptance—that the memorial to Matthew Arnold should take the form of a medallion bust in Westminster Abbey, and a scholarship in English literature at Oxford.

CANON CHEYNE, of Rochester, Oriel professor of the Interpretation of Holy Scripture at Oxford, has been appointed Bampton lecturer for next year.

THE senate of Dublin University has conferred the hon. degree of LL.D. upon the Bishop of Durham, who has also been appointed Lady Margaret's preacher at Cambridge for the ensuing year.

THE statute for lending from the Bodleian library "such printed works as in case of loss or damage can be replaced without difficulty" to certain university institutions will come on for acceptance in Congregation next Tuesday. Meanwhile, in default of Prof. Chandler, Mr. F. Madan, sub-librarian of the Bodleian, has issued a pamphlet containing his final protest against any lending whatever. At the end he has appended, *more suo*, a bibliography of the printed pieces to which this controversy has given occasion.

MR. JAMES BRYCE, regius professor of civil law at Oxford, was to deliver a public lecture to-day (Saturday) on "The Relations of Law and Theology as illustrated by the University of Al Azhar."

PROF. KENNEDY is lecturing this term, at Cambridge, on "The Histories of Greece and Rome compared as to their respective Influence on Language and Thought in Modern Europe and its Colonies."

MR. C. G. BOURNE, fellow of New College, has been appointed to take charge of the marine biological station at Plymouth, which will be opened in the course of the present summer.

DR. MARKBY has, we regret to learn, announced his intention to retire from the supervision of the Indian Civil Service students at Oxford.

THE Barlow lecturer on Dante at University College, London—the Rev. Dr. Moore, principal of St. Edmund Hall, Oxford—proposes to give a course of six lectures at Gower Street, London, at 3 p.m., on the following Wednesdays and Thursdays in May—16, 17, 23, 24, 30, and 31. The opening lecture on Wednesday, May 16, will be on "Dante and Sicily."

MR. W. MARTIN CONWAY, professor of art at University College, Liverpool, has been chosen to represent Victoria University at the commemoration of the eight hundredth anniversary of the foundation of the University of Bologna, to be held in June.

THE council of University College, Liverpool, propose to appoint a lecturer upon "Political Economy, the History of Industry and Commerce, and Commercial Geography." The appointment will be for a term of three years, at a salary of £200 a year, besides fees.

THE *Oxford Magazine* of May 2 contains an elaborate review of Mr. Margoliouth's "*Analecta Orientalia ad Poeticam Aristotelem*," signed with the initials S. R. D.; and also an article seeking to localise some of the descriptive passages in Matthew Arnold's "*Thyrsis*."

TRANSLATION.

ÆSCHYLUS IN ANAPAESTIC METRE.

Agam. 717-35.

As a lion's whelp she hath been,
A child of the house for a day,
Whom a man adventures to wean,
And 'tis tame and gentle at play,
The pet, while a summer runs,
Of the old and the little ones,
As it fawns with a hungry mien.

But the lion's heart doth rouse,
And 'tis quick to return his care
With a fierce and free carouse;
For never a knave will dare
To prevent the gory feast,
Or deliver his sheep from the priest
Whom the fool would hire and house.

Agam. 759-81.

For Violence, as a seed which was sown of old,
A creature doth surely breed, who is young and bold,
And she waxeth in woe upon men in the day of doom;
For the new-born beareth again, and the fruit of her womb
Is Lust and Defiance, a fiend who is stronger than man,
A demon whom men cannot bind nor Heaven shall ban.
And the dwelling accurst is afraid of the deadly twins,
For their visage is dark with the shade of the primal sins.
But Justice abideth bright in the smoky cot,
In the righteous is her delight, with the just her lot,
And she holdeth her eyes aloof from the smirched gilt,
From the pride of the sinner's roof, that his hands have built.
She disdaineth the power and praise that is miscreate.
With the just is her home, and her ways are the ways of fate,

GEORGE C. WARR,

MAGAZINES AND REVIEWS.

THE Rev. S. Coode Hore contributes to the May number of the *Antiquary* some interesting gossip on vane and weather-cocks. The cock, on account of its connexion with the events leading to the crucifixion, has always been the most common form which the weather-vane has assumed in Christian lands; so common is it that a fox, an arrow, or a peacock always goes among rural people by the name of a weather-cock. Objects of this kind are very liable to destruction, and we do not suppose that there are many very old examples; but illuminations and engravings, to some extent, supply their place. The weather-arrow was and is a very common object; from its form it is more easily moved by the wind than representations of animals. There seem to have been many heraldic vanes in former times. Very few examples remain; but some modern ones of the same character have been produced in recent years. Mr. C. E. Plumtre's paper on "The Rise and Development of Philosophy during the Period of the Renaissance" is a good one. He enters into the reasons why the witchery madness was more terrible among those races which had accepted the Reformation than in Italy. We have no doubt that he is on the right track; but, at present, little is known as to Italian witchcraft and its allied superstitions. The late Mr. Westropp's essay on finger-rings is continued. It is illustrated by several interesting engravings, some of which we think we have seen in other books. Mr. Peacock communicates certain notes on holy bread, pointing out that uninstructed people have confounded the *panis benedictus* with the eucharist.

CORRESPONDENCE.

TWO MORE POEMS BY CHAUCER.

II.

Cambridge: April 30, 1883.

In my last letter I gave the text of the "Balade of Complaint," in three stanzas, from MS. Addit. 16165, fol. 266, back. If this Balade, so exactly in the style of "Troilus," is not by Chaucer, it is indeed difficult to point to anyone else who could have written it.

I found another similar Complaint in MS. Harl. 7333 (which also contains the "Canterbury Tales"), at fol. 136. This is too long for quotation, as it extends to seventeen seven-line stanzas, or ninety-one lines; but I shall include it in the appendix to my edition of *Chaucer's Minor Poems*, now in the press. It is an extremely ill-spelt and bad copy, with several interpolated expletives, and with (what is worse) several omissions of words that are as necessary for the sense as the metre. At the bottom of the preceding leaf is the absurd heading: "And next folowynge begynnith an amerowse compleynte made at wyndesore in the laste May tofre Nouembre." This mysterious date is beyond me. Even if we read *day* for *May*, we are little the better for it. Happily the poem dates itself, being meant for a valentine, as will appear; and we may accept the title—"An Amorous Complaint." The note that it was "made at Windsor" is, however, extremely interesting. As in the other case, the agreement with Chaucer's style is complete; and, as the poem is of some length, it is more easily appreciated.

In "Troilus," iv. 516, we have the line: "Of me, that am the wofulleste wight." In the "Amorous Complaint" *wofulleste* becomes

sorwfulleste, without any increase in the number of syllables, because Chaucer uses *sorw* or *sorwe* as equivalent to a monosyllable in many places. I now quote the first stanza in an amended spelling:

"I, which that am the sorwfulleste man
 That in this world was ever yit levinge,
 And leest recoverer of him-selven can,
 Beginne thus my deedly compleyninge
 On hir, that may to lyf and deeth me bringe,
 Which hath on me no mercy ne no rewthe,
 That love hir best, but sleeth me for my
 trowthe."

The word *recoverer* means "recovery." In l. 4 I omit an interpolated *right* after *Beginne*. The scribe (is it Shirley himself?) did not know that *Beginne* has usually three syllables. The ninth stanza (amended) is beautiful:

"Yit is al this no lak to hir, pardee,
 But God or Nature sore wolde I blame;
 For, though she shewe no pitee unto me,
 Sithen that she doth othere men the same,
 I ne oughte to despyse my ladies game;
 It is [hir] pley to laughen when men syketh;
 And I assente, al that hir list and lyketh."

The pathetic resignation, with a hint of humour, in the last line is inimitable; the poet has surpassed himself.

But the last stanza is, to Chaucer students, positively startling:

"This Complaint, on Seint Valentines day,
 Whan every foul [ther] chesen shal his make,
 To hir, whos I am hool, and shal alwey,
 This lital song and this complaint I make,
 That never yit wolde me to mercy take,
 And yit wol I [for] evermore her serve,
 And love hir best, although she do me sterve."

Are we to suppose that this is copied from the "Parl. of Foules," 309, 310—

"For this was on Seint Valentines day,
 Whan every foul cometh ther to chese his make"?

Not necessarily; for there is at least an equal chance that, conversely, the two lines in the "Parl. of Foules" were copied from the "Amorous Complaint."

WALTER W. SKEAT.

THE CODEX AMIATINUS.

Cambridge: April 18, 1888.

I find Dr. Corsen's interesting letter on the Codex Amiatinus on my return from the continent. My letter of this date last year was less ambitious in its scope than readers of Dr. Corsen's letter might suppose. Repudiating all idea of speaking of handwriting and parchment except as a mere amateur, I said that "an examination of the ornamental parts leads to [the conclusion] that at least the Ezra picture and the 'Solomon's Temple,' which is, in fact, the Tabernacle in full detail, are not copies made in England, but are the original pictures of Cassiodorus. This seems the sounder conclusion; but I am well aware that even from my own point of view there is a great deal to be said on the other side."

And, at a later part of my letter, I somewhat limited this by allowing that the Ezra picture and the first list of books must probably stand or fall together. I am not sure that I should allow that now.

But since that time I have attached increasing importance to the adverse fact of the stoutness of the parchment. Last year I expressed the opinion—as a mere amateur—that the first quaternion was somewhat stouter than the rest, that is, one degree further removed from the beautiful fineness of the earlier Italian parchment. Dr. Corsen thinks it is not stouter. This tends to remove my scruple, but does not remove it. My notebook adds that this parchment is more highly glazed than the rest.

As regards the "Temple" picture, there seems to be still the curious confusion which I pointed out last year. Dr. Corssen will look in vain in my letter for any authority for his statement that I was inclined to doubt Bede's having seen the picture of the Temple "because Cassiodorus, in his commentary on the Psalter, where he mentions his picture, and to which Bede is also referring, says nothing about the triple porticus"; and that there is no ground for his next sentence, too—"It is of no avail to say," &c.—a reference to my letter will show. This part of Dr. Corssen's letter, and his explanation of the position held in the quaternion by the picture, take it to be a picture of the temple. But it is the tabernacle. I would bow to Dr. Corssen's dictum without reserve if the matter were not so clear to my eyes. There is the second chapter of the Book of Numbers given in a graphic form: "Mosis et Aaron before the 'altare holocausti'; on the *dysis* side of the tabernacle 'Filii Gerson viid.,' on the *arctos* 'Filii Merari viic.,' on the *mesembria* 'Filii Cath viiic.; outside the porticus the tribes, three on each side, with their numbers, e.g., *anatot*, 'Zabylon lviicccc. Judas lxxiiiic. Issachar liiiicccc.'; the only difference, and it may well be that I have made a mistake in my hasty sketch, being 'Rfrain xliid.'" There are the ten spaces at each end and twenty at each side, between pillars, i.e., fifty cubits and one hundred cubits, with a pillar to each five cubits. The four central spaces at the east end are marked by a different colour and an exterior line of solid black. The colour is a deep lilac lake, and it will be remembered that at these twenty cubits of entrance the curtains were to be "blue and purple and scarlet" (Exod. xxvii. 16). And each of the altars has the four legs of which Bede makes such special mention as being shown in Cassiodorus's picture, though the Bible makes no mention of them.

Cassiodorus says of the tabernacle: "Quod nos fecimus pingi et in paucis majoris capite collocari" (Ps. xiv. i.). And in the same sentence he gives Josephus *Ant.* iii. 7 as the place where he had found a diligent account of the subject of his picture. Under present circumstances there is a certain point in Whiston's rendering of the heading of this chapter—"Concerning the tabernacle which Moses built in the wilderness, and which seemed to be a temple."

I have still not found in Cassiodorus's exposition of the Psalms the authority for Bede's statement as to the temple and the "triple porticus." Bede carries further than Josephus the confusion between Solomon's temple and the later temples. This very "triple porticus," which Dr. Corssen and de Rossi desiderate in Amiatinus, has no connexion with Solomon's temple, though Bede describes the court of the Jews, the court of the women, and the court of the gentiles, and—speaking always of Solomon's temple—says that in these porticoes Jeremiah and the prophets, our Lord and the apostles, preached to the people. If all these things were really shown in a picture of Solomon's temple by Cassiodorus, it is perhaps as well that the picture is lost. I still doubt its being necessary to understand that Bede had seen any such picture. What he does say that he had seen was the tabernacle: "Quomodo in pictura Cassiodori Senatoris, cujus ipse in expositione Psalmorum meminit, expressum vidimus." Of the temple he says: "Hæc ut in pictura Cassiodori reperimus distincta"; and his prefatory remark is: "Has vero porticus Cassiodorus Senator, ut ipse Psalmorum expositione commemorat, triplici ordine distinctit"; a very different statement from that respecting the picture of the tabernacle. I trust that de Rossi will not—as Dr. Corssen hints he is about to do—publish a condemnation of this

picture on the ground of the difference between it and "Beda's description of the temple."

With regard to the New Testament picture, I am unable to subscribe to Dr. Corssen's remark that my inference would only stand if it had been copied from Cassiodorus. On another point, I never had the slightest doubt that the writing of the contents is the same as the writing of the prologue; but when Dr. Corssen proves his case by describing them as the contents of the Codex Amiatinus, remarking that the contents of the Amiatinus could surely not come in before the MS. itself existed, I feel bound to ask how he knows that *in hoc codice continentur* means "are contained in the Codex with which this single leaf is now bound up."

Dr. Corssen's explanation of the phenomena presented by the arrangement of the first quaternion seems very startling. As I understand it, the modern binder—who still lives, and is still allowed to visit the Laurentiana—wantonly cut in two one of the huge sheets, and then pasted it together again on a guard. As a matter of detail, the "slight cut between ff. iii. and iv.," i.e. cutting the huge sheet in two at the folding, does not save the phenomena, for my note is that "the heel of f. 4 is carried through, on a guard, and f. 7 is pasted on to the heel and guard, covering a part of the heel." This means that f. vi. was cut out bodily, leaving a small heel. It explains, too, the smaller size of f. 7, whereas Dr. Corssen's explanation of the smaller size of f. 7 should—if I understand it—make 7 larger rather than smaller. The fact that 7 somewhat overlaps the heel of 4 made it impossible for me to determine whether the two pieces really fitted together accurately, as they would if they had originally been one piece; but it seemed in itself an argument against it. Dr. Corssen does not mention what struck me a good deal, namely, the worn appearance of the outer edge of f. 4, as though it had been an outside leaf.

Dr. Corssen's opinion on the difference between the handwriting of the lists and of the codex is of especial value to me. I had not ventured to express an opinion, though I did suggest that the somewhat untidy lists were not like copies made for a very special purpose. Dr. Corssen says that "one would strive in vain to recognise a difference of more than a century in the style of the two handwritings." If this means that the lists are conceivably a hundred years earlier than the codex, the difference between the time when Cassiodorus was having his picture—and, perhaps, copies of it—made, and the time when these lists may have been written, is reduced to a few years.

In case anyone refers to my letter of last year, and notices the remark that there are only sixty-six books recited in the contents, whereas Dr. Corssen says there are sixty-seven, I may mention that my statement is literally correct, St. Peter being credited with one epistle only, probably by a clerical error on the part of the sixth- or seventh-century scribe.

G. F. BROWNE.

NEWSPAPERS "IN WALPOLE'S DAYS."

London: April 23, 1883.

It would be difficult to imagine a less satisfactory piece of literary work than the chapter entitled "In Walpole's Days," which appears in Mr. H. R. Fox Bourne's recently published *English Newspapers*. So many futile attempts have been made to tell the story of the rise and progress of the English press, that the least an historian of to-day could do would be to verify the statements of previous writers, or to go to the fountain-head itself. It would have been bad enough if Mr. Fox Bourne had only given his

second-hand facts with a certain modicum of accuracy. But he has not done even this—so far, at all events, as the chapter in question is concerned. It may be as well to point out some of his blunders.

1. We are told that "Defoe contributed to the *Daily Post* during five-and-half years, his most notable contribution being the original of *Robinson Crusoe*, which ran through a hundred and sixty-five numbers." There is nothing like being precise, and so the numbers—"125-289"—are given in a foot-note. As a matter of fact the first volume of *Robinson Crusoe* was issued on April 23, 1719, and the story was not first published in a newspaper. Mr. Fox Bourne's *Daily Post* was neither a daily nor the "Daily Post." The paper in which *Robinson Crusoe* came out in piecemeal, after its appearance in book form, was *The Original London Post, or Heathcote's Intelligence*, which was issued on Mondays, Wednesdays, and Fridays. The first instalment of Defoe's masterpiece appeared in No. 125 (October 7, 1719), and the last in No. 289 (October 19, 1720).

2. It is implied (vol. i., p. iii.) that "Cato's Letters" were printed solely in the *London Journal*, and it is distinctly stated that they commenced in November, 1720, and were continued until December, 1723. A very small amount of trouble would have shown that these famous letters were transferred to the *British Journal*. The exact date I am not at the present moment able to give; but, by referring to the forty-fifth number of the latter journal (Saturday, July 27, 1723), Mr. Fox Bourne may read Cato's very admirable and dignified valedictory address. We are told that Defoe was nearly sixty years old, in August, 1719, when he started the *Thursday Journal*, called, after the first number, the *London Journal*; but we are not informed that there were, in consequence, two newspapers of exactly similar title, price, and date of publication being "run" at the same time. It should have been pointed out also that "Cato's Letters" first appeared in the older of the two papers, which, until the eighty-third number (February 25, 1720), was printed by J. Roberts of Warwick Lane, but was then taken over by J. Peele, of Locke's Head, near Temple Bar. In May—the earliest number I have had an opportunity of seeing—James Roberts was publishing the younger of the two journals.

3. Mr. Fox Bourne declares that Defoe's "Tory cloak had to be worn in the more important journal, *The Daily Post*, the only daily rival at that time of the *Courant*, which, on October 24, 1719, began to be printed by Meers, of Old Bailey."

Now the *Daily Courant* was printed by S. Gray, in Amen Corner, during the latter half of 1719, and the whole of the year following. There is just the chance that our author is referring to the *Daily Post*, but even in such a case confusion is only doubly confounded; for the *Daily Post* was published throughout by H. Meere, not "Meers," whose office was at first situated in "Black Fryers," not Old Bailey, to which latter place he did not remove for several months after the paper in question was started.

4. *The Grub Street Journal* was about the best weekly paper of the time. Mr. Fox Bourne dismisses it in a few words, in the course of which he manages to perpetrate many errors both of omission and commission. The paper, he says, "was started in 1730 by a Nonjuring clergyman named Russell," and it "had Pope for one of its early contributors." The paper was projected, or at all events edited, by Dr. Richard Russel and Dr. John Martyn, both men of considerable eminence, the former as a physician and the latter as a botanist. There is no proof that Pope was an

early contributor, or that he contributed at all. The statement, in, I believe, founded solely upon an assertion of Budgett (see *The Bee*, February 1733, p. 23) who "suspected" Pope's connexion, and whose opinion, for very obvious reasons, is not worth much in a question relating to the author of the "Dunciad." We are further informed that the *Grub Street Journal* was altered into "the *Literary Courier of Grub Street* in 1737, and lived long under that name." As a matter of fact, the first number of the *Literary Courier* is dated January 5, 1738, and the last, so far as I can find, July 27, 1738. The *Grub Street Journal* existed for over seven years, and its successor just as many months; and yet by way of contrast we are told that the latter "lived long."

5. The first number of *The Craftsman* was not dated December 7, but December 5. Drake and another authority both give it so, and a reference to the journal itself proves that they are right. Even the name of the *Craftsman's* projector is quoted in inverted commas as "Caleb Danvers, Esq.," when it should be "Caleb Danvers, of Gray's Inn, Esq."

6. Not the slightest reference is made to Eustace Budgett's *Bee*, which, although in form it resembled a magazine, was, to all intents and purposes a newspaper. A passing allusion is made to Concannon, but none to the *Speculatist*. In addition, Mr. Fox Bourne appears to be ignorant of the very valuable "catalogue" of the Hope collection of early English newspapers and essayists (Clarendon Press, 1863).

The ingenious errors I have enumerated all occur within thirty-four widely printed pages.

W. ROBERTS.

"PALINGMAN."

Wimbledon: May 1, 1883.

As M. de Beer informs us that "palingman" is the Dutch name for a seller of eels, the word ought, probably, to be struck out of our vocabulary as not being an English word at all. The context of the passage where it occurs suggests that it was used with reference to foreigners. The Act is dealing with alleged frauds in the packing of preserved and fresh fish—salmon, herring, and eels—brought to the English markets. We are told that the salmon came mostly from Scotland. We are not told whence the eels came, but we may gather that they came from Holland. The turn of the phrase "sellers of Elys, called Palingmen," suggests that the word was not vernacular. The Act is quite pathetic on the subject of their frauds. They

"daily pakk and medell . . . their good Ele with rede Ele, galbeton storven and pilled Elys; the whiche rede Elys ben verrey perilous and unholsume for mannys body, and in no wise merchaundizable" (Rot. Parl. vi. 221).

J. H. RAMSAY.

Leeuwarden, Holland: April 30, 1888.

In Dutch the words *paling* and *aal* are synonymous, the difference being that *palingen* (the Dutch plural) are popularly known to be both bigger and longer than *alen*. However, it would seem that the original difference lies in the fact that eels live in muddy pools, and *palingen* in fresh water. Both in Adelung's *Grammatisch-Kritisches Wörterbuch der hochdeutschen Mundart* and in Dr. Sanders's *Vollständiges Wörterbuch der deutschen Sprache* we find this difference stated. Sanders says, s.v. *Mooraal*: "Im Moor lebend, in Holland schlechthin *Aal*, im Gegensatz der im frischen Wasser lebenden *Palinge*." I do not venture upon a derivation of the word; but can *paling* be connected with English *peel*, and Dutch *pellen*, meaning the fish that may be stripped of its skin, in contradistinction to all other freshwater fishes? K. TEN BRUGGENCATE.

"MARAHUNA."

London: May 1, 1888.

In your review last week of my romance, *Marahuna*, you speak of the heroine as "a personage whom in all probability we should never have known had we not previously known the wonderful 'she.'" As elsewhere I have met with much the same criticism, would you kindly allow me through your columns to say that the idea and the plot of *Marahuna* were conceived before I had read or knew anything of *She*. Since I wrote the romance, several resemblances to other books have been pointed out to me; but in each case I proved unfamiliar with the incidents which were supposed to have influenced me. That in working out minor points in the story I have been influenced unconsciously by Mr. Haggard is possible; for it would ill become anyone to pretend to analyse the mental atmosphere in which he works.

In regard to the mistake as to the means of inoculation of Elsie Venner, I confess that my memory here played me false; but I cannot consider the slip, however inexcusable, as misrepresenting the central motif of that fascinating book, as your reviewer seems to think. The theme of Dr. Holmes's romance appears to me to be the portrayal of a life which has been poisoned; and the method of the poisoning I regard as but of incidental interest.

H. B. MARRIOTT WATSON.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, May 7, 5 p.m. Royal Institution: General Monthly Meeting.

8 p.m. Society of Arts: Cantor Lecture, "Decoration," II, by Mr. G. Aitchison, A.R.A.

8 p.m. Victoria Institute: "The Extent of Egyptian Conquest in Southern Palestine under Thothmes III," by Prof. Maspero.

8 p.m. Aristotelian: Symposium, "What is the Distinction between Desire and Will," by Dr. Bain, Mr. W. R. Sorley, and Mr. J. S. Mann.

TUESDAY, May 8, 3 p.m. Royal Institution: "The Plant in the War of Nature," II, by Mr. W. Gardiner.

8 p.m. Society of Arts: "The Decorative use of Colour," by Mr. J. D. Ormerod.

8 p.m. Civil Engineers: "The Tay Viaduct, Dundee," by Messrs. Crawford Barlow and W. Inglis.

8 p.m. Colonial Institute: "The New Industrial Era in India," by Sir W. W. Hunter.

8 p.m. Shakespeare Reading Society: A Dramatic Reading of "Romeo and Juliet."

WEDNESDAY, May 9, 4 p.m. Egypt Exploration Fund: Special General Meeting.

8 p.m. Society of Arts: "Looks and Sates," by Mr. Samuel Chatewood.

8 p.m. Geological.

8 p.m. Microscopical: "New Infusoria Flagellata from American Fresh-Waters," by Dr. A. O. Stokes.

9 p.m. Egypt Exploration Fund: "M. Naville's Recent Discoveries at Subastis," by Miss Amelia B. Edwards, illustrated by Lime-Light Views.

8 p.m. Gynmrodorion: "Taleslain," by Prof. John Rhys.

THURSDAY, May 10, 3 p.m. Society of Arts: Conference on Canals and Inland Navigation.

3 p.m. Royal Institution: "The Chemical Arts," V, by Prof. Dewar.

8 p.m. Mathematical: "Some Theorems on Parallel Straight Lines, together with some attempts to Prove Euclid's Twelfth Axiom," by Mr. J. Cook Wilson; "Oyloclants, or Ternary Reciprocals and Allied Functions," by Mr. E. B. Elliott; "The Circulation of Two Spaces, each of Three Dimensions," by Dr. Hirst; "The Flexure and the Vibrations of a Curved Bar," by Prof. H. Lamb.

8 p.m. Telegraph Engineers: "The Risks of Fire Incidental to Electric Lighting," by Mr. W. H. Preece.

8 p.m. Society for the Encouragement of the Fine Arts: Conversations.

FRIDAY, May 11, 3 p.m. Society of Arts: Conference on Canals and Inland Navigation.

8 p.m. New Shakespeare: "The 1695 Quarto of Hamlet," by Mr. F. Marshall.

9 p.m. Royal Institution: "Some Curious Properties of Metals and Alloys," by Prof. Chandler Roberts-Austen.

SATURDAY, May 12, 11 a.m. Society of Arts: Conference on Canals and Inland Navigation.

3 p.m. Royal Institution: "The Later Works of Richard Wagner," V, by Mr. Carl Armbruster, with Vocal and Instrumental Illustrations.

3 p.m. Physical: "The Condition of Self-Excitement in a Dynamo Machine," and "The Conditions of Self-Regulation in a Constant-Potential Dynam. Machine," by Prof. S. P. Thompson; "The Electrical Action of Light," by Mrs. W. E. Ayton; "The Theory and Practice of

Applying the Dynamometer to the Investigation of Transformers," by Mr. T. H. Blakesley; "Measuring the Electromotion Force of Dynamos and Motors," by Prof. W. E. Ayton and Prof. J. Perry.

3.45 p.m. Botanic: General Meeting.

SCIENCE.

A *Latin-English Dictionary*. Printed from the unfinished MS. of the late T. H. Key. (Cambridge University Press.)

THE syndics of the Cambridge University Press may well have been somewhat puzzled to know what to do with the MS. of Prof. Key's long-promised Latin Dictionary. It represented the outcome of some twenty years of labour on the part of a scholar who brought to his work great freshness and enthusiasm, as well as wide and diligent reading. It would have been pitiful that all this toil should have been wasted; and yet the MS. was sadly fragmentary, and in no way fitted for the ordinary functions of a dictionary. The attempt was first made to secure its completion by another hand. But this proved impracticable; and now, more than twelve years after the death of the author, the volume is issued almost exactly as he left it. The letter A is tolerably complete, and extends over 179 closely printed double-columned quarto pages. The other letters, which, if the proper proportion had been observed, would have covered at least 1,600 more, are included within less than 600; and this is due, not to slighter treatment of the individual words, but to the omission of a large number of them. The words omitted are said to be those in the treatment of which Prof. Key did not think himself able to make any improvement, but they include many of the most interesting.

It is to be feared that only a very small number of students will find the work in its present form of any service; and that many of those who are most conscious of the debt which they owe to Prof. Key's excellent Latin Grammar will regard its publication as a serious mistake. On the one hand, its incompleteness makes it unfit for a work of reference, while, on the other hand, its bulk is swollen by a large number of unimportant articles which add little or nothing to the facts already collected in the standard lexicons. In the first page devoted to the letter R, for instance, there is nothing which is not to be found in Lewis and Short, except the form *rabia* for *rabies*, quoted, apparently in error, from "Serv. A. I. 204." It may be noted, however, that the funny blunder, by which in our standard dictionary a reference given by Freund to Manilius V. 207, is metamorphosed into "id. [i.e., Cic.] Imp. Pomp.," has been avoided.

But it is a much more serious objection to the issue of the book in its present form that it teems with etymologies of the type so lamentably frequent in Prof. Key's publications. In the present stage of philological science this is a matter which calls for plain speaking; otherwise serious injury might be done by the action of the official representatives of a university which has been so honourably distinguished for nearly twenty years by the encouragement it has given to scientific philology.

Prof. Key's etymologies are throughout based upon two or three assumptions. The

first is that there are no sound-laws characteristic of particular languages, but that a change established for one language by more or less plausible evidence may be forthwith assumed for another. The second is that these sound-laws act capriciously, so that the results following from them in one case need not be expected in another. A third is that primitive forms may be postulated without any evidence of their historical existence, and that they may be reduced conjecturally to the existing forms by arbitrary "decapitation" or contraction. A fourth is that of "ex-crescent" letters introduced by no necessary phonetic conditions. Now, if these assumptions are legitimate, it necessarily follows that the hundreds of graduates trained in the last few years by the Cambridge lecturers have been rewarded by university distinctions for their faith in cunningly devised fables. But if the teaching sanctioned by the university is anything better than a delusion, then the publication of this dictionary can only be compared to the issue of a treatise on the Ptolemaic system of astronomy in the generation following the appearance of Newton's *Principia*. We may open the volume where we like, and we come across statements like these:

"Uxor is for oous-or, and so implies a lost vb., oous-o = Gr. *οὖος* (i.e., *οὖος-ω*) marry; the -or of uxor dim. of affection, like -or of sor-or." "Ludo is for plugdo, and so akin to Eng. play, Germ. spielen." "Lucus perh. for solucus, a lost adj., of wh. sol is the root, analogue of Eng. hallow, Germ. selig." "Lux, prob. for goluc, cf. Eng. glow, gleam, Γλῶστος." "Luscus, older nuscus, stands for nucis-oc-us, night-eyed." "Libet for uol-ub-et, from vb. uol-wish." "Beo prob. for beno, and so from bonus." "Arx for car-ag, E. crag, and E. decap. 'rock.'" "Nubes shortened from on-ub, and so akin to umbra (= on-ub-era), and to infula (= en-ef-ula = *ν-εφ-ελ-η*)." "Nurus for genurus (elsewhere gonurus)" [to which last Prof. Key boldly adds = S. *snuça*, *nves*, O.G. *sohnur*, as if to show the wilfulness of his defiance of law]. "Sobrius (for sobrinus, and so = *σωφρων*, sound-minded; cf., too, e-brius, without mind)." "Pellex = *παλλας, παλος*, pullus, Sc. pollock, our fillic."

After instances such as these it is, perhaps, hardly worth while pointing out how Prof. Key repeatedly ascribes to the Greek accent a powerful influence in affecting the quantity of Latin words, ignoring altogether the difference between musical and tonic accent.

It is only fair to add that the etymologies are by far the weakest—or, rather, the most worthless—part of this dictionary. Prof. Key's wide knowledge of the usages of the Latin authors has often enabled him to throw fresh light upon the developments of meaning; and so has furnished valuable material to the future lexicographer. If something like a fifth of the present work had been published as "Contributions to Latin Lexicography" it might have been welcomed; though even then it would have required careful sifting, for one has more often to admire the writer's ingenuity than his judgment. On the whole, it cannot be said that his guidance is trustworthy; and though his suggestions often deserve consideration, they require to be received with great caution. The most meritorious part of the work is the care which has been taken to quote from the best editions, so far as they were accessible at

the time of compilation, and to give the evidence of the most important MSS. But it is with real regret that one finds the book so unworthy of the auspices under which it appears, and of the high reputation of its author.

A. S. WILKINS.

THE PRIMITIVE HOME OF THE ARYANS.

THERE are many objections to the theory which would make Northern Europe the home of the Aryan race; and also to the sub-theory which looks upon the dolichocephalic fair Scandinavians and North Germans as the modern representative of the original stock, and upon the Finns as the descendants of the earlier race from which the Aryans have been evolved, both physiologically and linguistically. As this sub-theory has been expounded twice in the ACADEMY, I need not enter into a detailed account of it.

Stress is laid on a similarity in shape of the skulls of the supposed descendants of the primitive Aryans and of the Tehuds or Finns. The dolichocephalic Aryans are compared to the mesocephalic or dolichocephalic Tehuds. As to the latter, I do not know where Canon Isaac Taylor has obtained his information, but surely it is not from Prof. Gust. Retzius, the chief authority on the subject. This scholar, in 1873 and 1874, accompanied by Prof. Christian Lovén and Dr. Eric Nordensson, travelled on foot through the country in order to study the original type of the Finns, and, in 1878, published his great work *Finska Kranier* (Stockholm, fol. and atlas), where he sets forth the results of his investigation. These show beyond controversy that the Finnic skull is brachycephalic. This is by itself a fatal objection to the theory of Canon Isaac Taylor. Prof. Retzius had not clearly established his conclusions, but Prof. A. de Quatrefages did so in reviewing his work in his book *Hommes fossiles et Hommes sauvages* (Paris, 1884), pp. 571-639. The few Karelian skulls, whose dolichocephalism is an exception to the rule, have proved to be Swedish.

The linguistic objection is no less destructive to the Finnic theory. I fail to recognise the primitiveness of the dubious identities pointed out by Canon Taylor. All that is Aryan in the Finnic languages is borrowed, and does not belong to the ground-speech of the family. This has been shown beyond controversy by such scholars as Alqvist, Budenz, and Donner. Moreover, the Finnic or Ugro-Finnic languages stand on a conception of the vowels which differs from that of the Aryans. Comparative ideology, in its turn, shows these two families of language to be framed on two different plans of thought. It would indeed have been a great help to comparative philology had this sub-theory proved true, and thus provided us with a ground upon which to base the Aryan *Grundsprache*. But I am afraid such is not the case. The various classes of objections mentioned are altogether fatal, and the theory of a Finnic origin for the Aryan languages will be forgotten unless its author can bring forward some new and stronger arguments to revive it.

The main theory of a European home for the Aryans is also open to strong objections, though of a different nature.

The finding of some of the phonetic and structural elements of the hypothetic primitive Aryan speech better preserved in the west than in the east does not prove, as remarked by Prof. A. H. Keane, that these elements were first necessarily developed where they are now found (*Ethnology and Philology of the European races*, § 5). We may say that it proves only that the physical circumstances of the

country and the physiological conditions of the speakers have been more favourable, either to their preservation there than was the case elsewhere, or to the recurrence of phenomena similar to those which are supposed to be primitively Aryan. As a matter of fact the Lithuanian, on which so much stress is laid in this theory, is only known to us as spoken and written during the last 400 years. And in connexion with this it ought to be remembered that the natural condition of languages is one of change. A comparison is made unfavourable to the Sanskrit; but it is not quite fair to do this without taking into account the difference of its circumstances. Though we know Sanskrit for 2,000 years or more, we are well aware, as I remarked twenty years ago (*Le Langage*, §§ 40-43), that the southern climes favour and develop broader vowels than do the northern ones. And Prof. Max Müller has lately pointed out that the imperfection of writing partly explains the apparent vocal poverty of Sanskrit.

I am afraid that the whole matter is more intricate than would appear from what has been written either for or against the new theory.

The Aryan family of languages, now spoken by several races, must have had a beginning; and this beginning, as shown by the narrow kinship of its members, in their two divisions, eastern and northern, must have been a protracted one, though not very remote in time, albeit it goes beyond the limits of written history. Now the formation of a linguistic nucleus, and the subsequent process of internal assimilation which must have taken place for an homogeneous family of languages to spring out of it, imply also the existence, at least temporary, of a homogeneous race of speakers. But this homogeneity need not have been more than social. Their physical types may have varied; fair or brown long-headed, fair or brown round-headed tribes may have entered into its formation. The brachycephalic character of the Galtchas on the slopes of the Hindu-Kush, who, as described by M. de Ujfalvy, are similar in so many respects to the Savoyards of Central Europe, might be explained in this way.

In the researches I have made into the comparative ideology of language and its relation to history, I was eventually led to admit a connexion of some sort between the ideology of the primitive language of a linguistic family and the characteristic form of the skull of its speakers. Applied to the Aryan primitive language, which had an inversive ideology, these views suggest that the Aryan cranial type, should such ever have existed, was probably composite, and that it was brachycephalic rather than dolichocephalic. And I venture to conjecture that an intermingling of tribes—allophylarian whites and Semites—may have produced the primitive Aryan ethnolinguistic nucleus.

The old views respecting the priority, in modern geological time, over a large area in Europe of a brachycephalic race have been modified by recent discoveries, which have shown the reverse to be the case. And it is very probable that the round-headed race which made its appearance in Europe later was that of the speakers of the Aryan languages. Naturalists look to the direction of the Caucasus, between the Caspian and the Black Sea, as its probable centre of emigration to the West. Comparative ideology discloses an important connexion as a counterpart, and, therefore, confirmatory of this view. The builders of the megalithic monuments—as shown by their skulls, from Scandinavia to Algeria, where they are represented by the dolichocephalic and fair Berbers or Kabails—were long-headed. Their ideology was direct (types

iv. and vi. of my classification) as it is still in the Berber languages. It has left a permanent impression on the non-Aryan ideology of the Celtic languages (type iv.) and a temporary one on the old Norse and ancient Spanish, where the same ideology has been found. And it is probable that the direct ideology which has taken the lead in Central Europe, and which has survived like a spot of oil among modern languages, Aryan and non-Aryan, through the reaction of the people over the higher classes, and which is neither Turanian nor Aryan in character, has resulted from the survival of the same pre-Aryan and pre-Finnic race, or, perhaps, another race similar to it. These arguments would require much longer explanation than space permits here; but I hope they will prove sufficient to show that the theory which makes the long-headed and fair Scandinavians the ancestors of the Aryans has no sufficient ground to stand upon.

Another class of objections into which I cannot make it my business to enter belong to natural history. Specialists are now satisfied that the Arctic regions and the North of Europe were once subject to a hot climate at a time later than the arrival of man. This implies changes in the distribution of the fauna and flora which do not seem to have been taken into account by the authors of the theory, inasmuch as it would require more precise notions about the antiquity of the Aryan formation than we now possess.

There is also the important question of the allophylian branches of the white race and their possible relation with this formation which have been left out of the discussion. And yet those branches are not a few. Eastwards they have gone as far as Corea, and southwards through Western China to Indo-China. We may some day know more of their movements. Many migrations which have occurred in historic times, but are unknown to written history, are slowly being disclosed by modern research. The prejudiced view that human migrations have always followed the path of the sun from east to west, and the correlative saying *Ex Oriente lux*, are simply misleading. They have blinded or led astray many clear minds. The region of the Persian Gulf, which in Western Europe we call the East, and where the Biblical traditions have been fostered, is partly responsible for this prejudice. As a fact, it is neither east nor west, but merely south-central with regard to Europe+Asia. On the other hand, extensive studies have shown, as stated by Prof. A. de Quatrefages, that the earth is now populated only with colonists.

I may mention only a few of the migrations eastward in ancient times. There are overwhelming proofs which show the migration of the Pre-Chinese Bak tribes from the west of the Hindu Kush to North-western China in the twenty-third century B.C.; but these did not belong to the white race. The same thing cannot be said of the Tek tribes which appeared on the north-west borders of China in the thirteenth century B.C., nor of the Tok, afterwards Tchou, who conquered the Chinese states and established the well-known dynasty of their name. They had certainly some Aryan elements, and these apparently were derived from the Aryan tribes who had migrated to Kwarism, east of the Caspian Sea, in 1304 B.C. I have already alluded to other white races who have migrated towards the east. Moreover, the campaigns and conquests in the east of Tiglathpaleaser II. (733), Sargon (713), Sennacherib (699), Cyrus (540), and Alexander the Great (330), were certainly no encouragement for independent populations to migrate westward; and we are certain that they caused some movements of tribes to the east. The Tukhari, the Dahae, and others

whom Sennacherib vanquished in the neighbourhood of the Caspian, were found by the Chinese in the second century B.C. close to the Tsung-ling range. The Gwetti—better known as Yueh-ti, a fair race like the Wusun and very probably Aryan—migrated eastward, and were found on the north-west borders of China in the third century B.C., or perhaps earlier. In the following century they were compelled to retrace their steps to the west.

Some of my criticisms and remarks cut both ways against the new as well as against the old theory of the origin of the Aryans. The seat of their formation, though cold, must have been sufficiently attractive to allow a long sojourn; and it must have been secluded enough to permit the great work of internal assimilation which has taken place. Should the former changes of climate and soil have permitted it some five thousand years ago, the region bordering the Caspian north and west may have been the seat of the Aryan formation, and therefore the primitive home of the race.

TERRIEN DE LACOUPERIE.

CORRESPONDENCE.

FINNISH NUMERALS.

Settlington, York: April 30, 1888.

I do not understand why Mr. Abercromby finds it so difficult to connect the suffix *-tesa* in the Esthonian *kat-tesa*, eight, and *ut-tesa* with the Permian *das*, ten, and the Magyar *tíz*, ten, which reappear in the Permian *sissim-das*, seventy, and the Turkic *ol-tus*, thirty. Since, according to Scholt, the numerals eight and nine are "ten less two" and "ten less one" in all the Ural-Altaic languages, the accepted explanation of *kat-tesa* and *ut-tesa* seems more reasonable than to suppose that the suffix *-tesa* is merely a privative meaning "without." The usual explanation is also supported by the analogy of the Roman numerals IV and IX.

ISAAC TAYLOR.

OBITUARY.

WE regret to learn from the German newspapers that Prof. Gerhard Vom Rath, of Bonn, died suddenly at Coblenz, on April 23. This distinguished savant had for many years held the professorship of mineralogy in the University of Bonn, and was at one time director of its mineralogical museum. He was born on August 20, 1830, at Duisberg, in Rhenish Prussia, and studied at Bonn, Geneva, and Berlin. Possessed of an ample private fortune, he devoted much time to travel; and in 1883 he undertook a long journey through the United States and Mexico. The results of his travels were the subject of numerous papers published in the transactions of various learned societies. He was on his way to Italy, accompanied by his wife, when he was seized by a fit of apoplexy which terminated fatally.

SCIENCE NOTES.

THE centenary of the Linnean Society occurring this year, a special celebration will take place in connexion with the annual meeting on Thursday, May 24. The occasion will be marked by two interesting features. (1) The presentation of the Linnean gold medal, instituted by the society on the occasion of its centenary, to Sir Joseph Hooker and Sir Richard Owen; in subsequent years a medal will be presented to a botanist and a zoologist alternately. (2) The delivery of eulogies on "Linnaeus" by Prof. Fries, the present occupant of the chair of botany at Upsala, and on the following deceased members of the society: "Robert Brown," by Sir Joseph Hooker; "Charles Darwin," by Prof. Flower;

and "George Bentham," by Mr. Thiselton Dyer. On Friday, May 26, the president, Mr. W. Carruthers will hold a reception in the rooms of the society at Burlington house, when the Linnean collections and relics will be exhibited.

At a meeting of the council of the Royal Geographical Society, the awards for the year were settled. The Founders' medal has been given to Mr. Clements R. Markham, on his retirement from the hon. secretaryship of the society, after twenty-five years' service; the Royal medal to the German explorer, Lieut. Wissmann, in recognition of his achievements as an explorer in Central Africa, which he has twice crossed from the Atlantic to the Indian Ocean, and especially for the arduous journey in which he traced the course of the river Kassai, from its upper waters to its previously unknown confluence with the Congo; the Murchison grant to Mr. James M'Carthy, superintendent of surveys in Siam; the Gill premium to Mr. Charles M. Doughty, for his *Travels in Arabia Deserta*; the Guthbert Peak grant to Major Festing for his services as cartographer on the Gambia river and in the neighbourhood of Sierra Leone. As hon. corresponding members have been selected Dr. G. Radde, of Tiflis; Dr. H. Rink, of Copenhagen; and Dr. Rein, professor of geography at Bonn.

MR. LEWIS, of Gower Street, will publish immediately *Physiological and Pathological Researches*, by the late T. R. Lewis, edited by Sir W. Aitken, Dr. G. E. Dobson, and Mr. A. E. Brown. The volume contains five maps, forty-three plates, including chromo-lithographs, and sixty-seven wood engravings.

M. E. CARTAILHAC opens the current volume of his *Matériaux pour l'histoire de l'homme* with an article entitled "L'incinération des morts à l'âge de la pierre." An interesting discovery of the relics of cremation in certain neolithic settlements in Italy had led M. Castelfranco to assert that this mode of disposing of the dead in the stone age had not been previously recognised in Europe. The object of M. Cartailhac is to prove, by citing a number of cases from various parts of France, that cremation was practised, perhaps exclusively, during the neolithic period—a conclusion which he had already announced when discoursing, to the French Association at Nancy, on the funeral rites of the stone age.

PHILOLOGY NOTES.

A SECOND instalment of the Rev. D. Silvan Evans's *Welsh Dictionary* has just been published by Messrs. Trübner. This part, which comprises about two hundred pages, brings the work to the end of the letter B.

APPARENTLY, Volapük is not to remain the sole claimant to the position of an international language, for already two opposition schemes are announced by Messrs. Trübner, and we believe several others have appeared in Germany. *World Speech*, by Mr. Alexander Melville Bell, advocates English spelt as pronounced as by far the best medium for international communication, and as superior to any artificial language. *Lingua*, by Mr. G. J. Henderson, while holding that the formation of an international association is absolutely necessary for the making and controlling of any really efficient common medium, suggests as the most expedient basis a language the vocabulary of which is almost entirely classical Latin, while its grammar is modern—mainly English simplified.

THE following resolution has been received by some of the scientific societies of Great Britain:—

"That the President of the American Philosophical Society be requested to address a letter to all

learned bodies with which this society is in official relations, and to such other societies and individuals as he may deem proper, asking their co-operation in perfecting a language for learned and commercial purposes, based on the Aryan vocabulary and grammar in their simplest forms; and to that end proposing an international congress, the first meeting of which shall be held in London or in Paris."

MEETINGS OF SOCIETIES.

CLIFTON SHAKSPEARE SOCIETY.—(Saturday, April 14.)

Mrs. C. I. SPENCER, president, in the chair.—In a paper on "The Poems of Shakspeare," Mr. G. Munroe Smith said that, as in Shakspeare's own time his poems were popular and now they are little cared for, the question arises whether the people of the Elizabethan or of the Victorian age are to be considered the better judges. The power of describing scenery is now much greater than in Shakspeare's time. Also, for nearly three centuries we have had bequeathed to us poetry which universal testimony has declared to be of supreme excellence. And appreciation grows with knowledge. On the other hand, the advance of science and the exact methods of thought it inculcates tend to destroy the imagination and spoil the poetic taste. Yet weighing the gain against the loss, the verdict must be that we are more qualified to pass judgment on Shakspeare's poems than his contemporaries or those who immediately followed him, and that our neglect of the poems (leaving the sonnets for the present out of the question) may thus be justified.—Mr. S. E. Bengough read a paper, entitled "The Music of Language as illustrated by 'Venus and Adonis,'" in which he said that the elementary sounds of language are an undeveloped music; and, after dwelling in detail on the differences between the various vowel-sounds which had been ascertained to have towards one another an invariable ratio of vibrations, went on to show that to the cultivated English ear there is an association between certain sounds and certain ideas. Illustrations of this view were adduced in great numbers from the poem.—A paper by Mr. J. W. Mills on "Venus and Adonis" and "Lucrece" was read, calling attention in the first place to the need of remembering, when we form a judgment upon the ethics of Shakspeare's handling, that it was then the fashion to so treat such themes. Even Spenser, the grave and pure, at times wrote in a way that grates upon modern nerves. But morality is not outraged, or even in question; it is only a matter of fashion. It may be difficult for a modern reader to discover those merits of "Venus and Adonis" on the strength of which it gained at once a great reputation. But if it be read in connexion with the plays, it is interesting to note how strong is the resemblance of thought and diction in many passages. Many apparent parallelisms were then quoted. "Lucrece" in style is a much riper production than "Venus and Adonis." The blemish, however, of an inordinate, although popular, classicism is irreparable. There is also in it a frequent want of naturalness, and it is loaded with laboured conceits.—Dr. J. N. Langley, in a paper on "A Few Obsolete Words in 'Venus and Adonis,'" taking "ear" (to plough) as a text, dwelt mainly on the almost inexhaustible derivatives of the prolific root *ar*. Comment was also made on some other rare words.

ARISTOTELIAN SOCIETY.—(Monday, April 23.)

SHADWORTH H. HODGSON, Esq., president, in the chair.—Mr. P. Daphne read a paper on "Some Conscience Theories." Following an analysis of the notions involved in the contrasted terms "Fact" and "Right" he drew attention to the two independent questions involved in any inquiry into the genesis of "Conscience," viz., that of the genesis of the various existing rules of conduct (which could often be traced), and the genesis of the partly intellectual, partly emotional, state called conscience, which was not so capable of demonstration. He considered the view taken by Dr. Bain in his book on *The Emotions and the Will*, that its germ is fear induced by punishment, unsatisfactory, since it involved the assumption that

disinterested and even self-sacrificing acts, from the prompting of which both fear and hope of praise were admittedly absent as motives, nevertheless arose from a germ of which fear was the sole characteristic. He doubted whether any satisfactory scientific theory of the genesis of conscience was to be expected; but he inclined to consider it more akin, so far as feeling was concerned, to the discomfort felt at being out of correspondence with surrounding relations.—The paper was followed by a discussion.

ANTHROPOLOGICAL INSTITUTE.—(Tuesday, April 24.)

FRANCIS GALTON, Esq., president, in the chair.—A paper, by Dr. Venn, on "Recent Anthropometry at Cambridge" was read, and was followed by a communication by the president, on "The Head-growth of Cambridge Students." During the Health Exhibition at South Kensington over 9000 persons were measured in Mr. Galton's laboratory; and a comparison of these measurements with those of the Cambridge men gives a result strongly in favour of the latter, as the following table shows:

	Height	Weight	Breathing Capacity	Pull	Squeeze
Cambridge ...	68.9	153.6	254	83	87.5
S. Kensington 67.9	143.0	219	74	85.0	

These figures point to the high physical condition of the upper educated classes; and a comparison of these figures with those derived from the statistics collected by the anthropometric committee of the British Association show that the average Cambridge student is distinctly above, and the average visitor to the exhibition about as much below, the mean of the general population in these particulars. The comparative brain capacity was calculated by multiplying together the maximum length, maximum breadth, and height above a plane passing through the *meatus auditorius* and immediately beneath the superciliary ridge. The men were divided into three classes: (A) first-class honour men; (B) all other honour men; (C) "poll" men and failures. It was shown that the heads in class A were distinctly larger than those in class B; and that, while both gradually increased in size from the age of nineteen to twenty-five, the superiority was steadily maintained. In the case of class C, which started with a smaller head than either A or B the size increased with much greater rapidity than in either of the other classes up to the age of twenty-two and a half, when the curve was found to cross that of class B; and at the age of twenty-five the size of the head of the average "poll" man, although considerably less than that of the "first-class" man was slightly larger than that of the ordinary honour man.—Mr. Galton also read a paper on the answers he had received from teachers in reply to questions respecting mental fatigue.

FINE ART.

A Season in Egypt—1887. By W. M. Flinders Petrie. (Field & Tuer.)

MR. PETRIE has done well to break with that time-honoured tradition which requires the scientific traveller to be strictly dull. To a book brimful of hieroglyphic inscriptions, pyramid measurements, tables of weights, and the like, he gives us the liveliest of gossiping introductions, detailing his adventures on land and water—the former in a tent round which hyenas prowled by night and thieves by day; the latter in a small boat with a deck-cabin measuring 12 ft. by 7, "having scarce room for a bench on either side to sleep on, and a passage up the middle." Such being the limited nature of the accommodation (which he shared, by the way, with Mr. F. Llewellyn Griffith), one is scarcely surprised to learn that "a table was out of the question," or that it was found necessary to devise a substitute for that piece of furniture in the shape of a swinging shelf, suspended from the roof of the cabin by two loops of string. "It

kept up its character well for swinging," observes Mr. Petrie; "and, if there was any wind, we had continually to steady it and save our plates. A vigorous carver would have made short work of it; but, as we readily dissected our fowls in Arab fashion, the firmness of the dinner-table was not so needful." In this minute craft, with a crew consisting of two boatmen and a boy, they went in six weeks from Minieh to Assuân.

At Assuân they explored the desert valleys, the riverside cliffs, and the islands of Elephantine, Konosso, and Philæ, in quest of rock-cut inscriptions, of which they copied no less than 356. Hence they went northwards, crossing a low plateau of broken-up sandstone above Assuân, and following the path by the Nile as far as a place called Hosh, nearly opposite Silweh—i.e., about forty miles below the first cataract. Here, in an almost unknown valley, called "Shuter-regâl," they found a still richer harvest, consisting of Egyptian, Phœnician, Greek, Cufic, and Arabic inscriptions, some of which are historically valuable. Of the 291 which they copied (filling three of the plates at the end of Mr. Petrie's volume), nine-tenths at least are now published for the first time. At a point some three or four miles lower down they found yet more inscriptions, and a vast number of most curious and interesting graffiti of men, horsemen, giraffes, camels, elephants "with tusks and trunks, and large African ears," besides ostriches and boats of various build. Some of these designs are of extreme antiquity, "being almost as dark as the native surface of rock of geologic age." Others underlie inscriptions of the XIth and XIIth Dynasties. Others, again, are perhaps comparatively modern. As Mr. Petrie very truly says, these figures, though so numerous, have hitherto been disregarded by travellers, probably because they have had no suspicion of their antiquity. I remember to have seen many such rude "counterfeit presentments," of boats and men and animals; but I took them all for the idle scrawls of dragomans and Arabs. A few minutes' careful examination of the surface of the rock and the colour of the graffiti would doubtless have given one matter for reflection; but that was precisely what they did not appear to be worth.

"There is a great range of colour of the surface by which to judge," says Mr. Petrie. "The fresh sandstone is of a slightly brownish white, while the ancient weathering is of a very dark brown, the absolute loss of the rock-face being probably not the thickness of a single grain of sand during thousands of years in most parts. Hence, while on the average we might say that the inscriptions of 4,000 years ago are but perhaps a quarter, or half, as dark as the old face, the oldest of the animal figures are, perhaps, three-quarters of the way toward the colour of the primitive surface. . . . It seems probable that many of these figures date from a time when the elephant and ostrich lived in Nubia and Southern Egypt" (chap. ii., p. 16).

In other words, they may be ranked, perhaps, in the history of primeval art as next in succession to the bone-carvings of prehistoric man. The subject is one of extreme interest, and the traveller who would follow Mr. Petrie's route for the express purpose of copying or photographing these graffiti would render a service to science.

At Silsileh, and in a quarry near the "Soba Rigaleh," Mr. Petrie transcribed the quarry-marks which there abound; and at Kom Ombo, Esneh, and Denderah, he actually identified the sources of the building material used in the construction of the temples by these same marks. At Thebes, he copied about forty very interesting graffiti, including some royal cartouches (pl. xviii.), of which there appears to be no mention in the letter-press. From the recurrence several times of the title "Setem Ash As-t Pa Ma"—i.e., attendant in that quarter of the great necropolis now known as Draḥ Abu'l Neggah—it would seem as if some of these antique scrawls had been found on the rocks thereabout. In his next edition, Mr. Petrie will, perhaps, tell his readers more about them. It was at Thebes that he took his long series of paper-casts and photographs of "Racial Types," shown last year at the Manchester meeting of the British Association. These precious ethnological records form no part of the present work; but something is said as to the methods employed when photographing in the depths of subterranean tombs, and of the conditions under which the paper-casts were occasionally taken. Many processions of foreign captives, battle-scenes, and tribute-offerings are sculptured on the faces of walls so high that a lofty scaffolding would be needed were any attempt made to reproduce them by means of the camera; so Mr. Petrie, emulating Shakespeare's sapphire gatherer, took paper casts of these subjects at the imminent risk of his neck.

"By hanging a rope-ladder over the wall," he says, "weighted down at the top by Muhammed (enjoined not to move) I could scale up, holding the paper and brush in my teeth; and then, hanging on by an elbow, beat the paper on to the sculpture. Altogether nearly two hundred sheets were done, including about two hundred and seventy heads" (p. 4).

It is well that Muhammed did *not* move, and that he was heavy enough to keep that rope-ladder in its place!

Still going northwards, Mr. Petrie journeyed from Thebes to Dahshur, in order to make a trigonometrical survey of the four Dahshur pyramids. The necessary government permit was, however, so slow to arrive that he had but time to complete a survey of two—namely, the large southern pyramid, which is remarkable for being built in two different slopes, and the small one adjoining. Of the history of these structures, their date, their builders, nothing is known; but Mr. Petrie's quick eye detected part of a royal cartouche on one of the blocks of the large southern pyramid, of which he says that "among all possible names, this would correspond only to Rama (Khernu), Amenemhat IV." (p. 27). Here, too, he discovered two ancient roads, one leading from Sakkarah to the oasis of Ammon, and the other from Sakkarah to the Fayûm. The former is very interesting, being not only bounded by two parallel ridges of swept-up pebbles about 5 feet wide and 1085 inches from crest to crest, but measured off at stated intervals by means of road-side way-marks. These way-marks consist of stone socket-blocks cut to receive a square pillar, and occasionally a stela. The socket-blocks measure about 20 cubic inches, and the pillars

9 inches each way. The stela sockets are oblong, and cut to support tablets about 20 inches wide by 10 inches thick. Fragments of both pillars and tablets were found near various socket-blocks; and one tablet, nearly perfect, gives the height of the rest—namely 35 inches. Unfortunately, the surface of the stone is so ploughed up by the sand-blasts of the desert that no trace of the inscription remains. The stelae were erected at distances of 12,000 Egyptian cubits apart, the pillars at distances of 1000 cubits; and 12,000 cubits, as Mr. Petrie points out, is the accepted value of the Greek schoenus. The ruins of a little guard-house on the crest of the ridge marks the first half-schoenus from the point whence the road starts at the mouth of the valley near Sakkarah. The oasis road, though departing from the same point, is marked out by two lines of swept flints only, and shows no remains of way-marks.

At Thebes, Mr. Petrie collected more than 250 funerary cones; and, while camping for five weeks at Dashur, he bought some 500 weights, ranging in ponderosity from a few grains up to 25 lbs. These are of many different substances, as basalt, haematite, granite, limestone, quartz, gneiss, serpentine, diorite, alabaster, flint, felsite, jasper, and glass; and he has tabulated them according to various standards, as the Egyptian "kat," the Memphite bi-uten, the Assyrian shekel, the Attic drachma, the Phœnician shekel, the Aeginetan drachma, the eighty-grain standard, and the Persian silver standard. He also gives a plate showing the forms of twenty types. Two plates and part of a third contain copies of the inscriptions stamped on 107 funerary cones, dating from the XIIth to the XXIVth Dyna-ty. These inscriptions, as translated in chap. v. by Mr. Petrie and Mr. Griffith, read like an extract from an ancient Egyptian directory. They contain many of the official titles enumerated in Prof. Maspero's paper on "The Egyptian Hierarchy" (see the ACADEMY, No. 833, April 21), and some—as, for instance, the "Head Sealer of the Jars of Amen"—which do not appear in that very curious list. The inscriptions will be very useful to collectors for purposes of comparison; and so, also, will be Mr. Petrie's suggestions for the classification of these interesting objects, which occur in every museum of Egyptian antiquities, and of which most travellers bring home a few specimens. They are found only at Thebes, and always outside the tomb, buried either in the sand and débris which mark the entrance, or in the sand in front of the entrance. Archaeologists have differed as to their meaning and uses; but there can be no doubt that they are, as Prof. Maspero supposes, imitations in baked clay of a certain kind of sacrificial cake made with flour and salt, the flour being represented by the whitened surface of the clay. A familiar hieroglyph, figuring an outstretched arm and hand with a conical object supported in the upturned palm, stands for *ta*, meaning "give," or "offer," and is commonly employed in funerary inscriptions when oblations of food and drink are in question; and the conical object is clearly one of those cakes for which the clay cone is an enduring substitute.

If Mr. Petrie is not a professed Egyptologist, he at all events knows enough of the

language and writing not only to decipher inscriptions, but occasionally to suggest new readings. That *Neb-t Pa* means "Lady of the House," and is a courtesy-title pertaining to the wife of the master, has long been an accepted commonplace; but a careful analysis of certain of the Assuan inscriptions has led Mr. Petrie to conclude that *Neb-t Pa* is the equivalent of "widow." He finds, in fact, that where the husband is described as *Makheru* (i.e., "true-voiced," and therefore deceased), the wife is styled *Neb-t Pa*; whereas, if the husband is yet living, she is simply *Hem-t*, or "wife." Mr. Petrie points to some five or six inscriptions in support of his theory, which appears so far to be fully borne out; but it will be necessary to glean a much larger field of funerary records before any final verdict can be pronounced. I may, however, observe that I find a striking confirmation of Mr. Petrie's argument in a stela in the Peel Park Museum, Manchester, where a certain Maa figures as the wife of one Meshi, with the title of *Neb-t Pa*, and reappears further on as the wife of one Uau, and designated as *Hem-t* only. Here we have a clear case of widowhood and second marriage. Much more important, and supported by a weightier body of monumental evidence, is Mr. Petrie's remarkable argument on the Horus-names of Egyptian kings, in chapter iv. He had already shown, in his memoir on *Tanis* (Part I.), published by the Egypt Exploration Fund, that the so-called "banner" on which the Horus-name appears is in truth no banner, but the abridged representation of a false door, and that the supposed fringe of the "banner" is the pannelled ornamentation of the earliest type of doors of the kind. This false door is essentially sepulchral. It was always placed on the west side of the outer chamber of a tomb; and it was supposed to be the door through which the *ka*, or "double," of the deceased passed to and fro between the place of sepulture in which the mummy reposed, and the outer chamber, or chapel, in which friends assembled and oblations were offered up. Mr. Petrie gives a series of examples of these "banners" (plate xx.) of various periods, showing how some are elaborate and unmistakable representations of a pannelled doorway, with folding-doors, bolts, and the accustomed "drum" above, which is invariably found in tombs of the ancient empire. One example, from the "banner" of Queen Hatshepsu at Dayr-el-Bahari, shows not only the double doors, but the lintel, door-sill, and pivots, the cross-beams of the door, and the two bolts. The two bolts are also seen in the "banner" of Ptolemy II. at Kous, and in that of Ptolemy XIII. from Kom Ombo. In short, Mr. Petrie demonstrates the exactness of his conclusions by giving seventeen illustrations of "banners" from the monuments, ranging from the earliest to the latest periods of Egyptian history; namely, from Seneferu of the IIIrd Dynasty down to one of the most recent of the Ptolemies. For the further development of his argument, he shall speak for himself:

"What does this connexion mean? The square in which the Horus-name is written must be the exact equivalent of the square panel over the false door in the tombs, and the name is the equivalent of the figure and name of the deceased written on those panels. It is the

name of the king as deceased; the name as owner's name, written over the doorway. But it was the *ka*, or double, or ghost of the deceased person which possessed that doorway. It was solely for the *ka* to pass from the burial vault beneath (the shaft of which was supposed to pass behind this false door) into the upper chamber, where its food of funereal offerings was provided for it (see Prof. Maspero's *Archéologie égyptienne*, p. 115, &c.). The name, therefore, must be the name of the *ka*. Private persons had but one name, and their *ka* was of the same name. But a king, who took a second name on ascending the throne, took also a third name for his *ka*. This *ka*-name alone occurs on the doorway in the step-pyramid of Sakkara. Under the Empire, as he [the king] had many *ka*-statues, so he had many *ka*-names. Now observe what the monuments show us. Behind the actual fleshly king there is often shown his double, or *ka*, making offerings with him. Sometimes the *ka* is of the same size as the king, sometimes lesser. And on his head he bears the Horus-name embraced between the *ka*-arms. For fear even this was not sufficient, an inscription nearly always accompanies him, reading 'The king's *ka*, life of the lord of both lands (Upper and Lower Egypt) within the chamber of the sarcophagus and within his chamber of offerings; all life, happiness, and stability, all health to him, all joy of heart to him, like Ra.' The word 'within' (*khent*) may mean 'presiding over,' but the sense is unchanged. It could not be more explicitly stated that the *ka*, which bears the Horus- or *ka*-name on his head, is to pass from the body to the offerings, by means of the very doorway which is represented beneath his name. . . . Another form of the same idea is where the *ka*-name appears to act and live of itself, provided with *ka*-arms, which hold a feather and a staff, surmounted by the head of the king's *ka*. This is known as late as Tiberius. The *ka* was young when the king was young; Amenhotep III. as a child, at Luxor, is borne by a nurse, and has also his *ka* borne by a nurse behind him; the *ka* wearing the *ka*-name between the *ka* arms, on a stand upon his head. It is needless to multiply examples, or to describe them further. The *ka*-name of the king was always associated with the doorway of the tomb by which the *ka* passed to and fro; and the *ka* itself, whenever represented, from Amenemhat I. down to Vespasian, always bears the *ka*-name on his head as his special name. Let us henceforth, then, recognise what is so simply and carefully explained to us on the monuments, and write of the *ka*-name as we do of the throne-name and personal name of each king" (chap. iv., p. 22).

The monumental references in the foregoing extract are reproduced in plate xx., at the end of the book—false doors, inscriptions, *ka*-figures, &c.; and they fully confirm Mr. Petrie's argument. It would be rash to conclude that his theory is of universal application before it has been tested by all accessible monuments; but thus far it seems to betray no flaw.

Meanwhile, I am tempted to suggest that we have not yet, perhaps, fathomed the full meaning of that mysterious offspring of Egyptian metaphysics—the *ka*. Was it really no more than a mere *simulacrum*—a double, a ghost, an appearance? And is this view of the *ka* compatible with the sense of those bas-reliefs to which Mr. Petrie refers when he points to the *ka*-images of living kings, and to the infant *ka*s of the infant Amenhotep III? Plates xxviii. and xxix. of Rossellini's *Monumenti Storici* give various scenes from the celebrated series of tableaux

in the Great Temple of Luxor which relate to the birth and bringing-up of the founder. In one of these we see the queen-mother, Mauteus, who kneels on a kind of dais, having just given birth to the infant king. Hathor kneels facing her, with the royal babe in her arms; and a second Hathor, with a second babe in her arms, kneels behind the first. Over the head of the first child (the actual Amenhotep III.) are engraved his royal ovals, while the space above the head of the infant "double" is vacant. But the remarkable feature of this bas-relief is the *ka* of the queen-mother, which stands behind her, with the *ka*-arms on its head, while from each of these *ka*-arms is suspended an *ankh*, or sign of life. The meaning of this symbol is obvious. The child is but just born, and the maternal *ka* presides over the lives of both mother and child. Below the dais, we see the child Amenhotep and the child *ka*, both in the act of being suckled by Hathor in the shape of the divine cow. In plate xxxix. the child-king and the child-*ka* are presented by Ra to Amen-Ra, king of the gods; while behind Ra stands a Nilus, carrying the child-king and the child-*ka*, the former with his two royal ovals above his head, the latter crowned with the *ka*-banner, and *ka*-name. Behind this Nilus stands another Nilus, carrying three *ankhs* tied together in his right hand—an *ankh*, evidently, for each of the royal names, i.e., the family name, throne-name, and *ka*-name of the infant Pharaoh.

But why this close association of the *ankh* with the *ka*? And why does the *ankh* (and especially the bull, also called *ka*, and expressive of vital energy) recur so persistently in *ka*-names, especially of the Rameside Dynasties? If I permitted myself to hazard a guess upon this difficult and obscure subject, I would ask whether it may not be possible that the *ka* represents, not only the "double," but something answering to the vital principle? The *ka*-inscriptions expressly define the *ka* as the "life" of the king, and this expression might perhaps furnish the key to a more exact apprehension of the part played by the *ka* in the Egyptian conception of the universe. Man, according to that conception in so far as it is known to us, consisted of a body, a soul (*ba*), an intelligence (*khau*), and a *ka* or double; but unless the *ka* stands also for the "life," the vital principle is not represented. Were the conception of the *ka* susceptible of this interpretation, a more powerful motive than any yet suggested would be discovered for the mummification of the body, and a more satisfactory solution not only of the functions of the *ka*, but of the urgent need which existed for providing for its material nourishment by means of pious foundations in perpetuity.

I am anxious to add that I offer this conjecture purely for what it may be worth, and, thus far, as a guess only. I hope to return to the subject at some future opportunity.

A Season in Egypt is well printed on excellent paper, and is illustrated with no less than thirty-two plates.

AMELIA B. ELWARDS.

THE ROYAL SOCIETY OF PAINTERS IN WATER-COLOURS.

PEOPLE say that this is the best "Old Society" show they remember. Perhaps one reason for the remark may be that it is less monotonous than usual. There are a few surprises. Here, for instance, is the president suddenly turning his back on romance and "streakiness," and presenting us with a Velasquez-like "Spanish Infanta" (73), admirable in grouping and colour, and very humorous in conception—observe the preference of the infanta for animals that do not fawn, and the exquisitely pompous air of the little spaniel, rendered in a manner worthy of Caldecott. Perhaps the best figure in the picture is the girl behind the infanta; the stooping woman seems to be out of drawing, but possibly this may be the result of the stiff brocade dress. In "After the Battle" (126) we have a rather fine specimen of Sir John Gilbert's old style, though why the wounded horse in the foreground should have developed such a tapir-like prolongation of the nose is mysterious. Turning to another well-known member of the society, Mr. Herbert M. Marshall, we are again startled with a new departure. This skilful artist has discovered that subjects are to be found beyond the Thames. In "Mevagissey" (61) he gives us a clever study of a Cornish village after sunset, in which blue smoke takes the place of the familiar London black smoke. The proper point of view for this picture, by the way, is rather difficult to find; and, until it is discovered, no one will understand the delicate harmony of the work. But it is in his "Dordrecht" (249) that Mr. Marshall has most distinctly gone afield. There does not seem to us to be a more charming piece of colouring in the room than this exquisite little sketch. Of his old class of subjects we have a fine example in "From Waterloo Bridge, looking East" (94)—a Venetian London, with a marvellously glorified St. Paul's. Mr. Albert Goodwin, who is always original, has, as usual, a very wonderful exploit in romance and colour, "The Enchanted Island" (70), mainly remarkable for the extremely unsuccessful reflections in the water; but he also sends a powerful and impressive picture of "Lincoln" (143)—to our thinking, the finest landscape in the room. Mr. J. W. North sends only one work, "Sir Bevis and the Woodwoman"—in Memory of Richard Jefferies" (131), characterised by all the charm of colour and accurate delineation of interlacing trees of this accomplished artist. Mr. E. A. Waterlow has an exceptionally good study of "A Cornish Harbour" (16)—very striking and truthful in colour; but we do not understand why the foreground in this, as in so many of the pictures of this artist, should be rendered by a series of "dabs." Among other works of more than average merit, we may notice Mr. A. W. Hunt's "Wind of the Eastern Sea" (36); Mr. Collingwood's "The Matterhorn" (154); and Miss Clara Montalba's "Gondola Race" (204). Returning to the figure-subjects, one of the most elaborate is Mr. Otto Weber's "A Big Haul" (184)—a careful and admirable study of a group of fishermen hauling in their nets. The drawing of the figure of the man on the left and of the boy in the middle of the picture is excellent; the colour is pleasing, and, above all, the men are not posing for a picture, but are all directing their attention to a common object. It is the lack of this quality which seems to detract from the success of Mr. Tom Lloyd's ambitious "Ferry Boat a-hoy" (25). Several of the figures are graceful and well grouped, but they seem to be sitting for their portraits. Of Mr. Walter Crane's drawings, "Sunrise" (178) is probably the most successful; and Miss Edith Martineau has two well-drawn figure pieces.

CORRESPONDENCE.

TURNERIAN TOPOGRAPHY.

Autun: April 30, 1888.

In the *Portfolio* for April Mr. Cosmo Monkhouse reverts to this subject, which will retain its interest as long as Turner's name is remembered; and he refers to the criticism of Turner's "Kilchurn Castle" in my biography of that artist. Since the biography was published a little more light has been thrown upon the subject. I am inclined now to believe that Turner never sketched Kilchurn Castle from nature, and, I think, it is scarcely even probable that he ever saw it from the river Orchay. The landscape—or the mountainous part of it, which is nearly the whole—is a sketch from Cladich with modifications, and Cladich is a long way from Kilchurn. The castle is not Kilchurn at all, but some other building; and Mr. Josiah Gilbert told me, in the year 1885, that he believed himself to have found the original in Bolton Castle in Wensleydale. On opening my *Life of Turner* when he returned home Mr. Gilbert found his guess confirmed. Turner modified his sketch of Bolton Castle by leaving out one of the great towers and by making the small intermediate tower round instead of square. It seems evident, therefore, that on passing by Loch Awe Turner made for himself a slight sketch from Cladich; but perceiving that the subject would not make a picture, he then inserted Bolton Castle, probably because he had not a sketch of Kilchurn.

With regard to the morality of this I should say that the public, rather than the artist, is to blame. The public will not endure topographic accuracy (i.e., correct drawing) in landscape; while, on the other hand, it wants a local name, and does not like to be told that a picture is a composition out of the artist's own head or from loose sketches in his portfolio. The artist supplies the two demands at the same time—a local name and an artistic composition. The people wish to be deceived and they are deceived according to their desire—surely, then, it is not for them to complain.

P. G. HAMERTON.

THE BABYLONIAN TABLETS IN THE BOULAQ MUSEUM.

Queen's College, Oxford: April 30, 1888.

I have just received from M. Grébaud, the director of the Boulaq Museum, the following letter, which he asks me to forward to the ACADEMY. It will be seen from it that the Babylonian tablets acquired by the Museum were after all safely deposited in an accessible part of the building, and not locked up in the private house of the director. I am exceedingly sorry that the misinformation I received should have led me to commit an act of injustice to M. Grébaud, and I hasten to repair it as soon as possible. If I am again in Cairo I hope I shall not be so unfortunate as to miss him again, or to lose the chance of copying inscriptions which throw light on Nebuchadnezzar's campaign against Egypt, and possibly also on his campaign against Judah.

A. H. SAYCE.

"Boulac: April 22, 1888.

"MY DEAR COLLEAGUE,—

"The Assyrian tablets collected, with some difficulty, at the Boulac Museum towards the end of last year have never left the offices of the building, where they were under the hands of the curator when you arrived in Cairo. You were misinformed when you were told that they were locked up in my house. Not being able to read Assyrian, but thinking you would come to Egypt this winter, before I departed to Upper Egypt, I had requested that the existence of the tablets should be made known to you, and that you should be asked to leave at the Museum some notes which would assist us in compiling our catalogue. I am doubly vexed at what has happened: vexed on

account of the annoyance you have experienced, and vexed because I am deprived of the information I had congratulated myself I should obtain from an authority like yourself.

"As regards the impediments put in the way of the discovery of antiquities by the *fellahin*, I assure you, my dear colleague, that the information given to you is not less erroneous than that regarding the sequestration of the Assyrian tablets. I will ask the ACADEMY to offer me the hospitality of its pages in one of its next numbers; and, with your permission, I will point out the real facts, which, I hope, will appear to you to be reassuring.

Yours, &c.,

"E. GRÉBAUD."

THE HYKSOS KING RA-IAN.

Queen's College, Oxford: April 22, 1888.

Mr. Tomkins's letter induces me to send three short notes.

I possess a scarab which seems to read Set-an. I bought it at Cairo a few years ago under the impression that it represented the name of the Hyksos king Staan.

In spite of the names Ra-set-nub, &c., I feel doubtful whether a name like Ra-ian, compounded with that of the sun-god Ra, can be of Hyksos origin. On the other hand, the Arab historians make Rayan or Er-Reyan the Pharaoh of Joseph and the son of El-Walid the Amalekite. As is well known, the Amalekites of the Arab writers represent the Hyksos of Manetho. El-Walid, the son of Duma', corresponds to the Salatis of the Greek lists.

Light will be thrown upon *Janua* as an explanation of *Tharatha*, "in connexion with the great sanctuary Mabog," by a passage in my paper on the "Monuments of the Hittites" (*Tr. Soc. Bib. Arch.* 1881, p. 257). Here I say: "Babia, from *Bab*, 'gate,' was the Semitic translation of the name of the great goddess of Carchemish." A. H. SAYCE.

NOTES ON ART AND ARCHAEOLOGY.

MR. W. J. LINTON, the veteran wood-engraver, poet, and Chartist, is at present on a visit to this country from his home in America, in order to see through the press the important work on which he has been engaged for several years past. This, which will be entitled *The Masters of Wood-Engraving*, consists of a history of the art from the earliest times, illustrated by photographic facsimiles of the choicest examples, and combined with careful criticism. Both the library and the print room of the British Museum have been thoroughly searched to obtain the purest impressions of the engravings reproduced, while others come from unique proofs in the author's own collection. All the reproductions will be of the same size as the originals. The book will be in one volume, of the form known as short royal folio, containing 229 pages of text, with nearly 200 cuts interspersed, and 48 page-subjects. It will be issued, to subscribers only, in an edition of 500 copies, at the price of ten guineas; while an extra edition, limited to 100 copies, will also be issued on paper large enough to give the whole of such masterpieces on wood by Dürer as "The Triumphal Car of Maximilian" which measures more than seven feet in length.

A SPECIAL general meeting of the Egypt Exploration Fund will be held on Wednesday next, May 9, in the large room of the Zoological Society, 3 Hanover Square, W., in order to pass the articles of association. At 9 p.m. of the same day, and at the same place, Miss Amelia B. Edwards, the hon. secretary to the Fund, will deliver a lecture on "M. Naville's Recent Discoveries at Bubastis," illustrated with limelight views.

THE exhibitions to open next week include the Royal Academy, The Royal Society of British Artists, and Messrs. Hollander & Oremetti's summer exhibition at the Hanover Gallery, New Bond Street.

THE Queen has consented to become patron of the exhibition of pictures and objects of interest connected with the royal house of Stuart, to be held at the New Gallery during the winter season of 1888-89. The following is a list of some of the objects which it is proposed to collect:—First will come authentic portraits of the members of the family, painted in oil or in miniature, or drawn in pastel. The royal palaces and the great houses of England and Scotland, not to speak of collections of recent formation, possess large numbers of pictures by Janssen, Van Somer, and Mytens, by Jamesone and by Vandyck, by Lely and Kneller. Second only to these in interest are the miniatures painted in the great period of miniature art—the works of Hilliard, the Olivers, Samuel Cooper, &c. Then there are original documents without end, some of them of the highest interest—letters of Mary Queen of Scots, and of all her descendants down to the time of the Cardinal of York, papers directly referring to the family, and so forth. It is intended to make the autographs a special feature of the exhibition. Next will come personal relics of all sorts; and these are so numerous that the chief difficulty will be to select those of unquestioned genuineness and greatest intrinsic interest. Coins, medals, and seals will be another department; sculptured portraits, &c., another; needlework from the hands of the many princesses will form another, and not the least attractive, part of the display. The president of the committee is the Earl of Ashburnham; and the secretary is Mr. Leonard C. Lindsay, New Gallery, 121, Regent Street.

DURING the whole of next week, from Monday to Saturday, Messrs. Sotheby will be engaged in selling the duplicates from Mr. H. Montagu's famous collection of English coins and medals. Mr. Montagu, it seems, has been ambitious that his cabinet should contain not only a specimen of every English coin, but also the finest example of such coin; and with this object he bought up the entire collections of the late Mr. Addington and the late Mr. William Brice. Having thus been able to satisfy himself that the specimens he retains are those in the highest state of preservation, he is now parting with all his duplicates, which are often scarcely less choice, and in a few cases the only other examples known outside the British Museum. We may specially mention the penny of Aethelbald (of which the vendor retains the only other known example), a pattern crown of Henry VIII. (which has before sold for £165), the "Oxford" crown of Charles I., Simon's "petition" and "reddite" crowns of Charles II., and the series of pattern pieces of George III.

We have received somewhat late, but none the less welcome, a double number of the *American Journal of Archaeology* (London: Trübner), which completes the quarterly issue for 1887 and the third annual volume of the work. Among the more important articles are—"The Portraiture of Alexander the Great," by Mr. Alfred Emerson, who urges special consideration for a small terra-cotta bust at Munich, of which two phototype plates are given; an ingenious attempt by Mr. W. H. Goodyear to prove, with many illustrations, "The Egyptian Origin of the Ionic Capital and of the Anthemion"; and the first of a series on "The Antiquities of Southern Phrygia and the Border Lands," by Prof. W. M. Ramsay (not "of Glasgow"!). The valuable section entitled "Archaeological News" fills just 100 pages in this double number, while the total number of

plates given in the whole volume is thirty-three. We are promised that, in the future, this abundant scale of illustration will be continued; and that a series of papers will deal with the recent expedition to Southern Italy undertaken by Mr. J. T. Clarke and Mr. A. Emerson, under the auspices of the Archaeological Institute of America.

AN interesting "Preliminary Catalogue" of Mr. Ruskin's St. George's Museum at Sheffield has been compiled by Mr. Howard Swan. (Sheffield: W. D. Spalding & Co.) The descriptions of the objects are in most cases accompanied by illustrative extracts (which appear to be very happily chosen) from Mr. Ruskin's works, together with references to other passages treating either of the objects themselves or of the principles which they are intended to exemplify. The present catalogue deals only with the portions of the museum which relate to architecture, sculpture, and painting, the collections of coins, of minerals, and of drawings illustrative of natural history being reserved for a separate catalogue. The quotations are not too short to be read with pleasure, and form an epitome of Mr. Ruskin's teaching with regard to the leading principles of art, and the relation of art to the other interests of life. Altogether, this little pamphlet will be found well worth reading, even by those who have no opportunity of visiting the unique collection to which it relates.

THE STAGE.

STAGE NOTES.

MISS GRACE HAWTHORNE has entered into an agreement with Mr. Wilson Barrett to produce "Ben my Chree," the dramatised version of Mr. Hall Caine's novel, *The Dreamer*, at the Princess's Theatre, on Thursday, May 17.

THE Shakspeare Reading Society—of which Mr. Irving is president, and Mr. Frank Marshall and Prof. Henry Morley are among the vice-presidents—will give a dramatic reading of "Romeo and Juliet," under the direction of Mr. W. Poel, at the London Institution, on Tuesday next, May 8, at 8 p.m. The part of Juliet will be taken by Miss Gertrude Giles.

MUSIC.

RECENT CONCERTS.

MISS ALICE GOMEZ, previous to her departure for India, gave a farewell concert at Prince's Hall on Thursday afternoon, April 26; and the large audience assembled showed that this talented lady has many admirers. Some songs suit her extremely well. This was the case with "O Fatima," from Weber's "Abu Hassan," and Gounod's "Entreat me not to leave thee," which she gave in a way which thoroughly satisfied her hearers. Mrs. Hutchinson, Miss Glenn, Messrs. Piercy, and Mr. H. Thorndike, added to the success of the afternoon. The last named sang an interesting song by Miss M. Carmichael, "The King of Denmark's Ride," in which he was accompanied by the composer. Mr. W. Coenen and Herr Meyer contributed piano and violin solos.

Mr. Orton Bradley gave a concert at the Steinway Hall on the following afternoon, and the whole of the programme was devoted to the music of Brahms. So far as we are aware, this is the first time the composer has been so honoured, at any rate in London. The Piano-forte Quartet in A (Op. 26) and the Trio in C major (Op. 87) afforded interesting examples of a comparatively early, and of a late, period. The Liebeslieder waltzes, which have become so popular, were suitably included in the scheme.

Mr. Bradley was unwise in giving the Sonata in C (Op. 1) without head or tail: he only played the two middle movements. If he considered the whole too long for his programme he could easily have selected one or two numbers from the Ballade (Op. 10) or from the Eight Pieces (Op. 76). He rendered the Andante with feeling, but he was not so successful with the Scherzo. The vocalists were Miss Marriott, Miss Damian, and Messrs. Lane and Brereton.

Mdme. Frickenhaus gave a pianoforte recital at the Prince's Hall last Saturday afternoon. Her rendering of the Sonata Appassionata, if not all that was requisite in feeling and dignity, was good and evoked hearty applause. In a pleasing Zadumka, by Noskowski, and a lively Bourrée, by E. Shute, the lady was heard to advantage. The programme included pieces by Weber, Brahms, Chopin, and other composers.

Otto Hegner gave an orchestral concert at St. James's Hall on Monday afternoon. Beethoven's Concerto in C major of course recalled the performance of Josef Hofmann last season. Hegner's playing was unequal, but there were many moments in which he surpassed his rival. There is more brightness, vigour, and soul in his playing. He afterwards gave Chopin's Etude in A flat, and the Valse (Op. 42). Both pieces are beyond his powers, yet in the latter he played remarkably well. He was also heard in Mendelssohn's Capriccio in B minor. An excellent rendering of Schubert's unfinished Symphony, under the direction of Mr. F. H. Cowen, added to the interest of the concert. There was a large attendance.

Mr. Theodore Werner, violinist, gave the first of three orchestral concerts at St. James's Hall on Monday evening. His technique is good, but his tone is weak and his intonation not always pure. He played Beethoven's Concerto in D, and proved himself a worthy pupil of Herr Joachim; but there was nothing exciting or characteristic about the performance. The Finale, indeed, was tame. He afterwards gave two movements of a Vieuxtemps Concerto, and finished with a movement from Paganini's first Concerto. Paganini's music requires to be given with all possible dash and daring, but both were lacking. Mr. Werner was encored after the Vieuxtemps, and played with much effect a transcription of Chopin's Nocturne in E flat (Op. 9, No. 2). Why are so many violinists guilty of this artistic error? An excellent band, under the able guidance of Mr. A. Manns, played Cherubini's overture to "Anacreon," Schubert's delightful Entr'acte and Ballet Air from "Rosamunde," and the Introduction to the third act of "Lohengrin."

J. S. SHEDLOCK.

MUSIC NOTES.

THE prospectus of Mr. Harris's opera season at Covent Garden has just been issued. Thirty-two subscription performances will be given during eight weeks, commencing Monday, May 14. The list of operas includes however, no novelties. Engagements have been made with Mdme. Albani, Mlle. Arnoldson, Messrs. Jean and Edouard de Reske, and many other distinguished singers. Signor Mancinelli and Mr. Randegger will be the conductors.

A FUND is being raised by subscription for the purpose of founding a scholarship at the Royal Academy of Music supplementary to "The Liszt Scholarship," and to be entitled "The Walter Bache Scholarship." Mr. Alfred Littleton, of Berners Street, is the honorary treasurer.

WARD & DOWNEY'S NEW PUBLICATIONS.

THE LIFE and TIMES of JOHN

WILKES. By PERCY FITZGERALD. 2 vols., crown 8vo, with Four Portraits, 21s.
"Replete with interesting records of a life almost without parallel."—*Morning Post*.
"No richer or more suggestive theme could engage the practised writer. Entertaining and readable these volumes could not fail to be."—*Saturday Review*.

SHELLEY: the Man and the Poet.

By FELIX RABBE. 2 vols., 21s.
"He has succeeded in writing the most entertaining Life of Shelley extant in any language."—*Athenaeum*.
"An interesting and accurate analysis of Shelley's life and works."—*Daily Telegraph*.
"A vivid and interesting picture of the poet in his works and in his life."—*Scotsman*.

With a Prefatory Paper by Sir CHARLES GAVAN DUFFY.
A THIRD and CHEAPER EDITION of

THE IRISH in AUSTRALIA. By

J. F. HOGAN. Cloth, 2s. 6d. [Just ready.]
"Altogether the book offers a pleasant corrective of the silly transcripts of anti-Irish prejudice and hearsay ignorance which have found their way into the 'impressions' of literary carpet baggers, who have sought to instruct the old world with a few months' hotel experiences of the new. It appears that among the offenders in this way is to be counted that prince of bookmakers, the late Mr. Anthony Trollope."—*Full Mail Gazette*.

THE CHEQUERS: being the Natural

History of a Public-House. By JAMES RUNCIMAN. Boards, 2s.; cloth, 2s. 6d.
"There are passages which, in simple pathos, remind one vividly of Bret Harte, and there are others, again, which Dickens might have penned; but over all there is a veil or strong originality, and through all runs a vein of quaint humour. The author's knowledge of the shady side of life is extensive and peculiar, and an occasional touch here and there reveals a really profound insight into the springs of human action. Some of the characters are sketched with humorous felicity, yet without caricature; and the work as a whole is one of observation and analysis, the unconventional quality of which fascinates the reader."—*Whitehall Review*.

THE NEW NOVELS

AT ALL CIRCULATING LIBRARIES.

A WOMAN'S FACE. By Florence WARDEN, Author of "The House on the Marsh," &c. 8 vols. [Just ready.]

ROBERT HOLT'S ILLUSION. By M. LINSKILL. Author of "The Haven under the Hill," &c. 6s. [Just ready.]

MISER FAREBROTHER. By B. L. FARJEON, Author of "Great Porter Square," &c. 8 vols.

"A workmanlike story of sensational interest.....The novel taken as a whole is heartily enjoyable."—*Scotsman*.

FOR FREEDOM: a Garibaldian

Romance. By TIGHE HOPKINS. 2 vols.
"An exciting and fluent story of love and war."—*Daily Telegraph*.
"A really refreshing story."—*Literary World*.
"Mr. Hopkins's descriptions are forcibly graphic."—*Morning Post*.

"Sensational the story undoubtedly is.....but the sensation is always healthy and natural."—*Pictorial World*.

IDLE TALES. By Mrs. Riddell. 6s.

"A delightful volume.....It has charm enough to take a reader straight from beginning to end with unflagging pleasure."—*Scotsman*.

MIRACLE GOLD. By Richard Dowling. 8 vols.

"Weird and strange indeed are the indictments of 'Miracle Gold,' Mr. Richard Dowling's new novel. He ranks himself by natural aptitude amongst those to whom the pain and pathos of human nature come more forcibly than its pleasures.....Mr. Dowling's portraiture of suffering humanity is very feeble."—*Daily Telegraph*.
"Characteristically ingenious and peculiar.....It would spoil interest in a very cleverly constructed story to say anything about the secret of the 'Miracle Gold,' or to impute the nature of the part played by the dwarf. He is really the character of the book, and it is a character very skilfully drawn, the effect upon it of a calamity being powerfully depicted. There are other powerful things in the book; among them a picture of the feelings of a murderer just after he has done the deed. The novel is decidedly clever, original, and somewhat bizarre in construction."—*Scotsman*.

MOLLY'S STORY. By Frank Merryfield. 3 vols.

"A quaint, sweet, and perfectly natural romance.....Mother-wit, pathos, and the power of true love stamp it as a story of all time."—*Vanity Fair*.

WARD & DOWNEY,

LITERATURE.

Merchant and Craft Guilds: a History of the Aberdeen Incorporated Trades. By E. Bain. (Aberdeen: Edmond & Spark.)

As one who long filled the office of Master of the Trades' Hospital at Aberdeen, Mr. Bain has enjoyed special opportunities of becoming familiar with the well-preserved records of the seven incorporated trades, which, after playing so great a part in the history of the borough as it gradually advanced to self-government, have still, in all probability, an important task to fulfil in the war of competition by which our commerce is menaced in the future. The title of the work seems to promise a general account of all the trading associations which anciently existed at Aberdeen; but the author has in fact confined himself, with the exception of a short essay on the history and nature of guilds in England and on the continent, to giving an exact account of the seven craft-guilds or trades, at first in relation to their long and successful struggle with the privileged merchant-guild, and afterwards in connexion with the causes which led to their peaceful development after the memorable treaty between the burgesses and the artisans established by a common indenture in the year 1597.

The trading community at Aberdeen, as in the other royal burghs in Scotland, was established on a foundation of oligarchical privilege. The country being in a very poor state, King David I. (1124 to 1153) obtained a willing crowd of settlers from England and Flanders by giving them very important powers over the poorer classes of townsmen, and by securing to them a nearly complete immunity from the royal jurisdiction, with the exception of the greater pleas of the crown. The leading regulations of the burghs appear to have been copied from the customs of Newcastle. Mr. Robertson tells us that the original burgesses were, with few exceptions, of foreign origin, and that it was long before the native element entered largely among the civic population; and that this was especially the case in the North, "where the towns must have long stood out like commercial garrisons in a disaffected, and not unfrequently a hostile, country." Mr. Bain shows us that the earliest charters granted to Aberdeen had reference only to trading privileges, and especially to the protection and regulation of the market. The first of these charters was granted by William the Lion in 1196, who gave the liberty of holding a "free hanse," as peaceably as in the days of his grandfather King David, to his burgesses of Aberdeen and Moray, and to all his burgesses dwelling north of the Mounth. Mr. Bain considers that the privileged class of burgesses was intended to include the craftsmen as well as the merchants; but, as a

matter of fact, the merchant-traders long continued to maintain the monopoly of buying and selling raw materials, and to confine the artisans to dealing in their own wares, except so far as they were authorised to use the market. Dyers and weavers, or "websters," were excluded from the merchant-guild, as was usually the case throughout Scotland; and it seems to have been a general rule that a craftsman could only become a member of the superior body by giving up working with his own hands and assuming the dignity of a "master." In some burghs it was even forbidden for foreign traders to sell their wares to any but members of the merchant-guild, with certain exceptions as to fair-time and as to goods, such as salt and herrings, which might be sold on board ship to all comers. Alexander II. granted a charter to the traders of Aberdeen in the year 1224, which affords a great deal of valuable information as to the wide monopolies belonging to the leading citizens, and the stinted and scanty benefits which were thought sufficient for the "foreigner" and the ordinary inhabitant. The principal passages of this important record are as follows:

"Know all men present and to come that I have granted, &c., to my burgh and to my burgesses of Aberdeen the rights and privileges that my predecessors granted to the burgh and to the burgesses of Perth, that is to say, to hold their market on Saturday in every week; and I have rightly given my sure protection to all good men who shall come to that market, and I forbid anyone wrongously to inflict injury or annoyance or inconvenience upon them while coming to market or while returning, on pain of my full forfeiture. I also strictly forbid any stranger merchant to buy or to sell anything within the Sheriffdom of Aberdeen outwith my burgh of Aberdeen in despite of my protection. But stranger merchants are to bring their merchandise to my burgh of Aberdeen, and there sell the same and receive their money. If, however, any stranger merchant shall, in despite of my protection, be found within the Sheriffdom of Aberdeen buying or selling anything, he is to be apprehended, and kept in custody until I shall have declared my pleasure regarding him. I likewise strictly forbid any stranger merchant to cut his cloth for sale in the market of Aberdeen, save from the day of the Ascension of our Lord to the Feast of St. Peter ad Vincula—between which terms it is my will that they cut their cloth for sale in the market of Aberdeen, and there buy and sell their cloth and other merchandise in common with my burgesses, in like manner as my proper burgesses, saving my rights. I likewise ordain that all who dwell in the burgh of Aberdeen, and wish to take part with my burgesses in the market, take part with them in paying my dues, whose men soever they be. . . . I likewise grant to the same my burgesses of Aberdeen that they have their Merchant Guild, the waulkers and weavers being excluded. I likewise strictly forbid anyone dwelling outwith my burgh of Aberdeen within the Sheriffdom of Aberdeen to make or cause to make cloth, dyed or shorn, within the Sheriffdom of Aberdeen, save my burgesses of Aberdeen who are of the Merchant Guild, and who take part in paying my dues with my burgesses of Aberdeen, with the exception of such as had hitherto their charter securing this privilege. Wherefore I strictly forbid anyone within the Sheriffdom of Aberdeen to presume to make cloth, dyed or shorn, on pain of my full forfeiture. If, however, any person's dyed or shorn cloth shall be found made in despite of this protection, I command my Sheriff

to seize the cloth, and to do therewith as was the custom in the time of King David, my great grandfather. I likewise strictly forbid any stranger outwith my burgh at Aberdeen to buy or to sell hides or wool, save within my burgh of Aberdeen. All these privileges and usages, however, I grant, and by this my charter confirm to them, without prejudice to the privileges and free usages which before this grant were bestowed on other burghs and burgesses within the bailiwick of Aberdeen."

Mr. Bain notes that the exception as to the weavers and dyers, or "waulkers," was also contained in the charters granted to Perth and Sterling; and that we have here the first indications of the conflict between the wealthy merchants and the "plebeian crafts" of weavers and dyers, who seem to have been the first associations of artisans in England as well as in Scotland who endeavoured to break down the barriers of the original monopoly.

The power of the craftsmen gradually increased with the growth of the population, and in the course of the fifteenth century several Acts were passed with the object of placing them under wardens appointed by the governing authorities of the towns. The customary election of "deacons" was forbidden, and the gathering of the fraternities or associations was denounced as being "a meeting of conspirators." "Very severe punishment was imposed on craftsmen when they ventured to act independently or in any spirit of antagonism to the town council." Even the payment of entrance fees for the benefit of the trades union was declared to be an interference with the privilege of the governing body as to charging dues or compositions for making freemen, although it seems that at Aberdeen no special rule had at first existed as to the exaction of any payment for the taking up of the civic freedom. "A freeman was simply bound to pay scot and lot, and to watch and ward the town." During the wars with England these quarrels were somewhat abated; but when peace was established the craftsmen began to urge their claims again, especially upon the ground that they had contributed as much in proportion as the merchants to the common necessities, and were therefore entitled to a corresponding representation in the town council. By a statute of James III. it had been provided that every artisan should "either forbear his merchandise or else renounce his craft"; but each craft contended that even under the terms of the disabling Acts they were entitled to deal in the materials used in their respective trades. "The wrights claimed the right to import timber, the shoemakers to deal in leather, the skinnors and gloves to deal in hides and skins, and so forth." At last, when the affairs of the burgh were at a deadlock an agreement was made by the common indenture—which lasted as a charter of rights till the passing of the Burgh Reform Acts—whereby the mode of admitting craftsmen to the freedom was defined and the composition for dues fixed at an easy rate, the trading privileges of the two classes of burgesses were regulated, and the craftsmen were empowered to elect two members of the council, while six of the trade deacons were allowed to vote at the election of burgh magistrates and officers. The deacons had previously obtained a very full jurisdiction over all members, journeymen, servants, and appren-

tices. Mr. Bain considers that these classes, taken at a moderate computation, would represent about two-thirds of the whole community, so that the history of the craft-guilds "ought in no small measure to reflect the conditions of life among the great bulk of the industrial classes." It must be remembered that each of the seven trades included a great number of associated crafts. The incorporated hammermen, for example, comprised the cutlers, pewterers, glovers, saddlers, glaziers, engineers, and all kinds of smiths, besides claiming jurisdiction over the watch-makers as users of "hammer and forge"; the shoemakers included the curriers and dealers in bark, and claimed rights over the skimmers which they were forced to yield to the hammermen; the wrights, coopers, and furniture-makers were included in one craft; the tailors governed the mantua-makers; and the "baxters" and "fleshers" had control respectively of all kinds of bread and cakes, and the sale of all meat and fish respectively.

When the municipal corporations were reformed, all these monopolies came to a sudden end, somewhat as it appears to the surprise of the craftsmen, who had hoped that they would "enter on a new era of extended trading privileges," and would gain increased powers of regulating the commerce and industry of the burgh. Their exclusive rights were indeed spared to some extent by the first reforms, but were afterwards abolished by the Act passed in 1846 against trade monopolies in Scotland. Since that time the members of the incorporated societies have turned their attention to "provident and educational objects," and Mr. Bain shows that in this useful course the Aberdeen trades have gained a remarkable success.

C. ELTON.

Glen Dessaray, and other Poems. By John Campbell Shairp. Edited by F. T. Palgrave. (Macmillan.)

RICHER than Latin though the English language is in most ways, yet it is poorer in this—that it has only one name in general use for those who express their ideas in verse. We want a distinction such as may be drawn between the words "vates" and "poeta," to mark off the poets who teach great truths, the real "pii vates et Phœbo digna locuti," from those who do little more than soothe or charm; a Shakspeare and a Goethe from a Tasso and a Scott. If poetry is "the breath and finer spirit of all knowledge," and that only, then the latter class are not poets at all; but so much that the world rightly loves has been written by the soothers and the charmers in verse that it is best to amplify Wordsworth's definition so as to include their work. It is among them that the late Principal Shairp takes his place. His poetry is obvious, inasmuch as it does not deal with intricate soul-problems. It moralises, certainly, now and again, but constantly on one theme, which may be shortly put—"the generations pass, the hills remain"; yet to anyone who is not well stored with impressions derived from his own observation of mountain, tarn, and glen, it is a cause of effort in conjuring up the mental images of the scenery which he describes with suchoving detail.

Shairp's successor in the chair of Poetry at Oxford, Mr. F. T. Palgrave, has written a graceful preface to this selection from his poems which is the best review possible, if due allowance be made for the two facts that the edition is a "labour of love entrusted to him by those most nearly connected with the poet," and that Mr. Palgrave is his successor. But readers of the ACADEMY expect to be informed whether it is worth their while to look into a book or not, and, therefore, an account of it in these pages will not be superfluous. Shairp's poems are healthy as the air they breathe, the air of Ross and Inverness; but pervaded by a spirit of soft regret, in no wise morbid, for a lost past, when the Highland glens were still uncleared, and the peat-smoke curled along them from many a "bothie" which is now levelled to the ground. They are saturated with a passion for wild and mountainous scenery; they smell of the heather. In a heart which is open to the full influence of such surroundings they would arouse reflections such as greater poets express. Shairp wisely stops short, as a rule, at the description, being, as Mr. Palgrave says, an "objective" poet.

"Glen Dessaray"—the title-poem of this volume, occupying one-third of its pages—is rambling in its story, if it can be said to have a story. Its alternative title, "The Sequel of Culloden," shows that it deals, among other things, with the wanderings of Charles Edward, the Young Chevalier, after his defeat; and, indeed, its best passages are those which treat of that episode and the glamour which the Highlandmen threw around him and his cause, with a love which will always remain incomprehensible to the average Southron. Here is the description of the effect of the news of the coming of the young prince:

"It wakened mountain, loch, and glen,
That cry—'Lochiel comes back again';
Loch Leven and Loch Linnhe's shore
Shout to the head of Nevis Ben,
The crags and corries of Mamore
Rang to that word, 'He comes again.'
High up along Lochaber Braes
Fleeter than fiery cross it sped,
The Great Glen heard with glad amaze
And rolled it on to Loch Askaig-head.
From loch to hill the tidings spread,
And smote with joy each dwelling-place
Of Camerons—clachan, farm and shiel,
And the long glens that interlace
The mountains piled beneath Lochiel.
Glen-Mallie and Glen Camgarie
Resounded to the joyful cry,
Westward with the sunset fleeing,
It roused the homes of green Glenpean;
Glen Kinzie tossed it on—unbarred
It swept o'er rugged Mam-Clach-Ard,
Start at these sounds the rugged bounds
Of Arisaig, Moidart, Morar, and Knoydart,
Down to the ocean's misty bourn
By dark Loch Nevis and Lochurn."

Was ever family so loved or so unworthy of love as these Stuarts? This lengthy quotation is typical of the whole piece, and makes it unnecessary to give any further extracts.

There is one poem in this volume which ranks with the work of the greatest of Scotland's poets, and only one, "The Bush aboon Traquair," well known already, we fancy, to Shairp's fellow-countrymen, having been published nearly twenty-five years ago. It is an exquisite work of art, short, but too long for quotation here, and it rather "kills"

its neighbours that precede and follow it. One values this poem most of all after reading Robert Crawford's lyric with the same title which supplied the words for the air with a "blithe lilt," to which Shairp refers as the inspiring motive of his composition. Crawford, who wrote at the beginning of the eighteenth century, has got the eighteenth-century malady badly, with his "amorous flame" and "languishings" and "rural powers." "The Hairst Rig" is another dainty poem of the same kind as "The Bush aboon Traquair."

The note of regret, to which reference has been made, sounds through "A Cry from Craig-Ellachie," which dwells on the results of the invasion of the Highlands by the "iron horse," and ends with a pretty passage which recalls memories of Heine, especially in the last verse. The regret gives way to this self-solacing reflection:

"Yet I know there lie all lonely
Still to feed thought's loftiest mood,
Countless glens undesecrated,
Many an awful solitude.
"Many a burn, in unknown corries
Down dark rocks the white foam flings,
Fringed with ruddy berried rowans,
Fed from everlasting springs.

"If e'en these should fail, I'll get me
To some rock roared round by seas;
There to drink calm nature's freedom
Till they bridge the Hebrides."

Material civilisation is responsible for much; but is it the natural enemy of poets, that so many of them flee from its approaches with instinctive horror, or is it only the landscape-poet who dreads it?

Leaving the tumbled panorama of mountains, with Schibhallion ever prominent towering above the rest, the headlong rivers and the desolate glens, all dear to many a Scotchman besides Shairp, we come to what his editor calls his "Character Pieces." "Balliol Scholars" is a series of portraits of the poet's Oxford contemporaries, "to the faithfulness of which" Mr. Palgrave "can bear witness" from personal acquaintance at Oxford with the originals. We have Clough brought before us here "with forehead high and broad" and "eyes dark-lusted"; the Lord Chief Justice of England "fair-haired and tall, slim, but of stately mien"; the Bishop of London "broad-browed, with open face, and frame for toil compacted"; and most interesting of all, at the present time, for a most sad reason, Matthew Arnold,

"So full of power, yet blithe and debonaire,
Rallying his friends with pleasant banter gay,
Or half a-dream chaunting with jaunty air
Great words of Goethe, catch of Béranger."

It is the Oxford of the great ferment in the "forties" that Shairp is describing as many another poet has described it, fascinated by all the circumstances of its awaking from its long sleep of stagnation. "Highland Students" is a series of reminiscences of promising St. Andrews men who died too soon, and is written in well-managed blank verse—Wordsworthian blank verse it may be called. The poem again takes us to Schibhallion, and lovingly lingers round about its spurs in describing the homes and burial-places of the three students—men, unlike the Balliol scholars, not known to general fame. One feels in reading "Highland Students" that

there is something lacking, that the point of each narrative is the sadness of a premature death, and yet the lump will not rise in the throat, for the master-charm, which only the greatest have, is absent. There is detail, simple and winning, but not the art which comes by nature and knows instinctively what touches carry pathos with them and what are touches only.

There are no sonnets in this volume. There are three poems of fourteen lines, which, in the eyes of many, will pass for sonnets. One of these ("Prayer") begins with two lines which refuse to fit into the framework prepared for the others. Another ("Relief") contains much solemn beauty in the lines :

"Be still, sad soul ! lift thou no passionate cry,
But spread the desert of thy being bare
To the full searching of the All-seeing eye."

The volume ends with several short poems of a devotional character, which do not need special notice here. A reviewer should respect, and pass on tip-toe by, the inner sanctuaries of a writer's heart.

HERBERT B. GARROD.

The War of the Succession in Spain. By Colonel the Hon. Arthur Parnell. (Bell.)

THIS is a military history in the truest sense, and, though scarcely a work of a high order, is a valuable and well-informed book. The principal interest of the mighty conflict, known as the War of the Spanish Succession, centres in Germany, Italy, and the Low Countries ; and the eye of the student of the time turns to the campaigns of Marlborough, Eugene, and Villars, to Blenheim, Turin, Denain, and Malplaquet. Yet Spain itself was the scene of a contest on which Englishmen might especially dwell ; for it foreshadowed the Peninsular War of this century ; it illustrated, in a remarkable way, what, in a great European struggle, England can achieve as a maritime power, and it bestowed on the nation a glorious possession, of supreme importance until a few years ago, and even now of the very highest value. The fame of Ramillies has been eclipsed by Waterloo ; and the poet may have been right in saying that Blenheim is now known only "as a great victory," though that memorable spot marks the farthest limit of the advance of a British army in the wars of the continent. But the Rock of Gibraltar, won in 1704, still bears on its heights the standard of St. George. The repeated efforts of two great monarchies have failed to reconquer the famous prize ; and the mistress of the seas still retains a citadel which, even now, commands the Mediterranean portals, and forms an outpost of her distant empire in the East.

One cause, doubtless, of the comparative neglect shown by Englishmen towards this phase of the contest is that we do not possess a good history of it. Lord Stanhope's book is a poor performance, composed largely from unsound data ; Mr. Wyon passes lightly over the war in Spain ; and there is no remarkable contemporaneous account except a part of the memoirs of Berwick. In this dearth of information Col. Parnell has tried to reconstruct this chapter of events ; and, if his work is not of transcendent merit, it deserves high praise from an impartial critic. The industry

of the author is truly admirable. He has exhausted all available sources of knowledge ; and he has collected an enormous store of materials from the archives of continental states, and from all kinds of records of the eighteenth century. We have seldom read so conscientious a work ; and, though not without faults of method and judgment, this history of the War of the Succession in Spain is infinitely the best military description of it to be found in any of the tongues of Europe. Col. Parnell has brought into clear relief parts of the contest before unnoticed ; he has thrown fresh light on its better-known passages ; and he has woven his copious store of facts into a work which, if not free from defects, has the great merits of research and freshness. His judgments, too, upon men and things are, for the most part, impartial and true ; and he has, we think, completely exploded the undeserved estimate made of Peterborough and Rooke, while he has done justice to the military skill and heroism of the great Huguenot, Galway. On the other hand, he has failed to combine his narrative into a dramatic whole. It is too much a series of detached scenes ; and we cannot agree with his judgment on Berwick—a really great chief, whose remarkable exploits he endeavours throughout the book to depreciate.

The War of the Succession in Spain presents three widely distinct phases. The interest of the contest in the first of these mainly centres in events on the seaboard ; and the failure at Cadiz, the triumph of Vigo, and the surprise and the defence of Gibraltar, are the principal scenes of the stirring drama. The second passage chiefly consists of the advance of Galway into the heart of Spain, and the temporary success of the Austrian cause ; and, whatever Col. Parnell may say, Almanza, won by the skill of Berwick, threw a decisive weight into the scale of fortune. In the third phase, Philip V. regains authority that had appeared lost ; and the arms of the Bourbons, owing more to the triumphs of Villars in distant lands than to the ability, great as it was, of Vendôme, completely reconquered the Spanish monarchy. We cannot follow Col. Parnell through the vicissitudes of this varying conflict ; but we shall attempt to point out the truths it teaches clearly indicated in his thoughtful narrative. In this, as in the Peninsular War of Wellington, the command of the sea was of the first importance ; and, though it was bravely challenged by France, it was maintained by England and her ally Holland. Owing to this immense advantage, England possessed a moveable base along the coast, was able to occupy points of vantage, to send expeditions far inland, and to draw enormous supplies from home ; and, while the French armies were weakened and wasted by long marches through a difficult country, and the French fleets proved a doubtful aid, the power of the English arms was formidable in the extreme, though our forces were always small in numbers. This superiority would have secured Cadiz but for the incapacity of the timid Rooke. It made victory at Vigo certain ; it gave us Gibraltar, and baffled the attempts of a great army to retake the fortress ; and it compelled Tessé to draw off from Barcelona at a critical moment, when the sails of Leake

were desecrated on the waters. On the other hand, the inferiority of the French at sea, though they struggled hard to redress the balance, was evidently attended with disastrous results ; and, had Tessé been successful at Velez Malaga, Gibraltar would have assuredly fallen.

As a specimen of Col. Parnell's narrative, we transcribe his picturesque account of the appearance of the fleets before this memorable fight :

"At ten o'clock, almost motionless on the rippling waters, lay a semi-circle of wooden castles, with the iron muzzles of their guns peering from their numerous port-holes, and at their lofty mastheads in relief against the sky the white ensigns and golden lilies of the Bourbons. Slowly approaching them in a line of echelon was an equal number of gallant warships, displaying the red cross of St. George. Leading them on the right was a fine three-decker, carrying at the fore the blue flag of Sir John Leake, who was destined to have the honour of opening the engagement. Not far distant at his left rear was the *Barfleur*, bearing at the main the broad white pennant of Sir Cloudesley Shovel. No sound was heard until Leake's ship was brought to within pistol shot of Villette's. Then the two fleets began their deadly struggle, and the air was rent with the thunder of their guns."

A country, however, of the extent of Spain was never conquered by mere coast attacks, and this is well illustrated in the work before us. Two great invasions were required to subdue the Peninsula and to transfer its crown ; and these are described at length by the author. Col. Parnell, though somewhat too vehement in his language, has very clearly shown that Peterborough was a worthless chief ; and that Ruigny, better known as Galway, was the real hero of the advance from Portugal, which brought the archduke victoriously to Madrid. From some reason, however, that we cannot understand, he is thoroughly hostile and unjust to Berwick. The alleged timidity of that renowned soldier, in the campaigns of 1706-7, was obviously due to the fallen fortunes of Louis XIV. at this conjuncture, to the necessity of husbanding the only army which upheld the cause of Philip V., and to the distance of Berwick from his base in France ; and it is ridiculous to asperse the memory of a not unworthy successor of Turenne in the glorious traditions of the French Army. Col. Parnell, too, has slurred over Almanza, as decisive a victory as that of Blenheim ; he has not indicated that the results of the day were due to a charge directed by Berwick, not unlike that ordered by his kinsman at Blenheim ; and, whatever he may say, Almanza proved the turning-point of the contest in Spain. The battle restored the power of France in the East. From that moment the cause of the archduke went on in a course of rapid decline ; and though many fortresses bravely held out, the throne of Philip V. was practically assured. The invasion afterwards conducted by Vendôme merely confirmed a conquest already certain ; and though Villa Viciosa was nearly a drawn battle, it consummated a triumph no longer doubtful. Vendôme, in our judgment, though a very able man, in the intervals of a life of debauchery, was, upon the whole, inferior to Berwick ; and we cannot comprehend how Col. Parnell shows

such animosity to the Marshal of France—an Englishman of the great Churchill breed—unless it be, perhaps, that Berwick displayed more than once contempt for the craft of the engineer, Col. Parnell's statue in the British service. For the rest, Col. Parnell describes very well—though in a somewhat dry and technical way—the remarkable sieges of the war in Spain. Unlike those in the Low Countries, they were characterised by the stubborn constancy ever shown in defence by the Spanish race, and they form an interesting episode in this work. His book, we have said, deserves high praise, though we have pointed out some defects and shortcomings.

WILLIAM O'CONNOR MORRIS.

Shakespeare, and other Lectures. By George Dawson. Edited by George St. Clair. (Kegan Paul, Trench, & Co.)

THIS second, and probably final, collection of George Dawson's lectures will be welcome to a large class of readers—a class comprising those older men and women who remember the spoken utterances, and many members of a younger generation who knew not Dawson in the flesh, but who have been attracted to him by the report of their seniors or by making personal acquaintance with his posthumous works. I have no authority for the words "probably final" in the preceding sentence; but I have been led to use them by observing that Mr. St. Clair has not merely reaped his field, but has apparently gleaned it also. Personally, I make no complaint of the inclusiveness of the editor's labours, for while my admiration of Dawson is not, I hope, indiscriminating, it is enthusiastic enough to induce an interest in all Dawson's sayings; but the general reader will perhaps feel that some of the lectures and addresses in this volume are too slight in substance or too obviously extempore in expression to be worthy of the permanence here conferred upon them. In their original form as spoken they may have been—probably were—quite worthy; but what we have here are mere reprints of newspapers, and who does not know the fiendish facility with which the newspaper reporter can so "condense" the material with which he deals as to make it seem utterly undeserving of the labour of condensation? True, these palpably and irritatingly inadequate reports are not numerous, but it is unfortunate that the majority of them are to be found among the discourses dealing with Shaksperian topics; and as George Dawson had that vital comprehension of Shakspeare which comes of a large enjoyment one cannot help feeling specially regretful for the mischance which has consigned to oblivion all but the mere skeleton of such discourses as those on "Romeo and Juliet" and on the Sonnets, which in their present form cannot be said to be of much value. I would not overrate or praise in the wrong way even those lectures upon Shakspeare which have been reported with the greatest fullness. The introduction into discourses intended for a popular audience of the subtleties of esoteric criticism would have been an impertinence, and such criticism lay outside of George Dawson's range. He was not so much a critic—in the sense in which most people understand the word—as

a guide, an expositor for those who need guidance and exposition; and his power lay in his shrewd penetrating common sense, which was saved from the prosaic hardness and blindness of much that is called common sense by rare gifts of imagination and humour. Drawn by a natural wholesomeness of taste to that in literature which is permanently valuable, he inspired his hearers with a strong desire to enjoy what he enjoyed: to listen to him was to be initiated into the art of enjoyment; and it is a significant fact that the first Shakspeare library in England was established in that midland town where Dawson's influence was most powerful. Separate expressions of opinion in these lectures may fail altogether to win the assent of the most competent judges. To mention a trifle by way of illustration, Dawson sanctions Mr. C. Armitage Brown's extraordinary punctuation of Shakspeare's sonnet beginning

"The expense of spirit in a waste of shame,"

which, by the introduction of a semicolon at the end of the second line, entirely destroys the obvious meaning of the poem. Things of this kind are, however, of small account, for George Dawson was an inspirer and a stimulator rather than a mere propounder of opinions; and, unlike the utterances of many men who are speakers rather than writers, his words lose astonishingly little of their peculiar quality when deprived of their accompaniments of voice, expression, and gesture. To say more would only be to repeat what I said of the former collection of lectures (ACADEMY, February 13, 1886). The two volumes are a treasury of homely wit, and of wisdom which is not the less wise for being expressed in the language of the marketplace.

JAMES ASHCROFT NOBLE.

Manual of Biblical Archaeology. By C. F. Keil. Translated from the German (chiefly) by the Rev. Peter Christie. Edited by the Rev. Frederick Crombie. Vol. I. (Edinburgh: T. & T. Clark.)

THERE are orthodox Germans as there are Conservative working-men, and Dr. Keil is one of these. His adherence to the traditional theology would satisfy even Mr. Spurgeon. For him, every statement handed down to us in the extant remains of ancient Hebrew literature is literally true. The extent to which we share Dr. Keil's opinions in this respect cannot but affect our estimate of him as an authority on Biblical archaeology. A treatise on Roman antiquities which should assume the historical accuracy of every statement in Livy's first decade would be valueless to the disciple of Lewis or Mommsen. Dr. Crombie does, indeed, assure us that this "must long remain the standard treatise in a scientific form on biblical archaeology, irrespective altogether of Dr. Keil's views on the dates and origin of the books of the Bible." But here he has against him the authority of Dr. Keil himself, who warns us at the very outset that the science which he professes to teach is based on "a belief in the reality of the biblical revelation," and expressly repudiates the standpoint of such critics as Ewald, Reuss, Graf, and Wellhausen (p. 5).

It is indeed obvious that if the Levitical code was first drawn up in the time of Ezra,

it cannot have the same significance for an archaeologist as if it were the work of Moses. If we believe that the tabernacle never existed except in the imagination of the later priests, we shall be apt to grow rather impatient over a long disquisition concerning the exact number of oxen required to drag it through the wilderness (p. 160), which, by the way, quite unintentionally throws still further discredit on the narrative it strives to elucidate. Nor shall we be much edified at hearing that the oblong shape of the tabernacle was meant to prefigure the advent of a more perfect dispensation (p. 128). Much of Dr. Keil's space is devoted to such displays of what must, on any theory, be regarded as rather futile ingenuity. Thus it is explained that the altar of burnt offering was constructed of earth and unhewn stones

"with a view to indicate that the earth forms the real (material) ground on which the kingdom of God had to develop itself here below, and that in this altar the earth was to be regarded as being raised from the ruin into which it had fallen in consequence of man's sin, and once more restored to God through the power of His grace. This lifting up of the earth into the kingdom of God was further indicated by the fact that the stamp of the kingdom of God was impressed upon the altar in the quadrangular shape of its enclosure, which, besides, was made of wood and brass (copper), the latter being of the colour of the earth, and having something of the nature of the earth about it" (pp. 140-141).

This, however, is almost reasonable compared with the theory of Kurtz, who holds that,

"it is just earth and stone in this state that best represent the curse which in this their natural condition is supposed to rest upon them. Now man, with all his skill and all his industry, has been unable to free them from this curse. He is, therefore, commanded to abstain from his chiselling and dressing of them altogether. With all his efforts he need never hope to be able to sanctify the altar that has been made from the accursed earth" (quoted by Keil, p. 141).

It is quite natural that writers of this school should try to extract all sorts of symbolical and typical meanings from the prescriptions of the Levitical law; that, being debarred from using the new method of historical criticism, they should fall back on the old method of mystical interpretation. Unfortunately their exegesis finds no support in the Old Testament, and very little in the New. One might suppose that the prophets would have felt called on above all other men to set forth at large the spiritual lessons embodied in the public worship of Israel, had such lessons really existed. Yet such an application has no place in their teaching; and Dr. Keil's references to them in this connexion (p. 344) are as far as possible from proving his contention. The whole theory is, in fact, founded on the Epistle to the Hebrews, and stands or falls with its infallibility. Theologians cannot tell us when or by whom that epistle was written, but they have ascertained by their own peculiar methods that it was supernaturally inspired. Nevertheless they must admit that the anonymous author was permitted to use a faulty translation of the Old Testament, to misquote the Pentateuch (Keil, p. 359), and to base an important argument on an utter misunderstanding of the term *δαθήκη*. Yet, perhaps,

it would have staggered even him to find the separation between the fat and the lean in certain sacrifices made symbolical of "that separation between the old and the new man which is brought about in the life of the justified" by the Holy Spirit (p. 303).

The English of Dr. Keil's translator is frequently awkward and sometimes ungrammatical. One does not expect idiomatic elegance in a work of this kind; but Mr. Christie and Dr. Crombie might between them have known that a German *Meile* is not the same as an English mile, and thus avoided the absurdity of making the Dead Sea only thirteen miles distant from the Lake of Genesaret—a pleasant morning's walk.

ALFRED W. BENN.

NEW NOVELS.

Herr Paulus. By Walter Besant. In 3 vols. (Chatto & Windus.)

The Blacksmith of Voe. By Paul Cushing. In 3 vols. (Blackwood.)

The Chequers. By James Runciman. (Ward & Downey.)

The Bohemians of the Latin Quarter. By Henri Murger. (Vizetelly.)

In Glenoran. By M. B. Fife. (Edinburgh: Oliphant, Anderson, & Ferrier.)

A Lombard Street Mystery. By Muirhead Robertson. (Bartholomew.)

A Burmese Maid. By the Author of "Reginald Vernon." (Tribner.)

MR. BESANT'S new novel is a story of the rise, the greatness, and the fall of a gentleman with a mission. That mission is his own glorification as the prophet of a new faith, or rather as the herald of a new development in spiritual life and knowledge, though to unprejudiced eyes he is nothing more than an exceptionally skilful mesmerist, ventriloquist, and conjuror. There is a certain amount of originality in the fundamental conception of the book, which is the evolution of a badly balanced nature, afflicted with an irresistible itch for notoriety—a species of mania exceedingly common in real life, but by no means overworked as a guiding motive by novelists. The hero—Herr Paulus as he calls himself, though his real name is Ziphion B. Trinder—suddenly appears in the midst of the "spiritualistic circles" of London, and is hailed as a prophet worthy of all acceptance. The young man is not dishonest in any pecuniary sense; he is fraudulent only in his claim to supernatural powers. His beauty, refined manners, and general winsomeness, fascinate most people with whom he comes in contact, even when they are incredulous as to his pretensions; and particularly among women his ascendancy is of swift growth. Very early in his career as prophet-guest in the house of the noted spiritualist leader, Mr. Cyrus Brudenel, he is discovered by the lover of that wealthy gentleman's daughter, Mr. Tom Langston, to have been deceitful as to his nationality. For though Tom Langston has no idea that the mystic who is the promised exponent of what lies "behind the veil"—the deputy of the occult Abyssinian Brotherhood, who are the depositaries of the supreme wisdom of the ages—is no other than the ambitious son of a Yankee store-keeper, he has not failed to

detect that "Herr Paulus" occasionally speaks with an accent impossible to anyone not bred to transatlantic English. Later on Tom discovers more serious discrepancies between assertion and fact, though the fall of Herr Paulus is brought about more by inevitable causes than by the action of any suspicious individual. Among other successes of the young man is the conquest of the heart of a beautiful girl named Hetty Medlock, the daughter of a once famous medium. Miss Medlock detests spiritualism, mainly from her own bitter experiences of the degradation of its seamy side, and so her love for Herr Paulus is in spite of, rather than in any way fostered by, his miraculous powers. When disgrace is imminent, when the prophet is left of his greatness, when Herr Paulus has subsided into the shamed, repentant, and downcast Ziphion B. Trinder, Hetty Medlock (the only exceptionally fine character in the story) proves the power of unreasoning love; she not only throws in her lot with her unworthy lover, but believes in him still, not as a gifted being but as a man capable of honest work-a-day endeavour and reputable life. Mr. Besant could hardly write a story that was not interesting; but I admit that I find *Herr Paulus* the dullest, or, it would be fairer to say, the least engrossing of all his tales. It reads like a satire upon certain phases of credulity cast into the form of fiction, not as a novel wherein these phases are incidentally derided. In a word, it is as if Mr. Besant had felt "a call" to denounce spiritualism, esoteric Buddhism, and all allied "isms," and had proceeded to act up to this call by writing a perfunctory romance on the subject. But, in addition to this fundamental weakness, the novel has another obvious flaw, which will be fatal to it with many readers, though possibly imperceptible to others: this is, that Mr. Besant not only fails to substantiate his case, but weakens it by making Herr Paulus accomplish certain acts entirely outside of trickery or deception, in view of which the foolish persons would be those who laughed at the manifestations, and not those who, whether too easily credulous or not, eagerly examined them. No man could exercise the subtle powers, hypnotic or whatever they be, such as Herr Paulus occasionally displayed through genuine faculty as distinct from acquired art and practised trickery, without reaching a position which would demand earnest attention from any thoughtful man. There is no phase of human belief that is wholly ridiculous; and it is this curious imperceptiveness to anything save broad facts that has again (for it is a characteristic feature of Mr. Besant as a novelist) led the author of *Herr Paulus* to stultify the full force of his satire. Moreover, it is open to doubt if he has not made a mistake in so strongly enlisting the sympathies of readers in Herr Paulus when his aim has simply been to throw discredit upon all who believe in anything beyond the common grooves of knowledge. To the reader the result is apt to be as if he were perusing a prolonged series of contradictions in terms. Although the novelist who would deal with such a story as that of Herr Paulus could not lay claim to absolute originality, there would be ample scope for one of subtler discriminative faculty than Mr. Besant to write an enthralling

romance. Those who have read *Elsie Venner*, or Mr. Howells's *The Undiscovered Country*, or Mr. Browning's "Sludge the Medium," are not likely to desire any new insight into the ways of spiritualists; but neither Dr. O. W. Holmes, nor Mr. Howells, nor the author of *Fools of Nature*—a book to which *Herr Paulus* is closely akin—would have betrayed any confusion between mesmerism (a word, by the by, which savants no longer use save in the licence of conversation) as an irrefutable natural process and as the subterfuge of tricksters. Mr. Besant's talent is of so robust a nature, so genial and kindly and generally sunshiny, that those who admire his writings cannot but regret his desertion of a field where his place is undisputed for the barren waste of controversial fiction.

Mr. Paul Cushing is nothing if not original, in diction and nomenclature as well as in subject and treatment. In his preceding romance, *Dr. Caesar Crowl: Mind-Curer*, there was enough to startle the ordinary novel-reader accustomed to the proprieties of fiction; but in the *Blacksmith of Voe* the author surpasses his former eccentricities. Strange names are those we meet with: Dame Cowlishaw, Miller Duckmanton, Nathan Wass, Ann Ende, Balthasar and Janoca Phythian, Violet Chalk, Christopher Kneebone alias Abel Boden, and so forth. And Voe itself is a strange village, and the Voese a strange folk, though they be worthy yeomanry and peasantry of the hill-districts of Derbyshire. As a novel *The Blacksmith of Voe* is a distinct advance upon either *Misogyny and the Maiden* or *Dr. Caesar Crowl*—it is, in fact, a thoroughly interesting and wholesome story, without a dull page, and is, moreover, the means of introduction to several very pleasant people. The hero is worthy of that much-abused designation, and acts like a high-natured man from the time of his quarrel with his sullen brother, Luke Boden, to his advent, twenty years after the tragic event narrated in the prologue, as Christopher Kneebone, the blacksmith (and "unknown millionaire") of Voe. The love episodes are delightful; and, at the end, the reader must not only be pleased at the good fortune that comes to the two Abels and to Janoca and Ruth, but must also wish that his or her lot might be cast in renovated Voe, with its many improvements and its Memorial Hall, after the fashion of Mr. Besant's People's Palace. Entertaining, and very frequently brilliant, as is Mr. Cushing's quaint style it is occasionally strained to excess; and one wonders not so much at its cleverness as at its obvious manipulation for effect and even its dire obscurity. If an understanding of the following sentence, for example, be any test of mental calibre the present writer must admit the possession of "the stony heart of central stupidity."

"Grim, too, is the reflection that below the wafer of rationality are the seething *magna*, the twin pulps of fiery madness, enclosing the stony heart of central stupidity. Sparks of madness and particles of stupidity would have been seen in great streams and clouds if one-half the ideas suggested by Janoca's act had been visibly embodied in fire and rock."

Still this and more (and more there is) can be forgiven to the creator of Abel Boden alias Christopher Kneebone alias "Job Else &

Co.," and of that delightful Phythian couple, Brother Balthasar and Sister Janoca.

The Chequers purports to be the natural history of a public-house, as set forth in a loafer's diary. It is, as a matter of fact, a record of ruined lives. Of the baker's dozen of narratives here brought together there is not one that as a story is not deeply interesting. But *The Chequers* is something more than a collection of temperance tales. The trail of the teetotal stump-orator is nowhere visible, nor is there any hint of that debauchery of sickly sentimentalism in which so many temperance advocates delight. There is not a page of Mr. Runciman's book that is not only in dead earnest but intensely true to life; hence it is one of the most impressive volumes of its class which have been published. Like the Billy Devine of one of his stories, Mr. Runciman, in a different way, illustrates a sordid chapter of England's history, and wishes such illustration had been impossible. The terrible world he draws is impressive, because one feels that nothing is overdone, that the chronicle is true in fact as well as honestly set forth—a world of sordid misery so appalling that it is impossible not to agree with him that "the popular conception of hell is quite barren and poor compared with the howling reality." *The Chequers* is, in a word, a thoroughly manly book in every respect, and preaches a more forceful and exigent message than a whole library of ordinary temperance tractates. In the story called "Jim Billings" there is a fine tribute to the now well-known sea mission and the quite unknown sea missionaries, a passage from which I may quote as not only admirably just but as affording an index to the straightforward honesty of the writer:

"Some blathering parsons say that this blessed mission is teaching men to talk cant and Puritanism. Speaking as a very cynical loafer, I can only say that if Puritanism turns fishing fleets and fishing towns from being hells on earth into being decent places; if Puritanism heals the sick, comforts the sufferers, carries joy and refinement and culture into places that were once homes of horror, and renders the police force almost a superfluity in two great towns—then I think we can put up with Puritanism."

What a contrast between *The Chequers* and the translation of Henri Murger's famous masterpiece, *Scènes de la Vie de Bohème*! It is like passing from a conventicle in some Northern manufacturing town to the gay *corso* of a Mediterranean health resort in time of carnival. The romance of the strange vicissitudes of Rodolphe and Mimi, and all their motley company of friends in the old Quartier-Latin, is by no means wholly or even greatly fictitious; the incidents are mainly actual records, and the personages but thinly disguised. Murger himself was Rodolphe, and experienced some of the extraordinary ups and downs in the career of that typical Bohemian. So the reader may learn from the preliminary account of Henri Murger and his associates, which adds considerably to the value and interest of this exceptionally well-translated version of the *Scènes de la Vie de Bohème*. The story is full of laughter-provoking episodes, and there is no lack of pathos for those who can see beneath the surface of wild heedlessness. But Bohe-

mianism such as described is now a thing of the past. The Bohemian spirit is not vanished, nor are the eccentricities and aberrations of youthful men of talent merely fictitious; but the true Bohemian life, distinct as that is from mere looseness of manners and habits, combined with paucity of cash, now exists only in the imagination of the romancist.

In *Glenoran* is a pleasant, but sedate, story of Scottish country life. The writer seems to have modelled herself—I think I am right in using the feminine pronoun—upon the popular author of *Carlourie* and *Aldersyde*; at any rate it is easy to imagine Annie Swan's having written this tale as a piece of 'prentice-work. Miss Fife has a quick eye for what is essential whenever she attempts to render local colour; and her affection for the place and people whom she describes is unmistakably of the heart, and not merely of the pen. Love runs its usual devious course throughout this tale; but, in the end, the difficult ways become easy, and the chief personages have their heart's desires. If the author may be considered to have any underlying purpose, it is to draw attention to the unjust and grossly selfish usurpation of the crofters' and small farmers' fields by the owners or creators of deer-forests. But it will need a very different book than *Glenoran* and a much stronger pleader than its writer to bring any measure of conviction to those who look upon the sheep-farmer and hereditary crofter as of no account against their lust of depopulated soil.

A Lombard Street Mystery is certainly not without some originality, but it is the originality of *naïveté* and inexperience, not of literary skill and understanding. The plot and its development are alike old-fashioned, and the probabilities are violated in a manner that almost recalls the sophistication as to fact displayed by Victor Hugo in *L'Homme qui rit*. In style the author has much to learn. Passages such as the following read like echoes from a time that is no more:

"He had been accustomed to regard the sex in general with prejudiced eyes, placing to their credit an unfair proportion of the artificial and superficial phases of life. Too apt to take for granted that a gay and sprightly temperament and love of external display were sure indications of shallow, aimless minds and inconstant, insipid hearts, he had come to the conclusion that nine-tenths of womankind were only intended to be the charming and expensive playthings of his own sex. A far too common error among his sex!"

The short story called *A Burmese Maid*, issued in the guise of the ubiquitous shilling-shocker, is sub-titled "A Tale of Pathos and Incident." Notwithstanding the comparatively recent obtrusion of Burmah upon the attention of the British public, there have already been two or three excellent stories dealing with life and incident in the Land of the Golden Umbrella, notably Mr. George Manville Fenn's exciting tale *One Maid's Mischievous*; so the author of *A Burmese Maid* is not exactly first in the field. On the other hand, his story is not cast at the present time, but just before the second Anglo-Burmese war, about the middle of this century. Broadly speaking, it consists of an account of the captivity of an English officer named Dick Alister, of the ministra-

tions and love for him of a fair Burmese known as Mah Shway, of the triumph of the British arms and consequent escape of Alister, and of the somewhat unromantic but very sensible conclusion to Mah Shway's young dream. There is something rather comical in the way in which that damsel accepts the marriage offer of her Talaing lover. Having explained to him that she loves another, she is taken aback by the news that Alister neither could nor would marry her; whereupon she is "actuated" by "an electric impulse," and throws her arms around the philosophical Bo Kwet in a rapture of passionate affection. The tale ends with this touching "union of two souls," though the author, as well as Bo Kwet, seem oblivious to the fact that the shrewd Mah Shway gladly accepts the Talaing as king when the ace has disappeared from the pack.

WILLIAM SHARP.

SOME BOOKS ABOUT THE COLONIES.

Incuadi Yami; or Twenty Years' Personal Experience in South Africa. By J. W. Matthews. (Sampson Low.) Dr. Matthews has had a long and varied experience of South Africa, having practised as a medical man first in Natal and then in the diamond fields for over twenty years. He represented Kimberley in the Cape House of Assembly, and was at one time vice-president of the Legislative Council of South Africa. His book would have been better for some pruning, and he certainly does not sufficiently consider how much we have already heard and read of South African questions great and small. Readers may be inclined to grumble at having it all over again; but, at least, it comes from one who, in spite of having taken a part in Cape politics, has preserved a fair mind, and is temperate and unprejudiced in his judgments. His sympathies are with the natives, whether their oppressors be English or Boers. He says, indeed, that the subject of the Zulu war has been worn threadbare by each party, yet he cannot resist giving his own views; and we must say that, with regard to Sir Bartle Frere, the war, and Sir Garnet Wolseley's settlement, they are sound enough. Dr. Matthews visited the scenes of the Boer war, and conversed with men who took part in it, and his account, as far as it goes, tallies with Mr. Carters. A large part of the book consists of a very full account of Kimberley and the diamond fields. The trade in diamonds is regulated by a whole code of laws, and many are the ingenious shifts to which the illicit traders resort to get the stones bought from thieves out of the country. The heels of boots are made hollow, the tails of oxen and wings of fowls are made use of, and carrier pigeons, instead of messages, convey valuable diamonds to the neighbouring states. The dishonest traders are themselves occasionally the victims of cheats still more acute, and find what they thought a cheap diamond a very expensive piece of glass. Dr. Matthews pronounces intemperance to be, though not now to such an extent as at first, the curse of the diamond fields. He is confident that seventy per cent. of the cases he treated during an extensive medical practice of fifteen years could be traced directly or indirectly to excessive indulgence in alcohol; while the name is legion of the natives who have been poisoned by the vile preparations passing under the name of brandy. He writes with deep veneration of Bishop Colenso, and remarks on the power and vitality of his preaching. Of the Roman Catholic missionaries he also speaks highly. They abstain entirely from politics, and are, in that respect, favourably distinguished from the Protestants. Those who already know some-

thing, but not too much, of South Africa will find Dr. Matthews's recollections instructive and amusing.

Digging, Squatting, and Pioneering Life in the Northern Territory of South Australia. By Mrs. Dominic D. Daly. (Sampson Low.) The writer of this pleasant book has seen more than most people of Australian life. She was brought up at Adelaide; and, when her father was appointed Government Resident of the Northern Territory of South Australia in 1870, she accompanied him to Port Darwin, the first permanent settlement in the tropical portion of South Australia. She gives an excellent account of the scenery and of the manner of life in the infant settlement. So remote was it from the outer world that the whole Franco-Prussian war had been fought, and the deadly struggle over, before it was known at Port Darwin that there was any prospect of war at all. Mrs. Daly has some thrilling stories of voracious alligators; but abundant as snakes were, their only victim was a pet dog. She returned to Adelaide to be married, and the young couple settled in Narracoorte, 300 miles from the capital. Young and active, they thought nothing of a sixty miles drive in order to go to a dance; but in this they were not singular, for they frequently met others who had come, either on horseback or in buggies, over a hundred miles for the same purpose. The discovery of gold in the Northern Territory took the Dalys back to Port Darwin, now in regular communication with Adelaide by means of the overland telegraph. The diggings were not a success. Gold there certainly was; but it was too far inland, and cost too much to raise. The climate also would not permit the same hard work that could be endured in the more temperate parts of Australia. With regard to the future of the tropical part of South Australia, Mrs. Daly writes:

"There is no doubt that one day we shall see Malay villages, or Kampongs, all along these wild northern shores. The race has spread all over the Eastern Archipelago, and their language is the lingua franca of the East. One cannot believe in any great success being attained in colonising tropical Australia until it has become the home of the Chinese and Malay races, and not a mere dépôt where labour can be engaged for a time. When the entire coast-line becomes a sea of waving palms, with Chinese and Malay villages fringing the shores, which are at present mere barren wastes of mangroves, with plantations of pepper, of gambier, and of tobacco and rice, the Northern Territory, backed by the unswerving energy of the Australasian squatter, miner, and planter, will present a spectacle almost unknown in the scheme of British colonisation."

Near and Far: an Angler's Sketches of Home Sport and Colonial Life. By W. Senior. (Sampson Low.) Most of these sketches have already seen the day in different papers and magazines, and certainly there is nothing in the first part of the book—the accounts of angling in English waters—to have made it worth while to reprint them. They are verbose, and throw no fresh light whatever upon angling, whether fish or the modes of catching them be considered. Commendable enough as padding, they make a poor show now when rustling as cloth of gold; and book-buyers may well resent old essays on fishing being offered them, especially from one who can write as sensibly as Mr. Senior. Such papers as "A Grayling Expedition" and "The Mill Pool" are specimens of a style of writing on sporting matters common enough in every periodical devoted to outdoor sports. With the many books already lying heavy on the world, it seems a pity to add another having so few distinctive merits of its own. It is different with the second part of this book. This records a good many pleasant aspects of

life and sport at the Antipodes. Mr. Senior has travelled in Australia, and here reproduces its scenery, bird-life, and farming in several well-written papers. There are three good chapters on wild horse hunting, 'possum shooting, and that singular product of Moreton Bay, the dugong. Supposing, what we fear is the case, that all these wild creatures have diminished in numbers considerably since the author's visit to Queensland, it is useful to have the methods used in taking them in the days of their abundance put upon record. There is more fishing, too, and a couple of chapters, not devoid both of amusement and information, on "camping-out" and "kangaroos." An account might have been added with advantage of the rabbits which have recently become the scourge of some parts of Australia, demanding even the skill of M. Pasteur for their extermination. Life at a Queensland farm carrying 7000 head of cattle is a paper which might be put into the hands of an intending emigrant to show him what Australia was in its palmy days. The prospects of farming there at present do not look quite so rosy. There are many descriptive passages on the timber and scenery of the country which, at all events, still hold good; and, altogether, Mr. Senior has thrown power and good writing into the second part of *Near and Far*. More of his colonial experiences brought up to date would be welcomed by a large circle of friends who only know the genial author by his *nom de guerre*, "Red Spinner"; and the man who sits in the editorial chair vacated by Mr. F. Francis should have many striking narratives to tell of English fishing.

Antipodean Notes, collected on a Nine Months' Tour round the World by Wanderer. (Sampson Low.) "Wanderer's" notes are pithy and pleasant. He begins with Adelaide, Melbourne, and Hobart Town, but the larger portion of his book relates to New Zealand. He tells us that he had more and better opportunities of studying the practical, commercial, and social aspects of that colony than are obtainable by the majority of "globe-trotters"; and his stay in the middle island was sufficiently long for him to strengthen or correct views taken on first landing. The author makes a good case against the severe remarks often passed on "globe-trotters'" books. Superficial in some sense they must needs be, but not necessarily incorrect, and the value of first impressions is apt to be underrated. They are generally more vivid than later ones, and a person just arrived from England will probably be able to convey to his readers a far more lifelike picture of the Australian bush than one who has spent years in it. The latter will have forgotten the effect which it originally produced on his mind and habit will have made him familiar with what was once startling and strange. That this is so "Wanderer" testifies from his own observation. More than once he mentioned the strangeness of certain views, and the weird impression produced on him by the trees and shrubs of the New Zealand bush, and called his companion's attention to the striking difference between antipodean forests and those of his own country. In every case, if the companion was an old colonist, the truth of the remark was doubted, or acquiesced in without enthusiasm; if, on the other hand, he was a "new chum," it nearly always happened that he had made the same observation himself, or anticipated the author in making it. But, after all, much more depends on the powers of the writer than on the length of time he spends in the country he describes. "Wanderer," however, while defending "globe-trotters" in general, is severe on *Oceana*. Mr. Froude, he asserts, was made too much of to see things in their true colours. A man, he thinks, cannot help taking

a more favourable view of a place if he contemplates it after an excellent dinner, reposing on the soft cushions of a well-horsed carriage, than if he visits it on foot, hot, tired, and thirsty, with very poor hotel accommodation to fall back on, and no great friend's home to go to. We may ask, is the poor man necessarily right? May he not err in the opposite direction? "Wanderer" himself holds an even balance, and, so far as we are able to judge, paints things in their true colours.

Auretanga; Groans of the Maoris. Edited by G. W. Rusden. (Ridgway.) In this stout pamphlet Mr. Rusden pleads, with much knowledge and ability, the cause of the Maoris against their oppressors. Out of a great number of instances of oppression and wrong he singles out, and especially dwells on, the story of the reserve at Dunedin, and the sack of Parihaka, with the persecution of Te Whiti. Have the Maoris, then, no friends? Not at all—almost every Secretary of State for the Colonies, with the exception of Lord Kimberley, has been on the side of justice, and has endeavoured to uphold treaties which the Colonists upset as soon as they find it inconvenient to abide by them. Men of the first position and influence, chief justices, such as Sir W. Martin, bishops, like Selwyn, governors, like Sir Arthur Gordon, have striven, and striven earnestly, against oppression and robbery. The press has not been entirely on the side of land-grabbers. There are societies which make it their business to befriend the aborigines, yet there is hardly an instance in which the wrong-doers in New Zealand have not gained the day. Such is the power of greed and covetousness! Mr. Rusden justly observes that exposure of past wrongs may be a warning to those who may be tempted to sin hereafter. May this be one effect, at least, of his present publication! We are not sure that it is in the form most likely to attract readers, and the matter, in truth, is painful enough, yet we trust no one into whose hands it may come will put it aside on that account.

Lights and Shadows of Melbourne Life. By John Freeman. (Sampson Low.) Mr. Freeman states in his preface that some of the papers of which his book is composed have already appeared in the *Melbourne Daily Journal*. All of them, however, bear the marks of having been written for newspapers, and we have seldom met with an instance in which the republication of fugitive pieces was less defensible; nor can we for a moment agree with him that what is worth reading once may in all cases be read with profit twice. We will not go so far as to say that his papers were not worth reading in the journals in which they first appeared. They are sufficiently smart to have secured for them a place in the columns of a newspaper, and readers while there; but we can find nothing in them to warrant their reproduction in a permanent form. Mr. Freeman deals principally with the shadows of Melbourne life, and we learn from his book that there is no less misery and squalor in Melbourne than in the cities of the old world.

NOTES AND NEWS.

THE first volume of Prof. Schipper's *Englische Metrik: a History of English Rhythms*, will be published in a fortnight by Strauss, of Bonn. It will treat: (1) the origin of modern English rhythms, their structure, and the relations between word accent and rhythmical accent; (2) the early English metres continued in modern verse, including the offspring of alliterative metre—doggerel; (3) the fresh metres introduced in the modern English period, blank verse from Surrey to the latest writers, imitations from classical writers, &c. Volume ii. is in the press, and will probably appear next

year. It will contain the history of the stanza and the sonnet, and other imitations from Italian and French poetry.

We learn that all the "hand-made paper" copies of the new edition of Mr. Ruskin's *Modern Painters* have already been subscribed for, though the work itself cannot be issued until October. In addition to the original five volumes, there will also be published a companion volume, containing a complete index, and a detailed bibliographical account of the different editions of the work from 1843 to 1873.

We hear that Mr. Holt Hallett, the fellow explorer with Mr. Colquhoun of the Indo-Chinese peninsula, is writing a new book, to be called *A Thousand Miles on an Elephant in the Shan States*.

MR. C. G. LELAND, together with a staff of American contributors, is engaged upon an elaborate Dictionary of American Words and Phrases, with special reference to their origin. The work will contain much folklore in the form of popular songs, proverbs, and anecdotes; and also an account of the different dialects of the Union, including Pennsylvanian Dutch, Chinook, Creole, and Gumbo.

MESSRS. MACMILLAN announce a new volume of sermons, by Canon Westcott, on the Atonement.

The next volume in the series of "Epochs of Church History" will be *The Arian Controversy*, by the Rev. H. M. Gwatkin, of St. John's College, Cambridge.

MESSRS. SAMPSON LOW will publish in the course of this summer the authentic biography of Henry Ward Beecher, written by his son and son-in-law, with the assistance of his widow, and largely based upon his diary and other autobiographical materials. The book will be profusely illustrated.

UNDER the title of *The Music of the Waters*, Messrs. Kegan Paul, Trench, & Co. will publish immediately a collection of the sailors' chants of all maritime nations, boatmen's, fishermen's, and rowing songs, and water legends, by Laura Alexandrine Smith.

THE June volume of the "Camelot" series (Walter Scott) will be the Autobiography of Lord Herbert of Cherbury, edited by Mr. W. H. Dircks.

MESSRS. DEAN & SON have in the press a work, entitled *England's Battles in the Peninsula*, by Mr. Roscoe Morgan.

MESSRS. TILLOTSON & SON have made arrangements for publication in English newspapers of M. Zola's forthcoming novel, *The Dream*, which they guarantee to be "a story of absolute chastity, written for girls."

No. 10 Downing Street, the official residence of the First Lord of the Treasury, is the subject of an illustrated article in the forthcoming number of the *Leisure Hour*. Miss Macirone contributes her "Recollections of the Philharmonic Society," including the times of Beethoven and Mendelssohn. "The Story of the Armada" is "told from the state papers," by Mr. W. J. Hardy, and illustrated with portraits and facsimiles.

THE *Nation*, of New York, thus begins a long review of the posthumous volumes of Thring's Addresses and School Lyrics:

"By the death of the Rev. Edward Thring, the distinguished headmaster of Uppingham School, England has lately lost the most conspicuous figure which has appeared in her school world since the time of Arnold. He is the only English schoolmaster of the present generation who can be said to have exercised a distinct influence on educational thought outside of England. His *Theory and Practice of Education*, reviewed in these

columns five years ago, has had a wide circulation in America. Though based on English experience, its vigorous dealing with the fundamental problems of education appealed to earnest thinkers everywhere, and many an American teacher would acknowledge a deep debt of gratitude to Mr. Thring's pages for stimulus and inspiration. What he preached about school work and organisation in his books, Thring tried to realise in actual fact in the great school which he created, and over which he ruled for more than thirty years. Of the scope and direction of his work at Uppingham not much has hitherto been known in America; but an article on the subject is, we understand, soon to be published by one of our foremost popular magazines, and doubtless in due time some record of his strenuous life, with its aims and accomplishments, will be given to the public."

UNIVERSITY JOTTINGS.

THE Royal Commission appointed "to enquire whether any, or what kind of, new university or powers is, or are, required for the advancement of higher education in London" is composed of the following: Lord Selborne; ex-Lord Chancellor Ball, of Ireland; the Hon. G. C. Brodrick, warden of Merton; Justice Hannen; Sir William Thomson, of Glasgow; Prof. Stokes, of Cambridge; and the Rev. J. C. Weldon, head master of Harrow.

PROF. ARTHUR SCHUSTER has been appointed to the Langworthy Professorship of Physics and Directorship of the Physical Laboratory at the Owens College, Manchester, in succession to the late Prof. Balfour Stewart.

MR. MADAN won a signal victory at Oxford on Tuesday, when the statute for lending books from the Bodleian to certain university institutions was rejected in Congregation by 126 votes to 37. The result is that no book or MS. can now be lent from the Bodleian under any circumstances, except by a special decree of Convocation.

MR. EDMUND GOSSE, Clark lecturer at Trinity College, will give two lectures at Cambridge this term: (1) on "Matthew Arnold"; (2) "Hints for the Study of Eighteenth-Century Literature." The latter may be regarded as an anticipation of the volume he will shortly publish on the same subject with Messrs. Macmillan, in continuation of Mr. Saintsbury's *Elizabethan Literature*.

MR. VILLIERS STANFORD, the lately appointed professor of music at Cambridge, is delivering a course of four lectures this term upon "The String Quartett, from the Early Italian School to Haydn," with examples.

DR. HICKSON will give a lecture in the museum at Oxford on Monday next upon "The Myths and Legends of Celebes," illustrated with a series of photographic views, taken during his recent visit to that remote island.

MR. PERCY GROOM, of Trinity College, has been elected to the Frank Smart studentship in botany at Cambridge. The term is for two years, and the holder must apply himself to original investigation.

CHRIST'S COLLEGE, CAMBRIDGE, has elected Mr. John Ball, F.R.S., best known for his scientific guide books to the Alps, as an honorary fellow.

AMONG the subjects selected for the second part of the classical tripos examination to be held in 1890 are the following: "The Argument from Language on the Authorship of the Different Parts of the Iliad"; "Existing Doric Temples"; and "The Campus Martius."

THE funds at the disposal of the trustees of the Eldon testimonial at Oxford allow of the creation (at least, for the present) of an addi-

tional scholarship, which will be awarded this summer.

THE general annual meeting of the Cambridge University Scholastic Agency, of which Prof. Lewis is hon. secretary, will be held on Tuesday next, May 15.

ORIGINAL VERSE.

MAY AT ST. MORITZ.

WHERE marble forms of ice and snow
Lay chiselled, now the waters flow,
And breath and life so warm and sweet
Are round the ancient mountains' feet.
The crocus o'er the fields will roam,
Until the golden age has come
Of glist'ning king-cups shining far
From the green earth, as many a star
From blue-black sky shall shine to-night
And quench the flowers' softer light.
Far up the hills the browsing goats
Ring tiny bells with treble notes,
And climb and play, from rocks they leap
And climb again where narrow, steep,
And rough the path leads on. What joy
To follow now the gay herd boy!
The long dark winter nights are o'er,
And cattle in their stalls no more
Need linger, in the flower-strewn grass
They ring their bells and lowing pass
With dark moist nostrils snuffing air
That fresh and cool from pastures fair
Brings tidings sweet. The foaming streams
Rush down anew, and murmur dreams
That haunt them from their winter's rest
While hushed they lay with sleep oppressed.
Ah, would that we might sometimes taste
This joy of waking life! We haste,
As goaded on by hope and fear,
Through every season of the year,
Nor pause enough to gather strength;
"Our life is all too scant a length,"
We cry; "no time to us is given
For peaceful thoughts, but onward driven
We toil for pleasure or for gain;
Nor pause, lest others should attain
The prize we seek, and thus till death
We strive. Can we take breath
And look around with calmer thought?"
Ah, fools! in winter's rest is wrought
A needful work. No life may cease,
But rather grow in that still peace,
And hidden germs enclose the power
That later opens out in flower.

B. L. TOLLEMACHE.

MAGAZINES AND REVIEWS.

IN the current number of *Mind*, which, by the way, is the fiftieth issue, Mr. Shadworth Hodgson opens the series of closely reasoned articles by a new statement of his view of the conditions of a true philosophy. Mr. Hodgson has reached that stage in the development of his system of philosophy at which its method has grown perfectly clear to him; and so he sets himself to formulate it in a fuller and more exact manner than he has before attempted. The fundamental principle of this method, he tells us, is "in analysing experience to subordinate the questions of *how* anything comes, and *how* behaves, to the question *what* it is known as, what it is for us in our present knowledge of it." This principle is developed at length, and the whole field of philosophy and science mapped out by help of it. Next to this article there comes a very clear account of the "Nature and Functions of a Complete Symbolic Language" from the pen of Mrs. Bryant. Here mathematics and logic are put in their right relative position, and the extension of the symbols—first worked out in the former—to the latter explained and justified. This article would serve as an excellent introduction to the study of symbolic logic. Next to Mrs. Bryant's study we have an appreciative criticism of Dr. Martineau's ethical theory by the Rev. H.

Rashdall, whose mind seems exercised by an equal admiration for two writers so far apart as Dr. Martineau and Prof. H. Sidgwick. Lastly, we have an ingenious criticism of the Kantian position that knowledge presupposes the unity of consciousness, by Mr. A. F. Shand. But the ingredients of the number which are likely to please the popular palate must be sought not in the principal articles, but in the contents of the subordinate sections, and more particularly that devoted to discussion. Here Prof. J. Royce throws out the ingenious suggestion that many of the so-called instances of telepathy, collected by Messrs. Myers and Gurney, may be explained away as the outcome of hallucinations of memory. He starts from the well-known experience that on visiting a place for the first time we seem to have been there before. This suggested to his mind that many of the cases in which persons attest that they had premonitory apparitions announcing the death of distant relatives, and in which such "impressions" were not registered in a written form at the time, might be due to a similar illusion of memory. With this idea in his mind he proceeded to enquire in a very careful way whether there were any pathological instances of this illusion, in which the false memory manifests itself in a more daring and definite form; and at last he discovered such cases. By the help of the facts thus acquired, the writer is able to make out a plausible case for the co-operation of this source of error in the production of the stories relied upon as to the frequent occurrence of "phantasms of the living." The paper is likely to do good, if in no other way, at least in this, by suggesting that in a question of this kind, even if the greatest care has been taken to secure veracity of statement, hidden causes of self-deception may be at work, a knowledge of which would instantly destroy the evidential value of the testimony proffered.

CORRESPONDENCE.

A POEM BY HOCLEVE.

Cambridge: May 9, 1893.

Whenever we can definitely date and assign to its author any of the numerous poems ascribed to Chaucer, it is a clear gain.

In Bell's Chaucer (ed. 1878, iv. 424) is a poem headed, "To the Kings most Noble Grace, and to the Lords and Knights of the Garter"; this title is so cumbersome that I shall call it "Garter" for short.

It consists of eight eight-line stanzas, skilfully written. The first four stanzas have but three rhymes—viz., -esse, -our, and -alle; and the last four stanzas have also but three rhymes—viz., -ame, -aunce, and -ee. Moreover, the lines are fairly smooth and free from Lydgate's jerks; and the imitation of Chaucer is fairly good. These considerations at once suggest Hoccleve for the author of the poem.

But the tone and subject-matter effectually clinch this. No one can compare it with the poem against Sir John Oldcastle—written by Hoccleve in 1415, and printed by Miss Toulmin Smith in *Anglia*, v. 23—without at once perceiving the strong resemblance between the two poems. In the *Garter*, st. 1, the "Cristen king" is addressed as being "heir and successor Unto Justinians devout tendernesse." In *Oldcastle*, st. 63, we find the phrase "oure Cristen prince," and in st. 24 we are told how Justinian made a law against disputing about the faith. In both poems the king is called "liege lord"; *Garter*, st. 2; *Oldc.*, st. 63. Next, in the *Garter*, st. 2, we may note: "O liege lord, that have the liknesse Of Constantine"; where *have* is plural and dissyllabic, being the complimentary form. In *Oldc.*, st. 28, is an apostrophe to Constantine, and in st. 30, we are told that our liege lord, our faithful Christian prince and king, follows in the steps of Constantine. It now becomes clear that the Christian king who, in the *Garter*, is praised as being the successor of Justinian and Constantine for the way in which he puts down heresy, is precisely the same person as the Christian king in *Oldcastle*, who is praised for following Justinian and Constantine in the very same matter. Even

verbal resemblances between the two poems are not wanting. Compare:

"Again of heresies the bitter galle" (*Gart.* st. 2)

(which means—against the bitter gall of heresies) and the following:

"Than thou, that dronke hast heresies galle."
Oldc. st. 1.

Miss Smith quotes (*Anglia*, v. 20) a similar line, also from a Balade by Hoccleve:

"The feend hath maad us dronke of the poison
 Of heresie, and lad us a wrong weye."

Another curious point is the use of the somewhat rare verb to *thrulle*—i.e., to enthrall, of which Strattmann gives only three examples, viz., from Layamon, Romaunt of the Rose, and Mandeville. Yet both of these poems contain it; see *Garter*, st. 3, and *Oldc.*, st. 41. I forgot to observe that *Oldcastle* is likewise in the ballad-metre of eight lines, with the same order of rhymes, viz., *ababbcbe*.

But the argument can only be appreciated after a perusal of both poems, which can hardly be other than convincing.

I conclude that this "Garter" poem was certainly addressed, like the other poem, by Hoccleve to Henry V. It is worth while to add that there is a passage in *Oldc.*, st. 6, where Dr. Grosart actually proposed to turn the English word *lame*, i.e., defective, into the French *lame*, simply because he did not know what *lame* meant! Had he known the other poem, he might have found in it, st. 6, that "a heap" of the English were "halt and lame" in the faith.

Can we date the poem still more exactly? I think we may, by the help of Fabyan's Chronicle.

The address to the "Lords of the Garter" agrees well with the great feast of St. George celebrated by Henry V. with unusual splendour to welcome Sigismund, Emperor of Germany, in 1416. This will account for the sentiments being so nearly the same as those which the same author had expressed in 1415. That is to say, both poems belong nearly to the same period. Sir John Oldcastle met his end in 1417. It is sad to think that Hoccleve may have lent his aid to this; but Miss Smith shows clearly that he was a very staunch (I would say even a bigoted) adherent of the old faith, and that Walsingham was utterly wrong in accusing him of heresy.

WALTER W. SKEAT.

IRISH ITEMS.

London: May 1, 1893.

The second number of the *Archæological Review* (April 1) contains a "tentative translation" of sixteen out of forty-three quatrains that constitute an Irish poem, written in Queen Elizabeth's time, upon the Day of Judgment: its certainty; the signs that shall precede it; the advisability of due preparation. The theme is, and has always been, common to all Christendom. There is nothing distinctively Irish about it. To the readers of the *Archæological Review*, who, it is to be hoped, are numerous, may be left the question whether to them, as to educated speakers of and thinkers in English, the version in question is to any appreciable extent intelligible. If the answer be negative, then that version must be held to have missed the only conceivable final end of all translation. The following is offered as an alternative, italics and [] denoting that which has been added to convey ideas not expressed in the original by so many words, but clearly enough set forth by order and construction:

"Here is a poem by Philip, son of Conn Crossach,* in

* A sobriquet, not a patronymic.

which is shown the awful description of the Judgment Day, with the manner in which Christ shall come to the office of Judge and the words which He shall then speak.

"(1) God's Patience is but presage of impending wrath; be this to you as a preparation against the Day of Testimony: that against every man His displeasure is growing, neither will He show mercy at the last. (2) The slow anger it is that is the worst; the not having come under His Will will rise up against them for Evil may not go unavenged. (3) The gentleness that now he uses with us is but Sunshine in proximity to a deluge; he will yet sue for the penalties due and his present treatment of us is not what it most behoves us to discuss. (4) Were reproof to pass by their death-sin, then he would have refuted the ancient saying; † though God's power be absolute over all men, His bare Justice it is that is most fearful. (5) Near to its being kindled is His Wrath; nor may we make it matter of doubt but that the Day of Summons will *ones* come, of the which they are the foretokens that *even now are in process* of taking place. (6) If it be true that Time must have an end [and true it is], then was the World yesterday sensibly more remote than to-day it is from the Monarch's anger: a warning this to him that may understand it. (7) The various weather will occur perverse, *constituting* seasons that may not be trusted: that God's Sanctions are *hard* upon our track is being revealed by His indications. (8) Snow that may not be suffered; Wind most boisterous of utterance; shower of Fire poured out thereafter; at the poor world's last all there shall be. (9) Marvellous to tell, the trees and the clay shall in the Day of Testimony be enkindled; tribulation will seize the stones, of which the flames will not be less. (10) But many as be the extremities that from cold and from fire she shall suffer yonder, yet will the Earth never have endured utter ignominy [punishment] until the stripping of his rays from the Sun. (11) Of every plain the plants shall drip drops of right red blood: of which crimson blood the cause is our father's sin[‡] that lies upon us. (12) Farther than the range of sight which from us shall extend into the firmament the Sea out of her own natural consistence will mount upwards with a bound. (13) O ye that deserve the Fire! before you shall be witnessed the hardest [most incredible, or, direct] portent that was ever heard of: the mouth of all tombs set a-gaping. (14) Every Soul (for such is its original constitution) shall come (there is yet time to take note of it) to meet its body on the Day of Exaction: Matter will soon be in conflagration. (15) At the time of the Separation—Eve and all her Seed being assembled—Michael, Steward of the Lord, will not leave a man of them that he will not awaken. (16) He [the Almighty] will high above the Angelic Orders sit in the clouds of Heaven: upon every troop will be made a hosting-call[§]; the having to meet him is indeed a cause of terror."

The foregoing lines contain perhaps not six vocables, and certainly not a single inflection, idiom, or construction, outside of present common use and wont—in the province of Munster, at any rate. Such difficulty as there is in understanding compositions of this sort arises from extreme compression of style, neglect of transitions, use of verbs without expressed subject, licenses *metri gratia*, abundant employment of homonyms, and so forth. It was ever a favourite feat to construct sentences admitting of more than one interpretation. The men that wrote

* Immediately preceding.

† *The soul that sinneth it shall die*, or some such text. There is another, and perhaps, a more obvious rendering of this passage, but that would require an accentuation very detrimental to the metre.

‡ Than that of more combustible things.

§ Original sin.

|| *Tobach*, a technical term for the levying of tribute, &c.

¶ Another technical expression. *Sluaightheadh* was a chief's "mobilisation" of his forces for an expedition, and its literal equivalent "hosting" became a legal term in English.

in these complicated metres were long and specially trained for the task; so also (practically if not formally) were their auditors, as to ear and mind, besides which the poet was in the first instance there to explain; so also, again, must be their Irish readers in the present. But for a Highlander to attempt the task of interpretation *unprepared* is as hopeless as it would be for a Neapolitan or a Genoese, confiding in an absolute possession of his native dialect and in that alone, to tackle an ode of Horace. That is not the method pursued by the Rev. Alexander Cameron of Brodaig: would that we could speak in the present tense of Dr. Thomas MacLauchlan as well.

STANDISH H. O'GRADY.

"STEERMAN."

London: April 25, 1888.

In answer to an enquiry in the ACADEMY (December 17, 1887) as to whether the Latin *sternmannus* may not represent an English "steerman," Prof. Hart replies (ACADEMY, January 21) that it clearly does, and he supports this statement by a quotation in which the Anglo-Saxon *steorman* occurs.

In *La Vie de Saint Gile*, an Anglo-Norman poem by Guillaume de Berneville (written about 1170) I find the word *esterman*. St. Giles is on a voyage from Athens to Rome, his ship is stout, the breeze is fair, and in full confidence, being weary, he lays himself down to sleep by the "steerman" alongside of the windlass:

"Bons fud li tref e la nef fort,
E unt bon vent ki tost les port.
Tute nuit current a la lune
Le tref windé très k'a la hune:
Ne lur estat muver funain
Trestute nuit ne l'endemain.
Lur aire vunt od la mer pleine,
Kar isel veit cil ke Deus meine.
Gires se dort, car mult fud las
Od l'esterman lez le windas" (vv. 899-908).

It is open to doubt whether it was from the Latin *sternmannus*, or directly from the Anglo-Saxon *steorman*, that the French word was derived. A reference to the Latin *Vita Sancti Egidii*, upon which Guillaume de Berneville based his poem, might throw light upon the question, though the episode related in the passage quoted from above has every appearance of being an amplification, if not an invention, of the poet's own. Much depends upon the date at which the Latin word made its appearance. The latest edition of Ducange knows nothing of *sternmannus*, nor does *esterman* occur in the *Glossarium Gallicum* appended to that edition.

PAGET TOYNBEE.

London: May 5, 1888.

Since the above was written I have found, in the *Roman d'Eneas*, a second instance of the word *esterman*. It occurs in a passage describing the storm sent by Juno to overwhelm the ship of Aeneas:

"Et ciels et mers lur promet mort.
Ne velent lune ne estelles;
Lur cordes rumpent, chieient velles,
Brisent et mast et guernall:
Mult vunt a hunte et a travail.
Ne eschipse ne *esturmain*
De lur dreit cors n'erent certain."

(Bartech et Horning, *Lang. et Litt. Franc.*, p. 190, vv. 1-7.)

Further, in the *Lai d'Eliduc* by Marie de France, I have met with the word *estiere* used in the sense of rudder. Eliduc is sailing from Totnes with a lady who is not his lawful spouse. A great storm arises, and one of the sailors hints that it is a visitation on account of the *amie* Eliduc has brought with him, and he suggests that she should be thrown into the sea. Eliduc thereupon hits him over the head

with an oar and throws him into the sea, after which he steers the ship himself:

"Puis qu'il l'ot lancé en la mer,
A l'estiere vait gouverner." (vv. 865-6.)

It is a noteworthy fact that all the three poems quoted from above are of Norman or Anglo-Norman origin; indeed, the *Vie de Saint Gile*, and the *Lai d'Eliduc* were almost certainly written in England. There can be scarcely a doubt that *estiere* represents the Anglo-Saxon *stēor* ("a rudder or paddle to steer with," Skeat), independently of any Latin intermediary; and it may therefore with equal probability be assumed that *esterman* in the same way comes directly from Anglo-Saxon *steorman*, not from Latin *sternmannus*.

PAGET TOYNBEE.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, May 14, 8 p.m. Society of Arts: Cantor Lecture, "Decoration," ILL. by Mr. G. Aitchison.
8.30 p.m. Geographical: "A Journey across Central Asia, from Manchuria and Peking to Kashmir over the Mustang Pass," by Lieut. F. E. Younghusband.
TUESDAY, May 15, 8 p.m. Royal Institution: "The Plant in the War of Nature," ILL. by Mr. W. Gardiner.
7.30 p.m. Statistical: "Condition and Occupations of the People of East London and Hackney, 1887," by Mr. Charles Booth.
8 p.m. Society of Arts: "Duty of the State towards Emigration," by Mr. James Rankin.
8 p.m. Civil Engineers: "The Tay Viaduct, Dundee," by Messrs. Crawford Barlow and W. Inglis.
8.30 p.m. Zoological: "A Collection of Birds made by Mr. L. Wray in the main Range of Mountains of the Malay Peninsula, Perak," by Mr. R. Bowdler Sharpe; "Four New Species of Ophiroids," by Prof. F. Jeffrey Bell; "Some Rare Species of *Phasianus* from Central Asia," by Mr. H. Seebohm.
WEDNESDAY, May 16, 8 p.m. University College: Barlow Lecture, "Dante and Sicily," by the Rev. Dr. E. Moore.
4 p.m. College of State Medicine: "Soil in its Influence on Health," by Prof. H. G. Seeley.
8 p.m. Society of Arts: "Electric Lighting from Central Stations," by Mr. R. E. B. Crompton.
THURSDAY, May 17, 8 p.m. Royal Institution: "The Chemical Arts," VI., by Prof. Dewar.
8 p.m. University College: Barlow Lecture, II., by the Rev. Dr. E. Moore.
8 p.m. University College Literary Society: Solrée, "Sophocles and Shakspeare," by Mr. J. Churton Collins.
8.30 p.m. Antiquaries.
8.30 p.m. Historical: "The Commercial Policy of Edward III.," by the Rev. W. Cunningham.
FRIDAY, May 18, 8 p.m. Philological: Anniversary Meeting. Address by the President, Prof. Bayce.
9 p.m. Royal Institution: "La Reproduction Artificielle des Roches Volcaniques," by M. Alphonse Renard.
SATURDAY, May 19, 8 p.m. Royal Institution: "The Later Works of Richard Wagner," VI., by Mr. Carl Armbruster, with Vocal and Instrumental Illustrations.

SCIENCE.

A ROMAN SCHOLAR OF THE SIXTEENTH CENTURY.

La Bibliothèque de Fulvio Orsini: Contributions à l'histoire des Collections d'Italie et l'étude de la Renaissance. Par Pierre de Nolhac, ancien membre de l'École française de Rome. (Paris: Vieweg.)

(First Notice.)

Most students of Latin philology are familiar with the name of Fulvio Orsini, and many are aware that our modern editions of Festus are mainly based on his. And this is as much as the majority even of professing philologists in England probably know about him. Yet he was a man of whom Joseph Scaliger could write, speaking, too, of a work now almost forgotten, in these terms: "Fulvii Uraini Familiae liber divinus, ex quo multa didici." In effect, Orsini was, perhaps, the most marked figure in that eminent circle of archaeologists and scholars who formed the glory of

Rome in the middle and latter half of the sixteenth century. How great that epoch was as a period of classical research, how much was then commenced which subsequent ages could only develop and carry further, is nowhere more clearly set forth than in M. de Nohac's interesting volume.

Fulvio Orsini, a bastard scion of the great family of Orsini, was born in 1529, in the pontificate of Clement VII. Nine years old he became a chorister at S. Giovanni Laterano. One of the canons of the Lateran, Gentile Delfini, an antiquary and a collector of books, became his patron. Angelo Colocci, Bishop of Nocera, gave him the *entrées* to his house and gardens on the Quirinal, much frequented by the *savans* of the time. The archaeological collections of these two men, Delfini and Colocci, were Orsini's first introduction to the study of inscriptions and medals. His first appearance as an author was in Greek. Some laudatory Greek distiches—*Φουλβίου Οὐραίνου*—are prefixed to Benedetto Egio's *editio princeps* of the *Bibliotheca* of Apollodorus (1555). Egio mentions in his preface some of the *eruditi* who formed the circle in which both he and Orsini lived. They include the poet Zanchi, the later cardinal and librarian Sirleto, Giovanni Cessari (Janus Caesarius), Antonio Possevino, Gabriel Faerno, Latino Latini.

Orsini was made Canon of S. Giovanni Laterano in 1554. His canonry placed him above want, and left him leisure for study; but he was not yet in the full light of that exalted patronage which was needed to make him known. This he obtained when Delfini introduced him to the powerful family of the Farnese, which a few years earlier had given to the papacy Paul III. At this time (1557-8) two cardinals represented the Farnese at Rome—Alessandro and Ranuccio. Ottavio Farnese was Prince of Parma. Orsini was specially attached to the household of Ranuccio, who made him his librarian and secretary. The two brothers resided in the summer, Alessandro at Caprarola, Ranuccio at Capranica di Sutri, not far off, and Orsini would accompany them in this *villeggiatura*. In 1565 Ranuccio (he was called the Cardinal Saint Angelo to distinguish him from his brother, Cardinal Farnese) made a long stay at Bologna. Orsini availed himself of the opportunity to work in the Laurentian library at Florence, and to make the acquaintance of the great Vittori (Petrus Victorius); from Bologna he visited Pinelli, with whom he was afterwards in constant correspondence at Padua. At this time he added to the list of his friends Carlo Sigonio (Sigonius) and the lexicographer, Nizolio. The death of his patron, Cardinal St. Angelo, in 1566, did not sever Orsini from the family of Farnese. Alessandro transferred him to his own library, and made him his chief agent in buying up works of art, medals, gems, pictures, and antiquities. Alessandro, who had been a pupil of Vettori and of Romolo Amaseo, liked to surround himself with men of distinction; one of his secretaries was afterwards the Cardinal Bernardino Maffei, another became Pope Marcellus II. He liked to have his library at Rome considered a public school for all workers (*scuola pubblica del mondo*). Another notable ecclesiastic, the Spanish Cardinal

Granvelle, figures often in Orsini's correspondence. He also was an amateur in works of art; and Orsini could render him valuable service in advising him what to buy. In return he used his influence to secure antiquities for Orsini, to procure the restoration to him of stolen articles, inscriptions in the possession of the Augsburg Fuggers, &c. It was through him that the publication of Orsini's *Virgilius illustratus* by the Antwerp printer Plantin was negotiated.

The Catholic revival which set in with the Council of Trent, and which tended more and more to concentrate learning on the Scriptures and matters ecclesiastical, naturally claimed some share of Orsini's time for less secular pursuits. In 1583 he published his edition of Arnobius and Minucius Felix, with a dedication to Gregory XIII. His commissions on this score were indeed not slightly trying to his temper and patience. M. de Nohac quotes a letter found among the papers of Cardinal Sirleto, in which Orsini complains that after spending three hours of the morning over proofs, he had been obliged to revise a commentary on Joshua, Judges, Ruth, and that a further examination of the Vatican MS. was necessary in order to settle some points still left doubtful. He makes this an excuse for deferring his task of translating the "Decrees of the Reformation"—i.e., of the Council of Trent—into Greek; a work which had been confided to him and Matthew Devaris, and which appeared in 1583. Probably, he was very half-hearted about the Catholic "Reformation"; at least, in one of his latest works, the *De Triclinio*, published in 1588, he more than hints in his dedication to Sixtus V. that his favourite line of study no longer occupied the supreme position it had long enjoyed in Rome, and that some apology was due to his Holiness for laying before him a work only remotely connected with sacred studies. In fact, classical learning was rapidly passing into the condition in which we find it in the seventeenth century, Jesuitic on the one side, Protestant on the other. Orsini and his brother Italian philologists belong in the main to the earlier, in some senses, the happier period, when philology had passed, indeed, from the perfect and untrammelled freedom of the Renaissance, yet had not definitely committed itself to anything like absolute submission to a religious creed.

His fame, meanwhile, was steadily rising. In 1577, Stephen, King of Poland, wishing to found a university at Wilna, and an academy at Cracow, sent his secretary, Zamoyaki, to Italy, with tempting offers to the most eminent *literati* of the time, notably Sigonius, Muretus, and Orsini. None of them accepted the proposed honour, which, indeed, would have been an exchange very like Ovid's banishment from his Rome to Tomi. For at that time Rome was not only the religious centre of the Catholic world, but almost the only school of art and archaeology in Europe. There, as in no other city of that time, all that had been and was being discovered of antique, whether in art or MSS., was not only laboriously collected, but religiously studied and exactly described. The religious rites and manners of pagan Rome, its edifices, its roads, its coinage, its law, were illustrated by countless relics preserved

in a hundred museums and explained by scholars and philologists drawn from every part of Europe.

On the death of Cardinal Alessandro Farnese in 1589, his palace passed to the young Odoardo Farnese, son of the Duke of Parma. Orsini continued to live in it, and directed the young man's studies. Even after Odoardo had ceased to be regularly in Rome he would, when he returned thither, pass whole evenings with Orsini conversing on history and literature. Odoardo became a cardinal in 1591. In the frequent conclaves which followed the death of Sixtus V., Farnese is believed to have been considerably guided by the letters of his preceptor. Orsini lived through the successive pontificates of Urban VII., Gregory XIV., Innocent IX., on to that of Clement VIII. In January, 1600, he made a will by which he left the greater part of his books and MSS. to the Vatican, and various legacies to his friends, including four valuable medals which he begged the Pope (Clement VIII.) to accept. In the following May he died, and was buried in a chapel which he had founded for that purpose in the Lateran.

The list of Orsini's works is as follows:

- (1.) *Virgilius collatione scriptorum Graecorum illustratus opera et industria Fulvii Ursini.* (Antwerp, 1567.)
- (2.) *Carmina novem illustrium feminarum et lyricorum.* (Antwerp, 1568.)
- (3.) *C. Iulii Caesaris Commentarii.* (Antwerp, 1570.)
- (4.) *Imagines et elogia virorum illustrium et eruditorum ex antiquis lapidibus et nominibus expressa.* (Rome, 1570.)
- (5.) *Familiae Romanae quae reperiuntur in antiquis numismatibus ab urbe condita ad tempora divi Augusti ex bibliotheca Fulvii Ursini.* (Rome, 1577.)
- (6.) *Sex Pompei Festi de verborum significatione fragmentum, ex vetustissimo exemplari bibliothecae Farnesianae descriptum.* (Rome, 1581.)
- (7.) *Fulvii Ursini in omnia opera Ciceronis notae.* (Antwerp, 1581.)
- (8.) *Ἐκ τῶν Πολυβίου τοῦ Μεγαλοπολίτου ἐκλογαὶ περὶ πρεσβεϊῶν.* (Antwerp, 1582.)
- (9.) *Amobii disputationum adversus gentes libri septem. M. Minucii Felicis Octavius.* (Rome, 1583.)
- (10.) *Antonii Augustini Archiepiscopi Tarraconensis de legibus et senatus consultis liber. Adiunctis legum antiquarum et senatus consultorum fragmentis cum notis Fulvii Ursini.* (Rome, 1583.)
- (11.) *Notae ad M. Catonem, M. Varronem, L. Columellam de re rustica.* (Rome, 1587.)
- (12.) *Petrus Giaeconius Toletanus de Triclinio Romano. Fulvii Ursini appendix.* (Rome, 1588.)
- (13.) *Fragmenta historicorum collecta ab Antonio Augustino, emendata a Fulvio Ursino.* (Antwerp, 1595.)

In countenance Orsini was grave and dignified, with regular features, and not without an air of distinction. His contemporaries were unanimous in lauding his modesty and the sober regularity of his morals. The only allegation which could be brought against him—plagiarism—is discussed and rebutted, if not refuted, by M. de Nohac. It is interesting to know that his habit was to concentrate himself on only one study in the

same day—a good rule, which many modern students would do well to follow, and by which he made up for the frequent calls upon his time that his notoriety not only as a collector of MSS. and works of art, but as a *cicerone* to other collections, necessitated.

ROBINSON ELLIS.

CORRESPONDENCE.

FINNISH NUMERALS.

London: May 5, 1888.

The difficulty of connecting *-tesa* in Dorpat Esth. *kat-tesa*, *ut-tesa* (better *kaheksa*, *kadiksa*, *katesa*, *iikeksii*, *iiteksi*, for the double *t* is a mistake, see Wiedemann's *Phet. Gram.*, p. 414), with Perm. *das*, Magy. *tiz*, Nogai Turk. *ol-tuz*, is, at least, fourfold.

(1) *Das* is a loan-word from the Russ. *desyat*, and probably *tiz* has a similar origin, while the Finns have a native word *kymmenen*, Esth. *kümme* 10.

(2) *-tesa*, *-tesii* are modern forms of an older *-teksa*, *-tekaii*, so the *k* must be accounted for.

(3) In Finnish compounds the first member is always in the nom. or gen., never in apocopated form like *kat*, *kah*, *iit*, *ii*, and the vowels of the two members are not harmonised. Suffixes are attached to the root or root + stem, found in the illative sing., and their vowels are harmonised. The ill. sg. of *yksi* 1, *kaksi* 2, is *yhte*, *kah*, *kah*, which shows that *-tesa* is a wrong division of the word; it should be *ka(t)te-sa*, *iit(t)te-sii* with harmonised vowels.

(4) Böhtlingk in his Yakut grammar (p. 262) does not think anyone can be satisfied with Schott's explanation of *ol-tuz* by dividing in into two independent words. Besides, *-tuz* does not appear in the other numerals up to 90, while a Yakut *otut*, 30, makes it highly probable that *z* stands for an older *t*.

If *kaheksa* really means "without 2," it stands, of course, for *kymmenen kaheksa(n)*, "10 without 2," and the word for 10 has been dropped, just as it is omitted in *yksitoista* (11), *kaksitoista* (12), &c., which are used instead of *yksi (kaksi) toista kymmentii*, "1 (2) of the second 10."

If Canon Taylor will look at my last letter he will see I did not say *-tesa* was a privative, but that *k*, as I believe, has that meaning.

JOHN ABERCROMBY.

A SUGGESTION.

Gosport, Hants: April 33, 1888.

While reading again after many years the speech of Demosthenes *De Falsa Legatione*, it occurs to me that a legitimate interpretation of a disputed passage may have been overlooked.

The place is 444-5, § 323, Bekker, vol. i., small edition. The Athenians had sent (according to Demosthenes) a fleet to Pylæ to watch Philip's movements. "What artifice here again shall be called into existence respecting this? [*Botheias*]: deprive you of the time for action, and checkmate you by bringing on matters with a rush."

The sense of *ἐπιστῆσαι*, "to bring to a halt," appears to me to be unobjectionable, and to fit in well with the underlying thought, viz., warlike manoeuvres. An objection which might be urged, I suppose, would be that this meaning of *ἐπιστῆσαι* is not quite discernible from the context, the Athenian forces not being in motion, so to speak, at the time; but this is, I think, obviated by the following words *ἵνα μὴδὲ δυνάσθῃ ἐξελθεῖν* which show that this thought may have been in the mind of the orator. Again, *οὐκ* supplies itself naturally, *οὐκ* having just occurred. To supply this, at least, is far more simple than to supply

"Philip," as Mr. Shilleto seems seriously to have done in a passage which he says is "perhaps mutilated"; in the sense, "set Philip at the head of affairs." The use of this verb by Xenophon in the above sense is well known. The proper force of the verb may be, "to bring to a sudden stand," "to a dead lock."

In a sentence of oratorical vehemence such as this, I think the emphasis and point are improved by the above rendering.

WILLIAM LEE.

SCIENCE NOTES.

THE following fifteen candidates have been selected for election by the council of the Royal Society: Mr. T. Andrews, Mr. J. T. Bottomley, Mr. C. V. Boys, Prof. A. H. Church, Prof. A. G. Greenhill, Sir W. F. D. Jervois, Prof. C. Lapworth, Prof. T. J. Parker, Prof. J. H. Poynting, Prof. W. Ramsay, Mr. T. P. Teale, Mr. W. Topley, Mr. H. Trimen, Prof. H. M. Ward, and Mr. W. H. White.

MR. J. H. COLLINS has recently published an interesting work "On Cornish Tin-Stones," containing observations made during a long residence among the mines of Cornwall. The work consists of a series of papers which were contributed by him to the *Mineralogical Magazine*, and are now reprinted with additions and corrections. The illustrations include several coloured plates, showing the microscopic structure of tin ore.

Journal of the Asiatic Society of Bengal. Vol. LVI., Part II., Nos. ii. and iii. (1887). Edited by the Natural History Secretary. (London: Trübner.) The contents of these two parts show that very satisfactory work in different branches of physical science is being performed in India. In zoology we have (1) a memoir on the chiroptera of Nepal, by Mr. J. Seully, containing careful descriptions of nineteen species of bats ascertained to be inhabitants of Nepal, with proper references to the writings of Hodgson, Dobson, and other recent authors on those creatures; (2) description of a new Crustacean belonging to the *Brachyura* (Raninidae), by Mr. J. Wood-Mason; (3) on six new Amphipoda from the Bay of Bengal, carefully figured in six coloured plates, by Dr. E. J. Jones; (4) Notes on Indian Rhynchota Heteroptera, by Mr. E. T. Atkinson, containing descriptions of seventy-eight species of Linnean Cimices; (5) *Etude sur les Arachnides de l'Asie méridionale faisant partie de la Collection de l'Indian Museum, Calcutta*, par M. E. Simon, de Paris—seven species described, including a new genus of bird-spiders—*Avicularidae*. In other branches of science we have (6) Notes on some recent Neolithic and Palaeolithic finds in South India, by Mr. R. B. Foote, superintendent of the Geological Survey, with a map; (7) Notes on some Nodular Stones obtained by trawling off Colombo in 675 fathoms of water, by Commander A. Carpenter, with a plate; (8) on the Mean Temperature of the Deep Waters of the Bay of Bengal, by the last-named writer, with a plate; (9) on the Effects produced by small Quantities of Bismuth on the Ductility of Silver, by Surgeon-Major Scully, assay master, Calcutta; and (11 and 12) two mathematical memoirs, by Asutosh Mukhopadhyay, communicated by the Hon. Mahendralal Sircar, M.D., with woodcuts.

PHILOLOGY NOTES.

PROF. MAURICE BLOMFIELD, of the Johns Hopkins University, has sent us a reprint of two papers in the *Proceedings of the American Oriental Society*, both dealing with the interpretation of certain hymns of the Atharva

Veda. In one of these he contends that the hymn (vii, 76, 3-5) on the *jāyānya* charm, and also the three *apacit* hymns (vi. 83; vii. 74, 1, 2; vii. 76, 1, 2), are all remedial incantations directed against various kinds of skin-disease, being the earliest record hitherto discovered of this prevalent Indian complaint. In the other paper, he argues that the well-known hymn (ii. 12), which has hitherto been explained as an incantation accompanying a fire-ordeal, is in reality an incantation against an enemy who is attempting to thwart some pious work by unholy practices.

MEETINGS OF SOCIETIES.

UNIVERSITY COLLEGE LITERARY SOCIETY.—
(Monday, April 23.)

THE president in the chair.—Mr. H. Frank Heath read the first of two papers upon "John Lyly and the other Elizabethan Fiction Writers." There is, perhaps, no man who has had so much said about him in praise and blame, by those who know nothing of him at first hand, as John Lyly; and, after all, it is chiefly his style, the casing into which he put his matter, rather than the matter itself which makes men study him to-day. Of the man himself we know very little. In 1579, *Euphues, or the Anatomy of Wit*, was published, and next year, the sequel to it, *Euphues and his England*. Between 1584 and 1594 eight court comedies of his were acted, of which one, "Mother Bombie," is so different in style and superior in workmanship to the others that we can scarcely believe it to be his. As to the origin of his style, there are three theories: (1) that it is sprung from the conceits of the Petrarchists; (2) that it is due to the "Alto Estilo" in Spain, the introducer of which was Antonio de Guevara; (3) that it was an adaptation of the style of the "Rhetoriciens," Chastellain, Robertet, Crétin, and others. After an examination of the *Anatomy of Wit* and its sequel (1) from the standpoint of aesthetic criticism, (2) from that of its style, it becomes evident that in so far as any of these three theories are true, the second is the most reasonable. Lyly was not so greatly indebted to Guevara for his style as Landmann supposes; but, having read some of the many English translations of his work, he was led to study Plutarch, and to an imitation of the style of the Silver Latin writers, such as Seneca, Apuleius, and others. And, inspired by them, he elaborated the peculiar style of Guevara, which had been imitated by his translators—Lord Barners and Sir Thomas North, and also by Pettie, in *A Petite Palace of Pettie his Pleasure* (1576)—and thus launched Euphuism upon the world. The fact is, that in the sixteenth century there was a general tendency to Latinise and to imitate the Silver Latins, so much more read then than now, in the attempt to get rid of what was thought to be a rude method of expression. For the scheme of his novel, and even for some of his details, it was proved that Lyly was largely indebted to Guevara's *Relos Principum*; and the conclusion is reached that, though he was earnest, ingenious, scholarly, and had satire, yet that his power of telling a story was elementary in the extreme. He was far surpassed in it by his successors, whether adherents to his form of writing or not. "The very qualifications which won him popularity when he wrote make him almost unreadable to-day, while the gospel he preached is another man's, and can be better studied in the 'plaine Englishe' of Ascham, which those of his time could not appreciate."

BROWNING SOCIETY.—(Friday, April 27.)

DR. BARDON in the chair.—Miss Whitehead read a paper upon "Robert Browning as the Poet of the Nineteenth Century." The paper began by pointing out that the poets of the early part of this century—Byron, Keats, Shelley, Wordsworth, Coleridge—had an easier task than those of its later half. They left to Browning the task of dealing with its deeper problems. Life is complicated now with a thousand different claims. Great questions have to be decided by us from day to day. Every hour we are imperatively called upon for action. We are obliged to be actors when we should be students. It is the poet's function to

sanctify this practical life, to realise for us the presence and hand of God in our common work, to hold up a standard which arrests and invigorates the workers. Browning meets and satisfies our need. His influence is twofold: first, on the practical questions of our time; secondly, on those deep metaphysical elements which bear on our life and character. He directly treats many of the burning practical questions of our day. Witness his indignant sarcasm on the subject of vivisection, pointing out how the whole race barter its highest good for an uncertain advantage. No doubtful scientific gain can compensate for our loss in moral vigour when we betray the trust reposed in us by those feeble creatures who depend on our mercy. Vivisection extends the scalpel into other regions. In this age it is applied to brain and heart and soul; and here, too, the poet maintains the right of every soul to reserve. A tyrannous criticism not only fetters art, but kills all grace and spontaneity of action. Such tyranny of mind over mind Browning records in "My Last Duchess" and "The Flight of the Duchess." In the latter, too, he gives a blow to conventionality, to the use of fashions for their own sake, not for their value or beauty. "Pictor Ignobis" claims the soul's right to be set free, unblinded and untrammelled; and from the lips of "Fra Lippo Lippi" we hear the right function of art. The trading of to-day is rotten to the core, its education a mere passing of examinations. To all such shams Browning calls: "Stand and deliver." To the mediocrity and conceit of our time he teaches the lesson of humility, the only real means of estimate and elevation. The conception of brotherhood, with its attendant self-sacrifice, he immortalises in "Luria," "The Patriot," "A Soul's Tragedy." He wastes no words on the position of women, but accords them their true rank from the beginning—not inferior souls to be tutored, guided, patronised by men, but correlative and often guiding souls; and for this he has the deepest gratitude of women. How healthy his view of past happiness, not meaning over its transitoriness, but glad of its enjoyment; and how healthy too his view of love, with a firm hand upon himself, understanding the humility of true love! In "The Ring and the Book," he reveals the hideousness of loveless marriage—a daily circumstance of our time. Dealing with deeper questions, he answers, "Is life worth living?" with "Thanks that I am a man." "Do," he tells us, "and nowise dream." He warns us against the hurry and impatience of the age. Concentration seems beyond our power; every life is a tangled skein of many threads. "Sordello" warns us against such dissipation of mind. And, as if to complete the cycle of truth, he gives us a poem now and then which seems to contradict the lessons on which he has insisted, as in "Bifurcation," where his great lesson of self-sacrifice is shown to be foolishness when it is carried into practice for the mere sake of self-sacrifice.—The chairman expressed his hearty thanks to Miss Whitehead for her paper, both on account of its intrinsic merits and of the proofs it gave of her study of Browning. He wished to ask what is required of a poet of the century? He must be in sympathy with its aspiration, work, and needs. How far is Browning in sympathy with these? The aspirations and hopes of this age are combined with a passionate longing for truth and a rare purity of intention. It is an age of science, but also an age of faith at its sublimest. It is an age of destruction, if you will, but only to lay the solid foundation of a greater religion—that of humanity. Its work is to help the weak, to counteract the cruel law of nature that only the strongest shall survive. It is an age of humanism. Its needs, how great they are! Uprising millions are asking for mental food—what a field for scattering great thoughts! We want a purer faith, a nobler philosophy, more reality, less sham; and with all these Browning helps us. Is poetry to be got out of work and aspirations? Walt Whitman says so, while Ruskin says we are crushing all poetry out of life. But the Channel Tunnel and the St. Gothard Railway are full of poetic suggestion. What we need is more humility, more reverence and love, in addition to our knowledge.—Dr. Furnivall felt extremely obliged to Miss Whitehead for her very good paper, bringing Browning into relations with

the present time. Too many of his topics are in far-away life, questions dealing with people all over the world. The paper was most valuable; but it had not proved that Browning is in close relation with the chief problems of the age. Scientists are much more likely to side with vivisection than with Browning. On the political side of modern life, he treats very few things, but it is true that in respect of the progress of women he is splendidly superior to other poets. He goes back to Shakspeare and gives woman the pre-eminent place. With regard to trade, he says very little. In art, his message is clear. He (Dr. Furnivall) had no sympathy with those who see no poetry in modern life. Let each and all work, and there is poetry enough. We stand at a higher level and do better work than ever.—Mr. Revell expressed his great pleasure in listening to the paper. He felt, however, its want of definiteness in dealing with the subject. It was scarcely made plain enough how Browning speaks to the nineteenth century. His poetry dealing with soul-development is for all time. What is his teaching in relation to scientific modes of thought? He was eminently intellectual, sane and reasonable. He was certain of soul and so was J. S. Mill. Browning has done nothing to meet the need of a philosophy that J. S. Mill and Herbert Spencer have not done better. But Browning has helped us in the determination to face the truth at all costs. One thing stamps him above all other poets—his power to influence human lives, and form high and noble character. His optimism in no way meets the pessimism of to-day, and as to scepticism, what has he to say to it?—Mr. Gonner criticised Mr. Revell's comparison of J. S. Mill with Browning. The philosophy of the former is strictly described as utilitarian. It is illogically materialistic. When he makes an attempt to rise above materialism, he is crushed back by the influences of his early training. Both Mill and Spencer are hopelessly incapable of being logical according to the German and later philosophers. It is not fair to treat Browning as if he ought to be an encyclopaedia, and provide answers to every question. Why should he touch on politics? Politics are not in any sense the strongest aspect of an age, except when they grow out of its deeper life. Browning and the poet we have just lost understood our age. In Matthew Arnold's poetry we have the reflection of its passionate uncertainty. Browning sees that that will not endure. The age is passing from shams and conventions to reality, and must be content to wait for a time. Honesty and sincerity are of first importance; and the outcome will be a religion of self-sacrifice, in which the human element must be strongly developed. Browning is in no doubt about that.—Mr. Slater was surprised at the logic which had been used by one or two members on the subject of vivisection. If superior animals might torture the inferior for profit, it followed that superior races of men might do the same to inferior races; and as for the sweating system, it grew perfectly allowable in that light. There is poetry in the present age, but far more that is not. Money-getting and pleasure-getting are its chief aspects, and the money-getting is so fatiguing that its pleasures are less and less simple and worthy, more and more frivolous, if not degrading.

ENGLISH GOETHE SOCIETY (MANCHESTER BRANCH) —
(Saturday, April 28.)

THE REV. F. F. CORNISH in the chair.—Dr. Kuno Meyer delivered an address on Joseph Charles Mellish, one of the first of the small band of Englishmen who in those days took an intelligent interest in German literature, and whose efforts to interest their countrymen in it likewise have hardly met with the recognition they deserve at the hands of historians of German literature. Mellish was born in 1768. About the year 1795 he went to settle in Weimar, married there, and built for himself a house on the esplanade, which house Schiller bought from him in 1802. Schiller describes him as an educated, learned Englishman, thoroughly familiar with ancient and modern literature. Small wonder, then, that he was soon at home in the literary circles of Weimar and Jena. In order to counterbalance the success which translations of Kotzebue's plays had had on the English stage,

Mellish planned a translation of the "Wallenstein" trilogy for Drury Lane Theatre, and wrote to Sheridan about it, but Sheridan never replied. Schiller's MS., which he had sent to a London bookseller, found its way later on into Oleridge's hands. Not discouraged by this rebuff, Mellish made a second attempt with "Maria Stuart." He translated each act as it was finished by Schiller, and the English version appeared before its original. But it had no success in London. The critics received it badly, its representation on the English stage was out of the question, and Schiller renounced for ever his cherished hopes of seeing his dramas acted simultaneously in England and in Germany. In 1798 Mellish translated Goethe's "Hermann und Dorothea," and in 1801 "Palaeophron und Neoterpe"; but it is doubtful whether these versions were ever printed. Soon after, probably in 1802, Mellish left Weimar and settled in Hamburg. He died on September 18, 1823.—Dr. Meyer then read an interesting passage from the *Annalen*, describing the visit of a son of Mellish in 1820. To this young man, his godchild, Goethe gave, in 1816 [when father and son seem to have visited Goethe together, see *Annalen*], a copy of "Hermann und Dorothea," which Dr. Meyer showed to the meeting. In it is written boldly and clearly in Latin characters:

"Meinem theuren Pathen,
Richard, Carl, Emil,
Wolfgang, Gottlob
v. Mellisch,
dem der Vater der beste
Dollmetsch des Gedichtes
seyn kann,

"Weimar,
d. 2. May
1816.

"treumelnd
Goethe."

—The chairman, in a few remarks on the paper, mentioned that he had seen in a Manchester second-hand bookseller's catalogue a copy of an edition of the "Faust Fragment" bearing the date of 1787. This date is, according to Hirzel, a misprint. The full title runs: "Faust: Ein Fragment. Von Goethe. Aechte Ausgabe. Leipzig, bey Georg Joachim Göschen." Of the first edition of the "Faust Fragment" (1790), only one copy is known to exist. It belonged to Hirzel, was bought by him from a London bookseller, and bequeathed to the Leipzig University Library. The hon. secretary referred to Goethe's short poem, "An Freund Mellish," alluding to the pleasant time they had spent together in Mellish's country house in Dornburg.—Mr. H. Preivinger then read an interesting paper on the "Urfaust" lately brought to light by Dr. Erich Schmidt. After giving a brief account of its finding and a few words on its importance as throwing light on the Goethe of the pre-Weimar period, Mr. Preivinger went over this version scene by scene, pointing out where it differed from the first part of "Faust" in its final form, and drawing attention to the wonderful tact with which Goethe in the revision pruned away everything trivial and of passing interest, without touching anything really powerful and likely to live. Only with regard to the closing prison scene is there room for doubt whether the terse intense prose of the first version, with its terrible pathos, may not be more effective than the softened and harmonised poetic form in which Goethe recast it in 1798. The lecturer then touched on the bearing of this discovery on the theories of "Faust" composition propounded by Profs. Scherer and Schröder. While feeling that on the whole, the chances are that there never were any other prose scenes than those of the Gochhausen copy, Mr. Preivinger pointed out in favour of Scherer's theory of a prose "Faust" (1) that the language of the prison scene seems to point to a comparatively early date of composition; (2) that the Dom scene is of less decided rhythmical character in the older form; (3) that the example of the Auerbachs Keller scene and its subsequent transformation into verse render it at least possible that other scenes may also have existed in a similar immature form. Schröder's theory of an older form for almost all the scenes of the present first part receives but little support from the new discovery, which, on the whole, in Mr. Preivinger's opinion, invaluable as it is, propounds nearly as many riddles as it solves. The reading of some scenes from the oldest version had to be postponed on account of

the indisposition of the Rev. Ph. Quenzer.—The hon. secretary read a short note on the earliest performances of Marlowe's plays in Frankfurt and in Graz, and on Chr. Aug. Vulpius's highly improbable story that as early as 1588 a German comedy, "Dr. Faust," was performed in Nuremberg, with a woman acting the part of Gretche.

ROYAL INSTITUTION.—(Annual Meeting, Tuesday, May 1.)

SIR FREDERICK BRAMWELL, hon. secretary, in the chair.—The annual report of the committee of visitors for the year 1887, testifying to the continued prosperity and efficient management of the institution, was read and adopted. The real and funded property now amounts to above £81,000, entirely derived from the contributions and donations of the members. Forty-one new members were elected in 1887. Sixty-three lectures and nineteen evening discourses were delivered. The books and pamphlets presented amounted to about 283 volumes, making, with 463 volumes (including periodicals bound) purchased by the managers, a total of 746 volumes added to the library in the year. The following were elected as officers for the ensuing year: president—The Duke of Northumberland; treasurer—Henry Pollock; secretary—Sir Frederick Bramwell; managers—George Berkeley, Sir James Oughton Browne, Vicat Cole, Frank Crisp, William Crookes, Warren de la Rue, Sir Henry Doulton, John Hall Gladstone, Col. James A. Grant, Sir William R. Grove, the Rev. John Macnaght, Sir Frederick Pollock, William Henry Preece, Dr. John Rae, Sir Henry Thompson.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos and Photographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. REES, 115, Strand, near Waterloo-bridge.

THE ROYAL ACADEMY.

I.

ONCE more, if we lend ear to the pronouncements of those who aspire to direct the taste of the public, we find ourselves very generally asked to accept the judgment that the exhibition of the Royal Academy shows a decided advance upon its immediate predecessors, and is of considerably more than average excellence. This is not, it is true, very audacious praise; yet it may, perhaps, be permitted to enquire what are the results which are deemed to justify the opinion thus generally expressed. To play the part of the *advocatus diaboli* on such an occasion is a sufficiently ungrateful task; since it is far less irksome to follow the lead of official orators and chauvinistic partisans through thick and thin of native art, and to see things in the roseate atmosphere of artificial and ephemeral brightness which they would create for us. Let us leave out of the question for the moment the four or five first-rate productions, all of them portraits, contributed to the exhibition by those masters of technique, the Frenchman, M. Carolus-Duran, the American, Mr. J. S. Sargent, and the Belgian, M. Emile Wauters; as we must in fairness do, seeing that these works constitute an entirely fortuitous element, with which it is not fair to reckon in estimating the artistic value of the English contributions to the art of the year. To what paintings, apart from these, can the optimist point as absolutely complete and satisfying works of art from a technical point of view? How often, in the performances of the year, has incompleteness of technical achievement been redeemed by genuine passion, by real artistic vision, by the striving after a true ideality firmly based on nature, or by a fiery and unshrinking realism, emphasising and vivifying the individual instance until it acquires an intensity of physical and spiritual life which adequately takes the place of the generalised ideal? We prefer to leave these questions unanswered, or rather to let the

earnest student of contemporary art, after a careful examination of the collection brought together at Burlington House, answer them for himself.

Mr. Burne-Jones, apparently oblivious that he has acquired an official immortality by admission to the anti-chamber of the sacred Forty, contributes nothing to enhance the glory of his new home. Mr. Watts sends a single oil picture, "Dawn"—an almost nude female figure, drawn and modelled in the painter's latest and least satisfactory fashion. He is, however, far more worthily represented by a pastel drawing (1878), which it may be convenient to mention here, though a little out of its proper place. This is the head and bust of a young lady of regular and nobly moulded features, wearing a hat and summer walking-dress, and seen with half-averted, vanishing profile. The slight work is treated with an admixture of classic elegance and modern living grace, which impart to it a peculiar and delightful savour. The President shows an important and already much described work, "Andromache Captive" (227), which is a typical specimen of his latest and most mature style, and shows more clearly than ever the limits and self-imposed barriers of the so-called ideal which he has laboriously evolved for himself. The widowed consort of Hector is shown in the moment of that bitter captivity foreshadowed by her lord—when she has become the prisoner and slave of Pyrrhus. Clad from head to foot in diaphanous veils and robes of black, she moves slowly to fill her pitcher at the well, the centre and point of division of two frieze-like groups of beautiful youths and maidens, wearing garments of the brightest red, blue, pink, purple, and sulphur-yellow, these groups being again broken and diversified by more detached figures and groups in the foreground. The painter once more reveals his well-known capacity for taking infinite pains with each individual element of his composition; isolated figures, especially two beautiful studies of semi-nude athletic youths—which are rather fine sculptural designs than motives belonging to painting proper—are thoroughly satisfying in draughtsmanship and genuinely classic in conception. The colour, too, shows local hues both gay and beautiful, but it lacks transparency, vibration, and expressive power. The gravest charge, however, which can be brought against the picture is a certain lack of triviality of conception, a lack of that true and sustained ideality, of that generalised truth and real vitality of expression and gesture, which the adequate exposition of so high and noble a theme imperatively calls for.

On a lower level must be placed "The Roses of Heliogabalus" (298), the canvas of unusual magnitude and exceeding elaboration, by which Mr. Alma-Tadema is this year represented. The crazy boy-emperor appears in the background on a raised dais, with the empress-mother and some ignoble male and female parasites. They recline on magnificent couches, and, while sipping from priceless myrrhine vases, gaze with a languid curiosity on the strange scene which is being enacted below. On the assembled guests is being rained from above, by an invisible agency, a terrific avalanche of roses—deep red and pink of varying hue; the wave of cloying sweets has already risen so high that it threatens to overwhelm and stifle those who participate in the splendid feast; only the heads and occasionally the arms of the surprised courtiers emerge, and they appear either stolidly unconscious, or wearing a complacent and half-amused expression. Here shows the profile and elaborate headgear of a beautiful Roman dame, unaccountably serene and unruffled; there protrude the myrtle-crowned brows of a puzzled reveller; while beyond peers

forth a red-bearded Teutonic or Danubian chieftain. Everywhere there are signs, in isolated passages, of the Dutch master's consummate skill in the realisation of detail; yet, neither if we take the whole as a dramatic scene, having its *raison d'être* in a dominant motive of passion or action, nor if we prefer to consider it primarily as a decoration, can it be pronounced successful. As a dramatic picture it has, indeed, no existence; for its component parts are bound together neither by rhythmic harmony of line nor by the vivifying power of a connecting human interest. From a purely decorative point of view, the smallness and consummate elaboration of the execution are not consistent with breadth and unity of effect, while the predominance of the heavy and all-pervading tones of the roses, which are the chief motive of the picture, creates a fatal obstacle to well-balanced harmony or artfully contrasted brilliancy of colour. Such a subject is, perhaps, not of the highest order, yet its adequate treatment, from a dramatic point of view, requires the fervour of a Delacroix; while, if we are contented with a more purely scenic interpretation, we can imagine that such might have been supplied by painters not altogether of the first rank, such as Rochegrosse, Pradilla, or Benjamin Constant.

Mr. Poynter's sole contribution in the domain of ideal art is a charming classic study, "Under the Sea-wall" (814), learnedly drawn and beautifully lighted—not unworthy, indeed, to be placed beside the "Proserpina" and the small "Andromeda" of the same artist. It is almost inconceivable that the same hand should have produced this little work and the laboured characterless portraits to which we shall have to return hereafter. Not less ambitious than heretofore is Mr. Solomon J. Solomon; and, as on former occasions, his ambition has spurred him to a task for the realisation of which his technical acquirements do not at present afford him adequate means. Nevertheless his "Niobe" (712) is, in virtue of the true dramatic energy which it displays, and the real power of conception which it foreshadows, one of the notable performances of the year. Only a portion of the catastrophe which the artist seeks to portray is revealed to the beholder, the implacable deities who are its authors remaining invisible. The stricken mother is shown as, heavily burdened with the lifeless body of a child, she descends a long flight of steps, midway along which lies prone the nearly nude body of another of her offspring, a female child—while yet another and more mature female form lies—her lyre still grasped in her hand—at the base: huddled up in a corner is a terrified group of still-living victims soon to be overwhelmed by the same avenging fate. It would be easy to point to many technical faults in the vast canvas—to dwell upon the defective draughtsmanship of some figures; the inexpressive monotony of the colour, which hardly exceeds the limits of a monochrome; and a certain flimsiness of execution, especially in the draperies. But we may, on the other hand, find compensation in some fine points, and more particularly in the noble head of the "Niobe," in which a passionate despair is well expressed without loss of dignity. It is something in these days to have grappled with a great subject, and not to have altogether failed. Mr. Armitage must always count as one of our most careful and learned draughtsmen, and as one always ready to sacrifice purely pictorial qualities in the attempt to attain chastened perfection of outline. His "Juno" (152)—a heavy, fully-draped figure of the goddess rising into mid-air—cannot, however, be commended. Truth compels us to state that it is only saved by a certain naive simplicity from absolute vulgarity. The artist is, however, more suc-

cessful with his embodiment of the "Siren" (95), who appears in his version under the form of a nude nymph of sculptural proportions, seated on a rock, and seeking to lure by her song the companions of Ulysses. In the drawing and modelling of the half-averted head and the undraped form there is much to admire; but of dramatic import the work is altogether bereft.

It is difficult to speak of the large and ambitious canvases which have been contributed by Mr. Frederick Goodall. So much enterprise, so large a measure of enthusiasm and self-confidence in a veteran, seeking year by year to enlarge the scope of his art, is in itself worthy of admiration; but beyond such praise candour forbids us to go. In "David's Promise to Bathsheba" (189) we may admire—more particularly in the figures of the kneeling Bathsheba and the nearly nude handmaid, who reclines in an attitude of indolent repose at the head of the aged king's couch—much fine and learned draughtsmanship in the arms and extremities of the personages. Rarely, indeed, has the suppleness of joints working under their muscular envelopment been expressed with more truth; but, on the other hand, how vacuous, how inexpressive are the heads of the king and his women, how crude and chalky the flesh-tones, how jarring the juxtaposed tints in the draperies! Still less is it possible to find any reason for the existence of a so-called sacred work such as "By the Sea of Galilee" (329), to which the painter has appended the text: "Himself took our infirmities and bare our sicknesses." The crowded composition emulates in dimensions the cartoons of Raphael, and attempts on a similar scale a subject of as profound a significance. Here, however, the lack of appropriate character and meaning in the heads of the chief personages, their imperfect modelling, their inexpressive and misleading movement and gesture, render the work practically non-existent as the pictorial exposition of a theme so mighty and so dramatic.

We have been accustomed on these occasions to seek refuge and consolation in the exquisite subtlety of observation, the sympathetic power, and the technical mastery of Mr. Orchardson. Though his latest creation, "Her Mother's Voice" (286), is not lacking in these precious qualities, it is, as a pictorial whole, far less successful than have been of late years this eminent artist's contributions to the exhibitions of Burlington House. In a room of that formal and charming fashion of the very end of last century which Mr. Orchardson so persistently affects even when his personages are of to-day is seated, in the artificial glow of lamplight, an isolated figure—that of an English gentleman of advancing years; in the farther corner of the apartment a young girl is seen sitting at the piano in the very act of singing, while her well-matched lover bends over her in an attitude of rapt attention. Much is here worthy of admiration, and especially the infinitely touching expression of melancholy without bitterness which passes over the face of the old man as he listens, half-dreaming, to his daughter's voice; her head, too, is realised with great skill and charm, under the most difficult circumstances, where to be realistic is often to be grotesque. But, on the other hand—to say nothing of the prevailing hotness of colour and the mannerism of touch, which are defects familiar to the master's admirers—the figures are bound together by no linear harmony, and do not make a complete picture; moreover, the group of the lovers seems too small in relation to that of the old man, seeing how inconsiderable is the distance in depth which separates the two. Is it not time that so great a pillar of the native school as is Mr. Orchardson should break new ground, and seek to bring his technical mastery and his delicate sensibility of

temperament to bear on some fresher material? It is difficult to mention this master without associating with him another painter who possesses most of his mannerisms—with some very pronounced additions of his own—but with little of his power of observation or his genuine aspiration to present pictorial truth in a new form. Mr. Pettie sends this year, among other things, a large melodramatic composition of little interest, "The Traitor" (220), and a three-quarters length of Mr. Charles Wyndham in his favourite part of "David Garrick" (1065). In this performance the contrast of colour between the bluish greens of the rococo furniture and the dark violet court-suit of the player gives rise to an excruciating discord. What a Japanese craftsman, a Whistler, or an Alfred Stevens might have done with the combination we can easily guess; but in Mr. Pettie's hands it is not excusable. He has, however, succeeded in imparting to his counterfeit presentment much of the restless energy, much of the peculiar individuality of the original.

Mr. J. W. Waterhouse's "Lady of Shalott" (500) appears to us to contain evidence of a certain change of technique and standpoint on his part. Whereas, up to the present, his leaning has rather been towards the manner and the colour-harmonies of Mr. Alma Tadema, he now shows an evident appreciation of the searching modelling and the intentionally crude freshness of Bastien-Lepage in his rustic phase. However this may be, Mr. Waterhouse is too true and too enthusiastic an artist to give way unduly to the deliberate imitation of any master, and his painted poem is certainly among the most earnest and satisfactory works at the Academy. His woeborn "Lady" is seated all solitary in a barge lined with the rich tapestried quilt which her own hands have worked; her eyes, tearless, though red with weeping, fix themselves on vacancy, as her hand mechanically unlooses the boat from its moorings. Her blown hair, and the wan flames of the candles placed in the prow—violently pressed down as these are in a horizontal direction—would seem to indicate the stirring of a great wind, but this effect is very imperfectly suggested in the green landscape of tall flags, smooth water, and wooded pasture which frames the central motive, and appears to extend itself round it unruffled and almost airless. The fresh tones of an English summer are somewhat out of relation to the chromatic harmonies of the figure and its accessories; but this is drawn and modelled with searching skill and precision, and conceived with a restrained pathos which constitutes the chief charm of the picture.

CLAUDE PHILLIPS.

EGYPT EXPLORATION FUND.

A VISIT TO EL ÂRÎSH.

Cairo: April 17, 1898.

[THE following report has been received from Mr. F. Llewellyn Griffith, whose expedition to the north-east frontier district was noted in the ACADEMY, Amelia B. Edwards, Hon. Sec.]

I have just returned from a visit to El Ârîsh, the little town on the coast near the north-east frontier of Egypt where the tolls are levied on merchandise and animals coming from Syria. It had been visited by the Archduke Salvator von Toscana in 1878, by Prof. Ascherson last year, and this winter by Prof. Sayce. Each of these travellers reported the existence in the town of a sarcophagus, or, as Prof. Sayce more correctly termed it, a naos; but no copy of the long inscriptions was brought back. A hieroglyphic monument at this spot promised to be of unusual geographical and historical interest; and I therefore obtained leave of absence from the excavations at

Zagazig for a fortnight and undertook this tedious journey through the desert.

Unfortunately, the geographical information afforded by the inscription has no bearing on the locality in which it was found. There is, however, something to compensate the journey in the fragments of mythical history that may be gathered from it.

The shrine is of black granite, about four feet high and pointed at the top. It has been used for ages as a drinking-trough for animals, and is, consequently, much damaged. The interior, which was sculptured with figures and inscriptions, is much worn or covered with lime incrustations, one side is scaled off and the front has been worn down to the depth of an inch all over; thus the whole of the dedication is lost. However, one side and the back have each thirty-seven lines in fair condition; and, thanks to the good nature of the governor, from whom I feared an unconditional refusal, I was allowed to roll it over "if I could," with the stipulation that I should turn it back in the evening for the camels to drink from. It was no easy job to turn one and a half tons without destroying the rubbishy pedestal of stone and dust on which it was laid; but our practice at Zagazig in rolling the stones of the temple gave us courage, and the pedestal was strengthened and widened, so that the stone might be turned without letting it down. The stone was then turned, but the high wind spoilt the squeeze, and I had to lay it down again and beg the governor to let me repeat the process next day. The wind continuing, I did not attempt to squeeze the inscription, but copied it in a most painful position. I was told that forty men would be required to lift the stone. Myself and my two men accomplished the job by ourselves at a cost of six piastres for the loan of two rude crowbars and some logs of wood. The text relates the history of the temple of Goshen under the reign of the gods, evidently in order to give it with all its adjuncts a respectable genealogy. It was visited by the god Ra; and, as the inscription on the back ends with a list of temples in Upper Egypt built by this god, it seems that the sacred localities at Goshen were to be put on a level in point of antiquity with those of the most celebrated cities in Upper Egypt. The local god, Sepd, is identified with the warlike Shu or Ares, in order to bring him into relation with the myth of the god-kings; and the other gods of the district are the spirits of the East who protect Ra (the sun) at his rising from the children of Apep. The temple is the eastern horizon on which the sun rests. The order of the god-kings mentioned on the shrine is

1. Râ=Harmachis=Atum? the organiser of the country and founder of the temple.
2. Shu=Sepd, who made it his favourite residence.
3. Seb.

This is the order of all the lists.

There are some curious details and a description of the temple, which I reserve for the present.

Of the later kings of Egypt, M. Naville found monuments at Goshen of Nectanebo II. and Philadelphus. From the style I should attribute the El Ârîsh shrine to Philadelphus.

In going from Zagazig to El Ârîsh I followed the railway line as far as Salehieh. At Faqûs, I found that where-ever a cutting had been made through the rubbish mounds, they were found to rest on sand at a slight depth, and appeared to be entirely of Roman date. Thus there cannot well have been a second ancient Ptacussa here. From Salehieh, following the caravan route, I passed within sight of Defeneh, crossed the Suez Canal at Qantarâh and passed Tell abu Sêfe on my right. This route to El Ârîsh, which can now be accurately laid down from

the survey of the telegraph line by an Italian engineer Signor Paoletti, is perhaps ancient. In fact, down to the Saite epoch, it was, perhaps, the most frequented route to Syria. It is now the principal land route, and is well supplied with herbage for camels and with brackish water. There is, however, no place for an extensive settlement; and, though heaps of pottery are found at the wells, there is little appearance of the permanent occupation of any spot except Qatye, where there are some mounds of Arab date, with small marble columns and a granite millstone. The sites of ancient guard-houses and post stations are also found along the route.

El Arish stands two miles inland up the Wady. The ruins of the ancient city of Rhinocolura are immediately south of it, and are partly buried in sand-drifts. A large Christian building, of which I have made a plan, was discovered this year, and cleared of the sand.

The pottery of the settlement and of the caravans seems to cover about one square mile, but the solid nucleus of stone buildings was much less. A firm basis for building had often to be made by mixing limestone dust from the Wady and lime with the sand, and, no doubt, by assiduous watering.

The rush of water down the Wady has not formed any new ground recently at the mouth. Pottery is found on a piece of high ground at the very centre of the Wady, and at the edge of the sea, marking, perhaps, the site of a harbour now silted up.

Returning, I followed the route of the ancient itineraries and of Herodotus by the coast to Pelusium, and thence to Port Said. I could not find a trace of Ostracine. The opening of Lake Serbonis into the sea seems to have moved eastward, since it is now found at the east end of the lake, while in Strabo's time it was half way to Casius. Ostracine probably lay on the east side of the opening at the end of the first day's journey from Rhinocolura.

I heard of a ruin called Berdawil, after the crusader Baldwin, between the sea and the telegraph line, about ten miles west of El Arish.

El Qels is unmistakably Casius; but, unfortunately, it consists of shifting sand, in which the temple and Pompey's tomb may be buried 150 feet. On the south side are large quantities of pottery. There is no likely tumulus either east or west of Casius on the shore. Pompey's tomb should be towards the east end from Strabo's order.

I think it probable that Gerrha, Pentascino, and Chabrii Castra are all to be identified at El Mehemdiyeh, where the sea is wearing away a piece of high ground and exposing a number of stone walls. *Χαβριον* *χάραξ* was probably a ditch cut in front of this fort along the edge of the low ground, and filled with sea water. There is, of course, no trace now of such a work.

I did not visit Pelusium again, as it lay off the direct road, and I had examined the whole surface carefully two years ago. I passed two Arab forts between it and Port Said, one circular, and the other rectangular and without any visible entrance. The first is visible from Tell Farama; and the Arabs told me two years ago that it was built by the French, I suppose under Bonaparte. But, notwithstanding the extraordinary rapidity with which the Arab mortar is destroyed here, it must be earlier, as well as the small rubbish heaps round it, which probably made the site of Tineh. There is no sign of pre-Arab remains.

The salt and barren shore along the whole line from a mile west of El Arish is evidently a modern formation of sand and shells banked up by the waves a foot or less above the sea, and filling up the bay from El Arish to El

Mehemdiyeh, and another from El Mehemdiyeh to the projecting alluviums formed at the mouths of the Nile west of Pelusium. The first bay includes Serbonis, &c. Casius forms an island enclosed between the Mediterranean and the lake. On the south it protects from the wind and spray a good tract of rather firmer ground covered with excellent pasture for camels. Strange to say, the rainfall supplies a small amount of perfectly fresh water in a well near the east end. This is rightly passed over by Strabo, since it could not supply a caravan.

At El Mehemdiyeh, the higher ground at last runs sharply down to the sea, which is wearing away both it and Casius. It is at this point that the boundary of Gerrha was placed, and where I suppose that the trench of Chabrias was dug to protect it, and to check the Persian advance into Pelusium. The ruins of Gerrha seem to consist of a square fortress built not on the crest of the rise, but apparently at the base of it on the east, and no doubt overtopping it. The foundations of some of the walls are carried down to the sea level, and all inside is made ground.

West of this is the second silted-up bay, which must have included the mouth of the Pelusiac branch in its sweep. The soil in the eastern portion consists not of alluvial mud, but for ten miles inland, as far as the telegraph line near Tell Habw (south of Tell el Hér), of shells and sand. This has clearly not been formed after the silting up of the Pelusiac mouth, for there are ancient Arab remains even north of Tell Farama; and one of the Greek authors states that Pelusium was twenty stadia from the sea, as now. The *ῥαπίδια* of Herodotus, and the *βάρατρα* of Strabo were therefore salt marshes, and pools, and channels left in the half-silted bay. Such exist still in the more alluvial district between Pelusium and Port Said, ready to entrap the luckless explorer among the Arab forts. They form generally broad channels of dry salt or sea water parallel to the sea north-east of the Tell.

F. LL. GRIFFITH.

CORRESPONDENCE.

TARATHA AND BABIA.

Christ's College, Cambridge: May 8, 1888.

Before we are called upon to accept a new theory of the name Tar'athā (Derceto, Atergatis, Palmyrene *ܬܪܬܐ*), I hope that Dr. Neubauer will tell us whether the rendering *Janua* rests on any better authority than a mere conjecture of Assemani (*B. O. i.* 327), which was excusable 170 years ago; and that Prof. Sayce will tell us his grounds for identifying Babia with the goddess of Mabbog. I know the goddess Babia only from Damascius (*Vita Isidori*, §76), as a deity worshipped by the Syrians, especially in Damascus.

W. ROBERTSON SMITH.

NOTES ON ART AND ARCHAEOLOGY.

It is to be hoped that the authorities at the National Gallery may see their way to buy the famous and desirable Sir Joshua which will be sold this afternoon at Christies. The picture is the well-known "Pick-a-back"—in other words, a portrait group of Mrs. Payne Galway and child. By its acquisition, the particular side of Sir Joshua's art which this remarkable picture represents would be expressed in the national collection in much greater force than it is at present; and an accepted masterpiece of the painter would be retained in England, and in public view, as it should be. Unfortunately, however, the authorities in Trafalgar Square will have no important sum of money to spend, unless they shall have been fortunate

enough to persuade the Chancellor of the Exchequer that an exceptional occasion has arrived—an occasion on which the grant which has been for some years suspended may be for the time being renewed. No small, or even relatively unimportant, sum will buy for the country the Sir Joshua of which it is now question; but if it was desirable to expend about £70,000 on a very important Raphael—though not a Raphael of quite the highest charm—it is, we should think, at least equally wise to expend say a tenth part of that amount (some £7,000) if necessary, on the acquisition of an admitted masterpiece of the English School.

THE following exhibitions will open next week: (1) the Nineteenth-century Art Society, in the Conduit Street Galleries; (2) paintings on china by lady amateurs and artists, at Messrs. Howell and James's, Regent Street; and (3) a collection of Japanese "Kakémonos," or hanging pictures, at Messrs. Dowdeswell's in New Bond Street.

ADMIRERS of Jean François Millet should not fail to visit the rooms of Messrs. Obach in Cockspur Street, where one of the most powerful and grandly executed of this master's pictures is at present on view. Its subject is of extreme simplicity—the commonest of all subjects—a mother and her child; but it has never, perhaps, been treated as Millet has treated it here. The woman is a peasant of the poorest class, to judge from the roughness of her wrapper or coat of thick woollen stuff. The infant is swaddled, and rests like a mummy between its mother's knees, stiff and almost erect, with its calmly sleeping face on her breast. Her large, strong hands are folded in front of it; and her coarse-featured face, with lips fallen apart and eyelids swollen as with recent tears, wears an expression of almost tragic pathos. Two little pictures of Meissonier, of the finest quality, are also to be seen here, with two or three good examples of Troyon, and others of Diaz, Daubigny, Decamps, and Corot, of a high class.

MR. G. BERTIN will deliver a course of four lectures at the British Museum upon "The Social Condition of the Ancient Babylonians," on Fridays in June, at 3 p.m., beginning on June 8.

THE sixth annual meeting of the Society for Preserving the Memorials of the Dead will be held at the Mansion House on Wednesday, June 13.

THE congress of the Société française d'Archéologie will open at Dax on June 12, and later at Bayonne, under the presidency of the Comte de Marsy. It will be followed by an excursion to Pampeluna in Spain. To all who are interested in Roman architecture, the visit to Dax (the *Aquæ Tarbellicæ* of the Romans) will be specially attractive. For tickets and general information as regards lodgings, &c., application should be made to M. Georges Camiade, at Dax (Landes).

MESSRS. CHATTO & WINDUS have issued this year, somewhat more promptly than usual, the two illustrated volumes of *Academy Notes* and *Grosvenor Notes*, compiled by Mr. Henry Blackburn; and also the companion work, on a larger scale, for the Salon, which contains more than 300 facsimile sketches. This last is, perhaps, the most interesting for those of us who have not been able to run over to Paris, though we cannot pretend to admire the studies of the nude model which are conspicuous in it.

MESSRS. W. A. MANSSELL & Co., of Oxford Street, have commissioned Mr. Robert A. Clouston to engrave in mezzotint portraits of five eminent physicians and surgeons. We have seen proofs of those of Sir William Gull and Sir Henry Thompson, which are certainly

effective as likenesses, though somewhat coarse in execution. On comparing them with the plate of Principal Sharp by the same engraver, recently noticed in the ACADEMY, it becomes evident how much the latter owes to the original painting by the late Mr. Herdman.

MR. WARWICK WROTH has reprinted from the *Numismatic Chronicle* his paper on "Greek Coins acquired by the British Museum in 1887," with a plate of illustrations. Included among them is a Jewish shekel, and a hemi-drachm of the Indo-Scythian King Maues. The total number of acquisitions during the year was 176.

MR. MORTIMER MENPES requests us to state that he has resigned his membership of the Royal Society of British Artists.

THE STAGE.

STAGE NOTES.

TIME and space will next week permit us to say something in detail about Messrs. Wills and Grundy's "The Pompadour," which—produced at the Haymarket quite lately with a result that seemed at first uncertain—has already settled down into at least a moderate success, so that the piece is likely to be played throughout the remainder of the season. Whenever it is withdrawn, it is understood that it will be followed by a new piece by Mr. H. A. Jones, which was long ago accepted by the management.

MR. WILLARD's performance of Macbeth—which was given at the Olympic one afternoon last week, and which was at once recognised as containing points of note—was yet presented under such unsatisfactory conditions that it had hardly its fair chance of appealing to even the critical public. The Lady Macbeth of the occasion was Mrs. Bandmann—known long ago to the playgoer, and especially to the provincial playgoer, as Miss Milly Palmer. The lady has of late years been acting in Germany, where she has at least gained some experience. But it appears to be conceded that Lady Macbeth is not the rôle for which either nature or art has intended her. It has been suggested that she would make a good queen in "Hamlet." But good queens in "Hamlet" have not been so rare since Mr. Wilson Barrett happily bethought him that there was no occasion whatever for them to be elderly. At the Princess's Miss Margaret Leighton was a very good queen.

THE Gaiety Theatre is, after all, not forsaken of laughter. Mr. Fred Leslie, Miss Nelly Farren, and those charming actress-dancers, Miss Silvia Grey and Miss Letty Lind, having started for Australia, their place is taken by a regular comedy-company of great repute—the American company managed by Mr. Augustus Daly, which, during its stay in England, Mr. William Terriss does us the service to supervise. The Daly Company plays pieces of very unequal merit; and "The Railroad of Love," which it is playing now, is quite inferior to "Nancy." Indeed, it requires a good all-round company, and two or three actors of the finest art, to make it succeed at all. Fortunately, it is such actors who interpret it. Mr. John Drew proves himself, in it, a most finished comedian; and bad as her part may be, from a literary point of view, Miss Rehan is yet enabled to convince us through her performance that her range is more extensive than had previously appeared. Her comedy and that acting of hers which is so serious that it cannot be called comedy at all are alike admirable. Though we could desire some change in the playbill before the company leaves us, there is no doubt that "The Railroad of Love"—interpreted as it is at the Gaiety—is quite worth seeing.

MUSIC.

RECENT CONCERTS.

WHEREVER there is a voice the songs of Grieg are sung, and wherever there is a piano his pieces are played. Yet some have expressed surprise at the cordial welcome given to the composer at the fourth Philharmonic Concert on Thursday, May 3. When he first appeared on the platform applause broke out such as is seldom heard at St. James's Hall. Grieg has acquired European fame, not by pandering to vulgar tastes, nor by any fantastic tricks. His compositions, like those of Chopin, owe much of their form and colour to the land which gave him birth; but, in spite of their quaint rhythms and harmonies, the music is from the heart, and so it makes a genuine appeal to musicians. There is all the difference between a man who adopts, for some particular effect, certain peculiarities of national music, such as Mendelssohn, who at one time borrowed the Scotch snap, at another the hop of the Italian Saltarella, and one who, like Grieg, from his youth upwards, has given himself up to home influences. Grieg's music has a *cachet* of its own, and so it has made its mark.

Mr. Grieg played his Pianoforte Concerto in A minor (Op. 16)—a work first performed in this country by Mr. Danureuther at the Crystal Palace in 1874. The printed notes can give little idea of the charm and character which the composer infused into the music by his sympathetic reading and delicate touch. He also conducted his two "Elegiac Melodies" for stringed orchestra: two simple yet characteristic pieces which Mr. Henschel introduced at his last season of concerts. As he made the piano sing, so was it with the fine Philharmonic orchestra of strings under his *baton*. Mr. Grieg possesses the rare art of communicating his feelings to the players. He also accompanied Miss Carlotta Elliot in two songs—"Erebes Begegnen" and "Farewell to Tvindehougen." Neither of them, however, in our opinion, represented the composer at his best in a department of musical literature in which he has so distinguished himself; nor did Miss Elliot sing in her best manner. The *encore*, "Guten Morgen," was far more satisfactory, both as regards choice and rendering. The rest of the programme must be briefly described. A "Petite Suite" of Bizet's, entitled "Jeux d'Enfants," was given for the first time in England. The five movements of which it is composed are but trifles, but they are pretty, graceful, and charmingly scored. Mr. Cowen was a little too ready to yield to the demand for an *encore* of "Petit mari, petite femme." Mozart's Symphony in C, supposed to have been written at Linz in 1783, and Mendelssohn's "Ruy Blas" Overture were also included in the scheme. Mr. Cowen conducted both works with skill and judgment.

Mdlle. Juliette Folville, a young artist, gave a recital at Prince's Hall on Thursday of last week. She has strong fingers and fair execution, and was heard to advantage in some showy *morceaux de salon* of her own composition. But she played part of the fugue which concludes Beethoven's Sonata in A flat (Op. 110) in a hurried and confused manner. She had no right to detach it from the last section of the Sonata, nor even from the Sonata itself—and still less right to play only the beginning and end of the fugue. Her Chopin pieces showed more power than poetry; and she also appeared in the second part of the programme as a violinist, but we must take another opportunity of judging her in this capacity.

Last Saturday afternoon the eminent violinist, Señor Sarasate, gave the first of a series of four concerts at St. James's Hall. There was nothing in the programme which calls for detailed notice. The performance of the

Beethoven Concerto, as usual, pleased the audience; but the violinist, with all his skill, does not make one feel the grandeur of the music to the same extent as Herr Joachim. Señor Sarasate is heard to the best advantage in works in which technical difficulties form the chief attraction, or in which gracefulness rather than grandeur is the prevailing feature. In Raff's showy Suite, in a Moszkowski "Ballade," and in Saint-Saens's "Rondo Capriccioso," he fairly electrified his audience, and roused them to a high pitch of enthusiasm. At the close of the last piece, he gave his own "Boléro" by way of *encore*. The hall was crowded in every part.

On Monday afternoon Miss Florence Menck-Meyer gave a pianoforte recital at Prince's Hall. She comes from Melbourne, and is said to be a grand-niece of Rubinstein. Though young, she has written an opera—both music and libretto. Her programme commenced with a dreary "Bellini" Fantasia by Liszt, which she played with some skill. Two pieces of Chopin were then given in a manner more eccentric than pleasing. The test piece of the afternoon was Beethoven's "Waldstein" Sonata. After hearing the first movement, we came to the conclusion that the young lady had better—for the present at least—confine herself to drawing-room music. Beethoven should be approached with respect and reverence.

The first Richter concert was held at St. James's Hall on Monday evening. There was an unusually large gathering. The programme, including the names of Liszt, Berlioz, Wagner, and, last but not least, Beethoven, was a genuine Richter one. A brilliant rendering of the Kaiser-Marsch gave good promise of what was to follow. Mr. Henschel sang with declamatory power "Das schöne Fest" from "Die Meistersinger," and "Hagens Wacht" from the "Götterdämmerung." The second excerpt was introduced for the first time; and those who could not fully appreciate it thus taken from its surroundings, could at any rate admire the masterly orchestration with its sombre and weird tones. Berlioz's lively "Carnival Roman" and Liszt's well-worn fourth Hungarian Rhapsody were rendered with great spirit. The performance of Beethoven's C minor Symphony was—from first note to last—highly impressive.

J. S. SHEDLOCK.

MUSICAL PUBLICATIONS.

Organists' Quarterly Journal. Parts 77 and 78. (Novello). Part 77 commences with an Adagio (second movement of a Sonata in G), by Mr. E. T. Driffell, light and not unpleasing. Mr. F. L. Crompton's "Pastorale" is dull. A "Postlude," by Mr. J. Thomas, is scarcely more than a sketch. Mr. R. B. Moore contributes a light and graceful Minuet. Mr. G. Minne's "Postlude" is lively, but not particularly interesting. Dr. Spark, the editor, commences Part 78 with a "Descriptive Fantasia" in Memoriam Sir G. Macfarren, in which the restless activity, the sudden illness and death of the composer, and his welcome to the celestial regions are depicted—a curious, if not altogether satisfactory, piece of programme-music. Mr. O. Thomas's "Fantasia" is well written, and shows much skill. But why in the middle line of the last page does he write wrong notation, and thus hide consecutive octaves? The last piece is an "Andante" by Mr. W. Blakeley, very Mendelssohnian in character.

Messrs. E. Ashdown send five Romances for violin and pianoforte by the late Sir G. A. Macfarren. Three of them (Nos. 1, 3 and 5) are in slow time; and the last, with its flowing theme and well-contrasted middle section, is

attractive. No. 2 has a showy part for the violin; but the pianoforte does little more than accompany. The number of good and comparatively easy pieces for these two instruments is limited, so these Romances, skilfully constructed and pleasing as to melody, ought to meet with a large welcome.

From Messrs. Hutchings & Co. we have: *Ask me no more*, by W. H. Cummings, a graceful setting of words by Thomas Carew, and one in which the old and new are pleasantly mixed; it is written for a mezzo soprano voice. *Oak Tree Farm*, by Annie E. Armstrong, a simple song and simple music. *Soul-Music*, by A. S. Gatty, begins well, but soon falls into the commonplace. *The Dove and the Raven*, by M. W. Balfe, in the composer's usual style. The same may be said of Pinsuti's *The morning smiled, the evening wept*. H. Smart's *The Farewell of the Swallow* is an easy and pleasing little duet for soprano and contralto. *The Lover's Prayer*, by Mrs. B. Bomer, is a feeble production. J. Edward's *Message of the Swallow* is melodious, though not original. *Hush thy sweet sounds, O river*, by W. H. Cummings, is a quiet, smoothly-written song, with an accompaniment for violin or violoncello. *Once in Royal David's City*, by J. A. Macmeikan, begins rather well; but in the middle the tonality is confused, and the conclusion is weak. May Ostlere's *Bourrée and Gavotte* for pianoforte has some good points. Both sections commence well, but one's interest soon flags. The short introduction to the *Bourrée* is quite out of place. A *Gavotte Fantastique*, by Ridley Prentice, is an effective little piece, but one which requires neatness in notes and phrasing. *At the Forge*, *Jeannette*, *Boat Song*, *Phyllis*, by J. C. Beazley. These four easy sketches for the pianoforte are exceedingly clever; there is plenty of taking melody, and the harmony and rhythm are both interesting. Teachers will find them useful. *Ivanhoe March* for pianoforte, by J. B. Calcott, is a spirited and pleasing duet; the time-signature is 6-8, somewhat unusual for a March. *Sextuor de Lucie de Lammermoor*, by J. Romano. This is a difficult and commonplace arrangement of Donizetti's well-known concerted piece for the left hand. Such transcriptions cannot be too strongly condemned. *Romance*, *Mazurka*. For violin or violoncello. By J. Cotrufo. Both of these are simple; the first is somewhat diffuse, but the second is neat and nice. *Danse Moresque*, arranged for organ by Dr. Westbrook. This light and elegant dance by Kilner is effectively arranged; but we do not like the final chords.

From Messrs. Ascherberg, the following: *Six Songs*. By A. W. Marchant. The melodies are smooth and flowing, and the accompaniments for the most part tasteful; but the composer's writing is not deep. *Beyond the Shadows*, by C. Ducci; a simple but effective song. *Third Bourée*, for pianoforte, by L. B. Mallett. Like other pieces of the kind mentioned above, it begins extremely well, but gets common; the passages in triplets do not suit the *Bourrée* form. *Moto Perpetuo*, for the pianoforte, by L. Godowsky. A difficult but not attractive piece; an excellent exercise for reading at sight. *A Toi*, by S. Smith. A good specimen of a class of composition, which is going out of fashion. *My Darling's Album*. Twelve silhouettes for pianoforte, by G. Lamothe. These are very small pieces, for quite beginners, in very large type, and with an outside page covered with silhouettes. *Revoir and Réverie*, by M. Bourne. Transcribed for violin by G. Papini. These pieces are easy and melodious. We prefer the second.

From Messrs. Patterson & Sons: *I'll tend thy Bower* and *To Julia weeping*, by Hamish MacCunn. The recent success of this young

composer makes one peruse with interest anything new from his pen. These two songs, forming a set of six, are, however, but trifles; the main interest lies in the ingenious accompaniments. *Frihling's ed*, by A. Gallrein. A pleasing, unpretending little song, with accompaniment for violin or violoncello. *The Skye collection of Reels and Strathspeys* (book iii.) will suit all who are interested in genuine Scottish dances.

Messrs. Marriott & Williams send a batch of ballads of a sentimental type. Musically, they are not of importance. We give the titles of two or three of the best—*Love, I am watching*, by C. Hoby, with viola accompaniment; *My love of long ago*, by S. Larkcom; and *To Thee*, by L. Barone.

From the London Publishing Company: *My Gentle Swallow*. By E. Allon. A very good song with a showy pianoforte accompaniment. The want of variety in tonality renders it, however, slightly monotonous. *Who is Sylvia?* Duet for contralto and baritone, by the same composer, is simple, yet—if well sung—would prove highly effective.

From Messrs. Weeks & Co.: *Technical Exercises* for the pianoforte. By C. A. Ehrenfechter. These exercises are said to be on the Deppe principle. Herr Deppe, popular in Germany as a teacher, and well-known, also, to all who have read Miss Amy Fay's charming book, *Music Study in Germany*, has certainly peculiarities with regard to finger and arm action. The technical exercises given by Herr Ehrenfechter are all good, but the very scanty letterpress renders them of little service to anyone wishing to understand or follow the system. *Compositions for the Organ*. By Dr. Chipp. This volume contains a selection from a large number of MS. compositions left by the composer. Dr. Chipp held a leading position among English organists; and the editors, Messrs. G. M. Garrett and J. Higgs, justly speak of his organ music as "solid in style and legitimate in effect."

Musical Notes. By Hermann Klein ("The Stage" Office). Last year Mr. Klein started his Annual, giving a critical record of all musical events of importance. This year the notes are more numerous, and the record more complete. It is a reading as well as a reference book. Some of the notices—e.g., those of Mr. Corder's "Nordica" and Mr. F. H. Cowen's "Ruth"—are of considerable extent; and Mr. Klein has a fluent pen. The new productions and other matters are carefully arranged in alphabetical order at the end of the volume. The present issue contains no portraits, but, on the other hand, it is offered at a lower price.

MUSIC NOTES.

DR. MACKENZIE gave his first address to the students of the Royal Academy of Music last Saturday afternoon. After alluding to the extraordinary gifts of his predecessor, which enabled him to raise the Academy to its present state of prosperity, and referring in touching terms to the death of Mr. Walter Bache, one of the teachers, Dr. Mackenzie proceeded to indicate the lines on which he was about to work. He did not believe in standing still. He proposes to make the study of English Church music a special feature—so as to turn out competent organists and choir-masters. The opera class, too, is not to be neglected. Modern musical works are to be put before the students to a larger extent than formerly. And, lastly, the Royal Academy of Music library is to be increased. The concert-room was crowded, and the new principal met with a hearty reception.

LITERATURE.

The Character and Times of Thomas Cromwell: a Sixteenth Century Criticism. By Arthur Galton. (Birmingham: Cornish.)

It is certainly not a very easy task to form a strictly impartial estimate of either of the two great statesmen who bore the name of Cromwell. Each rode upon the whirlwind of a great political, social, and religious revolution; and how far it may be said of each (especially of the earlier one) that he directed the storm, or, if he did direct it, how far it was for good, and how far for evil, are questions that will doubtless be variously answered in the future as they have been in the past. We may, however, not unreasonably entertain a hope that the progress of historical research will do something in either case to narrow the grounds of controversy; and that, as the public mind is gradually educated to a clearer appreciation of both the great movements out of which the modern history of England has been developed, it will be possible to speak of both of the Cromwells without political or religious bias.

The present little book is avowedly an essay, not a history or a biography, though the author throws out some indication that he may be led to favour us one day with a more elaborate work. It is to be hoped he will; but, at the same time, let us say at once, we trust he will not do so prematurely. For, though we are happy to acknowledge that the present is a work of considerable study and some original thinking, we believe that more deliberate reflection will modify not a few of the author's judgments, and lead to more valuable results. Indeed, when he honestly confesses, at the end of the book, that, "after all, he hardly knows what to say of Cromwell," it is evident that he cannot harmonise even his present knowledge of the man with his general conceptions of history. Under these circumstances, he should take a wider range, and ask himself, in the light of more extended reading, whether his own conceptions have been sufficiently emancipated from mere conventional opinion. For it is clear that there are some rather essential things which he has not yet thought out. He declines, for instance, to discuss the rather marked characteristics of the master whom Cromwell served, referring timidly to what has been said on that subject by Bishop Stubbs, as a view which it would be presumptuous in him to question. But, surely, an original estimate of Thomas Cromwell can hardly go well with a mere secondhand estimate of Henry VIII., however good the authority may be from which the latter is derived. For in truth, secondhand acceptance is not genuine approval; and it is clear that Mr. Galton, however much he bows to Bishop Stubbs's authority, has

not read the history of Henry's life and reign from Bishop Stubbs's view at all. Let him look into the matter for himself; and when he has really found the key of Henry's character, he will be less at a loss with regard to that of Cromwell.

Bishop Stubbs, for instance, will hardly, I think, endorse Mr. Galton's opinion that Henry's statesmanship was second rate, and that his foreign policy, in particular, was a proof of it. Nor is it altogether credible, as suggested on p. 187, that Cromwell saw a means of increasing his master's power which a regard for the future liberties of England restrained him from laying before Henry. That was certainly not the impression of the men of the North, who considered him the king's evil genius, and clamoured for his punishment. Neither was it the opinion of Cardinal Pole, who some years before his elevation to the cardinalate left his native country, as he tells us, simply and solely because he perceived that with Cromwell's growing ascendancy in the king's councils he could no longer hope to speak his honest opinion without danger to his neck. For, indeed, Cromwell had told him pretty frankly the principles on which he conceived a wise councillor ought to give advice: none of your scholastic disquisitions as to what was just or honorable; the true, practical philosophy was to study what was in the mind of your prince and then devise all means for carrying it out. This was the line suggested by Cromwell's favourite author Machiavelli, of whose famous treatise he had a copy in MS. and showed it to Pole some years before it was published.

Mr. Galton has not taken notice of this incident. If he had he could hardly have regarded Cromwell as the real statesman of the time, and Henry as only following his guidance. The truth, in fact, was exactly the reverse. Henry VIII. was a king who, whatever else may have been deficient in his character, always knew his own mind thoroughly; and Cromwell saw, and saw quite truly, that the only road to preferment was through complete subservience. Machiavelli was the best instructor to a man whose great object was to get on. But whatever Cromwell effected, it was not based on grand schemes for the good of England. It was based on the policy declared by himself to Pole, of endeavouring to find out what was in his sovereign's mind, and then devising methods for carrying it into effect.

I should be sorry, indeed, if these remarks had the effect of blinding either myself or anyone else to a possibly higher view of Cromwell's policy. But I must say that this view is the natural interpretation of what, unless Pole has belied him, were the principles of conduct confessed by Cromwell himself; and applying it to the facts of his life, it seems to me a perfectly adequate explanation. He was simply a consummate man of business, who had a very clear appreciation of the sort of world in which he lived, and saw, up to a certain point at least, the way to make the best of it for himself. He perhaps even saw—indeed he could hardly but have seen—that the course he was pursuing had its perils as well as its reward; but having once embarked on the sea of politics it was not in his power to recover a sure haven.

And let it be said, as really a redeeming point, that he does not seem to have been a "vile politician" from the first. It is clear that he had sown some kind of wild oats in youth, that he had gone abroad in consequence, and become a soldier in the French service in Italy. Reduced to beggary by the fortune of war, he is said to have been assisted to return to England by the Florentine banker, Frescobaldi; and there seems no reason to doubt the fact, though dates are a little puzzling. He applied himself to business, and soon became wonderfully prosperous, combining a singular variety of occupations, as those of a lawyer, cloth-merchant, and money-lender. He was employed by Wolsey in the work of suppressing some small monasteries with a view to the foundation of the cardinal's two colleges in Ipswich and in Oxford. This suppression, although authorised both by royal and papal authority, was unpopular in the country; and the cardinal's agents were undoubtedly guilty of something like peculation, for which Cromwell very nearly got into serious trouble. He was, however, shielded till the cardinal's fall by the fact of being in the cardinal's service. But on his master's disgrace he stood in the utmost possible danger; and then, as he said, he determined to "make or mar" by going to court and saying a word for himself. His facile tongue won the day; for it so happened that Henry was at the moment almost checkmated in his pursuit of a divorce, and his councillors rejoiced in the belief that he had really given it up. But Cromwell suggested that Henry's councillors were too timid. The king was really head of the Church in his own country; and if he met with any obstacle he could force the clergy to acknowledge his supremacy, cut off all appeals to Rome, and make it treason in anyone to oppose his wishes.

Henry saw from that moment that Cromwell was the man to serve his turn, and from the danger of imprisonment Cromwell stepped at once into the sunshine of royal favour. He knew too well after that that his safety depended on carrying still further the policy by which he had risen. He never thought of crossing the royal will, but rather of anticipating it at every turn. He was a master of the art of pleasing, and soon eclipsed all the old nobility at the council table. For he could do what they could not—take a regular pommelling from the royal fist, and look as comfortable after it as if he had received the highest honour. (Mr. Galton does not tell us this by the by.) He was callous as to all the enormities of the times, and even justified them boldly. He fell because the Anne of Cleves marriage seemed the only way to get the king out of difficulties, and when the Anne of Cleves marriage had served its purpose it was set aside.

But he did great things? Yes, undoubtedly. It was he who made the Church of England a State Church in the sense in which it has been so ever since—a spectacle alike to Dissenters and Roman Catholics, who despise it for succumbing to a power from which the Pope was unable to protect it. It was he who was mainly instrumental in setting up the royal supremacy, and in administering it as the king's vicegerent. That the Church was purified by the galling tyranny to which it was subjected we may

admit without saying, like Mr. Galton, that the clergy were "decidedly unpopular," or the monks exceedingly corrupt. Many things have been reformed since that day; and we in this later age inherit the blessings of a great revolution of which we have not endured the penalties. The papacy itself has been reformed, and, as Mr. Galton truly points out, stands no longer on the same basis that it did. Nor is this the only shrewd remark in Mr. Galton's book; but it certainly exhibits several crudities and deficiencies as well, and I have been led to part company with the author more, perhaps, than a reviewer ought to do in order to supply a few of his omissions.

JAMES GAIRDNER.

Greek the Language of Christ and his Apostles. By Alexander Roberts, D.D. (Longmans.)

FOR full a quarter of a century Dr. Roberts has been trying to convince the world that Greek was the language of Christ and his apostles; that in that language, at least, they delivered their public discourses, though they might in familiar intercourse make occasional use of Aramaic. But, though he is able to mention one "great scholar" who, so far back as 1862, wrote in the *Saturday Review* that the evidence adduced was such as could "hardly leave a doubt in the mind of unprejudiced readers," he does not seem to have made many converts since among those qualified to judge. Is it possible, however, that the learned world is clinging to a mere prejudice, reluctant to look facts in the face? It cannot be denied that scholars are sometimes as obstinately tenacious of their opinions as less enlightened people, and it may be so in the present instance. No doubt it would be a great and very difficult confession to make that on such a point the world has been wrong for eighteen centuries, and that it has been reserved for Dr. Roberts to set it right; but the world has been in error before, and whatever the truth may be it must be allowed free course. I am not, indeed, going to say just yet "almost thou persuadest me to believe" that Christ spoke Greek; but, after attentively reading Dr. Roberts's volume, I cannot say less than this—that he has, in my judgment, made out a very strong case, and has shown cause why the whole question should be carefully reconsidered.

That Greek was generally understood in Palestine in the time of Christ, and was the common medium of intercourse between the Jews and men of other nationalities, or between the Palestinian Jews and their brethren of the dispersion, cannot, perhaps, be disputed; and, on the other hand, Dr. Roberts does not deny that Aramaic was in daily use among the natives in conversing with one another. What he maintains is that the Galileans and, indeed, all the Palestinian Jews were at this time, and had been for a century or two past, bilingual, and that while clinging to their native *patois* among themselves, they were perfectly able to understand and converse in a language that passed for Greek. This being so, it really does not seem so improbable—and the question after all is much more one of probabilities than might at first sight be imagined—that in addressing large multitudes, in which there

could scarcely fail to be numbers of foreigners, Jesus should have employed the language which would be most generally understood. If Dr. Roberts had not gone beyond this, there would be less difficulty in following him; but, apparently, he would not be satisfied unless it were admitted that all the recorded sayings of Jesus, with only, perhaps, some very trifling exceptions, have come to us in the very words in which they were uttered.

It is certainly strange that there is so little direct evidence upon the point in question; but the fact that the evangelists never hint that they are throughout translating what was spoken in another tongue is, at least, not unfavourable to Dr. Roberts's theory. Not much, at least, can be inferred from the reproach to Peter, "Thy speech bewrayeth thee," since that would apply to a peculiarity of accent even better than to difference of language; nor from the surprise of the chief captain in the case of Paul, since he did not yet know what nation he was of; nor yet from the address of that apostle immediately afterwards, seeing it is noted as something exceptional or, at least, not necessarily to be expected, that he spoke in Hebrew. Still, Dr. Roberts should admit that this last piece of evidence is rather against him; for it is certainly apparent that to the mass of the people, even in Jerusalem, their native tongue was more welcome than the language of the foreigner, however much it may be implied that the latter was perfectly intelligible to them. But it is Josephus who is generally considered to decide the point; and yet, when the statements of Josephus are fairly weighed, it will be found that they are not so entirely irreconcilable as is generally assumed with the supposition that he may have been familiar from his childhood with such Hebraistic Greek as would be spoken in Palestine. It is clearly one thing to be able to speak a language intelligibly, and another to have a command of it for literary purposes; and the Greek of Josephus is sufficiently far from that of the Sermon on the Mount to account for the difficulty he experienced in acquiring the style of which he eventually became master. Still, it may be suspected that most people will think that this is rather a forced construction to put on the well-known passage in the *Antiquities*. Dr. Roberts achieves a less doubtful success in dealing with those cases in the Gospels in which the Aramaic words are actually given, and here it seems to me he distinctly turns in his own favour a point which is usually thought to be decisive on the other side; for why should attention be drawn to those instances unless they were wholly exceptional? We can understand it, of course, in the cry from the cross, because the "Eli" is required to explain the mistake of the bystanders; but, if Jesus constantly used Aramaic, it really does seem strange that we should be informed that he did so in addressing Jairus's daughter, or that the words themselves should be given, as if they were some charm. This is an argument that should tell powerfully with those who accept the tradition about Mark's gospel having been written at the dictation of Peter; but it will naturally have less effect with those who agree with Baur in regarding Mark's minute touches as simply a feature of his literary

style. That at least Christ could on occasion speak Greek can scarcely be denied, considering the number of persons of different nationalities with whom he must have come in contact. His trial before the Roman governor would presumably be conducted in Greek, and I am not aware that it has ever been maintained that his silence upon that occasion was caused by his ignorance of the language in which he was addressed.

The testimony of Papias as to the original language of Matthew's Gospel is one of the most serious obstacles in the way of Dr. Roberts's hypothesis, and is felt by him to be so. It is not surprising, therefore, that he should make the most of Eusebius's disparaging estimate of Papias's intelligence, and so try to set him aside as an untrustworthy witness. The statement of Papias is assuredly not free from difficulties, and many have thought themselves justified in rejecting it. That our Greek Matthew is not a translation will be so generally conceded that it was hardly necessary for Dr. Roberts to dwell at such length on the subject; neither can the suggestion, so often made, that it is a duplicate Gospel written at a later period by the same apostle, claim to be anything more than a mere guess in the interests of orthodoxy; but there seems to be no reason why it might not be a free composition by a different hand, founded on the original Aramaic of Matthew. At any rate, the existence of the Nazarene Gospel, which, whatever may have been its relations with our Matthew, is known to have been written in Hebrew, would seem of itself to show that the knowledge of Greek was hardly so universal as we are invited to believe. We must, however, I think, agree with Dr. Roberts that the report about Pantaenus having found the Gospel of Matthew in Hebrew letters in India, left there by the apostle Bartholomew, is too vague to count for very much. Whether he is altogether wise in trying to discredit Papias, considering his importance as a witness to Peter's connexion with Mark, I will not stop to inquire.

The use made of the LXX. in the New Testament is justly considered by the author as a point in his favour; but it is surely too much to assume, with Isaac Vossius, that that version was commonly read in the synagogues of Palestine. I am not aware that there is a shred of positive evidence for such an opinion; and if there is no reason to doubt that the Scriptures were read in the original Hebrew and then translated into the popular dialect, whatever that may have been, there is no force in Dr. Roberts's question as to what has become of the Aramaic version.

It may be that there are passages in the Gospels inconsistent with this view, and Dr. Roberts does not fail to urge them; but it need not be said there is an alternative way of getting over the difficulty they present. Nor is it necessary to follow the writer into his discussion of other points of interest. It may suffice to say that he has not, so far as I can see, evaded any difficulty or missed any point which could be urged in favour of his theory; but many of his arguments depend for their force on assumptions as to the strict authenticity of the books of the New Testament and the historical accuracy of their contents, which will not now be allowed to pass undisputed.

That the Gospel question would be somewhat simplified by dispensing with the necessity of assuming an Aramaic source or sources for our Greek Gospels will probably not be denied. Dr. Roberts is sanguine enough to believe that if his hypothesis were accepted, no doubt would remain that we have the *ipsissima verba* of the Lord in the reports of his discourses, parables, and conversations, as we find them in our four Gospels. May I be permitted to say that this seems to imply a very innocent view of the present state of New Testament criticism? That something—indeed, much—would be gained in this respect may, perhaps, be conceded. But, if there are solid grounds for believing that the discourses in John's Gospel, for instance, are the free composition of the writer, or at least deeply coloured by his cast of thought, they could not be shaken by any change in our judgment as to the language which Christ habitually spoke. And in all the Gospels there are passages—more or fewer—which a rational criticism will refer to a later period than the lifetime of Christ. Still, the question is, in itself, one of great interest; and Dr. Roberts need not be dissatisfied if he is admitted to have shown that Greek was more commonly understood in Palestine than, perhaps, has been hitherto believed.

ROBERT B. DRUMMOND.

Song-Tide: Poems and Lyrics of Love's Joy and Sorrow. By Philip Bourke Marston. Edited, with Introductory Memoir, by William Sharp. (Walter Scott)

MORE, alas! of love's sorrow than its joy are the poems of Philip Bourke Marston, for surely upon no brow has been written "a mortal sentence, a hieroglyph of sorrow," more stern than upon his.

There are few of us, I should think, still unacquainted with that life of persistent sadness of which these poems are the outcome; but for any such Mr. William Sharp has told the story with manly tenderness and fine insight in the introductory memoir prefixed to this volume, which seems substantially the same as that accompanying the recent collection of stories by his dead friend. How far removed, however, from puling and puking was Marston's attitude readers of that memoir will be aware, though even his poetry alone, rightly read, cannot surely give that impression. Sad to monotony, to absolute pain, indeed it is, but the sorrow is manfully borne; and never does it lead the poet into blasphemy against joy. Far removed indeed is it from the pessimistic honey-poison of much of our modern song, which, with all its charms and graces, it would be well for us to have burnt by the common hangman; for the strongest of us have struggle enough to keep our faces to the dawn without such sapping of our faith. If these singers could but realise how miserably selfish is their wailing, surely they would keep silence; or, if they "do but sing because they must"—as they all declare—they might wait for the midnight, and then from the top of some high tower let the murder out, like poisonous chimneys, where there are none but the angels to weep, or be harmed.

If Marston had been of their disposition, he would have found a malignant vocation in embittering those waters which he might not drink, and striven his utmost to affright the happy security of lovers by some materialising philosophy of the vanity of living and loving. But how different was his endeavour! Because he is in the dark himself, must he declare the sunlight a myth?

"Because my life is dark and desolate,
Would I make your lives sad, all ye who say
'Bright are the skies above, and fair the way,
Darkness may come, the present is the sun's!'
Love knows I would not; fear not then my song,
I speak strange words; ye know not yet the tongue."

And the same tender solicitude moves him in another sonnet, which I am sorry to miss from Mr. Sharp's selections, the first of the "Preludes" to *All in All*, beginning

"Oh! ye whose hearts on happy things are set."

But it is time I was considering the volume in hand more curiously. In coming to such a selection from work one has loved, one always expects, like Mr. Halliwell-Phillips, to "sigh the lack of many a thing we sought"; but I am glad to say at once that I have been quite surprised at the fewness of such disappointments in the present instance. Mr. Sharp has chosen to represent Marston's sonnet work by a hundred examples, and the most enthusiastic lover of the poet could hardly ask more. Indeed, to my mind, such a number, however selected, must include some that one hardly cares to remember; and, moreover, I am quite of Mr. Sharp's opinion that, with the exception of two or three supreme examples—such as "Not Thou but I," "Desolate," and "No Death"—Marston's best work must be sought, not among his sonnets, but among his lyrics. He has too little invention and fecundity of thought to save the stress of his sad music from becoming a strain, and many of his sonnets are solely dependent on that music driven by the strength of his emotion. The paucity of images is surprising, though he frequently rings the changes to weariness on those he possesses; while jarring metrical irregularities, prose words, and even bathos, are all too frequent. The lack of "fundamental brain-work"—as Mr. Sharp says, quoting Rossetti—must be admitted. But, nevertheless, all this confessed, some few of his sonnets are exceedingly fine; and, surely, those I have mentioned are beyond praise. Mr. Sharp is right in thinking that he has missed few that are noteworthy. At the same time there are one or two unincorporated which I had hoped to meet with again; and though I am aware it is more than likely that in doing so I but give expression to individual preference, it will be as well to mention them. I should have liked the "Greeting" from *Song-Tide*—

"Rise up my song, stretch forth thy wings and fly"—

if but for the sake of artistic arrangement; the sonnet containing the fine image of the lake; "Love's Shrines," and "Finis." From *All in All* I miss "Spring's Return," "Sad Dreams," "Thy Voice," and "In Heaven"; and from *Wind Voices* "My Love" and "Man and Spring." And surely that fine address to his song called "Beyond Reach," with its

exquisite figure of the lark, should have been included:

"What time the lark soars singing to the skies,
We know he falters, know the poor song dies,
That fain would reach Heaven's gate sustained
and strong.
But angels bending from the shining brink
Catch the faint note, and know the poor song fails,
Having no strength to reach their heavenly
height."

There are several sonnets included in the selections which, in the weakness of the flesh, I feel might give place to those I have mentioned.

Coming to the longer poems, though I miss but little I sought, I feel that that little might have been included by the omission of some which, it seems to me, most of Marston's lovers would not be sorry to lose. The foolish "Medley," for instance, or "Sir Launcelot's Song to Guenever," which is hardly more than commonplace, the turgid "Vision"—how well could we have spared these for the "Ballad"—

"O! mother the wind wails wearily"

—or the delicate "Garden Reverie." Surely there are verses in "In the November Night" which one would care to read again; and coming to *Wind Voices*, I personally could well miss the ballads of "Brave Women" and "Monk Julius," both of which seem to me most commonplace, and in the latter of which the poet is capable of such lines as

"The monk sprang up and he cried 'Oh, bliss!'
His lips sought hers in a desperate kiss."

To speak disrespectfully of "Caught in the Nets" is, I suppose, contempt against high authority; but the subject has always seemed to me too out of the way and fantastic for artistic treatment. Stronger than its predecessors in many ways as Marston's last volume was, there is no dramatic attempt in it, in my judgment, at all comparable to the "Christmas Vigil" which he printed in *Song-Tide*, and which, of course, Mr. Sharp includes. In none of his poems does he gather up his powers with firmer grasp, and in none is he more free from his besetting sins; while a power of dramatic imagination is displayed which is especially remarkable, as Mr. Sharp points out, in a youth of nineteen. For the ballads above mentioned I think we could have well exchanged the "Two Burdens" and "Ungathered Love," while it seems a pity that two or three verses at least from the "Lament" to Oliver Madox Brown should not have been included somewhere in the volume—this, for example, such appropriate moral from his life:

"O men and women, listen and be wise;
Refrain from love and friendship, dwell alone,
Having for friends and loves the seas, the skies,
And the fair land, for these are still your own.
The sun is yours, the moon and stars are yours,
For you the great sea changes and endures,
And every year the spring returns and lures;
I pray you only love what never dies."

But the work which makes this little volume chiefly precious is undoubtedly to be found in its later pages, where Mr. Sharp prints the "Garden Secrets," and brings together "Eleven Lyrics." In speaking of the former it is difficult to avoid hyperbole, though it would seem almost equally difficult to write any praise that should exceed justice, especially when we remember that Rossetti and Mr.

Bell Scott united in declaring them "worthy of Shakspeare in his subtlest lyrical moods," and that Mr. Theodore Watts has pronounced "The Rose and the Wind" a lyric that is absolutely perfect, perfect in conception and perfect in form." Indeed, so closely and musically does the form wed the conception, so alert is the fancy, so subtle the imagination, that were one unaware of the truth we could hardly suppose them the work of the sonneteer. Perhaps their ultimate power lies in the manner in which the poet has succeeded, without any suspicion of moralising, in winning from these trees and flowers of his garden what among men and women we call the human note, but what is really the one pathetic note of all life—as, for instance, in the grim concluding line to "The Rose and the Wind"—

"Roses must live and love, and winds must blow."

As to the "Eleven Lyrics," one can but repeat that they surely come nearer to the bird-note of the Elizabethan song-writers than perhaps any others of our day.

Altogether, this volume is one for which we cannot offer Mr. Sharp gratitude too warm, though the sweetest seal of his work will be the consciousness of having so lovingly, and yet so wisely, taken care for the fame of his friend. He says rightly that there is not room for all Marston has written. There is much, as I have said, in his three volumes that but obscures his true worth, and a judicious selection of the treasure from the dross was a true service to his name. Such, despite the few differences of opinion I have ventured to express—trivial indeed in relation to the whole selection—is Mr. Sharp's volume. To those who loved the poet in life on the footing of personal friendship, or to those, by no means few, who loved him from afar (for his personality was such as to make a friend of every kindly reader), this volume will carry a fragrance of sanctity. Many an hour this coming summer, when "birds besiege the twilight time with song," in such garden haunts as were so dear to Marston's heart, will this little volume be the companion of such lovers—not always for its "heard sounds," but for those still sweeter "unheard," which fill the soul when one's hand clasps a dear shut volume, and we feel it as another hand within our own.

RICHARD LE GALLIENNE.

IN AND ABOUT AMERICA.

The Land of the Pink Pearl; or, Recollections of Life in the Bahamas. By L. D. Powles. (Sampson Low.)

A Fight with Distances: the States, the Hawaiian Islands, Canada, British Columbia, Cuba, the Bahamas. By J. J. Aubertin. (Kegan Paul, Trench, and Co.)

THE Bahamas, like the rest of the globe, have been a good deal written about, and sometimes, as in the case of Messrs. Ives' and Drysdale's volumes, with no small measure of rather vulgar vigour. However, these remote outliers of the Antilles are still sufficiently unfamiliar to the world at large to secure a welcome for the very readable chapters in which Mr. Louis Powles has given us the impressions of his eight months' residence in the colony. It

is not an exhaustive or a scientific book, and is none the worse for being neither; but it is never dull, and often extremely entertaining, though it is well to add that the entertainment is likely to be confined to this side of the Atlantic. In New Providence it is not calculated to afford much pleasure, except to the black people, whose champion the author, in opposition to his early prepossessions, found himself compelled to become.

Mr. Powles held a judicial appointment in the islands. But he does not seem to have got on very well with the Methodist oligarchy which governs it; and very early in his career found it convenient to seek a more congenial sphere of usefulness. However, during his stay he managed, as circuit justice, to visit nearly all the principal islands, and to pick up a great deal of useful and, we believe—though Nassau will, no doubt, loudly deny this assumption—trustworthy information regarding the condition of the population. The account he gives is not flattering, for though the climate of the Bahamas is perfection, the spirit of men is far from divine. On the contrary, the colony is a nest of corruption, oppression, and wrong doing. The legislature is simply one large family. There is not a bank in the islands, the one which was established a few years ago having failed with half the officials in its debt, while

"some persons, whose positions render it especially desirable that they should be independent, are so handicapped by their indebtedness to Nassau merchants that they cannot call their souls their own."

The coloured population, we are told, hate the whites, and were it not for the presence of the soldiers would massacre them to-morrow. But they have not learnt the art of organisation, and are consequently powerless.

"The result is that the House of Assembly is little less than a family gathering of Nassau whites, nearly all of whom are related to each other either by blood or marriage. Laws are passed simply for the benefit of the family, while the coloured people are ground down and oppressed in a manner that is disgraceful to the British flag" (p. 41).

Mr. Powles loudly demands that panacea for every evil—a royal commission, for the purpose of investigating the state of the colony. Before this tribunal he is prepared to prove that within twenty years

"men have been sold into actual slavery to Surinam, that men of colour are denied equal justice before the law when their opponents are white, and have even been punished as misdemeanants for daring to enter the house of God by the door reserved for the white man" (p. 302).

This is the serious aspect of Mr. Powles's book. But he is not always so severe; and in the chapters treating of Bahaman society he supplies some very amusing, if rather acrimonious, descriptions of the manners of the "Conchs," or native whites; of the long-lived negroes; of the pomposity of the petty vice-regal court; of the legislature and the upper house, the members of which are prone to regard themselves as peers of their little realm; of the life of the different islands, of some of their industries, with notes on a variety of other topics. These accounts are

throughout coloured by an unconcealed dislike of the dominant race; and Mr. Powles's personal grievance, as might have been expected, seems to have occasionally affected his otherwise judicial estimate of the country, of which he gives so candid an account. On the whole, he appears to have liked the negroes best. His description of them is certainly the least caustic in the book. Many of them, having been landed on the islands within the last thirty years, still retain their old African tribal names. But all alike are vehemently loyal to "the good missus," their Queen; and in the names they apply to their children they are fully abreast of the latest ebbs and flows of political popularity. There are innumerable Prince of Wales's, Prince Alberts, and Prince Alfreds with black faces. There is a man named Tiberius Gracchus, a boy on whom his enthusiastic parents inflicted the name of Thaddeus de Warsaw Toot, while a third bears the title of the Duke of Wellington. Granville Sharp is a common name; and of late the negroes have begun christening the children "Randolph Churchill," a signature not quite so burdensome as "John Barbadoes and the Windward Islands," which, in a fit of pro-episcopal fervour, a black baby was decreed to sign. Partisan politics, however, run high in the Bahamas; and in an age of Gallios it is refreshing to hear of a certain old lady who is prepared to dispose of her worldly goods in order to have the pleasure of assisting at the execution of an eminent English statesman, whose trimming ways have aroused her patriotic indignation.

Mr. Powles's volume would have been of more lasting value had he possessed some scientific knowledge, and so been able to supply precise information about many of the natural features of the islands which he visited. An index would also be an improvement. However, taking his book as a whole, it deserves praise for the general interest it preserves throughout. Assuredly, it leaves little to be desired so far as pungent language is concerned. The author tells us of "Blue-beard wells" in the Bahamas of which if any man drink he will never leave the enchanted isles; but he assures us that he avoided the temptation to quench his thirst at these springs. And, we confess, after reading his book, that, in resisting this impulse, the circuit judge would seem to have displayed a most commendable discretion.

Mr. Aubertin also has visited the Bahamas. But he reached them after a roundabout journey which took him two and a half times across the North American continent, and once down its entire length, in addition to a voyage to Hawaii and several other places. A tour so extensive, undertaken in the course of less than ten months, could, at best, be only a series of glimpses. It was not only a "fight with distances" but a fight with days, and, no doubt, with dust also. Mr. Aubertin has, however, made the most of his time and space. He is no tiro in foreign parts, and is already favourably known in literature as the translator of the *Lusiads* and the "Seventy Sonnets" of Camoens into English, and by several books of travel. The result is that, having seen men and cities, he writes with none of the rawness of the novice, whose only model for comparison is London or that part of Great Britain with which

he happens to be more or less familiar. It is true that he did not leave the well-trodden tracks. But what he saw he describes with excellent effect, great good humour, and not infrequently with a keenness of penetration which gives his book a distinct value above the many volumes of a similar character written by less experienced appraisers of their species.

Provided with the best of introductions, he met all the men worth meeting, and saw all the places worth seeing, so that the reader has an excellent opportunity of putting himself abreast of the latest information on a great many points. Indeed, poor though many of the tourist narratives are, they are not without a purpose; for the New World is so changing that it is never certain whether the man who has "read up" a region or a city or an "institution" in 1887 is in 1888 quite in possession of the latest facts. It is, in truth, to a middle-aged *laudator temporis acti* (in even a moderate way), a little depressing to read of the Far West of to-day, and compare it with the romantic region of his youth. Corn fields wave where the buffalo roamed, and noisy railway stations stand on the spot where, twenty years ago, he pitched his tent, while cities are rising in the woods where he shot deer or trapped beaver; and the worst of the reflection is that, while he might have owned the entire site, he failed to secure so much as a town lot! Nor do the citizens seem ever to remember the pioneer by naming a street after him. It is, for example, a little curious to read in Mr. Aubertin's pleasant volume (p. 114) that Kicking Horse Pass was named from an accident which happened to "a certain Dr. Hector." In the blithesome days of 1863, Hector and Palliser were familiar names. Palliser is gone; and the Pacific Railroad people do not appear to have remembered either him or his companion amid the swarm of commonplace politicians and other passing nonentities after whom they have named their railway stations. New Zealand, however, is happily still well acquainted with Sir James Hector, the director-general of its geological survey.

Mr. Aubertin's volume, we ought to add, is illustrated by some excellent photographs, though, in common with that of Mr. Powles, *A Fight with Distances* would be improved by an index, when the dignity of that second edition, to which its merits so well entitle it, is attained.

ROBERT BROWN.

A Treatise on Money and Essays on present Monetary Problems. By J. Shield Nicholson. (Blackwood.)

MONEY is not only the "root of all evil" in practice; it is also prolific of vicious theory. First appearances—what the man in the street thinks—are almost always wrong; and the corrections of vulgar error which have been achieved by economists too often call for a second approximation. Prof. Nicholson is alive to all the dangers and difficulties of the subject; his comprehensive design covers both the first principles which are a stumbling-block to beginners and the controverted questions which puzzle specialists. The treatise is directed to the first object.

The author restates the portions of monetary theory which have been acquired for all time, which have been placed beyond controversy. As he observes, this body of science is larger than might be expected by those whose impressions are derived from newspapers and periodicals. The general reader hears only of the cases on which currency doctors disagree; the universally accepted principles are consigned to the text-books. Among such stores of ordered knowledge Prof. Nicholson's *Treatise on Money* deserves to occupy a high place. Less crowded with details than Jevon's manual on the same subject, and equally clear, it may with advantage be read by the student before, or even instead of, that justly popular work.

In the second part of the book we plunge into more contentious matter. The first essay is on John Law. It may be surmised that the flavour of economic heresy which attaches to the schemes of the notorious financier had some attraction for our author, himself, as a pronounced bimetalist, the proponent of monetary theories which appear paradoxical to many. He certainly makes out that Law was not so black as he has been painted. His advocacy is enhanced by the happy art of investing technical details with a literary form and human interest.

In subsequent essays he grapples with his monetary opponents more directly. The advantages of bimetalism, its practicability, its morality, the stability of the bimetallic ratio, are set forth in a series of brilliant chapters. Blow following blow discomfits at least the minor champions and auxiliary forces of the monometallist cause. The victor has not much mercy for the prostrate antagonist. "With many people," he sneers, "the mere mention of a general international agreement makes them quite deaf with their own volubility."

Many of the episodes in this contest are of extreme theoretical interest. The question is raised, What is the effect of improved methods of production upon the general level of prices? There is deduced the paradoxical, yet, we think, irrefragable, conclusion that the effect may be a rise of prices on an average. We emphasise the potential mood, suspecting that this consideration, like other bimetalist arguments, applies rather to conceivable cases than to the actual facts of modern commerce. Of course, much turns on what we mean by a "rise in the general level of prices." Prof. Nicholson is prepared with a definition of his own. He has propounded a new mode of measuring variations in the monetary standard. In our judgment upon this method we should, probably, differ from its author only by an article. What he regards as the method appears to us only a method—one of the many modes of measurement which have been proposed, though, no doubt, one of the best. His parental partiality seems to us very venial. We may say of originality in this abstruse subject what Lamb said speaking generally, that great respect is due to a man of one idea, for he has one more than most people.

Especial attention is due to the last chapter on "the causes of movement in general prices." Prof. Nicholson happily illustrates the character of the problem:

"Suppose that a number of yachts are racing

with a steady breeze—then, to explain the greater speed of some compared to others, we should look to the build, to the sails, to the seamanship, and so on. . . . But, if the wind gradually and equally declined in force, or if the tide began to operate in a uniform way . . . surely there is no need to point out that we could not discover the strength of the tide, or of the wind, by examining the build of the various yachts and the seamanship of their crews."

Yet this is the spirit in which the variation of general prices has been investigated by persons more conversant with the details of commerce than with the principles of probabilities. The interest of the chapters culminates in the concluding section on the interaction of gold and silver prices. The complicated analysis is elegantly expressed in algebraic symbols, and translated into the vulgar tongue for the convenience of "those who are unfamiliar with, or distrust, symbolical reasoning."

The following is the most important of the "present monetary problems" discussed in this section. Suppose that there occurs in gold-monometallist countries—say, for brevity, the West—a "prior depreciation of silver," that is, a drop in the gold price of silver, while "there is otherwise nothing to change the general level of prices." Then, according to Prof. Nicholson, one at least of two consequences tends to occur. Either silver prices will rise in the (silver-monometallist) East, or gold prices will fall in the West. At present the first alternative has not occurred; it is maintained that we are experiencing the second. The moral seems to be that the monometallist, who has fancied himself secure in selfish isolation, may find that he is—in consequence of the accidental cheapening of the white metal which he has persisted in regarding as a mere commodity—exposed to all the disturbance and loss incident to a variation in the value of his monetary standard. Before accepting this corollary, we should like the theorem to be more fully expounded. Revert to the proposition that either silver prices in the East will rise, or gold prices in the West will fall. The horns of this dilemma, in spite of their specious appearance of symmetry, are not equally sharp. Silver prices in the East may rise in consequence (perhaps partly in anticipation) of silver being exported from the West. But how do gold prices in the West fall? What is the *modus operandi*? If we were dealing with the rank and file of the bimetalists, we should suspect the existence of a confused idea that the exchange with India may act like a *perpetuum mobile*, whereby a continual stream of uncompensated exports is poured "from the exhaustless East." But Prof. Nicholson is quite above such a suspicion. Perhaps he will clear up this little difficulty on some future occasion, correcting by some original "second approximation" the conception which has hitherto satisfied economists, that international trade is virtually barter.

Whatever the issue of Prof. Nicholson's contentions, and even if the cause which he has so ardently supported is doomed to failure, it will still be true that he has made a splendid fight for it; and that, if bimetalism could have been defended, it would have been by him.

F. Y. EDGEWORTH.

NEW NOVELS.

Joyce. By Mrs. Oliphant. In 3 vols. (Macmillan.)

Sylvia Arden. By Oswald Crawford. (Kegan Paul, Trench & Co.)

Miser Farebrother. By B. L. Farjeon. In 3 vols. (Ward & Downey.)

Bonaventure. By G. W. Cable. (Sampson Low.)

Joan Vellacot. By Esmè Stuart. In 3 vols. (Bentley.)

A Cloud on St. Angelo. By Cyril Bennett. In 2 vols. (Fisher Unwin.)

Paula. By O. Heller. (Berlin: Deubner.)

Joyce is, we think, for five-sixths of it at least, the best novel that Mrs. Oliphant has written for some dozen years. That fatal determination to stint the public, if not of, yet to, its sizings, which has been so noticeable in all her later work—that apparently tradeswomanlike resolution to give just as much interest, just as much art, just as much literary skill, as will put an ordinary novel reader through three volumes and not one pennyworth more—is nowhere evident until quite the end. This end is so unsatisfactory in every way that we only imagine Mrs. Oliphant to have said to herself—"This really will not do, I shall be giving them another *Salem Chapel* for their money if I go on like this"; and then to have botched the finish anyhow lest she should commit an unbusinesslike extravagance. But the ends of novels concern the critic of new books less than any other part, because he may not tell them; though they, perhaps, concern the critic in his purely critical capacity most of all. Almost all the rest of *Joyce* is capital. Mrs. Oliphant might, perhaps, have made her good Indian colonel a little less of a simpleton, his wife not quite so near an approach to a shrew, her heroine a little fuller of colour, and her heroine's unsuccessful lover, Norman Bellendean, a good deal less of a stick. But it is only the fatal and unreasonable love of perfection which dictates such hypercriticism. The plot until its unravelling, or rather cutting, hinted at above, is simple enough, but quite sufficient. "*Joyce*," as she is at first simply named, a foundling, or all but foundling, schoolmistress, is discovered accidentally by her father, Colonel Hayward, and his really amiable, but brusque and managing, second wife, and transferred from her Scotch home to the life of villadom, as some persons say, at Richmond. In her chrysalis state she has suffered, rather than accepted, the addresses of Andrew Halliday, a respectable, but pragmatical, person of her own profession; and in this entanglement, and the unsuitableness to her unsophisticated and dreamy nature of the Richmond life, lie such "motives" as are needed. The charm of the book, however, lies in the rapid and skilful dialogue and business which carry the reader along, and in the profusion of Mrs. Oliphant's favourite types of character—types not very deeply struck or in very lasting material, but curiously vivid and workmanlike. Andrew Halliday is capital, and all the minor personages not yet noticed (and they are many) without exception good, the best being a certain Canon

Jenkinson and his rebellious district-clergy-woman, Mrs. Sitwell.

Mr. Oswald Crawford has tried his hand at novel writing not a few times and in not a few ways, and though perhaps never with complete success, yet never without some measure of it. But we do not think he has ever done anything so good of its kind as *Sylvia Arden*. It is something between a pure romance and an enlarged Christmas story, is full of hair-breadth 'scapes from imminent deadly Greeks and others, pilots the hero and the readers through them with speed and skill, and comes to a satisfactory and striking end. So far as it is necessary to say anything about the story it is easily told. Gregory Morson, a rather original villain (at least his most characteristic point—a sort of philosophic scoundrelism—does not remind us of anybody except Restif's Gaudet d'Arras, whom it is very improbable that Mr. Crawford should have copied) and Sylvia Arden are not only betrothed persons but joint owners of a certain auriferous tract of country "on the western coast," and, as its name is Scarfell Chace, we suppose rather on the north-west than the south-west. Morson, leasing Sylvia's share, has turned the whole into a sort of wilderness, guarded by a walled pass through the hills and a steam yacht manned by a crew of Levantine desperadoes. He invites his old school comrade Julian Bearcroft to prospect for gold. But whether Bearcroft finds it or not, and what he finds else, and what Morson's notions of proper behaviour to a friend are, and so forth, we utterly decline to say. Let it suffice that there are assassinations (attempted at least), druggings, fights by land and water, and all manner of good things. One situation is so extremely agreeable that we almost feel inclined to tell it. To sit upon a pile of small squared blocks in a dark cavern and agitating circumstances with a very agreeable and affectionately disposed young person could never be otherwise than pleasant; but to find that the small squared blocks are —. This, however, is telling, and we shall not go on. We have hardly more than one unfavourable criticism to make. Caverns are nothing, anybody may use caverns. But it is really a pity that Mr. Crawford, whose story is quite strong enough to stand on its own legs, should have, by prefixing a frontispiece map of Scarfell Chace and by certain remarks of Bearcroft's (who tells the story) on his own character, have given just the handle which raisers of the silly cuckoo-cry of plagiarism or imitation are sure to seize.

Mr. Farjeon's style is by this time quite a well-known one, and no doubt it has, like the styles of other practised writers, audiences ready made who appreciate it. To the casual critic it may seem to savour rather too much of Dickens, or rather of that school drawn from Dickens which flourished some five and twenty years ago. Thus, Jeremiah Pamflett, the villain of the present story, certainly seems like a compound reflection of Uriah Heap, Noah Claypole, and Jonas Chuzzlewit. Tom Barley, the good orphan boy, is at least suggestive of Kit Nubbles, and so on. Again, unkindly folk might say that the amiable Lethbridge family, and even their

fascinating niece and cousin, Phoebe Fair, brother, are just a trifle vulgar. But this kind of criticism, we repeat, is, in the case of an established writer, rather superfluous. The book shows, in its kind, practised craftsmanship enough.

A very different kind of praise can be given to Mr. Cable's *Bonaventure*. Though dealing, as usual, with the author's beloved Louisiana and its Creole and Acadian population, it is not in the least devoid of freshness; and it has that air of originality which, curiously enough, is as common in the small bulk of the literature of the Southern States as it is rare in the considerable bulk of the literature of the Northern. It cannot be said to have much story; and its title-hero, the schoolmaster, Bonaventure Deschamps, is not particularly interesting, except in his central scene, where his invincible sincerity gets the better of a plot which has been started by some of his enemies to ruin his reputation by a sham "inspection" of his scholars. The intended instrument of this plot, G. W. Tarbox, a book-cannasser of the familiar benevolent Yankee type, is also not extraordinarily enticing, though he is a good fellow enough in his way. The charm of the book lies rather in its succession of bright and masterly sketches of manners, dialogue, and scenery, than in any sustained interest of character or story. Only we wish Mr. Cable would not, according to an obliging, but extremely irritating, habit of his countrymen, translate perfectly intelligible, if sometimes slightly "dialected," French phrases: *jarretière de la vierge*—"virgin's garter"; *vieille*—"wife" (as if there were no such term here in English as "old woman"), and so forth, are, as Mr. Cable would put it, *agaçant*—"teasing."

Joan Vellacot is a book of which it is not easy to say much. If the author, with that illegitimate readiness to revert to *les grands moyens* against which we always protest, had not killed off one of her heroines in a sudden and tragic manner her book would be a kind of "Much Ado About Nothing." *Joan Vellacot* is a flirt—which is sad, perhaps; and she does not entirely discontinue the practice when her partner in the game has married someone else—which is sad, of course. Hector Duncan, a hero in battle but not altogether a saint, marries someone he does not love, because the someone whom he does love, or thinks he does, is engaged (or he thinks she is engaged, for there is much misunderstanding) to somebody else. There are minor characters showing capability rather than accomplishment. The really central figure, Margaret Duncan—a girl who might have been perfectly happy but for her own mistake and other people's faults—is better imagined than carried out. If the criticism did not seem rather too curious and carping, we should say that *Joan Vellacot* has the general plot of a French novel worked out on the lines of an English one, and that the combination is not happy. The violent ends without the violent delights somehow do not suit. Yet the book is readable enough in parts.

The same common fault of beginners—the tendency to squander and abuse death and unhappiness—appears in Mr. Cyril Bennett's

book. If you take a very beautiful, clever, amiable, and virtuous young woman, accumulate on her all the worst ills of life—poverty, orphanhood, the necessity of being a school-mistress, an ungrateful family, a worthless lover, an apparently triumphant rival, a tragical and heroic death—of course you can make a story pathetic after a fashion; but in that case you are only the cook who makes a dinner with a great deal of money. Mr. Bennett, however, is so obviously a novice, and there are touches in his book of such promise, that we bear not too hardly on him. Madie Willoughby, the heroine's innocent rival, is decidedly good.

In *Paula*, a very short story, Herr Heller has given a good example of the theatrical novel—or at least the novel with continuous relations to the stage—of which Germans have long been fond, and which is now not unpopular in England. Although the story is short, it has various turning-points, which are managed with considerable skill. The heroine, a dancer in her first youth, and of an old stage family, makes a love match, is left a young widow with one child, gets on but ill with her husband's family, is drawn back to the stage as a singer this time and with great success, and meets at her highest fame the son whom she has practically abandoned, without at first knowing him, and without others—including her teacher and impresario, who has a desperate passion for her—knowing him either. What follows may be read or guessed or both. It is a well-managed and well-told story.

GEORGE SAINTSBURY.

CURRENT LITERATURE.

"EMINENT WOMEN." — *Hannah More*. By Charlotte M. Yonge. (W. H. Allen.) "Hush, hush!" said Dr. Johnson; "it is dangerous to say a word of poetry before her. It is talking of the art of war before Hannibal." It seems extraordinary that Dr. Johnson should have spoken thus of Hannah More, even in jest; yet the fact remains that this author, whose plays are now without a reader, was for a season at least, and in the lifetime of Sheridan, considered the first dramatic writer of the day. The reason of this was that the world was still unaccustomed to women writing at all, and was not disposed to be hypercritical of their dramas or verses. Hannah More was also a member of a mutual admiration society, composed of Garrick and Horace Walpole at one end, and Bishops Lowth and Porteus at the other. This was without question a very strong combination; and the result of this conspiracy to applaud was eleven volumes, which no one of this generation—except Mrs. Buckland and Miss Yonge—has read. Hannah More is only referred to once in Boswell, and then the reference is far from complimentary. "I was obliged," said Dr. Johnson, "to speak to Miss Reynolds, to let her [Hannah More] know that I desired she would not flatter me so much." Somebody now observed that she (Hannah More) also flattered Garrick. To which Johnson replied:

"She is in the right to flatter Garrick. She is in the right for two reasons: first, because she has the world with her, who have been praising Garrick these thirty years; and secondly, because she is rewarded for it by Garrick. Why should she flatter me? I can do nothing for her. Let her carry her praise to a better market."

We quote this, as Miss Yonge does not, and expresses a doubt whether Dr. Johnson ever was

guilty of such plain speech as Boswell records. We see no reason to question Boswell's accuracy, and find, in the remark of the sage, a clue to Hannah More's ephemeral but undoubted popularity. Wilberforce said he would rather present himself before heaven with Hannah More's *Shepherd of Salisbury Plain* in his hand than with *Peveril of the Peak*. This "literary lady" (as Boswell calls her) lived to see her work judged on its literary, and not its religious, merits. The blow, too, came from a clergyman. Sydney Smith, in the *Edinburgh Review*, held up to ridicule *Coelebs in Search of a Wife*, the novel of this very worthy lady. Miss Yonge is qualified by sympathy to write this brief biography. She is, however, in error in speaking of Garrick as having "worked as an assistant master in Dr. Johnson's school at Edial, in Leicestershire." David Garrick was one of Dr. Johnson's pupils at Edial, and in some sense remained such to his life's end.

Grundriss der Geschichte der Englischen Literatur. Von Gustav Körting. (Münster: Schöningh.) Dr. Gustav Körting is better known as a Romanic than as an English scholar, and a work by him on the history of English literature is something of a surprise. To a certain extent, the book may be heartily commended. We know no other volume which contains so complete and serviceable an abstract of the chronology and bibliography of English writers and their works. The brief biographical notices of the authors indicate a large amount of careful research. Dr. Körting, however, knows the facts about English literature better than he knows the literature itself; and his literary criticisms, when they are not mere repetitions of the safe commonplaces usually current, are indescribably funny. One of his original discoveries is that of the existence of a peculiarly close affinity between Coleridge and Poe! If an English literary historian were to couple together Lessing and Chamisso as having a great deal in common, Dr. Körting would probably smile; but the blunder would not be one whit more grotesque than that which he has himself committed. It is almost as amusing when we are told that Mr. Froude and Mr. Freeman are learned specialists rather than artists in historical narration, though at the same time they both write in a very attractive style. However, faults of this kind can do the English student no harm, and the volume supplies a real need by its condensed information respecting dates, editions, and (in the case of the older literature) MSS. The references to modern books and articles (naturally in most cases German) treating of the several authors and their works are also of great value. A few important writers seem to be unaccountably omitted. The divines in particular, appear to have escaped the author's attention, as we find no mention of Tillotson, Sherlock, Atterbury, or South. The author of the "Rehearsal" is another overlooked name. Apart from obvious misprints, which are rather frequent, we have observed extremely few errors in matters of fact. The only one worth mention is that two of the MSS. of Langtoft's French chronicle are enumerated in the list of MSS. of Robert Manning.

Essays. By the late Clement Mansfield Ingleby. Edited by his Son. (Trübner.) Dr. Ingleby's name will always be honoured by Shaksperian students. It is to him that we owe that interesting collection of early allusions to Shakspeare, *A Century of Praise*; and it was his detective skill that first discovered the fatal pencil marks in the Perkins folio. In the present volume the pious care of his son has collected a number of his miscellaneous essays, most of which have already been published, but a few now appear for the first time. Among these last, "A Voice for the Mute

Creation" and "Romantic History" have pleased us by their moderate and thoughtful treatment of subjects which others have discussed in a very different temper. But the earlier articles, on prominent names in English literature, represent Dr. Ingleby as he was best known to the public.

Six Lectures introductory to the Study of English Literature. By G. C. S. Southworth, Professor of English Literature in Kenyon College, Ohio. (Cambridge, U.S.) While English universities and colleges are discussing whether English literature is or is not a fit subject for professorial teaching, American colleges solve the question practically. Prof. Southworth's six lectures are intended as a first introduction or direction to a young American student as to what authors he had better read in a first historical or chronological survey of English literature and style. They are an excellent guide to this end. The author shows, perhaps, a greater fondness for elegance and propriety than for strength and vigour of language; but in such a matter the personal preferences of a lecturer must always appear.

Hermesenda, or Bishop, Husband, and King. From the Spanish of D. M. Fernandez y Gonzalez, by J. R. and J. A. G. (Sotheran.) Don Manuel Fernandez y Gonzalez, who died in Madrid on January 6 of the present year, was one of the most prolific of Spanish novelists and dramatists. His dramas are superior to his novels. In the latter he followed closely the style of the elder Dumas, though without his highest qualities. He was a good copyist, but his works can never be mistaken for those of the master. The period of Spanish history which he chiefly illustrated is that from Peter the Cruel to Philip II. The present novel, however, deals with Aragon in the twelfth century, and with the reign of the monk and king Ramiro II. The final catastrophe is that of the celebrated "Bell of Huesca." The materials are to be found in Zurita's *Annales*. They are here treated in a melodramatic spirit. It is not the favourable side of the middle ages which the author presents to us. The translation seems carefully done, and improves as it proceeds, its slightly archaic turn of phrase and vocabulary being well suited to the theme.

Spanish Idioms with their English Equivalents. Collected by Sarah Cary Becker and Federico Mora. (Boston, U.S.: Ginn.) This is a book the real value of which can only be ascertained by trial and experience. It is not a collection or explanation of grammatical idioms, but of the current phrases, dictions, proverbs, to be found in ordinary authors. Merely technical or vulgar slang is not admitted. We do not think that the authors have quite kept to their own rule that "proverbs not containing idioms are excluded." Several of those given have word for word equivalents in English, and are regular in grammatical construction, e.g., *Alzar los ojos, ó los manos* "to raise the eyes or hands"; but it is, perhaps, better to err by excess than by defect. The arrangement of the book is (1) to give the Spanish verbs in alphabetical order, if the saying includes a verb; (2) if there is no verb, the alphabetical order is that of the principal word. Nautical phrases are particularly well explained, though it might have been more useful to have made a separate list of them. To those who have not the opportunity of consulting the larger Spanish dictionaries, and as a supplement to ordinary bi-lingual lexicons, this work will be very useful; and to the beginner in either language it may save a great loss of time.

Giunte e Correzioni inedite alla Bibliografia Dantesca del Visconte Colomb de Batines. Edited by Dr. Guido Biagi. (Florence: Sansoni.)

This volume consists of additions and corrections to the invaluable *Bibliografia Dantesca* of the Visconte Colomb de Batines, which were made by the distinguished author himself in an interleaved copy of his great work. He announced his intention, when issuing the first volume in 1845, to append a supplement "per le Giunte e Correzioni" at the end of the completed work. This, however (as will be seen by those who possess the work) was not done. Instead of this, the author continued the work of collecting materials for such a supplement until the time of his death, at the early age of forty-three, in the year 1855. The editor, Dr. Biagi, who seems to have performed his work with great care and skill, states that the "additions and corrections" now published amount to more than four hundred. They relate to all the various parts and sub-divisions of the original work, and the passages or articles to which they belong are indicated by references to pages and lines in the margin. It is to be regretted that the utility and convenience of the work is not still further increased (as it would be very greatly) by a good index. Those students who possess the original *Bibliografia* will find this supplementary volume indispensable to its completeness.

Ein Pessimist als Dichter: W. M. Thackeray. Von H. Conrad. (Berlin: Reimer; London: Williams & Norgate.) We have often been irritated by the German affectation of using "Dichter" indifferently for poet and prose writer of fiction, and this is especially annoying in Herr Conrad's very silly treatise on Thackeray. We do not often use such strong expressions as this, but we do not think that anyone who reads the tractate will quarrel with us. The total want of critical insight in this excellent Teuton will be seen at once when it is mentioned that he sets down the high value now put on Thackeray to the influence of "Naturalist" tendencies. Now, we happen to know pretty intimately some of the chief living Thackeray-worshippers, and we can answer for it that they are anti-Naturalists to a man. To exemplify Herr Conrad's complete failure to get at the point of view in detail would be tedious; it is enough to say that he takes quite seriously, and is much shocked by, Thackeray's frequent assertions that the man of letters is a workman like other workmen, &c. In short, a man totally destitute of humour, without even a conception of what humour is and what it is not, has undertaken to judge one of the greatest humourists of all time. The result is, and could not but be, a ludicrous and disastrous failure. It is laborious, earnest, inspired, we doubt not, by the highest and most virtuous sentiments; but it has the initial defect of invincible ignorance and blindness. Now, a blind man really should not undertake to tell us that purple is an immoral colour.

Some Hobby Horses and How to Ride them. By C. A. Montresor. (W. H. Allen.) We venture to affirm that no one would describe correctly the contents of this book from its title, at a first guess. A "hobby-horse" is generally regarded as the harmless, if somewhat selfish, amusement of mature or declining age. It is here understood to mean the unreasoning instinct of collecting that is so common among children hardly in their teens. For such, the author has written an interesting and not uninteresting volume, dealing with such matters as architectural scraps, coins, postage stamps, and crests. Her object has been rather to illustrate, by means of historical anecdotes, than to supersede authoritative books of reference. And, despite a few slips in matters of fact—e.g., the statement (p. 126) that the copper pennies of 1797 resembled in every particular those now in use—we think that she is to be congratulated on a large measure of

success. The illustrations of coins form a distinctly valuable feature.

A Far-away Cousin; a Story for Children. By K. D. Cornish. (Griffith, Farran & Co.) Parents ought to welcome gladly this new tale of child-life. Among the many literary caterers for the little ones none exceed Miss Cornish in pleasant dialogue, natural incidents, and, above all, in a cheerful elevated tone. A whole family of children has read this book with rapt interest from cover to cover, so that the author, it may be safely taken, is sure of the children's suffrages. It is well illustrated by G. M. Stoddart, and contains stories of adventures and pranks outside the nursery which will occasionally strike a responsive chord in the heart of an older reader.

Five Little Peppers, and How They Grew. By Margaret Sidney. (Hodder & Stoughton.) This is a story of five little American children, who are left with their widowed mother in very straitened circumstances. In describing the sunshine of their home life, the writer teaches a lesson in a pleasant way to the small inmates of wealthier homes. Polly and Phronsie are charming characters, and show that the author both knows and loves children. The fault of the book is its length and its improbable dénouement. We wish that writers of children's books would copy Mrs. Molesworth in her brevity.

NOTES AND NEWS.

MESSRS. KEGAN PAUL, TRENCH & Co. have made arrangements for the publication next season of a set of half-crown books to be entitled *English Actors: Ten Biographies*. The series will be under the general editorship of Mr. William Archer, and will include lives of Betterton, Cibber, Macklin, Garrick, the Dibbins, the Kembles, Elliston, the Keans, the Matthews, and Macready. Mr. Joseph Knight will deal with Garrick, Mr. R. W. Lowe with Betterton, Mr. E. R. Dibdin with the author of "Tom Bowling," and the editor himself with the Keans. The subjects have been selected so as to cover as completely as possible the whole field of English acting from the Restoration to our own time.

MESSRS. FIELD & TUER have issued the prospectus of a handsome book which they propose to publish by subscription in the autumn, entitled *Kensington Picturesque and Historical*. The letterpress is written by the Rev. W. J. Loftie, the historian of London, and himself an inhabitant of the old court suburb. The illustrations have been specially drawn on the spot by Mr. W. Luker, Jun.; they will be more than 300 in number, of which some will be printed in colours. Kensington, with its palace and historical houses, as well as its modern artistic residences, lends itself particularly well to such a publication. For collectors—to whom Messrs. Field & Tuer generally offer some curiosity—a few proof copies of the book will have a couple of views painted in water-colours in front, under the gilt edge of the leaves, so as to be invisible until the leaves are bent back at an angle.

MR. GEORGE JACOB HOLYOAKE has a new work in the press which Messrs. Sonnenschein & Co. will shortly issue. It is a history of remarkable schemes for "improving the condition and increasing the comforts of the poor," put in practice at the end of the last century by certain social reformers, of whom the most distinguished were the Bishop of Durham, Sir Thomas Bernard, and Count Rumford, under the special patronage of George III.

MESSRS. TRÜBNER & Co., will issue early next month a volume of selections from Sir

Edwin Arnold's poems, with the addition of some new pieces. The following—taken from the preface—will explain the purpose of the publication of the new volume:

"As it has been sometimes thought and said—inaccurately—that the author is exclusively devoted to oriental subjects of verse, and as he may yet again recur to these, he has here complied with the desire that a selection should be made from his non-oriental poems."

MESSRS. KEGAN PAUL, TRENCH & Co. will publish immediately *The Banshee, and other Poems*, by Dr. John Todhunter. Among the poems are two founded on the first and third of the Bardic Tales of Ireland, known as "The Three Sorrows of Story Telling."

The Blarney Ballads is the title of a new volume of political squibs on the Irish question which will shortly be published in a handsome quarto volume by Messrs. Swan Sonnenschein & Co. Some of the ballads have already appeared anonymously in the columns of the *Spectator*, *Saturday Review*, *Scotsman*, &c.; but Mr. C. L. Graves now assumes the responsibility of authorship. The book will appear with cartoons by Mr. G. R. Halkett, the illustrator of the *Irish Green Book* and other political brochures.

The Moderate Man, and other Verses, is the title of a volume which will be published next week by Messrs. Ward & Downey. It will contain a dozen original illustrations by Mr. Harry Furniss. The poems are from the pen of Mr. Edwin Hamilton, author of *Dublin Doggerels*.

Love's Labour Won, the last novel written by the late James Grant, will be published this day by Messrs. Ward & Downey in three volumes. Among new one-volume editions of novels just issued by Messrs. Ward & Downey are the following: *Mrs. Rumbold's Secret*, by Mrs. Macquoid; *Passages in the Life of a Lady*, by Hamilton Aide; *In Luck's Way*, by Byron Webber; *Double Cunning*, by G. Manville Fenn; *Frozen Hearts*, by G. W. Appleton; and *The Dingy House at Kensington*.

MR. JOHN HEYWOOD will shortly publish a volume of essays by Mr. W. E. A. Axon, entitled *Stray Chapters in Literature, Folk-Lore, and Archaeology*. Each essay is supplemented with a bibliography of the subject, and Mr. Axon has written a preface on curious book titles.

THE Government of India has issued a resolution on the completion of the Statistical Account and Imperial Gazetteer of India. The work was planned by Sir William Hunter in 1869, and has been carried to completion under his continuous supervision during the past nineteen years.

"The Governor General in Council now desires to place on record his cordial acknowledgments to Sir William Hunter for the great ability and industry which he has displayed in carrying through the important work entrusted to him. As a condensed epitome of the Statistical Survey of India, it (the Imperial Gazetteer) appears to His Excellency in Council all that could be desired; and as a standard work of reference, it will be of the greatest use to those charged with the administration of the country."

NEARLY eight thousand copies of Mr. Eric Mackay's *Love-Letters of a Violinist* have been sold in the series of "Canterbury Poets."

MR. THOMAS AUSTIN has just copied for the Early English Text Society the very curious "booke of huntynge, the which is clepid Master of the Game," from the two MSS. in the Bodleian. This treatise was written by Henry IV.'s Master of the Game for his son Henry V. when Prince of Wales, and tells among many other things, how the fox chiefly loves hens—which he "gynnouliche," or snarefully lies in

wait for—but also eats butterflies, grasshoppers, and such small deer, to say nothing of butter and honey. It has some illustrations which will be engraved from Mr. Austin's copies. The book will go to press forthwith, and will probably be issued by the Early English Text Society next year.

THE Shelley Society's publications for the present year will be eight in number. Four of these have already been sent out to members, viz., the *Masque of Anarchy* (a reproduction of the recently discovered MS.), the Shelley Society's Papers, the Shelley Society's Notebook, and an Alphabetical Table of Contents to Shelley's Works. The four to follow are: a reprint of Browning's "Essay on Shelley," which was prefixed to the suppressed volume of forged Shelley Letters, published by Moxon in 1852; and type-facsimile reprints of the original editions of the *Address to the Irish People*, *Rosalind and Helen*, and the *Posthumous Fragments of Margaret Nicholson*. In addition to these, there are several other works of great value to Shelley students which are actually in type, and will be issued as soon as the funds of the society permit. The address of the secretary of the society is 127, Devonshire-road, Holloway, N.

THE annual meeting of the London Library will be held on Thursday, May 31, with the Earl of Carnarvon in the chair.

At the next meeting of the Sette of Odde Volumes, early in June, Mr. Charles Welsh, vice-president and chapman to the Sette, will read a brief note on "The Babies' Book" in the Harleian collection, and will make a few remarks on the subject of the earliest English books for children.

WITH regard to the English word "steerman," Dr. Furnivall sends us the following quotation from Hexham's English-Dutch and Dutch-English Dictionary (1660): "*een Pilot, Pilote, ofte Stierman, a Pilot, or a Steerman; 'the Steere-man, Den stier-man.'*"

THE FORTHCOMING MAGAZINES.

PROF. J. R. SEELEY has written an article on what he calls "The Eighty-Eights" (1588—1688—1888), which is practically a supplementary chapter to his *Expansion of England*. Its speculations on the light thrown by past experience upon the dangers to which the empire may now be exposed are likely to attract attention at a time when the national defences are so much discussed. The article will appear in *Good Words* for June.

MR. AUGUSTINE BIRRELL will in future contribute signed reviews of books monthly to *Atalanta*.

SINCE the subject of the National Portrait Gallery was taken in hand in the present volume of the *Antiquary*, some influential reviews have enforced the claims of the collection to be provided with an adequate and permanent home. In its next number, the *Antiquary* will make a proposal in connexion with the future of the collection which it is to be hoped will receive similar support. In the same issue, Dr. W. F. Ainsworth describes his visit to the site of Dara, in 1837; Mr. Roach Smith gives another paper on the Roman walls of Chester; and Mr. William Rendle, the veteran historian of Southwark, concludes his "Reminiscences and Remarks."

THE next issue of the *Archaeological Review* will contain papers on "The Origin of the Eskimo," by Dr. Robert Brown; "Sonship and Inheritance," by G. L. Gomme; "The Origin and Development of the Village Community in Russia," by M. Kovalevsky; "Prehistoric Remains in Spain," by Miss A. W.

Buckland; "Index of Roman Remains in London," by J. E. Price; "Domesday Measures of Land," by J. H. Round.

ARCHDEACON GORE will contribute to the *Quiver* for June a description of a holiday trip to "The New Playground of Europe (Norway)"; and the same number will contain the Earl of Meath's recent address to the Church Army on "The Gospel and the Masses."

THE June number of *Time* will contain "Work and Workers," No. VI.—The "Salvation Army," by Mrs. Drummond; "Matthew Arnold," by George W. E. Russell; "Hans Christian Andersen," by Mrs. Molesworth; "A Bye Election Contest," by Henry Jephson, formerly private secretary to Mr. Forster and Sir George Trevelyan; "Civil Employment of the Army Reserve," by Major Walter Lindsay; and "Among the Lilies," by Clement Scott.

THE June part of *Art and Letters* will contain "Notes and Recollections," III., by L. Halévy; "Sister Euphrasia," by G. Duruy; "The Centenary of the Times," II., by Blowitz; "Vous n'aimez pas," words by Bourget, music by Bernberg; "The Salon Forty," by P. D'Igny.

A NEW serial story by Kate Eyre, entitled "For the Good of the Family," will be commenced in *Cassell's Magazine* for June.

A NEW magazine is about to be brought out, called the *Mirror*, the special feature of which will be biographical sketches and portraits of men and women of the day. Art, literature, science, and the drama, are to be alike represented.

FRENCH JOTTINGS.

M. ALPHONSE DAUDET has sent to his publishers (Lemerre) the complete MS. of his new novel *l'Immortel*, of which, by the way, an instalment appears—in English, and entitled "One of the Forty"—in the first number of the new *Universal Review*.

IT is understood that the late M. Désiré Nisard (of whom a striking portrait is published in the current number of the *Livre*) had written his memoirs some little time before his death, and that they will now at once be published.

M. E. CARO and M. Paul Bourget—perhaps the two most popular critics in France, representing the old and the new school—have each published during the past week volumes with very similar titles: *Mélanges et portraits*, and *Études et portraits*.

M. ARSENE HOUSSAYE has finished a new play in three acts, called "Diane," which will probably be produced at the Odéon.

M. ZOLA's new novel, *Le Réve*—which, as stated in the ACADEMY last week, is to be published in a series of English newspapers—has already begun to appear in the *Revue illustrée*.

THERE has recently been discovered at Boksmeer, in Holland, a large packet of letters containing the correspondence that passed between Napoleon I. and his brother King Louis, of Holland. The letters had been deposited by the king with his private secretary, whose grandson is the present owner of them.

DOCUMENTS relating even remotely to Molière are, as is well-known, as rare and almost as highly prized as those relating to Shakspeare. There has recently been found at Fontainebleau a contract of sale signed by Molière's father, Jean Poquellin [*sic*]. It is dated May 29, 1631, when Molière was a little over nine years of age; and it has to do with the supply of a considerable quantity of furniture for the royal troops.

THE Cercle Saint-Simon, or Société historique—which was founded some six years ago to serve as a sort of club for literary men—has been compelled, through a decrease in its members, to abandon its own handsome house at the corner of the Boulevard Saint-Germain and the Rue Saint-Simon, and to accept the hospitality of the Hôtel des Sociétés savantes.

GREEN's *Short History of the English People* has been translated into French (Paris: Plon), with an introduction by M. Gabriel Monod, the editor of the *Revue historique*, in which he discusses the differences between the historical development of France and England.

M. DELOCHE has been elected a member of the Académie des Inscriptions, in the room of the late M. Charles Robert; and M. Fr. de Miklosich, a foreign member, in the room of the late Prof. Fleischer.

FASCICULE XV. of the *Archives Historiques de la Gascogne* is one of the most important of that excellent series. It is the first part (two hundred pages) of "Sceaux Gascons du Moyen-Age," with introduction, notes, and excellent engravings of every seal. The present volume contains those of the clergy, kings, and nobles. Those of the cities and the bourgeois will be given in part ii. The text of the documents to which the seals are affixed is added when of exceptional interest. As works of art the seals of the kings, and especially of the queens, of Navarre are the most noteworthy. Those of the clergy of all ranks give evidence of the ecclesiastical robes of the period.

WE have received some numbers of a new weekly published in Paris since February of the current year, which in form somewhat resembles the *Revue Bleue*, but which seems to have taken its title—*Samedi-Revue*—from an English contemporary. There are other points of likeness besides the title, for the *Samedi-Revue* is strongly conservative in politics, and appears to possess as unusual an acquaintance with English affairs as its namesake does with French. The editor is understood to be Capt. Lamblin, who has recently returned from Tonquin; and the list of contributors includes the names of Xavier Marmier, of the Académie française; Paul Le Breton, senator; and Victor Tissot. The articles, of course, are signed.

ORIGINAL VERSE.

VILLANELLE.

How to compose a villanelle, which is said to require "an elaborate amount of care in production, which those who read only would hardly suspect existed."

It's all a trick, quite easy when you know it,
As easy as reciting A B C;
You need not be an atom of a poet.

If you've a grain of wit, and want to show it,
Writing a villanelle—take this from me—
It's all a trick, quite easy when you know it.

You start a pair of rimes, and then you "go it"
With rapid-running pen and fancy free;
You need not be an atom of a poet.

Take any thought, write round it or below it,
Above or near it, as it liketh thee;
It's all a trick, quite easy when you know it.

Pursue your task, till, like a shrub, you grow it,
Up to the standard size it ought to be;
You need not be an atom of a poet.

Clear it of weeds, and water it, and hoe it,
Then watch it blossom with triumphant glee.
It's all a trick, quite easy when you know it;
You need not be an atom of a poet.

WALTER W. SKELAT.

MAGAZINES AND REVIEWS.

THE design on the cover of the *Universal Review* seems intended to be emblematic of the manner in which its birth has been heralded. Of the contents not much need be said. Mr. Verrall's article on Martial—"A Roman of Greater Rome"—with its happy renderings, would attract attention anywhere; and the illustrations are at least a novelty, as also is the translation of a fragment of M. Daudet's new novel. For the rest, we do not find much worthy of notice except the irrepressible individuality of the editor. The titles of the articles and the names of the writers tell their own story.

In the *Revista Contemporanea* for April, Señor Fatigati, considering the budget of education, points out the unpractical character of Spanish teaching, the necessity of reform, and the need of better buildings and materials. The same writer has an article on Madrid, which subject is also treated of by F. Hardt, who deals with its shortcomings in cleanliness and sanitary matters. Acero y Abad continues her chapters on Ginés Perez de Hita, criticising his romances, and the various imitators of them. In his notes on Algeria, Francisco Pons gives a good account of the agricultural Trappist establishment at Stauei and a description of Constantine. The conclusion of a review of Pereda's last novel, *La Montañez*, describes it as a "Madame Bovary" in higher Madrid life. A more recent novelist, Bueda, an Andalusian, is eulogised by Garcia-Ramon. Fernandez Merino begins a series of articles on the etymologies in the last edition of the dictionary of the Spanish Academy; the present portion only points out deficiencies in the "personnel" of that corporation regarded as lexicographers.

CORRESPONDENCE.

THE ALLUSION TO SHAKSPEARE WANTED IN 1659.

3, St. George's Square, N.W.: May 7, 1883.

When issuing for the New Shakspeare Society, at the end of 1886, the *Three Hundred and More Fresh Allusions to Shakspeare*, which our society's members had gathered since sending out the second edition of *The Centurie of Prayse*, I noted that in neither book was any allusion to Shakspeare in 1659 registered, though in the hundred odd years from 1592 to 1694 we had collected some 700 allusions. I was sure, of course, that this was our fault, and not that of Shakspeare's seventeenth-century admirers; but, though several escaped allusions have been since sent to me for a supplement, none for 1659 turned up till a few days ago when, reading the article "Shooter's Hill" in Thorne's *Environs of London*, I came on the passage wanted, from Thos. Philipott's "Villare Cantianum"—an alphabetical list and account of the chief places in Kent, with the less villages, &c., set under them, so as not to be alphabetical. Copying from the folio of 1659, p. 136, the words are (after others on the improvement of the road, to stop thievery):

"King Henry the fourth granted leave to Thomas Chapman, to cut down, burn, and sell, all the Woods and Under-Woods growing and confining to Shooters Hill on the South-side, and to bestow the money raised thereby upon mending the High-way. Surely Prince Henry his son, and Sir John Falstaffe, his make-sport, so merrily represented in Shakspeare's Comedies, for examining the Sandwich Carriers loading at this place, were not the Surveyers."

To anyone who will send me other allusions of 1592-1694 not in the *Centurie* or *Fresh Allusions*, I shall be grateful.

F. J. FURNIVALL.

THE BEECH AND THE ARYANS.

Queen's College, Oxford: May 12, 1888.

Prof. Terrien de Lacouperie's views in regard to the primitive home of the Aryans have been stated by him with his usual fullness of learn-

ing and freedom from conventional doctrines. In suggesting, however, that the original speakers of the Indo-European languages may have been the short brachycephalic race from Asia, he has forgotten the one certain fact supplied to us by history, from which we are bound to start. In the Roman era the representatives of the Aryan Kelts and Teutons were a tall, blue-eyed, fair-haired race. Now, as a general rule, it is not the subject population that imposes its language upon its conquerors, but the conquering aristocracy which causes its language to prevail, like Etruscan in Northern Italy or Sanskrit in Northern India. It is only where the conquerors come into contact with a sacred book, an established church, or a hierarchy of priests that the contrary process is likely to take place. The Celtic and Teutonic dialects of the Roman age must have been the original property of the chiefs rather than of the serfs.

But it was not in order to controvert Prof. de Lacouperie's views that I sat down to write. That would require far more space than could be allowed me here, and would open up the question upon which I touched in my address at Manchester, whether there are not two distinct branches of the white dolichocephalic race, one of which may be termed Kelto-Libyan and the other Scando-Teutonic. What I want now to do is to make amends for exciting a controversy through the introduction into that address of an unfortunate illustration.

Sir George Birdwood has urged that if the beech had been known to the undivided Aryans they could not have lived in Scandinavia, since, according to the Scandinavian archaeologists, the beech did not grow there until long after the close of the neolithic age. Dr. Penka has just replied to this objection in the *Globus*, vol. liii., No. 13. He argues that the climatic conditions demanded by the beech already existed in Southern Scandinavia in the neolithic epoch, and that the objects of the iron age usually supposed to be coeval with the appearance of the beech were really very much later, having either sunk to the level of the stratum in which traces of the beech are found, or else been thrown into lakes and morasses where the stratum in question approached the surface of the ground. In many cases, indeed, they were artificially buried.

But I am beginning to feel considerable doubt as to whether, after all, the beech was known to the primitive Aryans. It certainly cannot have derived its name from its edible fruit, as Dr. Penka assumes, since it is only in Greek that *pay-* means "to eat," and in Greek *pay-* is "oak," and not "beech." Consequently, if *pay-* is derived from *pay-*, its original signification would be "oak" rather than "beech." It is only in Latin and Teutonic that the word signifies "the beech," since the Old-Slavonic *buky* has been borrowed from German, like the Bohemian *buk*, and the vowel of the Persian *buk* is inconsistent with its being a sister form of *fagus*. The fact, however, that the word has been borrowed in Slavonic suggests that it has also been borrowed by the German dialects, though at a period before the action of "Grimm's Law" had made itself felt. This was the case with the Old High-German *hanf*, "hemp," which was borrowed from the Latin *cannabis*, itself a loan-word from the Greek *kannabis*; and also with the Old High-German *lîn*, "flax," and *lewon*, "lion," which, along with the Latin *linum* and *leo*, go back to the Greek *linon* and *léon*.

I am therefore inclined to regard the Old High-German *buohha* (Anglo-Saxon *bōce*) as borrowed from the Latin *fagus* at the same period as *lîn*. Beech-mast has been discovered in the Swiss lacustrine habitations of the later neolithic age; and it is reasonable to conclude that the ancestors of the Aryan Italians applied

to the tree they found in this locality a name which may previously have denoted some species of oak,
A. H. SAYOR.

APPOINTMENTS FOR NEXT WEEK.

TUESDAY, May 22, 8 p.m. Royal Institution: "Conventions and Conventionality in Art," I., by Mr. Sidney Colvin.

WEDNESDAY, May 23, 8 p.m. University College: Barlow Lecture, "Dante," III., by the Rev. Dr. E. Moore.

8 p.m. Society of Arts.

8 p.m. Geological: "The Spheroid-bearing Granite, Mullagherry, co. Donegal," by Dr. F. H. Hatch; "The Skeleton of a Saurpterygian from the Oxford Clay, near Bedford," by Mr. R. Lydekker; "The Mesozoic and Paleozoic Rocks of the Atlantic Coasts of Canada in comparison with those of Western Europe and of the Interior of America," by Sir J. W. Dawson; "A Hornblende-biotite Rock from Dusky Sound, New Zealand," by Capt. F. W. Hutton.

8 p.m. Gymnasion: "A Critical Estimate of Welsh Poetry," by Mr. T. Marchant Williams.

THURSDAY, May 24, 8 p.m. Linnean: Anniversary Meeting.

8 p.m. Royal Institution: "The Growth and Sculpture of the Alps," II., by Prof. T. G. Bonney.

8 p.m. University College: Barlow Lecture, "Dante," IV., by the Rev. Dr. E. Moore.

8 p.m. Telegraph Engineers: "My New Standard and Inspectional Electric Measuring Instruments," by Sir William Thomson.

FRIDAY, May 25, 8 p.m. Quaker: Papers by Messrs. Bulham, Smith, and Priest.

9 p.m. Royal Institution: "Personal Identification and Description," by Mr. F. Galton.

SATURDAY, May 26, 8 p.m. Royal Institution: "The Later Works of Richard Wagner," VII., by Mr. Carl Armbruster, with Vocal and Instrumental Illustrations.

8 p.m. Physical: "The Governing of Electromotors," by Prof. W. E. Ayrton and Prof. J. Perry; "The Formulas of Bernoulli and Haecker for the Lifting Power of Magnets," by Prof. S. F. Thompson; "Experiments on Electropleps. II. Irreversible Conduction," by Mr. W. W. Haldane Gee and Mr. H. Holden.

8.45 p.m. Botanic: General Meeting.

SCIENCE.

The Timaeus of Plato. Edited, with Introduction and Notes, by R. D. Archer-Hind. (Macmillan.)

We have here a work worthy of the reputation of Cambridge for scholarship. Full and clear, systematic and accurate, it is one of the best among those valuable studies of Plato of which Cambridge has recently been fertile.

Mr. Archer-Hind has chosen a dialogue of no common difficulty, for the student of the *Timaeus* meets with stumbling-blocks of many kinds. First, what is its place in Plato's system, or in the sequence of his works? Mr. Archer-Hind is of opinion that it belongs to a group of dialogues "of the later period" (*Parmenides*, *Sophist*, *Philebus*, and *Timaeus*), which give an "amended form" of the teaching of another group to which the *Republic* belongs. This theory looks plausible when one considers under Mr. Archer-Hind's guidance the attempts to amend and to defend the ideal doctrine of the *Republic* and its group which the *Timaeus* contains. But yet we do not feel it possible to separate so widely the *Timaeus* from the *Republic*. If any two dialogues of Plato belong to one group, these two do so. Plato writes with a purpose even when he is apparently composing with the lightest heart, and he has himself put the close connexion of these two beyond question. The *Timaeus* then begins with a résumé of the *Republic*, and here we come on our next difficulty. As often happens with résumés, one has to go back to the work analysed to find out what the analysis means and to watch its correctness. The inferior children of the Guardians in the *Republic* were to be made away with; but

the *Sekrates* of the *Timaeus* unblushingly says that they were to be "secretly dispersed" among other classes. Next we have the much-debated legend of Atlantis, about which we hold, even more strongly than the editor does, that it was a pure invention of Plato from beginning to end. He is "our only authority for the legend." It is nowhere else alluded to, not even in connexion with Attalus's commemoration of the great battles of Athens, when the Amazons were remembered. Then we come to the account of creation, much of which must, as the editor says, be taken as an "ontological scheme in the form of a highly mystical allegory." "The *δημιουργός* is merely a mythological representative of universal *νοῦς*, which evolves itself in the form of the *κόσμος*." Only by reading the allegory thus can we explain the dark saying that the universe is *εἰκὼν τοῦ ποιητοῦ* (P. 92 C); the *δημιουργός* and the *αὐτὸ ζῶν*, from which the universe is copied, are one and the same. Interwoven with this is the ideal theory, which is at least as hard to grasp as Plato found it to write. Lastly, there are the many difficulties of a mathematical nature, and those springing from the state of physical science in the fifth century B.C. In advance as he was of his age in speculation, Plato could not escape its limitations in positive knowledge; and we find his attempts at explaining natural facts so obscure and so remote from our ways of thinking that they themselves need to be explained. But all through these manifold difficulties we desire no better guide than Mr. Archer-Hind. Without always being able to agree with him, we feel that he has done more for his subject than any editor before him. He has wonderfully elucidated the dialogue by his commentary and by his account of the allegory, and has given us a spirited and faithful translation. But he seems to be on a wrong track in placing the *Timaeus* where he does. We can only decide such questions as that of the order of Plato's writings by comparing views, and giving the latest place to what seems the most complete development, if we know already that the writer persevered in one line of thought; but that is just what we do not know about Plato. The growth of the writer's art is another criterion; but it is not favourable to the theory that the *Timaeus* came late. That composition is not a lively dialogue, with a share of ethical interest, but a tedious sermon, which does no justice to its magnificent subject and really noble thoughts: one speaker has it all to himself. Yet we must not lay great stress on this criterion; for, so far as we can judge, the *Timaeus* is later than the *Republic*, though so inferior to it in literary skill, in dramatic power and interest. In fact, criteria, internal as well external, fail us for the ordering of Plato's dialogues; and no theory of the order can be more than an insecure foundation for further reasonings.

We subjoin notes on a few passages which seem open to doubt. (1) What reason is there for thinking that Hermokrates here is the Syracusan general? He is a foreigner, as P. 20 c shows, but that is no proof. (2) P. 18 A. Can *τούτοις* refer to the feminine *γυμναστική* καὶ *μουσική*? Is it not the Guardians? (3) P. 22 d. *λύομενος* cannot mean both "by releasing his founts" (trans-

lation) and "being released" (note). The latter is probably to be preferred. (4) The translation omits *τῇ λόγῳ* in P. 47 n. The construction of the dative is not certain. Perhaps it is most likely to be the instrumental dative, but we might also think of the *λόγος* as personified. (5) P. 50 A. The whole clause, from *δεικνύντος* to *ἔστι*, is omitted in the translation. (6) P. 52 b—c. Mr. Archer-Hind has probably hit on the right explanation of *ἐαυτῆς*, which has troubled everyone before him. There is a *σχῆμα πρὸς τὸ σημαίνον*; and *ἐαυτῆς* is governed by *αὐτὸ τοῦτο ἐφ' ᾧ γέγονεν* (which = *παράδειγμα*), just as if *π.* had been written. But what is the government of *ταῦτα δὲ πάντα* just above, and what the meaning of *διοριζόμενοι*? The translation does not tell us. (7) In P. 70 b we should take *εἰς τὴν δορυφορικὴν οἰκίαν* κατέστησαν differently from the editor. In fact, we doubt whether it even can mean "[the heart] they made into the guard-house." It seems to us to mean that the creators placed the heart in the guardhouse, i.e., in that part of the body which is the seat of the spirit, the guard and champion of reason. (8) P. 89 d, *καθ' ὅσον ἂν ᾗ τῷ σχολῇ*, understand of time left, not only for mental cultivation, but also for a man's occupation or profession; cf. *Rep.* 406.

F. T. RICHARDS.

PHILOLOGICAL BOOKS.

Comparative Philology. By G. W. Wade. (Rivingtons.) In form and contents this little book resembles Dr. Peile's *Primer of Philology*, though it is far from being so able a work. It is, however, sensibly put together, and is fairly up to date. A good many of the obsolete ideas which still hold their places in English manuals are here omitted, in favour of correcter views, and that without any great loss of clearness. We are not sure, however, that Mr. Wade has quite grasped "the methods and principles" of recent philology. Certainly he has missed the importance of analogy, of which he seems to have heard rather than read. His book would be the better for a firsthand study of (say) Brugmann and Joh. Schmidt. We hope Mr. Wade will undertake such a study, and embody the results in a second edition. At the same time he might correct various slips and misprints, and, above all, simplify the alphabet of the *Ursprache* printed on p. 78. A³, K³, GH³, are all very well for an advanced scholar, but if Mr. Wade tried to teach these symbols to schoolboys (or girls), most of the pupils would laugh, and none would understand. The "Slavonic *szimtas*" (p. 76) might also disappear. There are many Slave languages, and *szimtas* happens to be Lithuanian, the "Church Slavonic" form being *szto*. Instead, we might have a word about the nasal and liquid sonants and the like, which are very important to the Greek philologist. The chapter on the origin of language is superfluous, and should be omitted.

A Dictionary of Place-Names: giving their Derivations. By C. Blackie. Third Edition, revised. (John Murray.) The first edition of this book was published in 1875 under the title of *Etymological Geography*. As it only claims to be a school-book and not to contain the results of independent research, it ought not, perhaps, to be judged by a very high standard. This new edition has been "revised," and enlarged by about fifty pages, but it cannot be said to have been materially improved. Miss Blackie does not seem, for instance, to

be acquainted with Dr. Egli's *Etymologisch-geographisches Lexicon*, published in 1880, which is now the standard work on her subject. It would have enabled her, with little trouble, to have brought her book more nearly up to the present standard of knowledge. As Miss Blackie professes to be merely a compiler and not a philologist, it would be unfair to criticise too harshly the etymologies she has inserted, many of which are, to say the least, somewhat dubious. But she might at all events have copied accurately from her authorities, and corrected her proofs with greater care. The Celtic derivations, which have been revised by such competent scholars as Dr. Joyce and Dr. Skene, are the most satisfactory portion of the volume. Elsewhere inexcusable blunders or misprints are to be found. Thus the chief authority for Teutonic names, Dr. Förstemann, is repeatedly called "Forsteman," and one of his books, *Die deutschen Ortsnamen*, is quoted as *Deutsche Ortsnamen*. Opening the book at random, we find on p. 242: "Wurtemberg, anc. Wrtinisberk." Either Wurtemberg or Wirttemberg might pass muster, but not Wurtemberg. Both Förstemann and Kausler, from one of whom the ancient form of the name seems to be copied, give it correctly as "Wirtinisberk." Hard by we find "Huieci" for Huieci, the Latinised form of the name of the Saxon tribe of the Hwiccas. All these errors appeared in the first edition, and remain uncorrected in the third. On the same page two new etymologies are inserted, both of which are erroneous. The Norse *ormr*, "a serpent," appears as *ornr*, while a little higher up is one of the funniest blunders we have ever happened to come across. We are told that the old name of the Isle of Wight was "Zuzo-yr-With." The mysterious *zuzo* is plainly a misprint for *ynys*; and, though not a single letter of the word happens to be right, it is easy to see how an ingenious compositor, confronted by a badly-written manuscript, successively perverted each of the four letters. But it is not so certain that the schoolchildren, for whose use the book is designed, will detect the error, which will doubtless be duly copied by future compilers of books on local names. A book on geographical names is useless unless they are correctly printed, and it would be easy to enlarge the list of errors. Thus, in both editions we have "Spalatro" for Spalato, "Slangenbad" for Schlagenbad, "Kupperberg" for Kupferberg and "Nurnberg" for Nürnberg, as well as the marvellous name, "Bains-les-du-Mont-dore," which has evidently been copied without thought from a gazetteer, or from the index to some atlas. Even where the first edition has been revised it is not always done correctly. Thus Königsberg appears in the first edition as "Konigsberg," which is altered to the hardly less erroneous form "Königsberg" in the third. It would be unfair to criticise severely the cases in which Miss Blackie has correctly copied from her authorities, but it may be remarked that she has not always gone to the best sources of information. Thus she derives the name *Devizes* from *de vies* (*sic*), and interprets it as "a place where two ways met"; whereas Dr. Guest has shown that the old name *Divisae* or *Ad Divisas* marked the ancient boundary between the English and the Welsh. It is a pity that the significance of a name which possesses so much historical interest should thus be missed. To take another instance, she gets the name of the Danube from the Teutonic *Tuon-aha*, the thundering water, whereas the two best authorities, Zeuss and Glück, more reasonably derive it, with reference to its strong current, from the Celtic *dan*, fortis. Prof. John Stuart Blackie, the brother of the author, contributes an interesting and well-written introduction; but surely a classical professor ought to have heard of the Indo-European *Ure Sprache*, and should have known

better than to derive Gaelic from Latin, and Latin from Gaelic, indifferently on the same page. Thus he tells us (p. xxiv.) that the Latin *aqua* is an abraded form of the Gaelic *uisge*, water; and also that the Gaelic *amhainn* is evidently softened down by aspiration from the Latin *amnis*. If, in the present year of grace, a philological professor is capable of such statements, we must not be too hard on a lady who has evidently devoted immense labour to a work which, with the needful revision, might be really useful to those for whom it is designed.

A Note on Indo-European Phonology. By D. B. Murdoch. (Trübner.) Dr. Murdoch, L.R.C.P., L.F.P.S., F.R.G.S., B.Sc.M., &c., Int. B.Sc. Lond. Univ., &c., &c., may be a very clever doctor, for aught we know. But, if his philology is seriously meant, we would entreat him to reflect on the proverb *Ne sutor ultra crepidam*. Amid much information, his forty-page pamphlet contains a good deal of ignorance. "The first syllable of *mu-lgeo* reminds us of the *moo-cow* of the English nursery" (p. 9) will serve as a specimen. At the same time, we respect and applaud Dr. Murdoch's enthusiasm for the Greek language.

SCIENCE NOTES.

THE Geologists' Association have arranged for an excursion to Charnwood Forest on Whit Monday and Tuesday. The headquarters will be at the Royal Hotel, Leicester.

THE third edition of *The Management and Diseases of the Dog*, by Prof. J. Woodroffe Hill, will shortly be published by Messrs. Swan Sonnenschein & Co.

MRS. McKENNY HUGHES, the wife of the Woodwardian Professor of Geology at Cambridge, has contributed to the current number of the *Geological Magazine* a valuable paper, embodying the results of many years' study of the Mollusca found in the Pleistocene gravels of Barnwell and elsewhere in the neighbourhood of Cambridge. It is shown that these deposits contain six species of Mollusca which are no longer living in Britain; some of these forms being of northern and some of southern range, while others enjoy a wide geographical distribution. The gravels also contain six or eight species which have disappeared from the district, but are still living elsewhere in England; while, on the other hand, certain species now common near Cambridge are absent from the gravels.

THE Hollandsche Maatschappij der Wetenschappen, of Haarlem, have just issued the first volume of the great work they have undertaken to commemorate the eminent Dutch savant of the seventeenth century, Christiaan Huygens. This will be an annotated edition of his complete works, including his correspondence and a biography. The correspondence alone will fill some eight large volumes; and this first volume covers the period from 1638 (when Huygens was only nine years old) to 1656. The letters received by Huygens were bequeathed by him, with his own unpublished papers, to the university of Leiden, and have before now been made use of by his literary executors and others. The chief labour of the present editors has been to collect the letters written by Huygens himself, which are scattered throughout the libraries of Europe, and to arrange the whole in chronological order. They have added abundant notes, giving biographical details not only of the correspondents but also of all the persons mentioned, besides full indices. Prefixed is a photogravure of the well-known picture at the Hague, showing the father of Huygens surrounded by his children. This picture, by the way, was formerly attributed to Vandyck, but now to A. Hanneman. The book is beautifully printed,

in large quarto, by the firm of Joh. Enschedé et Fils, of Haarlem, of which the editors say that it worthily maintains the honourable traditions of old Dutch typography; and it is published at the Hague by Martinus Nijhoff.

Étude historique et critique sur la Peste. Par H. Émile Rébouis. (Paris: Picard.) During the great plague of 1348, the Faculty of Medicine of Paris drew up, at the royal command, a consultation or opinion upon the causes and remedies of the epidemic. M. Rébouis professes to publish here for the first time a complete copy of that interesting document, and adds a translation of the Latin into French. This is good work well done, and justifies the publication of this little book; but not at all its title, for so trite and superficial a sketch of the subject ought surely not to be entitled a critical and historical study of the plague.

MEETINGS OF SOCIETIES.

CLIFTON SHAKSPEARE SOCIETY. — (Saturday, April 23.)

W. R. ETCHEMS, Esq., in the chair. — Miss Louisa Mary Davies, in a paper entitled "First Impressions of the Sonnets of Shakspeare—December 31, 1609," gave a view of the sonnets as they would have appeared to an elderly gentleman alive at the time of the publication of these much maligned poems, and by whom they were regarded simply as literary productions, no notice being taken of their supposed autobiographical or allegorical character. In the first place he would acknowledge his gratitude to the honoured Earl of Surrey for bringing to our shores this graceful form of versification—three fourfold strands of poesy, caught up, and dexterously wound into a perfect circle by two shining threads of gold. Then he would dwell on the sympathetic quality of poetry as shown in these verses which had waked in him a hundred happy thoughts, just tinged with that sweet sadness that makes them seem realities and not dreams. In some of these sonnets we can almost hear the very heart-beats of the writer; and yet, although the sonnets possess such intensity of feeling, not obscured as in so much of the poetry of Master Edmund Spenser in his exquisite *Faerie Queene*, the brain-work at their root is also the crown of their splendour, if not the highest factor in their worth. In many we hardly know whether to bestow our chief admiration on the intellect that conceived them, on the poetic imagination that clothed them, or on the artist-skill that moulded the various lovely thoughts into one perfect whole. Sonnets lxi., cxxix., cxlvi., are only instances where profoundest sense and brilliant imagination are blended with an unsurpassable artistic terseness, and where the antitheses are remarkable alike for sharpness and accuracy. If no other proof offered of Master Shakspeare's glorious intellect as unveiled in his sonnets, it would surely be sufficient to point to a series beginning with xviii., and continuing with scarcely any intermission to lxxvii., which ring an indescribably graceful set of changes on the simplest and yet most complex of all themes—"I love you." At the first hearing we may fancy we detect duplicates, but a closer attention brings to our apprehension new and charming shades of difference, the more truly appreciated because they must be listened for. Truly his delicately-tinted love sonnets are like the closely-folded petals of the rose he so dearly loves, each one differing somewhat from its neighbour, each modestly enclosing its own choice beauty and fragrance, each necessary to the perfect whole, and all binding in homage toward their common centre. But marvellous as is the "body" of these poems, so also is our admiration called forth for their poetry and music—the two beautiful garments in which they are clothed. Nearly every line runs over with poetry and turns to music on the tongue. Some of the finest passages in the sonnets are inspired by the observation of nature, for example, the whole of xxxiii. and lxxiii., and many passages scattered here and there. Music in poetry comprehends a great deal more than the liquid flow of syllables and the due adjustment of long and short

vowels. To be perfect it requires also the harmony of sentiment and sound. This finds its absolute fulfilment in *lxxi.*, in which the feeling and rhythm alike are eloquent of mournful self-abnegation. This perfect harmony of conception and form is observable in many others, notably in *xxix.*, *xxx.*, *liv.*, *lx.*, and *lxxxvii.*—Mr. S. E. Brough read a paper on "The Use of Alliteration in Shakspeare's Poems." The predominance of alliteration forms a part of the very genius of our language; and while it gives force to the dialect of the rudest peasant, its artistic employment renders it capable, in the hand of the orator or poet, of marvels of expressiveness, infinitely various and often exquisitely delicate. In Anglo-Saxon poetry, the versification contains few rhymes and depends neither on the length nor the number of syllables in a line, but is based entirely on alliteration. And it has always played an important part in the rhythm of versification. As for force and harmony English prose is also much indebted to the skilful use of alliteration, it is astonishing that, in works on style in English literature and kindred subjects, its importance is so ignored. It is commonly alluded to as a trick which is rather to be avoided than otherwise. Its abuse is ridiculed, and then the matter is dropped. Now, if the use of marked alliteration in almost every sentence is a blemish, all our greatest masters of prose style did not know how to write English. It was then pointed out that alliteration is useful in (1) giving rhythm and emphasis, (2) accentuating antithesis, (3) associating allied or related ideas, (4) emphasising significant combinations of letters, (5) imparting effect to assonance; and examples of these were quoted from Shakspeare's poems and sonnets.—Mr. W. R. Etches read a paper on "Shakspeare's Autobiography in the Sonnets." He said that the biographical materials we possess are so scanty and so much of the nature of conjecture that we are unable to form any certain idea of what manner of man Shakspeare was in his daily life apart from his work. It is no wonder that we look eagerly to the sonnets for biography, although that which they reveal may not coincide with our preconceived idea of the great man's life. But even here all is not certainty. At the very outset we are disturbed by the perplexity which Thorpe has caused by writing only the initials "W. H." instead of "the onlie begetter's" full name. While adopting the generally received view that the letters stand for the name of William Herbert, there is a difficulty in believing that Shakspeare could have written such adulatory language to a man so weak, reckless, and mean, as Herbert. And although from a comparison of sonnets *xlii.*, *lxx.*, *lxxix.*, *cxvii.*, some reasons might be adduced for considering the "dark lady" as a dramatic device, yet from the flesh and blood likeness of all the descriptive sonnets, it is better to accept the personal interpretation; and the story of Mary Fitton in connexion with Herbert renders the double identification most probable. With all the flattering words used towards Herbert, who stands, as it were, for Shakspeare's dramatic ideal, the poet does not hesitate to tell "the tenth muse" (!) very decidedly about his faults (*xciv.*—*xcvi.*). Altogether the conclusion is irresistible, that, in the sonnets, Shakspeare is relating his own experience, although it is doubtful if he ever intended them for publication; and it is not likely that these are "the sugred sonnets" which Meres said Shakspeare had distributed "among his friends," for to these that description is certainly not appropriate.—"A Member" sent a paper on "The Two Angels of Sonnet *cxliv.*" In previous sonnet evidence exists that Shakspeare was making an effort to show that his love for the dark lady was not weakening his affection for his friend. The argument, however, was self-deluding. But yet it is interesting as representing the struggle between good and evil in the writer's soul. Although he recognises the woman's evil influence, his mad infatuation is too strong, and he remains in her toils. Sad it is to trace the progress of the sinful story; to witness the gradual uprooting of all pure friendship; the base degradation of manhood to be seen in the pitiful pleading for, at least, "a show of love"; the faint longing, now and then visible, after better things; and, finally, the determined extinction of reason, the wilful acceptance of evil, and the sad foreknowledge of eternal defeat and loss.

CAMBRIDGE ANTIQUARIAN SOCIETY.—(Monday, April 30)

PROF. A. MACALISTER, president, in the chair.—A memoir by Mr. C. T. Martin (of the Public Record Office) was read by the secretary upon eleven deeds, mostly charters of feoffment, dating from 1439 to 1646. They had been found by the Rev. F. O. Marshall, Rector of Wilbraham Parva, in the parish chest, and relate to three several properties in that parish. One of these charters (No. 4, dated 1480) bears the signature of the Earl of Surrey, the victor of Flodden; Sir John Cheyne, who is mentioned in the same deed, afterwards fought by the side of the Duke of Richmond against Richard III. at the battle of Bosworth. In No. 5 mention is made of Anglesey Priory, a house of Austin Canons founded by Henry I., and granted at the Dissolution to John Hynde; of this a full account has been given in the *History of Botolph Claydon* by Mr. E. Hailstone, issued by this society in 1873-78.—Mr. Jones exhibited and described a collection of antiquities found within the last few years in the neighbourhood of Royston, of which the following are the most notable: A small gold annular brooch set with two red stones, and bearing a Christian legend *IESV . . .*, dating probably from the twelfth century A.D. Bronze bust of a Roman lady, three inches high; the hair is dressed in the style of the end of the third century A.D. Of the nine Saxon fibulae exhibited, the most remarkable were a pair, found at Barrington, with trefoil and crescents at the ends, about two inches long; and a smaller annular one from Royston Heath, formed of thick wire, convoluted in half of its circuit. From the same place came a beautiful bronze awl, possibly Celtic, two inches long; one of similar form is given by Evans (*Ancient Bronze Implements*, p. 189, fig. 224).—A communication by the late Mr. C. W. King upon an antique calcedony signet, bearing in intaglio the Fall of Kapanews, was read by the secretary. After alluding to the warnings against sin exhibited in the similar signet-devices—of Philoctetes, stung by the serpent in the very act of betraying the deposit of his dying master—of the impious Theseus fixed eternally upon his iron chair before the gates of Hades—and of the unconquerable Heracles, a victim to the potency of wine, he proceeded to describe the fate of Kapanews, struck down by Jove's lightning from the Theban walls which he had sworn to scale, even in Heaven's despite. The subject was a favourite with gem-engravers, and another example from the same collection on a sard (necessarily of different treatment) was exhibited; the calcedony had been traced back to the Comte de Caylus, to whose cabinet it belonged in 1782. It seems that in this case alone architectural details of the Kadmeian Gate and of the city-battlements have been introduced.

PHILOLOGICAL SOCIETY.—(Friday, May 4.)

THE REV. DR. R. MORRIS in the chair.—Mr. A. J. Ellis first stated that of his work on "The Existing Phonology of English Dialects," on which he read reports this time last year and the year before, 333 pages were in type (of which 224 pages had been printed off), and that about 500 pages more would probably complete the work by May, 1889. The whole of the remainder of the MS. was complete, and a considerable portion of it corrected for press.—Mr. E. L. Brandreth then read a paper on "A Sub-Editor's Work for the Society's Dictionary." First, he has to hunt up the history of words. Take as a sample "Home Rule." Mr. Brandreth gave an amusing account of his applications to Home Rulers here, who knew nothing about the history of the phrase. The first name was "The Home Government Association for Ireland," 1870, started by the Protestants, in disgust at Mr. Gladstone's disestablishment measures. Mr. MacGuire, in his speech on June 26, 1871, was the first noted user of the term "Home Rule" in the House of Commons. Mr. Brodrick (now the Warden of Merton) used it in a lecture in January, 1871, and printed the lecture in *Macmillan's* for May, 1871, "what is termed Home Rule." Mr. Timothy D. Sullivan, M.P., the editor of the *Nation*, says that in 1860, in an Irish petition to the Queen, printed in the *Nation* of July 28, the phrase "Home Rule" was used as its third heading by his late brother, A. M. Sullivan. The term was

nearly still-born, but revived in 1870 on the foundation of the Home Government Association for Ireland. Next, the sub-editor has to trace the changes of meaning in words—thus of home, it meant (1) the village community, as contrasted with the separate family dwelling *um*. *Str. ashema* is a place of rest; in *Pall*, *lum*, *Nirvana* (a blowing-out). Later, *um* and *lum* changed meanings, though in Scotland "toon" is still the "home" or farm-buildings and yard. Again, "heat": meaning 5 in Johnson, is "one violent action intermitted"; this is justified by Dryden, "a cause between the heats." But "cause" is a mere misprint for "pause." Johnson also wrongly separates "heat" in a race into two meanings, and gives two definitions for it. Next, "heart": it is physically affected by emotions, and it is thus regarded as the seat of strong or deep emotions; thence it is transferred to the emotions themselves; it is the seat of courage and understanding, and courage and understanding themselves. "Learn by heart" is first used by Chaucer, but occurs in French a century earlier, "par quer," so that one phrase is probably a mere translation; it is not of Teutonic origin. "Heart" is often personified as "the heart went down on its knees" in the time of Elizabeth; it stands for "the whole man"; a person beloved is "a sweetheart." Next, "health": means (1) cure, healing; (2) salubrity; (3) the state of the functions of the body. Last, Mr. Brandreth treated of "head," "language of the head," by movement and position, &c.

UNIVERSITY COLLEGE LITERARY SOCIETY.—(Monday, May 7.)

THE PRESIDENT in the chair.—Miss A. B. Anderton read a paper on "The Character of Shylock." Shylock while repelling us by his cruelty, awakens our sympathy by reason of the disadvantages against which he had to contend. His cruelty is to be accounted for, to a great extent, by the hatred and contempt felt for the Jews by all Christians, and by the tyranny which had been exercised over them for centuries. Writers, imbued with this hatred, had thrown it, in all its bitterness, into the character of the Jew. Marlowe's "Barabas" may be taken as an illustration. Shakspeare, with his wider sympathies, saw the Jew's side of the question also; restrained to a great extent by public opinion, he yet succeeded in presenting to the world a man who at least wins our sympathy, though not our admiration. Shylock under his harsh exterior gives occasional glimpses of a softer nature which has been beaten down by love of money, his ruling passion for which everything is neglected. Its only rival is hatred for the Christians, national and personal; and this too, finally gives way to it as the stronger. In Antonio's necessity he sees a way of requiting the injuries done to himself and his race. After the loss of his daughter as well as of his money, his sole object is revenge; and this he pursues in spite of all efforts to appease him before and during the trial. But, at the last moment, he is disappointed, and finds himself reduced to giving up either his money or his religion and nationality. After a final struggle, he sacrifices the higher possessions for the lower, which has gained the full mastery over him. He returns to his home amid the contempt of all, except, perhaps, of Portia, who alone will be able to reconcile him to his daughter, if such a reconciliation ever takes place.

FINE ART.

THE GROSVENOR GALLERY.

SOMETHING like what was once said of life may be said of this year's "Grosvenor." It would be tolerable if it were not for its important pictures. In the extraordinary composition which Mr. John Reid calls "Smugglers—Cornwall Sixty Years Ago," the artist seems to have determined to set aside all laws of nature and art. It is useless to attempt to criticise such a chaotic canvas, and all that can be said is that we hope he "won't do it again." The fiasco is all the more deplorable as Mr. Reid is

one of those always rare painters who have a true gift of colour. From Mr. E. F. Britten less was naturally expected; but he has done pleasant and clever work before, and there is much reason for disappointment at the large weak picture which is intended to bring before our eyes the spectacle of "A Noble Family of Huguenot Refugees shipwrecked on the Suffolk Coast," in 1572 (30). Mr. Arthur Hacker's large composition, "By the Waters of Babylon, &c." (93) has some dignity of conception and pathos of expression; but it is yet far below its subject, and the limbs of the figures are poor in shape and colour. Indeed, in more than ordinarily ambitious work, Mr. Jacob Hood is the only artist who can be sincerely congratulated. His "Triumph of Spring" (170) is sweet in colour and fresh in sentiment, full of pretty incident, especially of childish pose and expression, and is altogether a bright and pleasant vision.

The pictures by members of the Academy and other artists of long-standing reputation do not add much strength to the exhibition. Sir John Millais's portrait of "Sir Arthur Sullivan" (71) is not a success. Mr. Poynter's nameless half-figure (15) is dry and dull; in "Welcome," a large half-figure of a girl with bare arms, in a spring landscape, Mr. Boughton has for once chosen a subject unsuitable to his charming talents; and what Messrs. A. Moore, John Pettie, J. McWhirter, P. R. Morris, and G. D. Leslie have chosen to send to this gallery will not much enhance its reputation or their own. In an exhibition which may be generally characterised as one of disappointments, not the least is the contribution of the deservedly famous artist, Prof. Adolph Menzel. His "Piazza d'Erbe, Verona" (118) is indeed full of talent and knowledge, of admirably drawn figures and lively incident; but in colour (despite the bit of blue sky and sunny street in the distance) it reminds one of London on a dingy day, rather than of Verona.

It is rather an account of the poverty of its surroundings than to any very special merit that Mr. E. J. Gregory's portrait of "Miss Mabel Galloway" (9) assumes a position of considerable importance in this exhibition. The painting, especially of dress and accessories like the Japanese vase and the peacock feathers, is no doubt of unusual dexterity, and there is a force of colour and presentment which is distinctive of the artist; but the arrangement of the legs is singularly unhappy, the background of stamped gilt paper or leather does not keep its place (so that the figure, though seated on the table, seems to be flat against the wall), and there is more show than refinement about the whole work. Both in its merits and defects, it differs much from Mr. Stuart Wortley's lively and beautiful portrait of "Mrs. Monckton" (144), where the mind of the painter has been solely engaged and his aim entirely satisfied in realising the charm of his sitter's face and character. In portrait-painting at least, "the subject" should be of paramount importance. There are other very good, if not superexcellent, portraits here. Among them may be reckoned Mr. J. J. Shannon's full-length of "Henry Vigne, Master of the Epping Forest Harriers" (151), which occupies a position of honour in the second gallery; two fine works of Mr. Holl, "Sir George Stephen" (29) and "Sir John Rose" (33); Mr. A. E. Elmslie's "speaking" likeness of the "Rev. Philip H. Wicksteed" (75); Mr. Jacob Hood's little portrait of "Mr. Cunningham Graham" (41); Mr. H. H. Gilchrist's striking portrait of "Walt Whitman" (192); Miss Blanche Jenkins's "Marjorie Sykes" (154); and Mr. Solomon J. Solomon's unpretending likeness of "The Rev. Dr. Lowy" (180).

In landscape the most striking contributions are the brilliant autumn scenes of Mr. Kesley

Halswelle (133 and 157); and one which excels them in refinement, and even in brightness of colour—Mr. Ernest Parton's "St. Martin's Summer" (176), a wonderful work in its way. To these, however, we prefer many of the quieter scenes: the fine broad "Passing Showers" of Mr. R. W. Allin (129), the curious effects of moonlight by Mr. Linder (152, &c.); Mr. Mark Fisher's charming "Winter Fare" (165); Mr. David Murray's "Shine and Shower" (166)—perhaps the best landscape he has painted; and Mr. Arthur Lemon's delightful "Breezy Day" (189), with its beautifully drawn horses wandering at their will in a green hollow. This by no means exhausts the number of delightful landscapes. The names of A. Helcké, J. E. Grace, E. A. Waterlow, Adrian Stokes, Alfred East, Prof. Costa, Yeend King, E. H. Fahey, Mrs. Gosse and others might be mentioned; but most of these artists are better represented in other exhibitions now open. This, in fact, must be our sufficient excuse for closing our notice of the "Grosvenor" here, though, perhaps, strict comparative justice would require mention of some other pictures. For this year, at least, the glory of the "Grosvenor" has departed, and even those artists who have not deserted it have sent their best work elsewhere.

COSMO MONCKHOUSE.

THE GLASGOW INTERNATIONAL EXHIBITION.

It could hardly have been expected that within six months of the closing of the great display at Manchester another really important gathering of modern British art could have been brought together. But the activity and opportunity of loan committees seem to be irresistible; the generosity of owners to be inexhaustible; and the promoters of the Glasgow Exhibition have succeeded in collecting, in the seven galleries that they have devoted to pictures, not only a very representative series of Scottish works, but also by far the most complete representation of English art that has ever been shown north of the Tweed.

The picture-buyers of the West have sent their treasures with a liberal hand, and much important aid has been received from well-known London collectors. Sir Charles Tennant, an extensive contributor, lends Gainsborough's "Sisters—Lady Erne and Lady Dillon" (which fetched so phenomenal a price at Mr. Graham of Skelmorlie's sale), and "The Little Fortune-Tellers" of Reynolds, whose fine profile bust of Mrs. Sheridan is lent by the Glasgow Corporation. Romney, at his best, is represented by his graceful full-length of "William Beckford," from Hamilton Palace, and by a seated portrait of "Lady Derby," crisp and delicate in handling, free from the unpleasant hotness which sometimes mars his flesh-tints, and especially broad and painter-like in the expression of the white brocaded drapery. Turner is seen in seven works in oil and over twenty water-colours. Of the former the finest is "The Vintage at Macon," with its mighty stretch of plain and its soft curve of river, painted in 1806, which was shown in the Grosvenor Gallery last year. Here, too, is the "Ivy Bridge," that harmonious subject of stream and woodland, in tones of golden green and ruddy brown, which figured in the Academy last winter; and the contrast between Turner's earlier and later manner is sharply emphasised for visitors to the Glasgow Exhibition by the close proximity to his "Boats carrying out Anchors and Cables," of 1804, and his "Wreck of the *Minotaur*" of the same period—works stern in colour, tending to blackness in the shadows, and definite in expression of form (even form so changeable as

that presented by the sweeping curves of waves) to his "Falls of Clyde," an unfinished work of his latest period—the faintest dream of fair colour, the merest vision of the radiancy of abstract light, with the least possible hold upon the actual, the slightest basis in visible nature. The water-colours include his fairly mellow and embrowned view of "Edinburgh from the Calton," several of the "Scott" vignettes, two "Southern Coast" subjects—"Poole" and "Lyme Regis"—and such of the larger drawings of his maturity as "Pembroke Castle," "The Falls of the Rhine," and "Dartmouth Cove."

Of the simple and manly art of David Cox, with its lush pastures and its silvery sunlit skies, we have an excellent selection of about forty works, including many productions of his later days, subdued in tone, summary in execution, pathetic in feeling, like the "Welsh Funeral" and Mr. Houldsworth's richly coloured, well-concentrated "Landscape with Red House"; and, in water-colour, Mr. Gaskill's large and powerful "Peat-Gatherers." Constable is represented by several landscapes, mainly of small size, sufficient to explain the method of his art, but hardly enough to show its full reach and utmost power. By Müller, along with minor examples, there is an important "Mediterranean Scene," under an effect of warm afternoon sunlight. Cotman, De Wint, Copley Fielding, William Hunt, James Holland, Palmer, Creswick, and Linnell are represented; Rossetti's "Dante's Dream" has a place of honour in the great gallery, where, too, hangs Lawson's "Barden Moor," and where, on the press-day, a place was reserved for Walker's "Bathers."

Among living English painters, Millais is seen mainly in works of his earlier period, like "The Rescue"; the only example of his broader, later style being his vigorous half-length of "Mrs. Jopling." By Sir Frederick Leighton is the colour-study for his "Andromache" in the present Academy, and his full-length of "Lady Sybil Primrose"; by Mr. Tadema, "The Siesta," "Pleading," "Rose of all Roses," and that moonlight subject, "The Improvisatore"; by Mr. Holman Hunt, the smaller version of "Christ in the Temple"; by Mr. Burne-Jones, "Idleness and the Pilgrim of Love," "Pan and Psyche," and the water-colour "Wheel of Fortune"; by Sir J. D. Linton, "The Banquet" and "The Benediction"; and by Mr. E. J. Gregory, his talented, but prosaic, full-length of "Thomas Chapman," and his earlier picture of "Dawn," interesting, this last, as a study of mingling sun- and candle-light, more interesting, in its figures—its drowsy pianist and pair of flirting dancers—as a study of character, a glimpse of drama. Mr. Watts sends his imaginative figure-piece "Love and Life," and a noble group of portraits, including those of "Sir Henry Taylor" and "Lord Dufferin"; and beneath the latter hangs Mr. Albert Moore's "Midsummer," with its vivid notes of potent orange and sharp green striking against white and grey.

The series illustrative of Scottish art begins—if we except a head of Jamesone by himself—with Raeburn. His full-length of the "Seventh Duke of Argyll" is thin and cold in colour; but that of "The Countess of Moira and Lady Elizabeth Penelope Crichton"—a white-clad pair, maiden and comely matron, pacing arm in arm in a landscape—is a beautiful example of the painter, most harmonious in its union of figures and background and graceful in the flow of its draperies, if rather emphatic in the strongly pronounced carnations of the faces. Another double full-length of "The Fifth Earl of Dumfries and Flora Countess of London" is also an effort of the painter in his higher

moments, and there are various good examples of his bust-sized portraits. The likeness of his daughter by George Watson is an excellent head by the first President of the Scottish Academy. In J. Graham-Gilbert's "William Couper, Esq.," the shrewd countenance is expressed with the crispest touch; and the portrait of Charles McKay, the actor, by Sir Daniel Maclise, contrasts, in its firm definition and warmth of colouring, with the indeterminate handling and leaden tones which characterise much of that painter's later work.

The exhibition has no quite capital work by Wilkie. His own early portrait is one of the best of them on the walls. The full-length of "George IV.," lent by the Queen, shows the vigour of his painting on the scale of life, but it wants the refined reticence of his gallery picture of Lord Kellie at Cupar, or even of his Lord Melville at St. Andrews. His sketch for "The Penny Wedding" only hints at the composition of that great work. His "Rabbit on the Wall" is terribly gone in the background, as is also his delicate head of Sir Walter Scott; and his "Washington Irving at La Rabida" represents one of the least pleasing phases of his last period. "The Entry of Prince Charles into Edinburgh," and "Prince Charles in Hiding," are the two most important of Thomas Duncan's subject-pictures; by that excellent colourist and excellent art-instructor, R. Scott Lauder, are "Louis XI.," and "The Bride of Lammermoor"; and by David Scott, his impressive "Traitor's Gate."

In landscape, we have several works by Thomson of Duddington, including the "Glenluce Castle," so well known through Miller's fine engraving. The "Early Morning, South Shields," by Ewebank, is silvery and harmonious in its rendering of faint mist; a "River-Scene with Shipping" is an important and adequate example of Milne Donald, a Scottish landscapist, less known than he deserves; Macculloch and Harvey are both seen in landscape, and by the latter is the "Covenanter's Preaching"—that most national and popular of Scottish figure-pictures. "The Vale of St. John," by Bough, is spirited in touch and brilliant in effect; and in his "Barncluith" we find more breadth, more quietude and unity of colouring, and a more selective and expressive rendering of form than his water-colours commonly show. One of G. P. Chalmers's most vigorous landscapes, "Running Water," is hung in Gallery No. II.; and here also is his head of "J. C. Bell, Esq.," the most finished and artistic of his essays in portraiture.

The earlier work of John Phillip, hard and precise in execution, cold in tone, but always careful and clearly perceptive of both form and lighting, may be studied in his "Baptism in Scotland," painted in 1850. Several Spanish subjects show his gradual progress towards breadth of touch and effect and power as a colourist; and in "Il Cigarillo," 1864, we touch the moment—with this painter the period was hardly more—of his highest power. The rendering of the embrowned face in this picture, the delicate tone of the sun-lit grey-green panelling, the painting of the rosy dress contrasting with the brilliant pearly whiteness of the drapery beneath it, rank—as examples of mere painter's work, of the art of laying colour so as to be superlatively delightful—among the best triumphs of British art in our century.

We have left little space in which to refer to works by living painters of Scottish nationality. Two of the larger figure-pictures of Sir William Douglas, P.R.S.A., "The Magic Mirror," and the "Summons to the Secret Tribunal," find a place on the walls. Sir Noel Paton is represented by two of the best of his early pictures, "In Memoriam," and "Home," and by "The Fairy Raid," a romantic subject of his middle period. Quite a profusion of work by Mr. Orchardson

is shown—pictures, with the exception of "Master Baby," of comparatively small size, but all of them works of his maturity, done after the hard, dry execution, and the chill greyish-green colouring of his earlier days had given place to those delicate blendings of subtly interwoven colour which delight us in his work to-day. Among Mr. Pettie's subjects is "The Sword and Dagger Fight," one of the most dramatic and spirited of his productions; and Mr. W. McTaggart is at his very best in "Adrift," a party of children on a raft, painted in 1870-1.

In the foreign gallery there is an interesting gathering of works by such painters as Corot, Daubigny, Troyon, Millet, Courbet, Isabey, Rousseau, and, among the Dutchmen, Israels, the Maris, and the Mauves. But these are mingled with the works of men as alien in artistic aim, as diverse in colour-scheme, from these, and from one another, as Gérôme, Degas, and Bastien-Lepage; and the total effect of the collection is infinitely less rich and harmonious than was that of Mr. Hamilton Bruce's gallery which formed the great artistic feature of the Edinburgh Exhibition.

In addition to the Loan Section of the Fine Art Department, an extensive sale section of both British and Foreign art has been brought together, and the Sculpture Gallery contains a particularly rich collection of statuary and medals by English and continental masters.

J. M. GRAY.

THE ROYAL SOCIETY OF BRITISH ARTISTS.

THE disappearance of Mr. Whistler and his followers has brought back the exhibition of the Royal Society of British Artists nearly to its old level. Among the subjects of pictures children, and dogs, and cats, and other specimens of the "homely" class are prevalent; but as Mr. William Stott, of Oldham, still remains, we have no right to complain of lack of originality. Yet surely Mr. William Stott, of Oldham, is less original than usual. We think we saw the Diana of his "Endymion" (242) last year on these walls, figuring as Aphrodite, and also as a modern domestic deity, seated in a rocking-chair. This year she appears behind a coat of blue paint. The drawing of the figure is careful, but there is little grace of line or attitude. In another work, "Pastoral: with Gorse" (122), this painter gives us a great expanse of sky, with a small corner of grass and a little gorse. Apart from the eccentricity of composition, there is much that is charming and truthful in this picture. Mr. Paget has a striking sketch of "Gudbrand Vigfusson" (144); Mr. J. S. Hill's "Black-shore" (149) is excellent in colour; and Mr. Edwin Ellis has adopted a new class of subject in his single contribution, "Summer" (279)—a stretch of shore, with figures, and goats, and a calm sea rippling in. The picture is a fine one, with less startling contrasts of colour than are usual with this artist. Another good sea-shore picture is "The Morning's Catch—Katwijk" (196), by Mr. Dudley Hardy. Mr. L. O. Henley's "Amorosamente" (201) and "Andante Espressivo" (206) are admirable figure studies, and Mr. H. S. Tuke has a very characteristic and masterly portrait of "His Honour Judge Bacon" (348). There are some excellent works in the water-colour room. Mr. T. B. Hardy, in his "Fishing Village, Picardy" (424), "Near Ambleteuse, Picardy" (381), and other pictures, is seen at his best; and Mr. Bernard Evans's autumnal landscape, "The Home of the Shepherd Lord, Wharfedale" (366); Mr. C. S. Mottram's "Grey

Weather" (462); Mr. David Law's "Riva degli Schiavoni, Venice" (394), deserve special attention.

THE EGYPT EXPLORATION FUND.

THE subscribers to the Egypt Exploration Fund met on Wednesday last, May 9, at 4 p.m. at the rooms of the Zoological Society in Hanover Square, to pass the articles of association whereby the society has become a corporate body under the conditions established by Act of Parliament. The meeting was attended by Sir John Fowler (president), Sir Charles Newton and R. Stuart Poole, Esq. (vice-presidents of the Fund), Miss Amelia B. Edwards (hon. secretary), Mr. J. H. Baylis, Q.C., General Sir Charles Wilson, Prof. Hayter Lewis and Mr. A. S. Murray (members of the committee), &c. Mr. Baylis gave a short and lucid statement of the past and present constitution of the Fund, and exhibited the framed certificate of the registration of the society. And, after a few observations from Sir John Fowler, and a short speech by Mr. Poole proposing a vote of thanks to Mr. Baylis for his invaluable advice and assistance during the reconstruction of the society, the meeting separated.

The members of the society met again in the evening in the same place at 9 p.m. to see some limelight views of the ruins of the great Temple of Bubastis, and of the objects discovered in the course of the season by M. Naville. Among the latter may be especially noted a superb colossal head of the goddess Hathor from the capital of a column of the time of Osorkon II., the statue of King Risan, and a fine colossal head of a Hyksos king, supposed to be a portrait of Apepi. The views were preceded by a short lecture delivered by Miss Amelia B. Edwards, who also described them as they were shown. Miss Edwards and Mr. Stuart Poole made an earnest appeal to the subscribers for donations in aid of the expense of transporting these valuable monuments to England, and the sum of £79 6s. was subscribed upon the spot.

CORRESPONDENCE.

TARATHA AND BABIA.

Oxford: May 12, 1888.

If Dr. Robertson Smith had taken the trouble to verify my statement concerning Taratha. (*Géographie du Talmud*, p. 305, note 4), he would have seen that in mentioning Assemani's *Janna I* rejected it, and explained the word by Atarata. Still, that the idea of a gate as a divinity was known among the Semites can be seen from the name of *Sheariah* (1 Chron. viii. 38; ix. 44), of the locality in Judah called *Shaaraim*, and, finally, of *Taratim* (1 Chron., ii. 55), not to mention the assemblies which were holden at the gate. There was also the gate of heaven, which may be noticed in passing.

A. NEUBAUER.

Oxford: May 12, 1888.

Dr. Robertson Smith will see that I have not identified Babia with the goddess of Mabug, but only said that the word "was the Semitic translation of the name of the great goddess of Carhemish" (*Trans. Soc. Bib. Arch.*, vii. 2, p. 257). As Damaskios affirms that she was worshipped by the Syrians I suppose I was justified in my statement; and I do not imagine that Dr. Robertson Smith will endorse the popular etymology assigned by Damaskios to the name. That the Semites were not unacquainted with a gate of heaven may be gathered from the name of Bab-ilu or Babylon, "the gate of God."

A. H. SAYCE.

NOTES ON ART AND ARCHAEOLOGY.
MR. HAMO THORNYCROFT has been elected a full member of the Royal Academy.

AN exhibition of the water-colour drawings of Ootman—which might with advantage have been held in London before now—is to be held in Norwich, which was the artist's native city, at the end of June or the beginning of July. The body of amateurs known as the Norwich Art Circle are the prime movers in the exhibition, which follows appropriately enough the tributes paid to two other Norwich painters—Thistle and Stark—by the gathering together, last year and the year before, of collections of their work. Of the Cotman exhibition an illustrated catalogue will in due course be published.

A publication of extreme interest and importance to the students of Rembrandt is very shortly to be made. It will consist of the issue—in at least four parts—of reproductions by permanent photographic process of the famous and accepted Rembrandt drawings in the Royal Museum of Berlin; in the Albertina, at Vienna; in the Louvre; in the British Museum; in the collections of the Duc d'Aumale, of M. Léon Bonnat, of Herr von Beckerath, of Mr. Malcolm, of Poltalloch, of Mr. Seymour Haden, of Mr. Holford, and of Mr. J. P. Heseltine. This enterprise is in no sense a mercenary speculation; and we have the greater pleasure in announcing it, because it is understood that any surplus money which may be found to accrue will be devoted to the issue of further reproductions. In London, Mr. A. W. Thibaudan, of 18 Green Street, St. Martin's Place, will be the recipient of subscriptions and the distributor of information. We may add that the two or three specimen reproductions which we have seen are uncommonly good.

THE New Gallery in Bond Street does credit to all concerned. The central hall—with its beautiful marble pillars, its gallery with gold balustrade, and its fountain—is very beautiful and effective. Mr. Robson, the architect, deserves all the praise he is likely to get, and that is no small share; and the same may be said of all concerned, from Messrs. Hallé and Carr to the workmen, who have raised this fairy palace in an incredibly short time. The two picture galleries are finely proportioned and admirably lighted, and the pictures have been hung with great judgment. As to the exhibition, all we can say at present is that it resembles an unusually good "Grosvener," and that Mr. Burne Jones is quite "himself."

MESSRS. SOTHEY will sell on Friday and Saturday of next week a number of prints from several different collections, including examples (in various states) of Méryon, Seymour Haden, and Whistler, which do not very often come into the market.

At the sale that took place at Christie's on Saturday, the directors of the National Gallery did not feel themselves justified in paying 4,100 guineas for the famous Sir Joshua, to which we referred last week. But they did authorise Sir Frederick Burton to give £420 for the superb portrait of "Endymion Porter," by Dobson; and they have since acquired two other important pictures knocked down to Messrs. Agnew on that occasion. "The Card Players," attributed to Nicholas Maas, but by some thought to be the work of another pupil of Rembrandt's, Karel Faber, or Fabritius (£1,375 10s.); and a portrait of a lady of the Braganza family by Van der Helst (£189).

A MEMORIAL tablet has been placed in the north transept of Chester Cathedral to the memory of the late Randolph Caldecott, who was born in Bridge Street, Chester, and was subsequently educated at King Henry VIII. School.

THE New English Art Club are issuing free tickets for Thursday evening, May 24, 7 to 10 p.m. This is intended chiefly for artisans and others unable to visit the gallery at ordinary times. Application should be to made Gleeson White, Esq., Dudley Gallery, Egyptian Hall, Piccadilly, W.

Echoes of Hellas—the elaborate work in which Prof. G. C. Warr and Mr. Walter Crane have conspired to preserve the memory of those Greek tableaux that were the talk of the town a few years ago—has just been distributed to the fortunate subscribers, 250 in number. The work consists of two volumes: (1) the letter-press and illustrations; and (2) the music, composed (mainly) by Mr. Walter Parratt and Mr. Malcolm Lawson, about which something will be said on another occasion. We must content ourselves now with calling attention to the marvellous skill with which the publishers, Messrs. Marcus Ward & Co., have performed their task. The result is a triumph of English—or, perhaps we ought to say, Irish—colour-printing. Regarding Mr. Walter Crane's bold challenge to Flaxman in a very different style varying opinions will doubtless be held; but it is only just to call to mind the conditions under which the artist laboured—to reproduce the effect of the original tableaux, and to enclose each page of text within a decorative design. Some of the less ambitious attempts please us best—such as the weeping Andromache, the watchman on the palace roof, and the choruses on the two following pages. We must not omit to add that the profits of the publication, as of the performances, are to be given to the building fund in connexion with the ladies' department of King's College, London.

M. A. LANDRIN, keeper of the museum of ethnography at the Trocadéro, has just put forth some very useful *Instructions Sommaires* (Paris: Roussel), to aid collectors of objects of ethnographical archaeology. The classification is clearly made, not exhaustive but suggestive, and affords valuable hints to all who desire to learn, or to be reminded of, what is worth collecting.

THE STAGE.

"THE POMPADOUR."

MESSRS. WILLS AND GRUNDY'S piece at the Haymarket, founded on the "Narcisse" of Emil Brachvogel, which in its turn is said to have been suggested—though it must have been very indirectly indeed—by the *Neveu de Rameau* of Diderot, is a piece which probably requires what it obtains—elaborate scenic illustration; for, unlike the remarkable bit of literature which gave it—one does not quite know how—the germ of its being, the rarest of all eulogies can never be pronounced on it: "*cela remus beaucoup d'idées*." No; it is a piece with merits, but a piece which deals rather thinly with the problems and the persons of the time in which the action passes—a piece which affords occasion for a panoramic vision, so to say, of the time's ceremonies and splendours, but no fresh illumination of the characters in history, and in the history of letters, who for a while occupy the scene. The fact is, Grimm and Diderot—thought-laden personages at all events—and the bright star of the period—"Wit's self, Voltaire," as Mr. Browning calls him—are assigned parts in the piece which are not really revealing—parts only comparable with those which in "Masks and Faces" are identified, by hook or by crook, with the famous characters of Colley Cibber and Kitty

Clive. Attempt is reasonably made that they shall talk well, in more scenes than one; and so they do; for Mr. Grundy at least—strong and nervous at need, as he has before shown us—has, among his other gifts, the capacity for smartness. And some good things are said; some of them so good as to show that in our own day the art of conversation has been not so much lost as transferred to writing-paper. Still, Mr. Wills and Mr. Grundy have not been made by nature or by cultivation quite of the size of these literary giants of the eighteenth century. They do not quite bring before you the characteristics, or continue the brilliance, of these famous people. And, again, they tamper with history. In doing so they are within their rights in the matter; but there is none the less an obligation to recognise that while their sketch of Louis Quinze is fairly veracious, and their introduction of Marie Leckinska neither ineffective nor seriously untrue, the main story of the Pompadour's relations with her husband has no foundation in anything that the Brothers De Goncourt, or more profound historians, have discovered in her career. And, as regards the invented story, I cannot find it to be so very moving. Your sympathy cannot possibly be given to the Pompadour. Whatever Mr. Wills and Mr. Grundy have done or left undone, they have made no attempt to whitewash her. But can serious sympathy be fully given even to the half-witted husband whom she has deserted? And, as to the fortunes of Mathilde de Boufflers and her honourable lover, they are too much of a mere episode to be very stirring or engaging. There is, on the whole, some want of concentration—some lack of an interest obviously central and dominant—though for the most part one's sympathies are with Narcisse.

So far as the scenic effect is concerned, it could hardly be more charming. Not only is the work well done by what are called the practical people, but Mr. Comyns Carr's taste as an art critic—who, to be worth twopence, must see things with freshness, and possess the happy faculty of getting out of grooves—is of visible use. One or two points in which yet more marked local colour might, I think, have been given, I take leave to point out. A certain element of stage picturesqueness comes somehow into the scenery and the setting—into the foliage and disposition—of the garden-scene, outside the château. Here would have been a splendid opportunity, not of adopting more or less, but of realising absolutely, one of Watteau's pictures. With infinite effectiveness a work so characteristic of Watteau and of the period he influenced as "La Perspective"—the line engraving, by Crepy, is before me as I write—might have been used in its entirety. It is a composition quite as appropriate, and much more French, and much more beautiful, than the pretty scene which they have actually got. And, in M^{me}. de Pompadour's boudoir—a very pretty boudoir, though a little too much swept and garnished—I would have had, at all events, some further suggestion of the pursuits the woman did not only affect, but must have really enjoyed. For, with a curious sensibility to all the forms of art, the Pompadour was more than ambitious and more than merely pleasure loving. Allusion

is made in the piece to music; and, if my memory serves me, an instrument is visible. But there should have been more books about. Was she not very particular as to her bindings? Are not her bindings, now, the treasures of connoisseurs? And do Messrs. Wills and Grundy—does Mrs. Beerbohm-Tree—happen to know that the branch of art talked of to satiety nowadays—I mean etching—was practised by M^{de}. de Pompadour, under Boucher's direction? I should like to have seen what we might have taken for a "proof" or so of those now rare little prints—M. Burty had a set of them—lying on the table on which there nods the porcelain mandarin which Mr. Beerbohm-Tree addresses. Tiny details: yet these and such as these would have given the picture of the time and the characters yet more life and verisimilitude. There was room for so many. As for the dresses—silks, satins, and brocades—they are perfection, absolutely. And, at a particular moment, they move—they and the comely people who are in them—figuratively, if not literally,

"To Rameau's notes, in dances by Gardel."

That is, they are admirably quaint and belong to the elder world.

Now about the acting. Narcisse, the deserted, half-crazed husband, is certainly the chief character; and he is played by Mr. Tree with force, with picturesqueness, in tones now and then that are really touching. It is to Mr. Tree's disadvantage, however, in performing this part, that his weird and interesting—albeit not quite perfect—performance of Gringoire in "The Ballad Monger" has been seen so recently. Mr. Tree is a master of "make-up"; and he is very varied; he has many resources. But he has not been able to divest his Narcisse—especially in gesture and carriage—of certain of the attributes of Gringoire. I do not see that in this piece he lays himself open to the common charge of occupying the stage and the audience too persistently. He gives, to my mind, conclusive evidence—and especially by the discretion of his pathos and its true ring—of his capacity to be something more than the very skilful character-actor everybody allows him to be. Mrs. Tree, it is clear, has left nothing undone by aid of which she could identify herself with the Pompadour. I can conceive the part played with more authority and magnetism: hardly with greater delicacy, intelligence, or care. She has moments—the moment of one entry in particular—in which she is wholly admirable. The part of the Queen is made, for its brevity, extraordinarily effective. The material here is small, but it is very good, every word tells; and Miss Rose Leclercq is at her very best in using it. Miss Le Thiere, in a small part, is fairly French and of the eighteenth century. Miss Janet Achurch, as Mathilde de Boufflers—the young lady-in-waiting, who is in love with the Pompadour's son—looks the part, which is a sympathetic and pleasant one, very well. And her pleading for the youth's life—when, with parentage unsuspected, he is condemned to death—has pathos in it, of course. I take exception to nothing but a want of directness—the very quality Miss Achurch, in "Partners," was so exceptionally strong in—in the delivery of her lines in her first scene: a method

and a pitch of voice adopted deliberately no doubt, but I cannot see to what purpose. Mr. Ashley—for an actor who has been much in comic opera—is discreet as the king. Mr. Royce Carlton—whom one is accustomed to find effective—is not very strong as the Duc de Choiseul. (The authors, by the by, have not been able to give us any glimpse of the wife of this personage, who, as her correspondence with M^{de}. du Deffand sufficiently proves, must, for goodness and simplicity, have been at that Court of Louis Quinze as the shadow of a great rock in a dry and thirsty land.) Mr. Brookfield, in his Voltaire, has probably given due remembrance to Latour's pastel—is it at Edmond de Goncourt's or is it at St. Quentin?—which is no doubt Voltaire's most veracious portrait. Mr. Brookfield's manner is rightly incisive; but—partly by stooping so much: by a needless physical decrepitude—he presents us with a Voltaire a good deal older than the philosopher really was at the time of the action of this piece. Grimm and Diderot—a Diderot, by the bye, who has not a word to say about the arts to which his life was a devotion—are played by Mr. Allan and Mr. Voltaire well enough and pungently; and Mr. Harrison—to name the actor of a part still less important—says his few lines with uncommon point. And indeed, though I have made my strictures freely, it is plain, no doubt, that everything in the production has been done with intelligence. I am told that the words "moderate success"—which were used in a brief paragraph last week—described inadequately the financial situation.

FREDERICK WEDMORE.

STAGE NOTES.

"MR. BARNES OF NEW YORK"—which has been played at the Olympic in the morning, with Mr. Willard as the chief attraction—was put into the evening bill at the same theatre on Wednesday night, Mr. Willard's practically indispensable services being, of course, retained.

THERE is talk of no less than three versions of Hawthorne's *Scarlet Letter*. Perhaps we shall see in London the version by Mr. Joseph Hatton, which was played, some while since, in the North. Certainly we are to see, at a *matinée*, a version in which Miss Janet Achurch and Mr. Charles Charrington will present themselves before the public in important and attractive parts; and likewise—but this will be at night—a version which Mr. Stephen Coleridge and Mr. Norman Forbes have prepared for the new management of the Royalty. This last—in which Mr. Forbes Robertson, we believe, will play Arthur Dimsdale—will re-introduce to the London public the distinguished young American actress, Miss Calhoun.

THE performances of Mr. Seeborn's version of "Little Lord Fauntleroy"—memorable chiefly for the acting of Miss Mary Rorke and Miss Annie Hughes—having now been stopped, we have instead, at Terry's Theatre, for at least a few mornings, Mrs. Burnett's own version of her naive and pretty story.

MUSIC.

RECENT CONCERTS.

MR. C. HALLÉ commenced his series of Chamber Music Concerts at St. James's Hall on Friday afternoon, May 11. A Quintet for piano and strings in A (Op. 81) by Dvorák proved an interesting novelty. The opening Allegro is not at first impressive; but the composer, by his power of thematic development, soon commands the attention of the listener. The second movement is a Dumka (Elegy); but, although it is clever and quaint, it is spun out to so great length as to become monotonous. The Dumka of the E flat Quartet is a more favourable specimen of Dvorák's specially "Czechish" music. The Scherzo of the Quintet is full of life, while the Finale brings the work to a worthy conclusion. Mr. Hallé and his associates, M^{de}. Norman-Néruda and Messrs. Ries, Straus, and F. Néruda, all played most admirably. Mr. Hallé gave the Beethoven Sonata in F sharp (Op. 78) with his usual finish and precision. The programme included Bach's Sonata in E for piano and violin, and the Brahms' Pianoforte Quintet. There was a good attendance. Mr. Hallé has announced this season several interesting novelties—among other things, an MS. Intermezzo (Trio) by the late Stephen Heller.

Bach's Mass in B minor was performed by the Bach Choir on Saturday, May 12, under the direction of Dr. Stanford. It is now twelve years since this great work was first given in London; and, like the Choral Symphony, the better it is known the more marvellous does it appear. The solo numbers remind one painfully how time has already laid his destroying hand on the music. The orchestra, as composed in Bach's time, is no longer possible. When will some genius arise and do for Bach what Mozart did for Handel? The closer we keep to the letter of the Bach score as he left it, the farther do we get from the spirit—especially in the accompaniments to the solos. The performance was not all that could be desired; the orchestra was at times rough, and the choral singing lacking in refinement. Of course it is only fair to bear in mind the great difficulties of the music, but we can recall more successful performances of the work. The solo vocalists were Miss Anna Williams, Miss Damian, and Messrs. Ben Davies and Watkin Mills. The last-named deserves praise for his rendering of the difficult "Quoniam."

The programme of the second Richter concert on Monday evening was, in large part, devoted to Wagner. Besides the oft-played Introduction and closing scene from "Tristan," and the Ritt der Walküren, Herr Richter introduced, for the first time, the closing scene from the "Götterdämmerung." Wagner's music always loses more or less of its effect when given away from the stage; but the more or less depends upon the particular character of the excerpt: more, if the prevailing element be dramatic; less, if lyrical. The closing scene of the "Götterdämmerung" is essentially dramatic, and we must frankly say that in a concert room it is not effective; and without the hidden orchestra, the balance of tone is not satisfactory. Miss Pauline Cramer as Brunnhilde had a hard task. Some of the passages were extremely well rendered, but in others she was scarcely equal to her task. In the second part of the programme Dr. Stanford's "Irish" Symphony was given; a work, which in a very short time, has become almost popular.

Mr. Oscar Beringer gave his annual pianoforte recital at St. James's Hall on Wednesday afternoon. A feature of the programme was a Trio of Beethoven's for piano, flute and bassoon in G, recently published by Breitkopf & Härtel. It is an early work of the composer's,

supposed to have been written at Bonn in 1786. The music is pleasing, but thoroughly Mozartish. Mr. Beringer was, we think, not at all justified in giving it as a trio for piano-forte, violin and violoncello, and most unwise in making some alterations in the last movement *Andante con Variazioni*. In the second variation some of the flute part was omitted, and the violin played a passage allotted to the bassoon. So, again, alterations were made in variation iv., and in variation vi. ornamental pizzicato notes being added by the cellist. It is not a work of great importance, but nevertheless the composer's intentions ought to have been fully respected. Mr. Beringer played Liszt's *Rhapsodie Élegiaque*, in memory of Mr. W. Bache; Schumann's Sonata in G minor, and short pieces by Chopin, Rubinstein, and Mackenzie, meeting with his usual success. Also, with his talented pupil, Mr. L. Arditi, he played Liszt's "Tasso," arranged for two piano-fortes. Miss A. Trebelli was the vocalist, Herr Ludwig violinist, and Mr. E. Howell violoncellist.

The Grieg concert at St. James's Hall on Wednesday evening was one of special interest. In the Norwegian composer's music almost everything depends upon the mode of interpretation. Composers are not always the best interpreters of their own work, but Herr Grieg knows exactly how to render effective every little point of his delicate tone-poems for the pianoforte. His selection of pieces included the picturesque "On the mountains" and the "Norwegian Bridal Procession" from Op. 17; two numbers from the delightful *Humoresken* (Op. 6), the Menuet from the Piano Sonata in E minor, and some very short but dainty numbers from the Norwegian folk-songs and dances (Op. 12). M^{me}. Norman-Néruda played with Herr Grieg the early piano-forte and violin Sonata in F (Op. 8) and two movements from the new one in C minor performed lately at one of Mr. Dannreuther's concerts. But, attractive as all this was, the vocal portion of the programme was, perhaps, listened to with the keenest interest. Six of the composer's most charming and characteristic songs were sung by M^{me}. Grieg with great feeling and intelligence, and in the style of one born and bred among the silver-crested mountains and romantic firds of Norway. And her husband at the pianoforte was one with her in spirit. To say a word in praise of Herr Grieg's songs would be impertinent, for they are world-famed. The enthusiastic applause and the numerous encores proved how thoroughly the whole programme was enjoyed. Herr Grieg and his wife cannot think that England is not a musical nation; and when they return home the remembrance of their visit to London will surely be one of unmixed pleasure.

Otto Hegner played the Weber Concertstück at his recital at St. James's Hall on Thursday afternoon, and gave an accurate and vivid rendering of this difficult bravura concert piece. As he cannot strike the octave, many of the passages had to be altered; and, besides, the orchestral accompaniment was played on a second pianoforte. With hands capable of stretching the octave, and an orchestra to support him, Otto Hegner would have produced a still more wonderful effect.

Space compels us to omit notice of many concerts this week, but we must say one word about the recital of M^{lle}. Kleeberg at the Prince's Hall. In her rendering of two Sonatas by Beethoven and various other pieces she was heard at her very best; indeed, she more than maintained her reputation. This young and talented artiste is showing the best of all signs—progress.

J. S. SHEDLOCK.

WALTER SCOTT'S LIST.

GREAT WRITERS.

A NEW SERIES OF CRITICAL BIOGRAPHIES.
MONTHLY SHILLING VOLUMES.

Edited by Professor E. S. ROBERTSON.

May Volumes now ready.

THE NEW TRANSLATION of DON QUIXOTE.

Just published.

THE INGENIOUS GENTLEMAN, DON QUIXOTE OF LA MANCHA.

By MIGUEL DE CERVANTES SAAVEDRA.

A NEW EDITION,

Done into English, with Notes and a new Life of the Author, by HENRY E. WATTS.

To be completed in 5 thick volumes, small 4to (the first two are ready), half-bound, vellum.

Price to Subscribers, 24; Publishing price, 25 5s.

Vol. I. comprises the Biography, Criticism, and Bibliography.

Vol. II. comprises the first volume of the new translation of Don Quixote.

Vols. III.-V. will be ready during the year.

No volume is sold separately. The whole edition is limited to 250 numbered copies.

BERNARD QUARITCH, 15, PICCADILLY, LONDON.

Just published.

THE ART OF

WOOD-ENGRAVING in ITALY

IN the FIFTEENTH CENTURY.

By FRIEDRICH LIPPMANN,

Director of the Royal Print-Room at Berlin.

English Edition, with extensive corrections and additions by the Author, which have not appeared in the German original.

1 volume, imp. 8vo, with Sixty Facsimiles of the choicest early Italian Woodcuts, Roxburghe binding, 25s.

The edition consists of only 500 copies.

BERNARD QUARITCH, 15, PICCADILLY, LONDON.

SATURDAY, MAY 26, 1888.

No. 838, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

A History of Political Economy. By J. K. Ingram. (Edinburgh: A. & C. Black.)

THIS *History of Political Economy* is, for the most part, a reproduction of the article "Political Economy" which appeared in the *Encyclopædia Britannica* in 1885. The changes made in the article with a view to the present publication seem to be few and unimportant. As he states in the Preface, Mr. Ingram has, in writing his treatise, drawn largely on continental sources—a course which was more or less inevitable, especially with regard to German books. For, on the whole, it is only in the highly organised universities of Germany that we have the leisure, division of labour, and love of hard work necessary for the production of elaborate histories and other manuals on all the different branches of human knowledge. So long as most of the work done in our universities consists in passing examinations and helping others to pass examinations in a few comparatively restricted departments, so long shall we need to borrow considerably from Germany.

Mr. Ingram had more than sufficient reason for adopting the historical method of exposition. Of dogmatic treatises from the usual English point of view we have enough. In view of this fact, and in view of the growing dissatisfaction with the prevalent economics, recourse to the historical method of treating the subject is right and natural. Such a method is obviously in accordance with the most pronounced intellectual tendencies of the age. In most sciences it is now an accepted commonplace that we can best understand a thing by explaining its genesis, by tracing its origin and historical development. Whether the subject of investigation be language, the geological structure of the earth, the character of a man or a nation, or an economic institution, the scientific spirit is most thoroughly satisfied when we see the facts and processes which have made it what it is.

Even orthodox English economists should now be ready to acknowledge that this point of view has not been sufficiently recognised in this country. A book like the present is, therefore, a valuable and timely addition to our economic literature; and it should be most useful to those who most strongly disagree with it by stimulating thought, even when thought takes the form of contradiction. Mr. Ingram is a very decided adherent of the historical school of political economy, and gives emphatic expression to his views throughout his book. This would be enough to provoke dissent; but this is not all. He has, we believe, in several instances failed to do justice to the orthodox school of economics. He has not always succeeded in making a fair

and impartial appreciation of the past—a defect which in any case would be regrettable, but in an adherent of the historical school is the less to be admired.

There can be no doubt that the English school of economics has suffered from a defective recognition of the principles emphasised by the historical school. Our political economy has been too much studied in isolation from the other facts of society—from ethics, politics, law, &c. In particular, the ethical element has not been adequately considered. We have not been sufficiently alive to the truth that the economic circumstances and conditions of England are not part of the permanent order of the world, but are the product of historic forces, and may, through the operation of historic forces, be modified, and even radically changed; that these forces are partly peculiar to ourselves, and only partly common to us with other countries, and that it does not follow that what is normal and suitable for us must also be normal and suitable in Ireland, India, France, or Germany. Our economists have been too content with the minute analysis of the economic facts prevalent in this country during the last two or three generations—an important function, no doubt, but a really scientific economics ought to have a larger field of inquiry and a wider horizon. Nor is it a purely theoretical problem for a country with a vast empire to govern and an enormous range of interests, which cannot be understood by a simple reference to abstract formulas. One of the most remarkable results of this method of studying economics was the assurance so long and so generally entertained that free-trade would ere long become the accepted policy of the world. Without ignoring the noble and humanitarian motives of men like Cobden, we should recognise the fact that England adopted free-trade because it was best for herself, and that countries like France and Germany have not adopted it because it was not best for them. Starting from the modest assumption that Germany was bound and entitled to work out her own national life in a full, effectual, fair, and rational way under the conditions prescribed to her, we must regard the arguments of List as unanswerable. As men and nations are constituted at present, free buying and selling are not universally suitable. For the restoration of her unity and the due development of her national life Germany, for example, required a needle-gun. If her industries had been crushed by the overwhelming competition of England, she could not have produced a needle-gun. With Cobden and the Manchester school we believe that the world would be better without such instruments of destruction; but in the meantime they are part of the economy of nations, and we must make the best of the situation. No economics can be scientific, in the truest and best sense of the word, without due regard to the collective life of the people, and to the facts and conditions of national development.

We have said that Mr. Ingram is not always quite just to economists who are not of the historical school so called. It may fairly be asked, for instance, whether it is not arbitrary and artificial to classify the physiocratic school with the school of Adam Smith and others under the heading "System of Natural Liberty"? Is not the label too prominent?

But, apart from historical classifications, which generally have only a very moderate value, we cannot admit that "metaphysical" conceptions (to use Comte's language) play such an important part in Adam Smith's work. In him and in Malthus we see great examples of what may be done by history in the service of science. The pages of Mr. Ingram on Malthus are particularly open to objection, the information being meagre and the criticism unsatisfactory. Even the fact that Darwin borrowed from Malthus the principle with which he revolutionised biology meets with only a kind of grudging recognition from Mr. Ingram. It is an impressive example of the solidarity of science, which should have called forth the warm appreciation of an admirer of Comte like Mr. Ingram. Biology borrowed the principle from political economy, and political economy now gets back its own with usury. The principle of the struggle for existence has already received fruitful application in sociology, economics included. As in the case of Malthus, so with regard to Mill, we find a note of depreciation running through the criticism of Mr. Ingram. In his early stage Mill was too much under the influence of Ricardo, the most unhistorical of English economists; while in his later life he was too revolutionary, going farther, in fact, than the most advanced of the ordinary historical economists. For our own part, we believe that Mill was admirable at both stages of his life—first as the expounder of Ricardo and Bentham, and later as the hopeful teacher of ideas that promised a wider and more perfect development than the philosophic radicalism of his early days. The greatest minds, we hope, are those who are ready to learn even at the expense of an external consistency. All through his career Mill had his mind open to the best and truest of his time, and what more can we expect of mortal men? And is it not one of the first principles of the historical school that economists must be judged in relation to the time and country that produced them?

In his criticism of the "orthodox" political economy Mr. Ingram has, in our opinion, been unduly biassed by his admiration for Comte. Comte was a great thinker in sociology; but in the fourth volume of his *Philosophie Positive* he is too consciously the founder of a new science, and does not sufficiently recognise the work already done. Most of what is best in the historical method had been put in practice long before Comte's time. Indeed, we cannot see that it is either true or useful to draw such sharp distinctions between the various schools of political economy or to proclaim so loudly, as Comte does, the necessity for new departures in science. To do so is in direct contradiction with the spirit of the historical method, which should teach us that science itself is a process of development, and that we can only lose by self-confidently breaking away from the past. Political economy can still be best cultivated in the manner of Adam Smith, with his wide human sympathies, his insight into the best thought of his time, his great historical knowledge, and his sagacious appreciation of the actual and practical; not, however, by stereotyping his principles into dogmas, but by facing the problems of our own time in his spirit and method.

In a brief review it is impossible to do anything like justice to a book that raises so many debatable questions. We can only hope that it will be widely read, as it is an able and comprehensive survey of the leading schools of political economy from a point of view not familiar to this country; and that it may lead to a more extensive study of the works of great German economists, such as Roscher, Adolf Wagner, and Schäffle.

T. KIRKUP.

The Fighting Veres: Lives of Sir Francis Vere and of Sir Horace Vere, Baron Vere of Tilbury. By Clements R. Markham. (Sampson Low.)

MR. FROUDE concludes his history with the defeat of the Spanish Armada. Mr. S. R. Gardiner's great series of volumes opens with the accession of James I. Between the two books there lies a stretch of territory which is practically unexplored. We are aware that a writer is engaged in filling the gap, but it is improbable that his work will see the light at an early date. In the meantime, Mr. Markham's *Fighting Veres* may be safely recommended as the only satisfactory account of some of the chief events that mark the interval between the crises of 1588 and 1603. Sir Francis Vere was probably the greatest of the Elizabethan generals. Lord Willoughby and Sir John Norris would certainly have equalled his achievements had they had the same opportunities. But the brilliant series of operations which Sir Francis Vere conducted as commander of the English auxiliaries in the Netherlands, in the last fifteen years of Elizabeth's reign, are not equalled in the military history of the epoch. Sir Francis also served in those expeditions to Cadiz and the Azores which gave Essex, the Queen's favourite, his fatal popularity. All these stirring incidents belong to that tract of history which both Mr. Froude and Mr. Gardiner have passed by. They certainly do not exhaust the interesting episodes in which the period abounds. But Mr. Markham has described the campaigns in the Netherlands which assured the States-General their independence, and the romantic, though fruitless, expeditions to Spain of 1596 and 1597, in such admirable detail that he goes far to supply the pressing need for some trustworthy guide to the neglected epoch. Very much still remains to be done, but every wise student will be grateful for Mr. Markham's contribution.

Mr. Markham has no misconceptions about the biographical art. The life of a man is not the history of an age, and Mr. Markham has avoided all contemporary history that does not immediately affect the careers of Sir Francis and his brother. The history of Spain's war with the Netherlands and of Elizabeth's connexion with it are necessary features of the biography, and Mr. Markham's account of both is satisfactory. The topographical notes and the maps which illustrate the Veres' campaigns are abundant, and give the reader exceptional facilities for understanding the critical manoeuvres chiefly associated with the country about Nieuport and Ostend. Mr. Markham is not sparing in references to contemporary authorities; but it is needless to enumerate all the features

of biographical scholarship which characterise the volume.

There are points in which we disagree with Mr. Markham; but our differences of opinion do not diminish our respect for his book. The incidental references to the queen suggest an estimate of her character from which we dissent. She was able, undoubtedly, to excite much personal enthusiasm in her servants, for which many explanations could be offered; but it did not spring, as Mr. Markham more than once suggests, from any generosity in her treatment of them. Her admirals and generals were, with few exceptions, reduced to something like beggary in her service. With the falsest notions of economy, she starved her armies, and left her officers to bear pecuniary burdens which would have been allowed in no other country to fall upon them. Mr. Markham praises her enlightenment in making an open alliance with the States-General in 1586—an alliance which supplied Sir Francis Vere with his chief field of action. But Mr. Markham has not a word to say of the contemptible shifts by which she tried to shirk the responsibilities of the situation as soon as her army landed in the Low Countries. No reading in history is more pathetic than those letters from Elizabeth's generals in France and Ireland, in which they narrate the sufferings of their men from lack of proper food and clothing—privations directly attributable to the queen's parsimony. Failure on the part of officers thus heavily handicapped never won any sympathy from their mistress. Bitter sarcasms flowed from her ready pen—sarcasms beneath the dignity of a sovereign, especially of a sovereign who was herself mainly responsible for the misfortunes which she resented. Vere's experience was much like that of all Elizabeth's generals, although he suffered at her hand fewer personal indignities than his fellow-officers. Mr. Markham declines to dwell on these discreditable features of Elizabethan history. But it is only after we have realised the unfavourable side of the queen's character that we can fully appreciate the patriotic temper of Vere and his contemporaries.

Those engaged in biographical research must never boast that they have consulted every authority. In some obscure and ill-indexed volume of memoirs there may always lurk some small, yet critical, piece of information which the biographer may well be forgiven for overlooking, although the oversight may be regrettable. The authority which Mr. Markham has omitted to consult is not indeed very obscure nor ill-indexed, but the omission is intelligible. Lord Herbert of Cherbury's memoirs have been regarded as the confessions of a Lothario, amusing enough in their frank avowals of sin and self-seeking, but throwing no light on serious history. This view is for many reasons untenable, and the biographer of Sir Francis Vere should take the opportunity of contradicting it. The fame of Sir Francis Vere is nowhere more strikingly illustrated than in a conversation which Lord Herbert held with Spinola, the great Spanish general, in 1614. Sir Francis had died five years earlier. The first enquiry which Spinola addressed to Lord Herbert was of Sir Francis's death. In the camp of his enemy, Sir Francis's memory was held in almost as high

esteem as in his own. More important is it to note that Mr. Markham has omitted in his life of Sir Horace Vere all mention of his services in Juliers and Cleves from 1610 onwards. Lord Herbert was present at the operations about Juliers in 1610 and 1614, and he mentions more than once that Sir Horace Vere was among the Englishmen who took part in the siege. It was, indeed, after a feast, "where there was liberal drinking," at Sir Horace's quarters before Juliers that Herbert began with Lord Howard of Walden that well-known quarrel which fills a large space in the autobiography. Mr. Markham has given so admirable an account of Sir Horace Vere's action in the Palatinate after the opening of the Thirty Years' War that it is a matter for regret that he should have altogether overlooked his connexion with the siege of Juliers, the prelude to that deadly struggle.

One or two slight corrections might be made in a future edition. Sir George Carew, Earl of Totnes, was not the father of Anne, the wife of Sir Allen Apsley. She was the daughter of Sir George's brother Peter. The libel on Leicester, which Mr. Markham quotes on p. 77 and describes as anonymous, without giving its title, ought to be more plainly indicated. It is of course well known as *Leicester's Commonwealth*, and was undoubtedly from the pen of Parsons, the Jesuit. The account of the literary work of Edward, Earl of Oxford, requires a word or two of further explanation. It is hardly adequate to say that he "wrote poems, some of which are preserved," and to refer in a note to "the *Paradise of Dainty Devices*, London, 1758." The *Paradise* was published in 1576; and verses by the earl appeared not only in that collection, but in *England's Helicon* and *England's Parnassus*. We do not know why Mr. Markham should apply the epithet "young" to Bingham, the English lieutenant who distinguished himself, in 1578, at the battle of Rymenant. He is identical with the Sir Richard Bingham who was subsequently distinguished in Irish politics, and was at least fifty years old at the date of which Mr. Markham is speaking. None of these are matters of great importance. Their venial character is the best testimony to the general excellence and accuracy of Mr. Markham's work.

SIDNEY L. LEE.

Auld Licht Idylls. By J. M. Barrie. (Hodder & Stoughton.)

THIS is not only the best book dealing exclusively with Scotch humble life, but the only book of the kind deserving to be classed as literature that has been published for at least a quarter of a century. It is, no doubt, a work that can be thoroughly understood and revelled in only by Scotchmen, the album of whose memory contains photographs not unlike those which Mr. Barrie must some years ago have taken at Thrums to colour—though not unduly to colour—in London. But it is written in a style of clear, direct English, devoid of affectation and unmarred by self-consciousness, but which, every tenth page or so, leads the reader into some ambuscade of what looks like quaintness, but is only realism touched with humour. Then, while Mr. Barrie deals exclusively with Scotch cha-

racter, though not at all with those odious "characters" that are perpetually posing as types, he does not indulge too much in the Scotch dialect or the Thums variety of it. Finally, Mr. Barrie's descriptive power, which is little if at all inferior to his humour, and, like it, has the saving grace of self-restraint, reminds one sometimes of Mr. Thomas Hardy, and sometimes of the late Mr. Richard Jefferies, but never of Mr. R. L. Stevenson, and seldom of Mr. William Black.

The first chapters in the book, "The School-house" and "Thums," which contain more of the Idyll, and less of the Auld Licht, than their successors, are certainly not the worst or the least readable. On the contrary, Mr. Barrie's power as an artist rather than as a humorist—owing to the accident of birth—stands out more prominently in these than in anything else that, so far as my knowledge of his work goes, he has yet written. "The world of Scotch drink, Scotch religion, and Scotch manners is often," according to the late Mr. Arnold, "a harsh, a sordid, a repulsive world." It is a corner of this world that Mr. Barrie devotes himself to in his book on the weaving community of Thums, and the little body of fanatical, poverty-stricken, hair-splitting Auld Lichts in its midst. We have Scotch religion at its dreariest and most grotesque in "The Auld Licht Kirk," "The Auld Lichts in Arms," and "Little Rathie's 'Bural'"; and Scotch manners, so far as they are synonymous with diffidence and matter-of-fact, in "Lads and Lasses," "The Courting of T'Nowhead's Bell," and "Cree Queery and Mysy Drolly." But somehow this little world of Mr. Barrie's does not seem harsh or repulsive, and hardly even sordid. No doubt this is so to some extent because Mr. Barrie, while he does ample justice to Scotch manners and Scotch religion, does not make too much of Scotch drink. He has nothing in common with the wretched tribe of Scotch artists in whisky-and-water-colours, who think it the perfection of humour to place a snuff-mull and a tumbler of toddy by the side of the Bible and the Confession of Faith. Not that he ignores Scotch drink altogether. Even his Auld Lichts steal from a Scotch mist and a debate on the immortality of the soul into "The Bull," and his Old Dominie rises from his deathbed to hide a whisky-bottle from his wife. But Mr. Barrie keeps drink in the background, as it always has been kept in well-regulated Scotch households. His success in toning down the harshness of the world he depicts lies in the tenderness which mingles with his humour, and prevents its realism from becoming dry with the dryness of contempt. Perhaps the finest chapter in his book is that which, under the title of "Cree Queery and Mysy Drolly," tells the story of the affection of a poor grinder for his mother. There is humour, and a promise of something better, in this:

"Mysy got me to write several letters for her to Cree, and she cried while telling me what to say. I never heard either of them use a term of endearment to the other; but all Mysy could tell me to put in writing was 'Oh! my son Cree; oh! my beloved son; oh! I have no one but you! Oh! thou God, watch over my Cree!' On one of these occasions Mysy put into my hands a paper, which she said would perhaps help me to write the letter. It

had been drawn up many years before, when he and his mother had been compelled to part for a time, and I saw from it that he had been trying to teach Mysy to write. The paper consisted of phrases such as 'Dear son Cree,' 'Loving mother,' 'I am takin' my food weel,' 'Yesterday,' 'Blankets,' 'The peats is near done,' 'Mr. Dishart,' 'Come home, Cree.' The grinder had left this paper with his mother, and she had written letters to him from it."

The same mingling of tenderness—in this case, perhaps, rather pathos slightly ashamed of itself—with humour, is seen in the following from "The Auld Licht Kirk."

"In one week three of the children died, and on the Sabbath following it rained. Mr. Dishart preached, twice breaking down altogether, and gaping strangely round the kirk (there was no dust flying that day), and spoke of the rain as angels' tears for three little girls. The Auld Lichts let it pass; but, as Lang Tammas said in private (for, of course, the thing was much discussed at the looms), if you materialise angels in that way, where are you going to stop?"

Next to the description of "Thums," which is the second chapter of Mr. Barrie's volume, and "Cree Queery and Mysy Drolly," from which I have already quoted, I like most—and in a case of this kind criticism practically amounts to singling out what one likes—"The Auld Licht Kirk" and "Lads and Lasses," which exhibit the spiritual and human sides of Thums respectively. One or two chapters, such as "Davit Lunan's Political Reminiscences," and "A Literary Club," have the look of after-thoughts. They are not devoid of ability, but they suggest the idea of having been written mainly with a view to making their author's picture of Thums complete. We are told that "not many years ago" a man died (not on the scaffold or on the woolstack) but "on the staff of the *Times*," who

"when he was a weaver near Thums was one of the literary club's most prominent members. He taught himself shorthand by the light of a cruizey, and got a post on a Perth paper, afterwards on the *Scotsman* and the *Witness*, and finally on the *Times*."

Here Mr. Barrie's dry realism becomes the baldest of prose. Then "The Courting of T'Nowhead's Bell," while unquestionably clever, and no doubt essentially true as a description of Scotch rural love-making, has, to me, a spun-out look. In it Mr. Barrie seems, for once, to be desirous of creating a laugh, instead of trusting to the native force of his writing to act as a moral touchstone upon the faculty of his readers. WILLIAM WALLACE.

The Land beyond the Forest. By E. Gerard.
In 2 vols. (Blackwood.)

MDME. GERARD is the wife of an Austrian officer, and these two volumes form the record of her two years' stay in Transylvania. It is but justice to say that she has produced on the whole a very readable book. She writes with clearness, is a shrewd observer, and is by no means wanting in wit. "I have remarked," she says (p. 57), "that on an average it takes three well-populated [Saxon] villages to produce two bonnie lasses." She describes the Armenian women (vol. ii., p. 156) as "pale, dark-eyed beauties, whose portraits might be taken in pen and ink only,

without any help from the palette." The chapter on "Still Life at Hermanstadt" would be evidence—if we needed any—that the author could write a satirical society novel. "We hear so much about the corruption of large towns; but for a good, steady, infallible underminer of morals commend me to the life of a dull little country town" (vol. ii., p. 229). Disraeli himself could not have put this better. But, though Mdme. Gerard's style is piquant, it cannot be called either poetical or picturesque. The book is full of verse, but devoid of poetry. Her translations fail to give the spirit of the original, and even her descriptions of scenery seem hard and metallic.

Mdme. Gerard tells us that she has "more pleasure in chronicling fancies than facts and superstitions rather than statistics." If this be her bent, she must be congratulated on her choice of a subject. Transylvania is the happy hunting ground of those whose delight is in folklore. Great Pan is not dead in the "land beyond the forest." We find there a network of races each more superstitious than the other. There is little to choose in this respect between the civilised Saxon and the ignorant Rouman. If a Saxon recovers from a dangerous illness, he is said to have "put off death with a slice of bread." And as to a Rouman, his whole life is taken up in devising talismans against the devil. Even his wedding-day is darkened by uncanny shadows. He lives in dread lest the devil should appear and make love to his wife. Chemists are applied to for a magic potion called *spiridusch*, which has the property of disclosing hidden treasures. No land, according to tradition, is more rich in treasure-trove than Transylvania. Those born on Sunday, or who have eaten mouldy bread for a whole year, are the most likely to be successful in their search, provided it be made on the eve of St. George's day. The Gypsies are described at great length, and this illustrates the lack of proportion and design in the book. Chapters taken from Mdme. Gerard's diary and essays on folklore follow each other haphazard, and much in the second volume is pure padding. If the Gypsies and Roumans receive more than justice from the author, the Saxons receive less. "I do not give my flowers for nothing!" said the wooden Noah's-ark faced woman to Mdme. Gerard. "Unless you pay me two kreutzers, I shall keep them for myself!" (p. 94). This was an unlucky remark for the Saxons, whose lack of courtesy is contrasted with the courtesy of the Roumans, and courtesy with Mdme. Gerard covers a multitude of sins. The Saxons, too, are Malthusians, and this, in the opinion of most persons, is a crime. The fact however remains that the Saxon, with his *zwei Kinder* system, has abolished poverty from Saxon villages, while the Rouman, with his large family, remains the paid labourer of the thrifty Saxon. It is also equally true that the Saxons are not as pleasant-spoken or as good-looking as the Roumans; and therefore those who set great store by externals prefer the latter.

Although Mdme. Gerard is at home among the Saxon and Rouman (not the Szekel) peasantry of Transylvania, she has little to tell us about the dwellers in towns. If an English reader wishes to learn something both

about the Hungarian country gentleman and the Saxon or Jew burgher, he must turn to the pages of *Life and Society in Eastern Europe*, by Mr. Tucker, the diffuse, but entertaining, personal guide to Transylvania. Unfortunately, the little that M^{de}. Gerard tells us about the social life of towns is not always accurate. The following is an instance:

"A peculiar characteristic of Klausenburg are the Unitarian divorces, which bring many strangers on a flying visit to this town, when the conjugal knot is untied with such pleasing alacrity, and replaced at will by more congenial bonds. To attain this end the divorcing party must be a citizen of Klausenburg, and prove his possession to house or land in the place. This, however, is by no means so complicated as it sounds, the difficulty being provided for by a row of miserable hovels chronically advertised for sale, and which for a nominal price are continually passing from hand to hand. House-buying, divorce, and re-marriage can therefore be easily accomplished within a space of three or four days" (p. 33).

A statement like this reminds us that some modern travellers still resemble their remote ancestor Baron Munchausen. There are no such hovels in Klausenburg, nor would their purchase be a necessary step to a divorce. Wherever he may reside in Hungary, a Unitarian, not attached to any other congregation, would be ecclesiastically within the jurisdiction of the Mother Church at Kolosvar (Klausenburg). Nor is it true, as the reader would infer from M^{de}. Gerard's book, that divorces are more easily obtained among the Unitarians than among other Protestant communities. The only difference is that the terms of admission are easier, and a merely civil divorce is not considered so respectable as an ecclesiastical one. The expediency of sanctioning divorce must, of course, remain a moot point, but in this respect the Unitarians are no worse than other Protestants. Divorces are not frequent among the Transylvanian Unitarians themselves. Most of their divorces are between persons who join the body for that purpose. These converts are naturally birds of passage; but some, who come for a very different purpose, "remain to pray." Duke Arthur Odesscalchi, who joined for a divorce, has been a member of the Supreme Ecclesiastical Council of the Unitarians since 1877. The Unitarian colleges are admirable institutions, at which youths of all denominations are educated. The name Unitarian was officially adopted by the Church in Transylvania in 1638. This anti-Trinitarian Church owed her origin to the religious toleration of 1568, when Prince John Sigismund was himself a Unitarian. Strange to say, the first Unitarian bishop, Francis David, was not of Magyar, but Saxon origin.

The most romantic race in this romantic land is the Szekel; yet to this race M^{de}. Gerard devotes but half a chapter, and that little is inaccurate. "The greater number of Szekels have remained Catholics" (vol. ii., p. 152). This is not the fact. The Szekels are the backbone of the Unitarian Church in Transylvania. Had M^{de}. Gerard consulted Baron Orbán's *Székelyföld*, she would have learned that in Csikarék alone have the Catholic Szeklers a majority over the Unitarian Szeklers, and this majority includes not only Unitarian Szeklers, but outsiders, such as Wallachs, Gypsies, and Armenians. In Transylvania religion is essentially parochial.

Very rarely indeed is there more than one church in a village, and those who do not care to conform generally go elsewhere. The Szeklers, who are nature's gentlemen, would have delighted Rousseau. In the Middle Ages, when the Saxon, bent on securing his own life and property, sheltered himself behind impregnable fortresses, and when the Rouman as a mere savage fled to the mountains, the Szeklers would go forth and meet the invader in the open field, undaunted by overpowering odds. For their knightly integrity and valour the Hungarian kings emancipated them from serfdom and ennobled the entire race. They are now what their forefathers were—industrious, generous, simple-minded, and absolutely truthful. Proud they justly are of their illustrious ancestry, whether as humble shepherds they tend their flocks on snow-ridged Carpathian slopes, or whether they are tillers of the soil in the valleys below. Their faith saves them from the degrading superstitions of their Saxon and Rouman neighbours. The virtues of these peasant Unitarians have yet to be sung. Some historians (M^{de}. Gerard states) have supposed them to be unrelated to the Magyars, who live on the other side of the mountain; but a Szekler is as much Magyar as a Yorkshireman is English. Their language is a dialect of Hungarian, and differs from it far less than does "Saxon" from German. There is an old Szekler alphabet, which I am told is "very curious."

Transylvania is a deeply interesting and almost unknown land. Its annals are still unwritten. No English book can be recommended without great reservations, and certainly not the book before us. I have been careful to draw attention to all the good points in M^{de}. Gerard's book; but justice compels me to state that, by reason both of her omissions and her grave inaccuracies, she has proved herself an unsafe guide to the land that lies beyond the forest.

J. G. COTTON MINCHIN.

The Death of Roland: an Epic Poem. By John F. Rowbotham. (Trübner.)

THIS is neither a great nor a good poem; but it cannot be denied that it is an extraordinary one. I may not, with any regard for humanity, recommend anyone else to read it through; for it consists of twenty cantos, and—estimating roughly by pages, for the lines are not numbered—we may put it down at about 8,000 lines. Its metre, I must not call indescribable, for Mr. Rowbotham elaborately describes it, in his preface, as "octometer catalectic, unrhymed, with all its places free except the two last," and as possessing a certain relation to music, the discussion of which I must leave to his brother connoisseurs. Its wealth of language—martial, heraldic, abusive, imprecatory—is quite phenomenal. It is "full of strange oaths," and familiar ones, too. The Saracens (canto xiii.) advance in the following array:

"With chiefs and with chevrons, with cantons and gyrons, with pallets and billets of many a hue,
With lozenges, rustrees, with bezants and bendlets, seamed, powdered, and blazoned, they beetled to view."

And they describe the absent Charlemagne (canto xviii.) thus:

"And well I picture him sitting at dinner, bearing the horn, wiping his mouth,
And testily muttering under his iron-grey moustachios, 'D—n their souls!
What do they want, disturbing my dinner?
Shall pudding spoil and men be saved?
Or shall men spoil and pudding be saved? G—p d—n their impudence! Bring the *relais*.'"

Strange as it may seem, all this is not meant for buffoonery. The whole poem is an attempt at the Homeric manner—at the mixture of the grand with the homely. Sometimes, as at the top of p. 112, passages from Homer are actually translated or adapted. Unfortunately, Mr. Rowbotham cannot distinguish between the simple and homely and the mean and vulgar. The sublime and the ridiculous not only approach, but touch, in his treatment of the theme of Roncesvalles. Turpin, the Archbishop of Rheims, strikes off a Saracen's head in the fight:

"As when a cricketer, Grace or Hornby, at the wickets with his bat
Beats the bouncing buoyant bounding ball across the meadow wide,
He with pleasure views the bounding, bouncing ball and runs his run,
With such grim delight did Turpin view the Saracen's flying head."

There is some faint fun, some artful alliteration, about this, but as epic poetry it is very vile. As to the language of the ugly monster Chernubles over the dead Astolpho (p. 55), it is absolutely intolerable. There is a bestiality about it which M. Zola could scarcely borrow from the worst plays of Dryden or Aphra Behn. And even "the blast of that dread horn," when Roland at last launches it upon the Fontarabian echoes, sounds grandiose, not grand, when thus described:

"Suddenly over the roar of the battle was heard the roar of the horn,
Putting it out, and overmastering every sound except itself.
Such was the hubbub terrific, that instantly all the battering fight beneath
Lay like a painted battle before them, amid the roar that came from the horn.
Then from out the horn's concavity, out rushed the noise in earnest, in great
Splashes of uproar fitfully belching, and ponderous billowy waves of sound,
That grew each minute steadier, gathering strength as they poured from the bottomless horn;
Surging and rising, until, like a cataract, from the horn the uproar poured.
Louder it rose. And still he blew. He blew till the blood burst out at his lips.
And angry snaps of uproar sullenly mix with the universal din;
Ear-splitting cracks of terrible thunder sputtered and spluttered from the horn."

Mr. Rowbotham, in fact, does not prosper in the "unchartered freedom" of his octometer catalectic, with its single or double anacrusis and all its places free except the two last. Where the metre is so little restricted the thought and style are uncurbed, and run, wild and copious, to the ocean of the excessive. When, at irregular intervals, he falls into rhyme, the matter and form are both raised to a much higher level. Witness this passage from canto x., p. 83, where, after the first battle has ended with the defeat of the Saracens, and the Paladins and their men, wearied to death, are waiting for nightfall:

"Hard on the right, another knot of veterans on the herbage late,
And thus they cried 'summer sunsets, summer sunsets, ye are late."

Ye are late, ye summer sunsets; late ye are and
tardy, when
Ye do come in answer to the prayer of tired and
weary men.
Sultry lustres, sultry glories of the glowing
afternoon,
Fain would we behold your splendour fainting
shortly, fading soon.
We are tired, and we are weary, after all the
war to-day,
After all the fearful wrestle and the struggle of
the fray.
Summer sunsets, summer sunsets, ye are late in
coming, then.
Ye are late and long of coming unto tired and
weary men."

This may certainly be read with pleasure. It is rhythmical and natural, though it is diffuse and pleonastic. Think with what unerring brevity Homer gives us the same thought:

Ἀχαιοὶς

ἀσπασίη, τριλλιστος, ἐπὶλυθε νύξ ἐρεβεννή.

A poem that owes so much to Homer for its inspiration was bound, I think, to aim at preserving the dignity of Homer, and not to blaspheme it by couplets like this (canto xviii., p. 168):

"Why don't they all go in for suicide, so as to save the devil in hell
The trouble of turning the key so often to let them into blazes, eh?"

or by ending a line with the third syllable of "braggado-cio," or by launching such words as "impoverisheder," "reguly," and such phrases as "divinely divine it."

A copious descriptive faculty and almost unlimited command of varied language do not of themselves constitute the poet. A sense of discrimination, an imaginative tact, that knows the really great from the merely large, the homely from the vulgar, the marvellous from the monstrous—this it is that is wanting, as I think, in *The Death of Roland*.

E. D. A. MORSEKAD.

NEW NOVELS.

The Parting of the Ways. By M. Betham-Edwards. In 3 vols. (Bentley.)

Even Such is Life. By Lady Watkin Williams. In 3 vols. (Chapman & Hall.)

Pearl Stutton's Love. By J. G. Holmes. In 3 vols. (Wyman.)

The Web of Fate. By W. J. Wilding. In 2 vols. (Hurst & Blackett.)

Life in the Cut. By Amos Reade. (Sennenschein.)

Crane Court. By A. M. Monro. (Griffith, Farran & Co.)

Idle Tales. By Mrs. J. H. Riddell. (Ward & Downey.)

The Parting of the Ways is a novel of brilliancy and distinction. There is always a certain cleverness in anything that Miss Betham-Edwards writes, and this story forms no exception. Over-melodramatic in parts, perhaps, and uneven in execution, there is yet an originality about it which removes it from the average fiction of the time. The delineation of Mr. Rapham—a man who has become a millionaire out of the African slave trade, who lavishes his wealth upon his daughter and vainly endeavours to become a figure in English society—is one not readily to be forgotten. The utterly unexpected way

in which the infamous secret of his life is divulged at a public meeting, and the dramatic results which flow from it, furnish quite a new sensation for the jaded novel reader. Rapham's daughter is filled with loathing for the wealth and diamonds, &c., with which she is loaded when she discovers their origin, and she chooses expulsion from her home rather than life under the new conditions. The revelation brings terrible disillusion to her. Subsequently, deep remorse seizes upon Rapham himself; and, in a state of semi-madness, he searches for his daughter, raving under the impression that she has been stolen from him. His final meeting with her, and his miserable death, are very dramatically told. Mr. George Bentley is described as the architect of this novel, having supplied its *motif*, and he has certainly hit upon an unusual plot. There is some capital burlesque writing in the description of Allchere & Co., the "universal contractors," who provide everything for Mr. Rapham, and who could, if required, supply such miscellaneous indulgences and commodities as "lessons on the violin, a new set of teeth, vaccination," &c. They not only undertake funerals and provide the mourners, but contract for the funeral sermons too. Mr. Rapham even favours putting the work of legislation into their hands, by contract. "Half a dozen fellows paid moderately well for the work would make as good laws as those passed in the House of Commons." The sketch of the girl-inventor, Norrice Bee, is very pathetic and lifelike.

There is a fine optimistic tone running through Lady Watkin Williams's *Even Such is Life*; but it is the optimism that springs from a life spent in doing good. Sir Victor and Lady Arvon have no time to ask Mr. Mallock's question, "Is Life worth Living?" but they furnish a practical answer to it by living it as it ought to be lived. After all, it is worth something to look back on a career that has not been all selfish enjoyment; and if this story were valuable for nothing else, it must have a bracing effect on those who rightly grasp its purport and live out its principles. It is not exciting as a narrative, for there are no fell crimes or hairbreadth escapes. It contains no tragedy more exciting than a contested election, and yet it is very pleasant to read. Its merit consists in giving true pictures of life and thought, as both exist in certain circles at the present day. Some perhaps may complain that it is a little too polemical in parts; but the present writer, at least, is in substantial agreement with it, both as regards politics and religion. On other questions Lady Watkin Williams occasionally says things which are worth pondering over. "It is greater," she observes, "for a woman to be womanly than clever, and her failure in the first proves her to be something below the true height of the last." Again, touching the battle of life, "I feel as if I could never thank God enough for having made me a fighting human soul instead of a ready-made angel." Philanthropy or help must not always be offered to others from our own point of view: "Before you offer active service, try to enter into their mind on the subject, and offer help in aid of *their* schemes, not in aid of independent or possibly counter ones." On matters of contemporary art our

author would be voted defective, for she courageously, if mistakenly, assails the claims of Dante Rossetti.

Appalling crudities meet us in *Pearl Stutton's Love*. Hitherto Mr. Holmes appears to have written verse only. We have not read his *Sir Richard's Revenge*, and other *Poems*, but should certainly prefer that work to this, on the ground that it can scarcely have sounded the same depths of literary inefficiency. In a very singular preface to his novel the author somewhat deprecates criticism by remarking that the Muses have forsaken him. "I ride," he says, "a less romantic horse; one clothed in commoner harness; one whose movements and manners are yet strange to me." It may be open to question whether the steed he rides is not even a more prosaic quadruped still than a horse; but we do not wish to be too severe on Mr. Holmes, he writes with such buoyant spirits. He needs to carry more ballast, and to aim at a higher literary finish. There are many entertaining passages in the story, but as a whole it is very diffuse and unsatisfactory. Its most striking incident seems to have been "conveyed" from the play of "Hoodman Blind." Mr. Holmes's poet Hayton is a washed-out individual, and there is scarcely one character that bears the impress of flesh and blood.

Mr. Wilding, with an author's license, calls *The Web of Fate* "a dramatic story." Whether it be this or not, we know that it is an unhealthy story. A protest must be entered against elevating such characters as Digby Fanshawe into positions of prominence, while the influence they acquire over women like Marcia Cantalini is demoralising in the highest degree. The closing chapters of this book are revolting in the mere sensationalism of brutality. We doubt, too, whether the jealousy of such a woman as Marcia over a rival's triumph would lead her to make a slave of herself in the way she does here to a blackleg and a murderer. The writer is not to be commended from any point of view upon his work, which is crudely thrown together, and not in the least dramatic in the true sense.

A word of cordial welcome can be given to *Life in the Cut*, which is evidently a faithful picture of our canal population—a race still to a great extent outside the pale of law and civilisation. It is well that we should be brought face to face with the life-sorrows of this strange and miserable class of beings; and this little work will do a considerable amount of good if it only obtains, what it well deserves, a wide circulation. We trust the time is coming when all the waifs and strays of canal life will be got hold of, and when the present evils which now so sadly weigh upon their existence will be fairly grappled with and abolished. Such a narrative as this must do something to educate the public conscience in the matter.

Crane Court is a delightfully fresh and interesting story. It is told without any straining after effect; and little Fidge Mortimer is one of the best child studies we have met with for years. He is a real child, fresh and natural, with no priggishness or precociousness about him. Without being striking from the point of view of literary finish or

workmanship, Mr. Monro's sketch is in every other respect most creditable, and is sure to beget in readers a desire for a further acquaintance with him. All the characters in the story are well drawn.

The author of "George Gaith" has been silent too long for so excellent a novelist. She now gives us only a series of sketches in her *Idle Tales*, but they are all very entertaining. There is a touch of true pathos in "Only a Lost Letter"—an uncommon incident, uncommonly told. Now that Mrs. Riddell has broken ground again, we shall look for something more ambitious and sustained than this single volume offers.

G. BARNETT SMITH.

RECENT THEOLOGY.

The Risen Christ the King of Men. By James Baldwin Brown. (Fisher Unwin.) The first eight of the sixteen sermons in this volume form a "connected series," and were intended to form "part of a book" which Mr. Baldwin Brown was preparing for publication when his work was interrupted by illness, and finally by death. The subject of the sermons is the Resurrection of Christ. They begin by criticising Warburton's *Divine Legation of Moses*, with the view of establishing that the belief in a future life is implicit in the Mosaic dispensation, but that it was necessary for the Jews "to master the meaning of Life before they could explore successfully the mystery of Immortality." Sermons iii. and iv. deal with "the place of resurrection in the scheme of creation": Christ's resurrection is the answer to the riddle of the universe—"what it means all life must be striving to mean; what it expounds all life must be striving to manifest; what its prophecies all life must be travelling to fulfil." The strength of the evidence for the resurrection is the subject of sermons v., vi., and vii. They treat respectively of "the witness of the disciples," "the testimony of St. Paul," and "the universal acceptance." This slight sketch will sufficiently indicate the aims and the scope of the volume. The sermons contain some redundancies of thought and language which could not be avoided in discourses intended primarily for the pulpit and not for the study, and the preacher makes the mistake in the fifth sermon of resting a most valuable and eloquently-stated truth on a text which "many ancient authorities omit"; but, after noting these slips, we have nothing but praise. The evidence for the resurrection has rarely been stated so lucidly and so sensibly. Mr. Brown's capacity as a writer of history was scarcely less than his ability as a preacher; and he possessed a breadth of view, a power of marshalling facts and arguments, which are missing in many histories. The comparison and contrast of the characters and careers of St. Paul and Julius Caesar in sermon vi. is, perhaps, the most striking passage in the volume, and we believe it to be quite original; but fine sayings and original thoughts are frequent. Mr. Brown's eloquence is always pleasant, because it is always natural. The last eight discourses, three of which have been already published, are complementary to the first eight, and were apparently intended to find a place in the contemplated work, the interruption of which will be keenly regretted by all readers of the present volume.

Work and Worship; Sermons preached in English Cathedrals. By G. E. Jelf. (Sonnen-schein.) In his short but interesting preface to these sermons, Canon Jelf remarks on the "peculiar responsibilities" of the cathedral

preacher, who has "to meet the arguments, but also to satisfy the spiritual needs, of the free lances of society." He cannot speak as priest and pastor, "his position is more that of an ecclesiastic." This theory accounts for the weakness of the sermons, viewed as appeals to worldly or indifferent hearers. The non-believer, whether agnostic or worldling, is separated by an essentially wider chasm from the ecclesiastic than from the "priest and pastor." He must be preached to as a man, and religious questions put before him as a question of things, not of names. Canon Jelf, in his sermon on "Self-deceit as to our Churchmanship," quotes Christ's words that a man cannot enter the kingdom of God except he be born of water and of the Spirit, and makes the words mean that if a man's baptism has been neglected, he is "not a Christian at all" till the omission is rectified. We should have explained Christ's words as meaning exactly the contrary, and mention Canon Jelf's statement as one possible only to the "ecclesiastic," which is calculated hopelessly to confuse, perplex, and rebuff the anxious agnostic or returning prodigal. But Canon Jelf only occasionally strikes this false note. His sermons are very excellent as appeals to the careless and unconverted, simply because the hearer must acknowledge how tender, beautiful and holy is the religion they set forth. A refined sweetness distinguishes the sermons, which is never feeble from want of earnestness, or unsympathetic from pride. A preacher who is always sincere, and always loving, can afford to reveal himself occasionally as an ecclesiastic; but the revelation does not help him in appealing to a profane congregation. There are thirty-one sermons in the present volume, of which the first, on the "Comfort of the Creed," and the nineteenth, on "The True Sacramental Fellowship," may be mentioned as fine examples. Every reader will notice the appositeness and the spiritual beauty of Canon Jelf's quotations.

Sundays at Balmoral. By the late Principal Tulloch. (Nisbet.) These sermons, "preached before her Majesty the Queen in Scotland," have been printed since Principal Tulloch's death, and have not had the advantage of his final revision. But, although they are neither ambitious nor elaborate, they are finished compositions, saying what they wish to say in sober natural language, which avoids fine writing without becoming platitude. The volume contains twelve sermons in all, of which the third, on "Christian Agnosticism," and the last, on "The Ideal of the Church," are specially striking. The third, in particular, states with unusual precision and clearness a truth which preachers and theologians are too fond of ignoring. It is refreshing to find a theologian confessing of theology that "of all subjects, unhappily, where real knowledge is but partial, it is that on which men have indulged the wildest and the proudest dreams." A well-executed photograph of the author accompanies the volume.

St. Paul in Athens. The City and the Discourse. By J. R. Macduff. (Nisbet.) To Dr. Macduff it has been a labour of love to put together everything about Athens which can illustrate St. Paul's discourse on Mars Hill.

"The writer's purpose is to give a monograph on Athens; but Athens in connexion with its one scriptural episode and association. . . . In the fulfilment of a long-cherished purpose it is designed to form a companion to what was published many years ago, after a personal sojourn in the City of the Caesars—*St. Paul in Rome*."

Dr. Macduff apologises, very unnecessarily, for what he calls the "hybrid character" of his book; it is "as much secular as sacred, and as much sacred as secular." This means that the

author has most enthusiastically acquainted himself on the spot with the topography of Athens, and placed his knowledge so brightly and clearly before his readers that few will be able to resist the contagion of his enthusiasm. We finish the volume with the feeling that we have spent an hour or two under the Attic sky, more than willing to pardon Dr. Macduff for allowing "one of the sunniest memories of life and travel, and a fascinating and congenial subject, to occupy more detail than might otherwise be justified." Three careful woodcuts from excellent photographs preface the exposition.

The Conquering Cross (The Church). By the Rev. H. K. Haweis. (Burnet.) This last volume of the series "Christ and Christianity" is disappointing. "Three hundred years have been rapidly spanned," we read in the Forewords, and we expect that we shall be given in outline a view of the development of Christianity in the first three centuries; but nothing of the sort is attempted. "The Legend of Peter and Paul" is treated at unnecessary length, in order, apparently, to give occasion for a sketch of Nero, who seems to exercise an irresistible fascination upon historians of early Christianity; and when Mr. Haweis at length gets to Clement of Rome, he begins by telling us that till recently his epistles were extant only in "an Alexandrian MS. now in the British Museum." The account of Clement is eminently readable, but it makes no effort to define Clement's work as a founder of Christianity, being occupied mainly with the sensational discovery of the house of Clement and recovery of his epistle. Mr. Haweis does not seem aware that the so-called second epistle is not an epistle at all. The chapter on "Justin Martyr and the Apologists" gives a fairly full account of Justin's Apology; but what proof is there that "St. Paul he systematically ignored"? "Crescent" and "Frontin" are presumably misprints for Crescens and Fronto. Minucius Felix is sympathetically expounded; but it is probable that he was not the "first of Latin Apologists," and that his date was about A.D. 234 instead of A.D. 178 as Mr. Haweis supposes. Mr. Haweis has room only for a hasty sketch of Constantine and Athanasius; and Clement of Alexandria, Origen, Tertullian and Cyprian, are scarcely more than alluded to. The most interesting chapter in the book is the last on "The Christianity of the Future." After quoting a remark of M. Renan that "the negation of the supernatural has become an absolute dogma for every cultivated mind," Mr. Haweis goes on:

"I venture to affirm with equal confidence that there will be no living Christianity without a belief in the Supernatural. . . . A religion may be corrupt, ignorant, even grotesque, but as long as it asserts fearlessly a belief in that great bugbear of science, Supernaturalism, it must win. A ridiculous religion, with Supernaturalism, will always be more influential than a religion, however sensible, without it, simply because it will contain the one thing without which there can be no religion at all."

To many readers of Mr. Haweis's *Picture of Jesus* and *Picture of Paul* this passage will occasion some astonishment, however fully they may agree with its common-sense.

Martyrs and Saints of the First Twelve Centuries. By the Author of "Chronicles of the Schönberg-Cotta Family." (S.P.C.K.) We have only one fault to find with these delightful and careful "Studies from the Lives of the Black Letter Saints of the English Calendar," and that is that they make up a volume which is somewhat lacking in unity. The author explains the cause of this when she tells us that "at a first glance, our Anglican Calendar does seem to have a peculiar casualness of its own"; and she takes the best course for the avoidance

of disorder by dividing her book into two parts, which deal respectively with "Martyrs" and "Saints not Martyrs," and dividing her characters into groups, such as "The Legends of the Virgin Martyrs," "The Four Latin Fathers and St. Benedict," "Saints of France." By these means some of the chapters are made fairly homogeneous; but, on the whole, the reader feels that the book is essentially a book of reference, not to be read consecutively, and yet so pleasantly and graphically written that it is hard to lay it down. As a book of reference it needs condensation; as a volume of narrative it would bear a good deal of expansion. The facts are recorded with the author's accustomed thoroughness and care, and the style of the narrative hits the happy mean between an unnatural picturesqueness and an unreadable dullness. Her own observations, whether literary, historical, or ethical, are always sensible, and frequently original.

A Manual of Church History. Vol. i. By the Rev. A. C. Jennings. (Hodder & Stoughton.) Mr. Robertson Nicoll, the editor of "The Theological Educator," in which series this *Manual of Church History* is contained, is much to be blamed for the form the work has taken. We can imagine no greater boon to the theological student, and no surer means of arousing interest in church history, than the publication of a handbook which should do for church history what Prof. Warfield's volume in this series has done for the textual criticism of the New Testament. An accurate account, after the style of the paragraphs in Green's Short History, of the original sources for the history of the Church in the first ten centuries, with a list of the best and most accessible editions and of the received authorities on the times and the men, is much needed; but Mr. Jennings's attempt to cram the events of eleven centuries into 134 short pages, though conscientiously carried through, will be useless to the serious student, and not much assistance to the lazy one. We blame Mr. Nicoll, because Mr. Jennings "readily admits" that his manual is probably "of small educational value," and that "the utmost that can be expected" from it is that it "may be useful to candidates for examinations"!

Solomon: His Life and Times. By the Ven. F. W. Farrar. (Nisbet.) This is one of the series of biographies, entitled "Men of the Bible," which are to do for the heroes of the Bible what so many series are attempting for the celebrities of profane history. We are presented with an exhaustive history of Solomon and his times, full of interesting information stated picturesquely and eloquently. Archdeacon Farrar considers it no part of his task "to enter into minute critical questions as to the date and origin and character of various elements in the Books of Kings"; and consequently, we do not feel entirely satisfied with the lively narrative he constructs from his untested documents. The chapters, moreover, on Solomon's temple and other buildings are somewhat dull and difficult to follow; but the accounts of "Solomon in all his glory," and of "the decline of Solomon," with the chapters on the writings attributed to Solomon are in Archdeacon Farrar's best manner, and will be read by every class of readers with pleasure and profit. The author throughout the volume leans decidedly to the side of orthodoxy; but he does not hesitate to question the Solomonic authorship of most of the works attributed to Solomon, and gives a clear and appreciative account of their character and contents.

The Contemporary Pulpit. Vol. vii. (Sonnen-schein.) The editor may be congratulated on his seventh volume. It contains the last three of Bishop Moorhouse's sermons on Hebrew

Prophecy, sermons by Dean Plumptre, Dr. Maclaren, Archdeacon Farrar, and others, with a number of specially good "Outlines." The Bishop of Derry's discourse on Socialism will be found interesting, though it will not be accepted as just by those it criticises. To assert that the "final motto" of Socialism is "to squeeze all things flat" is merely to beg the question. English Socialists at all events, notably Mr. Morris in his *Lectures on Art*, insist that the squeezing of all things flat is the direct result of unlimited competition. We do not admire the tone of "A Sunday among the London Preachers"; Mr. Stopford Brooke should be criticised courteously, or not at all.

Moore's Church Manuals. Nos. 1, 2, 3. (Walter Smith.) These manuals, entitled respectively, "State Control over Church and Chapel," "Church and Chapel Property," and "Parliamentary Grants to Church and Chapel," are by the Rev. Thomas Moore, the author of the *Dead Hand in the Free Churches of Dissent* and of the *Englishman's Brief on Behalf of His National Church*. Mr. Moore writes with clearness and vigour, and makes effective use of his favourite argument that Dissenters are practically in much the same relation to the State as the Established Church. But if the Dissenters are not the most dangerous advocates of disestablishment, a great part of Mr. Moore's argument is inconclusive.

The Saints' Rest. By Richard Baxter. A New Edition. (Griffith, Farran & Co.) When we have said that these two volumes of "The Ancient and Modern Library of Theological Literature" constitute a handy and clearly printed edition of *The Saints' Rest* we have exhausted our praise. The preface is well-written, but it is very short, and its tone objectionable; instead of being enthusiastic it is censorious. It speaks of "the spleen and bitterness which controversy had planted" in Baxter's heart. This is the more inexcusable, because there is a lecture by Archbishop Trench on *The Saints' Rest*, which is exactly what this preface ought to have been. To write a short disrespectful preface to a popular edition of such a book as *The Saints' Rest* is silly. Moreover, we are nowhere told what text our edition follows. It seems to be that of Orme's edition with the quotations at the foot of the page omitted, except when they are from Herbert or Du Bartas. This is the only trace of editing we can detect. Baxter's quotations are not verified, nor translated except when he translates himself; and there is no sort of attempt made to give the reader information about the numerous names which constantly occur. This would be a task needing both learning and discretion, but it would have added immensely to the interest of the book.

The Enchiridion of Augustine addressed to Laurentius. (Religious Tract Society.) This is the second of the prettily printed "Christian Classics Series," and is a reprint of the translation published in Messrs. T. & T. Clark's edition of Augustine's works. The excellent principle that the series is to consist of complete and unabridged tracts and treatises has led to the choice of the *Enchiridion ad Laurentium* to represent St. Augustine. The choice is happy, and the translation careful and conscientious, though not brilliant. The prefatory note and argument might have been longer, and a few notes would have been useful to the general reader. These are the only improvements we can suggest in a dainty edition of a deeply interesting book.

Eucharistica. A new Edition, revised. (Parker.) The popular "Meditations and Prayers on the Most Holy Eucharist from Old English Divines" is carefully revised in this little book, and many errors are detected and corrected. Bishop Wilberforce's original intro-

duction is retained. It is a pity that the editor could not refrain in his preface from a reference to what he calls the "degraded view of this sacrament" held by those whose religious views he disagrees with, for such an attack is singularly out of place in a devotional treatise; but otherwise he has done his work well, and his volume will be valued by many.

NOTES AND NEWS.

THE early portrait of Mr. Browning in the next volume of the new issue of his works will be taken from that in Horne's *Spirit of the Age*, formerly published by Smith, Elder & Co. The "Ring and the Book" volumes will have portraits of Count Guido on his road to execution, and of the old Pope, besides other engravings.

PROF. C. H. HERFORD, of Aberystwyth, has just sent to press his introduction to the select plays of Ben Jonson in the Mermaid Series, and will now take up his like selection from Lyly.

A Gipsy Lore Society has just been formed. The president is Mr. C. G. Leland, the vice-president, Mr. H. T. Crofton; and the members already include the Archduke Joseph of Hungary, Sir Richard Burton, M. Paul Bataillard, Dr. Alexander Paspatis, and several more English and Continental students of Romany. The society will publish a quarterly journal, part i. of which will appear in July, and copies of which will be strictly confined to members. The hon. secretary is Mr. David Mac Ritchie, of Archibald Place, Edinburgh.

THE cartulary of the abbey of Winchcombe, in the county of Gloucester, which was missing for many years from the muniment room at Sherborne and was supposed to be lost, has recently been found and restored to Lord Sherborne. With his permission, it has been carefully transcribed; and it is proposed to print a limited number of copies for subscribers only. The cartulary contains 840 documents, consisting of papal bulls, charters, confirmations, and other records relating to the abbey from its dedication, A.D. 811 to A.D. 1422. The charters contain not only the names of the parties, but also those of all the witnesses, too often wanting in such records. The work will form two volumes, uniform with the Rolls series; and the editing of it has been undertaken by the Rev. David Royce, vicar of Nether Swell, Stow-on-the-Wold, Gloucestershire.

MR. T. FISHER UNWIN announces as the new volume in "The Nation Series" *Assyria*, by Zenaide A. Ragozin, the writer of the companion volume on *Chaldea*.

MR. GEORGE MACGREGOR is about to publish through Messrs. Hay, Nisbet & Co., of Glasgow, a work entitled *Glasgow, Ancient and Modern*; with an Account of the Bishop's Castle. Mr. MacGregor is already known as the author of perhaps the best comprehensive history of Glasgow. The present work is essentially popular, and will extend to about 160 pages. There will be some half dozen illustrations, copies of rare prints connected with the city, the most interesting being Capt. Sleszer's *Theatrum Scotiae*. In connexion with the Bishop's Castle, a full-sized model of which is at present to be seen within the grounds of the Glasgow International Exhibition, it is interesting to recall the fact that it was a paper on the subject contributed by Mr. MacGregor to the Glasgow Archaeological Society three or four years ago which re-directed public attention to the long demolished residence of the Bishops of Glasgow.

Letters from Dorothy Osborne to Sir William Temple, published at the beginning of the

month by Messrs. Griffith Farran & Co., has already gone into a second edition.

DR. A. BAIN will read a paper before the Aristotelian Society on Monday next, May 28, on "The Definitions of the Subject Sciences, with a view to their Demarcation."

DR. ABBOTT, head master of the City of London School, will deliver the annual address to the Teachers' Guild, on Monday next, May 28, at 8 p.m., at the Memorial Hall, Farringdon Street. The subject he has chosen is the teaching of Latin to boys who leave school at the age of sixteen. All interested in education are invited to attend.

THE annual meeting of the Social and Political Education League—founded for the gratuitous delivery of educational lectures on political subjects—will be held on Friday next, June 1, at 8 p.m., at the Westminster Palace Hotel, when Prof. J. R. Seeley will deliver an address. The president of the league is Prof. Bryce; and the hon. secretaries are Mr. G. P. Maodonell and Mr. J. K. Stephen, both of Lincoln's Inn.

ON Wednesday next, May 30, Messrs. Sotheby will sell—in a single lot, if the reserved price be reached—the unique collection of books, MSS., drawings, engravings, maps, coins, tokens, seals, &c., relating to the city and county of Lincoln, which was formed by that enthusiastic local antiquary, the late Mr. E. J. Willson; and earlier on the same day the library of Mr. William Muir, of Edmonton, who is known to all lovers of Blake by his facsimiles of that artist's rarest work. Several of these facsimiles will be included in the sale, as well as original editions of Blake, Keats, Shelley, Wordsworth, Coleridge, &c.

THE FORTHCOMING MAGAZINES.

Two portraits of literary men are about to appear in *Men and Women of the Day*—viz., Mr. Walter Besant's in the May number to be issued next week, and Mr. Robert Browning's in the June number. The appearance of Lord Tennyson's portrait has been deferred owing to his absence from town; but is expected also in an early issue of the periodical.

MISS ELIZABETH THOMPSON (Lady Butler) will contribute several unpublished studies to the June (summer) number of *Atalanta*. The same number will contain an article on the Herkomer School at Bushey, illustrated with a reproduction of a "Monograph," by Prof. Herkomer.

THE Forthcoming number of the *Babylonian and Oriental Record* (David Nutt) will contain: "The Cone-fruit of Assyrian Monuments," by Dr. J. Bonavia; "Pehlevi Notes, the Semitic Suffix, Man, and its Origin," by Dr. L. C. Casartelli; "Gifts to a Babylonian Bit-ili or Bethel," by Mr. Theo. J. Pinches; "The Races of Man in Egyptian Documents," by Prof. Terrien de Lacouperie; "Ethical Types from Egypt," by Mr. W. M. Flinders Petrie; "Jareb," by Prof. Sayce; "Letter from Egypt," by Mr. F. Ll. Griffith.

THE *Century* for June will contain the following articles: "The Plains and Prisons of Western Siberia," by Mr. George Kennan; "Matthew Arnold's Criticism," by Mr. John Burroughs; "A Printer's Paradise," by Mr. T. L. De Vinne; "What We Should Eat," by Prof. Atwater; "The Liar" (II.), by Mr. Henry James; "The Philosophy of Courage," by General Porter; "Bird Music—the Oriole and the Thrush," by Mr. S. P. Cheney.

"A GRIMM'S Tale in a Shetland Folklore Version," by Karl Blind, is the title of an

article in a forthcoming number of the *Archaeological Review*. It is the first time that this northern version in Shetlandic speech, which deviates somewhat in details from the tale in the German collection, has been made public.

St. Nicholas for June will contain: "A Great Show, A.D. 105," by Prof. Church; "Louisa May Alcott" (with portrait), by Mrs. L. C. Moulton; "Dogs of Noted Americans" (I.), by Mr. G. Van R. Wickham.

A NEW sixpenny monthly, entitled *Life-Lore*: a Magazine of Natural History, will appear early in June. The publisher is Mr. W. Mawer, Essex Street, Strand.

UNIVERSITY JOTTINGS.

IN Congregation at Oxford last Tuesday, the statute admitting women to the honour examination in the final school of literae humaniores was proposed by the provost of Queen's College, and met with no opposition.

SIR F. ABEL will deliver the annual Rede lecture at Cambridge on Friday, June 8. He has chosen for his subject "Applications of Science to the Protection of Human Life"; and the lecture will be illustrated by experiments and the exhibition of appliances.

THE complete degree of M.A. *honoris causa* has been conferred upon Sir T. F. Wade, the new professor of Chinese at Cambridge, who proposes to deliver his inaugural lecture on Wednesday, June 13.

HITHERTO Persian has only been taught at Cambridge for the benefit of candidates for the Indian Civil Service, and by a non-resident teacher. It is now proposed to appoint a university lecturer in Persian, at a salary of £100, in connexion with the special board for oriental studies. It is also proposed to give the same salary to the Lord Almoner's professor of Arabic, for regular lectures on subjects approved by the board.

A UNIVERSITY lecturer in geography will be appointed at Cambridge this term, following the example of Oxford. The salary is £200, of which £150 is provided by the Royal Geographical Society.

PROF. HOLLAND and Mr. J. A. Symonds will represent Oxford at the celebration of the eight hundredth anniversary of Bologna University, to be held in June; and it is hoped that Prof. Bryce may also be present. Durham has chosen as its representative the Rev. H. Rashdall, also an Oxford man.

AN appeal has been issued at Oxford for subscriptions to an Asia Minor Exploration Fund, in order that Prof. Ramsay, now of Aberdeen, may be enabled to continue his work of archaeological exploration. He wishes to make two more expeditions, to collect additional inscriptions and to complete the materials for a map of Central Asia Minor.

It appears that Balliol College does not intend to make any use of the buildings of New Inn Hall, which recently fell to the college on the death of the last principal, in accordance with the fiat of the University Commission. The buildings are stated to be now for sale.

LAST Saturday the Bishop of Colombo (better known to Oxford men of twenty years ago as R. S. Copleston) delivered a public lecture at Oxford on "Buddhism." He confined himself to the Buddhism of Ceylon, which he stated that he knew from some study of the original Pali texts, as well as from frequent and thorough discussion with representative Buddhists in the island. He contested generally the view of Buddhism given in Sir Edwin Arnold's *Light of Asia*, and also animadverted upon passages in the "Sacred Books of the

East." The lecture is to be published immediately in pamphlet form.

THE Oxford University Dramatic Society will perform "The Merry Wives of Windsor" during the coming week, the part of Falstaff being taken by Mr. A. Bourchier. Sir Arthur Sullivan has composed the music for the fifth act.

IN the *Oxford Magazine* for May 23, Mr. F. Madan concludes his bibliography of recent Oxford publications, bringing it down to the end of 1887; and he promises a list of the best current reference-books relating to Oxford, including periodicals and guides. In the same number Mr. F. Haverfield prints some curious extracts from the *Gentleman's Magazine* relating to Oxford in the years 1731-61.

ORIGINAL VERSE.

THE FIRST HERO.

THE great sea's marvellous music filled men's ears,
And glory of snow-mountains pure and high—
Flight of bird-wings against a sapphire sky—
Birth of red roses—stars in still grey mares—
Set their hearts beating, filled their eyes with tears,
And thrilled their souls, as tho' their feet drew nigh
Some hidden shrine o'ershadowed of deity;
Yet no revealing lit the vanishing years,
Until with echoing voice, and eyes aflame,
With mighty hands to set the crooked straight,
And mighty heart to love full-consecrate,
To mock at mocks, to scoff at death and shame,
Show life God's lyre, and earth heaven's open gate—
The world's interpreter, the hero came!

EVELYN PYNE.

MAGAZINES AND REVIEWS.

BESIDES a short notice of the late M. Désiré Nisard, illustrated with a full-page portrait (unfortunately phototyped, not engraved), and a longer one of the publisher, Henri Fournier, the May *Livre* contains an article of some length by M. Julien Lemer on Baudelaire. M. Lemer (who must not be confounded by inquisitive Britons with his better-known fellow-member of "the trade," M. Lemerre) is known to Baudelaireans as having had literary dealings with the author of the *Fleurs du Mal*; and so long ago as 1846 he received from the poet a characteristic adjuration to spell his name "Baudelaire Dufays," as it then ran correctly, with the y and the tréma over the y, and the s, because there was a wretch named "Dufai" about. Most of the correspondence here printed relates to literary matters, and dates from that ill-starred Belgian period when brain disease was rapidly doing its work with Baudelaire. We cannot quite agree with M. Lemer's moral, which seems to be that the representatives of a man of letters should be legally compelled to publish or republish anything and everything that he leaves. Our literary hunger is, we think, as strong as any man's, but for one instance where literary executors have kept back anything worth publishing we know twenty where they have published what ought to have been kept back.

THE May number of the *Theologische Tijdschrift* contains two articles which English students of religions and of folklore will read with interest. They are reviews of De la Saussaye's *Lehrbuch der Religionsgeschichte* and Knappert's treatise on the significance of folklore for religious history (in connexion with the myths of Holda), by Prof. Tiele. The latter work, which augurs well for future services to science of its young author, is also reviewed favourably in the March-April number of the *Revue de l'histoire des religions*.

CORRESPONDENCE.

A POEM BY HOCLEVE.

Cambridge: May 22, 1888.

In the ACADEMY of May 12, I showed reasons for supposing that the poem "To the Kings most Noble Grace," printed in Bell's Chaucer, ed. 1878, iv. 424, must have been written by Hocleve, and is addressed to Henry V.

I now find that both results are correct, but I might have arrived at them by a shorter process. In the edition of Hocleve's Poems, by G. Mason, in 1796, Mason describes the contents of MS. Phillips 5151, and tells us that all the poems in that MS. are by Hocleve. The fifth poem, which he does not print, is addressed, he tells us, to Henry V., and begins with the words—"To yow, welle of honour." This is, doubtless, the very poem in question.

WALTER W. SKEAT.

THE DATE OF THOMAS CROMWELL'S BIRTH.

London: May 21, 1888.

Although the book on Thomas Cromwell reviewed by me in last week's ACADEMY is not a biography, but only an essay on his "Character and Times," some readers may be thankful for a note on the date of his birth, which has not hitherto been a settled question. The date commonly assigned, 1490, does not harmonise well with the story of his having served as a soldier with the French at the battle of Garigliano in 1503; and, though there is some reason to question whether his brief military career had even begun at that date, when it is supposed to have ended, it certainly must have begun, and ended too, a very few years later.

In writing the life of Thomas Cromwell for the Dictionary of National Biography I gave it as the opinion of Mr. John Phillips, of Putney, based upon a study of certain entries in the manor rolls of Wimbledon, that the true date of Thomas Cromwell's birth was at least five years earlier than 1490. Mr. Phillips has since written to me more definitely as follows:

"His birth year may be determined from the following facts. In 1494 his eldest sister, Katharine Cromwell, married an ale-brewer and inn-keeper in Putney, named Morgan Williams. In 1496 their first son, Richard Williams, was born at Lanishen Fawr, the Homestead of the Williams family in the parish of Lanishen in Glamorgan-shire. Morgan Williams and his wife were then on a visit to his father, who was known as Jevan ap Morgan. Now, it is known that Thomas Cromwell, who was Richard Williams's uncle, was eleven years older than his nephew. Hence Thomas Cromwell's birth year was 1485, and he was fifty-five years old when he was decapitated in 1540."

These statements must rest on the authority of Mr. Phillips, as they can only be verified by a minute investigation of documents not easily accessible. All I can say myself is that the year 1485 suits the story of Cromwell's life much better than 1490 as the date of his birth.

JAMES GAIRDNER.

THE CODEX AMIATINUS.

Jever, Oldenburg: Mai 20, 1888.

I do not mean to answer Prof. Browne's reply to my letter in the ACADEMY of May 5. I expressed my opinion on the Codex Amiatinus as well as I could; and, though I apparently succeeded very little—for Prof. Browne understands sometimes the contrary of what I wanted to say—still I trust I may leave it to your readers to judge between Prof. Browne's opinion and mine. There is only one point I feel bound to say some words upon.

My letter of March 26 had just been printed when I received De Rossi's "Memoria: La Bibbia offerta da Ceolfrido abbate al sepolcro di S. Pietro." The eminent Roman scholar's publication is still unknown to Prof. Browne, and probably also to most readers of the ACADEMY. I am certain that Prof. Browne will be delighted with it; for De Rossi declares that Cassiodorus's Bible, the *codex grandior*, which was brought to Jarrow by Ceolfrid, contained two different pictures, one of the tabernacle, in front of the book, and one of the temple, in some other part of it. He contends that both Bede and Cassiodorus are speaking of these two pictures.

Cassiodorus *de institutione divinarum litterarum*, c. v.—says De Rossi—mentions both pictures, that of the tabernacle and that of the temple. In his exposition of Psalm xiv. he only speaks of the tabernacle. Bede *de templo*, c. 16, describes the picture of the temple; *de tabernaculo*, ii. 12, he speaks of that of the tabernacle, referring erroneously in both places to Cassiodorus's words, *de expositione psalmorum*, xiv.

This is a very ingenious interpretation; but I am nevertheless convinced that there was only one picture in Cassiodorus's Bible, and that the tabernacle and the temple are identical. If Cassiodorus had made two different pictures he would have said: "Et tabernaculum et templum domini . . . depicta subtiliter . . . in pandeoto latino . . . aptavi," and not "Tabernaculum templumque," &c. Cassiodorus's representation of the temple seems to have been rather fantastical, so far as we can judge from Bede, who saw the picture. So he represented the tabernacle to be the middle part of the temple surrounded by a triple porticus, which was omitted by the painter of the Amiatinus. Bede made no mistake in referring both times to the same passage in Cassiodorus. Both times he had the same picture before his eyes, including the tabernacle and the temple. He wanted to remind his readers that the picture they had in their library at Jarrow was the identical picture of Cassiodorus. He does not seem to have known the place in the *de institutione*, or, at least, not to have remembered it, and so there is no confusion between the two passages, as De Rossi suggests. When Bede wrote about the temple he perfectly remembered what he had written before about the tabernacle, for he evidently refers to his tractate on the tabernacle. In one place he says:

"Quomodo in pictura Cassiodori senatoris, cuius ipse in expositione psalmorum meminit, expressum vidimus in qua etiam utriusque altari, et holocausti videlicet et incensi, pedes quatuor fecit. Quod utrumque eum, sicut et tabernaculi et templi positionem a doctoribus Judaeorum didicisse putamus" (*De tabern.*, c. xii.).

In the other:

"Haec ut in pictura Cassiodori reperimus distincta, breviter annotare curavimus, ita eum ab antiquis Judaeis didicisse, neque virum tam eruditum voluisse in exemplum legendi proponere, quod non ipse prius verum esse cognovisset" (*De templo*, c. xvi.).

By remarking: "Has vero porticus Cassiodorus senator in pandectis, ut ipse psalmorum expositione commemorat, triplici ordine distinxit," he did not mean to say that Cassiodorus in his commentary was speaking of the triple porticus, but only that he there mentioned the picture he had attached to his Bible. Of course, he might have expressed all this better and more clearly; but I am afraid we must entertain a less favourable idea of Bede's style than Mr. Martin Rule seems to do.

P. CORSEN.

OLD OXFORD EXAMINATION PAPERS.

St. John's College, Oxford: May 20, 1888.

Any of your readers who possess Oxford examination papers earlier than 1851 would do me a great favour by sending them to me, or sending me notes of their contents. More especially, I should like school papers in litterae humaniores, if there are any in existence. I will carefully return all papers that may be sent.

T. C. SNOW.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, May 22, 2.30 p.m. Geographical: Anniversary Meeting.

8 p.m. Aristotelian: "The Demarcations and Definitions of the Subject Sciences," by Dr. A. Bain.

8 p.m. Teachers' Guild: Annual Meeting: Address by Dr. Abbott.

9 p.m. Royal Society: Croonian Lecture. "Die Entstehung der Vitalen Bewegung," by Prof. W. Kühne.

TUESDAY, May 23, 3 p.m. Royal Institution: "Conventions and Conventionality in Art," II., by Mr. Sidney Colvin.

8 p.m. Civil Engineers: Annual General Meeting: Report of Council, Election of Officers.

8 p.m. Society of Arts.

8.30 p.m. Anthropological: "Prehistoric Structures, Stone Implements, and Paintings in Baghelband and elsewhere in Middle India," by Mr. A. Carlyle; "Rubbing from Ancient Inscribed Stone Monuments in Ireland," by Mr. G. H. Kinahan.

WEDNESDAY, May 30, 3 p.m. University College: Barlow Lecture, "Dante," V., by the Rev. Dr. E. Moore.

8 p.m. Society of Arts.

8 p.m. College of State Medicine: "The Organisms occurring in Fresh Water, and the Hygienic Importance of their Presence," by Dr. John M. Macdonald.

THURSDAY, May 31, 3 p.m. London Library: Annual General Meeting.

5 p.m. University College: Barlow Lecture, "Dante," VI., by the Rev. Dr. E. Moore.

8 p.m. Royal Institution: "The Growth and Sculpture of the Alps," II., by Prof. T. G. Bonney.

8 p.m. Society for the Encouragement of the Fine Arts: "Arts and Manufactures of the Anglo-Saxons," by Mr. J. F. Hodgetts.

8 p.m. Telegraph Engineers: "The Influence Machine from 1788 to 1888," by Prof. Silvanus P. Thompson.

8.30 p.m. Antiquaries.

FRIDAY, June 1, 3 p.m. Philological: "The Vowel Laws of the Latin Language," by Mr. E. R. Wharton.

8 p.m. Geologists' Association: "The Natural History of Gypsum," by Mr. J. G. Goodchild.

8 p.m. Social and Political Education League: Annual Meeting: Address by Prof. J. R. Seeley.

9 p.m. Royal Institution: "Earthquakes and how to Measure them," by Prof. J. A. Ewing.

SATURDAY, June 2, 3 p.m. Royal Institution: "Count Tolstol as Novelist and Thinker," I., by Prof. O. E. Turner.

SCIENCE.

A MODERN-GREEK EDITION OF SOPHOCLES.

Σοφοκλέους τραγωδία διώρθωσε καὶ ἐξηγήσατο Δημήτριος Χ. Σεμίτελος. Τόμος πρῶτος, Ἀντιγόνη. (Ἀθήνησιν Τυπ. Πέτρη.)

THE wheel is come full circle. After three and twenty centuries (or "seventy generations") the *Antigone* is edited at Athens. Two modern Greek editions are honoured with frequent quotation by Prof. Jebb—that of Pallis, with critical notes (1885), and the portly volume now before us, threatening the world (if proportion on such a scale can be maintained) with a Sophocles of 5000 pages! The enterprising publishers have thus given the Professor Ordinarius of the Hellenic University an opportunity of very fully expressing his views; and the result, if not exactly succinct, is in many parts very fresh and interesting. M. Semitelos is an original and ingenious person, and is thoroughly possessed by his theme, which he handles in all its aspects with a certain boldness and impetuosity. Writing for an audience not deeply read in the literature of the subject, he is not afraid of expatiating on truisms, with which, however, remarks of much acuteness are interspersed. His language presents no difficulties to the ordinary Grecian who has been once for all initiated in the mysteries of *và* and *θα*.

The introduction opens with a lucid exposition (twenty pages) of the divisions of a Greek tragedy, both quantitative and qualitative; then follows a description of the action, with its antecedent circumstances (twelve pages); then a discussion of the sources of the fable and of the treatment of the same subject by Euripides (six pages). The characters of Antigone, of Creon, of Ismene, and of Haemon, are, in the next place, very fully discussed (fourteen pages). The persons of Eurydice, Teiresias, the watchman, and the two messengers, are more briefly dismissed—M. Semitelos adding the following true observation:

οὕτω δὲ καὶ τὰ τῶν ταπεινῶν τοῦ δράματος πρόσωπων ἦθη κατ' ἀντίθεσιν τῶν ἡρωικῶν ἐσθότως ὡς ἀγαθὸς ζωγράφος ἀποχραίνει ὁ ποιητής.

The part of the Chorus, "having been misunderstood by recent critics," has ten pages allotted to it. This completes the account of the ἡθοποιία. The λέξις is treated less discursively. But the *διάνοια* or κεφαλαιωδὴς γνώμη ("Grundidee, Grundgedanken") must, of course, have a prominent place in any introduction to the *Antigone*. Was Böckh right in supposing that both the chief persons were blameworthy, and that the concluding words of the chorus reflected not only on Creon, but also on Antigone? Or is Antigone a true martyr to the higher law? M. Semitelos unhesitatingly adheres to the latter view; and he very pertinently remarks:

Καὶ τὸ σκληρὸν δὲ τῆς Ἀντιγόνης ἥθος οὐ μόνον πρὸς τὸν Κρέοντα ἀλλὰ καὶ πρὸς τὴν ἀδελφὴν, ὥσπερ ἡ βίαιος θάνατος αὐτῇ, εἶνε συνδεδεμένος καὶ ἀπόλυτος τῇ ἡρωικῇ αὐτῆς χαρακτῆρι καὶ βεβαίως τοιαῦτα ποιεῖ αὐτὴν πράττουσαν ὁ ποιητὴς τῆς ἡθοποιίας χάριν καὶ οὐχὶ θέλων νὰ ἐνοχοποιήσῃ αὐτήν.

A third supposition, however, does not seem to have occurred to him, viz., that the poet chose this subject not because he wished to enforce any ground-idea, but because he had been profoundly touched by the situation, as it was suggested to him by the close of the *Septem contra Thebas*.

The editor's remarks on the evidence, both external and internal, for the date of the *Antigone*, if they contain nothing novel, are clear and judicious. But when from these general topics we turn to the details of interpretation and criticism, M. Semitelos's originality, to the present writer at least, is much more apparent than his judgment. This is the more to be regretted, as it is on this part of the work that our editor has spent most of his care and labour. The διορθωτικὰ ὑπομνήματα, or critical notes, occupy nearly a third part of the whole volume. The method employed is, at first sight, very plausible. It is to take the first hand of the Laurentian, neglecting the "apographa" as a rule, and, with the help of the Scholia, to emend with constant reference to the *ductus literarum*. But the apparent safety of the method contains a hidden snare. There is a pastime not unknown to those who dabble in bouts-rimés, acrostics, and such vanities. Two words of equal length are taken, and the attempt is made to turn the one into the other by transliteration. Not more than one letter can be changed at a time, and each of the intermediate changes must produce a significant word. The "palmary" transformation is that which involves the fewest intermediaries. It is astonishing, to those who have not tried, how often this unpromising attempt is found to be successful. *Black*, for example, is turned into *white* by means of seven intermediate words (*slack, stack, stalk, stale, shale, whale, while*). M. Semitelos's readers may frequently be reminded of this process. The prologos of the *Antigone* contains ninety-nine lines, in which three places have always given difficulty to interpreters, and two more have been slightly emended. Our editor not only gives a brand-new reading of each of the three difficult places, among other things suppressing half of two lines; but in *ten* other places, hitherto unsuspected, he gives a wholly unprecedented reading. And his procedure throughout the play is in accordance with this beginning. So much for the quantity of emendation. Now for the

quality of it. It should be said before going further that at least two emendations of M. Semitelos (σχυρὰν κύνας for ἡσυχόμεν νέκυν περὰ δρᾶν for πάρεδρος) have been with more or less of reservation approved by so high an authority as Prof. Jebb, who also joins, independently it would seem, in conjecturing ἴσους for ἴσος in l. 520). So much being premised, the reader may be left to judge of the necessity and probability of the following (the ingenuity is beyond question):

SEMITELOS ("ἐξ ἐμῆς LXXIII διορθώσεως").	L. ("ὁ κῶδιξ").
113. αἰετὸς ἀργῆς ἔπερ ἐπτη	αἰετὸς εἰς γὰν ὡς ὑπε- ρέπτη
126. δυσχίμα τε δράκοντι	δυσχείρωμα δράκοντος
130. χρυσοῦ, Καπαῆς στν- γερᾶπην	χρυσοῦ παναχῆς ὑπεροπ- τίας
131. ἀντίτυπα δ' ἐπὶ γὰν, πέσε τ' αἰθαλωθεῖς	ἀντίτυπα δ' ἐπὶ γὰν πέσε ταυταλωθεῖς
138. εἶχε δ' ἄλλους δέος	εἶχε δ' ἄλλαι τὰ μὲν (according to G. Wolff, μὲν is written over διοί)
149. ἀντικυρούσα	ἀντιχαρεῖσα
168. δυστήνοιον	τοὺς κείνοιον
192. δς στήσασαν	ὅστις πᾶσαν
213. παντὶ πάντων ἔστι σοι	παντὶ τοῦ τ' ἐνεστί σοι
215. μενεῖτε	νῦν ἦτε
226. ὃδ' εἰσκυκελῶν	ὁδοὺς κυκλῶν
263. κοῦδεῖς ἐναργῶς ἐξέ- φαινε οὐδένα	κοῦδεῖς ἐναργῆς, ἀλλ' ἐφεινε τὸ μὴ εἶδέναι
269. λόγον τις εἶφ'	λέγει τις εἰς
291. κράτη σείοντες	κάρᾳ σείοντες
37. οὐδ' ὅπδ' ὑγυῖ λόφον δικαιοσύν' εὐλόφως στεργεῖν ἐμῇ	οὐδ' ὅπδ' ὑγυῖ λόφον δικαίως εἶχον, ὡς στεργεῖν ἐμέ (but Euse- bathius quotes ὅπδ' ὑγυῖ νῶτον εὐλόφως φέρειν from Sophocles)
355. ἀνεμῶν φρούρημα (= ὑψηλὸν φρούριον ἢ δούρωμα).	ἀνεμῶν φρόνημα
362. ("Αἰδαν-") θέλειν οὐκ ἐπύσεται	(Αἰδαν-) φεῦξιν οὐκ ἐπά- ζεται
421. εἰκομεν θεῖα νόσφ	εἰχομεν θεῖαν νόσον
531. ἐχιδνα φοινία	ἐχιδν' ὑφ' ἐμμένη
560. τί σθένεις σύ μ' ὠφε- λεῖν;	τοῖς θανούσιν ὠφελεῖν.

Passing over the central ode, which is changed in fifteen places, and the Haemon scene, in which the most notable changes are 653, πτύσας εἰς ὦπα, and 715, ἀλλ' εἰκαθὼν μοι καὶ μετὰ στάσιν δίου (= μεταδίωκε τὴν στάσιν), we come to the address to Eros, which is wonderfully little touched: only νικᾷ δ' ἐναργῆς... ἡμερος becomes νικᾷ δε μαργῆς... ἡμερος; and with this the present anthology must end.

Even for one who has learned to be sceptical about conjectural emendation, it is not unamusing to watch the different ways in which the problem is attacked by men of different nationalities. The English, the Germans, and the Dutch, have had their turn; and now it would seem that the Modern Athenian will not be wanting. M. Semitelos may take his place beside our ingenious countryman, whom he occasionally celebrates as ὁ Βλαυδέσιος.

LEWIS CAMPBELL.

SOME BOOKS ON CHEMISTRY.

A Treatise on Chemistry. Vol. III., part 4. By Sir H. E. Roscoe and C. Schorlemmer. (Macmillan.) The volume of organic chemistry now before us contains a description of the very numerous aromatic compounds belonging to the toluene, benzyl, hydrobenzyl, and xylene groups. Many substances of great interest, both from a theoretical and a technological standpoint, are clearly and adequately discussed

in these five hundred and odd pages. The study of toluene, and of its numerous derivatives and their substitution products, affords an opportunity for showing the different positions occupied by the replacing atoms and molecules in various isomeric bodies. Among the important bodies described in the present volume may be named—cresol; the three toluidines; bitter almond oil, benzoic and hippuric acid; salicylic acid and salol; vanillin; gallic and tannic acids. A comprehensive index, covering twenty pages, completes the book.

Modern Theories of Chemistry. By Dr. Lothar Meyer. Translated by P. B. Bedson and W. Carleton Williams. (Longmans.) It is unnecessary to praise the famous original of this translation, but we may congratulate Profs. Bedson and Williams on the successful completion of their useful labour in rendering it into excellent English. Here we have a textbook of chemical philosophy which every earnest student of the science will cordially welcome. To any one who is not acquainted with the method of handling his subject which Dr. Lothar Meyer has adopted, a mere reference to the varied contents of this volume would prove of little value. But the general scope of the treatise may be learned by a brief synopsis. There are three parts, the first of which is devoted to "The Atoms," the second to "The Statics of the Atoms," and the third to "The Dynamics of the Atoms." In part i. the atomic hypothesis, the specific gravity of gases, the specific heat of solids, and isomorphism as aids in the determination of atomic weights are discussed. In part ii. are considered the forms and types of combinations of the atoms, the laws of atomic linking, and the chemical value or valency of the atoms. The influence of mechanical disturbance, of heat, of mass, of light, and of electricity in relation to chemical change is fully described in part iii., which also includes a chapter on the "Stability of Chemical Compounds." We may add that the translation has been made from the fifth German edition of the work. The translators would have laid us under still greater obligations had they furnished their volume of 587 pages with an index.

Elementary Chemistry, by MM. Pattison Muir and C. Slater; *Practical Chemistry*, by MM. Pattison Muir and D. Carnegie. (Cambridge: University Press.) These are companion volumes, the latter work being complementary to the former, and being a manual for laboratory practice. The authors' aim is a sound one. Their *Elementary Chemistry* is not a descriptive catalogue of chemical facts, but a philosophical system of principles. Their *Practical Chemistry* is not a manual of qualitative analysis, it is a well-ordered series of experimental demonstrations. We commend this system of instruction to teachers of chemistry. We may be permitted to point out that there are some curious discrepancies between some of the atomic weights as given in the two volumes. In the *Elementary Chemistry* (p. 57) approximate and round numbers are said to be used. Why then should chromium there be 52.2, iridium 192.6, rubidium 85.4, and ruthenium 104.6; and in the *Practical Chemistry* (p. 206) the corresponding values be, respectively, 52.4, 192.5, 85.2, 104.4?

Experimental Chemistry. Part IV., Organic Chemistry. By J. Emerson Reynolds. (Longmans.) Prof. Reynolds has now completed his manual of practical chemistry for junior students. The volume before us, like the three volumes which preceded it, contains a large number of lessons, in which the preparation of important compounds is clearly described. Not only are all the necessary manipulative details duly given, but the structure and transforma-

tions of the substances concerned are carefully explained. The idea of this system of laboratory teaching is excellent, and it has been very ably carried out by Dr. Emerson Reynolds. We wish that the book had an index.

A Course of Quantitative Analysis for Students. By W. N. Hartley. (Macmillan.) This small book contains a well-selected series of examples of quantitative determinations belonging to the domain of inorganic chemistry. The various tables of specific gravities and of weights and measures, with the instructions as to the conduct of the several preliminary operations, will be found very useful in the laboratory. The absence of an index and of a table of contents is a great drawback to the utility of the volume. We may mention that the atomic weight of magnesium is wrongly entered as 24.4 in the list on p. 228, and that, by the accidental omission of a figure, 7.01 is assigned to aluminium instead of 27.01 on p. 21.

The Elements of Chemistry. By Ira Remsen. (Macmillan.) The high reputation which Prof. Remsen enjoys in the United States led us to expect that any chemical handbook from his pen would present some specially meritorious features, and would be marked out from the crowd of mechanical compilations which encumber the reviewer's table by fresh and clear modes of presenting chemical facts, and by the highest degree of accuracy. We are completely disappointed. The page assigned to organic acids carries us back to the time of Donovan, and of Lardner's Cyclopaedia. Surely something might have been said as to the constitution and relationships of the five organic acids which are mentioned on page 215—something better worth saying than that "oxalic acid is used in calico printing, and in cleaning brass and copper surfaces"; and that citric acid "is frequently used for the purpose of making lemonade without lemons, and there is no objection to its use for this purpose." Prof. Remsen is quite right when he asserts in his preface that it is possible to teach chemistry so as "to make the pupil shudder whenever a chemical formula is mentioned." But the statements about cleaning brass and making lemonade above quoted, even if multiplied a hundredfold, do not serve to teach chemistry at all. And then the author of these "Elements" is not even accurate. Pins are not made of copper covered with tin (p. 203); diamonds when found are not covered with an opaque layer (p. 96); cocaine is not found in cocoa-leaves (p. 230); and opium is not the evaporated sap of poppy-capsules.

The Fundamental Principles of Chemistry. By R. Galloway. (Longmans.) Mr. Galloway describes his method of practically teaching chemistry as new. We fail to see its novelty. Sound teaching in this science in the hands of competent instructors has followed pretty much in the lines traced by the author, at least for the last quarter of a century. The study of chemical physics has preceded instruction in chemistry proper. And we do not regard the volume before us as by any means a perfect model. We have failed to find any account of the periodic law; nor do we see that any description or definition of the term "mass" is given. Perhaps these things and others which we miss are really somewhere in these 364 pages, but there is no index to the work.

Handwörterbuch der Chemie, 44-47 Lieferungen. (Trewendt: Breslau.) The fifth volume of this chemical dictionary is complete, the sixth has been begun. The subjects discussed in the four parts recently published are the following: Isomorphism, Potassium, Caoutchouc, Ketones, Bone, Cartilage and Teeth, Cobalt, Carbohydrates, Croconic and Rhodizonic Acid, and Carbon. Some notion may be formed of the completeness attained in the

bibliographical references prefixed to the separate articles by referring to the list given in the dictionary of memoirs and treatises connected with the single subject of carbohydrates. They number no fewer than 1192. Of course the various matters discussed are not all treated in an equally satisfactory way. For instance, in glancing at the section on carbon, we are at once struck by the occurrence of a number of small inaccuracies. The Koh-i-noor does not weigh 163 carats (p. 220 of vol. vi.); and "Brackadon" (p. 222) should surely be Brockedon. But these, and other small blemishes which we have detected, are quite insignificant when we take into account the solid merits of this laborious undertaking.

CORRESPONDENCE.

THE FINNIC ORIGIN OF THE ARYANS.

St. John's College, Oxford: May 14, 1888.

Canon Taylor, in his letter to the ACADEMY of April 21, dismisses my objections on archaeological grounds to the Finnic origin of the Aryans with the remark that these objections apply chiefly to Penka's solution, which he definitely rejects. It would seem obvious enough that, if these objections have any weight, they tell far more strongly against Canon Taylor's hypothesis than that of Penka. The former places the cradle of the Aryan race far beyond what are even now the limits of the beech, and almost at the furthest boundary of the oak. The chief objection against the latter is that at what would seem to have been the time of the united Aryans—the age of the kitchen-middens of Denmark—the limits of the oak and beech were considerably further south. The prevailing tree was then the fir, which gave way to the oak, and that, again, to the beech. Scandinavia, it is urged, cannot, therefore, have been the home of the united Aryans.

Penka has now himself answered these and similar objections which were first raised by Hildebrand and others. The paper is published in the *Globus*, Illustrierte Zeitschrift für Länder- und Völkerkunde, vol. liii., No. 13; and as some readers of the ACADEMY interested in this question may not have seen it, I venture to give a short abstract of his chief arguments. He begins by dismissing, chiefly on philological and ethnological grounds, the possibility that originally the Aryan word "beech" may have, as in Greek *φύξ*, represented the oak, and that the meaning of beech may have afterwards been assigned to it. He then adduces two arguments in favour of his position. (1) He contends that the acknowledged fact that the beech was the prevailing tree in the period covered by the kitchen-middens is no sufficient proof that the oak, and even the beech, were not sufficiently common before the separation of the Aryans to have formed part of the common stock of Aryan words. The kitchen-middens cover a very long period, and those belonging to the fir age of Denmark, so to speak, may have long preceded the Aryan dispersion. (2) He finds positive proof that in the neolithic period the climatic conditions of Europe had already undergone the changes which gave the oak instead of the fir, and the beech instead of the oak. This he proves, among other ways, from the discovery of wheat and millet in the Swiss lake-dwellings, which are assigned to the neolithic period.

I may here be permitted to say that even if these were considered a sufficient answer to the archaeological objections to Penka's view, they are no answer to such objections when raised against Canon Taylor's. For it would be necessary to show not only that the climatic conditions of Europe have remained unchanged since the neolithic period; but that they were

so different as to admit of the oak and the beech growing much further north and east than they do at present.

F. H. WOODS.

P.S.—This letter was sent too late for insertion in the ACADEMY of last week, and I had not seen Prof. Sayce's letter when I wrote. If his opinion, that the word "beech" is a loan-word, be accepted by the ultimate verdict of philologists, it will, of course, get rid of the most serious archaeological objections to placing the cradle of the Aryan race in the north of Europe. As I had touched upon some points in Penka's paper not referred to by Prof. Sayce, I have thought it better to leave my letter as it stood.

F. H. W.

THE IDEOLOGY OF THE ARYAN LANGUAGES.

London: May 19, 1888.

With reference to Prof. Sayce's remarks in the last issue of the ACADEMY concerning the superimposition of the Keltic and Teutonic dialects spoken by a conquering aristocracy, I beg to state that I did not speak of the languages as a whole. My object in the ACADEMY of May 5 was only to point out in this connexion that the ideology—or word-order in the sentence—of the earlier populations has survived in their respective districts.

TERRIEN DE LACOUPERIE.

SCIENCE NOTES.

THE annual Croonian lecture of the Royal Society will be delivered on Monday next, May 28, at 8 p.m., in the rooms of the Royal Institution. The lecturer is Prof. H. Kühne, who has chosen for his subject "*Die Entstehung der Vitalen Bewegung*"; and the lecture will be given in German.

PHILOLOGY NOTES.

PROF. NAPIER's papers on *Cynwulf* and *Beowulf*, to be read before the Philological Society, are put off till the autumn session. At the meeting of the society on Friday next, Mr. E. R. Wharton, of Oxford, author of *Etyma Graeca*, will read a paper on "The Vowel Laws in Latin."

MR. BERNARD QUARITCH has recently purchased the library of the late Mr. Alexander Wylie, author of *Notes on Chinese Literature, &c.* During his long residence in China as agent of the British and Foreign Bible Society, Mr. Wylie amassed a very large and valuable collection of works relating in every manner to the far East, and more particularly to the history, philology, and literature of China. We understand that orientalists may expect a catalogue of the library very shortly.

THE Rev. Dr. N. Macnish read before the philological section of the Canadian Institute, on April 28, a paper entitled "*Umbria Capta*." He therein puts forth a new interpretation of the Eugubine Tables, the language of which he asserts to be Gaelic.

MEETINGS OF SOCIETIES.

THE SHELLEY SOCIETY.—(Wednesday, May 9.)

A PAPER by Dr. Henry Sweet on "Shelley's Nature-Poetry" was read by Dr. Furnivall. Premising that "the first germs of those emotions which inspire the nature-poetry of a Shelley or a Wordsworth must be sought in the purely physical sensations of pleasure and pain," Dr. Sweet traced the development of this faculty in the hymns of the ancient Hindu poets of the Rig-Veda, the keynote of which was an overwhelming sense of man's

weakness in the face of nature's strength. He then touched on the Celtic and Old English poetry; the Celtic distinguished by its vivid fancy, fantastic conceptions, minute descriptions, and extraordinarily keen colour-sense; the Old English by its superior moral earnestness and sense of awe and weirdness; while both stand in marked contrast to Greek art by their tendency to formless and shadowy creations. Chaucer, Shakspeare, and Spencer having been briefly referred to as showing how the Middle English literature had lost somewhat of the magic charm of the earlier nature-poets, stress was laid on Milton's remarkable anticipation of modern feeling in "*L'Allegro*" and "*Il Penseroso*," and in the sense of landscape, by him first developed in English poetry. It was next shown how, during the eighteenth century, the study of nature was enriched and deepened by two new factors—the growth of humane sympathy and of natural science; and how this prepared the way for the appearance of such nature-poets as Wordsworth, Coleridge, and Shelley, who were finally compared and contrasted. Special attention was drawn to Shelley's love of light and strong sense of colour contrast.—The reading of the paper was followed by a discussion.

NEW SHAKESPEARE SOCIETY.—(Friday, May 11.)

DR. F. J. FURNIVALL in the chair.—Mr. Frank A. Marshall read a paper upon "The 1695 Quarto of *Hamlet*"—the third of the "Player's Quartos," and the one in which Betterton's name appears in the list of actors—the variations in which were often interesting; noticeably I., ii. 77, "Tis not alone this mourning cloke could smother," probably suggested by the reading of Quarto 2, "could mother." There was throughout an extreme interpretation of the Act of James against profane language, every mention of God, heaven, and the like, being carefully omitted. The edition seemed to have been mainly taken from Quarto 8, and to have been made by a person addicted to elegant language, and with that ignorance of blank verse which seems common to that particular age. On comparing this acting edition with the modern Lyceum edition, one finds that the "cuts" are mostly the same, with certain exceptions. Betterton's version omits more than Irving's, and more, too, of Hamlet's speeches. Polonius is much cut, and the whole of the players' scene omitted; but it is noticeable that the whole of the beautiful soliloquy "How all occasions do inform against me," so rarely delivered on the stage, is absolutely untouched. Some light seemed to be thrown on the share that actors had in alterations of the text, and Mr. Marshall gave his reasons for thinking that many of the differences in the texts of "*Richard III.*" were due to actors.

EDINBURGH MATHEMATICAL SOCIETY.

(Friday, May 11.)

W. J. MACDONALD, Esq., president, in the chair.—Dr. William Peddie communicated a paper by Mr. Charles Ohree, King's College, Cambridge, on Vortices, and Dr. J. S. Mackay gave an introduction to the geometrical theories of similitude and inversion in a series of parallel propositions.

PHILOLOGICAL SOCIETY.—(Anniversary Meeting. Friday, May 18.)

THE following were elected officers for the session 1888-89: president, the Rev. Dr. Richard Morris; vice-presidents, Whitley Stokes, A. J. Ellis, Henry Sweet, J. A. H. Murray, Prince Louis-Lucien Bonaparte, Prof. Skeat; council, Henry Bradley, E. L. Brandereth, Prof. Terrien de Lacouperie, F. T. Elworthy, O. A. M. Fennell, H. Hucks Gibbs, T. Henderson, James Lecky, Prof. R. Martineau, W. B. Morfill, Prof. Napier, J. Pelle, T. G. Pinches, Prof. J. P. Postgate, W. R. S. Ralston, Prof. C. Rieu, Prof. Sayce, Dr. E. B. Tylor, H. Wedgwood, Dr. R. F. Weymouth; treasurer, Benjamin Dawson; hon. secretary, Dr. F. J. Furnivall.

FINE ART.

THE ROYAL ACADEMY.

II.

MR. ALBERT MOORE has for so many years accustomed his admirers to look for nothing more than studies of one generalised type of fair English girlhood masquerading in quasi-Greek draperies, and serving as the pretext for the combination and re-combination of delicate and original colour-harmonies, that they have long ago given up the hope of any enlargement of his artistic standpoint. This year, in "*The Riverside*" (139), he is even less enterprising in choice of subject than usual, though his attempt to arrange, and to relieve against summer foliage with a peep of blue sky, tender blue-green draperies of various tints, set off by pale yellow and orange, appears to us to fall but little short of absolute success. Mr. Frank Dicksee has undeniable mastery over the secrets of draughtmanship and composition, with a system of colour and handling which, if it never surprises, never actually offends. His "*Within the Shadow of the Church*" (5) bears evidence, however, of a triviality of conception, of a sickly sentimentality, which are growing upon him from year to year, and are, in the present instance, unredeemed by any marked display of the painter's better qualities. It is strange that Mr. Herbert Schmalz, an industrious artist to whom precisely virility of conception and vigour of execution have been denied, should persist in attempting subjects which emphatically demand a display of such qualities—should, in fact, assume that success is to be achieved only in the quarter in which it has been commanded on the other side of the Channel by such painters as Luminais and Jean-Paul Laurens. His "*Faithful unto Death*" (542) shows the figures of entirely nude Christian women bound to flower-decked and vine-crowned terminal columns in the arena, and thus awaiting the onward rush of the yet invisible beasts. They stand forth against a background of spectators lining the tiers of a crowded amphitheatre. Mr. Schmalz may be commended for having, in the treatment of the undraped human form—which it still in England requires a certain amount of courage to represent—attained a measure of correctness and success; but he has, on the other hand, treated his dramatic subject with a timidity which destroys its *raison d'être*, while his colour is so lacking in vibratory power as, especially in the background, to resemble in quality that which would be obtained by some mechanical process. A life-size figure, by M. Albert Aublet, of an aged oriental clad in pale greenish satin, called "*Turc en prière*" (433), shows just that certainty and finish of draughtmanship which is still so rare among our own painters. It is somewhat unfortunately placed—where it can least well be appreciated—by the side of one of Mr. J. S. Sargent's most powerful and exuberantly living portraits. In "*St. Paul's: the King's visit to Wren*" (648), Mr. Seymour Lucas has not found a subject of high interest, either scenic or human; it lacks just that melodramatic element which has so often imparted a measure of fire and unity to the painter's conceptions, even when these have not been of a high order. The arrangement of the subject and the technical execution are throughout careful, though the latter is as usual marked by some hotness of colour and emptiness of handling.

The younger generation of genre painters show quite as strongly as on former occasions their leaning towards the modern French and Dutch schools—and that not only in tonality and technical matters generally, but

in the manner in which they aim at seeing and interpreting the subjects chosen. No work coming within this category has in the present exhibition attracted a larger measure of notice than Mr. Frank Bramley's "A Hopeless Dawn" (351); and, deservedly so, since he has not shrunk from treating a well-worn theme, and approaching it with such genuine pathos and such efficiency of execution as to infuse into it a new life. In the wan light of early morning, in a mean chamber almost bare of furniture and harshly grey in the growing light, is seen in the embrasure of a window a mournful group. An aged and careworn woman is huddled up in mute despair in the window-sill, while kneeling and clinging to her is a younger woman who buries her head in her fellow-watcher's lap; in the opposite corner is a poorly-furnished table, on which still burns with yellow light a candle; through the casement appears a prospect of a tossing but fast subsiding sea. The painter has seen and conceived his subject with unmistakable sincerity, though—realist and direct student of nature as he would no doubt deem himself to be—his vision has, whether consciously or unconsciously, been coloured with recollections of M. Josef Israëls, and some French painters who could be named: notably his grey-buff harmonies are foreign, as is his method of dramatic representation. The handling is somewhat loose and wanting in real solidity, especially in the painting of the old woman's face, while the representation of the artificial light of the candle struggling with that of morning is not very happy. The work is, however, incontestably one of much promise, though before pronouncing as to the exact degree of originality and technical mastery which the painter possesses, it would be well—seeing that he at present confines himself to a well-trodden path—to wait for future performances in a direction less thoroughly explored. Mr. Stanhope Forbes has for some time been a devotee of the same school. His new work, "The Village Philharmonic" (1143), is by far the most satisfactory of his productions, evidencing as it does an advance in technical accomplishment and a definiteness of purpose to which his contributions to former exhibitions cannot lay claim in the same degree. The subject is the meeting for the purpose of musical practice of a motley village choir, seen in a sombre room lighted by the dying rays of day, and by lamplight. Here again, recollection of foreign work, of a foreign mode of conception and arrangement, tinges actual vision; the painter approaches his subject with a certain *parti pris* as to the particular conditions under which he chooses to conceive and elaborate it. Just so one of the admirable band of Franco-Scandinavian painters who have of late years developed their art in Paris, might have seen and painted such a subject; and this peculiarity may well account for the whole wearing a foreign aspect, quite apart from the elements of the picture being apparently derived from foreign sources, and the physiognomic types well studied from foreign models. Drawing and execution are, however, commendable to an unusual degree, while the scheme of chiaroscuro, though somewhat elaborate and dramatic for so calm a subject, is well carried out. In the same category may be classed a pair of very strongly and solidly painted pictures by Mr. Frank Hall, both of which are entitled "The Goose" (619 and 624), and deal in modern and realistic fashion with the legend of the Goose with the Golden Eggs. In these, the artist shows the possession of a firm brush and a considerable fund of quiet humour. The fussy flutter of the goose when it has just brought forth the fabulous egg is especially well rendered. The handling, though powerful, is

so uniform that a monotony of texture is the result; goose-feathers and fustian gown have a similarity of surface for which nature is not answerable.

The neo-Venetian school is happily not so over prominent as it has been of late years. It is, however, represented by a very successful "Saluting the Cardinal" (213), by Mr. Henry Woods, which would, in its way, be almost faultless, were it not for the too sudden mass of red introduced in the black and crimson vestments of the ecclesiastic whose figure occupies the centre of the picture to which he gives his name. More charming, because executed with more zest, is a little stretch of Venetian canal and distant dome (862) by the same artist—a very delicate exercise in tone and colour harmony. It would be unjust not to call attention to another work of this school, "Venetian Lace Workers" (49), by Robert H. Blum. This, though not specially well-observed as a study of life and manners, furnishes one of the most consummately realised studies of the qualities of light and of chiaroscuro to be found in the whole exhibition. A feeble echo of the technique of this school—which is admirable enough after its peculiar fashion when it is a Van Haanen or a Favretto who paints—is to be found in several works to be seen at Burlington House, though these no longer have invariably for their theme Venetian views or Venetian manners.

The chief excellence of the exhibition is this year, as last, to be found in the numerous examples of masculine and feminine portraiture, though we are constrained to admit that the efforts of the foreign exhibitors easily bear away the palm, while the most eminent English portrait painters do not this time, as on the last occasion, attain a level of excellence so high as to render the weighing in the balance of rival styles and methods a difficult matter. Mr. J. S. Sargent displayed last summer in the already famous "Mrs. Playfair" an originality, a technical mastery of all the secrets of the craftsman, beyond which it would be difficult to go. Though he has not this year contributed any work at once so striking and so faultless as that, it may be said that he fully maintains his high position. In one respect his "Mrs. H. G. Marquand" (365) is a marked advance on anything which he has yet produced. The subject portrayed is an elderly lady seated, almost fronting the spectator, soberly robed in black, which is relieved only by a white lawn fichu fastened with a pale-yellow rose, and by a closed fan of grey ostrich feathers. Here the painter—whose crying sin has often been the fatal facility with which he has developed the amusing and outwardly characteristic side of a subject, at the expense of its more serious and less obvious aspect—shows an unmistakable respect for the task which he has imposed upon himself. He has evidently felt, and he interprets with singular felicity, all the reverence which a refined type of womanhood in old age should arouse; he has rendered not only a fleeting and purely exterior phase of expression, but a permanent individuality. The execution, too, in its moderation, in the evident restraint imposed upon the easy mastery of handling usual to the artist, is in perfect harmony with the unobtrusive pathos shown in the conception of the subject. Far less successful, and indeed—for Mr. Sargent—almost conventional in treatment, is the portrait of "Cecil, Son of Robert Harrison, Esq." (314), a boy of some eleven years, in a sailor's costume; even this, however, has the intense vitality which the painter's work never lacks. The third contribution, "Portrait of Mrs. E. D. Boit" (432) is a work of singular power, showing in their strongest form the painter's technical excellencies, and at

the same time that eccentricity of standpoint to which we have already alluded. The picture is a life-size presentment of a lady of florid aspect, wearing powdered hair; she is attired in a dress of the painter's favourite *lie de vin* colour, covered with black lace, and appears seated on a gilt Louis Quinze sofa, which is in parts somewhat too prominent an element in the colour-scheme. The artist has been struck—too much struck—with certain marked peculiarities of the physical and mental individuality of his sitter; and he has over-emphasised these—rendering with extraordinary power the mobility, the exuberant vitality of his model, but yielding too much to the amusement which he derives from these prominent characteristics, and thus omitting to supply them with the necessary balance, without which the work lacks repose and refinement. As a display of keenness of observation and technical power—both revealed in the manner which Frans Hals loved—it is not easily to be paralleled among modern portraits; but it is surely not a picture which it would be a joy to possess, and still less would it be hereafter, for those to whom the sitter may have been near, in kin or in friendship, a pleasant or a suitable remembrance.

The mention of Frans Hals brings us at once to the portrait contributed by the eminent Belgian professor, M. Emile Wauters. This, showing a boy dressed in a black velvet suit, with a large falling collar of lawn or some transparent white material, and holding a hoop (335), while it has nothing like that real vitality, the possession of which makes Mr. Sargent, in certain moods, so near akin to Hals, is so close and avowed an imitation of that painter's outward mastery of handling as almost to amount to a pastiche. It is undeniable that the work has very real qualities of style—somewhat too pompously brought forward—and some power of handling; but it is neither so vigorous nor so life-like as it assumes to be. A master standing so high among continental artists should be able to furnish something more original and more genuine. To M. Carolus-Duran we do not look for a high degree of refinement or for the adequate presentment of an individuality difficult to decipher; we expect, and we get, great freshness and intensity of colour, magnificent brush power, and great simplicity and unity of execution generally. His "Portrait of M. Pasteur" (153)—a head and shoulders of the famous chemist relieved on a claret-coloured ground—is one of the most conspicuous pictorial achievements to be seen at the Academy. It is possible to imagine a more energetic characterisation of the well-known features and a firmer rendering of the structure of the head, but hardly a more exquisite delicacy in the rendering of the grey-hued flesh and the silver hair which frames it. The "Portrait de la Comtesse de Rigo" (594) is a somewhat startling presentment of a mature but handsome blonde, wearing a low dress of a deep and intense red—between crimson and scarlet—and standing out against a background of that steel-gray which the painter so much affects. Here, as in so many of M. Carolus-Duran's full-length portraits, an unmistakable vulgarity of conception, an all-pervading intention to astonish by the accomplishment of a mere technical *tour de force*, peeps forth. Yet there is in the large canvas much to admire and to imitate: the head and shoulders are modelled with an admirable decision, which does not exclude softness; while, if the robe was necessarily to be painted entirely of the singular hue chosen, and with so daring a unity of tint, it could scarcely be better done, or more successfully relieved against the sombre but vibrating tones of the background.

CLAUDE PHILLIPS.

MISS JANE INGLIS'S PAINTINGS.

THE paintings of Miss Jane Inglis, now exhibiting for a short time at St. George's Gallery, George Street, Hanover Square, are well worth a visit. They are, for the most part, at the same time faithful to fact and artistically satisfying in outline and colour. They reveal a strong enthusiasm for nature, a subtle feeling for colour and form, together with technical skill in rendering these, as well as an artist's eye for determining what kind of effect is likely to make a beautiful picture. Knowing as I do the particular scenes in Cornwall and Ireland which Miss Inglis has transferred to her canvases, I can vouch for their remarkable fidelity. The tone, the keynote of colour on the Cornish coast, is, of course, quite different from that of Donegal, and that of Rostrevor. These, in each case, are admirably reproduced.

I have only space to name the pictures I most care for personally. The four sunset scenes—"After Sundown in Rostrevor Bay," "Rostrevor Bay," "Stormy Sunset in October," "November"—combine profound feeling for the solemn ideality of sombre, yet gorgeous harmonies in cloud, sea, and mountain, with notable power to reproduce them by painting. Of the remaining pictures I may mention "Stormy Morning, Glen Head, Donegal"; a small and charming harmony of hues, which is entitled "A Moorland Scene on the Eve of Rain"; "Sea Fog, Newquay, Cornwall," a noble study of tumbling green waves that thunder in seething foam upon great rocks, one huge headland looming through mist; "Binding up the Barley Stooks after a Storm"; "Fairyhill, Mourne Mountains," where the girl's figure in the foreground, and the long bed of bright flowers in vivid green grass, contrasts admirably with a fainter wooded middle distance, and purple mountains beyond.

This collection is to be transferred shortly to the Irish Exhibition at Olympia, which all who love Ireland, to whatsoever political party they belong, should make a point of visiting.

RODEN NOEL.

CORRESPONDENCE.

"TARATHA" AND "BABIA."

Christ's College, Cambridge: May 21, 1888.

Dr. Neubauer's answer to my question is what I expected. He knows the explanation of Taratha, or Atergatis, as *Janua* only from Assemani, and he mentioned it only to reject it. I am sorry to have put him to the trouble of saying this. But I was unable to lay my hand on the statement of his which was vaguely referred to by Mr. Tomkins in the ACADEMY of April 28; and, as both Mr. Tomkins and Prof. Sayce took the *Janua* interpretation seriously, it seemed desirable to trace it to its source, and to show that it has no support either from ancient tradition or from modern scholarship.

As regards Babia, Prof. Sayce has no evidence to produce except the passage of Damascius to which I gave a reference. He does not seem to have looked at the passage again, otherwise he would not have spoken of the popular etymology assigned by Damascius to the name. What Damascius says is this: "The Syrians, and especially those in Damascus, call infants, and even striplings, *Babia*, from the goddess Babia worshipped by them." He gives no explanation of the name of the goddess, nor does he offer any detail that can help us to identify her with a known Syrian goddess. Prof. Sayce now says that as she was worshipped by the Syrians, he supposes that he was justified in his statement—viz., that "*Babia*, from *Bab*, gate, was the Semitic translation of the name of the great goddess of Carchemish." By the great goddess of Carchemish, Prof. Sayce has hitherto meant Atergatis (see his *Herodotus*, pp. 5, 429), who was also in more historical

times the goddess of Hierapolis-Mabbög. Prof. Sayce now says that he has not identified Babia with the goddess of Mabbög, which I do not understand, unless he has changed his mind since he edited *Herodotus*. But, however this may be, it is certain that the Syrians worshipped various goddesses, and that there is nothing to identify Babia with one of them more than another. As regards the derivation of the name, it is to be observed that *Bab*, in the sense of "gate," is very rare in Syriac, though common in Jewish Aramaic. But even if Babia does mean "the goddess of the gate," which is far from clear, this does not in the least help to connect her with the great goddess of Carchemish, who, if she was the Atergatis of Mabbög, had nothing to do with "gate," while if she is not to be identified with the goddess of Mabbög her name is still veiled in obscurity.

W. ROBERTSON SMITH.

A NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF ART.

IT is proposed to form a National Association for the Advancement of Art on the analogy of the British Association for the Advancement of Science. Like the British Association, the National Art Association will hold an annual congress in one of the great provincial towns after another. Its first congress will be held in Liverpool in the month of November next.

This movement was started at a town meeting, held in the town hall of Liverpool, on March 21, with the mayor of Liverpool in the chair. At that meeting it was unanimously resolved that a congress should be held in Liverpool in the ensuing autumn to discuss all manner of practical questions connected with the furtherance and development of art in all its branches. An influential committee was appointed to carry the scheme into effect. It was afterwards decided that this congress should be the first of a series to be held year by year in different towns; and the National Association for the Advancement of Art, now to be founded, is called into existence as a central body to organise these congresses.

The officers of the first congress will be as follows:—president of the Liverpool meeting, Sir Frederick Leighton; section of painting—president, Mr. L. Alma Tadema; section of architecture—president, Mr. G. Aitohison; section of sculpture—president, Mr. Alfred Gilbert; section of art history and museums—president, Mr. Sidney Colvin; hon. secretaries of the Liverpool meeting, Mr. H. E. Rensburg, Prof. W. M. Conway. There will also be sections devoted to the decorative arts and to what may be called public art. The last mentioned section will discuss the relation of governments and municipalities to art, both in regard to patronage and the technical education of artists and artisans; also to the legislative measures or social developments to be promoted for the propagation of art among the masses of the people.

A public meeting for the purpose of constituting the association will be held, by kind permission of the Duke of Westminster, at Grosvenor House, on Friday, June 6.

NOTES ON ART AND ARCHAEOLOGY.

MR. R. BARRETT BROWNING and his bride have settled in Venice for a year. He has at last thrown off the throat complaint which laid him up in London.

THE really important Méryon etching to be sold to-day at Messrs. Sotheby's is one of the extraordinarily rare "first states"—they might almost have been called "proofs"—of the "Abside de Notre Dame." These are so few that they may very nearly be counted on the fingers of one hand; and the impression about to change hands is mentioned in Mr. Wedmore's *Méryon*

as one of two on which the artist wrote some bitterly satirical verses, setting forth that the church of Notre Dame, great as it is, would be found not large enough to contain even the *élite* of the sinners of Paris. This particular impression, it seems, was given by the etcher to his brother artist, Braquemond.

MESSRS. CASSELL & Co.'s sixth annual exhibition of drawings by modern artists will be held in the Memorial Hall, Farringdon Street, from June 7 to June 22 inclusive. The private view will be on June 6.

THERE has just been published, as the third volume of the *Papers of the American School at Athens*, Dr. J. S. Sterrett's account of the archaeological expedition in Asia Minor which he made in 1885, with funds supplied by Mrs. Wolfe. Two maps by Kiepert show the results in the identification of some twenty ancient towns in Cilicia, Lycæonia, Isauria, and Pisidia. Perhaps the most interesting of these is the Lystra of the Acts, which is fixed at a ruined site called Zoldera, near the modern Khatun Serai, by the following Latin inscription: "Divum Augustum Colonia Julia Felix Gemina Lustra consecravît decreto decurionum." There is also mention of a monolithic stele, twenty-three feet high and nine feet in diameter, found by Dr. Sterrett at Fasiller, containing figures which are unmistakably Hittite. Dr. Sterrett, we may add, has recently accepted a professorship at the small university of Miami, Oxford, Ohio.

THE STAGE.

"THE BEN-MY-CHREE."

ON Thursday in last week we welcomed Mr. Wilson Barrett back to the theatre whose fortunes and whose credit he honourably raised. His loss of it may, after all, have been only temporary. His present return to the Princess's is, it is true, as guest, and not as host or landlord; but more lasting possession may even yet be given him. That is quite within the bounds of possibility; and Miss Hawthorne, who sat in a stage box on Thursday night—applauding Mr. Barrett and Miss Eastlake with great heartiness—would certainly not be the last to recognise how appropriate is even Mr. Barrett's present return. At the Globe he was out of place. The auditorium is uninviting; the approach disagreeable; the stage—though used ingeniously enough in "The Golden Ladder"—wanting in spaciousness. But a move to Her Majesty's, which was talked about, would have been a move from bad to worse. Acting of reasonable delicacy is simply lost in so vast a theatre. In a gigantic play-house art can make no appeal to you; spectacle and a great orchestra alone have their chance; and it is obvious that even the spectacle cannot be of the finer and more delicate kind. But, at a theatre of the size of the Princess's, the claims of spectacle and of the art of acting are fairly reconciled.

Much of the enthusiasm bestowed upon "Ben-my-Chree" was bestowed, no doubt, on Mr. Barrett and his return; but, when the circumstances of the moment have been allowed for, there remains a measure of cordiality reserved for the drama. The drama had obvious advantages. The hand Mr. Barrett himself had in it was the hand, of course, of one profoundly versed in stage knowledge; and that must necessarily have been wanted in a case in which the manager's literary partner was a novelist who has

indeed, devoted, some attention to the theatre—but much as Mr. Micawber devoted “some attention to the art of baking,” for Mr. Hall Caine has been primarily critic and novelist. But it was not only Mr. Hall Caine who experienced an advantage in the co-operation of so entirely practical an artist as Mr. Barrett. It was an advantage to the management to present a work by a romance writer of a certain mark—one who takes his craft seriously—and who, in *The Deemster* (on which the “Ben-my-Chree” is founded), has not only got upon new ground, but has spared no pains to make himself completely acquainted with it. Nor is *The Deemster*—as my own rapid reading of it has convinced me—only the result of literary tact and local learning. There is feeling in the book—some dramatic power—conceptions bold, or of fair originality, and these well realised. Much is done in *The Deemster*, and the writer of *The Deemster* may conceivably do more.

This word upon the genesis—the favourable genesis—of “Ben-my-Chree” has not been out of place; but it would be ridiculous, because one mentions the novel, to judge the play with much reference to it. A novel, even if the novel is his own, can never be to a dramatist material for mere transfer. It is a source of inspiration, and not, for the present purpose, a work of art. Accordingly—in most cases at least—the dramatist owes it but little respect. He may be grateful, but his gratitude need not take the form of conservatism. He may alter incidents; he may emphasise or accentuate character. What is required of him chiefly is that he shall produce a good play. Very likely the better the novel is, the more it will want altering. I will go further than that—the better the novel is, the more difficulties will it present to the dramatist. For the artist in novel writing—the artist in narrative fiction, long or short—is the person who best takes advantage of the large liberty peculiar to the narrative form. The form may be so flexible: his effects may be so varied. Now the *Deemster* is a novel that dramatises well. It is a good, even a striking, romance. It is aimed presumably, not at a poor public indeed, but not at a very specially chosen one, which alone exacts, and alone understands, the virtues of compression and delicacy; the employment of the precise word, and of no other, for the thing that is in question; the last refinements of style; the frankest or most deliberate originality. Work of this sort, on the rare occasions on which it is produced, must be practically addressed by an artist in literature to his brethren; and the affront of academic and mechanical praise, or of a too immediate popularity, is by this means avoided. But Mr. Hall Caine's work—unlike the best of Mr. Hardy's, Mr. Meredith's, or, strange as it may seem to-day to say so, Mr. Stevenson's—Mr. Hall Caine's work does not belong to this class.

“Ben my Chree's” story has been told sufficiently in the morning papers. All I chronicle here is that its complications are made possible by a curious and very interesting conflict between the powers of Church Law and Civil Law, and that its scene is laid in the earlier half of the last century, in the Isle of Man, amid a landscape and a seascape, which Mr. Walter Hann

has splendidly realised. Pool vash beg, its coast and its waters, as they are seen at the Princess's, recall in the richness and glow of their colouring the effects of Mr. Hook. Tynwald—the upland solitude, where the strange trial comes to be conducted amidst the encircling hill-sides—is, in its stage way, wilder and more spacious than any moorland of Copley Fielding's. It suggests, in its own fashion, Mr. Thomas Collier, or perhaps Turner's “Ingleborough”; or, to put it differently, is an extremely skilful and even imaginative piece of scene-painting. “Ben-my-Chree” gives occasion for scenery of this sort, and thus, in its own way, does service. It does greater service by affording an at all events sympathetic part to Miss Eastlake, a hearty part to Mr. George Barrett—whose genial personality the town enjoys—and such a part for Mr. Wilson Barrett as he has not found for some time; so spirited and daring is the character of Dan Mylrea, so well is it endowed with the colours of romance. Indeed, I think that, after the great part of Hamlet and the touching part of Chatterton, must next be reckoned among the impersonations of Mr. Barrett this part of Dan Mylrea. It gives occasion for the display of so much of his range; it suggests to him perhaps the doing of the very things which he does best of all. As Mona, Miss Eastlake, I have said, is very sympathetic; but she is more than that—her display of variety within limits pretty narrowly traced by the dramatist shows that she has at hand the resources of her art. Winning and emotional in several earlier passages, her brief death scene is notable for its discretion and its truth. As Ewan, Mona's brother, Mr. Fulton shows himself again as earnest actor and good elocutionist. As the Deemster, Mr. Austin Melford is repugnant with picturesqueness, and I could wish to give him no higher praise. Mr. John Maclean—one of those sound actors who know their business to the core—may, as the good bishop, be picturesque sympathetically. He does not seem to me to be, at any moment, incarnate grief; but he is often incarnate piety and incarnate benevolence. Miss Lillie Belmore—never seen before half as well, and bright and fresh as it is possible to be—gives reality, a pleasant definiteness, to the character of an attendant, Kitty, who might easily have been played with tameness, and would then have been nothing at all.

There are several circumstances—good acting, a good setting, a piece sufficiently original—conspiring together, happily, to make the “Ben-my-Chree” certain of the desired run.

FREDERICK WEDMORE.

STAGE NOTES.

WEDNESDAY night was appointed for the long-expected change of programme at the Lyceum, when “Robert Macaire,” with Mr. Irving in Frederick Lemaître's great part, and “The Amber Heart,” a more or less poetic production, with Miss Ellen Terry in the chief rôle, were to succeed “Faust.”

It seems that Mr. Richard Mansfield, when he comes to the Lyceum in the autumn, during Mr. Henry Irving's provincial tour, does not purpose to confine himself to “Mr. Hyde and Dr. Jekyll,” in which in America his great success has been won. That, however, is the piece in which, unless his merits have been overstated, every one will be interested in seeing him.

MUSIC.

RECENT CONCERTS.

THREE mythological pieces for orchestra, composed by Mr. Silas, were played at the fifth Philharmonic concert last Thursday week, under the composer's direction. They belong to a set devoted to the deities of classical mythology. The first represents Aphrodite floating on the waves; and the goddess of beauty appears in the form of a long drawn-out theme of considerable charm. The movement is cleverly written and scored with ingenuity. Next comes Vulcan; and by means of cymbals and side-drum, the fire-god at his forge is depicted in somewhat realistic fashion. The third movement, devoted to Pan, is less interesting. The composer met with a hearty reception. M^{me}. Sophie Menter, who has not visited London for several seasons, appeared at this concert, and performed Liszt's Pianoforte Concerto in A. M^{me}. Menter is one of the few pianists who can grapple successfully with the enormous difficulties of this work. Her technique is faultless, her strength prodigious, and her wonderful playing almost made one forget the extreme ugliness of the music. At the close she was received with a storm of applause, and returned to the platform, giving, as encore, Liszt's transcription of the “Marche Hongroise,” the one in Schubert's “Divertissement” for four hands. Here, again, she showed herself a worthy pupil of the great pianist. M^{me}. Fursch-Madi gave a dramatic rendering of Beethoven's “Ah! perfido,” and won also her share of applause. In the second part of the programme she sang Gounod's “O ma lyre immortelle.” The instrumental music comprised Wagner's “Siegfried Idyll,” Beethoven's C minor Symphony, and Weber's “Oberon” Overture. Mr. F. H. Cowen, who conducted for the last time previous to his departure for Melbourne, acquitted himself admirably.

Mr. C. Hallé gave his second recital on Friday, May 18. The novelty of the afternoon was a pianoforte Trio in A minor, entitled “A la mémoire d'un grand artiste,” by the Russian composer Tchaikowski. The first movement is a long one, and has about it an air of nobility. The writing throughout is decidedly clever and interesting; but one cannot help feeling that the composer might have tried to express and develop his thoughts at less length. The same, indeed, may be said of the second part of the Trio, which consists of a theme followed by variations. They show an immense amount of ingenuity, and all are more or less attractive; but there are too many. Just before the close, a return is made to the opening theme of the first movement. The pianoforte part throughout is extremely effective, and it was brilliantly played by Mr. Hallé. M^{me}. Norman-Néruda and Mr. F. Néruda proved, of course, worthy associates. The rest of the programme included Beethoven's Sonata, Op. 81a, Brahms' Sonata for piano and violin in G, and the Phantasietücke, Op. 88, by Schumann.

Señor Sarasate gave his second orchestral concert at St. James's Hall on Saturday afternoon, May 19. His fine rendering of Dr. Mackenzie's Concerto must have given pleasure to the composer who was present. It is only in the last movement that Dr. Mackenzie has tried, as it were, to catch the popular ear. The opening Allegro and Largo are more difficult to follow, but Señor Sarasate throughout made one feel the earnest and ambitious character of the music. Afterwards Señor Sarasate played in Lalo's clever Symphonie Espagnole, and performed one of his showy Fantasias. The orchestra, under Mr. Cousins' direction gave, besides, Liszt's “Les Préludes,” and Weber's “Preciosa” Overture.

J. S. SHEDLOCK

THE HENRY IRVING SHAKESPEARE.

NOTICE.—*The Third Volume of THE HENRY IRVING SHAKESPEARE, Edited by Henry Irving and Frank A. Marshall, and Illustrated by Gordon Browne, price 10s. 6d., will be published on WEDNESDAY NEXT.*

LONDON: BLACKIE & SON, 49 AND 50, OLD BAILEY.

NEW NOVEL AT ALL THE LIBRARIES.

A CLOUD on ST. ANGELO: a Novel. By Cyril Bennett, Author of "The Message Case." 2 vols., crown 8vo, cloth.
"The conclusion is pathetic, and well brought about. Both in tone and manner, 'A Cloud on St. Angelo' has much that merits commendation."—*Morning Post*.

NATURAL CAUSATION: an Essay in Four Parts. By C. E. Plumptre, Author of "General Sketch of the History of Pantheism." &c. Demy 8vo, cloth, 7s. 6d.
"There is in it a great deal deserving of careful consideration, and a great deal that is calculated to stimulate thought."—*Scotsman*.

JEWISH PORTRAITS. By Lady Magnus, Author of "Outlines of Jewish History." &c. Frontispiece by Harry Furniss. Small crown 8vo, cloth, 5s.
"These topics are touched upon with a light and facile pen, and, what is more, are treated with real sympathy, which is soon communicated to the reader by the art of the author."—*Jewish Chronicle*.

THE NEW VOLUME OF "THE STORY OF THE NATIONS."
ASSYRIA: From the Rise of the Empire to the Fall of Nineveh. By ZÉNAÏDE A. RAGOZIN, Author of "Chaldea," &c. Maps and Illustrations. Large cr. 8vo, cloth, 5s.
"Mde. Ragozin has performed her task in it as admirably as she has done in her earlier volume on 'Chaldea.' She has spared no pains in collecting the latest and best information on the subject."
EXTRACT FROM LETTER FROM PROF. SAYOR.

BRIDGE CASTLE is the OLD ENGLISH HOME
described in
THE ENGLISH
ILLUSTRATED MAGAZINE

For JUNE.

Profusely Illustrated, price 6d.; by post, 8d. CONTENTS:—

I. SOLITUDE. By DAVIDSON KNOWLES. Frontispiece.
II. GLIMPSES OF OLD ENGLISH HOMES.—IV. Bridge Castle.
ELIZABETH BALCH. Illustrated.
III. THE MEDIATION OF RALPH HARDELOT. Chaps. XXXI—
XXXIII. By Prof. W. MITTS.
IV. PAGODAS, AURIOLES, and UMBRELLAS.—Part I. By C. F.
GORDON CUMMING. With Illustrations.
V. COACHING DAYS and COACHING WAYS.—"The York Road."
Part I. By W. OUTRAM TRISTRAM. With Illustrations by
Herbert Ralston and Hugh Thomson.
VI. LIL: a Liverpool Child. Chap. II. (Concluded.) By AGNES C
MAITLAND.
VII. ET CETERA. By H. D. TRAILL.
MACMILLAN & Co., London.

SATURDAY, JUNE 2, 1888.

No. 839, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Lectures on the Origin and Growth of Religion as illustrated by Celtic Heathendom. By John Rhys. (Williams & Norgate.)

In his preface to this book Prof. Rhys says that when the subject of his Hibbert Lectures was announced many of his English friends wondered what he could possibly find to occupy six lectures. The friends from whom this expression of curiosity proceeded will certainly be astonished when they see this portly volume, containing more than double the quantity of matter in an ordinary Hibbert course, and still more when they learn that the author has been obliged to reserve for subsequent publication a large portion of the material which he had collected, and which, but for reasons of space, might have been appropriately included in the present work. The surprise excited by the size of the book will not be diminished by an examination of its contents. It is well known that Prof. Rhys is not among those writers who have the faculty of making a big book without having something to say; but few even of those who have given some study to the subject will be prepared to meet with such an abundance of well-established (or, at least, highly probable) results as are brought together in the earlier chapters. It is doubtless true, as the author would be the first to acknowledge, that the book contains, besides the conclusions which may be regarded as fairly secure, a large number of suggestions which future investigation may very likely show to be untenable. But in the infant stage of a science it is quite as important a task to present new problems as to solve old ones; and the most effective way of calling attention to a problem is usually to propose a tentative solution. The Hibbert Lectures on Celtic mythology will be none the less an epoch-making book, even though but few of the theories advanced should win their way to a place among scientific certainties.

Prof. Rhys's starting-point in his investigations is of course the well-known description given by Caesar of the Gaulish pantheon. In most cases the native names, or at least the native epithets, of the gods identified by Caesar with those of his own country are ascertained beyond doubt by the evidence of ancient inscriptions in which the Roman and the Celtic names are mentioned together. In other instances the inscriptions present us with Celtic names of gods which are nowhere accompanied by any Roman names. But even in this case it is often possible to connect these gods with those in Caesar's list by means of the indications of their characters and functions contained either in the inscriptions themselves or in the sculptured representations with which they are associated.

So far the ground has to a considerable extent been worked by former scholars, though even here Prof. Rhys has been able to make many new and interesting suggestions. But the most original, and therefore the most important, part of his work consists in the investigation of the traces which ancient Celtic mythology has left in the heroic legends of Ireland and of Wales. To many persons, indeed, it will seem that this line of inquiry is foredoomed to unfruitfulness. The theory that the gods of ancient heathenism survive into Christian times as the heroes of quasi-historical legend has undoubtedly fallen into some discredit owing to the exaggerated application of it that has been made by certain scholars, who seem to think that all popular tradition is nothing but divine myth in disguise. But the passage of religious myth into heroic legend is so natural a process that the burden of proof surely rests with those who deny its existence, and the evidence of its having occurred in particular instances is too strong to be reasonably resisted. This is true, as I believe, even where we have to do with purely popular tradition. But Irish and Welsh romance, it is important to remember, is not of merely popular origin. It is the work of an organised and trained class of poets and story-tellers. If these men had been accustomed in heathen days to relate the exploits of the gods and goddesses from whom their royal patrons claimed to be descended, they certainly would not cease to relate the same stories when they became Christians. The court poet of a Christian Irish or Welsh king could not, indeed, without blasphemy continue to say that the ancestors of his royal patron were divine. But just as little could he consign to oblivion their glorious achievements. The heroes of tradition were for him none the less real persons, and their history none the less true, because a benighted age had deified them. The stories of the gods, which reflected honour on their supposed descendants, must still continue to be told; only they were now regarded as belonging to the history of Ireland or of Britain. We must be prepared, I think, to find in Irish and Welsh romance a kind of systematic euhemerism which it would be unreasonable to expect to discover in purely popular tradition. And this view of the matter is supported by the fact that the earliest versions of Irish legend show a distinct consciousness of the divine character of many personages whom later versions exhibit as human and historical heroes.

There is therefore every reason *a priori* to expect that the method of inquiry followed by Prof. Rhys will lead to sound results. It will, indeed, probably occur to many readers that his success has been too complete, for he has been able to find in Celtic tradition vestiges not only of the six deities (including Dis) said by Caesar to have been the chief objects of Gaulish worship, but also of many minor divinities whose names appear in the inscriptions of Gaul and Britain. Very likely he may often have found survivals of mythology in stories which are really either distorted history or the product of romantic invention. It would be a marvel indeed if he had altogether escaped falling into the errors incident to all pioneer work. But, at all events, a solid basis for further

research has been laid in the demonstration, now given for the first time, of the great extent of the common element in the heroic legends of Ireland and of Wales. In some instances it may be safely inferred, from the forms in which the names appear, that this common element is not due to borrowing on either side, but goes back to the period of Celtic unity, that is to say, to a time when the divinities described by Caesar were actually worshipped.

In several cases Prof. Rhys has been able to show that the actual names of ancient divinities have survived into Christian times in Ireland and in Wales. The epithet *Segomo* (presumably "the victorious" or "the mighty") belonging to the Gaulish Mars, appears in the Ogam personal name, *Netta-segamonas*, "Segomo's champion." The proper name of the same god, *Camulos*, which is found in the name of the British Roman city *Camulodunum*,* has its normal phonetic descendant in *Cumall*, the name of "a warrior king of Ireland," the father of the famous legendary hero *Finn*. The investigation of the stories of the Welsh hero *Lleu* (corruptly *Llew*) and of the Irish hero *Lug*, yields still more striking results of the same kind. Prof. Rhys shows that their names are etymologically identical, pointing back to an Old-Celtic *Lugus*; and that the character of the stories about them, no less than the derivation of their common name, suggests that they represent an ancient God of Light. The name of this god he considers to be the etymon of the name of the city *Lugdunon*, or *Lugdunum*. A more satisfactory evidence, however, of the connexion of *Lleu* or *Lug* with the Gaulish pantheon is found in the Spanish inscription in which a certain *L. L. Urcico* dedicates a temple to "the *Lugoves*" for the benefit of a guild of cobblers (*collegio aurorum*). The form *Lugoves* is the normal plural of *Lugus*, and even the association with the "cobblers" seems to receive illustration from a Welsh triad which designates *Lleu* as one of the "Three Golden Cord-wainers" of the Isle of Britain. Whether the Welsh myth which accounts for this grotesque-sounding appellation be genuine, or merely invented for the sake of an explanation, does not greatly matter. At any rate, the coincidence is a remarkable one; and Prof. Rhys cannot fairly be accused of arbitrarily manipulating his materials when he suggests that the *Lugoves* may be *Lleu* and his father *Gwydion*, who is associated with him in one version of the triad and in the explanatory legend. An alternative conjecture, which perhaps deserves consideration, is that the *Lugoves* were a pair or triad of divine brothers, bearing the name *Lugus*, possibly with distinguishing epithets. This supposition, however, makes no difference with regard to the mythological origin of the *Lleu* or *Lug* of late Celtic legend. It is obvious that the demonstration that *Cumall*, and *Lleu*, or *Lug*, are the representatives of ancient Celtic deities affords a *prima facie* justification for the attempt to discover traces of religious myth in the other personages with whom those heroes are associated in Irish and Welsh story. To a considerable

* Is it possible that the similar name, *Camulodunum* (Slack in Yorkshire) may be derived from *Cambo*, one of the names of the Celtic Mercury?

extent there is other justification also; for the early forms of Irish legend not unfrequently speak of one or other of the heroic figures as being gods or the children of gods. It is perhaps too much to hope that this volume will put an end to the notion that the Tuatha Dé Danann and the Fomorians (= *submarini*) were real nations who lived and fought on the soil of Ireland; but it is not likely that any careful and clear-headed reader will continue to advocate that once popular theory. That historical elements may have here and there been worked into the mythic framework is a different position, and not in itself irrational, though it might be difficult to prove its truth in any particular instance.

Prof. Rhys's examination of the myths relating to the Celtic Mercury leads him to highly interesting and far-reaching conclusions. According to Caesar this deity was the head of the Gaulish pantheon, and his character was that of the inventor of arts and sciences, and the patron of travelling and commerce. Caesar does not say that the Gauls regarded him as being, like Hermes-Mercury, the inspirer of eloquence; but this function harmonises well with those which are expressly mentioned. Now, the Gaulish god of eloquence, who may plausibly be conjectured to be an aspect of the so-called Mercury, is described by Lucian under the title of Heracles Ogmios; and this epithet is etymologically identical with the name of Ogma, the champion of the Tuatha Dé Danann, who appears in Irish legend as the inventor of Ogam writing, and as being "skilled in dialects and in poetry." Prof. Rhys conjectures that the word Ogam, from the original form of which Ogmios is derived, must have primarily meant "skilled use of words," or something nearly equivalent. It has long been observed as a remarkable fact that the chief god of the Gauls and the chief god of the Germans should have been identified by the Romans with Mercury, and that Caesar's description of the character of the Gaulish deity should coincide so closely with what we know respecting his Germanic analogue Woden. But, if to the attributes of the Gaulish Mercury we add those of Ogmios, the parallel with Woden becomes more striking still. Moreover, in Welsh romance there is a conspicuous personage, Gwydion ab Dôn, whose story bears a very noteworthy resemblance to that of Woden, and whose connexion with Gaulish mythology is shown by his being said to be the father of Lleu, the representative of the Celtic god of light. From all these facts the author draws the startling inference that the myths which are preserved in the Teutonic story of Woden and in the analogous Celtic traditions must have already assumed a high degree of development before the breaking-up of that portion of the Aryan family which included alike the ancestors of Celts and Teutons.

One obvious objection to this view is that, according to the teaching of philology, the Celts stand in a less close relation linguistically to the Germanic peoples than they do to the peoples of ancient Italy, and that there is no evidence that the latter had anything closely analogous to the myth in question. It is true the genuine Italic mythology has been so overlaid with foreign elements, Greek and

Etruscan, that a very large portion of the original traditions must be irrecoverably lost. But it seems worth while to suggest that the common element in Celtic and Teutonic myth may partly date, not from the time of Celto-Teutonic unity, but from the less remote, though still prehistoric period, when, as the evidence of language shows, the undivided Teutonic people lived under the dominion of the Celts. Nor does it seem wholly impossible that among those portions of Teutonic mythology which are known to us only from Scandinavian sources there may be many individual features directly borrowed from the Celts in comparatively recent times.

Prof. Rhys endeavours to show that the names of Gwydion and Woden are etymologically allied. The demonstration, however, does not seem quite conclusive. According to the theory which the author adopts, the name Woden, put back into its proto-Aryan equivalents, would be *Wātānōs*, allied to the Norse *ǫðr*, "poetic inspiration," the Latin *vates* and the Irish *fáith*, "a poet"; and also to the Old-English *wōd*, "mad," the original sense of which is indicated by the use of its Gothic equivalent as the rendering of *δαίμονιζόμενος*, "possessed by a demon." This etymology certainly seems to yield a more appropriate sense than any that can be got out of the older assumption (phonologically equally legitimate) of derivation from the root *wadh*, "to go." According to Prof. Rhys, the original Celtic form of Gwydion was *Vetjo*, in the genitive *Vetjonos*; and he derives it from a root *wet*, meaning "to say." So far as the consonants are concerned there is no difficulty in connecting this name with Woden; but the long *a* of *Wātānos* and *vates* cannot easily be derived from an *ǝ* in the Aryan root. Another point is that the assumed meaning of the root does not satisfactorily account for the notion of "daemonic frenzy" which seems to be present in the Teutonic and Latin words; unless, indeed, it be supposed that the sense "to say" was developed from an earlier sense "to prophesy." It is to be noted that no such divine name as *Vetio* has yet been found in any old Celtic inscription, nor does the equivalent name appear in Irish story; so that even if it had been shown that Gwydion is from the same root as Woden, the fact would still not have the same importance as if the former name were known to be the common property of the Celtic people.

The statement that the heroes of the Tuatha Dé Danann and the chief actors in Arthurian legend are neither mere creations of romantic imagination nor historical personages, but the gods of Celtic heathendom, will by many persons be received with incredulous surprise. Readers who are disposed to regard such a theory as utterly preposterous may be recommended to consider what Prof. Rhys has to say about Nuada of the Silver Hand, king of the Tuatha Dé Danann. The spelling of this name and its declension show that it represents an original Celtic form *Nōdent* or *Nōdont*. At Lydney in Gloucestershire three Latin inscriptions have been found bearing this name as that of a god, their readings being severally *Devo Nodenti*, *D. M. Nodonti*, and *Deo Nudente M.* The normal Welsh equivalent of *Nōdens*, *Nuada*, would be *Nûs*. There is a hero of this name in Welsh legend, of whom but little is recorded. But one of

the most famous characters of the fictitious history of Britain bears the name of Llŷs Llawereint—Llŷs of the Silver Hand; and the identity of the epithet with that of the Irish hero at least gives strong plausibility to Prof. Rhys's view that the name Llŷs (Geoffrey's King Lud) was altered from *Nûs* by the influence of alliteration. If this be so, it follows that Irish tradition spoke of a king of Ireland, and Welsh tradition of a king of Britain, bearing the name of a god who is proved to have been worshipped in Britain after the Christian era; and in each case the legend gives to the king in question the attribute of a "silver hand." It seems to me that the conclusion that a divine myth has in this instance been transmuted into romantic legend can be resisted only by those who have made up their minds beforehand that such a transmutation is impossible.

Whether the Celtic *Nōdens* is to be identified with Caesar's Mars, as has been inferred from the initial M in the Latin inscriptions, or with Neptune, as the Lydney mosaics suggest, or with Jupiter, as Prof. Rhys believes on other grounds, is a question of subordinate importance. The main point is that a strong case has been made out for regarding a considerable portion of Irish and Welsh romantic legend as a survival of stories that belonged originally to religious myth. I cannot myself follow Prof. Rhys in his suggestion that "Ludgate" indicates the site of a temple to the god "Llŷs"; but to state the grounds of my dissent would carry me too far.

The points of interest in the volume are so numerous that it is quite impossible to discuss them all in a single article. One of the author's most striking suggestions is that the unhistorical features of the German Theoderic legends may be due to a confusion between the Gothic king and his namesake the Gaulish (Apollo) Toutiorix. I cannot say that I feel altogether convinced, but the conjecture well deserves consideration. The name of the Gaulish god, like that of the historical Goth, means "people-king." The famous Teutates of Lucan (which appears in the dative as *Marti Toutati* in a Roman-British inscription) is also obviously derived from *touta* "people"; and Prof. Rhys seems to be right in thinking it equivalent to the similarly derived Gothic *biudans* "king." The divine name *Esus* (Hesus) mentioned by Lucan, together with that of Teutates, is regarded by Prof. Rhys as cognate with the Teutonic *ansus*; and he finds derivatives of it (quite according to phonological laws) in the Welsh *tor* "Lord," and in the personal names Eogan and Owen, which seem to be identical with the Gaulish *Esugenos* "offspring of Esus." The third name of a Gaulish deity mentioned in Lucan's lines, Taranis, is explained at once by the Welsh and Irish word for thunder, *taran*, *toirn*. Prof. Rhys accepts both the Taranis of the ordinary text of Lucan and the Taranus of Gaulish inscriptions, regarding the former as a goddess (according to the apparent implication of Lucan's words), and the latter as a male deity, both having to do with the thunder. The former name appears in the Ogam personal name *Awi Toranias*, "descendant of Toranis," and in the name of the Irish clan *Uí Torna*. The name Maponos, assigned in inscriptions to the Celtic Apollo, is obviously identical with the Welsh *mapon*, "a boy or

youth." The correctness of this interpretation is confirmed by the inscriptions which mention the god as *Deus Bonus Puer Posphorus Apollo*; and it is remarkable that in Welsh story Mabon actually occurs as the name of a mighty hunter, and as having undergone a proverbially cruel captivity, which Prof. Rhys aptly compares to the bondage of Apollo in the house of Admetus.

Notwithstanding the title which the conditions of the Hibbert trust have required him to give to his book, the author has nothing to say on the "origin and growth of religion," and not much even on the origin of mythology. His task has been to discover from the extant vestiges of Celtic myth what the ancient Celtic religion was in its latest and most developed form. Owing, however, to the nature of the materials, it is impossible to conduct such an inquiry, or to expound its results, without having some sort of general theory with regard to the class of ideas which mythology chiefly embodies. It is noteworthy that, although Prof. Rhys's avowed sympathies are with the "anthropological" school, most of his conclusions are likely to be less favourably received by the disciples of that school than by its opponents. The "anthropologists" will read with pleasure the remarks introductory to the chapter on "The Zeus of the Insular Celts"; but it is to be feared that when, after all, they find Prof. Rhys still cherishing the *excellent superstition* about "Sun-heroes," "divinities of Dawn and Dusk," and "the common Aryan mythology," they will be ready to echo the complaint of King Balak. Prof. Rhys has learned from Mr. Lang to ascribe the origin of the Aryan mythology to a lower stage of thought than that to which older scholars referred it; but he does not follow him in thinking lightly of the value of philological methods of research, and he still believes that nature-myth is the largest (though not the only) element in the stories of Aryan deities. The last chapter contains an ingeniously written conjectural restoration of the primitive Celtic theogony, which it may be as well for readers to look at before going through the book, as it will enable them to perceive the bearing of many of the author's individual theories, which otherwise they might be apt to overlook.

HENRY BRADLEY.

Before the Curfew, and other Poems: Chiefly Occasional. By Oliver Wendell Holmes. (Sampson Low.)

A SPEAKER or preacher, if he be wise, is careful to finish his discourse while yet his readers would be glad to have it prolonged. In like manner, one clear merit of Dr. Holmes's latest gathering of verses is that the reader closes the book regretfully, wishing there was more. It consists of only thirty-five pieces, most of them tolerably short; and, as Dr. Holmes is never guilty of writing dull things, at least in verse, its welcome is assured. As to the quality of the contents, the author's established reputation is not likely to be affected much in any way—it will be neither enhanced nor diminished. The verses are in his usual style and up to his usual average. There is not one piece of transcendent merit in the volume—not one that is fairly entitled to rank with "The One

Hoss Shay," or with "Contentment." But, on the other hand, there is nothing that the author need be ashamed of; nothing that can be said to indicate that he is getting "played out"; nothing, in short, that would have been better omitted. If Dr. Holmes has been always contented with a modest level in verse, never reaching any great heights, it must be admitted that, unlike some great poets, even in his later years he has done nothing to discredit himself.

The general tone of the book is not, indeed, quite the tone familiar to us of old. There is less of laughter, and what laughter there is is more subdued. Perhaps the very best pieces here are some which contain no laughter at all; whereas, hitherto, we have been accustomed to associate Dr. Holmes's best pieces with what was cheeriest and brightest. There is nothing in the book finer than the sad and touching initial verses entitled "At my Fireside," and dated March 1, 1868, referring to the irreparable loss that had then just fallen on the author:

"Alone, beneath the darkened sky,
With saddened heart and unstrung lyre,
I heap the spoils of years gone by,
And leave them with a long-drawn sigh,
Like driftwood brands that glimmering lie,
Before the ashes hide the fire.

"Let not these slow declining days
The rosy light of dawn outlast;
Still round my lonely hearth it plays,
And glides the east with borrowed rays,
While memory's mirrored sunset blaze
Flames on the windows of the past."

The nearest approach to fun is to be found in the series of pieces which Dr. Holmes prepared for the now famous meetings of the survivors of "the Class of 1829"; and, as might be expected, this fun is of rather a ghostly, if not actually of a ghostly, kind. In 1851, it was quite a "happy thought" of somebody's that the men who had graduated at Harvard University in the year 1829 should form a kind of club and meet together at dinner once a year; but thirty-seven years have elapsed since then, and brought such changes that the few members who are left might, one would think, give effect to another happy thought, and dissolve their club forthwith, instead of waiting for the time when the last man shall sit in solitary state partaking of his last dinner. The spectacle of a number of elderly gentlemen watching one another in this fashion, and wondering, on the occasion of each dinner, which of them will be dead before the next takes place, is not edifying. How many of the class met at this year's dinner on January 8 last I do not know; but so far back as 1880 Dr. Holmes's verses recorded that of the original fifty not more than twenty were left. No wonder that the fun, which in the early effusions was genuine enough, has grown more and more forced as, year by year, the old gentlemen meet and play at being boys again. One is reminded of the dismal subjects of Dr. Heidegger's experiment when the temporary delusion created by the Water of Youth had passed away:

"His guests shivered again. A strange chilliness, whether of the body or spirit they could not tell, was gradually creeping over them all. They gazed at one another, and fancied that each fleeting moment snatched away a charm and left a deepening furrow where none had been before."

The piece read at the gathering of 1882, which gives its title to the present volume, is quite in this tone. It is too long to quote in full, but a few verses will serve to indicate what I mean:

"Not bed-time yet! The night-winds blow,
The stars are out, full well we know
The nurse is on the stair,
With hand of ice and cheek of snow,
And frozen lips that whisper low,
'Come, children, it is time to go
My peaceful couch to share.'

"No years a wakeful heart can tire;
Not bed-time yet! Come, stir the fire
And warm your dear old hands;
Kind mother-earth we love so well
Has pleasant stories yet to tell
Before we hear the curfew bell;
Still glow the burning brands.

"Not bed-time yet! The full-blown flower
Of all the year—this evening hour—
With friendship's flame is bright;
Life still is sweet, the heavens are fair,
Though fields are brown and woods are bare,
And many a joy is left to share
Before we say good-night."

Here is none of the noble and contented spirit which properly belongs to the old age of a life well spent. We miss the "serenity of thought and behaviour" of which Emerson speaks. Contrast it with Emerson's own attitude when he discovered that it was "time to be old":

"As the bird trims her to the gale,
I trim myself to the storm of time,
I man the rudder, reef the sail,
Obey the voice at eve obeyed at prime:
'Lowly faithful, banish fear,
Right onward drive, unharmed;
The port, well worth the cruise, is near,
And every wave is charmed.'"

As a composer of occasional verses Dr. Holmes stands unrivalled. He can throw off a jovial song for a public dinner and a hymn for a church festival with equal ease. He is a master of fine phrases, can say airy nothings delightfully, and is judicious and never gives offence. He knows just what is wanted, and can supply it. All this has made him a very useful man in certain ways, and has helped to give him popularity; but it would be manifestly unjust to regard him as a mere tea-party poet, or to assume that time and fame will judge him solely or chiefly by his rhymes. "Here's a reputation: not as the author of *Typical Developments*, but the writer of 'The Little Pig Jumped,' who sings it and does the squeak himself!" exclaims Mr. Burnand's hero despairingly; and Dr. Holmes, likewise, when injudicious admirers talk extravagantly about his pleasant verses, calling them great poems, may well cry out—"Here's a reputation: not as the author of *The Autocrat*, *The Professor*, and *The Poet*, but as the writer of light verses for the hour, which show a talent for rhyme, but no genius!" How time and fame may ultimately settle matters for him I cannot know, and shall not try to guess; but this much is certain—that they will not follow in the footsteps of the injudicious admirers. Dr. Holmes has himself drawn an excellent distinction between the singer and the poet; and it is possible and proper to speak highly of his powers as a singer without pretending that he is a poet at all. "It is a man's sincerity and depth of vision that makes him a poet," said Carlyle. Dr. Holmes's "Agnes" has been described as

not only "by far the most beautiful of his poems," but "one of the most beautiful of American poems." "The Chambered Nautilus," too, is often quoted and much admired by its author as well as by others. The former is a questionable story gracefully told, the latter a moral lesson well applied. Neither suggests a doubt as to their author's "sincerity," and neither points to any "depth of vision." Dr. Holmes belongs to the order of "born singers," and not to the order of "born poets," yet his verses form, probably, his smallest claim to eminence. Those studies in morbid anatomy that are called his novels are truer indications of his genius than the best of the passing fancies which he has been accustomed to enshrine in verse. His office in the world has been neither that of poet nor that of novelist, but the office of a critic of society; and the high water mark of his achievement, a mark far beyond the others, is assuredly the "Breakfast Table" Series.

WALTER LEWIN.

Tropical Africa. By Henry Drummond. With Maps and Illustrations. (Hodder & Stoughton.)

It may be taken for granted that the author of *Natural Law in the Spiritual World* may be daring and at times even slightly paradoxical, but never either dull or commonplace. Mature scholarship and a genial temperament are in his writings so blended with an exquisite sense of style that however big a book he may choose to offer the public he will be always sure of an audience. But, like a giant sparing of his strength, he here offers them the very briefest summary of a trip recently made to the East African equatorial lake regions. He does it of set purpose, too, for he is minded that big books of travel have had their day, while

"small books, with the larger features of a country slightly sketched, and just enough of narrative to make you feel that you are really there, have a function in helping the imagination of those who have not breath enough to keep up with the great explorers" (Preface).

Instead of the obsolete "three or four volumes and a map," he therefore here gives us "three or four maps and a volume," and thus with bold originality takes a new departure in the literature of travel. The "departure" is even greater than might appear from this statement; for, while the volume is very small, with plenty of "leading" and blank spaces, the maps are not "three or four," but six—all, it may be added, on a liberal scale, clearly executed, and of such a nature as to let the light into the duldest capacity. There is even a heroic attempt at a uniform and rational system of spelling, as shown by the "Mozambik" and "Kebrabassa" of the carefully prepared route map, which, however, are elsewhere replaced by the old-fashioned "Mozambique" and the eccentric "Karoabassa." But *non omnia possumus omnes*; and notwithstanding this failure, Prof. Drummond may well rest satisfied with the credit of having presented his readers with the most instructive series of maps that has yet appeared on the physical features, the geology, the present social and political relations of the African continent south of the Sahara.

One of the series is the slave-trade map,

showing the chief tracks of the slave caravans, and in different shadings of red the districts either harrassed or entirely depopulated by the villainous Arab slave-hunters and their native confederates. A glance at this map, after perusal of the accompanying text on "the heart-disease of Africa, its pathology and cure," will convey a clearer idea of the frightful havoc wrought by this nefarious traffic than might be gleaned from whole volumes written expressly on the subject. Well may the author exclaim that all the other evils from which the distressful continent suffers

"are lost in the shadow of a great and national wrong. Among these simple and unprotected tribes, Arabs—uninvited strangers of another race and nature—pour in from the north and east, with the deliberate purpose of making this paradise a hell. It seems the awful destiny of this homeless people to spend their lives in breaking up the homes of others. Wherever they go in Africa the followers of Islam are the destroyers of peace, the breakers-up of the patriarchal life, the dissolvers of the family tie. Already they hold the whole continent under one reign of terror."

The last statement is scarcely exaggerated, although many people still foolishly suppose that the recent "land-grabbing" has brought about a great "pax Africana." On the contrary the slavers are more openly defiant than ever. Not long ago they stormed the advanced station of the Congo Free State at Stanley Falls on the equator, and the other day wasted the region about the north end of Lake Nyassa under the very eyes of a British consul. Our author refers in burning words to all these things. But there is a point which he does not mention and evidently does not know, else he would scarcely speak so hopefully of Germanic influences, and especially of "the German Association in the east," as tending "to secure the peace of Africa." Why the truth should be concealed it is hard to say; but certain it is that no one has yet had the courage to speak out plainly on this painful subject. Possibly the sense of national humiliation is too deep to allow them to tell the British public that, in retiring from the East African seaboard between Pemba and Mozambique at the bidding of the German Chancellor, our government has virtually surrendered the whole region between Zanzibar and Tanganyika to the Arab slave-hunters. Through our intervention the traffic had no doubt been previously legally suppressed, and by the terms of the treaties with the sultan his officials on the mainland were bound to give effect to the new law within their jurisdiction. But these officials have now been replaced by German commissioners, who have practically abrogated the treaties, and left the slave-dealers full freedom of action. This is what has set Africa again in a blaze from the Congo to the Zambesi, and this is what must henceforth neutralise all our efforts on land and sea to wipe out the plague spot. In their blunt way the Germans tell us plainly that they are not philanthropists, that they do not believe in sentiment, that they have come into Africa not to put down slavery, but to sell rifles and spirits so long as the trade is profitable. When it ceases to pay, that is, when nobody is left to drink or to shoot, they may change their policy; but meantime the thing must run its course.

Short as it is, only a very small part of this delightful volume is taken up with the actual incidents of travel. The route was restricted to the region between the Zambesi delta and the plateau between Tanganyika and Nyassa; and as it diverged scarcely anywhere from the beaten track, not much opportunity was afforded for adventures of a novel or exciting character. In lieu of these we have "a traveller's diary," which, like the introductions to Cicero's letters, is sufficiently generalised to fit into almost any account of travels in Africa between the tropics. Here is a characteristic passage:

"The greatest wonder of all perhaps was the burning glass. They had never seen glass before, and thought it was *mazi* or water; but why the *mazi* did not run over when I put it in my pocket passed all understanding. When the light focused on the dry grass and set it ablaze their terror knew no bounds. 'He is a mighty spirit,' they cried, 'and brings down fire from the sun!' This single remark contains the key to the whole secret of a white man's influence and power over all uncivilised tribes. Why a white man, alone and unprotected, can wander among these savage peoples without any risk from murder or robbery is a mystery at home. But it is his moral power, his education, his civilisation. To the African the white man is a supreme being. His commonest acts are miracles; his clothes, his guns, his cooking utensils are supernatural. Everywhere his word is law. He can prevent death and war if he but speak the word. And let a single European settle, with fifty square miles of heathen round him, and in a short time he will be their king, their law-giver, and their judge. I asked my men one day the question point blank—'Why do you not kill me and take my guns and clothes and beads?' 'Oh,' they replied, 'we would never kill a spirit.'"

Incident and reflections alike are obviously of universal application. Room has also been found for a "Geological Sketch," reprinted from the *Transactions* of the British Association, besides two essays on the white ant and on mimicry, which have already appeared in one of the monthlies. But no one will regret their reissue in this more permanent form, for, as might be expected, Prof. Drummond is here at his very best. The article on mimicry especially is worthy to rank with anything ever written by Wallace, Bates, or Darwin himself on this fascinating subject. In the presence of such perfect form, such graphic description of details, such genial humour and subtle reasoning the critic has nothing to do but quote. The only difficulty is to find one passage more suitable than another for the purpose. By way of compromise the concluding remarks may be given:

"At the first revelation of all these smart hypocrisies one is inclined to brand the whole system as cowardly and false. And, however much the creatures impress you by their cleverness, you never quite get over the feeling that there is something underhand about it; something questionable and morally unsound. The evolutionist, also, is apt to charge mimetic species in general with neglecting the harmonious development of their physical framework, and by a cheap and ignoble subterfuge evading the appointed struggle for life. But is it so? Are the aesthetic elements in nature so far below the mechanical? Are colour and form, quietness and rest, so much less important than the specialisation of single

function or excellence in the arts of war? Is it nothing that, while in some animals the disguises tend to become more and more perfect, the faculties for penetrating them, in other animals, must continually increase in subtlety and power? And, after all, if the least must be said, is it not better to be a live dog than a dead lion?"

A. H. KEANE.

TALICE'S COMMENTARY ON DANTE.

La Commedia di Dante Alighieri col Commento inedito di Stefano Talice di Ricaldone.
Pubblicato per cura di V. Promis e di C. Negroni. (Milan: Hoepli.)

In the library of the king at Turin this Latin commentary on the *Divina Commedia* had long lain inedited and unknown even to Dante students till in the year 1885 a professor of the Turin University drew to it the attention of the learned. From that day the destiny of this work suddenly changed, and from its former obscurity it has rapidly passed to the honour of a second edition. The first was printed for private circulation only at the expense and by the command of the King of Italy, who desired that it should be dedicated to his son the Crown Prince "as a reward for his love of study, and in order that the divine poem may strengthen his mind and educate his heart to the love of his country's literature." But this edition, exhausted as soon as published, was inaccessible to the common reader; and the publisher Hoepli obtained permission to reproduce it in its entirety in this second edition, which has, like the first, been prepared with great diligence and learning by Signor Promis and Signor Negroni.

This commentary, though of secondary importance, seems to merit attention for several reasons. It is remarkable, above all, for the time at which it was written; for while commentators on Dante abound in the fourteenth century they are comparatively rare in the fifteenth, and the famous commentary of Landino is the only one before printed embracing the whole of the *Divina Commedia* which was written in that century. Nor is it of small importance to possess a second commentary which may aid us to see how in the midst of the renaissance of classical studies and antiquity the medieval imagination of Dante exercised its influence on the thought of the fifteenth century, and on what points this influence approached or differed from that of the preceding century. On the whole, this commentary of Talice's may be said to be derived in great part from that of Benvenuto da Imola, the most valuable, perhaps, of all the commentaries on Dante, which has been lately published at the expense of Mr. Vernon and edited most carefully by Sir James Lacaita. But though Talice, especially in the historical part, may differ but slightly, or in unimportant points, from his predecessor, he often varies considerably from him in the interpretation of the allegorical and moral statements; and also, as was to be expected from one writing in an age in which humanism prevailed, he often adds to that of Benvenuto da Imola his own stock of classical erudition. As to the commentator himself, Stephen Talice—born at Ricaldone in the Montferrat—

is an example of the proportions which the renaissance of classic culture had taken in Northern Italy, and shows us the existence of an old current of Italian studies in Piedmont at the courts of the marquises of Montferrat and Saluzzo, which deserves the attention of students of Italian literature; while the information regarding this current collected by the learned editors is in itself of considerable value.

In short, the edition, which is also externally elegant, has been admirably carried out, and is rendered still more interesting by a fine portrait of Dante hitherto unpublished, which, by some experts, has been considered the most authentic known. The appendix which has been added regarding this portrait is very noteworthy, but we are less convinced by the other appendix on the reading of the famous line:

"Poi che hai pietà del nostro mal perverso,"

which, in the commentary, is changed into:

"Poi che hai pietà del nostro amor perverso."

In truth, we think that in similar cases of different readings, easy as it is to find good reasons in favour of a new and rational reading, it is equally easy to find them in favour of the old one; and the doubt between the two remains impossible to overcome.

UGO BALZANI.

NEW NOVELS.

Dolly Lorraine. By Susan Morley. In 2 vols. (White.)

Seventy times Seven. By Adeline Sergeant. In 3 vols. (Hamilton, Adams, & Co.)

Love's a Tyrant. By Annie Thomas (Mrs. Pender Cudlip). In 3 vols. (Sonnenschein.)

A More Excellent Way. In Two Books. By Constance Howell. (Sonnenschein.)

Sheikh Hassan, the Spiritualist: a View of the Supernatural. By S. A. Hillam. (W. H. Allen.)

Chris. By W. E. Norris. In 2 vols. (Macmillan.)

Ruthven of Ruthven. By E. Everett-Green. (Frederick Warne.)

THERE are few nobler figures on the world's stage than that of a good man silently enduring undeserved obloquy for honour's sake; and that is what we are called upon to contemplate in the person of Mrs. Morley's hero, Humphrey Armstrong. He is really a fine, manly fellow, who enlists our sympathy as much as he commands our respect; and even those few—if any such there be—who may feel disposed to sneer at his chivalrous action in shielding Cecilia Ponsonby at the cost of his own good name, must admit that such a man would have been the best to select for friend or lover, and that Miss Lorraine was heartily to be congratulated on her choice. It must be confessed that, apart from the underhand way in which she came by her information, Cecilia was hardly so culpable as she is represented to have been, in making use of a true story as the groundwork of her novel. The thing is done every day. Such an action would, of course, have been unpardonable in Humphrey, because he would

have been revealing office secrets; but the mere employment of the materials on the part of the girl was not so very grievous an offence, if only she had come by her facts honestly. Is it likely, by the by, that any business men would discuss matters of grave professional import in a room where they evidently knew that they were liable to be overheard? However, Miss Ponsonby elected to conceal her identity for fear of her father's wrath; and the worthy banker, who seems to have had a talent for jumping at conclusions, pitched upon his promising clerk as the author, the consequence being that Mr. Armstrong had a remarkably unpleasant time of it, and nearly lost his partnership. As has been hinted, he was morally convinced of the true state of the case, but refused to take any steps towards clearing his own good name out of consideration for that of Cecilia. Fortunately for him, and for the cause of poetic justice, Dolly Lorraine, between whom and himself a secret attachment existed, was by no means content that her lover should sit down with infamy and set herself to ferret out the truth, which she did in a singularly ingenious manner. But we shall not forestall the reader's pleasure by revealing the nature of her stratagem. Dolly was the granddaughter of an impoverished peer, at whose death she would be actually homeless; under which circumstances one fails to see why Humphrey—an acknowledged gentleman, in spite of the mystery about his family—need have hesitated in offering her even the modest position which he could afford to give her. Of course, all comes right at last, though in a rather conventional way. The mystery is cleared up, the question of ways and means is satisfactorily settled, and the lovers are dismissed to rank and affluence.

We have not read lately a more enjoyable novel of incident than *Seventy times Seven*. It is such a treat when an author has the wit to construct an effective plot and to work it out simply, without worrying the reader with immaterial side-issues and jejune reflections; and that is what Mrs. Sergeant has done as touching the life history of Magdalen Lingard and Max Brendon, around whose figures the main action centres. The heroine is a fine and striking figure, from the opening scene of her interrupted wedding, through all her chequered existence, down to the time when happiness at last falls to her lot. The opening referred to is telling in every way, when Louisa Mackworth confronts the bridegroom with his deserted children, and prepares us for some strong situations as the story progresses. Nor is expectation disappointed. Nothing could be better of its kind than the scene in which the dying girl reconciles Cecil and Lenore; excellent, too, is Max's encounter with Philip Esher at the Priory; so is the latter's interview with his mad wife, and his tragical end. We must remark that, although Capt. Esher was no doubt a villain of the deepest dye, our sympathies are entirely on his side in the matter of the Brendon law suit. Chemical works are, no doubt, useful things in their way, however objectionable to sight and smell; but no rational being could expect a man tamely to submit to having all the timber in his park killed by the noxious fumes—and not even in the interests of science, but merely

of money-grubbing! Another good episode is Ruby's discovery of Jim Lloyd as a blind basket-maker at Bournemouth. It is not stated how he became blind, any more than how people knew that Esher was drowned, since his body is stated to have been carried out to sea and never recovered; but these are trifles in so really excellent a story. We are not sure that we care greatly for Max. Doubtless he was a most worthy man, but it strikes us that he would have been rather dull company for a lifetime. It is possible, however, that Magdalen, with all her virtues, would not have proved exciting, so perhaps they were happily mated. The sketch of the Brendon household is good, and altogether the novel is one which we can heartily recommend.

There can be no doubt that Mrs. Pender Cudlip holds liberal views as to social position, unless we are to understand that all the nuptial arrangements at the end of the book are to be taken as illustrating the title. It is not so much that Marcus Gwynn, with a touch of "the pride that apes humility," described himself as a linendraper—because he was of gentle blood by the mother's side, and had never had anything to do with the active part of the business; but Charlie Salter's marriage is more than unlikely—for one thing, his mother would have been certain to disapprove entirely of the bride whom he selected, and who must indeed have been totally unfitted for a farmer's wife. Again, we feel that Constance Brymer was far too ready to accept the supposed fact of her lover's guilt on the mere unsupported testimony of Conway—a man whom she both despised and distrusted. We think that so energetic a young lady would have raised the question: how came the calumniator in her boudoir at dead of night any more than his victim; for his excuse would not have held water for a single moment with so clever a woman, all her mental energies stimulated by the power of love. Probably the incident was suggested by Wilkie Collins's *Moonstone*; but the cases are not parallel, because Rachel Verinder saw Franklin Blake steal the diamond, and could not judge otherwise than she did in her ignorance of the facts of the case. That on such slight evidence Constance could consent to a marriage with the man who was her special abhorrence is past belief. But Miss Brymer seems to have been rather dull of understanding, else how could she mistake the drift of her husband's half-confession during the storm off the Isle of May? We seem to have been finding fault all through, but it is not so. If we censure what seem to us blemishes in Mrs. Pender Cudlip's story, it is only on the ancient principle that the noblest animals were chosen for sacrifice. We might have contemptuously spared a lesser writer, but must admonish the author of *Eyre of Blendon*. And, indeed, the book is not one to lay down until you have finished it. The story is interesting and sympathetic, the plot well worked out, and all the characters living, breathing human beings. Marcus Gwynn, in spite of the plebeian strain, is as fine a gentleman as any in modern fiction; Constance is a noble creature; the impetuous Hawke family are described with plenty of humour, and no exaggeration; while last, but hardly least, Conway and Laura Payne, the villains

of the piece, have escaped the danger of being melodramatic. We have enjoyed the book greatly, but wish the author would remember that to say anybody "*gentled* considerably" when she means "grew much more gentle" may be Yankee, but is certainly not English.

When we state that the "more excellent way" advocated by the lady who has not been ashamed to affix her name to her very dreary and uninteresting story, is to turn Atheist, Socialist, and to uphold, practically, the South Audley-street riots, it may be thought that there can be nothing more to be said about this deplorable production. But there is something more to be said, and it has to be said in the interests of amiable enthusiasts who may be led away by what they and Miss Howell imagine to be argument; whereas, as a matter of fact, there is not a tittle of argument throughout the book. It is one vast *petitio principii*. The author says that Socialism or Atheism, as the case may be, does or will do this, that, and the other; but she never attempts to prove her assertions—which was, perhaps, wise. Were the book not so dull, we might speak more strongly; but a writer must be read in order to have any influence. As a sample of the wild statements which form the staple of the matter we may quote one passage *à propos* of the unhappy hero, Otho Hathaway, and his mother's death: "He had sorrowed, not as a Christian, but as an Atheist; and thus this great grief of his life was simplified, and its cure was healthy."

We must confess to being disappointed in *Sheikh Hassan*, because, after a good deal of laborious preparation, the author tells us nothing of any moment. His experiences in the desert with devils, snakes, and other "fearful wild fowl" really prove nothing. We have his word for it that they are true, and this must of course be accepted; but, granting the fact, in what possible way is the cause of supernaturalism advanced by it, always supposing it to need advancement? Here we are told that Mr. Hillam, then residing near Damascus, tried by all means to obtain an insight into the mysterious *Rohanes* power; but we cannot find that he ever gained it, and had he done so it would seem that he could not have communicated his knowledge to anybody else, so where on earth is the good of it all? We think that the author is throwing himself away, and might write a really good story, for the tragic episode of Hassan and Rasheedeh is excellent, and he has considerable descriptive power. But he would do well to amend his English, which is often inelegant.

It is an undeniable fact that Miss Christina Compton—usually known as Chris—was decidedly unconventional. It is equally undeniable that she was decidedly charming. We are first introduced to her in the slightly undignified attitude of sitting on the garden wall of her father's villa at Cannes, interviewing the passers by in a scene replete with quiet humour. To her enter, among others, a certain handsome young *roturier*, Valentine Richardson by name, to whom her father has a strong objection, but who is destined to exercise considerable influence over her future life. As a matter of fact the young man has nothing but his good looks,

and his superficial veneer of society manners, to recommend him. He is vulgar, penniless, and a gambler; and one wonders how even so unsophisticated a girl as Chris can have been taken in by such a fellow, or ignored his constant offences against *les convenances*. As regards the carnival episode, Lady Barnstaple would, of course, in real life quickly have caused him to leave her room. However, Mr. Compton dies suddenly; and while the girl's heart is sore for sympathy, Richardson entraps her into a sort of provisional engagement on the eve of her departure for London. There she is to board with her maternal aunt, in the neighbourhood of Primrose Hill—which, by the by, is hardly the howling wilderness that Mr. Norris makes out. But Aunt Rebecca proves to be a miserly old hag, who makes the poor girl's life so miserable that affairs culminate in her running away with the intention of finding her way to some old French friends, the Lavernes, at Cannes. Here revelation must cease, for the story is far too good to spoil by anticipation of the interest. The book contains almost a superfluity of well-drawn characters, and one or two striking scenes. The heroine herself, Lady Barnstaple, Ellacombe, Gerald, and even Valentine, interest us; and it is really thrilling when Chris encounters the burglar with her Spanish knife. On the whole, the story, though not one of Mr. Norris's best, is very far from being unworthy of his reputation.

Ruthven of Ruthven—as we understand we are to call it—is a rather slight but clever story, to which might have been appended the motto of Chaucer's Prioress, viz.: *Amor vincit omnia*. An old county family are dispossessed of their property by the scion of an elder branch who hails from America. Naturally they are not delighted; and Daphne, the sister, is specially bitter against the man whom they designate as a "Yankee upstart," whereas he was nothing of the sort. Need we say that all rights itself in the end? There is some good, and even powerful work, in this little volume—witness the scene of Jim Trent and Rafe (why is his name spelt phonetically?) and Ruthven's encounter with the old maniac. The novelette is well worth reading.

B. MONTGOMERIE RANKING.

SOME CLASSICAL BOOKS.

The History of the Achaean League, as contained in the Remains of Polybius. Edited, with Introduction and Notes, by W. W. Capes. (Macmillan.) "A conspiracy of Messrs. Capes and Mahaffy against the character of poor old Aratus" will be the comment of readers who come fresh from Mr. Mahaffy's recent writings to Mr. Capes's extracts from Polybius. It is impossible to deny that Aratus's conduct when exposed in the merciless commentary of Mr. Capes looks extremely bad. Not only did he undo his life's work, and "set the foot of a Macedonian master on his neck"; but, as we trace him through one intrigue after another, we find it hard to say whether his objects are meaner or his methods more unscrupulous. His shirking of responsibility when he "transferred to others the odium of the first overtures to Antigonus," and got Timoxenos elected general for the year instead of himself, was, as Mr. Capes says, characteristic of him. He could more boldly face the gardener's dogs at Sikyon than an angry assembly or a triumphant

rival. He outlived the best days of the league which owed so much to him, and he had himself to thank for the worse days. It was a happy thought to select from the fragments of Polybius the passages which deal with a topic interesting in itself, and possessing a unity of its own. Mr. Capes's wide knowledge of history and scholarship mark him out as the very man to undertake the task of popularising and explaining an author not very familiar in England to junior readers; and here and there we come in his commentary on little picturesque touches which show the traveller in Greece. But we doubt whether even his combination of advantages will make it possible for Polybius to become a schoolbook. Greek is generally read at schools now with a view to making Atticists of the boys, and a course of Polybius would be far from leading to such a result. From the schoolmaster's point of view, the Greek language is spoiled under the pen of Polybius. Yet it is wonderfully revived or rejuvenated into a tongue, if ugly, yet fresh and living. It reminds one of the newspapers of modern Athens, but it is full of technical terms and new compounds which betray the observer, the statesman, and the precise thinker. An historical writer of this calibre requires a historical commentary; but Mr. Capes's historical and geographical notes, valuable as they are, perhaps rather outweigh the notes on the language. The notes ii. 44, v. 52, iv. 30, have somehow fallen into disorder. Reference would be made easier if the book were prefaced with a list of the selections. In xxii. 10, Mr. Capes will find that it was Eumenes, not Ptolemy, who offered pay for the Achaean Senate: the offer of Ptolemy (xxiv. 6) was different.

Society in Rome under the Caesars. By W. R. Inge. (Murray.) A book in which the somewhat bulky German *Darstellungen* of Friedländer should be popularised for English readers ought to prove widely acceptable. It might be to this generation of schoolboys what Becker's *Gallus* was to their predecessors. It would serve to put heart and life into their reading, to connect their fragments of information, and make them realise that the Romans were a living people. Something of the kind must be studied to supply the local colouring for the Latin authors. It should not be too long; and a well-contrived summary of Friedländer would be more attractive, and, therefore, more useful, than a dictionary of antiquities, or even a large work such as that of Guhl and Köner. Unfortunately Mr. Inge, though he has turned the *Darstellungen* to good account, seems to have written and printed his essay in too great a hurry. There are more misprints than there should be, and many other slips. P. 14 confuses an *augur* with a *haruspex* in quoting Cato's jest, although Cicero, our authority for the story, tells it expressly of *haruspices* (*De Div.* 2.24.) The child whom Quintillian mentions as punished for cruelty to birds was punished at Athens, not at Rome; and his fate throws no light on the character of the Roman people. Horace was not a Roman knight, as p. 139 implies. Trimalchio in Petronius (c. 71) is not directing that no philosopher is to approach him in his last illness, but is boasting that he never attended any philosopher's lectures. If Mr. Inge will work over his essay, correct the oversights, and let his work grow naturally in successive editions, we shall be able to recommend it as an excellent prize or volume for the school library.

Roman Literature in Relation to Roman Art. By R. Burn. (Macmillan.) This is a curious book for the author of *Rome and the Campagna* to have published. On the one hand, its suggestions about the history of art and literature are sound and valuable.

"To trace some of the erroneous tendencies of

Roman literary and glyptic art, and to show how they had their origin in the national character and circumstances of the Romans, is the endeavour of these essays."

National characteristics, imperial sway, exorbitant wealth, and luxurious refinement set up in Roman or Graeco-Roman art a series of changes for the worse, which ran closely parallel in the various lines of literature, sculpture, and architecture.

"In Ovid's adherence to strict rule, and in the vagueness of Statius we see the incipient stages of imperial influence, which finally ruined Latin poetry; and in the sculpture of their busts, and in the arch of Severus, we see the same influence degrading sculpture."

A taste for finish and detailed symmetry outweighed grandeur and large idealism. Beauty of ideal motive was neglected in sculpture; excessive adherence to rule crippled power of expression in poetry; and in architecture, though new structural forms were discovered, the genius to imagine and the power to adapt new ornamental additions in harmony to them was wanting. The useless half-columns and capitals of the Colosseum, and the composite capital, which (as Hope said) "gave evidence of poverty to invent and ignorance to combine," sufficiently show the level of Roman taste in ornamental architecture. But the execution of Mr. Burn's book is not equal to the excellence of its design. On pages 7, 58, 97, 198, 245, 288, 300, the printing or the punctuation of Latin or Greek quotations is remarkable. At p. 309, verses of Martial are printed as prose. Lampridius is converted into one Lampréd, apparently a Frenchman; and there are some translations which really make the reader feel quite uncomfortable. Is "gently proceed in hope" (p. 21) meant for a translation of the "Leniter adrepe in spem" of Horace? A word now about the numerous illustrations. They are from photographs, and they are very good. We looked long at the stumpy picture of Claudius's statue, unwilling to believe it could be fair to a man who, Suetonius tells us, was *prolixo corpore*; but, after comparing it with an actual photograph, we came to the conclusion that it must be the statue which is in fault. It would be well for the publishers to add a list of the places where the smaller works of art are to be seen, and, perhaps, even of their approximate dates. One hardly knows, without some such help, what to think of the undersized and barbarous-looking figures in the "Scene in Forum." The whole book requires an index.

Lucian's Dialogues. Translated with Notes and Preliminary Memoir, by H. Williams. Bohn's Classical Library. (Bell.) Many years have passed since the last English translation of Lucian came out—that of Tooke (1820). It was not very faithful; and we welcome the appearance of an instalment of a new version, which, if not so elegant as the brilliant imitation of Lucian in *Letters to Dead Authors*, seems very tolerably correct. It is too much to say that *Lucian's Dialogues* were written when "that consummate skill in the management of the marvellous Attic dialect had been attained which rivals the style of the best masters," for unmisplaced and oddly used prepositions are nearly as common in the *Dialogues* as elsewhere in Lucian. It is sometimes a little hard to bring Mr. Williams to book, and see exactly how he construes a passage, owing to a certain looseness of his style. For instance, in the *Dial. Mort.* 12. 6, Alexander the Great is made to say that Italy and the West seemed to him "not worth fighting for, being already cowed and acknowledging a master." What master? Probably Lucian is referring to the story of an embassy from Rome to Alexander, and if so, we might translate "acknowledging me as

a master." Perhaps too, Mr. Williams has not fully grasped the force of the preposition in *ἐν τῇ ἀποδείξει* (*Dial. Mort.* 7.1), when he renders "depart this life for my special benefit." His version is obscure, but the real meaning is no doubt "making me his heir." But, looking at the translation as a whole, we shall be glad to hear that Mr. Williams is at work on a further instalment of the wit of a Greek (or Greekling) whose wit will bear translation.

Chronological Tables: a Synchronistic Arrangement of the Events of Ancient History. By A. C. Jennings. (Macmillan.) Why will the compilers of tables of this kind obstinately bring ancient history to an end with the birth of Christ? It may be difficult to say when it did end. It may even be maintained that no line of division at all should be drawn between ancient and modern history; but it is certain that the birth of Christ does not synchronise with any event in profane history capable of marking a line of division. Nevertheless, so far as Mr. Jennings has seen fit to carry his tables, he has performed his task carefully and lucidly. It is a good arrangement, which enables one to see at a glance what events in Palestine or the Eastern monarchies were contemporary with events in Greece or Italy. The attempt at compression disfigures the pages with some awkward abbreviations. "T S Gracchus jun tribune," has a barbarous look. Is it true too that Opimius was "made dictator" in 121?

Handbuch der Griechischen Chronologie. Von A. Schmidt. Nach des Verfassers Tode herausgegeben von F. Rühl. (Jena, Fischer.) These valuable studies, which the author originally undertook for the third volume of his well-known *Perikleische Zeitalter*, grew on his hands, compelling him to look back to the earlier history and forward to the later history, even to the Julian reforms and their effects on the Attic calendar. He was thus led on to embrace the whole subject of Greek chronology in an essay whose value to scholars and historians will be enormous. Its first-fruits may be seen in the long list of passages from Greek authors corrected or explained. A work of this kind, however, which goes down to the very foundations of Greek history, will produce its full results slowly, but for a long time. Ideler's handbook has done good service; but its day is past, and the time was come for a new survey and organisation of the facts. In 1884, A. Schmidt published separately a part of his researches, the *Chronologische Fragmente*, and some other essays later; but his death in April, 1887, left the work unfinished. Prof. Rühl has treated with becoming piety the literary remains of his friend, and given Schmidt's papers to the world substantially as he found them—incomplete, of course, but not incoherent or fragmentary. Perhaps the most interesting section is that in which Prof. Schmidt examines Greek chronology before Solon. We have here the interest imparted by contact with religious facts; for, whereas later changes of religious periods or other calendar-arrangements were more and more inspired by motives which we may call secular, the earlier were prompted by the rise and fall of special cults. "Die Entwicklungen der Zeitrechnung, des Kultus und der Kultur gingen auf altellenischem Boden Hand in Hand." Hence the close connexion between such legends as those of Niobe, Endymion, or the Danaids with the regulation of the months and years. It is not without a meaning that the Attic tale of Theseus sent the tribute to Krete every eight years. This is an early trace of the eight-year period of the Apollo-worship. And here comes out one of the difficulties of the inquiry: it is so hard to find any system carried out in its integrity unmixed. Even Homer's calendar is

more or less mixed. Its really considerable development proves that it is not primitive; and, whereas its general plan provides for a lunar year, many signs show through of a knowledge of a four-year period (*tetractis* or *penteteris*).

H. Kiepert: Manuel de Géographie Ancienne. Traduit par E. Ernauld. (Paris: Vieweg.) "Quæ regio in terris nostri non plena laboris" might be taken as the motto for Kiepert's geographical works, of one of which (the *Leitfaden der alten Geographie*) M. Ernauld has published a French translation. The *Manuel* travels over the world known to the Greeks and Romans, dealing in succession with the soil and physical features of each country, the origin of its name or names, its population and language, its history and political arrangements. The accounts are necessarily very brief, but a great quantity of matter is compressed into them, and the *Manuel* will be found an excellent book of reference. It may be said that it requires a good deal of historical knowledge to understand it thoroughly; but, at the same time, the use of it will impart a good deal of historical knowledge. It is curious to notice, in glancing over the fortunes of each part of the world, how much more thorough have been the conquests, how much more sweeping and effective the immigrations, since Roman civilisation opened up the land by roads. Little is said of the influence of physical geography upon history, and the topography of Athens is meagrely dealt with. But that of Rome is full enough, and the account of Gaul has (very properly for French readers) been enlarged and remodelled by M. Aug. Longnon, who takes as the basis of his account, not the *Leitfaden*, but the fuller corresponding chapter in Kiepert's *Lehrbuch der alten Geographie*. The other sections, too, of the *Manuel* can be strongly recommended as compressed but valuable surveys of the ancient world.

Die Römische Bürgerschaft in ihrem Verhältnis zum Heere. Von Th. Steinwender; Programm des Königlichen Gymnasiums zu Danzig. (Danzig: A. Müller.) Herr Steinwender, who has decidedly a head for figures, works hard to show that the regular levy of troops at Rome, until about the middle of the second century B.C., and, therefore, probably till Marius's organisation, was ten per cent. of the adult male citizens. This percentage was of course increased on necessity, and it falls into line with the gods receiving one tenth of booty, and with the punishment of a military force by decimation. But the reading of many theories of a like sort has taught us that each in turn looks plausible and flourishes, but "the third day comes a frost—a killing frost," a new *Programm*, and the old one is cut down to the ground.

NOTES AND NEWS.

It has been proposed to organise a Pope festival at Twickenham to celebrate the two hundredth anniversary of the poet's birth. A leading feature of the celebration will probably be an exhibition of pictures and engravings of Old Twickenham and of Pope and his neighbours, as well as of Popean editions and curiosities.

SIR RICHARD BURTON writes to us as follows:

"My friend M. Hermann Zotenberg authorises me to state, in reference to my last note (ACADEMY, February 4, 1888), that not only will he allow any competent English Orientalist to translate the *Histoire d'Alâ al-Din*, including the valuable notes on the origin of the Gallandian fables, but he is also prepared to supply 'un chapitre sur le développement et l'histoire du texte en prenant pour base le manuscrit de Galland, qui paraît

représenter la plus ancienne forme du teezâr-afârê que nous possédons."

It is to be hoped, for the honour of Oriental letters in England, that the public-spirited offer will meet with due appreciation.

MESSRS. MACMILLAN announce a new work by Prof. Henry Sidgwick, entitled *The Elements of Politics*, which will be a companion volume to those in which he has already discussed the principles of ethics and of political economy.

MESSRS. KEGAN PAUL, TRENCH, & Co. will publish immediately the *Letters and Memorials* of Archbishop Trench, edited by the author of the *Life of Charles Lowder*.

ANOTHER forthcoming biography of interest is that of the late General Sir Charles Macgregor, for many years quartermaster-general in India. It has been compiled from his letters and diaries by his widow, and will be published by Messrs. Blackwood. It will be in two volumes, with portraits and several maps illustrating his campaigns and also his military surveys in Central Asia.

MESSRS. T. AND T. CLARK announce a translation of Kant's *Principles of Politics*, with an Introduction by W. Hastie, the translator of Kant's "Philosophy of Law," &c. The work will contain the celebrated essay on Perpetual Peace and the Principle of Federation, and will give a complete view of Kant's political philosophy—a side of his system which has been generally neglected by his German as well as by his English expounders.

A WANT long felt is about to be supplied by the publication of a cheap edition of the *Select Poems* of Charles Mackay, author of *Verses from the Crowd*, *A Man's Heart*, *Egeria*, and of the popular songs, "There's a good time coming," "Cheer boys, cheer," and others well known to the last generation—many of which have become household words, both at home and in the Greater Britain beyond the sea. The volume will also contain a critical essay by the late George Combe.

MR. C. H. FIRTH, of Balliol College, Oxford, late professor of history at the Firth College, Sheffield, has nearly ready for issue an edition of Dr. Johnson's *Life of Milton*. The work will be published this month by the Clarendon Press.

MR. ALEXANDER GARDNER, of Paisley, has acquired the right to publish an English translation of the works of the Italian novelist, Salvatore Farina. The first of these, *Signor I*, translated by the Baroness Langenau, will appear immediately.

MR. WYKE BAYLISS has a new volume in the press. It is entitled *The Enchanted Island, and other Studies in Art*, and will be published by Messrs. W. H. Allen & Co.

MISS VEITCH, author of "James Hepburn" and "Angus Graeme," has in the press a new novel, entitled *The Dean's Daughter*. It will be published by Mr. Alexander Gardner.

MR. PERCY RUSSELL, whose New Guinea romance, "The Treasure Tree," recently appeared in the *Hull News*, has just completed a story, entitled "A Sister's Crime," which will shortly appear in the same journal.

THE *Illustrated Naval and Military Magazine* for June will contain an article on the Sikkim Expedition, with illustrations by Capt. H. C. Willy, Derbyshire Regiment, one of the officers engaged with the force.

A NEW serial story, entitled "The Youngest Miss Dallas," by John Strange Winter, will be commenced in No. 246 of *Cassell's Saturday Journal*, to be published on June 13.

MESSRS. WHITTAKER & Co. will publish next week a second edition of Mr. Leland's *Practical Education*. A German translation of this work, by C. Werner, Inspector of Government Schools in Austria, will shortly appear at Vienna.

A SECOND and revised edition of Mr. Phillimore's *How to Write the History of a Family* is announced by Mr. Elliot Stock for immediate publication.

MR. J. B. CROZIER'S *Civilisation and Progress*, which was reviewed in the ACADEMY on its publication, has been issued by Messrs. Longmans in a second and cheaper edition.

A BRIEF *Handbook to Rugby and its Schools*, giving full details as to its special educational advantages, has just been published by Mr. George E. Over of that town.

MR. LAURENCE KEHOE, President of the Catholic Publication Society of New York, has arrived in London to make arrangements for the coming season, and will visit the principal publishers in France and Germany before returning to America.

THE annual meeting of the Victoria Institute will be held on Monday next, June 4, at 8 p.m., in the house of the Society of Arts, when Sir Monier Monier Williams, Boden professor of Sanskrit at Oxford, will deliver an address upon "Mystical Buddhism in connexion with the Yoga System of Philosophy."

PROF. C. E. TURNER, of St. Petersburg, will this day (Saturday, June 2) begin a course of three lectures at the Royal Institution on "Count Tolstoi as Novelist and Thinker." Prof. Dewar will give a discourse on "Phosphorescence and Ozone" at the last Friday evening meeting of the season on June 8.

ON Tuesday next, May 5, Messrs. Christie will offer for sale a very large and valuable collection of autograph letters of Dr. Samuel Johnson and his contemporaries, including David Garrick, James Boswell, Edmund Burke, Mrs. Piozzi, Mrs. Siddons, Robert Bloomfield, Mrs. Abingdon, Joseph Baretti, Angelina Catalani, Charles Kemble, Macready, "Kitty" Clive, Charles Dibdin, and Maria Foote. There are no less than thirty-one letters by Dr. Johnson himself, besides numerous portraits, prints, and drawings illustrative of his life. The Piozzi letters comprise the entire correspondence with Sir James Fellowes, published in Hayward's *Life of Mrs. Piozzi*.

ON Friday of next week Messrs. Sotheby begin the sale of the library of the late A. J. B. Beresford-Hope, which will last, altogether, for seven days. As might be expected, the collection is particularly rich in liturgical works, both printed and in MS. There are also many rare books dealing with theology and architecture; a set of the publications of the Roxburghe and the Philobiblon Clubs, &c.

UNIVERSITY JOTTINGS.

AT the Oxford commemoration, to be held on Wednesday, June 20, the honorary degree of D.C.L. will be conferred upon (among others) Dr. James Martineau, Prof. Prestwich, Mr. W. E. H. Lecky, and Signor Ruggiero Bonghi, the well-known Roman man of letters, and, at one time, minister of public instruction.

AT Cambridge, a long list (chiefly of politicians) has been selected for the honorary degree of LL.D., to be conferred on June 9. Among the names, however, are those of Lord Acton and Prof. G. G. Stokes. It is proposed to confer also the honorary degree of D.Sc. upon Prof. Stokes; as well as upon Lord Rayleigh, Sir Frederick Abel (the Rede lec-

turer for the year), Prof. Cayley, and Prof. Adams.

MR. BENSLEY, the Lord Almoner's professor of Arabic at Cambridge, will deliver a public lecture on Tuesday next, June 5, upon "The Beginning of Arabic Studies in England."

MR. F. T. PALGRAVE, professor of poetry at Oxford, delivered a lecture on Thursday of this week upon "Chaucer and his Contemporaries in England and Italy," as part of his course dealing generally with the renaissance movement in English poetry.

CONVOCAION at Oxford has sanctioned a grant of books printed at the Clarendon Press to the value of £50 to the People's Palace in East London; as well as similar grants of smaller value to the Working Men's College, and to ten free public libraries.

THE hon. degree of M.A. has been conferred at Oxford upon Dr. Sydney Hickson, of Cambridge, who has for some time past been acting as deputy professor of anatomy, during the absence through illness of Prof. Moseley; and also upon Prof. Wyndham Dunstan, of the Pharmaceutical Society, who has recently been appointed to lecture on materia medica.

MESSRS. MACMILLAN & BOWES, of Cambridge, will issue this week to subscribers, in an edition limited to 120 copies, a *Bibliography of the Works of Sir Isaac Newton*, together with a List of Books illustrating his Life and Works, compiled by Mr. C. J. Gray.

M. TERRIEN DE LACOUPERIE, professor of Indo-Chinese philology at University College, London, will deliver a course of two lectures there on Fridays, June 6 and June 13, at 4 p.m., upon "The Ideology of Languages in connexion with the History of Eastern Asia."

THE last issue of *Bibliographical Contributions*, issued by Harvard University, being number 30, consists of a facsimile of a holograph copy of Shelley's ode "To a Skylark," recently presented to the college library. It comes from a thin quarto volume containing a number of Shelley's poems, mostly in the handwriting of Shelley himself or of his wife, which was bought a few years ago from a lady at Florence who had been of Shelley's acquaintance. Unfortunately, several of the leaves have been, at some time, cut out; but among the other poems in Shelley's handwriting are "The Sensitive Plant" and "The Indian Serenade." This version of the ode "To a Skylark" shows some variations from the usual printed copies, e.g., in the last line of the second stanza, which reads:

"Like an embodied joy whose race is just begun."

OBITUARY.

WE regret to record the death of Mr. John Snodgrass, who won for himself a high reputation as the most successful translator into English of Heine's prose. His *Heine's Wit, Wisdom, and Pathos*, first published by Messrs. Trübner in 1879, appeared in a new edition, considerably revised, a few months ago. His only other book that we know of was *Heine's Religion and Philosophy in Germany* (Trübner, 1882), for the translation of which he had carefully compared the French and German versions of the original. He contributed to the ACADEMY of September 6, 1884, a translation of an interesting letter from Heine to Wilhelm Müller, the poet of *The Songs of Greece*, and the father of our own Oxford professor. Mr. Snodgrass died at Paisley, where he was engaged in mercantile pursuits. He was only 38 years of age.

ORIGINAL VERSE.

Kómpis ἡ Ίμερος.

WHAT are these shadows from the sky
That move about us as we lie
Here by the brimming sluice that leads
Sweet water through the watermeads?
'Tis but the image of some bird—
Another, and again a third—
That sails across the quiet blue
Enjoying life as we may do.
Cloudless the heaven is near and far,
And lucid as the waters are;
Sunshine is o'er us and around,
Upon the trees, upon the ground;
And sunny bubbles dance and quiver
Along the sluice, along the river;
And rainbowlike the sunlit spray
Rises and floats and drifts away
Above the rolling waterwheel.
Ah, who in such a time could feel
Less bright, less pure, less calm and still
Than you fair pool beyond the mill,
Where never weed nor flake of foam
Hath leave to make itself a home
Or even seek a resting-place?
Yea truly—on the placid face
Of that clear pool a summer sky
Reflects its own benignity:
But in the pool's dark depths (you know)
In gloomy hollows far below
The crumbling edges of the dyke
Dwells that inexorable pike,
The terror of our upland stream;
Whom roach and barbel, dace and bream,
Abide not, but forsake in fear
A spot to us and them so dear.

We too, in spite of outward ease,
Have our own secret enemies
Who from within can drive away
All timid thoughts that fain would stay
And occupy with milder art
The stillness of a vacant heart
We too have shadows of the brain
Flung by some passing joy or pain
'That is but near to nothingness,
And yet hath substance form and stress
Enough to cast a varying shade
On whatsoever may be laid
Beneath it as the shadow moves.

'Tis Aphrodite with her doves:
'Tis Aphrodite in the air—
'Tis Aphrodite everywhere.

M.

MAGAZINES AND REVIEWS.

THE *Expositor*, in its May and June numbers, is chiefly remarkable for two articles by Dr. O. H. H. Wright on the pre-Christian Jewish interpretation of Isa. lii., liii. The first article is, perhaps, the more valuable; the second is somewhat marred by a strong homiletical element. We could have wished a more definite statement of Dr. G. H. Dalman's conclusions in his *Der leidende und der sterbende Messias der Synagoge*, as these are likely to have a material effect on the Christian-Jewish controversy, the author being a singularly open-minded orthodox Christian scholar. The few lines on the double Messiah in p. 402 seem insufficient. Dr. Wright might well have borrowed a few more "suggestions" from a work which he so highly commends. On pp. 411, 418 the traditional Christian interpretation of Isa. liii. 9 is maintained, but not very confidently. Among the other articles we may mention that of Prof. Stokes on the latest discoveries among the Fayûm MSS. (it seems from p. 457 that the writer's Prayer-Book differs from that in common use). The chief discovery mentioned is that of a small but important fragment of a third-century liturgy.

THE interest of the *Boletín* of the Real Academia de la Historia for April is chiefly geographical and bibliographical. Fernandez Duro describes three sets of early maps lately discovered—that of Angelino Duceri of

Majorca, 1339; the nautical maps of Jacobo Russo of Messina in the sixteenth century; and the maps of the world of Diego Ribero of Seville, about 1529. F. Codera reports on the Arabic coins presented to the Academy by C. Pujol, discovered among the old coins recently called in by the Spanish Mint. Francisco Danvila has a lively sketch of the history of the *chapines* or sandals, the Latin *fulmenta*, which continued in Spain down to the last century. The clause of the will of the late Marquis de San Roman, bequeathing his library of 8000 volumes and 400 autographs to the academy, is here printed. The chief treasure among the books is "Ptolomeus Claudius Alexandrinus Philosophus, *Cosmographia*," 1478 folio, with the autograph of Columbus. Among the autographs are the only existing letter of Cervantes, and the memorial of Columbus to the Catholic kings, the latter part of which is written with his own hand.

CORRESPONDENCE.

THE ORIGIN OF THE UNIVERSITY OF OXFORD IN 1167.

University College, Durham, May 23, 1888.

The origin of the University of Oxford is one of the most obscure problems of academical history. Until recently it has been quietly and most uncritically assumed that the university in some way grew out of the schools of Oseney or S. Frideswide's. The objections to this view are threefold: (1) There is no trace of the existence of any such schools. Purely conventual schools were, no doubt, attached to these monasteries; but there is not the slightest reason to believe that they were attended by other than monastic students, or that they possessed even a local reputation. (2) It would be contrary to all analogy to suppose that the university grew out of monastic schools. Universities were essentially secular schools. There is not a single instance on record of a university having spontaneously developed out of a monastic school. (3) When the university did come into existence, its schools exhibit not the smallest connexion, either constitutional or local, with S. Frideswide's, or any other conventual church. They are situated in the immediate neighbourhood of S. Mary's, which was a mere parish church, and (from 1214) are placed under the government of a chancellor, who, unlike all other chancellors in Europe (except at Montpellier) was in no way connected with any collegiate or cathedral church (*Mun. Acad.*, ed. Anstey, p. 2 seq.).

In the twelfth century there were no secular schools of higher education in Europe except in connexion with cathedral or (occasionally) large collegiate churches. Hence it becomes clear that the university—or the schools in connexion with which the university arose—cannot have arisen by spontaneous development, but must have been due to some movement *ab extra*. To any one familiar with the *origines* of the early Italian universities the facts above mentioned are, or ought to be, almost as conclusive evidence that the university arose out of a *scholastic migration* as if the fact were recorded by half-a-dozen contemporary chroniclers. In almost every case in which a *studium generale* arose by spontaneous development, its origin (when discoverable) may be traced to the migration of one or more famous masters, or of a body of scholars, from one of the two great archtypal universities, Paris and Bologna, or from schools derived themselves from Paris or Bologna. Thus the schools of Modena arose by the secession of Pillius in or before 1182.* Vicenza arose from the migration of scholars from the same city in 1204.† The origin of Padua is traditionally ascribed to a secession provoked by a quarrel between town and gown at Bologna in 1222.‡ In 1228 the scholars of Padua, having quarrelled as usual with the municipality, entered into a contract for a migration to Vercelli, by which the city was to place 600 houses at the disposal of the university.§ Even in later times, when universities were founded by papal or imperial bull, migrations of this kind, temporary or permanent, were of frequent occurrence. The one Portuguese university was twice transferred from Lisbon to Coimbra, and twice brought back to Lisbon between 1308 and 1380.|| But the most celebrated instance of such a migration was the great exodus of the Germans from

Prague, when 2,000 students are said to have left in one day, the whole number of secessionists being given as 5,000.* Of these, a body of forty masters and some 400 bachelors and students repaired to Leipzig, where a university was established to receive them.† It was upon this extreme mobility that the power of the universities was originally based. A threat of secession in the hands of a poor but famous university often proved as powerful a diplomatic weapon as the sword of kings and the spiritual thunders of popes and prelates.

If the schools of Oxford originated in a migration of this character, it will hardly be disputed that, being at first chiefly Schools of Arts, they must have come from Paris. I had long felt convinced that the origin of the schools of Oxford was to be sought in some such migration, and have elsewhere given expression to that view, which (I am told) has met with little acceptance among the few students who seem to be interested in the problem. I had hardly thought that actual historical evidence of a migration from Paris of this kind would be forthcoming, because it seemed inconceivable that, had it existed, it should hitherto have escaped the notice of the historians of Oxford—even of so thorough and scholarly an investigator as Mr. Maxwell Lyte. In the *Materials for the History of Thomas Becket* (ed. Robertson, 1875-1885) I have, however, discovered the following facts, the bearing of which upon the question will hardly be questioned, even though they are not discoverable by reference to the word "Oxford" in the index.

(1) In 1167, John of Salisbury, in a letter to one Petrus Scriptor, incidentally notices as one of a combination of extraordinary events which had marked the current year, that "mercuriales adeo depressi sunt ut Francia, omnium mitissima et civilissima nationum, alienigenas scholares abegerit" (*Materials* VI., p. 236). The fact is mentioned as fulfilling a prophecy (*ib.* p. 235) that in this year "regum concilia mutabuntur, et in orbe crebescant bella, feruebit terra seditionibus, deprimentur mercuriales, sed in fine anni relevabuntur." Since one of the other fulfillments of prophecy was the retreat of Frederick I. from Rome, the date of the letter is certain. The way in which the event is recorded makes it clear that it must have been one of some magnitude. It cannot be proved that the "alienigenas scholares" comprised the English; but it is certain that by far the largest body of foreign scholars at Paris in 1166 must have been English, even if Henry's continental subjects were not included in the expulsion.

(2) At some period during the exile of Becket, Henry II., among other measures designed to get the clergy within his power, issued the following ordinance:

"(a) Nullus clericus, vel monachus [vel canonicus] vel conversus, vel alicujus conversationis permittatur transire vel redire in Angliam, nisi de transitu suo habeat litteras justitiae, et de reditu suo litteras domini regis. Siquis aliter inventus fuerit agens, capiatur et incarcerationetur (*ib.* VII., p. 148).

"(b) Ut omnes clerici qui reditus habent in Anglia sint summoniti per omnes comitatus, ut infra tres menses veniant in Angliam, sicut reditus suos diligunt, &c." (*ib.* 149.)"

These edicts are referred here and by Gervase of Canterbury (ed. Stubbs, i., p. 215) to 1169. In *Materials*, i., pp. 53, 54, and Hoveden (ed. Stubbs), i., pp. 231, 232, these constitutions are placed under the years 1165 and 1164 re-

spectively; but Bishop Stubbs and Canon Robertson (see notes on Hoveden and *Materials*, *ad loc.*) have given reasons for believing that the real date was 1169. There are slight variations in the different versions of the Ordinance.

No one will dispute that many Paris masters and scholars must have both possessed and loved "redditus" in England. Hence we have established a return of Parisian masters and scholars, circa 1169. Moreover, all communication with Paris was cut off for Parisian scholars passing a vacation in England or for intending freshmen, at a time when every year saw probably some hundreds of English scholars leave the shores of England for the French capital.

(3) If anyone doubts whether such an edict would really have affected scholars, he may turn to a letter of Abp. Thomas himself within the same year, when he complains that the king "vult etiam ut omnes scholares repatriare cogantur aut beneficiis suis priventur" (*ib.* VII. p. 146). The Becket letters are full of allusions to the strictness with which the ports were watched.

(4) John of Salisbury, writing to Magister Radulfus Niger, says:

"Unde et studiis tuis congratulor, quem agnosco ex signis perspicuis in urbe garula et ventosa (ut pace scholarium dictum sit), non tam inutilium argumentorum loca inquirere, quam virtutum" (*ib.* VI., p. 6).

There is no actual evidence that Master Black was resident in England; but that is the natural inference from the contents of this and ep. cccxvii. It is dated 1166 by Canon Robertson, but it is only certain that it is not earlier than Whit Sunday of that year. For long after 1166 there is no trace of such a university town as is here described anywhere in England but at Oxford.

If the Parisian scholars expelled in 1167 and recalled in 1169 did not go to Oxford, where did they go to? No one who knows anything of the habits of mediaeval scholars can doubt that they would have gone in a body somewhere or other, and established there schools exactly like those which they had left. Had they gone to a cathedral city, the chancellor or *Magister Scholarum* would have at once claimed jurisdiction over them. At Oxford there was no one special scholastic officer who could claim their obedience. Hence the independence of the Oxford masters till the appointment of the chancellor by the Bishop of Lincoln under legatine direction in 1214. This independence was, no doubt, fostered by the vacancy of the see of Lincoln at the time. I may, perhaps, add that Oxford would have been recommended as a place of study for royalist scholars by the fact that it was a royal borough, by its neighbourhood to the royal residences at Woodstock and Beaumont Palace, and by the circumstance that the Archdeacon of Oxford at the time was an intimate friend and partisan (and probably relative) of Foliot, Bishop of London, the most prominent of the royalist and anti-Becketian prelates (see *Materials*, VI., p. 607-8.)

It now remains for me to show that the account thus conjecturally given of the origin of the Oxford schools fits in with the other indications of their date. To do this, I must make it probable (1) that no schools out of which a university could have grown existed in Oxford prior to 1167; (2) that there is evidence for their existence very shortly afterwards.

I. The only evidence that has been produced for their existence prior to 1167, consists of two statements in the Chroniclers:

(a) The assertion of the Oseney chronicler that Robert Pulleyn taught theology in Oxford in 1133 (*Annales Monastici*, ed. Luard, vol. iv., p. 19), which is amplified in the anonymous Chronicle (Bodley MS. 712, f. 275.)

* As these facts are not in dispute, it is unnecessary to refer to the ultimate authorities. They may be found in Denifle, *Die Universitäten des Mittelalters*, i., p. 296.

† *Ibid.*, p. 298.

‡ *Ibid.*, p. 277.

§ *Ibid.*, p. 290.

|| *Ibid.*, p. 525, seq.

* Tonck, *Gesch. d. Prager Univ.*, p. 69; Hofer, *Mag. Joh. Hus. und der Abzug . . . aus Prag* 1409, p. 246.

† Stubel, *Urkundenbuch d. Univ. Leipzig ap. Cod. Dipl. Saxonica*, Pt. II., vol. xi., p. 1, seq.

(b) The account in *Gervase of Canterbury* of the teaching of the Civil Law by Vacarius, circa 1149 (Gerv. Cant., ed. Stubbs, vol. ii., p. 384).

Of these statements, the latter is demonstrably an error of Gervase, who is admitted to be not one of the most accurate of chroniclers. The teaching of Vacarius is alluded to by Robertus de Monte and by John of Salisbury, but Gervase alone places it at Oxford. John of Salisbury expressly states that Vacarius taught in Archbishop Theobald's household, of which the writer was at the time a member; and he distinctly implies that the teaching went on (no change of place being alluded to) till the lectures were stopped by order of King Stephen. Such is the obvious meaning of the words:

"Tempore regis Stephani a regno jussae sunt leges Romanas, quas in Britanniam domus venerabilis patris Theobaldi, Britanniarum primatis, asseverat. Ne quis etiam libros retineret, edicto regio prohibitum est, et Vacario nostro indictum silentium" (Polycraticus viii., c. 22, ed. Giles, xxx., p. 357; cf. Bp. Stubbs, *Lectures on Med. and Mod. Hist.*, pp. 130-1, 142 ff.).

This was long since pointed out by Schaarschmidt (*Johannes Saresberiensis*, p. 14. s'q.) The statement of the thirteenth century chronicler of Oseney cannot, indeed, be disproved, though he is here unsupported by Wykes; and the fact that he uses the form "Oxonia" shows that he could not have taken his statement unaltered from any contemporary authority. It is quite possible that Pullus did teach for a short time at Oxford; but, if so, he must have taught at Oseney or S. Frideswyde's; and, as we have shown, the one certain fact about the origin of the university is that it did not grow out of any monastic schools. In 1133, monastic schools were still resorted to by secular scholars. One of the most important educational changes of the twelfth century consisted in the supersession of the monasteries by the cathedrals as places of education for the secular clergy. The teaching of Pullus is an isolated incident in the history of Oxford. We get no further trace of schools at Oxford for a full generation. What are the chances against such schools having escaped notice for half-a-century in that age of chronicling and letter-writing?

I cannot help hazarding the conjecture that the statement of the Oseney chronicler arose from some confusion between Oxford and Exeter. It is significant that the anonymous continuator of Bede says that Pullus came to Oxford "de civitate exonia." The frequency of the confusion in MSS. between Exonia and Oxonia is well known.

II. The first undisputed and indisputable allusion to the schools of Oxford is constituted by the celebrated visit of Giraldus Cambrensis, circa 1185, when he read his *Topographia* to a numerous assembly of masters and scholars (*Gir. Camb.*, ed. Brewer, vol. i., p. 23).

This is (so far as I am aware) the earliest hitherto published allusion to schools of the kind out of which a university might have grown. Whatever may be thought of Puleyn, one master does not make a university, nor have we any evidence that any one attended Puleyn's lectures from a distance, or (for that matter) that anyone attended them at all. The following references testify to the existence of what would a little later have been called a *studium generale*, some years earlier than the visit of Giraldus:

(1) In the contemporary account of the miracle wrought at S. Frideswyde's shrine after the "translation" of the saint's body in 1180, we read of a cure of a scholar who "morabatur eo tempore apud Oxenefordiam studiorum causa clericus quidam Stephanus nomine, de Eboracensi regione oriundus," &c. (*Acta Sanctorum*, October 29, p. 579). I owe this

reference to the kindness of the Rev. W. D. Macray, of the Bodleian.

(2) Bryan Twyne relies much in proof of his preposterous theories as to the antiquity of the university upon the bonds and other documents of the kind in the possession of the university. Having examined the documents in the archives of the university, I have found only one which really testifies to the existence of schools in Oxford before 1200.

(3) Among the persons cured at the tomb of S. Thomas was Robert, Prior of S. Frideswyde's, Oxford. In giving an account of his previous sufferings he says:

"Testis est mihi populus civitatis nostrae, quem cum in festis diebus, quando loquebar ad eos . . . cum interesset etiam clerici diversorum locorum Angliæ, prætendebam excusationem standi," &c. (*Materials for Thomas Becket*, II., p. 99).

There is no exact indication of date, but the latest note of time in Benedict's "Miracula" is 1177; and, according to Wood (ed. Gutch, vol. i., p. 139), Robert was prior in 1148. It is, perhaps, reasonable to infer that the miracle must have been earlier than 1180; since when miracles were going on at S. Frideswyde's, the prior of the house would hardly have gone to Canterbury to be healed. In all probability, the event belongs to 1170, or a few years afterwards.

This document (Archives Pyx. F. 46) is a transfer of property in the immediate neighbourhood of St. Mary's Church. Among the parties or witnesses appear the names of one *ligator*, no less than three *illuminatores*, one *scriptor*, two *parcamenarii*. Tradesmen of this order were the inseparable attendants of a body of scholars, and from the earliest times members of these trades enjoyed more or less of the university privileges. If their existence close to the later school street and university church does not actually prove the existence of the schools it establishes a strong probability of it. As to the date of the document, Mr. Macray, on paleographical grounds, gives about 1180 as the earliest possible date, and is strongly disposed to think that it must be earlier than 1170. The fact that the form "Oxonia" occurs in it is in favour of the later date. Is it conceivable that the form *Oxonia* (instead of the cumbrous *Oxenefordia*) was a classical affectation of the newly imported scholars?

I may add that the deed cannot be much earlier than 1170, since Peter, the son of the Torald, mentioned therein, occurs as Mayor of Oxford in documents ranging between 1231 and 1245, while Torald himself appears to have lived till circa 1225 (see Gough Add. MSS. Madg. Coll. Docs., Tom. v. *passim* in the Bodleian). Many of the other witnesses occur in a document of 1190-1200 (Ib., p. 114). Among them is one Peter the Illuminator, whom it is tempting, if hazardous, to identify with John of Salisbury's correspondent, Peter the Writer.

I have hitherto assumed that Canon Robertson and Bishop Stubbs are right in assigning the ordinance against "transfretation" to the year 1169. In that case the expulsion of the "alienigenæ scholares" alluded to by John of Salisbury would represent a distinct exodus from that which must have resulted from the ordinances. But the argument of the two learned editors is based on the assumption that all the ordinances grouped together by the chroniclers are of the same date. Is it not exceedingly probable that they were issued at various dates between 1164 and 1169? In that case we shall see in John of Salisbury a rhetorical allusion to the effects of Henry's ordinance, which we shall then confidently assign to the year 1167. This hypothesis will account for the discrepancy between the chroniclers as to the date of the ordinances. The above quoted letter of Becket, in which

there is no note of time other than the allusion to the ordinances, will then be referred to the same year.

We shall thus be able definitely to trace back the origin of Oxford to the ordinance of Henry II. in 1167. It cannot, of course, be established that the expelled scholars settled in Oxford in the same year; but (since there is no trace of any other large *studium* in England) it is highly probable that they settled there in that year or soon afterwards. Even if this view be rejected, the expulsion of the "alien scholars" will be sufficient ground for looking upon the year 1167 as the most probable birth-year of the schools of Oxford.

In conclusion, my acknowledgments are due to Mr. T. Vere Bayne, student of Christ Church and keeper of the archives, for his courtesy in giving me free access to the documents under his charge.

H. RASHDALL.

THOMAS CROMWELL.

Putney: May 29, 1888.

There is a slight mistake in Mr. James Gairdner's letter in the ACADEMY of May 26. It appears I wrote that Jevan-ap-Morgan was Morgan Williams's father. I should have written that William-ap-Jevan was his father; Jevan-ap-Morgan was his grandfather.

Permit me here to give some account of Thomas Cromwell's ancestry, and of an incident in his early life. His father, Walter Cromwell, was a copyholder in Putney, and a yeoman in Wandsworth. He resided beside the Thames, next the church in Putney. Here he carried on business as a beer-brewer, and was also a fuller and shearer of cloth, and a sheep-farmer. In 1452 his father, John Cromwell, came to Putney from Norwell, in Nottinghamshire, where he held on lease the prebend of Palace Hall. This lease devolved to him on the death of his father, William Cromwell, who was the youngest son of Thomas Cromwell, of Carlton-upon-Trent, who was the second son of the seventh Ralph de Cromwell, of Lambley, in Nottinghamshire. The eighth Ralph de Cromwell, who was the elder brother of Thomas Cromwell, married the heiress of Tattershall, in Lincolnshire, where he settled. On December 12, 1461, 1 Edward IV., John Cromwell was compelled, because he was a Lancastrian, to remise his lease of Palace Hall (see Close Roll of that date). Previously to this his copyhold lands and homestead in Putney had been seized from him by the lord of the manor, Archbishop Bourchier, because he was a Lollard. He was then ordered to take the name of Smyth, his wife's maiden name. In 1472 his son and heir, Walter Cromwell, came of age and claimed, and was admitted to, two-thirds of the land, with the homestead in Putney, seized from his father. In 1474 he married at Putney the daughter of a yeoman named Glossop, of Wirksworth, in Derbyshire. Their first child, Katharine, married, in 1494, Morgan Williams, who then was an ale-brewer and inn-keeper in Putney. Oliver Cromwell, the Lord Protector, was their great-great-grandson. Their second child was Thomas Cromwell, who in 1540 was created Earl of Essex. He married, in 1513, Elizabeth Wykys, third daughter of Henry Wykys, who occupied Walter Cromwell's freehold house and garden beside the Thames, at Point Pleasant, Wandsworth, and who was an officer of the Court of Wards, Westminster. Elizabeth Wykys and Thomas Cromwell, when young, were sweethearts. She, however, suddenly broke away from Thomas Cromwell and married a Thomas Williams, who was Morgan Williams's cousin, and an officer of the King's Yeomen of the Guard at Richmond. This mishap to Thomas Cromwell was the cause of his leaving England, in 1503, for Antwerp. Thence he

went to Italy for six or seven years. He returned to England in 1512, when his father was in trouble. He then found Elizabeth Wykys a widow, and next year they were married. Walter Cromwell's third child, Elizabeth, married William Wellyfed, a sheep-farmer in Wandsworth. He became manager of Thomas Cromwell's business as a wool-merchant in and about Wandsworth. The copyhold and leasehold lands which he held for his sheep-farming I have traced in Battersea, Wandsworth, and Wimbledon.

JOHN PHILLIPS.

"THE HISTORY OF POLITICAL ECONOMY."

Trinity College, Dublin: May 23, 1888.

The review of my *History of Political Economy* in the last number of the ACADEMY, the candour and impartiality of which I gladly acknowledge, may induce some of your readers to occupy themselves with the book. May I request them to correct an error which appears in an addition made in the last revision to the note on p. 122? I there, by a momentary confusion, misdescribed a volume well-known to me as *Letters of Malthus to Ricardo*, instead of—as it ought to have been—*Letters of Ricardo to Malthus*. You will sympathise with my wish not to diffuse a misconception even on a matter of bibliography. JOHN K. INGRAM.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, June 4, 5 p.m. Royal Institution: General Monthly Meeting.

8 p.m. Victoria Institute: Annual Meeting. "Mystical Buddhism in Connection with the Yoga System of Philosophy," by Sir Monier M. Williams.

TUESDAY, June 5, 8 p.m. Royal Institution: "Conventions and Conventionalism in Art," III., by Mr. Sidney Colvin.

8 p.m. Biblical Archaeology: "Les Actes Coptes du Martyre de St. Polycarpe," by Prof. Amelineau; "Some Unpublished Cuneiform Syllables with respect to Prayers and Incantations written in Interlinear Form," by Dr. Carl Bezold; "The Khetta-Hatta and their Allies," by the Rev. C. J. Ball.

8.30 p.m. Zoological: "Lepidoptera collected by Major Verbury in Western India in 1884 and 1887," by Mr. W. Warren; "A Collection of Echinoderms made at Tutuorin, Madras," by Prof. F. Jeffrey Bell; "The Sternal Gland of a Species of *Didelphis*," by Mr. F. E. Beddard.

WEDNESDAY, June 6, 4 p.m. University College: "The Ideology of Languages in Relation to the History of Eastern Asia," I., by Prof. Terrien de Lacouperie.

8 p.m. Geological: "The Sudbury Copper Deposit (Canada)," by Mr. J. H. Collins; "Some of the Auriferous Tracts of Mysore, Southern India," by Mr. George Attwood; "The Durham Salt District," by Mr. E. Wilson; "The Occurrence of *Calciophanes* in the Carboniferous Limestones of Gloucestershire," by Mr. E. Wethered; "The Movement of Scree-material," II., by Mr. Charles Davison.

8 p.m. Gymnædion: "Excavations and Discoveries at Strata Florida Abbey," by Mr. Stephen W. Williams.

THURSDAY, June 7, 8 p.m. Royal Institution: "The Growth and Sculpture of the Alps," III., by Prof. T. G. Bonney.

4 p.m. Archaeological Institute: "The Discovery of a supposed Anchorite's Cell at Ongar, Essex," by the Rev. E. S. Dewick; "Norman Masonry and Masons' Marks," by Mr. J. Park Harrison.

8 p.m. Linnean.

8 p.m. Chemical: "The Chemical Action of some Micro-organisms," by Mr. R. Warington; "The Optical and Chemical Properties of Osot-chou," by Dr. J. H. Gladstone and Mr. W. Hibbert.

8.30 p.m. Antiquaries.

FRIDAY, June 8, 8.30 p.m. British Museum: "The Social Condition of the Babylonians," I., by Mr. G. Bertin.

4.30 p.m. National Association for the Advancement of Art: Inaugural Meeting.

8 p.m. New Shakespeare: "A Few More Words on Greene and Shakespeare," by Prof. O. H. Hartford.

9 p.m. Royal Institution: "Phosphorescence and Ozona," by Prof. Dewar.

SATURDAY, June 9, 8 p.m. Royal Institution: "Count Tolstol as Novelist and Thinker," II., by Prof. C. E. Turner.

8 p.m. Physical: "The Analogy between Gases and Substances in Dilute Solution," by Prof. J. H. Van't Hoff, communicated by Prof. W. Ramsay; Exhibition of a Lantern, by Mr. W. Lant Carpenter.

8.45 p.m. Botanic: General Meeting.

SCIENCE.

Elements of Physiological Psychology: a Treatise of the Activities and Nature of the Mind from the Physical and Experimental Point of View. By George T. Ladd, Professor of Philosophy in Yale University. (Longmans.)

THE recent investigations into the physiological concomitants of psychical processes, and more particularly the experimental researches into the correlations of mental and nervous activity, are so extensive and intricate as to demand a special work for their record and critical estimate. It has been claimed by some that these new lines and methods of enquiry into psychical phenomena have done much to transform the older science of psychology, which was based largely on introspection. Since much the largest part of these psycho-physical researches have been carried out in Germany, there has been a special need of a comprehensive and systematic account of them and their results in our own language. And this need has at length been fully and satisfactorily met by Prof. Ladd, of Yale University. That an American should be the first to give English-speaking students this work is as it should be. For American students are much more in the habit of going abroad in order to get a perfect mastery of the latest scientific methods. And, so far, the only important additions made by English-speaking students to the voluminous contributions of the Germans in the domain of psycho-physical research have come from America. And Prof. Ladd, though he confines himself in his treatise to giving an account and an interpretation of the observations and experiments of others, shows throughout that he has long made the subject his own by special painstaking study.

An enquiry into the meaning and value of the more exact modern investigations into the correlations of psychical and physical processes may subserve one of two distinct, though closely related, objects. It may aim at determining, in the first place, whether these researches have radically transformed the method of psychological science, whether they have supplied the student of the science with a new and more efficient means of ascertaining the precise characters and modes of variation of psychical phenomena than was supplied him by the older methods. Or it may aim, in the second place, at gauging the net philosophical result of these investigations, at showing how far the more precise formulation of the correlations of psychical and physical phenomena reached by means of these researches affects the ancient metaphysical problem of the ultimate nature of the soul and its relation to the body. Prof. Ladd includes both these objects in his view. He writes at once as a scientist bent on gaining the fullest and clearest insight into the phenomena of mind, and as a metaphysician deeply concerned with the sublime question of the nature of the spiritual substance. The success of so large and ambitious an undertaking will depend mainly on keeping the two ends so far as possible distinct, on carrying out, first, a strictly scientific examination of the facts reached, and then proceeding to a separate consideration of their metaphysical bearings; and in this the author has been eminently

successful. A careful and critical estimate of positive results is made to lead up to a distinctly speculative enquiry into their ontological significance. No reader can reasonably complain that the problems of empirical and of rational psychology, to use an old distinction of Wolff, are here confused. Scientific problems are discussed in the dry light of science, and without any admixture of the alluring, but somewhat blinding, rays of metaphysical theory. The reader may, no doubt, by reading between the lines, see what particular metaphysical view of the soul the author means to adopt; but this view is only partially suggested as a logical inference from the facts, and not gratuitously introduced as a presupposition of an inquiry into the facts.

Prof. Ladd has written for the serious student, and not for the hasty crammer. His ponderous volume of some seven hundred closely printed pages will, it is safe to say, never become a widely used text-book. For, as if its size were not enough, the writer has seemed to take pains not to supply the crammer with definite and concisely formulated results. His method is to weigh leisurely all the pros and cons of a point, and his special delight is to show how very little our knowledge amounts to after all. To this it must be added that Prof. Ladd's style is not made for the runner. The sentences have something of the intricacy and of the sinuous movement of Lotze's—a writer, indeed, whom in thought and expression Prof. Ladd appears closely to resemble. Yet, if his treatise demands from the reader serious interest in the subject, it will abundantly reward such interest where it is given. We are not too often reminded nowadays, and since Lotze has left us, of the vast lacunae of noscience in our vaunted sciences. Prof. Ladd exposes these big "bind spots" in the field of scientific vision with unsparing hand. It might do some of our physiologists substantial good to read, for example, so able a *résumé*, by one well versed in the facts and well endowed with a critical logic, of the net results of their inquiries into the functions of the several regions of the nervous system. So far from being able to connect particular psychical elements with individual nerve-cells in the brain, the author shows clearly that we are still a good way from knowing what psychical activities are correlated with the several distinguishable masses of the brain. Prof. Ladd discharges the same wholesome Socratic function of exposing our ignorance when he discusses the much-extolled method of psycho-physics. In spite of the colossal labours of Fechner and his followers, we are still very much in the dark as to the precise relation of the intensity of sensation to the strength of the external stimulus; while as to the physiological conditions of qualitative differences among our sensations, the case is even more hopeless. By such unsparing exposure of ignorance, Prof. Ladd may, perhaps, repel the too ardent seeker after knowledge; yet he will certainly recommend himself to every jealous lover of the truth.

Prof. Ladd's work is divided into three parts, entitled "The Nervous Mechanism," "Correlations of the Nervous Mechanism and the Mind," and "The Nature of the Mind."

The first part gives us a very complete summary of what is known of the elementary constituents of the nervous system, their groupings into distinct structures, and the functions of these conceived as the working of a mechanism, that is to say of a system of minute particles of matter which act upon one another at indefinitely small distances, and which, when any motion is set up in one part of it, propagates such motion according to laws that are given in the very constitution and arrangement of the particles themselves. As an account of the nervous system, together with the end-organs of sensation and movement, this part will supply the English student of psychology with a comprehensive view of the physical substratum of mental activity comparable in its value with that given by Prof. Wundt at the beginning of his *Physiologische Psychologie*. In the second part Prof. Ladd proceeds to bring into view the mental activities which somehow connect themselves with the workings of this mechanism. This is the larger of the three parts. It opens with two chapters on the localisation of cerebral function, which might, one supposes, have better been incorporated into part i. After this we have a methodical examination of the physiological concomitants of the several psychical processes, from sensation up to the action of the higher faculties—memory, &c. Here we have a full exposition of the results of recent psycho-physical research. The chapters headed "The Quality of Sensations," "The Quantity of Sensations," "The Presentations of Sense," and "The Time-Relations of Mental Phenomena" will be particularly welcome to the English student. The least satisfactory portion of this part ii. is the account of the perception of space (presentations of sense). The author seems here to follow Wundt too passively and uncritically in his peculiar theory of a synthesis of different series of sensations. According to Prof. Ladd, every series entering into the formation of the presentation of space must have certain spatial characteristics—viz., qualitative likeness, gradation and reversibility. He finds such essentials in the two series of muscular and tactile sensations which accompany all movements of the limbs and of the eyes, and in the distinct local colourings that differentiate a number of simultaneous sensations of the skin or of the retina. How little such a mere compounding of different graded series of sensations explains the genesis of the space-perception is seen in the author's own words on introducing the theory: "A combination (or synthesis or association) of two or more qualitatively different series of sensations is *ordinarily*—if not *absolutely*—*necessary*, in order that presentations of sense in space-form may be constructed" (p. 386). Surely the writer ought to have decided between the "ordinarily" and the "absolutely" before he commenced to propound his theory. It may be doubted, further, whether Prof. Ladd on his theory accounts for the fact that the most practised vocalist does not place musical sounds in space as he places tactual and visual impressions. And lastly, it may be observed, the author dismisses in much too cavalier a fashion the root idea of the theory of space-perception adopted by the majority of English psychologists from the

time of Berkeley—viz., that our adult vision of space is based on the experiences of touch and movement gained by the limbs. Prof. Ladd is here perhaps just a little too German. If instead of stopping at the space-perception he had gone on to consider the perception of things in space, he would have been compelled to recognise that interweaving and partial blending of visual experiences and experiences of the moving limbs which, according to Berkeley and his followers, are discoverable in the visual cognition of locality. It is, no doubt, true, as Wundt and Prof. Ladd urge, that the eye has at its command a variety of sense-elements, sufficient for an independent construction of a system or order resembling that involved in a true space-presentation; and English psychologists have not, perhaps, done full justice to the eye's capabilities here. But one may allow this, and still contend that such a combination of purely visual data could never yield *our* perception of space. It seems impossible to conceive of a clear intuition of depth arising from such visual elements as those counted on by the author.

Coming now to the third part, which to many will be the most interesting, we find, on the whole, a careful and impartial investigation into the bearing of the results of modern physiological psychology upon our metaphysical conception of the soul and its relation to the body. Prof. Ladd is a spiritualist in the sense that he claims for the soul a distinct nature and an independent place by the side of "material beings." The researches of the physiologist into the correlations of psychical and physical processes do not, according to him, tend in the least to resolve mental activity into physical. Further, he will not allow to the modern monist that there is such a clearly demonstrated parallelism between the course of mental activity and nervous processes as to supply him with an empirical basis for his identification of mind and matter as two aspects of the same being; and in this connexion he emphasises not merely the circumstance that we do not know that the higher activities of mind have their physical correlative in simultaneous actions of certain parts of the brain, but the fact that cerebral development does not go on precisely *pari passu* with mental. According to our author, the general dependence of psychical development on the building up of its physical basis is through the sensations and their reproduced images. Beyond this, the faculties evolve independently of such physical basis. Here it may well seem that Prof. Ladd exaggerates our ignorance. The probability of the strict concomitance of mental and nervous processes, and of the dependence of every increase of mental power on brain-changes is so firmly established by a cumulative chain of reasoning that it seems futile to attach serious importance to the fact that we cannot yet follow out this correlation in detail at all points. Hence we think the author does injustice to the monist's position. At the same time, there is something refreshing in Prof. Ladd's re-assertion of the old-fashioned dualism of mind and matter, which, while different in their substance and their attributes, act one upon the other. Our author will have as little to do with the weak subterfuge of occasional-

ism as with the high flights of modern Spinozism. He says out boldly that there is no more mystery in a causal connexion between mind and body than between one material thing or atom and another. In both cases alike we have real beings with natures of their own acting upon, and being acted upon by, other beings. Here, as throughout Prof. Ladd's work, we seem to catch the echo of Lotze's voice; and, indeed, it looks as if his metaphysical discussion of mind tended towards such an ontological system as Lotze has left us. JAMES SULLY.

CORRESPONDENCE.

FINNIC GOAT-NAMES.

Barton-on-Humber: May 15, 1893.

Mr. John Abercromby (ACADEMY, January 21, 1888), criticising a comparative list of goat-names given by me (*ibid.*, January 14, 1888, p. 30), quotes Prof. Ahlqvist's view that the three Finnic goat-words—*vuohi*, *kauris*, and *kuttu*—are all Aryan loan-words. Admitting that there has been "intense intermingling" (Prof. Keane) between Finns and Aryans, I yet venture to think this highly improbable. Ahlqvist, be it remembered, treats some words as loan-words which other scholars, e.g., Budenz and Donner, regard as original. The Eastern Turanians had original goat-names; and, in the abstract, it would be probable that the Western Turanians should have the like. The following are one or two points in the evidence.

(1.) *Vuohi*. Thought by Ahlqvist to be "das weibliche Schaf f. *uuh*" (printed *uuh* in Mr. Abercromby's letter) "with *v* prefixed." Some instances of similar differentiation should be given in support. The Finnic *uuh* it is thought = Lit. *avis*, Lett. *avs*, Lat. *ovis*, &c., the Finns being unable to provide even a sheep-name. Well, this is possible, though *uuh* is not very like *avis*; but, when we turn to another European Turanian language, Magyar, we find the "Mutterschaf" called *juh*, which is an admirable variant of *uuh*. True, Ahlqvist is ready for us, and states that *juh*, too, is an Aryan loan-word, and represents that Aryan sheep-name of which the Lat. *agnus* is a form. Further, Turanian comparisons, in my opinion, confirm the view that *uuh* and *juh*, words of exactly the same meaning, are variant forms, and not derived from the distinct Aryan forms, of which *ovis* and *agnus* are representatives; if so, *vuohi* or *wuohi* is an original Finnic word.

(2.) *Kauris*. Said to be from an "old form" *kapris*. This may be so, though *kauris* is remarkably like many Turanian goat-names, some of which I quoted (cf. the Akkadian *gar-us*, "kidling"); but, when we get the form *kapris*, the Aryanistic difficulties begin in real earnest. Hésychios gives *Κάρρα*. *ἀἴξ*. *Τυρρηνία*. Fearing to overstate my case, I suggested that the Etruscans pronounced the Latin *caper* *κάρρα*, and that Hésychios meant to indicate a dialectic difference. But, I am bound to admit that it is far more probable that he (as Canon Taylor—*Etruscan Researches*, 316—thinks) gives *kapra* ("skipper," vide Schott, *Fin.-Tat. Sprach.* 112) as an original Etruscan word, distinct from Latin goat-words; and, hence we naturally find such forms as the Finnic *kapris*, Lap. *habres*, *habra*. The Aryan animal-name (Greek *κάρρος*, Latin *caper*, Anglo-Saxon *hæfer*, Slav. *vepri*), boar or goat, is the "rank."

(3.) *Kuttu*. Ahlqvist is "inclined to see in *kuttu* the O.N. *kid*." But, while he is thus very doubtful on the point, he admits that the Mag. *kecske* (= *katschka*, cf. the Japanese *hitezji*, "goat") = Tat. *hadsa* = Votiac *ket*, "goat," which is not "a far cry" from the Finnic *kuttu* and the Etruscan *κῶτα*. It thus appears that

the Aryan origin of these three Finnic goat-names is, at the best, extremely doubtful.

My Kalevala-notation (ACADEMY, November 12, 1887, p. 323), which Mr. Abercromby corrects, is that used by Castrén in his *Finnische Mythologie*.

ROBERT BROWN, JUN.

SCIENCE NOTES.

ON Monday evening last, Herr Julius Wolff, whose successful treatment of that obstinate malady, "writer's cramp," has compelled the admiration of some of the most eminent medical authorities of Europe, delivered a lecture at Steinway Hall on "Writer's, Pianist's, and other Muscular Cramps." He classed these affections in the "professional neurosis" group, because their characteristic symptom is the refusal of certain muscles to perform acts more or less intimately connected with the patient's profession or occupation. In the lecturer's opinion, the exciting causes of these affections was not so much overtiring of the affected muscles from prolonged work as individual susceptibility; in other words, the muscles seized by these cramps are usually by nature weak or contracted, and in most cases the nerve plexus connected with them is apt to be over sensitive. Weighty reasons were, however, given for believing that in their origin these affections are muscular rather than nervous. Apparently literary men are especially liable to writer's cramp—a judgment which printers would doubtless endorse. Herr Wolff's treatment, which has achieved such brilliant results, is essentially local, and consists in a combination of massage—a French term covering a complicated series of manual manipulations, akin to but more refined than Oriental shampooing—with a series of simple bodily exercises designed to strengthen, and in some cases stretch, the affected muscles. That the cures thus effected are of a permanent nature is borne out by the experience of thirteen years.

Asbestos: its Production and Use, is the title of a pamphlet by Mr. R. H. Jones, recently published by Messrs. Crosby Lockwood & Son. As the employment of asbestos in the arts is rapidly growing, the information collected in this little work is likely to be serviceable in many quarters. Our supplies of the mineral are obtained chiefly from Italy and Canada; and the writer's description of the Canadian variety is of value inasmuch as it is the result of residence at the mines. The Canadian mineral is a fibrous variety of serpentine, known to mineralogists as chrysotile. The substance of the pamphlet appeared originally in the form of a series of letters written from Canada to a friend in London—a fact which accounts for the writer's gossipy style.

PHILOLOGY NOTES.

THE current number of the *Journal of Philology* (Macmillan) contains several articles of more than usual importance, all of which happen to be contributed by Oxford men. The first two deal with historical subjects. Mr. D. G. Hogarth writes of "The Army of Alexander" in a style more vigorous than graceful. With reference to the interesting speculation whether the Roman legions could have resisted the Macedonian phalanx, he concludes that Alexander "would have been before the walls of Rome in a month after crossing the Alps and over them in a week." Mr. H. F. Pelham deals with "Some Disputed Points connected with the *imperium* of Augustus and his Successors." Mr. I. Bywater contributes a third series of "Aristotelia," chiefly textual notes on the *De Anima*. Prof. Sanday discusses "The MSS. of Irenæus," in connexion

with a paper by Dr. Loofs on the same subject in the recent Reuter birthday-volume (noticed in the ACADEMY of October 15, 1887). Mr. E. G. Hardy draws attention to a MS. of Pliny's Letters in the Bodleian, which he maintains to be the oldest authority extant, and also that from which Aldus printed his edition of 1508. Prof. Nettleship sends four pages of corrections to the *Epinal Glossary*. And, finally, Mr. Robinson Ellis, besides some *Adversaria*, suggests a new answer to the riddle in Verg. *Ecl.* iii. 104-5:

"Dic quibus in terris—et eris mihi magnus Apollo—
Tris pateat coeli spatium non amplius ulnae."

Founding upon an historical incident recorded by both Lucan and Valerius Maximus, he finds the key in the similarity of the words "coeli spatium" to "Caelis spatium," Caela being the place in Euboea to which a certain Appius Claudius had retired, on the advice of the Pythia, just before the battle of Pharsalia, and at which he was buried.

THE next number of the *Zeitschrift für deutsche Philologie* will commence a new series, under the editorship of Dr. Hugo Gering. The editor announces that there will be no essential change in the character of the journal, the only new feature being that the contents of German and foreign philological periodicals, so far as they come within the scope of the *Zeitschrift*, will be regularly noticed. The preliminary list of contributors includes the names of nearly all the most distinguished Germanic philologists, both in Germany itself and in Scandinavia. The current number contains an interesting biographical sketch of the late editor, Dr. Julius Zacher. We observe that a movement has been set on foot for the erection of a monument (in the Hamburg cemetery) to this eminent philologist.

In the second number of Prof. Viator's promising periodical, *Phonetische Studien* (Marburg: Elwert), the most interesting article is the continuation of M. Paul Passy's thoughtful and original remarks on modern French pronunciation. Some of the statements in this article are acutely criticised by a young Dutch scholar, W. S. Logeman, who has (somewhat curiously) chosen to write in English, which he does with remarkable correctness. M. Passy, however, maintains his ground effectually. The discussion on Greek pronunciation between Drs. Engel and Lohmeyer is continued with spirit. There is wit on both sides; but Dr. Lohmeyer, who defends the received German system, seems to have the advantage in argument, as well as markedly in tone and temper. The editor gives in tabular form the results of the elaborate inquiry he has been making with regard to the pronunciation of literary German in four characteristic localities, Western East-Friesland, Mülheim-on-the-Ruhr, Remscheid, and Hanover.

MEETINGS OF SOCIETIES.

CAMBRIDGE ANTIQUARIAN SOCIETY.—(Annual Meeting, Monday, May 20.)

PROF. A. MACALISTER, president, in the chair. The following officers were elected for the next academical year: president, Prof. Macalister; vice-president, Prof. E. O. Clark; treasurer, W. M. Fawcett; secretary and librarian, the Rev. S. S. Lewis. The annual report mentioned two volumes that had been lately issued, and promised the early appearance of *Alderman S. Newton's Diary* (1622—1717) and of Mr. Hailstone's *History of Swaffham Bulbeck*; the *Registers of St. Michael's Parish* and the *Pedes Finium for Cambridgeshire* are in process of transcription.—Prof. G. F. Browne made the following communication. On the semi-circular tympanum of the south door of Pampisford Church, round the top, are ten small round-headed arches.

The piers are marked with incised lines, showing the separate stones of which they are represented as being built. The capitals are of very early shape. Such arches in church architecture would be early twelfth-century work; but the style of surface ornament did not keep pace with the development of architectural styles. The arches are 5½ inches high, and the human figures in them for the most part about 5 inches. The surface of the figures and piers and arches is flush with the rest of the stone, the effect being produced by cutting away very roughly the surface of the stone within the arches, leaving the piers and figures standing clear. The ten scenes seem to be taken from the story of the birth and death of John Baptist. Beginning with the lowest arch on the east side, the subjects are as follows, some alternative explanations being given below: 1. The altar of incense. 2. Zacharias bowing before the angel. 3. The angel. 4. Herodias's daughter dancing. 5. Herod and his guests. 6. St. John the Baptist, perhaps shown as an angel. 7. The headman's block. 8. The severed head. 9. A single figure in the attitude of carrying something not shown, probably the charger with the head. 10. Another head, with the neck. The neck is bent sideways upward, as though the head had been lying on one side and was rising up of its own accord—probably showing the Resurrection or Invention of the Head. The church is said by tradition to be dedicated to St. John the Baptist. Cole in his MS. account of the church (British Museum) gives that dedication, but a note is added by Mr. J. Allen that the dedication is to SS. Peter and Paul. Baker, in his MS. account (University Library), gives SS. Peter and Paul. H. Clonville by will, dated October 17, 1453, leaves his body to be buried in the church of Peter and Paul of Pampesworth; and this is usually the most conclusive evidence of a dedication. The two saints' days are only five days apart, St. John being June 24 and SS. Peter and Paul June 29, so that some confusion is not unnatural. The village feast is "the first Monday in July, unless that is July 1, in which case it is the second Monday." This brings old St. John's Day, July 6, into the feast week in every case but one—i.e., when July 6 is on Saturday; while old St. Peter's Day, July 11, only falls in the feast week when it is a Saturday, Friday, or Thursday. This is in favour of St. John the Baptist as the dedication, and the evidence of the tympanum is strongly in the same direction. The head of John Baptist is said to have been found in Herod's palace in the year 330. After many changes of abode, it was brought from Constantinople to Amiens in 1204, and this no doubt would attract attention in the north of France to the Invention of the Head. It is therefore interesting to enquire whether Pampisford had any special connexion with the north of France at that time. The Domesday survey states that Pampesworde was held by Alan (Fergant) of Brittany, who built Richmond Castle in Yorkshire, and made Pampesworth part of the Honour of Richmond. The counts of this line were represented in 1171 by Constance of Brittany, and her grandmother some time before 1219 brought the honour of Richmond and her titles to her husband Peter of Dreux. Dreux is not many miles from Amiens, and it is tempting to suggest that, in spite of the early style of the sculpture, it may have been due to this connexion. The date 1204 or 1205 is only seven or eight years later than some of the round-arched work at Ely Cathedral, and the monks of Ely held lands in Pampesford. Or it may be suggested that the canons of Amiens procured the head because of the regard paid to the Invention of the Head in these parts. Alternative explanations of the subjects are: 3 John crying in the wilderness. 5. The executioner with his axe. 10. The head on a charger, the charger being not shown. If No. 10 is not the Resurrection of the Head, there is no reason for not allowing the style of the work to date the stone; in that case, it is, to say the least, one of the earliest stones with Christian subjects in the county. The local pronunciation of the name Pampisford is *Pawmser* or *Parnser*, the last syllable evidently coming from *worth*, not *ford*. The Domesday spelling is *Pampesworde*; the Hundred Rolls of 1273 and 1286, the Taxatio of 1292, the Pleas in Cambridge of 1299, and other records down to the Reformation, agree in the spelling *Pampesworth*; the Valor Ecclesiasticus

Henry VIII. gives in one place, on a return made in Norfolk, *Pansworth*, but in the local return, *Pansforth*; while the Computus Ministrorum of the same king gives practically the present local pronunciation, spelling the name *Pawnsworth*.—Prof. Middleton thought that the style of the work dated it 100 years earlier than Prof. Browne's suggestion would place it.—Prof. Browne also exhibited a figure of a saint. The figure (copper gilt) was found in the parish of Guilden Morden, near the place where an ancient chapel, known as Redderia, used to stand. It is probably of thirteenth-century workmanship. The youthful face and the clasped book held in the left hand suggest the attribution to St. John the Evangelist. The figure has probably been one of the figures on a shrine; and, in that case, it would naturally stand on one side of our Lord, the Virgin standing on the other side. It was fixed to the shrine by two large studs, the holes in which remain in the figure; these bores are at an angle of about 20 degrees with one another, as though the figure stood at one corner of the shrine. Height, about 3 inches.—Prof. Hughes made a communication upon the subject of Limbrow Hill, a tumulus between Royston and Litlington, which the owner has recently begun to destroy. He described it as composed entirely of surface mould and chalk rubble scraped together, and inferred accordingly that the surrounding ditch is a later addition, the material from it having, perhaps, formed a bank on the outside. The present height of the mound is 18 feet, and the diameter about 42 feet. Below the centre a rectangular pit, some 4 feet long and 2 feet deep, had been found, full of large flints; but no bones or other objects were seen in it.—Baron A. von Hügel and Mr. Jenkinson exhibited some of the ornaments, &c., from the Saxon cemetery recently found at the back of St. John's College. Over fifty skeletons had been examined. The specimens obtained, especially the brooches and the belt-plates, compared favourably with those yielded by other localities, though no such brooches as the large one from Haslingfield, in Trinity College library, had turned up. There were more pierced Roman coins than at Gilton, and also more men with shields and spears; both which facts may point to a slightly earlier date. Otherwise, and especially in the apparent concurrence of inhumation and urn-burial, these two cemeteries were much alike. Some of the urns now found are very remarkable. They will be exhibited on another occasion.

BROWNING SOCIETY.—(Friday, May 25.)

DR. FURNIVALL in the chair.—Miss Stoddart read a paper on "Saul," in which, after a description of the poem, she drew attention to the poet's use of Saul in an age anterior to Christ, as illustrating man's need of Christ. Stress was laid on the fact that Mr. Browning had in 1855 enlarged the scope and altered the purpose of the poem written in 1845; and the function of music in working out David's ministrations, as well as its inadequacy at the moment of his inspiration, was indicated.—Dr. Furnivall, after thanking Miss Stoddart for the paper, spoke of the poem as a noble lyric, written at the full tide of emotion, when the poet's triumphant life was strong. He complained, however, that at its close, Saul was forgotten altogether. We have the effect of the situation on David, while Saul, who roused it, seems left behind. In Miss Stoddart's treatment of the poem, he took exception to her denial that agnostics have faith, hope, and happiness. They transferred their faith and hope from unsubstantial objects to the human race.—After a discussion, in which Dr. Berdoe, Mr. Shore, Miss Whitehead, and Mr. Gouner took part, the meeting closed.

FINE ART.

JAPANESE KAKEMONOS.—More than Four Hundred remarkable Pictures by the most eminent native Japanese Artists of the Eleventh to the Present Century. NOW ON VIEW at Messrs. DOWDSELL'S GALLERIES, 160, NEW BOND-STREET. Admission, including Catalogue, One Shilling.

THE NEW GALLERY.

I.

THE New Gallery has begun well—a fact partly, perhaps, to be accounted for by its strong consulting committee, and an architect

who, at the Institute of Painters in Water Colours and the People's Palace, has already shown remarkable skill in the construction of well-proportioned and well-lighted halls. In Regent Street his task was one of conversion as well as construction; and he has transformed a market into a palace of art so quickly and beautifully that the gallery itself, with its hall of marble and gold and spacious saloons, is not the least interesting and effective part of the exhibition.

Perhaps the New Gallery does not contain many pictures of extraordinary merit; but all are so well hung that they are seen to great advantage, and, taking them all together, there is little that is not interesting. That adjective is never misapplied to the work of Mr. Burne Jones, who appears to have adopted the New Gallery as his peculiar temple, shunning the Royal Academy no less than the Grosvenor. Besides three pictures highly characteristic in design, and of his highest quality in execution, he sends a number of beautiful drawings and studies. One of the latter is particularly instructive, as it is a study from life for the figure of Andromeda in his pictures down stairs, and shows the process through which nature passes in its translation into Burne Jones.

Near these drawings are some beautiful silver-points and etchings by M. Legros, who again appears in something like his old force, though the pictures he sends cannot be admired so unreservedly as his drawings. It is, indeed, the drawing in his paintings, the finely-touched heads and hands of the "Femmes en Prière" (8), and the sympathetic lines (especially of the legs and feet) of the "Dead Christ" (64), that chiefly distinguish them as the work of no ordinary artist.

From Signor Costa we have a large and fine landscape, "The First Smile of Morn" (77), treated in his later style—large, definite, and somewhat dry. At the back rises a range of mountains, dark against the clear, rosy sky of morning; in the foreground is a piece of rough land overgrown with trees and rushes, and in the corner a strange figure like a negro faun with pointed ears. He also sends a small landscape from Cumberland, with a sunset setting behind trees (129), very similar in feeling and handling. A large work of his school is Mr. Corbett's "The Orange Light of Widening Morn," with a powerful effect of sunlight on the red stems of pines; but neither this work nor Signor Costa's large picture fully justify their size. Mrs. Arthur Murch's "Coast near Pisa" (137), another work of the school, is charming. Of Mr. Mark Fisher's landscapes we prefer "Winter Pasture" (27), in subject (sheep feeding) similar to his picture at the Grosvenor, but a finer composition, with a noble sky, and all things—sheep, boughs, and clouds—put in with masterly dexterity and variety of touch. Mr. Hope McLachlan, too, is at his best, betraying in sombre wise the feeling of a true and original colourist as well as of a poet. His "Mists in Early Autumn" (138) is fine in design, its atmosphere and moonlight are singularly true, and his smaller picture, "Nearing Twilight" (41), has a charm so true and deep that Mr. Peppercorn's "Winter Evening" (39) looks beside it more slight and empty than it is. Mr. David Murray has two or three characteristic examples of his delicate art. His "Britannia's Anchor" (110) is more solid and rich than usual. The sunset sky and the hill in shadow, with the ships at anchor in the river, and the foreground of wet sand, make a picture at once poetical and true. Mr. Alfred East's beautiful morning scene (118) is one of the best of the landscapes, and there are a few more works of this class of which mention must be made hereafter; but it is time that something was said of what after all is the

great distinction between the New and other galleries—the presence of three elaborate pictures by Mr. Burne Jones.

These are all concerned with Perseus. In the first, "The Tower of Brass" (54), which is in full colour, his mother Danae watches with wonder the building of the brazen tower in which she is to be immured for the safety of her father. Robed in brilliant red, she stands in a garden, her slender figure relieved against a cypress-like shrub, her feet surrounded with deep blue iris blossoms. She looks through an archway with a heavy bronze door, which opens on the space where the tower is being built, and plated with sheets of brass. The arrangement of colours is striking, beautiful, and harmonious; the painting throughout is most careful and accomplished. In conception it is more fifteenth century than antique, or it would not be a Burne Jones; but, apart from all such questions, it is a masterly and beautiful picture, such as only a true artist-poet could have designed. The same may be said of the other two pictures, though in these the task of assent to the artist's conception is more difficult. They are both painted in that scheme of colour which Mr. Burne Jones has chosen more than once for heroic designs—notably in his "Wheel of Fortune"—a scheme akin to work in various metals, bronze and copper, and silver and gold. This we may accept—in spite of the unpleasant morbid tone it gives to flesh—because it is carried through with such consistency and skill. In one of the pictures (53), Perseus flying by on his winged sandals is arrested by the strange sight of the beautiful damsel chained to the rock; in the other (55), he is fighting with the strange sea monster. It would be easy enough to admire only, if we regarded these compositions as purely decorative, mere arrangements of form and colour suggested by the story; but the artist will not allow us to do this. He appeals to our emotions. The pictures are intended to be a power to the soul as well as a pleasure to the eyes. In the charming series of designs for the decoration of a piano (281-90) which are to be seen in the balcony, Mr. Burne Jones has illustrated another story—that of Orpheus and Eurydice. Step by step we see them climb the ascent from Hades until the fatal backward look is given, and Eurydice swoons into a shade. These designs are still more decorative than those of Perseus and Andromeda; but he must be singularly wanting in sympathy for the poetry of line who fails to be moved by these eloquent images. They are decorative, but they are dramatic; they are quiet, but they are full of passion; and the conception of the three-headed dog Cerberus, though a beast beyond experience, is singularly fine and acceptable even to the prosaic. The reason why Mr. Burne Jones's version of Perseus and Andromeda is so much more difficult of acceptance, and so much less moving, lies, I think, in the numerous contradictions to experience which the pictures force upon the attention. The events of both legends are equally foreign to our lives, but the designs of the Orpheus series are in sympathy with it, the others not. We never saw Cerberus, but we have seen dogs and can accept Mr. Burne Jones's Cerberus because he is dog-like, formidable, and alive. If he is beyond our experience, he does not flatly contradict it. The sea monster does. He is something like a huge eel with the head something like a salmon, and he coils himself in a way no eel or even serpent ever did. There is no objection, perhaps, to this. We could not expect him to be like, or to behave himself like, an ordinary creature—a horrid mixture of known forms is a proper idea of a monster; but we may at least expect him to be alive and formidable. The sense of life is wanting. He is invertebrate and rigid, a masterpiece of metal-work perhaps, but

incapable of motion. Then we know what fighting is, and these terrible combatants are not fighting: the sword hangs idle in an idle hand, the monster lets the hero's legs between his coils without crushing them. This is, perhaps, because Perseus is invisible; but if so, why do they stare at one another? One would think that Mr. Burne Jones had had the other version of the myth in his mind, in which Perseus turns the monster to stone with the Gorgon's head, and had transferred the power from the Gorgon to Perseus. Then we know what armour is, and enough about flying to make the heavy suit that Perseus wears an additional tax on our faith—a tax which the mind resents all the more because the feet are bare, and the armour comparatively useless. Finally, we know what human nature is, and it is difficult to believe in the terror of a scene which can be regarded by Andromeda with such *sans froid*. Both pictures are full of beauty. The figure of Andromeda is exquisite, the composition especially of that in which Perseus is fighting the monster is admirable and original, the execution is broad and masterly; and if we can only look upon Andromeda as on some mystic mediæval Alice in Wonderland, there would be little room for criticism.

COSMO MONKHOUSE.

MODERN MAIOLICA AT THE ITALIAN EXHIBITION.

TAKING a hasty run, a few days ago, through the long gallery of the Italian Exhibition, I was arrested by the rich display of modern Maiolica produced by Signor Catta Galli, of Florence, who, himself an artist, has given much time and careful study in the endeavour to reproduce wares similar to artistic character to those of the ancient *maiestri* of Urbino, Gubbio, &c., and has also been very successful in his reproductions of the Hispano-Moresque wares. In these last, although his lustrous pigments are very brilliant, there is a somewhat too brassy effect in the lighter golden tint; but the coppery colour of the later wares of Manises is very good. Specially excellent are some vases, &c., painted with grotesques on the white ground, after the manner of the later Fontana fabrique of Urbino, by a young artist who was reared under the teaching of Signor Catta Galli. A pair of such was made for the Prince of Wales a few years ago. Some of the lusted pieces, after the manner of Gubbio, are also very successful.

In these latter days, when original pieces of Maiolica of any merit fetch more than their weight in gold, it is satisfactory to see such able reproductions, at a moderate cost, of the artistic pottery of the Italian renaissance, each piece of which honestly bears the distinctive mark—the crowing cock—of Signor Catta Galli's bottega.

EGYPT EXPLORATION FUND.

THE STATUE OF KING RAIAN AND THE LION OF BAGDAD.

I find, on my return from Egypt, that there has been some correspondence about King Raian; and now that what remains of his statue has been formally introduced (by limelight, at least) to the London public by Miss Edwards, in her interesting discourse delivered on May 9 at the rooms of the Zoological Society, I may be allowed to add some particulars respecting it.

As the statue first emerged, the work of the legs and the general appearance of it suggested an early date; and the unknown name, when that appeared, was of course most easily placed in the gap between the XIIth and XVIIIth

Dynasty, while the nine bows under the feet reminded one of some statues of the middle kingdom. The first positive impression was, however, quickly dispelled when the cleaning was completed. There was a rudeness about the work, and a strangeness about the hieroglyphs and about the name, which suggested that the statue was of a non-Egyptian type, when art was at a low ebb. But the most striking feature was the faintly incised scale ornament on the sides of the throne—a feature that is most noticeable in late porcelain statuettes, especially of goddesses of the Saïte period. The remarkable absence of erasure or usurpation made a late date extremely probable. I questioned whether it might not belong to the Ethiopian conquerors, or some unknown invaders of the new kingdom. The curious hieroglyph in the prenomén occurs as a variant in the prenomén of *Rameses II.*

The suggestion (made, by the way, by a native student of hieroglyphs, Ahmed Effendi Kamâl, of the Bulaq Museum) that this was the Raian of Arab tradition was scarcely sufficiently weighty of itself to influence one's opinion about the date. I looked upon it as a most curious coincidence and nothing more. There was nothing in the situation of the statue to suggest an early date. Its *entourage* consisted of a block with the name of the Hyksos King Apepi, some Greek inscriptions, with portions of a Ptolemaic statue, and—implying that the place was not reserved for foreigners—a statue of *Rameses VI.* The great Hyksos statues were 200 feet east of it; moreover, the granite, though black, was more granular than that of the Hyksos statues, and as to the style of the work, it was entirely different. The general attitude of Egyptologists is that of the agnosticism with which M. Naville and Miss Edwards from the first approached the tradition. It is evidently, therefore, of great importance to obtain evidence of the true position of the king in the history of Egypt. After fulfilling the perhaps invidious task of describing the monument and raising doubts, I now have the pleasure of bringing forward a piece of evidence confirming the early date.

Recently, when in the British Museum, I was attracted by the black granite lion from Bagdad, which has been so long a puzzle to Egyptologists. If anything is to solve this puzzle, it is the statue of King Raian. Dr. Birch and others settled, in sheer despair, that the cartouche upon the lion must have been an unprecedented manner of writing the name of a Hyksos king, "*Ra set nub*," for whose possible existence there was some slight and questionable evidence. A glance at the cartouche reminded me of the strangely written prenomén of Raian. A closer examination did not make it much clearer. It is wretchedly engraved, but the arrangement of the signs is at least referable to no other known king.

Now for the date. In most of the important sites in the eastern part of Lower Egypt, at Tanis, Nebesbeh, Khataaneh, Pithom, and Tell Muqdam, are found sphinxes or lions in black granite, which either preserve or bear traces of a massive mane or wig arranged in tapering tufts. Sometimes the whole head, face, and wig have been re-cut; but the re-worked surface is always recognisable. These sphinxes bear the cartouches of *Rameses II.* and of later kings, with abundant erasures showing their earlier date. They are previous to the XVIIIth Dynasty, when a different style of lion was invented, and the sphinx returned to the form of the XIIth Dynasty. The Bagdad lion is of the heavily maned black granite class. Thus these lions and the statue of King Raian belong to a dynasty whose monuments are found (so far) from Muqdam and Zagazig to Tanis and Pithom, while they are unknown in Upper Egypt—that is to say, to the Hyksos.

The Tanis sphinxes have distinct Hyksos features. They are the only specimens of the class whose heads are intact. Possibly, however, there is a distinction to be made between them and the rest. This fine and more independent work may belong to the later Hyksos dynasty, together with the great Hyksos statues, while the ruder style of the statue of Raian bears a closer resemblance to the style of his predecessors of the XIIth and XIIIth Dynasties. These monuments are found only in the north-east of the Delta; but I find it difficult as yet to accept this fact as evidence that the power of the Hyksos did not extend into Upper Egypt. It would rather seem that certain portions of the country were favoured (for very good reasons) by certain families of kings. The Saïtes favoured the western Delta; the Sebennytes, Bubastites, and Hyksos the eastern; the XVIIIth Dynasty Thebes and Upper Egypt; and so on throughout the history of the country. Seldom had kings like *Rameses II.* the determination, power, and activity to honour every shrine with costly monuments.

The Hyksos statue from the Fayum, taken in combination with the name of Wady Raian in the neighbourhood, and the Bahr Yusif are very curious coincidences. The agnostic will say that the connexion between Raian and Joseph arose as follows: the Hyksos were traditionally known to be connected with the Fayum. Raian was known to be a Hyksos king. The connexion of both the Bahr Yusif and of the Wady Raian with the Fayum suggested the connexion of King Raian with Vizier Joseph.

The truth is perhaps not far distant from such a conclusion. I leave it for the reader to choose whether he will consider that the connexion of Raian with Joseph was the origin of the names of the Wadi and the canal, or that the Wadi and canal gave rise to the tradition.

F. LEWELLYN GRIFFITH.

May 13, 1888.

P.S.—I have kept back this communication in order to procure squeezes of the cartouche engraved upon the Bagdad lion. Mr. Benouf gave me several excellent squeezes this morning, and I have re-examined the original. The work of the whole lion is extremely rough. The upper signs down to *s* are clear enough; but the last two signs were much more difficult to cut, owing to their shape, and to the fact that the work had to be done in the narrow space between the forelegs. The chisel seems to have slipped about hopelessly. The very least that can be said is that the signs cannot be read in very many ways, and the only cartouche hitherto discovered that will agree with it is the prenomén "*Ra-suser-n*" of Raian. I have very little doubt of the identification. I have throughout assumed the correctness of the reading Raian; but I may state, for the benefit of those who are not acquainted with the vagaries of cartouche names, that the name might be read Ianra, in which case it might be identified with Iannas, the fifth Hyksos king. This is, I believe, the opinion of many Egyptologists. Possibly Raian and Iannas are both genuine readings of the same name.

As to these Hyksos, they seem to be, as Manetho practically said, *Hequ Khakhet*, the sub-kings of the foreigners (shepherds), who had gradually made settlements in the north-east of the Delta, and whose occupation was no doubt chiefly pastoral. The title was revived in connexion with this very part of Egypt in the latest periods of Egyptian independence. I take this opportunity of publishing an opinion that I formed two years ago in preparing the memoir on the inscription of Nebesbeh, and which I now see very little reason to doubt.

F. L. G.

CORRESPONDENCE.

"TARATHA" AND "BABIA."

Queen's College, Oxford: May 27, 1888.

Dr. Robertson Smith's letter shows that I have laid myself open to considerable misapprehension. If he has failed to understand me, it is very likely that other scholars will do so too. I still hold to the opinions I expressed in 1880 in my paper on the *Monuments of the Hittites*. I there said that

"on the coins of Hierapolis or Bambykê (now Membij), which supplanted Carchemish both in name (Hierapolis) and actual existence, the simple 'Ati represents the same divinity as the compound 'Atar-'Ati. The latter, however, is the well-known Atargatis or Derkeo of classical writers. Atargatis, that is, 'Atar-'Ati, may be represented by the goddess 'Antarata of the Hittites' mentioned in the treaty concluded between the Hittites and Ramses II."

It will be seen from this that there is no real difference of opinion between Dr. Robertson Smith and myself as regards the original etymology of the name Atargatis. When, however, the name was corrupted into Taratha, it seems to me by no means improbable that a "popular etymology" connected it with the Aramaic *tera*, "a gate." Dr. Neubauer has shown that the Semites attached a certain sacredness to the gate; and the most natural explanation of the name of the goddess Babia is that which derives it from *bab*, "gate," especially when we remember that the masculine Babios, from *bab*, i.e. Bab-(ili), is given by the Syneklos as a king of Assyria. Of course, by "the great goddess of Carchemish"—a city, by the way, which had disappeared long before the age of Damaskios, and did not occupy the same site as Mabug—I did not mean the particular form of the goddess worshipped at Carchemish, but the goddess whose cult had originally been imported, at all events in part, from Babylonia, and who was adored by the Syrians under varying names and forms. Only I should now hesitate to speak of Babia as being a "Semitic translation" of a Hittite name.

A. H. SAYCE.

NOTES ON ART AND ARCHAEOLOGY.

An order in council has just been issued prescribing that the following shall be deemed to be "ancient monuments" within the meaning of the Act of 1882: (1) The Nine Stones, Winterbourne Abbas, near Dorchester; (2) the Chambered Long Barrow, known as the Gray Mare and Colts, near Gorwell, in the county of Dorset; (3) the Stone Circle on Tenant Hill, Kingston Russell Farm, near Dorchester; (4) the Cup-marked Rock at Drumtroddan Farm, Mochrum; (5) the Three Standing Stones, Mochrum; (6) the Moat-hill, of Druchtag, Mochrum; (7) the semi-circular earthwork on the sea cliff, Barsalloch, Mochrum; and (8) the ancient chapel at the Isle of Whithorn.

We hear, on good authority, that the town council of Christchurch, Hants, have resolved to pull down the remains of the Norman domestic buildings existing near the Castle keep, and have obtained the permission of Lord Malmesbury and Sir George Meyrick for this "improvement" in order "to open up the view of the Minster." The ruin, now overgrown with ivy, is one of few examples remaining in this country of the domestic architecture of the period; and the beautiful round chimney may be called unique.

MR. A. BERGEN has now on view, at his gallery in Old Bond Street, a collection of paintings by "old masters" of the Italian, Dutch, and Flemish schools.

THE next examination for certificates of the London Institute for the Advancement of Plain Needlework will be held at St. Michael's Schools, Ebury Square, on Saturday, June 23, at 11 a.m. All particulars can be obtained by applying to the secretary, 36, Balcombe Street, Dorset Square, N.W.

WE have received a catalogue of the summer exhibition in the Corporation Art Gallery at Derby. It comprises (1) the fine collection of modern pictures lent by Mr. Sharpley Bainbridge, of Lincoln, which is especially rich in examples of Mr. Birket Foster; and (2) works in black and white—either etchings, or drawings lent by the *Graphic*, the *Illustrated London News*, and Messrs. Cassell.

THE STAGE.

THE LYCEUM PROGRAMME.

AT last a change of bill has been effected at the Lyceum. The "Faust" of Mr. Willa—the "Faust" of the perfection of scenic effect—of a finished Mephistopheles and a picturesque Margaret—has disappeared. Two shorter pieces have taken its place. One of them—that in which Mr. Irving himself appears lateish in the evening—must be described as an abridgment of the "Robert Macaire" which Lemaitre rendered celebrated; and the other is "The Amber Heart," a drama not, perhaps, by a poet—for a poet must be either inspired or worthless—but by a poetic person, who can execute work of merit. We were unable to remain in the theatre long enough, on the first night, to see "Robert Macaire." It is generally thought that, skilfully as Mr. Irving treats the part—in the shape it at present assumes—he cannot, and probably does not expect to, add to an immense reputation by its performance. But further than this we shall, of course, not attempt to criticise. Everything that Mr. Irving does has its interest. Thoughtfulness in the conception, skill in the execution, are obviously certain to have been brought to bear upon it; and we can thus afford to wait—not exactly with patience, but assuredly without ingratitude—until he shall be pleased to bring out a "Macbeth," for instance, a "Coriolanus"—a something which must be an intellectual delight.

We have called Mr. Calmour a poetic person. The phrase pleases us. It describes so many people of culture and sentiment—birds, if you will, but for ever with clipped wings: incapable, for ever, of lofty flight. Mr. Calmour goes as high as any of them; and "The Amber Heart" is the usual mixture of prettiness, tameness, and the happy line here and there. But there is nothing whatever in it to make three acts of. The amber heart is itself a fortunate instrument. It protects a maiden from the assaults of love. The maiden loses the amber heart—knowing not its efficiency—and when it is lost she falls in love, and when she is in love it is found again. That is pretty much all the story. The author—whose elegance and good feeling doubtless deserve well of the public, and who may give us in the future a fair amount of work that is pleasant if not great—is singularly fortunate in its interpretation. If Miss Ellen Terry—an actress content with her own art, and one of the few actresses appreciating the art of literature—had done what Mme. Sarah Bernhardt has done: that is, written a play for herself,

the exactest measure she could ever have taken of her own capacities would have produced for her nothing more completely fitted to her than has been produced by Mr. Calmour. As raiment for Miss Ellen Terry, "The Amber Heart" is, so to say, tailor-cut, tailor-fitted. It reveals to perfection every line and contour of her talent. To drop the simile, Mr. Calmour's drama makes no strain upon her which she is unable to bear. It asks her to be pleasant, asks her to be playful, asks her to be fanciful, dreamy, poetic, eloquent, and gracious of gesture—demands that she shall be touching and kindly, sympathetic and suffering. It calls upon her, therefore, in many ways, and each call obtains its response. On the first night, her whole mind was in it, there is no doubt. She performed, or lived, in each line with curious and equal perfection. Unless there has been a very notable falling-off since then—and that is hardly likely, for the part is so entirely her own, the piece so dependent on the best exercise of the actress's personality—Ellaline must take rank as, perhaps, the most engaging of all Miss Ellen Terry's creations.

Miss Terry is supported by Mr. Alexander, who acts very well indeed, and by Mr. Hermann Vezin—who had a tremendous reception—who has infinite judgment, and who utters verse much more correctly than the lady in virtue of whose charm "The Amber Heart," it is quite possible, may hold the stage.

FREDERICK WEDMORE.

STAGE NOTES.

OUR readers will learn with interest that Monday has been appointed for the opening of Miss Calhoun's season at the Royalty. Miss Calhoun will appear that night as Hester Prynne.

MR. ERNEST PERTIVÉE'S and Miss BERTHA MOORE'S Dramatic and Vocal Recital will take place at the Marlborough Rooms. Mr. Pertivée is one of the best of our reciters, and Miss Moore one of the most accomplished and sympathetic of our younger singers.

"THE TAMING OF THE SHREW" was produced by the Daly Company, at the Gaiety Theatre, too late for notice this week. Its continual absence from the English boards must be enough to remind playgoers that little faith is placed, by managers here, in its success; but it has really been taken up seriously so very seldom that it is long since it has had a fair chance. This chance the Daly Company—with Miss Rehan and Mr. John Drew as Katherine and Petruchio—will unquestionably give it; and it is claimed for the performance that in America the comedy was discovered to be singularly fresh, practical, and, in a word, *de nos jours*. We shall be interested in seeing if a comparatively unconsidered piece will strike the London playgoer in this light. It is perfectly possible.

THE revival of "The Ironmaster" at the St. James's Theatre will probably be followed by the revival of "The Squire"; and with a certain number of performances of this singularly effective piece—with its great opportunities for the greatest English actress of domestic emotions—the season at the St. James's, and, with it, the Hare and Kendal management of the house, will conclude.

MUSIC.

RECENT CONCERTS.

Two sisters A. and E. Ferrari d'Ochieppos, gave a pianoforte and vocal recital at the Steinway Hall last Friday week. They are both fairly good pianoforte players. A feature of the programme was the performance of a Schubert-Liszt piece and of Henselt's "Si oiseau j'étais" on two pianos. It showed the result of much practice, for the *ensemble* was excellent; but we protest against such exhibitions in public. In class teaching the performance of a piece by two or more persons is often done, and with certain advantages to the students; but as a concert piece Henselt's delicate Etude will not bear doubling. The ladies have both powerful voices, but there was more character than charm about their singing.

SEÑOR SARASATE gave his third orchestral concert on Saturday afternoon at St. James's Hall. He played Saint-Saens's third violin Concerto. The first and last movements are not particularly interesting; but the Barcarolle is graceful, and it was charmingly rendered. The effective harmonic notes at the close secured a special round of applause. Señor Sarasate afterwards gave the Mendelssohn Concerto, taking the last movement, as usual, at a most uncomfortable pace for the wind players. Mr. Cusins kept the orchestra back whenever he got a chance. The violin solo was the concert-giver's "Fantasia on Airs from 'Carmen'"—a showy and difficult piece, but in questionable taste. The concert commenced with Beethoven's C minor Symphony, and concluded with an overture, "Béatrice," by Emil Bernard. The overture, French in character, with a touch of Weber, is not striking. We shall have, however another opportunity of judging the composer, for Señor Sarasate will play a violin Concerto by him at his fourth and last concert. The hall was filled in every part.

MDME. SOPHIE MENTER gave the first of two pianoforte recitals at St. James's Hall on Monday afternoon. She commenced with Liszt's Fantaisie et Fugue on the name Bach. A wild rhapsody would be a better title for the piece. It is very difficult, but for Mdme. Menter difficulties have ceased to exist. She played Beethoven's Sonata in E (Op. 109); but we do not like her reading: it lacks feeling and poetry. Schumann's "Traumeswirren," too, needs more sympathetic treatment. Three transcriptions of Schubert by Liszt, "Wohin," "Soirées de Vienne" No. 6, and "Marche Hongrois," were performed—the first two with wonderful delicacy, and the last with immense dash and brilliance. Mdme. Menter is a Liszt player *par excellence*. Her rendering of two pieces by Chopin, the dreamy Nocturne in G (Op. 37, No. 2) and the G sharp minor Scherzo, was not altogether satisfactory: it was Chopin dressed in Liszt clothing. A "Chant Polonais" was included in the Chopin selection, but it was only a transcription by Liszt of one of the Polish composer's songs. Why not announce it as such? A "Mazur" by Balakireff and some more Liszt pieces, including the formidable "Don Juan" Fantasia, brought the recital to a highly successful close. When Mdme. Menter appeared in London, it was in the "Don Juan" Fantasia that she first displayed her great strength and her brilliant technique. Since then she seems to have gained in both.

THE first of two orchestral concerts was given at "The Lothians" Studio, by permission of Mr. M. J. Pettie, on Wednesday evening. The orchestra, including some of the best members of the Crystal Palace and Richter bands, was under the direction of that young and rising artist, Mr. Hamish MacCunn. The wind, however, overpowered the strings, and

the tone of the violins was far from satisfactory. Mr. MacCunn showed that a clever composer is not of necessity a good conductor. He, of course, succeeds better with his own works; but he has yet much to learn before he can do justice to overtures like the "Meistersinger" and the "Midsummer Night's Dream," the first two pieces in the programme—and, by the way, a somewhat incongruous juxtaposition. Both of Mr. MacCunn's successful compositions—"The Land of the Mountain and the Flood" Overture, and "The Ship o' the Fiend" Ballad—were included in the programme. Miss Marian Osborn gave a fair rendering of Schumann's Concertstück (Op. 92); and Mr. Henry Pope was encored for his singing of a lively song with heavily scored accompaniment, by Mr. MacCunn, entitled "Pour forth the Wine."

MDME. CHRISTINE NILSSON, whose name will long be associated with "Margherita" and "Martha," "Elvira" and "Elsa," gave the first of two farewell concerts at the Albert Hall on Thursday afternoon. A large crowd assembled to greet and to applaud the favourite of former years. Her high notes may have lost in brilliancy, but the middle ones are still rich and sympathetic. The programme included "Elsa's Dream," "I know that my Redeemer liveth," the "Jewel Song," and Boito's duet "La Luna Immobile," which last was sung with Mdme. Trebelli. Mdme. Nilsson's first encore was Schubert's Serenade. Mr. Sims Reeves, Mr. Henschel, and Mr. Foote added to the attractions of the afternoon. Miss Kuhe played a pianoforte solo, and Mr. Cusins conducted the orchestra. J. S. SHEDLOCK.

LITERATURE.

THE SPEAKER'S COMMENTARY ON THE APOCRYPHA.

"The Holy Bible with Commentary."—*Apocrypha*. Edited by Henry Wace, D.D. In 2 vols. (John Murray.)

Few young people of the present day have read the Apocrypha, or possess more than the vaguest idea of its contents. Pictures and literary references have made them familiar with the names of Tobit, Judith, and Susannah; but of the stories in which those personages figure they probably know less than of the legends of the Madonna. Nor, indeed, if they wished for further information, would it be easy for them to gratify their curiosity, for the Apocrypha has long ceased to be reprinted in our English Bibles, and is not readily accessible elsewhere. The causes that have led to this neglect are well traced by Dr. Salmon in the learned and very entertaining introduction which he has contributed to the two stately volumes recently issued by Mr. Murray. In accordance with an overwhelming consensus of ancient authority, the reformed Church of England decided to exclude from the inspired canon of the Old Testament all those books or parts of books that did not exist in the Hebrew original, although they were included in the Septuagint version. The Roman Catholic Church, as is well known, judged differently; and, as if in defiance of the New Learning, gave the stamp of divine authority to books which the most learned among her own fathers had rejected as uncanonical. As matters now stand, the uncritical attitude of the Council of Trent may have been no misfortune to the claims of the Church which it represented. Dr. Salmon justly observes that "the acceptance of the Apocrypha as inspired necessitates a low view of inspiration." But to Catholics like Prof. St. George Mivart a "low" view of inspiration is precisely that which leaves it least compromised by the results of modern criticism. If the "Song of the Three Children" is a pious fiction, so also may be the story of their fiery ordeal. If Judith contains historical impossibilities, so also may Esther. If the glorification of a suicide in the second book of Maccabees leaves the Christian conscience unpugged, the panegyric pronounced by Deborah on a particularly odious assassination may equally fail to disturb it.

Apart from such questions, these books well deserve more attention than they generally receive from English readers, and to include them in the Speaker's Commentary was a wise and liberal policy. In the words of the preface, "it is hoped that these volumes will afford the latest information which modern learning has supplied on the subject of the Apocryphal books, and will furnish a

trustworthy guide in their study." The enormous amount of labour and learning expended on the introduction and notes would perhaps have been more in keeping had they accompanied a new critical edition of the Greek text; and no popular demand can be expected for such a bulky and expensive publication; but what the French call a *suocès de bibliothèque* is assured to the work. With perhaps one exception, the various portions have been assigned to thoroughly well-qualified specialists; and if, in many cases, their labours have added nothing to the existing stock of knowledge or conjecture on the subject, or have led to merely negative results, it is perhaps because nothing remained to be learned or guessed.

In a series of commentaries so extensive and embracing such an immense variety of topics, it was natural that some errors and oversights should remain uncorrected. The following points are suggested for revision. Dr. Salmon refers to the treatise *De Vita Contemplativa* as a genuine work of Philo's (Preface, p. xxi.), in apparent ignorance of the fact that its spuriousness is now generally admitted. Mr. Lupton, commenting on 2 Esdras xv. 51, refers for "a picture of jealous cruelty" to "Baruch vi. 43"—a passage which has no existence. What he meant to write was probably "Baruch iv. 12 and 33." In collecting precedents and analogues to the maxim "Do unto others," &c., Prof. Fuller omits to notice its complete anticipation by Plato (i. 202, *cf. Legg.* 913a). In a note on Judith Mr. Ball attributes to Nero the wish "that the people of Rome had but one neck, that he might behead them all at one stroke" (i. 295). Nero was, like M. de Robespierre, "très aimable en société" and would have shuddered at such an idea. The wish was expressed by the homicidal maniac Caligula. Prof. Edersheim, finding "the idea of an essential dualism of contraries" broached in Ecclesiasticus, calls this a "glimpse of Aristotelian philosophy" (ii. 15). Aristotle limited the dualism of contraries to the sublunary sphere, and, therefore, did not regard it as essential. A reference to Pythagoreanism would have been more apposite. In the note on 1 Maccabees i. 3, Canon Rawlinson speaks of 180,000 talents as equal to above £43,000,000 (ii. 383); while in the note on v. 23 of the same chapter 1,800 talents are made equal to nearly £350,000. There must be a mistake in one or other of these statements, probably in the second. It is incorrect to speak of "the murder of Hannibal by Prusias," as the same scholar does (p. 457), seeing that the great general poisoned himself—although it is true that he did so to escape being murdered.

The one exception to the general character of the work for exact scholarship is the commentary on Wisdom by Archdeacon Farrar. Here the blunders are so numerous as to require a separate paragraph for their exposure. The archdeacon's notes are deluged with quotations and references, which prove more for the extent of his reading than for the fidelity of his memory. A long and sufficiently hackneyed passage from Pope's "Essay on Man" is given twice over (i. 429 and 465), and some lines of Scott quoted on p. 483 are repeated on p. 525. This, however, is a harmless sort of forgetfulness. It is

more serious when we find the well-known passage beginning "Felix qui potuit" attributed to Lucretius (i. 522). On the same page we are told that "the word *συνειδησις* is found in Euripides *Orest.* 396," where the word actually used is *σύνεσις*. Here Dr. Farrar was evidently misled by a reference to Stobaeus in one of his German authorities which he did not take the trouble to verify, or he would have found that Euripides is cited in illustration of the idea of conscience, not of the word which afterwards came into use. On the next page one of the most familiar lines in the English language is printed:

"Strong walls do not a prison make."

In the note on chap. i. v. 16, the reference should be to Isaiah xxviii. 15 instead of to "Psalm xxviii. 15" (i. 430). Chap. vii. v. 2, note, for "Arist. *Hist. Animal.* x. 4," we should read vii. 4; and for "Terent. *Adelphi*, iii. 5, 28" read 4, 29. Dr. Farrar seems to read everything but his own proof-sheets. Three quotations from Virgil, Aristotle, and Dante, amounting altogether to six lines of poetry, contain six mistakes or misprints (pp. 443, 469, and 470). The archdeacon does not often air his Hebrew, which is fortunate, as out of the few words in that language which occur six are miswritten (notes on chaps. v. 1, vii. 27, xii. 23, xvi. 17 and 20). Possibly the printer may be responsible for these slips, as well as for the strange combination *ὁλωδὸς ἀρχή*, attributed to Aristotle (p. 488); if so, Dr. Farrar must be singularly unlucky, as typographical errors are of extremely rare occurrence in the notes of his collaborators. The foregoing instances are bad enough, but they are not the worst. Of all the Apocryphal books Wisdom is most profoundly affected by Greek philosophy, and therefore demands the closest acquaintance with the literature of that subject on the part of its interpreter. Such an acquaintance, however, Dr. Farrar does not possess. He attributes to Xenophanes the saying of Parmenides, "It is the nature of limbs that thinketh in men" (p. 431). He tells us that "the conception of the eternity of matter was fixed by the aphorism of Aristotle (*Phys.* i. 4, sect. 9) that 'nothing can be made out of nothing'" (p. 488). In the passage referred to Aristotle mentions the principle in question as a long-established opinion held in common by all physical philosophers. A little further on we read that "the word *ὕλη*, in the sense of 'matter,' first occurs in Timaeus Locrius" (*sic*). Dr. Farrar ought to know that the treatise attributed to Timaeus Locrus is a spurious post-Aristotelian production. He should also know better than to quote the *De Mundo* as a work of Aristotle's, especially when he quotes it to illustrate a word that never occurs in the genuine writings of Aristotle (p. 427). Like Dr. Salmon, he treats the *De Vita Contemplativa* as a genuine work of Philo (p. 407 note, and note on Wisdom, iii. 13, where there is also a characteristic blunder about the number of Solomon's wives and concubines—a figure known to every schoolgirl); and not content with this he mentions Zeller as if that great scholar still believed in the existence of the Therapeutae (p. 518); whereas in the third edition of the last volume of his *Gräechische Philosophie* (pub-

lished seven years ago) Zeller gave in his adhesion to the arguments of Lucius, proving them to be a fiction. It is rather too bad that the maxim, "Let us eat and drink, for to-morrow we die," which first originated with Jews, and was thrown into general circulation by a Jew, should be called "the Epicurean motto" (p. 417), when, as Dr. Farrar well knows, it would have been repudiated by Epicurus himself and by all his genuine followers; but to charge the followers of Antisthenes with the "degraded sensualism" depicted in Wisdom ii. 6 *sqq.* is, if possible, a still more inexcusable muddle.

There are but few passages in the Apocrypha that can be brought to bear on disputed points of Old Testament criticism. Much the most important is the long review filling chaps. xlv.-xlix. of Ecclesiasticus, where, in a very full enumeration of Hebrew heroes and prophets, the names of Daniel and of his three friends do not occur. It is hardly possible that they could have been left unnoticed had the author been acquainted with the Book of Daniel; hardly possible that he could have remained unacquainted with such a book had it existed when he wrote (about 200 B.C.). Yet the omission is passed over in silence by Dr. Edersheim. On the other hand, he observes that,

"considering the developed angelology in the Book of Daniel, it seems strange that no reference should be made in it to Satan. Indeed, the apparent generality of the belief as implied in Ecclesiasticus seems incompatible with this silence in Daniel, if the authorship of the latter were posterior to that of Ecclesiasticus" (ii. 116).

Dr. Edersheim's first sentence contains the answer to his second. On any view the author of Daniel knew all about Satan. Perhaps, if he did not mention him, it was because there was no occasion to do so. Canon Rawlinson makes much of an allusion to Daniel in the dying speech of Mattathias (I. Maccabees ii. 59-60):

"His dying words were tolerably sure to have been remembered; and their recorder would have shrunk from interpolating into them a passage which, if Daniel were a historical romance, written in the thick of the struggle, his contemporaries would have known that Mattathias could not have uttered" (ii. 404, note).

It is supposed that I. Maccabees was written at least seventy years after the date assigned by modern criticism to Daniel, which by that time may well have come to be regarded as historical and canonical. Canon Rawlinson knows perfectly well that ancient historians had no scruple in putting fictitious speeches into the mouths of their characters, on their deathbeds and elsewhere (see his note on the pretended dying speech of Epiphanes in chap. vi.); and he knows that this particular historian does not shrink from much more bare-faced fabrications than the one here supposed. In the presence of such logic it is rather amusing to find Canon Rawlinson's opinion about the date of Esther quoted by Prof. Fuller as "the conclusion of historical criticism as distinguished from the subjective and 'tendency' criticism which refers the Book of Esther to the Maccabean period" (i. 366). The piece of German slang used by Prof. Fuller is apparently a way of saying that those critics who come to conclusions

that he does not like are actuated by some other motive than the love of truth. His other unimpeachable authority for the early date of Esther is Prof. Sayce, whose name might carry greater weight were the discussion one about the habitat of trees, and against which we may set the perhaps equal authority of Dr. Kuenen. Prof. Fuller himself talks airily of "the Greek Bible used by our Lord" (i. 367), as if such use were a fact too well-established to need proof. Mr. Ball, commenting on the "Prayer of Manasse," defends the authenticity of the narrative in Chronicles respecting that monarch's captivity and repentance against the objections of modern critics; but he omits to notice one of the most important, which is the evident assumption of Jeremiah—almost a contemporary—that the sin of Manasseh had remained unpunished (Jer. xv. 4). As Wellhausen justly observes (*Prolegomena*, p. 215), the mention of Manasseh in a cuneiform inscription, so triumphantly adduced by the Chronicler's defenders, rather tells against his story, since it represents the Jewish king in the character of an obedient vassal. Perhaps the feeblest of all these incidental apologetics is Dr. Edersheim's appeal on a disputed point of Hebrew scholarship to the authority of the translator of Ecclesiasticus. In translating the blessing promised to Abraham (Gen. xxii. 18),

"it is the contention of most modern critics that the Hebrew should not be rendered (as in the LXX.): 'In thy seed shall all the nations of the earth be blessed,' but that the correct translation is: 'With thy seed shall all the nations of the earth bless themselves.' It is instructive to find that, in opposition to the confident assertions of these critics, the younger Siracide (who presumably knew Hebrew) adopted the first translation, probably quoting from the LXX." (ii. p. 18).

Dr. Edersheim seems rather proud of his parenthetical sarcasm, as he repeats it *totidem verbis* on p. 211. But the LXX. "presumably knew Hebrew" as well as the younger Siracide, so that his adhesion adds nothing to their authority. Curiously enough Dr. Edersheim accuses his own oracle of "not unfrequent mistakes, due either to misreading or to misunderstanding of the original Hebrew" (ii. 23). With regard to the true force of the Hithpael of *barak*, one wonders what Dr. Edersheim makes of such passages as Is. lxxv. 16, and Jer. iv. 2, referred to in Mühlach and Volck's *Gesenius* as examples of its reflexive significance.

It is regrettable that such blots should disfigure the pages of this excellent and scholarly work; and it is to be hoped that the learned contributors will see their way towards removing some at least of them in the next edition. ALFRED W. BENN.

Poems. By George Morine. (Bell.)

THESE poems are to some extent remarkable, seeing that they are now published for the first time, when sixteen years have elapsed since the death of the author, and are put forth to the world not by any relative or connexion, but at the cost and by the liberality of a Yorkshire gentleman, Mr. Richard Morris, of Beechfield, under the editorship of the Rev. Richard Wilton, Rector

of Londesborough. Born in the same year as the Laureate (1809), the poet is said to have been among the earliest of Lord Tennyson's admirers, and to have possessed a copy of the *Poems* of 1833, inscribed with the words: "George Morine, from the author," which is now in the possession of Mr. Wilton. As is so often found to be the case with persons of surpassing genius, Mr. Morine was the offspring of parents belonging to different races—his father being of French descent, while his mother, whose maiden name was Lois Harland, was a native of Yorkshire. A portrait of him, painted by Mr. W. Beetham, was exhibited at the Royal Academy in or about the year 1838; and the likeness which forms the frontispiece of this volume is taken from a pencil-sketch of about the same date, and by the same artist. Coleridge is said to have grieved over the fact that he had not a noticeable face; but, if we may trust this likeness, Mr. Morine had no reason to complain in this respect, as the features are exceptionally striking, and the broad massive brow reminds one of Prof. Shairp's description of Clough in his lines on "Balliol Scholars."

The first fifty pages of the volume consist entirely of sonnets, and it is in this form of verse that his best work appears to have been accomplished by the poet. These sonnets, I may state at once, resemble, and are but little inferior to, those of Wordsworth and Hartley Coleridge; that is to say, they belong to the old school of sonnet-writers, and have not the rich colouring or the adorned, yet passionate utterance, of the compositions by Rossetti or those by Mr. Dowden. But they have a beauty of their own; and we are quite prepared to endorse the opinion of the critic referred to in Mr. Wilton's preface, who wrote respecting them, "The rhythm and cadences are often truly admirable—full, swelling, and tender—grave, and yet entirely musical." Here, for example, are two full of pathetic melody, which we may be pardoned in imagining that Milton himself might have read with pleasure, as they indicate a study of those eighteen "soul-animating strains" which form the sum of Milton's English sonnets.

TO WILLIAM BEETHAM.

December 1836.

"FRIEND of my bosom, I could learn to chide,
And vex with murmurs harsh, the gentle Power
That guards the Painter's room—Art's hallowed bower—
For that she keeps thee tarrying from my side:
But thou art winning honour, and my pride
In thy success, makes light the lagging hour,
Though dark December weeps in silent shower,
And thou, though promised long, art still denied.
Yet prithee come ere winter pass away!—
Come while the tapers gleam—while on the wall
The firelight dances, and the shadows fall
From many a glimmering bust in quaint array:
Come let us sit till midnight and recall
The fading dreams of many a lapse'd day."

"Man leaves a Monument for Earth to Hide.
"Man leaves a monument for earth to hide;
His generation and his name decays;
His footsteps vanish from the busy ways
Where life and death sit mocking side by side.
The warrior-kings who conquered far and wide,
Steeping in blood their perishable bays,
Now slumber with the dead of other days,
Their mighty bones to meanest dust allied!"

'Peace!—babbling moralist! Thy words are cast
Unnoticed on the world's tumultuous tide;
Man heeds no voice save passion's trumpet-blast—
No ensign save the banner of his pride:
Lord of to-day, he holds the present fast,
He dares the future and derides the past!'"

It is needless to point out that these are compositions of unusual merit, for they speak for themselves, and there are others in the volume equally good. Among such I would especially mention "Fanchon in Solitude," "Gott's Statue of the Young Apollo," "Wadworth Churchyard," "George Herbert's Temple," and "To the Memory of Sophia Woodrooffe."

But there is also another sonnet (p. 30) to which reference should be made, as it has become somewhat famous, owing to the very favourable notices which it received a few years ago, when included in an anthology of sonnets, edited by the present writer, one critic observing that "if the author of it left other work as good as this it were surely to be wished that it should be more widely published." As it may possibly be unknown to some readers of the ACADEMY, it is here quoted as an example of the poet's best work.

"SUNSET.

"Day—like a Conqueror marching to his rest,
The warfare finished and the victory won,
And all the pageant of his triumph done—
Seeks his resplendent chamber in the West:
Yon clouds, like Pursuivants and Herald's dress'd
In gorgeous blazonry, troop slowly on,
Bearing abroad the banners of the Sun
That proudly stream o'er many a warrior's crest.
In the azure field a solitary star
Lifts its pale signal, and the glorious train
Of errant sunbeams, straggling from afar,
Reform their glittering ranks, and join again
Their father Phoebus in his golden car,
Whose panting steeds have snuffed the Western main."

Of the lyrics and miscellaneous verse which form the latter section of the book, it is not necessary that I should give any lengthy criticism, as they do not call for any special remark. They are for the most part bright, graceful, and melodious; but some of them are lacking in originality, and a few are almost commonplace, both as regards subject and execution. This defect may possibly be due to the fact that the poet's life was one so singularly devoid of incident that he himself observed respecting it in one of his letters, "The sunny side of the street in winter, and the shaded side in summer give the sum of its variety." Mr. Wilton, however, informs us in his preface that the MSS bequeathed to him by Morine include a journal full of interesting personal details and literary criticism; and surely it is to be regretted that extracts from this journal have not been added as an appendix at the end of the volume.

But to return to the lyrics, it may be observed that some of them will please most readers, as, for instance, that at p. 65, of which the following are the two first stanzas:

"As down Life's stream we glide, our sight
Turns backward with a sad delight;
And wanders o'er
Each feature of the pleasant shore
We love, and leave for evermore.
That shore is in the distance now;
Faint and more faint its outlines grow:
And one by one,
Love's lamps that once so steadfast shone,
A moment glimmer—and are gone!"

There is, moreover, another poem that should not be left unnoticed, as it is a very striking and noble composition. It is entitled a "Dirge," and has reference to the death of Charles David Faber, who died in the year 1857. The late Lord Houghton, it may be mentioned, was especially pleased with the poem, of which we give the first and concluding stanzas:

"Raise the pillow, smooth the bed;
Gently turn that reverend head;
Shade the lamp, nor let its glimmer
Vex those eyes that still grow dimmer—
Dim, and dark, and dead."

"Life is fleeting—life has fled!
Drop the curtain round the bed:
Through its clay-encumbered portal
Wanders forth a Soul immortal—
Dust retains the dead."

"Bend the knee, and bow the head;
Let the last farewell be said:
So leave the chamber of the dead."

I think that I ought not to close this review of an interesting volume without some expression of the thanks due to Mr. Morris and Mr. Wilton for having given to the world poems which, though they may not be of the highest order, are, nevertheless, too good for us to be willing that they should pass away unrecorded and unpublished.

SAMUEL WADDINGTON.

Four Oxford Lectures, 1887. By Edward A. Freeman. (Macmillan.)

THIS volume consists of four lectures delivered lately by Mr. Freeman as Professor at Oxford of Modern History. The first two lectures contain a retrospect of the affairs of Europe during the last fifty years, so far as regards what the author calls "the political geography of the subject," that is, the changes wrought in the map of the Continent from 1837 to 1887. The succeeding lectures deal with a theme in which Mr. Freeman is more at home; while dwelling on the marked contrast which Teutonic conquest in Gaul and in Britain presents through its results in history, they maintain the positions held by the writer in well-known historical works, and refute the theories of opposing critics.

The book is not without characteristic merits; but it is, we think, less worthy of praise than any other product of Mr. Freeman's studies. The lectures which treat of the events of our own age abound, no doubt, in research and learning, often express noble and just sentiments, and contain passages of real and earnest eloquence. But, in our judgment, they misinterpret the march of events over large spaces; they often fail to assign the changes of the last half century to their true causes; they are occasionally singularly unjust and partial, especially as to leading men who have played a great part in a mighty drama; and they are more or less pervaded by views on politics as questionable as those of Rousseau and of Necker. Mr. Freeman, in short, condemns himself, when, with scornful irony, he talks of "professors who venture to open their mouths on current affairs," and when, with self-complacent vanity, he refers "to a man who knows how to grapple with the living problems of his own time." His historical estimate of modern Europe seems to us, in a great measure, untrue and

misleading. As for his excursions in the domain of antiquity, he has, we think, done very much better; he has successfully vindicated, to a large extent, the conclusions he has formed against recent objectors; but even here we cannot wholly accept the inferences he draws and the doctrines he lays down. The book, we should add, is much disfigured by the defects of Mr. Freeman's manner and style. It abounds in clumsy and pedantic arrogance; it is full of tautology and repetition; it is injured by endless obscure allusions; and the sentences are sometimes so ill-constructed that the author's meaning is not easily perceived. In one respect Mr. Freeman, we fear, will obtain little gratitude from his last allies in politics. He has flung himself into the cause of Home Rule without a particle of knowledge of the state of Ireland; but his dictum that "the relation of Home Rule is that of a *dependency* which manages its own internal affairs" is rank treason in the sight of true Irish Nationalists.

The accession of Queen Victoria to the throne placed England and Hanover under two sovereigns. This separation—in Mr. Freeman's judgment the most important fact of 1837—has led him into a long review (full of curious learning, but out of place) of the continental dominions of the English monarchy; but he remarks with truth that the effects of the change were not fully revealed until 1866, when Hanover was swallowed up by Prussia. Passing from this to his main subject, we agree with Mr. Freeman in his general summing up of the results of the great events he has sketched:

"On the whole the domain of right has been widened; the domain of wrong has been cut short; . . . our fifty years have been, on the whole, fifty years of advance for the cause of right and of freedom."

But his judgments on many of the chief passages of the time are, we think, often unsound and wrongheaded. The settlement of Europe in 1814-15 was, for instance, "revolutionary," in a certain sense; but it does not deserve unmixed censure, for it opposed a barrier to the aggressiveness of France, and, in a lesser degree, to that of Russia; and it is ridiculous to describe the Crimean War—a real effort to maintain the balance of power, and to set limits to Russian ambition—as a shedding of "Christian blood by Christian hands, for no cause but to keep the yoke of the unbeliever upon unwilling Christian nations." Not less unjust and historically false are Mr. Freeman's ponderous gibes against "the House of Habsburg and Lorraine," and the tyranny it has practised "in its family estate." The Austrian, like the British monarchy, to a certain extent represents the influence possessed by Rome in the ancient world—the welding together under a common government, with results not on the whole fruitless, of communities differing in race and origin; and be this as it may, two Austrian chiefs, Eugene of Savoy and the Archduke Charles, were, perhaps, the saviours of German independence. These are only a few out of many instances of Mr. Freeman's distorted views; but his worst error in this part of the book is his estimate of the agencies which throughout this period have promoted the cause of European progress. Diplomats and statesmen, according

to him, have been conspirators against the rights of nations. He does not mention the name of Canning with reference to the Holy Alliance, or of Palmerston in the liberation of Belgium. Napoleon III. was a mere plotter, and Cavour a clever but powerless trickster, in the events that led to the freedom of Italy; and even Bismarck played no decisive part in the drama that ended in German unity. How utterly untrue these ideas are is evident if we look back to 1848. The wild, popular movements of that memorable year, uncontrolled by minds accustomed to rule and versed in the difficult art of politics, ended in reaction and complete failure; and the tendencies of the age towards national freedom were only realised when directed by capable and far-seeing statesmen. As for another of Mr. Freeman's dogmas, we agree with him that modern history shows that "nations work out their own destinies"; but we must question a notion he evidently holds, though he does not express it in plain terms, that the mass of a nation must, as a rule, be right in determining its conduct and marking out its course. We are happy to perceive that he has no sympathy with the forcible annexation of Danish Sleswick, and that he even doubts the wisdom of tearing from France her loyal children in Alsace and Lorraine—Elsass and Lothringen we cannot write. But these instances of spoliation were not, as he hints, the work of military despots and chiefs. They were pandering to the revolutionary greed of Germany, the most overbearing of nations in success.

We have found fault with this part of Mr. Freeman's book; in return we quote the following passage, which abundant knowledge and earnest feeling make a specimen of real historical eloquence:

"Stand where we will in the circuit of the Golden Shell, by the small remnant of that *all haven* where the shipmen of Canaan first cast their anchor, and into which Belisarius bore his victorious eagles—stand on the plain where the legions of Metellus bore up against the brunt of the charging elephants—look from the height whence Hamulthar the Thunderbolt looked from his unconquered camp over land and sea—look from the less rugged height which good King William crowned with his glorious minster—stand by the tower whence tolled the vesper bell that rang the knell of foreign bondage—from all and every of these spots we may look forth on yet another spot, whose tale of our own days ranks beside all, surpasses all, which finds days and spots like itself in the story of Syracuse, but which finds more of the truth in the story of Palermo. Beyond the bridge of George the Admiral, beyond the pleasure-house of Roger the King, the eye turns to the left to look at that slight sinking in the mountain which marks the pass where the thousand followed the Deliverer to his work. And think of that other day, when that same Deliverer stood face to face with the king for whom he had won two kingdoms; how he laid down the rod of the ruler and the sword of the warrior, and turned aside, greater than honours, greater than crowns, greater even than the applause of a rejoicing world. And yet, we may ask, was not his work too swift, too thorough? By the throne of Roger, by the tomb of Frederick, by the many-coloured form of the great Admiral, we may be allowed to ask whether such a style as that of King of Sicily should so lightly have passed away from the roll of royal titles. We may be allowed to ask whether the crown of the kings and

Caesars who made Sicily the most brilliant realm in Europe could be unworthy to rest on the brow of any ruler of mankind. The crown of Monza, the crown of Palermo, why has not a King of Italy and Sicily taken each in turn to its own home?"

The second division of these lectures, though we do not wholly agree with the author, is nevertheless an able performance worthy of an occupant of Mr. Freeman's chair. To understand the nature and the characteristics of the settlement of the Teuton in Britain, we should direct attention, Mr. Freeman tells us—and this, we think, is perfectly true—to the essential differences of Teutonic conquest in the lands parted by the English Channel. The Frank overran and ruled in Gaul; but the social, and even the political, structure which he found in existence was but slightly changed: the Gaelic lands and cities retained their names; the Romance tongue remained the national language; and the conqueror accepted the faith of the conquered. It was wholly otherwise within the shores of Britain. The Saxon, wherever he made his settlements, all but effaced the institutions of Celt and Roman—within the greater part of the vanquished country almost every word on the map was altered; the dominant speech became that of the Teuton; and Christianity was, for many years, replaced by the worship of Thor and Woden. This undoubtedly proves that in vast tracts of Britain there must have been a displacement of the conquered race and a substitution of the conquerors in its stead; and Mr. Freeman has, we think, established his case—though he indulges in somewhat pedantic merriment—against those objectors who dwell on the fact that whole districts of Britain remain British in race and even, in some degree, in language, and who pay no heed to the qualifying bounds within which he has confined his argument. Mr. Freeman, too, we believe, stands on sure ground when he assures us that the Teutonic influence is the main fact in English national history, the essential force in English national life; though, in our judgment, he certainly underestimates the importance of other concurring elements, and he probably ascribes, in too large a degree, the institutions, the laws, and the civilisation of England to a purely Saxon or Teutonic origin. The Celt in Ireland transformed both Norman and Saxon; and we are by no means confident that the Celtic genius has not had a more potent effect in determining the character of the English race, and especially in forming our literature and art, than is supposed by writers of Mr. Freeman's tendencies. As for the England of the last eight hundred years, it owes more to the Norman conquest, to Norman centralisation, and to the Church of the Norman, than Mr. Freeman, we suspect, would admit; but this is an enquiry outside our present subject.

WILLIAM O'CONNOR MORRIS.

A THEATRE IN SHAKSPEARE'S TIME.

Zur Kenntniss der alt-englischen Bühne; nebst anderen Beiträgen zur Shakespeare Literatur. Von Karl Theodor Gädertz. Mit der ersten authentischen innern Ansicht des Schwan-Theaters in London, und Nachbildung von Lucas Cranach's Pyramus und Thisbe. (Bremen: C. Ed. Müller.)

ALL lovers of Shaksperian literature and

students of the English stage will hear with delight of the discovery of the first authentic representation of the interior of an old English theatre, dating from 1596. This most interesting drawing is contained in a quarto MS. preserved in the university library at Utrecht, under the title:

"A. van Buchell. Aanteekeningen van den meest verschillenden aard; excerpten uit handschriften en boeken enz. enz. Op pag. 132 geteekende Afbeelding van het theater genaamd de Zwaan te London (c. 1600)."

Underneath the quaint delineation, of which the book before us gives a facsimile, stand the words: "Ex observationibus Londinensibus Johannis de Witt."

Of original drawings of London playhouses in Shakspeare's time very few have come down to us; and those show only the less important part—namely, the outside of the buildings. The earliest inner view, which represents the Red Bull Theatre, dates from 1662; that is, more than half a century after Shakspeare's withdrawal, and forty-six years after his death. Now, here we have—as Dr. Gädertz proves by a well-connected chain of arguments—a pen-and-ink drawing, somewhat faded through age, whose date must be fixed at 1596, when the greatest dramatist of all nations and all ages was still alive. Unfortunately, De Witt, a Dutch scholar, who made it a point during his journeys to enter into relations with all prominent scholars and artists, had no opportunity of seeing Shakspeare himself, who had in that very year retired to Stratford.

The interior of the Swan Theatre ("cujus intersignum est cygnus; vulgo te theatre off te cijn")—which could seat 3,000 persons under cover,* not counting the pit (or yard) where spectators stood in the open air—is likened in the MS. to a Roman amphitheatre. To judge from the representation, it was of oval form, in accordance with the allusion in "Henry V." to the Globe Theatre ("this wooden O"). The actual stage was in the open air. It was square, constructed of wood, resting on colossal blocks, the two front ones of which are visible in De Witt's drawing. We see on the stage two actresses, apparently a queen and a lady of the court, in the dress of Elizabeth's time. A messenger, with a martial Henri Quatre beard, lance or staff in hand, runs up to them with a seven-league stride. At the back of the scene is the "tiring-house" (*mimorum aedes*), its projecting roof supported by two large, high columns with capitals. The first storey of the tiring-house is divided into boxes separated by columns. There we observe ("over the stage in the lord's rooms") distinguished persons or unoccupied actors looking at the performance. A small upper storey above the tiring-house—covered, like the latter, with straw or bulrushes—rises beyond the roofing of the amphitheatrical galleries, which are also adorned with many columns. From this upper turret, where a banner floats with the sign of the "Swan," the Thames could,

* Regarding the capacity of the theatre, the words used by De Witt are "quippe quod tres mille homines in sedibus admittat." Can any of our readers adduce any evidence to corroborate a statement which seems to err so largely on the side of excess?—ED. ACADEMY.

no doubt, be seen. There are two windows and a door in it; at the door a trumpeter stands, who gives the "three soundings" as an announcement to the people outside that the performance is soon to begin. We see the place for the orchestra also, and the openings for ingress. Between the stage and the yard, where spectators had to stand exposed to every kind of weather, there are no dividing palings.

From the notes copied by Arend van Buchell from the MS. of Johannes de Witt, the original of which is lost, we learn that the Swan Theatre was built of flintstone ("of which there is an immense mass in Britain"), with wooden columns, "whose marbled colour might deceive even the most expert." The prominent position of the Swan Theatre, as well as its size and splendid arrangements, become evident, for the first time, from this description. As to the chronology, Dr. Gädertz aptly quotes a passage from the poetical account of the travels of Prince Ludwig of Anhalt-Köthen, who was in London in 1596, and who, later on, became known as a member of a society for the restoration of the purity of the German language. That passage agrees closely with De Witt's description of the four chief playhouses, as well as of the bear-gardens and the places for bull and dog-fights; and this—not to mention stronger arguments tending the same way—seems to fix 1596 as the likeliest date for De Witt's sojourn in London.

Arend van Buchell, who has preserved the important extracts, was a friend of Johannes de Witt—"born in the same year (1565) and brought up with us," as De Witt himself writes. The latter was canon of St. Mary's Church in Utrecht; but, having obtained a dispensation from his duties, mainly spent his time in travel, collecting materials for the history of art and literature. Among the MSS composed during his journeys was a catalogue of painters and paintings, entitled *Coelum Pictorium*. It was a work similar to the *Schilderboek* of Karel van Mander (1604), but, as De Witt says, far more comprehensive, though he does full justice to the researches of his predecessor. This catalogue was delayed in publication. De Witt then went to Italy, which he had longed to see for many years, and there again industriously made studies to complete the work. He was on the point of returning to Utrecht, when he died suddenly in 1622.

A mine of knowledge was thus irretrievably lost, so far as our present information goes; for the whereabouts of De Witt's MSS. is no longer known.

"Did he die at Rome or at Venice?" Dr. Gädertz asks. "Did the things he left remain at either of these places? Who was with him at the last moment? Who took care of his burial? Who was his heir? Have his MSS. gone astray into an Italian public or private library? Are there any documents referring to him in the chancery of the Embassy of the Netherlands? In Italy his last intercourse was with Paulus Brillius, Antonius Tempesta, Gerhard Honthorst, and Cornelis Poelenburg. Did any of these painters perhaps come into possession of his property? Or was it conveyed to Utrecht by the two last-mentioned, who were De Witt's compatriots? Might not Arend van Buchell, knowing, as he did, of the labours of his friend and relation

who died single and childless, have brought forward any claims? With united forces all explorers of art must now follow these traces and make their researches in Holland and Italy."

If the *Coelum Pictorium* is exhumed from the dust in which it must have lain for nearly three hundred years, the other MSS. of Johannes de Witt will, in all likelihood, be found with it. In that case it will be the merit of Dr. Gädertz, whose name is already favourably known by a history of the *Drama of Lower Germany* from the oldest times, to have pointed out the tracks leading to the recovery.

There are, in Dr. Gädertz's little book, some other contributions to Shakspearean literature, among them one concerning the interlude in "A Midsummer Night's Dream." At the British Museum Dr. Gädertz found an undated old German print by Johannes Sauro-mann, not noted in Jöcher's *Gelehrten Lexikon*, nor in Zedler's *Universal-Lexikon*. It refers to a session of the German parliament at Spire, probably of the year 1526. The print is remarkable for having on its title-page a woodcut representing the story of Pyramus and Thisbe. Under the mulberry tree, at the brook which springs from a cleft in the rock, lies Pyramus, in the garb of a German knight of the sixteenth century, with bleeding breast. Near him Thisbe, with manifest Babylonian features, clad like a noble German lady of the period, her hair dishevelled, and with the sword pointed at her heart, falls towards her lover with extended arms. In the background on the left is the roaring lion, and a town in the distance. On the right there is Thisbe once more, as she walks towards the wood. This drawing is topped by a monument in Renaissance style. No monogram indicates the artist. As printer of the fly-sheet, Georg Rhau is mentioned, who was also an important publisher at Wittenberg.

The opinion of Dr. Gädertz is that the drawing was probably made by no other than Lucas Cranach, who at that time lived at Wittenberg, and who drew many woodcuts and ornamental headpieces for Rhau, whose portrait he also painted. The Pyramus and Thisbe story was a favourite subject with German artists of the time, such as Hans Holbein and Cranach. Dr. Gädertz further concludes that the woodcut, being so well executed, and having no reference whatever to the political and religious theme of the pamphlet, which is mainly an exhortation addressed to all Christians to fight against the Turks, must originally have adorned the title-page of a German story of Pyramus and Thisbe, which possibly was the source of Shakspeare's interlude in "A Midsummer Night's Dream." Among the books published by Richard Tottell in Shakspeare's time, there are two ("*A Dialogue of Comfort against Tribulation*," made by Syr Thomas More," and *The History of Quintus Curcius*) which both have the same woodcut on their title-pages as Sauro-mann's pamphlet. There are only a few slight deviations in detail; but the German dress is preserved in the figures. The hypothesis of Dr. Gädertz is that the London publisher used the Wittenberg original for a new block, and that he first brought out the woodcut with a translation of a

German work on Pyramus and Thisbe, afterwards making use of it for two other prints. Bold as the surmise may appear, Dr. Gädertz adduces arguments which cannot be lightly set aside. At all events, we have here some valuable suggestions which may lead to further discoveries.

KARL BLIND.

NEW NOVELS.

Wessex Tales: Strange, Lively, and Common-place. By Thomas Hardy. In 2 vols. (Macmillan.)

All Else of No Avail. By Ben Hayward. In 3 vols. (Hurst & Blackett.)

Beyond Compare. By Charles Gibbon. In 3 vols. (Sampson Low.)

The Rat of the Land. By Mary Lester (Maria Soltera). In 3 vols. (Blackwood.)

The Fortunes of Philippa Fairfax. By Frances Hodgson Burnett. (Frederick Warne.)

Francis and Frances; or, an Unexplainable Phenomenon. (Bristol: Arrowsmith.)

She came Between. By Mrs. Alexander Fraser. (White.)

Mary Jane Married: Tales of a Village Inn. By George R. Sims. (Chatto & Windus.)

MR. HARDY has been a good many years before the public, but his *Wessex Tales* tell us something new about him—that he can work as effectively on a small as on a large canvas. Perhaps it will not be altogether new to readers who are in the habit of defining and analysing their impressions, for such readers will probably find that their recollection of anyone of Mr. Hardy's novels which they happen to have read some time ago is less a recollection of the book as a whole than of certain originally conceived situations—just the situations which, it detached, might serve as centres for short stories like those in his two latest volumes. The title of the new book indicates that the five tales of which it is composed have a common background, which is, of course, the background of West-country scenery and custom with which the author has made us all so pleasantly familiar. If we adopt Mr. Hardy's own classification we shall have no difficulty in placing the first two stories—"The Three Strangers" and "The Withered Arm"—under the first heading, and there is as little difficulty in deciding that the "lively" element is provided by "The Distracted Preacher." If the remaining stories—"Fellow Townsman" and "Interlopers at the Knap"—are to be described as "common-place," it must be remembered that the epithet is Mr. Hardy's own, for no critic worth his salt would be likely to use it; though in the simple sense of "ordinary" it serves well enough to describe the matter of the tales, which includes nothing in mere incident which is alien to ordinary experience. "Three Strangers" provides an appetising opening, being comparatively brief, novel in invention, and simple in construction. It is, indeed, an elaborated incident rather than a story proper—the accidental meeting in a lonely moorland cottage, where a merry christening party is being held, of an escaped

prisoner, whose execution had been fixed for the following morning, with the hangman, who is on his way to the county jail. In the midst of the grotesque humour there is a suggestion of creepiness which prepares the way for the powerful but unrelievedly painful story which follows—"The Withered Arm." This tale is the most striking and most elaborately wrought-out of the whole five; and it closes with a singularly impressive dramatic situation, in which a gruesome local superstition is utilised with wonderful skill and effect. Of the three remaining stories, "The Distracted Preacher" is most original in conception. The perplexities of the young Methodist minister—who, after falling in love with the pretty widow, his landlady, discovers that she is a not inactive member of a gang of smugglers provide capital material, of which Mr. Hardy makes the best possible use, treating the theme not farcically, but with a light humour which blends easily with the occasional pathetic touches. Mr. Hardy has one recurring structural idea, which appears with more or less distinctness in all the tales except the first—that of a man who drifts away for a time from a woman he has loved to return to her in the end, generally to find that he is too late. This conception is treated most pathetically and gracefully in "Fellow Townsman"; but in making use of it again and again Mr. Hardy runs the risk of producing an effect of monotony which is only averted by variety of treatment and by his inventive fertility in the matter of incident. Circulating library managers—who on this point are unquestionable authorities—declare that short stories are unpopular. It would not be difficult to make them popular if the task were attempted by a few writers of Mr. Hardy's calibre.

All Else is no Avail is a story which opens with a fine collection of healthy improbabilities. A Channel steamer running across from England to France is overtaken by a heavy gale, accompanied by a thick fog—a remarkable combination of natural phenomena—and is driven upon a rock and wrecked. A young lady is rescued by a young gentleman; and her confidence being won by this act of heroism, she, prompted apparently by natural ingenuousness of character rather than by any definite motive, confesses that she has just stolen a valuable set of diamonds, which she is about to hand over to her lover, who turns out to be the brother of her rescuer. The world being, as we know, very small, nothing is more natural and likely than that the hero should before long meet at his uncle's house the daughter of the lady who has lost the diamonds; and before we reach the end of the first volume, we perceive that things are becoming delightfully tangled. After this the story runs rather wild; but it has an intermittent liveliness, which may tempt the reader who is not fastidious about probability or grammar or accuracy of quotation, to run after it. The book is terribly slipshod, but it is slipshod in a not unamusing way.

It is quite impossible to say what person, place, or thing is referred to in the title of Mr. Charles Gibbon's *Beyond Compare*. Indeed everything in the book is very ordinary; certainly not with the ordinariness

of real life—of which it can hardly be said that we are ever reminded—but with the ordinariness of familiar melodramatic conventions. Most of the well-known stage properties are here, and the "business" has the charm of old association. There is a forged will which is in evidence, there is a genuine will which has unaccountably disappeared, there is a lonely tower supposed to be haunted, there is a mysterious pedlar, and so on, and so on. Villain number one agrees—of course for a consideration—to separate the hero and heroine and to obtain the latter as a wife for villain number two. In their dealings with the villains the hero and heroine exhibit the fatuous credulity which the necessities of melodrama demand; and there is no reason whatever that the nefarious plan should not be successful, except that provided by another melodramatic necessity—that villainy should be foiled and virtue triumphant. The story is not more absurd than others of its class; but "the pity of it, Iago," is that it should be written by the author of *Auld Robin Gray* and *For Lack of Gold*.

The Fat of the Land, unlike Byron's *Corsair*, has many virtues and one crime; but unfortunately the one impresses us much more forcibly than the many. The characters are lifelike, the sequence of very quiet incident is natural enough, and the literary style is without reproach; but what avail these things in a book which is so dull that the reading of it instead of being play is the hardest of work? Occasionally it seems as if it were going to brighten up, but, alas, it is only seeming! The scapegrace Marmaduke, who runs away with a ward in chancery, promises well, but his promise is unfulfilled; the scheming Miss Fanshawe is equally disappointing; and even Col. Leppell's theft of his daughter's diamonds, which really does seem likely to lead to something lively, comes absolutely to nothing. The book is also very long, and some people will call this a second crime; but length is not in itself criminal. *Vanity Fair* is a long book, so is *The Woman in White*, so is *Middlemarch*; but—readers must complete the sentence for themselves. When an unpleasant truth has been stated once it is needless to repeat it, especially when it concerns a book which does not exasperate, but only mildly depresses.

The Fortunes of Philippa Fairfax is certain to be liked by the public and praised by the critics, for the liking is well-won and the praise well-deserved. I cannot help thinking, however, that the latter would be expressed more heartily if the little story had some less known name than that of Mrs. Burnett on its titlepage. It is, perhaps, unfair, but it seems inevitable that the question asked concerning any book by a popular author should be not simply "Is it good?" but "Is it as good as it ought to be?" It is one of the most irritating of the grievances of authors that they are never allowed without complaint to do less than their best, and it is a grievance which is not likely to be remedied. If the portrait of Philippa Fairfax is hung between those of Joan Lowrie and the fascinating "fair barbarian," it will certainly be killed; but place it on a wall by itself and it will be found very winning and attractive. The most successful

character in the book is, however, Philippa's father, the scheming, sponging, utterly unprincipled but good-natured gambler who, after having all but irretrievably spoiled his daughter's life, takes the journey which he knows must be fatal in order that he may undo the wrong he has done. The book is very slight, but it is perfect in construction and charmingly artistic in workmanship.

Francis and Frances is one of those books which will prove most attractive to the reader who, like Lord Dundreary, loves to wonder. The beginning and the middle contain hardly anything that is interesting for its own sake, and will be read mainly with a view of getting through them to the end. A book which is certain to be subjected to the test of hasty perusal should be constructed to stand that test satisfactorily; and this is just where the present story fails, for, if the reader does not proceed slowly, and with as much attention as he would devote, say, to a text-book of biology, he will find himself becoming hopelessly befogged. The whimsical motif of the book—the alternate daily disappearance and reappearance of a twin brother and sister—would suit Mr. Anstey, though even he would find it difficult to work up to a satisfactory *dénouement*, without the use of such supernatural machinery as that employed to work the transformations in *Vice Versa*; and, as in *Francis and Frances* the mystery is entirely unexplained, the readers whose curiosity has led them on will feel themselves rather ill-used. The liveliest portions of the book are those which have no relation to the main action of the story.

She came Between is an utterly worthless story of the sentimental and "intense" order. The class is, unhappily, too familiar. The hero, a young man of the lowest mental capacity we expect to find outside of Earlwood, is, like so many of his race, "handsome and fair as a brave young Viking" (how sick we are of Vikings!), "tall and dignified as a young poplar" (a very young poplar must be meant, or Cyril would have been the chief attraction of a travelling show), and is altogether a most ineffable person. As the heroine tells her own story and cannot very well describe herself so elaborately, the impression of her physical charms is rather vague; but she disinterestedly devotes much eloquence to celebrate those of her rival—the young woman who "came between"—who possesses "an exquisite face," a "tall willowy figure," "a pair of liquid eyes, grey and dreamy," and also "a pair of perfect scarlet lips." High-flown amorous conversations, interrupted by kisses, constitute the contents of a story which is of absurdity all compact.

As a rule, a sequel to a successful work of fiction is more or less of a failure, as any artistic afterthought is likely to be; but *Mary Jane Married* is certainly an exception to the rule, perhaps because it is a sequel in form rather than in substance. We certainly renew our acquaintance with Mary Jane, of whom it is now more respectful to speak as Mrs. Beckett; but she is no longer the centre of interest as she was in the delightful *Memoirs*. She still manages to make her genial personality felt, but here she is simply the narrator, not the heroine; for *Mary Jane*

Married is really a collection of short stories, of which the heroes and heroines are the visitors to the Stretford Arm, of which Mrs. Beckett has become the mistress. Mr. Sims, whether speaking with unveiled face, or from behind a feminine mask, is a capital *raconteur*. He is pleasantly fertile in the kind of invention best suited to the purposes of the short tale; his hand, in dealing with a humorous or pathetic motive, is light and dexterous; and if the stories of the good hostess have not much specific gravity they provide very pleasant and entertaining reading.

JAMES ASHCROFT NOBLE.

SOME BOOKS FOR THE COUNTRY.

The Angler's Note-Book and Naturalist's Record. Second Series. (Elliot Stock.) This book is a medley of notes, piscatorial and bibliographic, of different value, yet all more or less pleasant in the eyes of a scholarly angler. Thus, there are papers on the *Geoponica*, on flint fish-hooks, on Martial's piscine epigrams, on trout-fishing in Belgium, and on Dame Juliana Berners. Prof. Skeat, the late Mr. Westwood, Mr. O. Lambert, and other well-known writers contribute articles; and there are some good original sonnets on angling subjects. The misfortune is so few scholarly anglers exist that there is a probability that such handy books of angling as this will fall unnoticed from the press. Originally projected by the late Mr. T. Satchell, the *Note-Book* has been finished by the kindly care of Mr. A. Wallis. It is impossible to turn over the leaves without finding articles of sterling value, such as Mr. Satchell's paper on the "Regimen Sanitatis Salerni," or that on "Old Angling Terms and Proverbs." Some of the matter collected in the dozen different papers called "Our Creel" is of ephemeral interest, but the rest of the book will always find readers among scholars when the angling season is over. It will also serve as a memorial of its projector, a man of literary tastes and much discernment in bibliography, who had gathered round him a little circle of scholarly anglers, and done much diligent and unselfish work for them, when a short rest from literature would probably have prolonged his own life.

Notes on the Birds of Herefordshire. Collected by the late H. G. Bull, M.D. (Hereford: Jakeman & Carver.) These notes were contributed by members of the well-known Woolhope Club; but it is not needful to plunge into the controversy as to the exact amount which was written by Dr. Bull. They are published partly in memory of that enthusiastic student of nature, partly to collect the scattered ornithological notes which have been from time to time read at the field meetings of the club. The late Dr. Bull would not himself have claimed much scientific value for his book. It contains for the most part pleasant gossiping notices of such birds as have been observed in the county of Herefordshire, garnished liberally (some will think too liberally) with poetic scraps bearing on each bird. Where investigation and practical knowledge have been applied to a bird the result is more valuable. Thus, the account of the partridge's habits, and, again, of the woodcock's range in Herefordshire, its relative abundance or scarcity in different years and the increase in the number of these birds which now remain behind to breed, are much to be commended. Every here and there a note on the ornithology of the county is worth remembering. We are told that *Motacilla flava* occurs every season at Belmont, near Hereford. Some authority,

however, for this statement is desirable. This bird is said to have been seen, too, at Lynton in 1840; but it "was not handled, and is, therefore, doubtful." The probability is that it has been mistaken for the common yellow wagtail, *M. Raiti*. Indeed, more strict supervision should have been exercised over many of the birds admitted as natives of, or found in, the county. Thus, the only recorded instance of the scap (*Fuligula marila*) is assigned to 1851, because a specimen is said to "have been seen in the flesh" at a bird-stuffer's in Hereford, which, to say the least of it, is somewhat vague. Nor can we accept the existence of the black woodpecker in the county, although it is said to have been seen (and even handled) by several observers. The arrangement of the book is objectionable, as it admits into the text all so-called British birds, merely bracketing such as have not been found in the county and adding a brief notice like "said to have occurred near Newcastle, and also near Exeter," or "once in Sutherlandshire and in Perthshire." It would have been less confusing to have treated only of Herefordshire birds, and in an appendix to have named the birds which have not been taken in that county. In the index to the present book such birds are printed in italics. A good feature in these "Notes" is a list of provincial names for the birds of the county. It is bad enough to see the grotesque mummies which country taxidermists frequently make of rare birds; but a still worse fate befell a specimen of that exceedingly rare bird, the sooty tern, which was picked up dead near Pembroke in May, 1885. A rustic bird-stuffer, in order "to make it fit a small case, carefully cropped the longest primary feathers of each wing." A scientific history of the birds of Herefordshire yet remains to be written. Many, however, will welcome this book for the characteristic portrait of Dr. Bull, which forms its frontispiece.

The Songs of the Birds; or, Analogies of Animal and Spiritual Life. By the late Rev. W. E. Evans. (Sampson Low.) Originally published more than forty years ago, this reprint is a good example of the school of religious poetry of the time, whereof Keble and Isaac Williams were prominent leaders. But the writer, being a practical ornithologist, fond of country sights, has confined himself to the poetry and spiritual teachings of bird-life. Taking all the common birds in order the author devotes a chapter of prose to each, in which he shows considerable insight every here and there into the habits of birds, and follows this with an ode or song to the bird, drawing out spiritual lessons from its characteristics and economy. Thus, the cuckoo becomes the personification of selfishness; the missel thrush is an unrestful bird owing to its overbearing quarrelsome temper, and the like. Mr. Evans wrote thoughtfully and well in prose, and much of his verse is far from mediocre; but his rhymes are occasionally faulty—"warning" and "morning," "him" and "in," "wept" and "swept," are examples. The book is a possession to be prized by all devout lovers of our birds, and of the quiet happiness of a self-contained retired life. Whether amid the anxious stir and fret of souls in the end of the nineteenth century there is room for a book of this meditative character may admit of doubt. But the work of Mr. Evans was well-known in his lifetime, and has been long out of print. It is still sure of a joyful welcome with the quiet natures referred to. The cuts are the old ones, if we remember aright, and they have not improved with age.

The Principles of Agricultural Practice. By J. Wrightson. (Chapman & Hall.) The excel-

lence of these lectures is rather obscured by occasional solecisms, such as the use of that vile word "examinees," or the expression—"It is difficult to see for why." The author throughout uses big words too, words surely beyond the understanding of the ordinary agricultural pupil. What would such an one, for instance, be profited by the information that "the nitrification of nitrogenous matter existing in a state of organic combination is one of the most recent and one of the most important facts brought out by agricultural chemistry"? The chalk formation does not end at Beachy but at Beer Head, towards the west; while to talk of the Yorkshire and Lincolnshire wolds "supporting a prosperous and intelligent tenantry" is scarcely a true statement, at present, of their condition. With such exceptions as these Mr. Wrightson's book contains much that is well reasoned, and ought to prove a valuable help to the young farmer. Without disgusting him with tables and statistics, it does not shrink from figures when they are useful; while the repetitions in the different lectures (for which the author apologises) strike us as unavoidable, if salient points and the relation of one topic to another are to be remembered by pupils, few of whom, presumably, have had the benefit of a regular literary education. Besides stating lucidly the theory of modern agriculture, the author every here and there descends to practical advice. Most farmers are amusingly distrustful of the man who writes; but the sound sense here concentrated, and the teachings necessary for these times of sorrow and trial to agriculture, will at once disarm suspicion, if the cautious reader perseveres and weighs the value of Mr. Wrightson's advice. Drainage, he rightly says, is of the first importance in a farm. A knowledge of geology will often prevent serious mistakes in treating crops and manures; and this is fairly given in three out of the fourteen lectures of which the book is composed. From soils the author advances to manures and crops, which are very fully treated, the preference being given to natural over artificial manures for the most part, and the subject of rotation of crops being exhaustively handled. The new phosphate, basic cinder, is carefully estimated as a fertilising agent. Mr. Wrightson deems that one-sixteenth less grain is grown in the country now than twenty years ago, and holds that the farmer in a clay country can only realise now £7 or £8 per acre on his corn crops instead of the £12 or £13 which used to be expected. Few but those who are practically interested in farming stiff clay land know to what depths in such a country agriculture has descended. Manure is absolutely necessary for a root crop; and a good root crop, as farmers know, means for the most part a good succession of crops. More nonsense, however, is talked about patent manures and their effects than about any other point in agriculture. It is refreshing to read Mr. Wrightson's excellent commonsense on the subject. We have formed a high idea of his little book, and hope that he will be encouraged in another volume to advance to the theory of stock-keeping and harvesting in general. In order to reduce his ideas to practice, besides the experience which comes out every here and there in his pages, we would supplement Mr. Wrightson's *Principles* with an admirable pamphlet on farming at the present day, and in the existing stress of agricultural matters.—*The Advantages of Well-bred Stock, and its Selection*. By Alfred Ashworth. (Riley: Darwen.) It is full of sensible suggestions. Mr. Ashworth himself is favourably known as a breeder of pedigree stock. Furnished with these two guides, the farmer ought, even during the present distress, to be able to make his occupation pay.

Profitable Dairy Farming. By H. M. Upton. (Sampson Low.) Cheshire farmers have already betaken themselves to the improvement of dairy produce, and found the benefit of it in these days of trouble. In the hope that farmers elsewhere will devote more attention to milk and butter, Mr. Upton has prepared this manual, which is cheap, concise, and full of excellent counsel. Seeing that this country imports annually some fifteen millions of dairy produce, they will be wise to turn their minds both to greater production of cheese and butter, and to maintaining an even standard in them. Irregularity of quality and appearance ruins the English dairy-trade; and to secure an improvement in these points the farmer must henceforth give more thought to theory and scientific processes in his dairy, and less to the old-fashioned rules of thumb, which are at present too common. Mr. Upton has useful chapters on crops, manure, milk, cream, and butter, with estimates of cost, management, and much information for all who keep a cow. Not the least of the advantages of this book are its abstracts of the different Acts recently passed on dairies and contagious diseases. We think, however, that his dogma of allowing no cattle on grass-lands after Christmas, in order to obtain the heaviest crops of hay, is somewhat over-strained. It is advantageous rather than otherwise to let cattle into them during any sunny gleams up to the middle of March.

Poultry for Exhibition, Home, and Market. By a Poultry Farmer. (Sonnenschein.) This is a decidedly useful book for all country folks. It does not hold out much hope, indeed, to poultry-farmers, and herein the author is right. Profit cannot be made as things are at present, except in very exceptional cases, by poultry-farming pure and simple. But as adjuncts of a stable or farmyard, fowls may always be kept with advantage. This little book gives careful details of the best breeds to be kept, rules for their management in health and disease, hints on artificial incubation, and on exhibiting fowls. Being written by a thoroughly practical man, the style of the book need not be criticised, or else it would have to be enquired what is meant by the assertion that "Mother Carey and her chicks play quite an important part in everyday life," if, indeed, it means anything. The author very properly condemns the cruel "dubbing," or cutting the combs of game-cocks, and the plucking out the fluffy feathers from black Spanish fowls, to improve their appearance. This hand-book will please some country lovers by a sensible chapter on pheasants and pheasantries, while many others will be conciliated by the excellent plates of the different kinds of fowls most in vogue with fanciers at present. But why is not a word said of the pretty Japanese bantams, although a good illustration of them is given?

Nature's Fairy-Land. Rambles by Woodland, Meadow, Stream, and Shore. By H. W. S. Worsley-Benison. (Elliot Stock.) No more excellent book could be placed in the hands of a boy or girl fond of nature during this year's sea-side holiday. It points out the methods of investigation to be employed in several popular sciences, and is thoughtfully as well as lucidly written. The papers on botany are especially clear and to the point. Indeed, all Mr. Worsley-Benison's book is attractive. Even elder lovers of the country will find novel views on accepted theories happily expressed every here and there; for the author has laid Tyndall, Huxley, Romanes, and other well-known names in biological research under contribution. But the popular views on the Druids which are here stated might be reconsidered with advantage. And when it is asked "Why should the misletoe be excluded from our sacred Services at Christ-

mas?" the answer is easy. The plant possesses so many heathen associations, and is connected with so much that is sportive in modern times, that it is very properly shut out from the decoration of churches. We believe it is carved in one Gloucestershire church. Otherwise, mediæval sentiment long ago declared against it. Again, Peter the Great could hardly have suggested to Evelyn to plant a holly hedge in his garden, 400 feet long, when much of the damage done to the diarist's garden by the Czar, for which the owner received a large compensation from the Crown, consisted in the holes made in such a holly-hedge by the royal shipwright driving wheel-barrow through it. When Mr. Worsley-Benison discards such padding, and discourses on nature by the sea or on the hills, we gladly listen. Such a book as this reveals wonders and beauty everywhere around us; and, as giving insight, and making men value more highly our English scenery and wild creatures, it deserves nothing but commendation.

NOTES AND NEWS.

MISS MARY ROBINSON'S new volume of verse will be issued immediately by Mr. T. Fisher Unwin, under the title of *Songs, Ballads, and a Garden Play*.

MR. WALTER SCOTT is about to publish *Oak-bough and Wattle-blossom*, being a series of Australian stories and sketches, edited by Mr. Patchett Martin. Among the contributors are Mrs. Campbell Praed, Mr. Douglas B. W. Sladen, Mr. Haddon Chambers, Mr. Edmund Stansfeld Rawson, "Sebastian Oldmixon," and the editor. A special edition is being prepared for the Melbourne centennial exhibition.

ON June 15 Messrs. Swan Sonnenschein & Co. will publish the first part of a new monthly serial, entitled *Our Celebrities*. Each part will contain three portraits, with monographs from the pen of Dr. Louis Engel. The portraits selected for part i. are: the Duke of Cambridge, the Marquis of Salisbury, and Sir Frederick Leighton.

MR. T. FISHER UNWIN announces for publication next week *The Paradox Club*, by Mr. Edward Garnett—a novel dealing with London life.

A Fresh Water Yarn: an illustrated account of a boat voyage up the River Avon, is announced for immediate publication by Mr. Elliot Stock.

Ballades of a Country Bookworm is the title of a little volume by Mr. Thomas Hutchinson (dedicated by permission to Mr. Andrew Lang), which will be issued about September by Mr. Frank Murray, of Nottingham and Derby. The edition is limited to 160 copies.

THE next volume in the series of "Great Writers" (Walter Scott) will be *Goethe*, written by Mr. James Sime.

WE learn that the limited edition of the forthcoming *Dictionary of Slang, Jargon, and Cant* is nearly exhausted. In addition to the contributors already announced in the ACADEMY, Mr. Walter H. Pollock, assisted by Mr. Aubrey Stewart, has undertaken to supply a collection of circus and showmen's slang. The editors have also recorded an interesting contribution of tailors' slang from Mr. T. H. Holding, editor of the *London Tailor*; and Mr. Walter Rye will supply athletic and running slang.

A SPECIAL holiday number of *Little Folks* will be published on June 21, under the title of "Summer Tide." Its contents will include a large picture, entitled "Pickaback," by Mr. Burton Barber, reproduced in twelve colours; two pages of humorous illustrations in colours,

by Mr. Walter Crane; complete stories, &c., by Mrs. Molesworth, L. T. Meade, Mr. Clark Russell, Talbot Baines Reed, &c.; "An Out-of-Doors Play," by Mr. H. Savile Clarke; and "A Summer Song," by Mr. A. Scott Gatty. The number will be illustrated by A. Hopkins, M. E. Edwards, W. Rainey, Gordon Browne, and other artists.

THE July number of the *Theatre* will contain a paper by Mrs. E. S. de Courcy Laffan (Mrs. Leith Adams), entitled "The Poet's Cradle." The paper will be illustrated with views of Stratford-on-Avon, Trinity Church, the old Latin schoolroom where stood Shakspeare's desk, &c.

A FORTHCOMING issue of *Temple Bar* will contain a poem, entitled "Sea-foam and Drift-wood," by Mr. Arthur L. Salmon.

A FOURTH and popular edition of Mr. Ashby Starry's *The Lazy Minstrel* will be published next week by Mr. Unwin.

WE have received the first number of a new serial, entitled *North Country Poets*, edited by Mr. William Andrews, of Hull. Its object is to give short biographies, with examples, of modern poets who are natives of, or resident in, the northern counties of England.

ON Monday and Tuesday of next week Messrs. Sotheby will sell the collection of autograph letters and historic documents formed by the late Earl of Lonsborough. Among them are the sign-manuals of Henry V., Henry VI., Richard III., Edward VI., and other kings; a holograph sonnet of James I.; a proclamation signed by the Old Pretender; a letter from George IV. appointing the Duke of Wellington to the command of the army, with the duke's reply; besides several characteristic letters by Benjamin Franklin, Carlyle, and other modern personages.

THE Countess Agénor de Gasparin writes to us to say that she has taken no share whatever in the translation of her last work—*Dans les Prés et sous les Bois*. Neither the MS. of the translation nor its English title, "Sunny Fields and Sunny Woods," was submitted for her approval. A few pieces at the end of the translation, though in many points faulty, alone give such a rendering of the original as the author can approve.

A CORRESPONDENT writes:

"Several of your contemporaries, in noticing the death of Mr. W. L. Birkbeck, have fallen into the error of making Dr. Birkbeck the founder of the London Mechanics' Institution. There has hitherto been a popular impression to that effect, but, I believe, the real facts of the case are these:

"The entire conception of the plan of mechanics' institutes belongs to Mr. Francis Place. Having sounded his own personal friends, and obtained afterwards the support and pecuniary assistance of Brougham, Birkbeck, Burdett, and others, the affair was set on foot. Dr. Birkbeck became the first president of the London Mechanics' Institution; but Mr. Place was not only the author of the scheme, but the final preparation of the rules and orders was left in his hands."

UNIVERSITY JOTTINGS.

A NEW studentship has been founded at Cambridge, by the widow of the late Guy Lushington Prendergast, for "the furtherance of study and research in the Greek language, literature, history, philosophy, archaeology, and art." The proposed stipend is £200, for one year, of which some considerable portion shall be passed away from Cambridge; and it is specially provided that the Prendergast studentship shall not be awarded by competitive examination, nor be tenable together with the Craven studentship.

DR. E. B. TYLOR, reader in anthropology at Oxford, delivered a public lecture on Thursday, entitled "A New Method of investigating the Development of Institutions, with Applications of the Method to the Special Cases of the Laws of Marriage and Descent."

THE syndicate appointed by the University of Cambridge to examine the collection of papers written by or belonging to Sir Isaac Newton in the possession of the Earl of Portsmouth, the scientific portion of which he offered to present to the university, have reported as follows. They have carefully examined the collection, have divided it under such heads as seemed most appropriate, and have prepared a detailed catalogue of the whole. This catalogue has now been printed, and the syndicate recommend that it be published by the university. The books and papers retained by Lord Portsmouth are marked in the catalogue as returned to him. Some of these have been already returned, and the remainder will be sent back shortly. The portion of the collection presented by Lord Portsmouth to the university is ready to be transferred to the library as soon as a place is found for it. In bringing their work to a termination the syndicate express their sense of the interest and value of the collection, and of the liberality of Lord Portsmouth in thus bestowing the scientific papers of Newton on his own university. It will be necessary either to bind, or to do something in the way of mending, a considerable portion of the papers, as they have suffered much from fire and damp. As the greater portion of the miscellaneous correspondence is retained by Lord Portsmouth, copies of the more important of these letters have been made and placed with the portion of the collection presented to the university. With this has also been placed a copy of Brewster's *Life of Newton*, in which the letters printed from this collection have been corrected after careful collation with the originals.

PENDING a reconstitution of the Laudian chair of Arabic at Oxford Mr. D. S. Margoliouth has been appointed to give instruction in Arabic during next term. Mr. Margoliouth has been spending some time lately at Cairo.

THE hon. degree of M.A. has been conferred at Oxford upon Dr. Hermann Ethé, professor of Oriental languages at Aberystwyth, who has long been engaged in cataloguing some of the Oriental collections in the Bodleian, and who is now examining in the Oriental school.

THE president of Trinity College has printed, for private distribution, a paper that he recently read before the Church Society of the college, entitled "Religio Loci." By the help of the statutes and MS. records he seeks to depict the strong religious spirit which animated Sir Thomas Pope, the founder of the college; and incidentally he animadverts upon an historical inaccuracy in *John Inglesant*, where the musical service at Trinity is described as an attraction to the courtiers of Charles I. It appears, on the authority of Aubrey—himself a member of the college—that the organ presented by the founder had been removed previous to that time.

THE Rev. H. D. Rawnsley, vicar of Crowthwaite, and the enthusiastic champion of public paths in the Lake district, will deliver an address at Oxford on Thursday next upon "Rights of Way and Access to Mountains."

WE hear that Mr. Ignatius Donnelly has been invited to speak at the Cambridge Union in support of his Shaksperian cryptogram.

PROF. TERBIEN DE LACOUERIE has been compelled to postpone his lectures at University College, London, on "The Ideology of Languages in connexion with the History of Eastern Asia," announced in the ACADEMY of last week.

ONE of the latest issues of the Publication Agency of the Johns Hopkins University is a reprint from the *American Journal of Philology* of Prof. Maurice Blomfield's paper on "The Origin of the Recessive Accent in Greek." In this he argues, with much detail (p. 41), against the theory advanced in Wheeler's *Der Griechische Nomenaccent* (Strassburg, 1885), and reasserts his own view that

"the recessive accentuation in Greek is a modification of a special Greek law of enclisis, which has spread from the finite verb until it has absorbed many quantitative word-types in general in the Pan-Hellenic speech and all in the Aeolic."

ORIGINAL VERSE.

TATTON MERE.

At dawn I passed beside a silent mere,
So still, so smooth it mirrored calmly here
Its own green banks, the heavens, the passing
cloud,
And some grey willow with its branches bowed:
The day was closing ere I passed again,
The north wind blew a fierce and angry strain,
The cry of wild geese sailing o'er the wood,
The plash of wavelets reached me as I stood;
The rushes bent and rustled in my ear,
How quickly changed the lovely placid mere;
Yet not unwelcome are the signs of strife,
The rushing wind, the scream of birds, for life
Awakes that slept, and now with stir and strength
No more with passive heart receives, at length
Knows the new joy of motion, voice, and gives
To man the sympathy of all that lives.

B. L. TOLLEMACHE.

MAGAZINES AND REVIEWS.

MR. C. E. PLUMTRE's papers on the rise and development of philosophy during the renaissance are finished in the present number of the *Antiquary*. They have been admirable so far as they go, but the length they take us is but short. It is a subject that has been discussed over and over again, yet there is room for a work which should deal with the history of thought from the fall of Constantinople till the days of Bacon in an exhaustive manner. But where is the scholar that can in these chaotic days be trusted to organise for us all this scattered knowledge? The concluding portion of the unsigned paper on the National Portrait Gallery is good in itself, and will be of service by attracting attention to an institution which is not so widely known or so much valued as it should be. The most important paper, however, without doubt, is that on the Walls of Chester, by the veteran archaeologist, Mr. Charles Roache Smith, who was working at Anglo-Roman history when most of the present race of antiquaries were in their cradles. No one, it may be safely affirmed, has given such long-continued attention to this subject. We have no doubt that his conclusions with regard to the fortifications of Deva of the Legions are correct. Mr. W. F. Ainsworth's account of Dara is interesting, and contains new knowledge. We wish that he had treated the subject more in detail.

THE ANNUAL MEETING OF THE GOETHE SOCIETY AT WEIMAR.

Berlin: June 2, 1888.

THE Goethe Society has just held its third annual meeting at Weimar. No similar society in Germany exhibits such an extraordinary growth. It now numbers, including the affiliated English society, nearly 2900 members. One fourth of the membership resides outside of Germany. The *Goethe Jahrbuch*, which had

been published before the foundation of the society, has become its organ; and the ninth volume has just been issued. The Goethe archives, containing the poet's MSS., are deposited in a wing of the palace. Through the munificence of the Grand Duchess, by the purchase of the Kohn collection, a valuable library has been brought together for the use of the editors. The acquisition of MSS. and of original editions will make Weimar a centre for the study not only of Goethe literature, but of all the contemporary literature of the period.

The additions during the last year have been of great interest, the most important being the papers of Eckermann and of the Chancellor von Müller. Among the Eckermann papers are a considerable number of poems, sketches, apothegms, letters of Goethe from Italy to the Frau von Stein, Herder, and Koppenfels, also a collection of twelve folk-songs which Goethe made for Herder in Elsass in 1771, "which he enticed from the throats of the very oldest mothers," and a letter on the first representation of Schiller's "Wallenstein." There is also a part of a MS. of Schiller and a letter to Goethe. The papers of the Chancellor von Müller present a mass of interesting material. Among them is a memorandum of Goethe respecting the disposition of his property. He regarded his extensive collections as of value not only for intellectual Weimar, but for all Germany. If care were not taken great loss might arise. For sixty years he had devoted annually 100 ducats to the purchase of interesting and instructive objects, and it would be occasion for regret if these were to be scattered. From every article in the collection he had learned something, and much could still be learned. He therefore wished that his collections might be preserved in this spirit. Coins and medals were to be given to the Weimar library. Everything else was to be preserved for twenty-five years, first for the culture of his grandchildren, and then for that of the whole people.

Among the gifts of the year have been Goethe's letters to Fräulein von Levetzow and to Nees von Esenbeck. Much other material has been discovered which it has not yet been possible to obtain. The discovery of eighty-three unedited letters of Goethe in Jena has just been announced. In connexion with these, further investigation has shown the existence of a series of contemporary diaries, which may possibly present additional and interesting facts relating to Goethe's life during the different periods of his residence in Jena and his relations with the university. A careful examination of the *Tagebücher* of the officials of the Jena library has lately been begun by Archivrat Burkhart, who edited Goethe's scientific writings.

During the year, five volumes of the Weimar edition of Goethe's works, published under the auspices of the Grand Duchess, have appeared. Of the four parts into which this publication is divided (literary and scientific writings, journals and letters), all are represented except the scientific writings. It is not yet possible to determine how many volumes this edition will embrace, but the number will probably exceed one hundred. Many of the most competent scholars of Germany are engaged in the preparation of this edition. The aim of the editors is to present, first, a pure text, faithful to Goethe's last revision and free from the arbitrary changes of his secretaries; and, secondly, to exhibit the material for text criticism found in the various MSS. and in the readings of the different editions. Occasionally the sources of certain passages are presented, as in the edition of the first part of "Faust," where Erich Schmidt has not only given the various readings, but has inserted extracts from obscure works, which explain certain scenes and frag-

mentary paralipomena. Illustrative passages from Goethe's correspondence and from his unpublished diaries are also given. The other works which have appeared are the first volume of the poems edited by Von Lörper, one volume of journals from 1775-87, and two volumes of letters embracing the period to 1775. The society has also issued to members one volume of the letters of the Frau Rath, Goethe's mother, and letters containing a diary of his residence in Italy. The text of the recently discovered Göchhausen MSS. of the "Urfaust" has been issued separately and not as a part of the standard edition. The society purposes to issue immediately to members an album containing twenty-two drawings by Goethe.

During the year, under the admirable skill of Hofrath Ruland, the director of the Goethe National Museum, the vast collections in the Goethe House have been, in part, arranged and made accessible; but before this was possible the most thorough restoration of the entire building was necessary in order to preserve it from falling. It has now been restored to its original condition.

The value of these collections is very great. There are possibly ten thousand geological and mineralogical specimens. These are being carefully transferred from the pavilions in the garden, where they were in Goethe's lifetime, which would no longer sustain them, to the ground-floor of the Goethe House. They are now in process of arrangement by a young scientist of the University of Jena. The number of specimens of Italian marbles and of volcanic products from Italy and Sicily is very great, as is the number of ores and minerals from various springs in Bohemia and Austria. The collection of *faience* includes a number of pieces, many of which are not surpassed in any museum of Europe. There are 1600 medals arranged in cases to illustrate the history of the different countries of Europe. Some of these medals are almost unique, such as that cast to commemorate the massacre of St. Bartholomew's day, on which the French king is represented standing on the skulls of the murdered Huguenots. There is also the medal to faith and religion struck by order of the Pope to commemorate the same event. The antique bronzes present many choice specimens. In addition to about nine hundred drawings and paintings by Goethe himself, there are many original drawings by artists of the Dutch, Flemish, and Italian schools, by Rembrandt, Rubens, and Guercino, and by the German artists with whom Goethe was associated in Rome. There are also 140 paintings in water-colour of Goethe's friends, among them portraits of many members of the English colony in Weimar, and of visitors. The portfolios of engravings are also very numerous. Goethe's wide interest in art is shown by the discovery of several very interesting stained glass windows which date from the earliest period of the art, which are now being prepared preparatory to exhibition. These come from early Romanesque churches in Thuringia, some of which still exist, which were founded on sites where Boniface had preached.

The annual meeting of the society was held on May 26. The number of members present was somewhat less than 200. The honoured chief-justice of the empire, Von Simson, presided, and delivered a brief opening address. The interest of the court was shown by the presence of the Grand Duke and Duchess, the Hereditary Grand Duke and Duchess, the Crown Prince of Greece, the Princess Hermann of Sachsen-Weimar, and the Princess Olga of Stuttgart.

The annual address was given by Prof. Kuno Fischer, of Heidelberg, upon Goethe's "Iphigenia." Goethe's two plays, "Iphigenia" and "Tasso," had a double home—in Germany and

in Italy. "Tasso" was produced slowly, like the growth of an orange tree, the "Iphigenia" rapidly. The latter play was begun February 14, 1779, and in three weeks the first three acts were finished, the fourth act on March 19, on the Schalkenstein, near Ilmenau, and the fifth act on Lake Garda, on March 28. The tragedy of Euripides was made the basis, and a trilogy was contemplated—Iphigenia at Aulis, Tauris, and Delphi. The play was presented at Ettersburg July 3, 1779, when the Duke Carl August played the part of Pylades, and Goethe himself that of Orestes. The chief theme of the play was representative of vicarious suffering, through which the curse resting upon a family is atoned. In this respect there is harmony between its teaching and the corresponding doctrine of the Christian religion, from which comes the divine sympathy with human suffering.

The short address of Prof. Erich Schmidt showed how rich is the MS. material for the new edition of the Second Part of "Faust," which will appear in the autumn. In 1824 Goethe wrote down, for incorporation in an additional volume of *Dichtung und Wahrheit*, his plan of the Second Part of "Faust," which he had no hope to complete. These rejected sheets have been found in the Goethe archives. Later, when Goethe had been induced to resume work upon the poem, many features were modified and others abandoned. In the sketch which has been lately discovered there is no mention of the masquerade, paper money, Bacchalaureus, Homunculus, the "Mothers," or the classical Walpurgisnacht. The first scene is more operative. Faust, on awakening from sleep, is conducted to the court of the Emperor Maximilian in Augsburg. Mephistopheles is represented as the helper of Faust. Paris and Helena are evoked at the wish of the emperor. Here there is a closer adherence to the Volksbuch of Dr. Faustus. The emperor demands the magic mantle for a journey through the air to a chamois hunt in Tirol. After the scene where Helena is evoked, Faust falls in love with her and demands her for himself. They reside remote from Greece in the castle of a crusader in Palestine. There Helena, in solitude, longs for society and the homage of men. Faust, as a German knight, is at first repulsive to her, but she finally returns his love. Mephisto, as a female gypsy who had received Christian baptism, and a seneschal familiar with sorcery, serve the couple. A consecrated sword plays a certain part, and there are features which recall the mechanism of fairy tales. The son of Faust and Helena immediately after its birth leaps and fights. He becomes involved in a fracas with monks, peasants, and soldiers of fortune, and is slain. Helena, in grief, draws from her finger the magic ring, which has invested her with an illusory existence. Faust seeks to embrace her, but she vanishes, leaving behind her garment in Faust's hands. Faust then carries on war against the murderers. "Now that I have learned to despise this world, I am worthy to conquer it." Mephistopheles places the "three helpers" at his disposal. Everything is more German, more objective, coarse, vigorous, revolutionary, popular, naturalistic than in the later poem. There is a particular city and a particular emperor about which events cluster.

There has also been found in the Goethe archives a memorandum of the year 1827, in which Homunculus, "the dwarfish master of chronology," becomes the guide in the vest-pocket of his originator to the Thessalian night. Wagner puts a queer figure among the antique classical ghosts of Pharsalia. He collects in a vial phosphorescent atoms of earth composed of the remains of the dead in order to produce a Homunculus; and in this manner awakens the dead Roman legionaries, who expressly depre-

cate his use of portions of their bones. The lines

"Reden mag man noch so griechisch
Hört's ein Deutscher, der versteht's,"

may relate to Wagner.

A scene was planned, but not executed, where the centaur, Chiron, bears Faust to the Sibyls upon Olympus, and commends him to the favour of Manto for aid in winning Helena from Orcus. The MS. material presents a bewildering array of sketches, scenes, revisions, and new creations, with touches of fairy lore which vary greatly from the finished poem as we now possess it, and throw light upon many passages revealing a fancy exuberant in strange caprices. The paralipomena are very numerous. It is possible to trace the growth of the thought and expression in almost every line of certain acts, as in the Helena act, where there are often eight or ten versions of the same line, until the poet found at last the form that satisfied him. There is also a grand plan for an unexecuted Helena act. Rich as is the material for the new edition of the Second Part of "Faust," many loose sheets have disappeared through the generosity of members of the Goethe family after his death, and several of these have been found in Castan's Panopticon in Berlin. We miss the investiture of Faust with the land in this original sketch. Goethe kept to the end of his life the desire of revision and addition, and we find in his diary, in February 1832, the note—"New impulses to 'Faust.'"

The committee which had been entrusted with the work of suitably marking the graves of those associated with Goethe reported that measures would be taken to erect a monument to Minna Herzlieb in Görlitz, and that the grave of the actress Christiane Neumann, whom Goethe commemorated under the name of Ruphosyne, had been discovered, and would also be inscribed. The resting-place of Goethe's wife has long remained a mystery. Several years ago, Goethe's grandson told me that he had no knowledge where it was situated, and the Vulpian family were equally ignorant. Privy Councillor Kuhn believes that he has determined its position in the churchyard of St. James by the discovery of certain old records of burials. A substantial stone has now been placed over it. This discovery was called in question by Dr. Robert Keil, on the ground of an oral statement once made to him by one acquainted with the exact spot. The subject was referred for further investigation.

Two of Goethe's minor plays were performed in the theatre for the benefit of the society—"Die Laune des Verliebten" and the "Jahrmärktsfest zu Plundersweilern." The latter was given first in Weimar 110 years ago, and has not been repeated until this occasion. It was received with great applause.

CORRESPONDENCE.

ALEXANDER POPE AND TWICKENHAM.

Richmond, Surrey: June 7, 1883.

On May 23, two hundred years ago, was born the great poet, critic, and letter-writer—Alexander Pope. To celebrate so important an event in the annals of English literature, and to do honour to the name of Twickenham's greatest genius, a few gentlemen in London and Twickenham are proposing to hold a Pope Festival in "The Literary Village," the date to be towards the end of July.

It is suggested that one of the leading features of this festival shall be a Popeian Museum, consisting of letters by Pope, portraits of the poet, editions of his works, views of the celebrated "villa" and Twickenham at the time of his residence—in short that the museum (which it is proposed to keep open for a week) shall consist of anything throwing light upon Pope and his friends, more particularly his Twickenham contemporaries, such as Lady Mary Wortley Montagu and Kitty Olive.

With this object in view, may I ask the publicity of your columns to invite the aid of all Pope students and collectors? The proceeds of the exhibition will be devoted to enriching the Twickenham Free Library with the best literature relating to Pope and his contemporaries.

THE EDITOR OF
 Richmond and Twickenham Times.

THE NAME OF MOSES IN THE CUNEIFORM TABLETS OF TEL EL-AMARNA.

Queen's College, Oxford: June 3, 1888.

The cuneiform tablets discovered last winter at Tel el-Amarna in Upper Egypt turn out to be even more interesting and important than I supposed. About 160 of them have been procured for the museum at Vienna, and have been examined there by Drs. Winchler and Lehmann. The result of their examination shows that the Amasis, whose name is found on one of M. Bouriant's tablets, does not belong to the XXVIth Dynasty, as I had imagined, but to the XVIIIth, and that the tablets themselves formed part of the archives of Amenophis III. and IV. They consist, for the most part, of letters and despatches sent to these monarchs by the kings and governors of Palestine, Syria, Mesopotamia, and Babylonia; and, as some of them were written by Burna-buryas, King of Babylon, their age is about 1430 B.C. I will not say anything here upon the new vistas in Oriental history which such an extraordinary discovery opens up, since my copies and translations of the tablets belonging to M. Bouriant will appear before long in the *Proceedings* of the Society of Biblical Archaeology. But there is one fact brought to light by them which is so curious that I cannot refrain from laying it before the readers of the ACADEMY.

In my Hibbert Lectures last year I pointed out that the Hebrew Mosheh or Moses is letter for letter the Assyrian Masu, and I gave reasons for believing that Masu would prove to have originally been a name of the Sun-god. One of the tablets from Tel el-Amarna has confirmed my conclusions sooner than I expected. It contains a reference to "the Sun-god rising from the divine day, whose name is Masu" or Masu. Masu was, therefore, a name already known in Egypt a hundred years before the date assigned by Egyptologists to the Exodus, and it is further proved that it was the name of the Babylonian Sun-god before it was the name of a man.

A. H. SAYCE.

"THE FIGHTING VERES."

St. Paul's School: June 2, 1883.

It may interest some readers of Mr. Markham's book (of which an appreciative notice appeared in the ACADEMY a fortnight ago) to learn that there is a slight presumption in favour of Sir Francis Vere's having been at St. Paul's School.

Among the MSS. in the British Museum is one (Reg. 12 a. lxvii.) containing sets of Latin and Greek verses, addressed to Queen Elizabeth, by William Malim, high master of St. Paul's School 1573-1581, and eleven of his scholars. Some of them appear to have been composed during the time of Malim's predecessor, John Cooke, who was appointed to the office shortly after Elizabeth's accession. The author of the last of the eleven is Franciscus Verus. There is no direct evidence, so far as I know, that this Francis Vere was the great captain, "the first great English general in modern history." But a few circumstances favour that conclusion. The collection of verses was probably drawn up by Malim for presentation at court soon after his own election; so that the real teacher of most of the boys would be his predecessor, Cooke. Now Cooke was either the schoolfellow, or friend from boyhood, of Cecil, the lord treasurer, as appears from a Latin letter addressed to him. To Cecil was intrusted the guardianship of Francis Vere's cousin, the young Edward Vere, afterwards seventeenth earl, who was born in 1550, and who afterwards married Anne Cecil, the treasurer's daughter. Though ten years younger (according to Mr. Markham's computation), Francis Vere was no doubt asso-

ciated with his cousin (according to the same authority) in his studies. The disparity of age would keep them from being long companions; but there is nothing unlikely in supposing that the lord treasurer, having his ward and future son-in-law up in London, might send the lad's cousins, one or more, to a master whom he appears to have spoken of in the highest terms. If it could be shown that there was any relationship between John Cooke and Sir Anthony Cooke (Lord Burleigh's own father-in-law) it would make it still more natural that St. Paul's School should be chosen for some of the young Veres. Malim, it may be added, had translated out of the Italian an account of the siege of Famagosta by the Turks in 1571, and dedicated the pamphlet to the Earl of Leicester in March, 1572-3, just as the great siege of Haarlem was going on. He had also been a great traveller in the East. If under him, therefore, during the latter part of his school-days, Francis Vere would be likely to get teaching congenial to his disposition.

I may, perhaps, be allowed to express a regret, in conclusion, that John Cooke, the master of Camden and Whitaker, and one of the most fluent Latin and Greek verse-writers of his time, should not have been admitted into the *Dictionary of National Biography*. The same sentence of exclusion has fallen on three other high masters of St. Paul's—Philip Ayscough, George Charles, and Timothy Crumpe.

J. H. LUPTON.

THE PROPERTY IN THE TITLE OF A NOVEL, AS AGAINST A LATER PLAY WITH THE SAME TITLE.

Nutfield, Surrey: June 5, 1883.

May I be allowed to ask, through the columns of the ACADEMY, if there be any means by which an author can secure, for future dramatic use, the title as well as the prose-matter of his novel? Does the recent judgment in the case of "Warne v. Seeborn" effect this matter, or does it only secure to an author his copy-right in a book that he has himself dramatised?

I ask these questions not only because I have a personal interest in them—a dramatic author having recently appropriated the title of one of my novels and written a play to it which is now being acted at a London theatre—but because I think it is a matter which directly concerns every author whose novel (title included) is likely, after it has run its three-volume course, to come before the public in dramatised form.

It seems to me a very unsatisfactory condition of things if any playwright may take the title of a popular novel, write a play to it, and score a success through the popularity of that novel.

C. L. PIRKIS.

P.S.—I do not mention the title of my novel, as I have no wish to advertise it or the play written to its title; but I enclose copies of the letters which have passed between me and the dramatic author on the subject.

"RECORDS AND RECORD SEARCHING."

London: June 1, 1883.

Miss Hopper wishes me to write and say that, in my book just published under the above title, I should have included her among "Record Agents" and not among "Transcribers."

WALTER RYE.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, June 11, 8 p.m. Aristotelian: Annual Meeting for Business.
 8.30 p.m. Geographical: "Hudson's Bay and Hudson's Strait as a Navigable Channel," by Commodore H. E. Markham.
 TUESDAY, June 12, 8 p.m. Colonial Institute: "Wine Growing in British Colonies," by Mr. Hubert de Castella.

8.30 p.m. Anthropological: "Mr. Flinders Petrie's Collection of Ethnographic Types from the Monuments of Egypt," by the Rev. H. G. Tomkins.

WEDNESDAY, June 13, 4 p.m. Society for Preserving the Memorials of the Dead: Annual Meeting.

4 p.m. College of State Medicine: "Some of the more Important Diseases common to Man and Animals," by Mr. G. Fleming.

8 p.m. Microscopical: "Additions to our Knowledge of the Carboniferous Foraminifera," by the Rev. W. Howchin.

8 p.m. Shelley Society: "Shelley's Women," by Miss M. Blind.

THURSDAY, June 14, 8 p.m. Mathematical: "The Correlation of Two Spaces, each of Three Dimensions," by Dr. Hirst; "The Determination of the Circular Points at Infinity," by Dr. C. Taylor; "Applications of Elliptic Functions to the Theory of Twisted Quartics," by Prof. G. B. Mathews; "Point, Line, and Plane-Curves of Second," by Lord Rayleigh; "Rationalisation," by Mr. H. Fortey.

8 p.m. Society for the Encouragement of the Fine Arts: Conversations.

8.30 p.m. Antiquaries.

FRIDAY, June 15, 4 p.m. British Museum: "The Social Condition of the Babylonians," II., by Mr. G. Bertin.

8 p.m. Philological: "The Proposed International Conference to perfect a Universal Language," by Mr. A. J. Ellis.

SATURDAY, June 16, 8 p.m. Royal Institution: "Count Tolstol as Novelist and Thinker," III., by Prof. C. E. Turner.

SCIENCE.

A ROMAN SCHOLAR OF THE SIXTEENTH CENTURY.

La Bibliothèque de Fulvio Orsini: Contributions à l'histoire des Collections d'Italie et l'étude de la Renaissance. Par Pierre de Nolhac, ancien membre de l'École française de Rome. (Paris: Vieweg.)

(Second Notice.)

THE biography of MSS., says M. de Nolhac very truly, is often as instructive as the lives of their possessors. It is odd enough that, being thus interesting, it is so rare. M. de Nolhac's volume probably contains more of such biographical details of precious MSS. than any English work that can be mentioned.

The *Augustus* of Virgil. In 1570 the Frenchman, Claude Dupuy, visited Rome and saw Orsini's library, of which he gives a short account in a letter cited on p. 84. In return for the kindness Orsini had then shown him he promised to send him a fine present. Three years later he enclosed in a parcel of books forwarded to Orsini's friend, Pinelli, a leaf of a very ancient Virgil, written in capitals, "quas unciales vocabant," which was once in the French Abbey of St. Denis. Pinelli sent on this leaf to Orsini, who suspected that the fragment was incomplete, and wrote back for the remainder. This also Dupuy sent. The whole fragment, amounting (p. 86) to two double leaves or eight pages, has since been supplemented by three leaves purchased at the Hague in 1862, and is assigned by Pertz to the first century A.D., by more recent and more sober palaeographers to a later time. It is written in large capitals, but not in what are now distinguished as uncials.

M. de Nolhac recounts the slow stages by which Torquato Bembo, the inheritor of Cardinal Bembo's library, was gradually induced to sell for a sum enormously below their value: (1) the famous Vatican codex of the *Opuscula Vergiliana* (on which I spent many hours last year in the new reading-room constructed by Leo XIII.); (2) the Bembo Terence; (3) the majuscule Virgil with pictures; (4) a Pindar; (5) a Dionysius of Halicarnassus; (6) an autograph copy of Petrarch's *Canzoniere*; (7) a large consign-

ment, including Herodotus, Nicander, Oppian, Lucian, Synesius, Xenophon, Seneca, Livy, and three MSS. in modern languages; a Dante, a copy of the *Cento Novelli*, and a volume of Provençal poets. Angelo Rocca, in his work published at Rome in 1591, *Bibliotheca Apostolica Vaticana a fratre Angelo Rocca a Camerino illustrata*, describes some of these in words which deserve to be quoted:

"Inter Graecos libros [belonging to Orsini] sunt quaedam scripta maiusculis literis exarata. . . . Sunt item inter Latinos libros aliquot codices litteris quoque maiusculis manuscripti, et praesertim Terentius, quem Petrus Bembo Cardinalis olim possedit, tempore Alexandri Severi imperatoris conscriptus. . . . Extat inibi Virgilius, quem prius Pontanus, deinde Bembo possederunt. De hoc libro manuscripto mentionem fecit Pierius. Hic codex antiquior est Virgilio, qui extat in Bibliotheca Vaticana, nec non Virgilio qui olim fuit Pomponii Laeti, deinde Angeli Colotii Episcopi Nucerini, et in bibliotheca extat Medicea."

Rocca here enumerates three of the most celebrated MSS. of Virgil: the Virgil with pictures mentioned above (Vat. 3225), which seems to have been in the possession of the Neapolitan humanist Pontano, before it passed into the hands of Card. Bembo; the Romanus, also in the Vatican; the Mediceus, in the Medicean library at Florence. M. de Nolhac traces the series of possessors of this last famous MS. on p. 273: Pomponius Laetus, Colocci (Orsini quotes it in his *Virgilius illustratus* as Colotianus), Card. Antonio del Monte, Pope Julius III., Card. Innocenzo del Monte, the Cardinal of Carpi, the Grand-duke Francis I., whence it came into the Medicean library.

As early as 1582, when Gregory XIII. assured him of his wish to that effect, Orsini had decided to bequeath his library to the Vatican. To this time M. de Nolhac assigns the original inventory of his MSS., annotated books, and papers (including a large amount of letters), a copy of which, executed by a somewhat ignorant scribe, is still extant, and has served as a valuable guide for identification. The fifth chapter of M. de Nolhac's work deals with the Greek MSS., the sixth and seventh with the Latin, the eighth with those in modern languages.

Among the Greek MSS., the Pindar mentioned above as Bembo's is identified with Vat. 1312. The inventory describes it as "Pindaro tutto integro con scholii et commenti nelli margini, libro antichissimo in papiro, legato alla greca, coperto di corame nero, in 4 foglio." It contains entire *Isthm. iv.* (v.) *Μᾶτερ ἀέλιον*. Tycho Mommsen assigns it to the twelfth century, and thinks it of great importance for the text of the poems. The Herodotus, also from Bembo's library, can only be Vat. 1359. It was written in the time of Theodore Gaza, in 1480. An Aristides, from the same precious collection, is beyond doubt Vat. 1298. Before Bembo it had been in the possession of Niccolo Tomeo; both Kramer and Dindorf give it a high place in the MSS. of Aristides. A very large folio codex of Dionysius of Halicarnassus, now Vat. 1300, is evidently that mentioned in the negotiations between Orsini and Torquato Bembo. The titles are in capitals, and it was written as early as the ninth or tenth century.

M. de Nolhac calls attention to what is now a very well-known fact—the slight palaeographical knowledge which even the best-informed collectors of that time possessed. Orsini's notifications of the dates of his MSS. are of the vaguest kind—*anticho* for codices anterior to the fifteenth century; *antichissimo* for those anterior to the fourteenth. The abbreviation *v. c.* (*vetus codex*) not unfrequently applies to MSS. of the fifteenth century. Thus he speaks of a Livy in his library as "*v. c.* qui est apud me scriptus manu doctissimi viri Poggii Florentini." The point is worthy of attention. Students of sixteen-century commentaries often find readings mentioned as drawn from some *v. c.*, and fancy themselves in possession of fragments of an early text. Nothing can be a greater mistake. Palaeography was then in its infancy; and little credit can be paid to statements of date unless that date is actually stated in the MSS., which, if we except MSS. of the fifteenth century, is, so far as I have observed, exceptional. In Greek, as might be expected, Orsini is even less reliable than in Latin MSS. Thus, a *Rhetoric* of Aristotle, written in the fourteenth century, is described in the inventory as "*di piu di 500 anni*"—i.e., as written in the eleventh century. Yet I think M. de Nolhac is a little too hard on our collector when he takes him to task for his description of the very ancient fragment of Dion Cassius, which he placed at the head of his collection and described as "*Dione il libro 79 et 80, imperfetti, in lettere maiuscole senza accenti, libro di più di mille et ducento anni, in pergameno in foglio*." Assuming that this is much too early, the fact remains that he was describing the most ancient MS. of his Greek collection; and this was not for that time only, but for every succeeding age of classical research, the important thing. If a Pertz could predate the Virgil leaves by a century or two, and this with the immensely advanced knowledge of our time, we may pardon Orsini for committing a similar mistake in the era of the Catholic revival.

The Latin MSS. are even more numerous and drawn from an even larger number of sources. The principal collections which contributed to form Orsini's Latin library were those of Petrarch, Poggio, Philaeus, Pomponius Laetus, Poliziano, Antonius Panormita, Colocci, the Bembo. The most ancient of them, indeed, would go back to Pope Nicolas III. (1279-80) if Orsini had not predated the MSS., both of Cicero's letters, and both written really in the fourteenth century, and ascribed them to an Orsini pope instead of an Orsini cardinal. From Poggio comes a MS., in his own handwriting, of the *Academica* and *De Legibus*, written in 1410-13, and with marginal corrections by Poggio, and remarks in the fine hand of Cardinal Bembo; also the third and fourth decades of Livy, written in a large hand in 1454 and 1453. The library of Philaeus contributed a twelfth-century Virgil, with the Commentary of Servius (Vat. 3251). Orsini possessed, besides, a Servius in Lombard characters (Vat. 3317), perhaps of the tenth century. In the hand of Pomponius Laetus, besides many other largely annotated volumes, is an *Agricola* of Tacitus, now one of the principal sources for constituting the text of this imperfectly transmitted work. It is bound

ARISTOTELIAN SOCIETY.—(Monday, May 28.)

SHADWORTH H. HODGSON, Esq., president, in the chair.—Dr. A. Bain read a paper on "The Definitions of the Subject Sciences, with a view to their Demarcation." Starting from the position that a science is an aggregate of kindred topics, that is, topics more closely related among themselves than they are to any others outside, he considered the best mode of securing this condition in the sciences of the subject world. There was a standing temptation among the professors of any one science to overstep its boundaries, from the desire of including some pet subject, to the consequent derangement of the unity of the science. A contrasting illustration was given from the position of Aristotle, who included in his grasp the whole circle of the subject departments, by which he was freed from the temptation to aggrandise one at the expense of another, and, in point of fact, kept their several provinces distinct to a degree that was quite remarkable at his stage. The course to be pursued as suggested by this example, would be to review the round of the subject departments, by taking them in couples, namely, psychology-logic, psychology-ethics, psychology-philosophy, logic-psychology; these four couples being sufficient for the particular purpose of the paper, which was to isolate the topics most proper to make up a department of philosophy, as in a great degree synonymous in its present usage with metaphysics and ontology. As regards the treatment of the successive couples, the plan would be to fasten upon the most typical and universally received matters in each, and from these to shape a provisional text for judging of the admissions of the more ambiguous topics. In the exercise of this judgment the points in question would be doubly tested: being compared with the standard examples of both members of the couple, the comparative relationship would then be estimated under the most favourable circumstances. Thus in the couple psychology-logic, there was an ambiguous topic in the law of resemblance or similarity, which seemed to come under both alike. Here, however, the difficulty would be met by distinguishing two different bearings of the principle—the one, consistency as the test of truth, and necessarily all-pervading in logic, the other, similarity as a process of the reproduction of thought, and falling exclusively to psychology. Under the couple psychology-ethics, the unequivocally ethical topic would be the standard of right and wrong; while the nature of conscience would be somewhat ambiguous, but would incline to psychology, when the purpose was to decide whether it was a simple or a compound faculty, and, if compound, to assign its constituent among the psychological elements. The stress of the final discussion lay between the couples—psychology-philosophy, logic-philosophy, after surveying which a series of topics was arrived at more or less heterogeneous with the characteristic material of psychology, logic, and ethics, and thereby free to enter into the sphere of philosophy, having, moreover, on examination, a sufficiently common character to give unity to that sphere. The questions—external perception, the priority of the particular and the universal in knowledge, the unity or duality of knowing and being, the relative and the absolute, the knowable and the unknowable—would be among the received topics of philosophy, being unsuitably placed in the other departments. There was a final issue of supreme importance in making up the sphere of philosophy—namely, whether it should absorb theism, in consequence of its supposed application in that region. Reasons were advanced for keeping theism wholly distinct from philosophy.

PHILOLOGICAL SOCIETY.—(Friday, June 1.)

THE REV. DR. B. MORRIS, president, in the chair.—A paper, on "The Vocalic Laws of the Latin Language," by Mr. E. R. Wharton, was read by his brother, Mr. H. T. Wharton. The leading points of Mr. Wharton's system are—(1) the law of the "pre-tonic" vowel (which he believes to be his own discovery); (2) the application of the theory that Latin—like Welsh, French, German, and, perhaps, some other languages—possessed a modified *u* as well as a genuine *u*; and (3) the demonstration of the influence of dialect on vowels, and especially on the diphthongs. The Romans used

sometimes *u*, sometimes *i*, for their modified *u*, for which the Emperor Claudius proposed a sign like a half capital *H*: *hubet* is later *libet*, *clienus* goes with *cluo*, *pingo* with *pungo*; Angustus spells *sinus* for *sumus*. To dialect are due the changes of *e* into *i*, and *o* into *u*, in the root-syllable: beside *felix*, "fern," we have *felix*; beside *trebus*, *tribus*, &c. The oldest Romans said *humo* for *homo*; *culpa* and *pulex* have older forms, *colpa* and *polex*. The later Roman dialect turned *o* in monosyllables and finals into *u*: *homo* and *sont* became *huno* and *sunt*; *filios*, *opps*, *trebibus*, *populum*, *consul*, became *filius*, *opus*, *tribibus*, *populum*, *consul*. Also, initial *co* became *eo*. Distinguishing between stress-accent and pitch-accent or "tone," Mr. Wharton showed how the pre-tonic vowels changed, as *e* into *a*, in *salvus* beside *solidus*, *lacuna* (space) from *locus*, and how unaccented vowels tended to change. He then treated the influence of analogy; and, lastly, dealt with long vowels and diphthongs. A print of the paper was put into every member's hands to enable him to follow the compressed arguments and examples.—There was also read a paper on "Thirty-five Words of the Dialect of the Cayapas Indians living in the interior of Ecuador, with their equivalents in Quichua, the mother Peruvian dialect," communicated by Mr. C. Cheston.

FINE ART.

THE ROYAL ACADEMY.

III.

It is impossible to admire the tendencies shown this year by the ever-shifting art of Mr. Hubert Herkomer. A painter who has given us the "Miss Grant" of two years ago, or even the idealised portrait-study of last year, must expect to be judged by a high standard. The level of his best work has certainly not been reached in the pompously posed, and not very conscientiously modelled, "Mrs. Arthur Sassoon" (316), which is, however, less open to objection than the series of masculine portraits contributed by the artist. In these a certain vigour of modelling, not of the soundest or subtlest order, is, no doubt, achieved, and a certain success attained in the reproduction of the mere exterior semblance of the sitter; but the higher problem of portraiture—the suggestion of a human personality as a whole—is hardly even attempted. The portraits now shown have in common a certain vulgarity of aspect and superficiality of general execution which are anything rather than attractive. With Mr. Holl we are always, to a certain extent, safe. He may on occasion show an unmistakable lack of interest in his subject; but his execution never lacks thoroughness, and never sinks below a certain point. Considerably above his average are the "Earl Spencer" (221)—a work as truthful as it is unaffectedly dignified; the "Sir William Jenner" (228); and, best of all, the very natural and living portrait of "John L. Townshend, Esq." (742). The art of Mr. Oulless is of a far higher type, though the dryness, the over-insistence on detail, and the failure to suggest atmospheric envelopment—which are characteristics of his technique—detract more and more from the due enjoyment of his work. For all that, the heads in the portraits of "Sir W. Ounliffe Brook" (287), and "Frederick Pitman, Esq." (293) are marked by a searching truth and an energy of characterisation in which they have not many rivals in the exhibition. Mr. F. Charles, in his realistic, almost pre-Raphaelite, presentment of "D. Radcliffe, Esq." (747), shows himself an earnest seeker after truth in the reproduction of natural fact and in the suggestion of vitality; but he fails to achieve complete success in consequence of his incapacity to sacrifice detail to the extent necessary to secure unity and veracity of general effect. One of the most characteristic and charming pieces of portraiture here is Mr. Edwin A. Ward's "Mrs.

Howse" (848). It is at the same time a refined and delicate tone-exercise, and a sympathetic delineation of old age under its most amiable aspect. Mr. W. Carter has, within a remarkably short space of time, made himself a place in the front rank of English portrait painters. It would appear that he is unable or unwilling to shake off that peculiar mannerism, that *sfumatezza* in the execution which conceals a certain hardness of touch; but, in other respects, his "Comte de Torre-Diaz" (155) and "H. Pickersgill Cunliffe, Esq." (1077), are works of a masculine vigour of execution, and a considerable power, if not a remarkable subtlety, of characterisation. Nothing in the whole exhibition shows this rarest of rare qualities, penetrating characterisation, in a higher degree than the modest pastel drawing (1326) in which Mlle. Anna Bilinaka has, with surprising success, conjured up an animated vision of her own engaging individuality. The peculiar type of the young painter—with its irregularity of feature, its swarthy complexion, and its extreme mobility of eye and feature—is less common on the walls of the Academy than on those of the Salon, and its effect here is to a corresponding degree greater. But the painter, in giving of herself so veracious and so subtle a picture, has achieved an artistic feat often attempted, but seldom truly accomplished. The "Know Thyself" is even more difficult of achievement in art than in introspective analysis; for the vision seen in the mirror is, in the process of interpretation, too often coloured by all sorts of *partis pris* and preliminary assumption. The execution of this unpretending but fascinating work is sober and firm to an uncommon degree, if it does not reach the limits of technical mastery.

The landscapes and marine pieces having real technical merit and the distinctiveness conferred by an earnest and personal interpretation of nature are even fewer than usual, though we meet with one or two instances in which artists of acknowledged reputation have shown a laudable ambition to leave well-worn grooves, and attempt subjects widely differing from those by which their fame has been won. We have first to deal with Sir J. E. Millais's "Murtly Moss, Perthshire" (292). This is a painstaking and enthusiastic effort to break away from former schemes of colour, and attain a delicate, opalescent harmony of general tone, akin to, though not identical with, that which the great masters of modern French landscape have often gloried in achieving. The master's pre-Raphaelite training, his love of detail in nature, and his somewhat prosaic insistence on ungeneralised fact, are all of them elements which, in the solution of such an artistic enterprise, militate against success. A pleasing, if not very inspiring, page of nature has been reproduced with much skill, but with a timid correctness which renounces all attempt to give back any portion of its higher truth and suggestiveness, or—by emphasising without falsifying its essential elements—to make clear a unity of design, and interpret a dominant sentiment, such as in all characteristic aspects of nature must lie hidden, though they do not necessarily show themselves on the surface, within the perception of the indifferent observer. To say that the picture is Sir J. E. Millais's is to say that it contains many fine points: among these may be noted the fine rendering of the stagnant grey pools in the foreground, with their delicate reflection of the rush-grown borders of the moss, and the dappled moist sky whose wide expanse canopies the whole scene. It is impossible not to admire the courage and enthusiasm shown by Mr. Vicat Cole in putting aside for the time his unemotional reproductions of English river and meadowland in order to attempt on a large

scale a subject of such exceptional difficulty as the "Pool of London" (350), with its inextricably involved masses of shipping, its rushing waters, and, in the background, its heaped-up towers and steeples. If we recognise here many of the artist's well-known defects—with a superadded over-anxiety and hesitation sufficiently natural under the circumstances—we find also a certain unwonted breadth and unity of design which gives to the vast canvas a veritable *raison d'être*, and makes us desire that it should constitute a new departure in the veteran painter's mode of conception and artistic method. Mr. G. H. Boughton is at his best in "A Golden Afternoon—Isle of Wight," a charming prospect of undulating cliff covered with field and broken meadowland, showing in the immediate foreground tree-trunks half stripped of their leaves, which—delineated as they are with a certain sharp accentuation of design peculiar to Mr. Boughton in such matters—greatly assist the rest of the composition. The broken green hues, the buffs and greys of the colour-scheme are harmonised with great felicity, the only drawback to enjoyment being a certain opacity in the sky and the far distance. The landscapes of Mr. Alfred East again prove that he possesses great feeling for unity of tone not pushed to the extent of undue monotony, as well as considerable felicity in composition. The easy breadth of his execution is, however, allied to a certain superficiality in the study of nature, betokening not so much a power of generalising fact, as of concealing imperfect or insufficient observation. His chief contribution, "A Frosty Sunset" (492), the general conception of which has much charm, is generally marred by this want of a thorough comprehension and true generalisation of detail, reacting as it does on the pictorial whole, and depriving it of serious value. Foreign training of quite another kind—apparently in the direction of the Belgian school—is shown by Mr. Yeend King in a number of landscapes, of which "Sylvan Solitude," a study of a river creek or backwater, overshadowed with a heavy canopy of summer foliage, is the best. The artist has a cold, unemotional way of looking at his subject, and he apparently cares to see in it only what is most obvious to all; but he is nevertheless a craftsman of considerable technical ability. Two shining lights of the Society of Water Colours—Mr. A. W. Hunt and Mr. H. Clarence White—are, not for the first time, unkindly treated by the hanging committee of the Academy. The strangely-named "On the Wings of the Wind" (739) of the former—showing a sad, deserted estuary bounded by low green banks, and seen under the light of a disquieting sunset—loses all significance where it is now hung. It is, nevertheless, a pathetic conception, wrought out with a subtlety bordering on over-refinement, but without the unity or breadth of execution necessary to give full effect to the artist's intentions. Mr. Clarence White's "Snowdon" (1010) has a very unsatisfactory foreground, but its middle and far distance of sunlit mountain, shown through a delicate vapour, afford a prospect full of fascination. Perhaps, on the whole, the most complete and satisfying achievement in the class to which it belongs is Mr. Adrian Stokes's "Upland and Sky" (1024), a work which—it may be on account of its calculated simplicity of design and its sober tonality—has attracted less attention than it deserves. Nothing meets the eye of the beholder but a projection of breezy, treeless upland, tenanted by a few cattle, and overhung by an expanse of overclouded grey sky, which moves languidly, and threatens to dissolve itself in rain. Unity and vigour of execution are here in perfect harmony with the subject expressed; and the artist most com-

pletely justifies his boldness in selecting it by the skill and directness with which he has made clear its pictorial value, both from the mere technical and the higher standpoint. If Mr. Stokes appears to have derived assistance from the example of the eminent Dutch landscapist, James Maris, he is yet no plagiarist. Few English painters could rival the rendering of the moisture-laden sky in this work, or the sense of all-enveloping atmosphere imparted to the scene. Mr. J. MacWhirter's "Edinburgh from St. Anthony's Chapel" (686) is, from a scenic point of view, admirably well laid out; but it is, like all the artist's works, hastily and incompletely executed. In Mr. Peter Graham's large sea-piece—"Driven by the Wind" (593)—the huge masses of tumbling green water and white foam, which cover the whole canvas, are given with a certain freshness and delicacy of colouring, but otherwise in a sufficiently unmeaning and superficial fashion. It is impossible not to praise year after year the splendid modelling and the glancing azure hues of Mr. Henry Moore's palpitating seas; but we wish that he could bring his skies up to the level of these by imparting to them a greater lightness and a more transparent depth. His "Nearing the Needles" (62) is an unusually fine specimen of his powers.

The improvement evident during the last few years in British sculpture—due to the initiative of a small band of true enthusiasts, belonging to the younger generation, who have declined to regard their art as merely a higher branch of commerce—is, on the whole, maintained. Two important works—those of Mr. Hamo Thornycroft and Mr. A. Gilbert—are so remarkable for originality and great technical excellence that they lend a certain distinction to this entire section of the exhibition. Mr. Thornycroft shows in his beautiful "Medea" (2062) the Colchian sorceress in the act of charming to sleep the dragon who guards the Golden Fleece. The style of the work is a little later than that of the "Teucer," in which the sculptor achieved his first great success; it is the post-Pheidian manner in its still severe and semi-architectural phase. He has, however, achieved the difficult feat of evolving in this peculiar style an entirely original creation, and one of great purity and penetrating power. The execution of the statue is, on the whole, deserving of high praise, though the flexibility of life has not been suggested, or, indeed, aimed at; it is apparently intended to be seen only from the front, the back portion of the figure being enveloped in draperies neither very graceful in fold nor very thoroughly worked out. The same sculptor's bronze relief, "Justice and Mercy" (2022), intended for the Gordon Memorial, is far less successful; the panel being, if it be considered from a purely decorative standpoint, overcrowded, yet not very happily filled, while the special technique of sculptural relief seems to be imperfectly understood. Mr. Alfred Gilbert's colossal model of a seated statue of the Queen—the original of which, executed in gilt bronze, has recently been erected at Winchester—is an entirely new departure in English monumental art. The sovereign is represented seated on a magnificent throne of a quasi-gothic rigidity of design—though its details are fancifully original—wearing a royal circlet and voluminous state robes, and holding globe and sceptre—the former, in unorthodox fashion, surmounted by a Greek Victory; the apex of the whole composition is formed by an overhanging crown of Tudor design, which bears a perilous resemblance to an ornate gas-lamp. The pose of the figure has great ease and dignity, and the modelling of the robes displays a really extraordinary skill, having nothing in common, how-

ever, with the frivolous *tour de force* of modern Italian sculpture. On the other hand, the treatment of the head, though very remarkable, is too realistic and too picturesque for a work coming within the category of monumental art, while the great mass of drapery formed by the robes—which are designed with a view to decorative effect, with an almost Berninesque exaggeration of fold—entirely fails to harmonise with the perpendicular and horizontal lines of the severely designed and strictly architectural throne. Before pronouncing, however, an absolutely definite opinion on the work as a whole, it should be seen in the open air with its surroundings. A group, "Death liberating a Prisoner" (1968), by Mr. Henry Pegram, contains some fine passages of modelling in both figures; but the central motive is not clearly expressed, and there is a want of coherence both in the conception and in the manner in which it is expressed. The "Fortune" of Mr. George Simonds (1913) shows that he, like Mr. Thornycroft, has a high appreciation of the finest period of Greek art; but it does not prove that he has been able truly to assimilate the great principles of that art, and thus to put it to new and worthy uses. Mr. J. S. Boehm is represented by several busts, and by a somewhat theatrical sketch of "Richard Coeur de Lion." Mr. Woolner has full-length statues of "Sir Stamford Raffles" (1915) and "The Late Dr. Fraser, Bishop of Manchester." Mr. Onalof Ford contents himself with two portrait-busts, those of the artist's mother and of General Gordon. A "Study of an Old Man" (2034), by Mr. J. W. Rollins, is far too close a pasticcio—though a skilful one—of Donatello's famous "Niccolo da Uzzano" at the Bargello. Mr. G. Nathorp's "Robert Browning" (1945)—a low relief executed in bronze—is a successful medallion-portrait of the great poet, in which the sculptor has cleverly overcome the great difficulty of presenting the full view of the human face in a bas-relief.

Want of space prevents us from noticing in detail the small plastic studies or the designs for medals, among which are to be found works displaying very considerable ability.

CLAUDE PHILLIPS.

THE ROYAL INSTITUTE OF PAINTERS IN WATER-COLOURS.

It is not very easy, after looking through a kaleidoscope, to recall the exact combinations of form and colour that have passed before the eye; and still less easy is it to appraise their relative beauty. Some such difficulties, I think, are experienced by the conscientious visitor who has worked through the nine hundred and thirty-five water-colour drawings in this exhibition. He is conscious of having seen a great many "bits" of nature, more or less deftly rendered; but when he tries to bring them back to his memory in clear outline, they seem to elude and mock him, and he falters in the task of selection and comparison. This is what comes of overloading a gallery.

Still there are a good many pictures here that the spectator will probably have "carried away with him." Some he will perchance remember as being unusual in subject. Thus, Mr. Cattermole's "Miracle of the Loaves and Fishes" (725) may have struck him as a stray inadequate survival of the religious art that once held undisputed sway; or Mr. Fowler's "Death of Socrates" (748) as a rare ambitious attempt to grapple with a great historical scene. Possibly, also, he may have wondered whether it is owing to some want in himself that he feels so unmoved by the appeal to his imagination in Mr. Stock's "A Soul contemplating the Stars" (391) and "A Soul con-

templating the Grass of the Field" (683). Then these unclothed souls will lead him to reflect how very small a part the nude plays in an English exhibition; and he will suddenly call to mind Mr. Laing's "Girl and Snail" (847) as a pretty little well-drawn bit of rosy-tinted girlhood.

Then he must be an art-ascetic indeed if a well-told story has no charms for him. And of such there are one or two here, as Mr. Dollman's "Her Birthday" (435), with its clever study of horseflesh; and, very notably, Mr. Dadd's "All is not Gold that Glitters" (579), which not only tells its tale of highway robbery and baffled greed to excellent effect, but exhibits a real painter's gift in the disposal of light and shade. A story should suggest Mr. C. Green's illustration to "Bleak House" (565), and a very good illustration it is; and that, again, might fittingly suggest the question how far art may legitimately derive its inspiration from literature.

But if he is wise, my imaginary spectator will resolutely put aesthetic problems of this magnitude to one side, lest he should forget to recall three or four more figure-pictures that he ought to remember; and among them Mr. Caffieri's bright "Cookham Regatta" (884), which has atmosphere for all its brightness; and Mr. Langley's "Village Idyll" (164), with its honest attempt to paint the fisher-folk as they are, and unpretentious; and the excellent girl's figure in Mr. Austen Brown's "Summer" (783)—lest, above all, he should fail to do justice in his thoughts to the body of landscape art that lends its main charm to these galleries.

Landscapes—when once he begins to think about them, they will jostle one-another in his thoughts. Here are Mr. H. G. Hine's "Kingston Hill, near Lewes" (3), and "Wall of Severus, near Haltwhistle" (295), both less ambitious, perhaps, in size than some of his contributions of former years, but full of all his old dainty perfectness, his finely graded distances, his poetry of delicate still sunlight and imbathe atmosphere. Here, again, as if to mark by what different methods art can reach her ends, are the rougher works of Mr. Wimperis and Mr. Orrock—powerful, breezy, impressive, and with good composition in them too, as notably in the latter's "Kinharvey Moor" (193). Here, again, as if to show that nature has her moods of melodrama, are Mr. Keeley Halswelle's "Christchurch, Hants" (157), with its glooms and splashes of brassy light, and his cloud-vexed "Rainy Day, Medmenham" (330). "J'en passe, et des meilleurs," as Ruy Gomez says in "Hernani"; but yet should one mention Mr. Yeend King's "Through Meadows Green" (899), as having a distinct vigorous character of its own, and being a strong presentation of lush grass, and glassy water, and poplar-bark. And Mr. Frank Walton's shore-scapes, too, should have a word, for they are very clever, though I scarcely think the "Black Rock" (17) shows more than the prose of the place, or has in it any pictorial suggestion of the "troubled spirit of Featherstone," which is believed to be still imprisoned under the rock in question.

And a word, too, there ought to be for many another good man and true, and for the works on which he has expended time, skill, and sometimes thought. But always there is a point at which words must pass into silence.

FRANK T. MARZIALS.

EXCAVATIONS IN THE FAYUM.

As my work in the Fayum is now suspended during the hot months, it is time to give a summary of the results which have been obtained since the discoveries at Biahmu,

which I reported in the ACADEMY in February.

The site of the Labyrinth is now fixed beyond reasonable doubt. After seeing the country, it is certain that the description in Strabo cannot agree with any site but that by the pyramid of Hawara. There is, indeed, no other pyramid anywhere near except at Illahun; and that has no extensive remains adjoining it. The question then lay thus: Can remains of any such building as the Labyrinth be traced at Hawara? The mud brick buildings planned by Lepsius as being part of the Labyrinth were long felt to be unsuited to it, and I could not hesitate at calling them a village of Roman age. On excavating, they were found to rest upon a mass of fine white limestone chips, and are posterior to the destruction of some great building on that site. Further, the stone chambers, figured by Lepsius as a part of the Labyrinth, are built in a pit dug amid the same fine white chips. They cannot, therefore, be of early work; and they closely resemble the tombs of Roman age found near at hand.

The result then is that, while Lepsius was wrong as to the buildings he attributed to the Labyrinth, it can hardly be questioned that he is right as to the site. All over an immense area of dozens of acres, on the south of the Hawara pyramid, I found the evidences of a grand building. In every pit I dug there was the flat bed for a pavement, either of clean flat sand, or usually of rammed stone chips, forming a sort of concrete. Over this bed in a few cases the pavement itself remained; while in all parts was a deep mass of chips of the finest limestone lying upon it.

There is no other site geographically for the Labyrinth; and there is no other building known to us to which such extensive remains could be assigned. This is the case for it; but of more direct evidence I fear none will ever be obtained, the destruction having been so thorough and entire.

The pyramid at Hawara was another object of my work there. No entrance has been found hitherto; and further work on the north side was fruitless, as well as a trial on the east. The south side was deeply encumbered, and so I determined to tunnel to the middle from the north. Thus I found the roof of the great chamber, which is sunk in a pit in the rock; but unfortunately I am still on the outside of it, and the work of cutting through it must wait for a few months. It is almost certain that it is the tomb of Amenemhat III., as his name is so constantly found in the temple adjacent. To have proved the existence and position of a chamber is a valuable point gained.

The remains of a group of chapels of the sacred crocodiles have also been cleared and planned; but all the stonework and inscriptions are destroyed.

While the above work was going on I turned my attention to the cemetery at Hawara, with most striking results. Altogether I unearthed sixty portraits, painted on panel with coloured wax, probably of the period from the Antonines to Gallienus. Though many of these are in bad condition, there are several brilliant ones, as fresh as when painted. Most of the fine ones are included in the dozen selected for the Bulak Museum; but among those which I have brought to England are many which will give a new light on the portraiture of Roman times. A large quantity of embroideries and patterned clothing has been found on the mummies. A sarcophagus with long inscriptions of titles and adorations throws much light on the state of the Fayum anciently. Of papyri there are pieces of hundreds of Greek documents, mostly accounts, lists, &c. The only literary papyrus is one of the second book of the Iliad. It is of the finest Greek writing, before the rounded uncials or cursive hand; and, though the ends

of the roll are rotted, the greater part is in fresh condition. This will be edited by Prof. Sayce. There are also many matters of minor interest, such as a glass vase with wheel-cut patterns, a number of funerary inscriptions in Greek, a double series of eight canopic jars of fine work, a large collection of flower wreaths, &c.

The above finds will be exhibited at the Egyptian Hall, Piccadilly, from June 18 till the middle of July.

WM. FLINDERS PETRIE.

CORRESPONDENCE.

THE GRAVE OF AN ETRUSCAN LADY AT TODI.

Lucca: May 31, 1888.

I recorded in the ACADEMY of June 11, 1887, the confiscation of the archaeological treasures found at Todi, in Umbria (described in my letter of October 16, 1886), by the judicial sentence passed at Perugia; also the infliction of a heavy fine on the owners of the garden where they were excavated.

After the elapse of a year the judgment has been reversed on appeal; and the tribunal, again sitting at Perugia, after a long discussion, ending on May 26, has ordered the restitution to the finders of the whole of the objects seized, together with a remission of the fine, and payment of all expenses. The Italian Government, however, retains its usual right of purchase under the Paoa law, before the proprietors can dispose of their property to other buyers.

I forbear dwelling on the delay and injustice to which Messrs. Orsini Brothers, the rightful possessors, have been exposed. I will only say I am glad to see that a letter from Rome, in the last number of the *American Archaeological Review*, adopts the same opinion which I entertain concerning this arbitrary conduct, most unfair to individuals, and unworthy of officials really desirous to benefit students of ancient art.

WILLIAM MEOGER.

"TARATHA" AND "JANUA."

Weston-super-Mare: May 30, 1888.

In referring to Dr. Neubauer, I had before me *Géog. du Talmud*, p. 305, note; and I wished to get to the bottom of the "Janua" explanation of Tharatha, for I thought Janua, "qu'on rapproche du temple de Janus," might have sprung possibly from the local name *Ianu* or *Ianui*, which we find in Egyptian records, and so might really have an ancient origin "which someone had blundered."

The fortress in question appears to have stood on the west side of the Euphrates. Leaving "Babia" out of view, is it possible that the name *Janua* in any way belonged to Hierapolis-Mabog?

I have not Assemani at hand. Does he translate Tharatha by Janua as a Latin equivalent? Or, if he simply "explains" the one by the other, may it not be an original name? I am simply an interrogator, and if any light can be thrown on the name or on the subject I shall be very grateful. For I do not feel sure that we have yet got to the bottom, or proved that there is none.

HENRY GEORGE TOMKINS.

NOTES ON ART AND ARCHAEOLOGY.

SIR FREDERIC LEIGHTON has received the high distinction of being nominated by the German Emperor to the order "pour le mérite."

At the general meeting of the Royal Society of British Artists, held on Monday last, Mr. Wyke Bayliss was elected president, whereupon

Mr. Whistler, the late president, and some twenty-three other members of the society, forthwith tendered their resignations.

THE sixth annual meeting of the Society for Preserving Memorials of the Dead will be held at the Mansion House on Wednesday next, June 13, at 4 p.m., when the Earl of Northesk, the president of the society, will take the chair. The society will also hold next week, on Tuesday and the three following days, in the rooms of the Archaeological Institute, Oxford Mansion, an exhibition of drawings and photographs of monuments, &c., that have come under their notice.

Examples of Old English Houses and Furniture is the title of a folio of drawings about to be published from the pen of Mr. Maurice B. Adams. The plates, of which there are to be thirty-six, include several etchings that have been exhibited by the author at the Royal Academy. Among the old mansions represented are Borwick Hall, Bradshaw Hall, Burford Priory, Oxon; Blickling Hall, Norfolk; Ightham Mote, Kent; Little Moreton Hall, Cheshire; Speke Hall, Lancashire; Dutton Hall; South Wraxall Manor, Warwickshire; Kirby Hall, Northamptonshire; Broughton Castle, Oxon; and others, including sketches in Suffolk, Somerset, &c. The plates devoted to furniture will comprise many old examples as well as new; and the book will conclude with illustrations of some modern works executed from designs by the author.

THE STAGE.

TWO HESTER PRYNNE.

ON Monday night, Miss Calhoun had a hearty welcome in opening her season at the Royalty, London—may I be ungallant enough to say it?—is not very rich in quite young actresses of real intelligence and sensibility. We can count them on the fingers of one hand—not people who are pretty; not people who know their business; but those very rare people whose individual qualities have excited interest, and whose limitations have not been betrayed—who have (for that is about the plainest way in which we can put it) a serious chance of some day taking the place of Mrs. Kendal and Miss Terry. Miss Calhoun did enough when she was last among us—did it especially in her *Rosalind*, and in her *Mabel Vane* in "Masks and Faces"—to show that she belonged to this scanty company of legitimate candidates for a great position. Even outside the American colony, therefore, her return was something of an event. And, appearing as Hester in "The Scarlet Letter," she appeared in a character which only the clumsiest of dramatic treatment could have deprived of its charm. The dramatic treatment was not clumsy, the impersonation was excellent, the success of the actress was unquestioned. Yet there is something to find fault with in the play.

The piece by Mr. Stephen Coleridge and Mr. Norman Forbes is in five short acts; the acts, if anything, are even too short—too much wanting in detail and local colour. It begins with a very strong scene, but a scene of which the advantage is to some extent discounted—the scene in which Hester Prynne takes her place on the pillory, as only the first stage of the punishment given to her for her sin of love. The second act, in which Hester is in prison, follows upon this, and it is distinctly weaker; and, unless we may be presumed to

come to the theatre always with a knowledge of the novel on which the play may be founded, there is some difficulty in sustaining our sympathy here. We are sorry for Hester in the pillory, as we are sorry for a woman who has an accident in the streets; but we do not know enough about her to make allowance for what is called her "fall." We do not know—save by a word or two—the temptations, the singular circumstances, the unisons and the discords in character, which have brought this thing to pass. Still, so far as the acting, so far as the representative of Hester is concerned, the difficulty is at all events minimised; and by the time the curtain rises on the third act, the gentle influence of the now blameless life—the life with the child in the cottage—begins to tell, and there is established for the heroine that fulness of sympathy which other literary treatment might perhaps have earlier secured. This third act is admirable in all respects; it is so conducted as to show the dramatist's perfectly clear conception of what M. Francisque Sarcey calls the "scène à faire." In it, Hester Prynne pleads touchingly with the governor for the retention of her child; and Arthur Dimmesdale pleads for her; and Roger Chillingworth discovers in the earnestness of his pleading the accent of a personal emotion. Nor is the fourth act weaker. The action passes in a New England coppice, where there is a very brief, a very delicate, a very poetic love-scene between Dimmesdale and Hester. Dimmesdale is without courage. All the strength is hers. And it is only under circumstances, which all but the implacable would make allowance for, that Hester Prynne—with her husband plotting an insatiable revenge—decides to leave America in Dimmesdale's company: to take up her lot with him to the end of their days. And even then there is a reaction; and the curtain falls, in this fourth act, upon the lovers' final choice of duty, rather than rest. Again Boston, and again the pillory. Much of what happens in the short fifth act is very striking, but at the end of all a cheap and unworthy device turns the whole current of the story. Just as Arthur Dimmesdale is about to make confession of his share in the fault, Roger Chillingworth incurs the anger of the town by a false accusation, and he is torn to pieces by the mob. He leaves the stage, at all events, upon that understanding. And happiness is meanly secured for the still silent Dimmesdale and his love. I am told—and I can only hope—that this *dénouement* is likely to be changed. It must be changed. The way in which it can be changed best is, not by merely exacting from Dimmesdale the confession now accidentally withheld, but by frankly recognising the inevitableness of a tragic end to the sombre story—an end, lacking which, the story loses half its effect. I am not blood-thirsty in the least. There was a good deal to be said for Arthur Dimmesdale; a great deal for Hester Prynne. But to end in happiness such a story is to be inartistic—thoroughly.

Miss Calhoun has grasped the true character of Hester—proud and embittered when the town reviles her; penitent when alone; full of tenderness; full of womanliness. The performance is consistent and harmonious. It has real beauty. And some dignity, and as

much sweetness, as may be got into the part of Dimmesdale Mr. Forbes Robertson shows. Mr. Norman Forbes—often excellent, and here clearly doing his best—still makes Roger Chillingworth rather needlessly grotesque. Mrs. Huntley, in a smaller part, adds strength to the cast. A delightfully simple little child, named Arnott, remains in her place as Hester's daughter—is not permitted to assert herself and come "out of the picture." The other characters, though well enough played, are quite unimportant. The stage management is excellent, the dresses pretty, the scenery very appropriate.

On Tuesday afternoon another version of "The Scarlet Letter" was presented at the Olympic. Dr. Aveling, it seems, is responsible for the greater part of it; but Mr. Charles Charrington, the actor—it whose *matinée* it was produced—had had the happy thought of writing a prologue, and this he did so well that the piece was started under favourable circumstances, and appeared likely to have unqualified success. But the promise was not fulfilled. After the prologue—long, but not diffuse; ingenious, but not affected; and extremely useful as giving variety to the impersonation of Hester, and as justifying her in what was to follow—there came a strong scene, the scene of the pillory. But the next act, laid in the governor's hall—the act corresponding to the cottage act I have spoken of above—compared ill indeed with what is at the Royalty. Wherever the dialogue had occasion to depart from Hawthorne's own, it was apt to be both pointless and diffuse. The cleverest acting in Europe could not then sustain its interest. In the fourth act again—before we got to Hester's decision that Arthur Dimmesdale should not depart alone—we had a voluminous outpouring from an ill-conditioned and most superfluous woman in the woods. This may have been Hawthorne himself, for all that I know, but if so, that does not make it any the less undramatic. The thread of interest was again entirely arrested, and the coming together of Dimmesdale and of Hester, when it did occur, wanted the effectiveness it need by no means have been without. In the fifth act I can praise the adapter for having, at all events, left Hawthorne as he found him—for not having been wanting in the courage to understand that the thing is a tragedy.

The acting was unequal: some of it earnest but inappropriate; some of it, on the other hand, brilliant and moving. Earlier in this notice I let drop the phrase that the possible successors to Miss Terry and Mrs. Kendal could be counted on the fingers of one hand. Honest and competent observers of the stage, if engaged in that operation of counting, would find themselves reckoning Miss Janet Achurch before they got to the middle finger. To the later phases of Hester Prynne's character Miss Achurch does not give the sweetness which Miss Calhoun is successfully at pains to convey; nor is she—like the actress at the Royalty—subjected, in the pillory scene, to the tremendous test of having to express everything by gesture and by countenance, and nothing by speech. None the less is Miss Achurch's performance moving and brilliant; realistic and imaginative. Her most humane touch—the touch

that corresponds to Miss Calhoun's tenderness in the cottage, and delicacy in the wood—is at that moment in the prologue when Hester, half overpowered by Dimmesdale's declaration to her, does her best to steady herself, to bring back her thoughts into the channel of duty—to make the channel less dry. It is the little bit, in which—quite hungry for any excuse to be good—she asks her husband whether he didn't miss her when he was busy and away. It is easier to be intense and powerful than to strike a note like that with perfect precision. Miss Achurch strikes that note—and is intense besides. Mr. Charrington's Dimmesdale is obviously burdened with remorse, and in the last act he makes a terrible atonement. But I think I have seen the actor in a part better suited to him. Mr. Fernandez, as Chillingworth, is full of firmness, decision, and resource. The piece may have a chance yet, if it is "cut" mercilessly—but mercilessly, without question.

FREDERICK WEDMORE.

MUSIC.

RECENT CONCERTS.

HERR JOHANN SWENDSEN, from Copenhagen, was conductor at the sixth Philharmonic Concert on May 31. His Symphony in D (Op. 4), which stood at the head of the programme, is a work written many years ago, during his student days at Leipzig. Herr Swendsen follows the lines of the old masters, and his music is bright and clever. We cannot say that it is strongly original, but it is fresh, vigorous, and healthy. There are fine effects of contrast, and the rhythm is varied, while the skilful orchestration adds immensely to the general effect. It was well played under the direction of the composer, who wields the *bâton* most efficiently. The symphony was well received, but Herr Swendsen would have done well not to accept the *encore* for the third movement. In the second part of the programme Mr. J. F. Barnett conducted his "Pastoral Suite for Orchestra"—a revised and expanded version of a work composed for the Norwich Musical Festival of 1881. Mr. Barnett appears to think prudence the better part of valour. He does not venture a step out of the beaten track; so, if he errs at all, it is on the safe side. His music rests on a poetic basis; and the village maidens gathering corn, the reapers singing harvest hymns, the threatening storm, and the dances on the green, are all depicted in realistic fashion. The music is tuneful and lively. The Hymn of Thanksgiving at the close is perhaps worked up in too pompous a manner for a village festival. Mr. Alfred Hollins, the blind pianist, played Beethoven's "Emperor" Concerto. If one takes his infirmity into consideration, the performance must be pronounced clever; but, as compared with many renderings of the work which we have heard, it left much to desire both in accuracy of technique and feeling. Mrs. Hutchinson was the vocalist.

Señor Sarasate gave his fourth orchestral concert last Saturday afternoon. He played with his usual brilliancy Emile Bernard's Concerto—a work of little musical interest, but calculated to show the performer's phenomenal skill as an executant. The same may be said of the Scotch Fantasia by Max Bruch. The hall was crowded, and Señor Sarasate was received with the utmost enthusiasm. So brilliant, indeed, has been his success that, to give those a chance who have been unable to obtain

tickets for his four concerts, he announces a fifth for to-day, in which he will play the concertos of Beethoven and Mendelssohn. Either of these would suffice to fill the hall.

Dr. Bülow commenced his Beethoven Cyclus at St. James's Hall on Monday afternoon. During four recitals he will play eighteen of the master's Sonatas, and other works, including the famous "Diabelli" variations. These last have not been heard in London for many years. The programmes are arranged in chronological order, so that one can trace the composer's progress from the Haydn-Mozart period down to that of his fullest development. Beginning with the early Sonatas, the pianist had no opportunity of showing all his powers, but it was a treat to listen to his thoughtful interpretation of works whose glory has been dimmed only by the grand creations of the second and third periods. Dr. Bülow's reading of the Sonatas is of a highly intellectual type; but he manages to show that he not only understands, but feels the music. As a special instance of this we may mention his rendering of the slow movement of the Sonata Pathétique. The clearness and crispness of his playing were shown to great advantage in the merry finale of the Sonata in F (Op. 10, No. 2). We cannot agree with all the *tempi* adopted by the pianist. Surely the *allegretto* of the Sonata in E (Op. 14, No. 1) was taken too rapidly; and most certainly such was the case with the air and some of the variations of the Russian Dance Song. Dr. Bülow's recitals will increase each time in interest; the last, including the Sonatas Op. 101 and 106, and the "Diabelli" variations will, no doubt, be a special success.

Herr Richter gave his fourth concert on Monday evening. M. Henri Marteau, quite a

youth, gave a singularly brilliant performance of Max Bruch's Concerto in G. His tone is excellent, and his execution wonderful for one so young. He was recalled twice at the close. There were two novelties. The first was a transcription for orchestra, by Felix Mottl, of Liszt's pianoforte piece, "St. Francis of Assisi preaching to the Birds." The transcription is exceedingly clever; but Herr Mottl would do well to turn his talents to better account, for the piece is very uninteresting. The second was an overture to Shakspeare's "Twelfth Night," by Dr. Mackenzie—a clever and humorous composition, in which Olivia, Malvolio, and the Clown sing, sigh, and laugh. It is a work which deserves more than one hearing. It was admirably played, and Dr. Mackenzie was summoned to the platform at the close. The programme included Symphonies by Haydn and Beethoven, and the introduction to the third act of "Die Meistersinger."

J. S. SHEDLOCK.

MUSIC NOTES.

THE annual conversazione of the Wagner Society will take place on Tuesday, June 19, at Prince's Hall, Piccadilly. The programme will include the first scene of the third act of "Götterdämmerung" (Siegfried and the three Rhine-daughters); the final scene from the same work (Brünnhilde); the quintett from "Die Meistersinger," the "Siegfried Idyll" and "Träume" for small orchestra, &c. Artists—Miss Pauline Cramer, Miss Marguerite Hall, Miss Alex. Elsner, Mr. B. H. Grove, Mr. William Nicholl, &c.; conductor, Mr. C. Armbruster.

Just published, with numerous Illustrations, demy 8vo, cloth, 7s. 6d.

THE HISTORY OF THE ENGLISH CONSTITUTION.

By DR. RUDOLPH GNEIST,

Professor of Law in the University of Berlin.

Translated by PHILIP A. ASHWORTH,

Of the Inner Temple, Esq., Barrister-at-Law.

"No foreigner has done more than Professor Gneist to examine and make clear the history and nature of the English Constitution.....He discusses such vital questions as, Whither are we drifting? How far do recent changes in the franchise accord with the old spirit of the Constitution? What is in store for us with democracy supreme? On such questions as these the opinion of a foreigner, who is a scholar but no bookworm, and has sedulously studied our institutions, is certainly much more weighty than that of most Englishmen.....At this time these volumes are especially instructive. They cast light on almost all the great questions of current politics."—*Times*.

"As a history of the English Constitution for English readers, Dr. Gneist's book has a great advantage over existing treatises.....It is not too much to say that Dr. Gneist is indispensable to the student of English constitutional history.....The translation is, so far as we have been able to observe, generally correct and adequate, and English students have every reason to be grateful to Mr. Ashworth for introducing them to so valuable a work."—*Athenæum*.

"The book is of great interest and value to students of constitutional history."—*Law Journal*.

"This book is a monument of German patience and industry.....Dr. Gneist's book, we may say in conclusion, ought to be on the shelves of every student of our constitutional history."—*Saturday Review*.

"Something like a national reproach is removed by this tardy recognition of the great services which Dr. Gneist has rendered to the history of English institutions."—*Academy*.

"The heavy task of translating the book has been executed by Mr. Ashworth with taste and judgment."

—*Scotsman*.

LITERATURE.

*Travels in Tunisia.** With a Glossary, a Map, a Bibliography, and 50 Illustrations. By Alexander Graham, F.R.I.B.A., and H. S. Ashbee, F.S.A., F.R.G.S. (London: Dulau, 1887.)

TUNISIA is still a tempting theme to African tourist-folk. Hereabouts arose the name of the Dark Continent which, according to Suidas, was originally (Ha-phirkah?) a section or suburb of Didonian Carthage, and is found in this volume (p. 43) as "Ferka," portion of a Dawar or encampment. Hence the term extended to Numidia, the Africa Provincia, alias Propria, alias Vera; to Mauritania and Libya; and, finally, it stood, as it now stands, for the whole quarter of the globe. It also begot a fine spurious family of legends and fables connected with an apocryphal Afrikús, King of Al-Yaman. But, while we can explain Utica ('Atikah = old town) and Carthage (Kar-hadith = new town), the origin of more ancient Tunis; the Tounis or Tunis of Polybius, Strabo and others, is not to be found in Numidian (Berber). Yet the Tunès Levkos (Ville blanche) of Diodorus Siculus probably originated the modern title "White Burnús of the Prophet," who, by the by, never wore a "burnús."

Tunisia is exactly what it should be, and might borrow a motto out of immortal *Eothen*: "From all historical and scientific illustrations—from all useful statistics—from all political disquisitions—and from all sound moral reflections these pages are thoroughly free." One author is an antiquary who has already printed professional papers upon Tunisia; and the other is a globe-trotter, as he loves to term himself—in his last letter to me he proposed voyaging round South America between January and June. The two friends distinctly perceived the require-

* A handsome, though not handy, volume of pp. 303; preface and table of contents, pp. viii.; the trips, pp. 206; a glossary of Arabic terms and words, pp. 3; a bibliography, which will presently be noticed, and an index, full and sufficient, pp. 7. The map is placed, as it should be, at the end of the volume opening rectò, and not, as too often, made to turn its back upon the reader. The binding is of green and red, "the colours of the Prophet" (?). The frontispiece shows at the north-eastern angle or sinister chief, "Al-Bahálat-fi-Túnisiyah = The Journey in Tunisia, for which I should prefer Bahlah fi'l-Túnisiyah, after the fashion of the older Arabs. The illustrations are of three kinds. The phototypes are frequently too dark and sombre, as must happen in the hot-dry air of Africa (e.g., the court in the Dar el-Bey, p. 30). The héliogravures, executed by a French artist after Mr. Graham's charming sketches, are well chosen; but their pale northern tintage, with milk-and-water skies, contrasts curiously with the dazzling and fiery hues of Libyan nature. The woodcuts are irreproachable, especially the headpieces and the culs-de-lampe.

ment of the age—a copiously illustrated narrative, like Cameron's most valuable *Across Africa*, showing to the eye of sense the most striking features of sundry popular tours. Their object was to produce a realistic journal, containing trustworthy information for readers and future travellers; and they described nothing they did not see. They shunned padding, generalisations, and politics (especially the "Last Punic War," the Enfida Estate, and M. Roustan); and even in the illustrations they were careful to eschew fictions like the palm-trees which disfigure the pages of Bruce.

The text opens with a short sketch of Tunis, and follow the various trips by steamer, carriage and horse to Soussa (Sússah), Sbeitla (Subaytálá), Sbiba, and Zankúr; by sea to Sfax, with an off-set to El-Djem (Al-Jam) of the Coliseum, which is carefully described and figured in chap. xii.; ending with the oasis of Gabes for the southernmost point. The western section was via Bona, La Calle and Tabaroc, with excursions inland to Tebessa and El-Kef; and the two embody the results of three tours in 1883-85. Readers will hardly thank me for following the travellers wherever they go, but some may be pleased with a few discursive notes upon the wanderings.

We (authors and critic) must agree to differ upon the use or misuse of the word "Arab," *les Arabes d'Afrique*, as the French term the Arabs, Moors, and Berbers of Egypt, Algeria, and Morocco. Hence the fondness of the "Arab" for his horse is no myth in Arabia, but it is among the negroids (p. 6); the "Arab" still follows Mohammed's injunctions not to maltreat his beasts (p. 131); and the "Arab" does not muzzle the ox that treadeth out corn, while the Syrian Christian, the Berber, and the Algerian Moalem do (p. 78). The disforested Sahará can recover its old fertility only by means of the artesian wells described by Ibn Khaldún in the early fifteenth century. The writers are wise in praising French civilisation, to which, like the encroachments of Russia in Central Asia, we should cry "all hail!" in the name of common humanity; yet it is pitiful to see that in Tunis and elsewhere the mosques have not been opened with a strong hand, an innovation found so easy at holy Kayrawán. That England is "conspicuous by her absence," and has lost all influence where she was once so much respected (p. 103), is what we must expect from the growth of Liberal and Radical feeling at home. "Borghaz or El-Bahirah" (p. 14) is, I presume, for Bughaz or Al-Buhayrah, the gorge and the gulflet. The "hand of Fatimah" (p. 24, with illustration on the title-page) is a peculiarly Tunisian superstition. The "hand of power," which originated in Egypt, and which is common throughout the Moalem world, has nothing to do with the lady; nor was the latter, as another tourist gravely informs us in "Chips," the mother of the Prophet. I have long ago explained the rags hung to trees (p. 56) as an old Fetish practice which transfers sickness from the animal to the vegetable. The following remarks of a French excursionist are commended to Europeans:

"When I saw passing before my door women [of Sússah] so simple, so ingenuously natural in

their quasi-nudity, I asked myself which was the less indecent, their extreme or that of the Parisian women, who exaggerate at one time certain parts of their body, and at another wear tightly-fitting garments more unchaste than the nude itself" (p. 66).

The description of "native music" (pp. 66, 68) is sensible and unprejudiced:

"We listened (after the first shock of surprise was over) with delight, unable to determine whether the voice or the instrument afforded the greater satisfaction."

The sponge market (p. 93) will be wholly changed by the discoveries of the Austrian Savant, who now plants the coelenterata from cuttings like potatoes.

The dancing of the Tunisian *ballerine*, mostly Jewesses whose morals are here abominable, stands out sharply described (p. 111). Of "Kairouan," I would note that the name is an Arabic corruption of the Persian Karwán, a caravan, and was given by Al-Okbah, who, planting his lance, cried: "Here is your Karwán," meaning *entrepôt*, or *place d'armes*. "Khaukáh" (p. 116), which we find in the Arabian Nights (viii. 330), is not a postern, but a tunnel; nor is *kiblah* a shrine (p. 119), but a direction of prayer; nor is the Grand Mufti "an archbishop as it were" (p. 121), but a chief doctor of the law while "Sidi-Sahab" (p. 124) should be Sidi Sáhíb—my lord, the Companion.

There is some mistake about the Arabs conquering Subaytálá "in the first year of the Hegirah." Hostilities with Western Africa began under Caliph Osman in A.H. 23 or 24; and the tale of Gregorius the Patrician, by the Arabs called king, and his daughter, deserves repeating. After her father was killed she fell to the lot of a barbarous Badawi from Kubá, near Al-Madinah, who placed his prize upon a camel and carried it away singing:

"O maid of Jurayjir, afoot thou shalt fare
In Hijáz; and a mistress awaits thee there,
And water in skin-bag from Kubá shalt bear."

"What saith the dog?" she asked; and when answered, the gallant girl threw herself from the dromedary and broke her neck.

The bronze cook on the Kasrin monument (p. 147), which was "so near heaven that, if nature had given it a voice, it would have compelled by its morning song all the gods to rise early," is akin to more than one marvellous fowl in the Arabian Nights. We have (p. 164) an admirable description of those sunset effects which are rivalled in The Cape and in The Brazil:

"Every point of the compass seemed ablaze, and hill and mountain caught up the reflected light; but the peculiarity of the glorious phenomenon was that in the west the colours were the least intense."

The notices of the Khomayr (vulg. Khroumir), who were found, politically, so useful, and of their country (chap. xxvii.) will repay readers; and the discovery of the long lost and lately recovered quarries of the old Numidian marbles, *giallo antico* and rose-coloured varieties (p. 194), is peculiarly interesting. An extract from the lively Lady M. Wortley Montagu (p. 199) shows that her corset was held by the Adrianopolitans to be a *corset-gardin*. Upon the spitting of the Badawin for good luck, a custom dating from Biblical days, and well known to the English

"navvy," a long note might be written for the benefit of "folklorists." I would not derive Gouletta or Goletta, port of Tunis, from "Halk al-Wād" = gullet of the valley (pp. 202, 203), but from the corrupt Neo-Latin diminutive of *gola*, Latin *gula* and French *goulu*.

Of the Glossary, let me observe that it matters little to the general how the traveller transliterates his Arabic, provided he keep to the same system or no system: the Arabist will at last understand him, and the non-Arabist will not. But if he aim at correctness he ought at least to learn the alphabet; at all events, he should not spell the same word in different ways, as Djamaa in the text (p. 118) and Jamâ in the glossary, when the right reading is Jâmi'. Also, it is unwise to use the makeshift French *ou* when we have the English *u*, as Zaouia (p. 122) for Zâwiyah. Mr. Ashbee forgets that he sent his Glossary to me for revision; but neither M. Pascual de Gayangos (p. iv.) nor I countenanced such corruptions as "Oust" for "Wasat," the middle, and "Medressen" for "Madrasah."

The exhaustive bibliography is truly valuable and gives weight to the volume. The seventy-six pages begin with an introductory note enumerating the books used by the authors and naming a score as necessary for the traveller. Then comes a catalogue raisonné in which every work, important or unimportant, is mentioned with more or less of detail. This is followed by (a) notes and notices of anonymous productions; by (b) publications on the Barbary States; by (c) studies of Tunisia proper; by (d) a list of maps; by (e) views and by (f) pictures. Like a certain pen, it is a boon and blessing to men; and it worthily forwards what Prince Hasan did for Egypt and Sir R. Lambert Playfair for Algeria. Mr. Robert Brown, I may note, promises the same for Morocco, and his work will supplant the defective sketches of M. Renou and De Mortinière. Finally, reference is made easy by an index giving alphabetically the names, ancient and modern, of every town, ruin, river, lake, mountain, &c., mentioned in the diary.

To conclude. The great lesson of the book appears to be that Tunisia is still a mine and a museum *in posse* of Roman and pre-Roman (megalithic) remains, which will supply epigraphs and architectural studies equally valuable to literature. Above ground much has been described and figured; but the earth has hardly been scratched, and great discoveries await the free use of spade and pickaxe. Despite, however, the French "Society for the Protection of Ancient Monuments" building progresses; the Arabs are carrying off sculptured stones, a railway is levelling all obstructions to its line, engineers are destroying bridges, and the upper part of a Numidian mausoleum was pulled down to secure a Libyo-Punic inscription. Before many years have elapsed the discoverer's task will, it is to be feared, be much simplified.

RICHARD F. BURTON.

Partial Portraits. By Henry James. (Macmillan.)

GOTHE says somewhere in the course of his *Conversations*, as reported by Eckermann—I

quote from memory, for the book is not at hand—that there are three classes of readers, those who enjoy without judgment, those who judge without enjoyment, and those who enjoy and judge at the same time. The critic in the pursuit of his vocation is necessarily shut out from the first class, for he reads solely that he may judge. He often takes a place in the second class, from compulsion rather than from choice; but I am convinced that he only does his best work when he can, for the time being, feel that he is enrolled in the third. I have never during my perusal of any of Mr. Henry James's novels been able to feel that I am so enrolled. I hope I am able to admire and appreciate the many high and rare intellectual qualities which they undoubtedly display, and which have happily been so widely recognised; but I have always felt—perhaps mistakenly—that in writing novels Mr. James is working under conditions not altogether favourable to the true bent of his genius. On the contrary, when I read *French Poets and Novelists* and afterwards the critical memoir of *Hawthorne* in the "English Men of Letters" series this feeling was altogether absent, and I have been quite unconscious of it during my perusal of the volume of literary essays to which the author has given the somewhat enigmatical title of *Partial Portraits*. Apart, however, from the opinions or feelings of any single reader or critic, it seems certain that, for some time to come, Mr. James's theory and practice of fiction will provide material for controversy among cultivated people; and, on the other hand, it is hardly less certain that he is already recognised by disputants on both sides as a critic of singular fineness of discrimination and exquisiteness of expression.

Now these are the very aptitudes which a critic of to-day stands most in need of. Criticism, which was once mainly judicial, has become mainly descriptive. We do not ask that it shall record a final verdict, but that it shall help us to record such a verdict by putting the evidence before us in such a manner that we can readily apprehend its significance. This evidence consists of the impressions stamped by a book, a picture, or any other work of art upon all our sensibilities—ethical, intellectual, and aesthetic; and therefore the critic who helps us most, and gives us the fullest measure of that intellectual satisfaction which is among our loftiest pleasures, is the man who has at once the most extended gamut of keen sensations, and the gift—which is half intellectual and half literary—of rendering his impressions with such precision of utterance that, even if we do not sympathise with him, we do, at any rate, understand him, and by understanding him are able to realise and define those impressions of our own which are antagonistic to his. Such a critic aids us when we agree with him by giving our feeling a concrete body of phrase or symbol, in which we can, as it were, survey it from the outside, and so learn to know it better; and he aids us hardly less when we disagree, because by defining his impression he compels us to define our own—to say nothing of the possibility that in defining it we may see in it for the first time some hitherto unsuspected blur or distortion.

The office of criticism is thus educational in the true etymological, not in the old colloquial, sense of the word. It does less in the way of putting something into us than of drawing something out of us; it may give us few new impressions from the outside, but it enables us to realise and revise impressions we have long ago received at first hand. We read Mr. Henry James's essays on two great writers whom we have lost within the last few years—Emerson and George Eliot—and in the mere gross matter of the thought we find, as we might expect to find, little that is new; but, in the manner and form of the thinking, the re-statement of the familiar, how much there is that is illuminating and instructive! When, for example, he says of Emerson that "life had never bribed him to look at anything but the soul," or of George Eliot that "nothing is finer in her genius than the combination of her love of general truth and love of the special case," we feel, not that we have received some novel truth, but that a set of vague impressions previously held in solution have been beautifully crystallised, and so converted into portable intellectual property. Mr. James has the happy gift of being able thus to interpret an author for us by interpreting ourselves to ourselves, not merely in an essay, a paragraph, or even in a sentence, but in a brief phrase, or, it may be, a happily-found illuminating word. When he speaks of Emerson's "high, vertical moral light" he puts into that single word "vertical" a mass of interpretative thought which might have been spread over a page without giving us any feeling of undue diffuseness. The word is, indeed, a condensed metaphor. Others have noticed the want of light and shade—that is, the want of shade to relieve the light—in Emerson's writing. Mr. John Morley, expressing his sense of the deficiency in the phraseology of Puritanism, has spoken of Emerson as wanting in "the sense of sin"; but here the truth is told in a word, which is not merely a word but a picture, having the grip which belongs to any vividly pictorial expression of a thought. We see Emerson walking in a world where the source of light is directly above him and directly above every object upon which he gazes, and how can he see or speak of shadows which are never cast?

I might give other examples, for they are numerous, of a like happy use of a single word, but such use is only the most striking manifestation of that quality of compactness of expression by which Mr. James's work is so eminently distinguished. In one place he speaks of George Eliot's style as "baggy." I do not think that the epithet is quite just, for I believe it will generally be found that even in the sentences of George Eliot which at first give us an impression of undue verbal amplitude the thought has a like amplitude—it fills out the words and does not permit them really to bag. Still, it may be admitted that the mistake, if it be one, is natural: it is not a *jugement saugrenu*, for George Eliot's was one of those large utterances which are apt to lapse into bagginess should the thought fail to sustain them and preserve them from unsightly creases. Bagginess, is, however, the last quality which even the most superficial and insensitive critic would predicate of

the style of Mr. Henry James. Few writers of our time have a finer gift of concentrated expression, a more remarkable power of filling a sentence with as much weight, and even complexity, of meaning as it will hold; and perhaps a critic, not superficial or insensitive, might find in this volume some few illustrations of the melancholy truth that Mr. Henry James, like the rest of us, has the defect of his qualities. Were it worth while, it would be possible to quote sentences in which we lose the thought by its escape from verbal clothing that, so far from bagging, is somewhat too strait for it; but such quotations, being in no way representative, would serve no purpose of edification. In spite of its compactness—indeed, to some extent, in virtue of it as a stimulation to intellectual alertness—Mr. Henry James's style has not less of lucidity than of brightness, the lucidity which is achieved by a writer who is able to strike his thought at once, and not to reach it tentatively and fumblingly by means of explanatory parentheses and modifying adverbs.

I have remarked that Mr. James often charms us by putting into finally satisfying words the thing that we have said to ourselves vaguely and without words; but not infrequently he does more than this, and we find him saying the thing we have not said, but only wish we had said when we see how obvious it looks. I take an illustrative sentence or two from the essay on George du Maurier, which is a convenient essay to quote from because it is so entirely free from matter that is in any way provocative of controversy. Mr. James is speaking of those *Punch* drawings in which Mr. du Maurier fixes on the block a momentary humorous situation, and he says:

"This is the kind of comedy in which Du Maurier excels—the comedy of those social relations in which the incongruities are pressed beneath the surface, so that the picture has need of a certain amount of explanation. The explanation is often rather elaborate—in many cases one may almost fancy that the image came first and the motive afterwards. That is, it looks as if the artist, having seen a group of persons in certain positions, had said to himself: 'They must—or, at least, they may—be saying so and so,' and then had represented these positions and affixed the interpretation."

These sentences deal with a comparatively trivial theme; but with what penetrating precision do they hit the gold. The suggestion is altogether a fresh one, but at once it makes itself at home in our mind, and consorts familiarly with the truisms which have been our life-long guests.

The essay on "The Art of Fiction" was so exhaustively discussed at the time of its first appearance that one may readily be excused for refraining from a re-discussion; but a review of this book which makes no mention of such important and interesting studies as those on Anthony Trollope, R. L. Stephenson, Alphonse Daudet, Guy de Maupassant, and Ivan Turgénieff certainly does seem to stand in need of some apology. I will shelter myself behind Mr. Henry James, and say that I too have aimed at producing only a "partial portrait"; though, of course, one cannot be quite certain in which of its two senses he employs the descriptive epithet. His special

criticisms are interesting, but one could canvas only a few of them; and his general method, which is equally interesting, can be discussed in a less obtrusively fragmentary manner. There is just one more remark that demands to be made. Mr. Henry James could not well have given a more striking indication of his fine feeling for form than his choice of the conversation rather than the essay as the vehicle for his thoughts on *Daniel Deronda*. The book has some qualities which attract him, some which repel him, some which attract and repel him at the same time; and to record these varying impressions in an ordered continuity of statement with any approach to unity of general effect would have been all but impossible—I think quite so. In the conversation he distributes his sensibilities among Constantius, Theodora, and Puloheria; and as every impression can be rendered with due precision of subtlety and weight, it is saved from the hard lot of being discredited in the very utterance by an irritating "though," or "but," or "nevertheless."

JAMES ASHCROFT NOBLE.

Winchester Scholars. A List of the Wardens, Fellows, and Scholars of Saint Mary College of Winchester, near Winchester. By Thomas Frederick Kirby. (Henry Frowde.)

SOMEWHAT late in the day the oldest of our public schools follows the example set by Westminster, St. Paul's, and Merchant Taylors by printing the register of its *alumni*. The task has been undertaken by the present bursar of the college, who is (we believe) not himself a Wykehamist, but whose enthusiasm for his adoptive mother is already known to the Society of Antiquaries. Complaints have reached us regarding the meagreness of the biographical notes which he has added; and it would not be difficult to point out errors both of omission and commission, especially in more modern times. But, as Mr. Boase has wisely said, in the preface to his *University Register* published by the Oxford Historical Society, the important thing is to get the MS. record put into type. The further work of annotation can now be carried on by any historical student, with a library at his command. Another matter requires to be brought into prominence. This list is limited to the scholars proper, *i.e.* (excluding the warden and fellows, who are both alike now doomed to disappear), to the seventy boys who alone had a place in Wykeham's original foundation. The "commoners," who began to appear almost from the first, and who are now (we suppose) at least five times as numerous as the "scholars," find no mention here, nor does Mr. Kirby deign to tell us whether any record of them has been preserved.

Despite this significant omission—to which we shall have to recur—enough is given to explain the position which Winchester has always held in the history of England. That we may not claim too much, it may be said at once that names of the very first importance, whether in literature, art, politics, or war, are conspicuously absent. Winchester has been at no time a nest of singing birds. While Westminster can boast of Jonson, Dryden and Cowper, St. Paul's of Milton, Christ's Hospital of Coleridge, Harrow of

Byron, and Eton of Shelley—Winchester has no poet to rank with these. She is practically unrepresented alike in the great epoch of Elizabeth, in the minor epoch of the Stuarts, and in the second great epoch of the early nineteenth century. (To avoid misconception we may explain that no Wykehamist would reclaim Matthew Arnold from Rugby on the strength of his twelve months' stay "in commoners.") The only period when Winchester can be said to have been prolific of poets was during the unpoetical eighteenth century, when she sent into the world William Somerville, John Phillips, Edward Young (who were all three contemporaries), Christopher Pitt, William Whitehead, William Collins, Joseph Warton (the three last again contemporaries), and, finally, William Bowles. More prominent than any of these in the history of English literature is Nicholas Udall (Owdall), author of "Ralph Roister Doister," and headmaster in succession of Eton and Westminster. In other departments of authorship, Winchester is scarcely more conspicuous than in poetry. The single name of the first rank is Sir Thomas Browne; while next to him we must be content to place Sydney Smith and Anthony Trollope, both of whom have written unkindly of their *alma mater*.

Wykeham's foundation has been more prolific, as he would doubtless have himself desired, in divines and paedagogues. To enumerate all the bishops and archbishops would be tedious; but it is impossible not to be struck by the number of those who (like their founder) occupied high secular posts at court. During the first two centuries we have noticed no less than nine ecclesiastics who are described as keepers of either the great or the privy seal, or as secretaries of state. Within the present century Winchester has given three occupants to the woolsack, and four members at one time to the cabinet; but all of these were "commoners." As regards education, it is perhaps not remarkable that every headmaster (*informator*) of Winchester seems to have been previously at the school. It is more important to record that William Waynflete took with him a draft of Winchester boys to open the daughter foundation of Eton in 1442; and that Waynflete was followed in the early days of Eton by at least three other headmasters from Winchester, besides a fifth of whom it is recorded "promotus ad informandum pueros Etonae." Udall was succeeded at Westminster by another Wykehamist, Robert Rolle; John Jakys (1503), "assumpsit onus scolae grammaticalis apud Charterhouse"; while the tradition has been continued almost to our own day by Dr. Arnold, of Rugby. Another long list of similar import is that of professors of Greek at Oxford, which begins with Grocyn (1483), and comprises no less than six names in forty years (1569-1608).

Quite apart, however, from distinguished personages, this school register sheds light on the vicissitudes of English history. On one of the earliest pages occurs the entry—"William Whyte. Civilista. A Lollard, burned at Norwich, *t. Hen. VI.*" The change of religion in the sixteenth century is brought before us very vividly. John Phylpott, archdeacon of Winchester, was burnt at the stake under Queen Mary in 1555; Nicholas Sawnder (*sic*)

perished no less miserably in Ireland *circ.* 1580-81, as all readers of Kingsley know; John Munden, a Jesuit, was executed at Tyburn in 1582; William Wygge, a Papist, was executed at Kingston in 1588; while his contemporary, Henry Garnet, was hanged in 1606 for complicity in the Gunpowder Plot. Still more numerous are the names of those fellows of New College removed for recusancy (1560 and 1562); while many, including the headmaster Hyde, fled over seas to Louvain, Douai, Paris, Rome, &c. During the Great Rebellion, Winchester emphatically "stood for the king." As Lord Selborne has put it

"And when the Scottish plague-spot ran withering through the land,
The sons of Wykeham knelt beneath meek Andrew's fostering hand,
And none of all the faithless, who swore th' unhallowed vow,
Drank of the crystal waters beneath the plane-tree bough."

To represent the parliament almost the only name is that of Col. Fiennes (Fenys), who, according to the tradition believed by every Wykehamist, protected the college from outrage at the hands of Cromwell's army. While, on the other side, such entries as the following are common:

"principal of Magd. Hall, fought for the king, and died in the Charterhouse." "major of royalist horse, then D.D." "vicar of Adderbury, slain by Roundheads." "rector of Hawarden, ejected by rebels and became major of cavaliers."

In this connexion we may also mention John Windebanke, M.D., secretary of state to Charles I., and John Betts, physician to Charles II. Indeed, at this time Winchester seems to have bred doctors of medicine, as just previously she had bred professors of Greek. Among the number is William Musgrave, one of the early secretaries of the Royal Society.

To pass to a later period. In the eighteenth century we first find the names of admirals—such as Sir Hyde Parker, lost at sea in 1783; Sir Richard Keats, Governor of Greenwich Hospital; and Raper, author of *A New System of Signals*. Generals hardly begin to appear till the end of the same century, when their number was exceptionally augmented by the "great rebellion" of March, 1793. Field-marshal Lord Seaton, indeed, seems to have left in the ordinary course; but his contemporaries and brothers in arms—Sir James Dalbiac, Sir Lionel Smith, and Gen. Cammae—were all included among the twenty-nine then expelled. We may be pardoned for here recording the name of another military schoolfellow of these—Major Pickwick, "son of the coach proprietor at Bath."

Space fails us to continue this bede roll into the present century; and if we were to attempt to do so, the exclusion of "commoners" would result in an entire falsification of the record. We will conclude with expressing a hope and venturing a suggestion—a hope that Mr. Kirby, or some one else, will be induced to carry on the work so well begun; and a suggestion that the governing body, who have now superseded the warden and fellows, will at once take steps to amend the form of register, by adding a column for the name and occupation of the boy's father.

JAS. S. COTTON.

Romantic Ballads and Poems of Phantasy.
By William Sharp. (Walter Scott.)

KEATS's sonnet, "On First Looking into Chapman's Homer," does not exaggerate the fresh feeling of delight which some books inspire in the reader. And it is the special privilege of poetry to exert this charm. A new poem that wakes the imagination, that stirs some depth in our nature of which we were not conscious before, marks quite an era in our life. We dwell upon the joyous experience as we first realise it, and it becomes so much a part of us that we can recall it at will. The poet has made us so much the richer by the rare gift he has given us. A gift of this rare kind we now owe to Mr. William Sharp; for this little volume, small as its compass is, contains some of the truest imaginative poetry. There are not many pieces in the book, nor are they long. It must be supposed that Mr. Sharp has written much other verse since his last published volume; but he has wisely saved the critic and the reader the trouble of avoiding the poorer sort and the padding by omitting it. What remains bears the very hall-mark of excellence. It is as though Coleridge had published the "Ancient Mariner" and "Christabel," with "Kubla Khan" and two or three of his ballads, in one precious little book.

The argumentative preface, which Mr. Sharp addresses to a friend, has itself somewhat reminded me of Coleridge, for it recalls that prefixed to the *Lyrical Ballads*. Mr. Sharp, like the Lake poets, protests against the merely literary quality in poetry. They wanted to infuse into it the freshness and simplicity of life. So does he, but life for him is all tintured with romance. It is life in which the imagination is active, and which is sympathetic not to every-day nature only but to "the light that never was on sea or shore." He believes that the poetry of the near future—as the painting also, and the fiction—will partake of this character; and he leads the way admirably in these ten exquisite poems.

The first, and most important, is a ballad in three parts, called "The Weird of Michael Scott," each part based on a legend relating to that mythical personage of mediæval story. In the first part the Wizard Michael practices his art upon an enemy, whom he changes into a creature of the woods; in the second his power to win a maiden by the same supernatural agency is thwarted; and in the third he meets his own doom. Throughout the poem he is represented as being vengefully pursued by his own soul—a feature of the legends to which Mr. Sharp gives a very impressive actuality. It is impossible to do full justice to this poem by quotations, for it is so perfect a whole that it can only be fairly judged by being read throughout. But detached passages will still have a graphic beauty or impressiveness of their own. Here are a few verses from the first part, describing the Wizard's headlong ride across the Haunted Brae:

"Across the Haunted Brae he fled,
And mock'd and jeer'd the shuddering dead;
Wan white the horse that he bestrode,
The fire-flaughts stricken as it sped
Flashed thro' the black mirk of the road,

"And ever as his race he ran,
A shade pursued the fleeing man,
A white and ghastly shade it was;
Like saut sea-spray across wet san'
Or wind about the moonlit grass."

"Down, down the Haunted Brae, and past
The verge of precipices vast
And eyries where the ospreys screech;
By great pines swaying in the blast,
Through woods of moaning larch and beech;

"On, on by moorland glen and stream,
Past lonely lochs where mallards dream,
Past marsh-lands where no sound is heard,
The rider and his white horse gleam,
And, aye behind, that dreadful third."

The pursuit of the Wizard by his soul is powerfully described again by the opening verses of the second part:

"Athwart the wan bleak moonlit waste,
With staring eyes, in frantic haste,
With thin locks back-blown by the wind,
A grey gaunt haggard figure raced
And moaned the thing that sped behind."

"It followed him, afar or near:
In wrath he curs'd; he shrieked in fear;
But ever more it followed him:
Eftsoons he'd stop, and turn, and peer
To front the following phantom grim."

"Naught would he see: in vain he'd list
For wing-like sound or feet that hissed
Like wind-blown snow upon the ice:
The grey thing vanished like a mist,
Or like the smoke of sacrifice."

I was almost tempted to italicise the last two lines, the more forcibly to draw attention to them; but no one can read them without remarking the singular fitness and the beautiful suggestiveness of the images employed. Quite as noteworthy is the vivid picture of wind-blown snow "hissing" along the ice. The sound and the natural fact itself are familiar enough; but the figure, as Mr. Sharp uses it, belongs to the highest level of poetry. Michael passes on to Kevan Byres, to invoke "fair Margaret," who dwells there, and bid her come to him:

"Come forth, May Margaret, come, my heart
For thou and I nae mair sall part—
Come forth, I bid, though Christ himself
My bitter love should strive to thwart,
For I have a' the powers o' hell!"

"What was the white wan thing that came
And lean'd from out the window-frame,
And waved wild arms against the sky?
What was the hollow echoing name,
What was the thin despairing cry?"

"Adown the long and dusky stair,
And through the courtyard bleak and bare,
And past the gate, and out upon
The whistling, moaning, midnight air—
What is't that Michael Scott has won!"

"Across the moat it seems to flee,
It speeds across the windy lea,
And through the ruin'd abbey-arch;
Now like a mist all waveringly
It stands beneath a lonely larch."

Michael again calls upon Margaret:

"But as a whirling drift of snow,
Or flying foam the sea-winds blow,
Or smoke swept thin before a gale
It flew across the waste—and oh
'Twas Margaret's voice in that long wall!"

"Was that a heron in its flight?
Was that a mere-mist wan and white?
What thing from lonely kirkyard grave?
Forlorn it trails athwart the night
With arms that writhe and wring and wave!"

"Deep down within the mere it sank,
Among the slimy reeds and rank,
And all the leagues-long loch was bare—
One vast, grey, moonlit, lifeless blank
Beneath a silent waste of air."

For striking imagery the third part of the poem is, perhaps, the finest. I must forbear to quote the supernatural incidents which enter into the plot of it, for their weirdness would suffer by detaching these passages from their place. I cannot refrain, however, from adding these few verses of picturesque description:

"At times he watched the white clouds sail
Across the wastes of azure pale;
Or oft would haunt some moorland pool
Fringed round with thyme and fragrant gale
And canna-tufts of snow-white wool.

"He watched the kestrel wheel and sweep,
He watched the dun fox glide and creep,
He heard the whaup's long-echoing call,
Watched in the stream the brown trout leap
And the grilse spring the waterfall.

"Along the slopes the grouse-cock whirled;
The grey-blue heron scarcely stirred
Amid the mossed grey tarn-side stones:
The burn gurg-gurgled through the yird
Their sweet clear bubbling undertones."

Striking as they are, the passages which I have extracted from this remarkable poem can give only a partial and insufficient idea of it. The subject demands imaginative treatment of the highest order, and that it has received. If Mr. Sharp had written this poem alone, and nothing else, it would be an unquestionable credential of his calling to the office of poet. But the nine other poems in the volume are each—with scarcely an exception—as perfect in their kind. "The Son of Allan" is as fine a tragic ballad as is to be found in modern literature; while anything more weird in conception or more imaginative in treatment than "The Death-Child," I do not know. Verse of this kind is so exceptional that one can only speak of it in terms of grateful appreciation. We shall naturally look for more of the same quality from the same source; but no fountain, however affluent, yields such streams every day.

GEORGE COTTERELL.

QUIGNON'S BREVIARY.

Breviarium Romanum a Francisco Cardinali Quignone editum et recognitum. Juxta editionem Venetiis A.D. 1535 impressam. Curante Johanne Wickham Legg. (Cantabrigiæ: typis atque impensis Academiae.)

LITURGICAL students are again under obligations to the Syndics of the Cambridge University Press. In 1884 they gave us the late Dr. Swainson's *Greek Liturgies*; in 1886 the issue of the *Sarum Breviary* was completed; and now we have before us from the same benefactors a reprint of the earliest form of Cardinal Quignon's Breviary, the Venice edition of 1535 (*Mense Junio*), collated with the edition published at Rome in the month of March of the same year. These two, with four other editions, all published before 1537, are the only editions that Dr. Legg supposes to contain the earliest form of the text.

The name, at least, of Quignon's Breviary is known to students of the English Prayer-Book as having, most probably, suggested the character of several of the reforms that were effected when the mediæval breviaries of the Church of England became the Book of Common Prayer, and as having, certainly, supplied in its *Prefatio* a considerable por-

tion of the *Preface* of the Book of Common Prayer (entitled "Concerning the Service of the Church" since 1662, when what is now called the "Preface" was prefixed).

Quite independent, however, of its relations to the Anglican service-book, Quignon's Breviary has many interests of its own. It was one of the earliest attempts at liturgical reformation within the Roman Church itself. Its construction was undertaken, at the request of Clement VII., by Francisco de Quiñones (a grandson of the famous Count Alvaro de Luna), a Franciscan, and Cardinal Priest of the Holy Cross. The cardinal's title, by the way, accounts for the curious mode in which the work before us has been sometimes referred to—viz., as *Breviarium S. Crucis*. The result of the revision, as seen before publication, was approved by Clement, and again by Paul III., who—as we find by his Brief of February 5, 1535, prefixed to the Breviary—gave permission to all secular "clerks and presbyters" to substitute the new Breviary for the old in the recitation of the office, on condition of obtaining a licence from the Apostolic See; and to encourage applicants, it was added that the licence should be issued without charge. The numerous changes made by Quignon, more especially the omission of antiphons and the reduction of the lections to three, whether the day were festal or ferial, were reasonably felt as removing much of the richness, variety, and colour from the ancient services; and strong opposition to the Breviary was made in various quarters. The Sorbonne censured it; and it was looked on with dislike and suspicion by many. Nevertheless it made its way, more especially, as it would seem, in France. Certainly the editions published at Lyons and Paris outnumber all the rest. Paul IV. in 1558 refused the issue of fresh licences for the recitation of this Breviary, and ten years later Pius V. went so far as to prohibit its further use.

The bibliography of this Breviary has yet to be written. Zaccaria, Arevalus, and Wadding's *Scriptores Ordinis Minorum* lay a useful foundation; but Dr. Legg's researches suffice to show that their knowledge of the early issues was very imperfect. While Dr. Legg, on the other hand, does not concern himself with the editions subsequent to July 1536. After this date the text was further revised. The later forms of the Breviary revert to the use of the antiphon, and some of the lections are altered. I wish some investigator would say when the third lection for the Feast of the Conception of St. Mary, which stands in the first form of the text, here printed by Dr. Legg, gave place to the lection in which Thomas Aquinas is cited as pronouncing in favour of the doctrine of the immaculate conception of St. Mary—a proceeding which afterwards so justly scandalised Maldonatus. The alteration I have seen in as early a copy as that of Paris, 1539 (apud Jolandam Bonhomme viduam Thielmanni Kerver).

In the first form of the text, again, Quignon's Breviary commits itself to a declaration in the third lection for the feast of St. Mary Magdalene, that there were great controversies among the learned as to whether Mary of Bethany, Mary of Magdala, and "the woman that was a sinner," are three persons or only one, and that the more probable opinion

is that they are three. The statement as to what is more probable is omitted in later editions. Despite, however, the statement of the lection, the collect yet inconsistently ran: "Beatae Mariæ Magdalene quæsumus domine suffragiis adjuvemur, cujus precibus exoratus quatruiduanum fratrem vivum ab inferis resuscitasti, qui vivis." The collect in the *Sarum Breviary* and that in the first Prayer Book of Edward VI., on the other hand, identified Mary Magdalene with "the woman that was a sinner." May it not be that the diversity of opinions emphasised in the lection of Quignon suggested to the Anglican Reformers to get rid of the difficulty by getting rid of the feast, as they did in 1552? The commonly received view in the Roman Church is to identify the Magdalene, the sister of Martha, and the "peccatrix"; that and the sanction more or less explicitly given by the Roman Church to this view (as in the *propria* for the Feast of St. Mary Magdalene in the Missal) would seem to invest this interpretation of Scripture with a high measure of authority for members of her communion. The matter is discussed in an able way by the late Dr. W. G. Ward in an article originally contributed to the *Dublin Review*, and since republished in his *Essays Devotional and Scriptural*.

Quignon, in his lections for Saints' Days, endeavoured to weed out the more improbable legends, and to cite only "ex probatis et gravibus auctoribus graecis et latinis." And even after the exercise of this care in his first edition the frequent *ut quidam tradunt* or *traditur* (which in the second was changed to *memoratur*) showed the critical temperament of himself and his assistants in the labour of revision.

Another motive that was at work in Quignon's revision was an outcome of the Humanist influence. The barbaric latinity that here and there disfigured earlier breviaries was a pain and grief to the cultivated reader. He declares that in the former Roman Breviary not a few of the histories of the saints were written "tam rudi stilo tam sine rerum delectu et gravitate" that they were objects of contempt and derision to the readers; and in his revision he desires that what is selected should not only be based on better authorities, but also appear "stilo paulo quidem cultiore non tamen fucato."

The suggestions supplied by Quignon's Breviary for the revision of the English Book of Common Prayer in 1549 are numerous, but are too well known to need notice here. But the English revision was more sweeping than even Quignon's first form, and certainly was in some particulars excessive, and injurious to the liturgical beauty of the service-book. Thus, the invitatory, as Quignon retained it, i.e., recited only once before and once after the Venite, could not be complained of as breaking the sense of the psalm; and, varying from feast to feast and from season to season, it would have early sounded with excellent effect the key-note of the service of each day. On the other hand, the lectionary system of the Church of England, even in its earliest reformed shape, and much more since the adoption of the new tables of lessons, is incomparably superior to Quignon's arrangement.

Dr. Legg has indicated in his indices of

hymns, collects, invitatories, &c., the materials which he has not found in the unrevised Roman Breviary of 1534 (the year previous to his work), and they prove to be of an entirely insignificant kind—five or six invitatories, and two or three collects. Much was removed, and much new matter supplied in the lectionary; but the revision of the rest of the Breviary consisted of pruning (and perhaps sometimes slashing and hacking), together with rearrangement, more particularly of the psalter.

The two first issues of this Breviary—those of Rome and Venice—were without the verses of sage counsel so commonly written in the mediaeval kalendars as guides to health, or to the timely execution of agricultural work. But they seem to have been missed; for one of the Paris editions of 1536 inserts them, and the good priest learned at what time of the year he might with safety pair his nails and take a bath, or received the warning in August, “noli sociare puellam.”

In a recent catalogue of Rosenthal, of Munich, I saw that a copy of the Venice (1535) edition—that from which Dr. Legg has printed the volume before us—was offered for 5000 marks. We should be glad to possess that precious little volume; but Dr. Legg and the Cambridge University Press have taken the sting from our fruitless longings.

J. EDENBURGEN.

NEW NOVELS.

The Academician. By Henry Erroll. In 3 vols. (Bentley.)

A Woman's Face. By Florence Warden. In 3 vols. (Ward & Downey.)

Ulu. By Joseph Thomson and E. Harris-Smith. In 2 vols. (Sampson Low.)

Walter Stanhope. By John Copland. (W. H. Allen.)

Found, yet Lost. By Edward P. Roe. (Ward & Lock.)

A Glorious Gallop. By Mrs. Edward Kennard. (White.)

The Academician is an exceedingly clever book—admirably constructed, well-proportioned, written with scrupulous care. Henry Erroll draws an unusual number of characters, yet not one of them can be said to be a caricature, except perhaps Chesham, the sybaritic, odiously selfish stepfather of the heroine, Mabel Moore, who appears in the first chapter, and who occasionally strikes one as a vulgarised Skimpole. Then, although *The Academician* is full of art, artists, and the folk that cling to the skirts of both, there is in it no gush of this “school” or of that, and but little of studio shop-talk. Above all things, Henry Erroll succeeds in giving an air of reality to his chief character, although at first sight that creation seems a monstrosity, an altogether impossible compound of Michael Angelo and the masterful hero-villain of *The House on the Marsh*. Stephen Baring, who gives the name to this book, and pervades it, is represented as not only a Royal Academician of the first genius, and in the zenith of his fame, but as loving his art with a pure passion, which prevents him from loving aught else. Yet this man has the manners of a costermonger, the

heart of a Murdstone, the cold-blooded, unflinching unscrupulousness of the Napoleon of popular fancy. He is a miser, a liar, and, in intent, a bigamist, if not a murderer. Seldom, if ever, has there been told, in fiction, or even in the law courts, a more revolting story than that of how Stephen Baring marries Constance Durant for her twenty thousand pounds, only to break her heart, to trample on her little ideals of home-comfort, decorum, and beauty; how he tries to get rid of her by placing her in the hands of a model—who has been something more to him than a model in his days of coarse and utterly selfish Bohemianism—while he spreads the report that she has died of cholera in Paris; and all that he may marry another woman, whom he wishes to have beside him, to permanently inspire, not his heart, but his art. Yet such is Henry Erroll's skill in revealing and developing Baring's character that it is hardly possible not to come to the conclusion that such a man actually exists. With the exception already mentioned, all the characters are as lifelike, if not as startlingly lifelike, as Baring—poor soulless, rather than heartless, Constance; Mabel Moore, her unconscious rival; Hubert Durant, Mabel's somewhat unsatisfactory lover; and, above all, Barthélemy, Hubert's mentor in French impressionism. There are, indeed, only two weaknesses in *The Academician*; and they are weakness in plot evolution, not in character painting. It seems incredible that a man at once so unscrupulous and so astute as Baring should, instead of poisoning or otherwise getting rid of Constance, have placed her in confinement in England. To do this was but to tempt the detection that ultimately befell him. Then Hubert Durant's wanderings from the straight road of Burlington House rectitude into the miry paths of “morbid,” but profitable, French art are not adequately explained, even when due weight is given to the influence of Baudelaire and Théophile Gautier, as well as of Barthélemy and opium. “De Quincey, Hoffmann, and Edgar Allan Poe, helped Hubert a little further,” says Henry Erroll, “on the unreal slippery path he was treading.” This is, perhaps, the one utterly weak sentence in *The Academician*.

A Woman's Face proves that the special cunning in plot-construction of the author of *The House on the Marsh* has not deserted her. One gets a little tired of the mesmerism, hypnotism, and so forth, which she presses into her service; but she keeps her secret—and the secret of Lady Kildonan—to the end. The two women in it—the suffering and ill-treated Alma Crosmont and the madly selfish Lady Kildonan—are admirably drawn; and Lord Kildonan, although there is nothing specially Scotch about him, is an excellent sketch of an old, eccentric, self-contained, good-hearted man. The introduction into a Westmoreland mystery of the young Doctor, Frank Armathwaite, who is on his way to Glasgow, is managed with that peculiar skill which Miss Warden, almost alone among the sensational novelists of the day, possesses. It is impossible—and it would be unfair even if it were possible—to give a *précis* of the plot of *A Woman's Face*; for, as in all its author's works, each link in the chain of incidents is essential to, and cannot be detached

from, the whole. It must suffice to say that the power of physical fascination which Miss Warden is so fond of exhibiting finds realisation in Lady Kildonan to an even greater extent than in any character she has yet drawn. The one poor portrait in *A Woman's Face* is Ned Crosmont. He is too contemptible a weakling. He is unworthy not only to be the husband of Alma, but to be the tool of Lady Kildonan in the gratification of her hereditary passion for gambling. Ned Crosmont is, however, more than atoned for by the extraordinary wife and the not less extraordinary daughter—though she is extraordinary in a different way—of the Westmoreland doctor, whose place Armathwaite ultimately takes. Altogether *A Woman's Face* is very little inferior to *The House on the Marsh*, and is in all respects superior to *A Prince of Darkness*.

Mr. Joseph Thomson, the traveller, has, with the help of Miss Harris-Smith—perhaps it would be more accurate, as well as more polite, to say that Miss Harris-Smith has, with the help of Mr. Thomson—given us in *Ulu* what is termed on the title-page “an African romance.” Undoubtedly there is abundance of African scenery in it. There is also abundance of romance, at all events of the sort that Mr. Rider Haggard has rendered us familiar with. The second volume is filled with hunts and escapes and combats as prolonged as the duel between Macbeth and Macduff when fought out on the stage of a provincial booth. Yet *Ulu* is not “an African romance,” because *Ulu*, who is ostensibly its heroine, fails to create the true romantic interest in the mind of the reader. She has “a lissom, supple figure,” “snow-white teeth,” and a “low, soft, musical voice.” She is devoted, loyal, brave; quite unnecessarily, she dies in the end. But somehow she fails to create any feeling stronger than sympathy. The odour of rancid castor oil which heralds her presence in the fourth chapter never leaves her. Had she been an Amazon, a Pocahontas, a “She,” one might have got over the castor oil with the help of time, soap, and love. But she is nothing of the sort. She is merely a simple, pretty, submissive, characterless girl, who, towards the end of her story, falls into her true position as African lady-help to her successful Scotch rival, Kate Kennedy. Then the fundamental idea of *Ulu* is an inadequate, if not an impossible, one. It is based on calf-misogyny, which is even more insufficient as literary capital to build a romance upon than calf-love. Tom Gilmour, a young Scotchman, with a weakness for dreaming on hill-tops, returns from the East to Edinburgh, “master of a considerable fortune” left him by his father, and intending to marry Miss Nina Lindsay, daughter of an advocate. He finds her married to “a bantling millionaire” (by the way, when was this creature naturalised in Midlothian?), who, with more than Disraelian liberality, has strewn her wedding-gown with diamonds. She tells him “My day is Wednesday”; whereupon he flees from civilisation, settles on Mount Kilimandjaro, solaces himself for the loss of Miss Lindsay with hartebeest soup, Chaga mutton, and banana fritters, talks Byron-and-water to himself and (when he gets a chance) “emancipated” savant-and-bitters to missionaries. He contemplates

wedding some savage woman, Ulu, for choice; and, of course, he falls in love with the first European girl, in the person of a missionary's daughter, he comes across. The Gilmour of real life would have gone in for "serious drinking" for a week, allowed his hair to grow for three months, astonished the Dialectical Society of Edinburgh with some extravagant doctrines, then plunged headlong into the study of theology or medicine, emerging as the husband of a daughter of the manse, or of a professor of anatomy. But although Ulu is a disappointment, although the *raison d'être* of Ulu is incredible, although we have too much old-fashioned fine writing about "broad home parks, with their stately array of oak and beech and broad-leaved chestnut giving added dignity to lordly mansions, stern with the pride of high degree," Miss Smith and Mr. Thomson have written an agreeable, pleasantly exciting book, strong, if not in dramatic, certainly in human interest. If Gilmour is rather a poor creature, Kate Kennedy, the missionary's daughter, is the reverse, in spite of her being a "lady medical" and being "spoiled by the Edinburgh men." She is a bright, active-minded girl, full of fun and good sense, courageous, resourceful, and practical. The development of a rather stand-offish acquaintance between her and Gilmour into intimacy and love is traced with great skill and perfect delicacy. Then the Massai scenes, the dances, the fights, and all the rest of it, are full of life and reality. Kennedy, the missionary, is well drawn; and Uledi, Gilmour's faithful but bloodthirsty lieutenant, is almost as striking a character as Umalopogaas himself.

The only serious fault to be found with *Walter Stanhope* is that its author, like its hero, attempts too much. Mr. Copland seems to be a new writer; but he is evidently a man of culture, and is especially well acquainted with German habits of life and with English political history during the first quarter of the present century. It is greatly to his credit, also, that he writes in clear unaffected English, even although he does make Walter Stanhope, in the delirium of happy love, pray to be changed from "a floating weed, blown about by every wind of feeling and of doctrine, into a fixed and steady buoy, by which the poor mariner on life's stormy ocean may direct his course." But he should have been content, through Stanhope's experiences, to contrast England and Germany as regards social life, amusements, education, and politics. He should not have brought actual historical personages upon his stage. At all events, his efforts in this direction have met with but scant success. The Bismarck with whom, as a young man, he makes Stanhope meet, and who says that "the work before us is to be carried out by blood and iron; here is the blood (putting his hand on his breast), and our army has the iron, which will one day act like a magnet," &c., is but a pale copy of "the madman" of Prosper Mérimée, Napoleon III., Biarritz, and, more or less, of fact. The influence of Lord Beaconsfield is distinctly to be traced, too, in Mr. Copland's conception of his hero. Walter Stanhope, with his blue blood, his capacity for becoming either an Admirable Crichton or a jack-of-all-trades, his impulses, his pecu-

niary resources, which allow of his devoting a few years of his life to the gratification of these impulses, is just such an aristocratic Odysseus as Disraeli used personally to conduct on a circular tour of passion and pleasure to the Penelope's arms from which he started. But there is no slavish imitation of Disraeli in the actual incidents of Stanhope's journey. Mr. Copland's "German student" scenes are all his own, and they are very good. They are much to be preferred to the political and matrimonial intrigues in which Stanhope is plunged on his return to England. The adventures on our inhospitable shores of Minna, the Göttingen girl—who holds the first place in the susceptible Stanhope's affections until she is displaced by the Lady Hilda whom he marries—are agreeably told, although Mr. Copland might have spared her one, on the whole, improbable insult that is offered her. The unpleasant people in *Walter Stanhope* are the poorest sketches in it. There must be sirens in an Odyssey, of course; but Mr. Copland does not score a success with Lady Earlsfield, the attractive widow, who endeavours to supplant Lady Hilda. We hear a great deal of her "cynical immorality"; but, in Mr. Copland's pages, she only seems a somewhat passionate and vulgarly forward woman.

Found, yet Lost is much shorter than the majority of the stories that have gained for Mr. Roe the remarkable popularity he enjoys in the United States; but it accounts for that popularity better than his larger and more pretentious works. It appeals directly to the sympathies of that large number of novel-readers—still, in spite of the evident attractions of "realism," the preponderating majority—who think there is nothing so deserving of admiration and a good cry as faithful love in woman and unselfish devotion in man. Both are given in the fullest measure and of the best quality in *Found, yet Lost*, which is very nearly an American "Auld Robin Gray." Captain Albert Nichol, the affianced husband of Helen Kemble, the successful rival of Hobart Martine, and a gallant officer on the Union side in the Civil War, is struck by a fragment of a shell while leading his men to battle. He is reported dead. Martine seeks for but fails to find him. In due course of time Helen promises to reward Martine, whose high character this crisis has revealed, with her hand. Then Nichol is discovered—alive, a mental wreck, ignorant of his own personality, incapable of recognising his relatives, his friends, or Helen. Then—but it is unnecessary to say more than that Martine never swerves from the path of duty, and that the end of the story is such as nine out of ten of its readers will approve of. The heroic unselfishness of Martine, and the ripening of Helen's character in the sunshine of its influence, are the attractive features of *Found, yet Lost*, and they are, indeed, very attractive. This is one of those few stories that are good in all respects, and that yet one does not feel tempted, after reading, to place on the nursery shelf.

There is, it is unnecessary to say, a strong resemblance between *A Glorious Gallop* and Mrs. Edward Kennard's previous works. It is, however, superior, both in plot and agree-

ableness, to several of those. There is not much of a story, to be sure. Capt. Falconer is for a time undecided whether he should ask in marriage the fascinating, handsome, and unveracious Miss Geraldine Brotherton, or Maggie, her decidedly plain, but also decidedly honest, sister. But "a glorious gallop," which ends in Maggie breaking three of her ribs decides the question. The story, which leads up to this satisfactory but commonplace arrangement, is, however, very animated, and the dialogue is not throughout pervaded with hunting slang.

WILLIAM WALLACE.

SOME HISTORICAL BOOKS.

"STATESMEN" SERIES.—*Life of Viscount Palmerston*. By Lloyd C. Sanders. (W. H. Allen.) This is a very useful and interesting record of a remarkable career which, in its course, illustrates the current of British affairs through the middle part of the century. Mr. Sanders makes careful mention in his preface of very numerous sources of information. In some points this short biography is more complete than larger works, because of the many later publications which have been open to Mr. Sanders, who has gathered from Hayward's letters that Palmerston was attracted "by the absurd theory that the plays of Shakspeare were really written by Bacon." It is needless to dwell upon Palmerston's popularity, upon his good nature, upon his flippancy, or upon his failure as a legislator. No great statue bears his name and fame to the next generation. Lord Shaftesbury, who was not a bad judge, said, "I never knew any Home Secretary equal to Palmerston for readiness to undertake every work of kindness, humanity, and social good." When attacks are made upon the manners of this later time in Parliament, it is well to bear in mind that to-day no minister would reply to a member as Palmerston did to Mr. Bright, that he treated his "censure with the most perfect indifference and contempt." Mr. Sanders is not more full of admiration for Palmerston than is becoming to a biographer, but he does sometimes less than justice to others. When he accuses Mr. Gladstone of throwing himself "with great inconsistency into the arms of the peace party" in 1856, it would be well to have shown on what grounds that unfavourable judgment of Mr. Gladstone's conduct was based. No fair-minded Englishman can read a biography of Palmerston without admiring his courage, his self-confidence, his fidelity to his friends, his strong commonsense. But his policy does not commend itself entirely to any party in the present day, and irresistibly one is reminded of Cobden's judgment upon his old opponent: "The noble lord has cost the country a hundred millions sterling, and I think he is dear at the money." The foreign policy of Lord Salisbury would have appeared cautious and timid to the minister who was known as Lord Firebrand.

"The Story of the Nations."—*Chaldea: from the Earliest Times to the Rise of Assyria*. By Zenaide A. Ragozin. (Fisher Unwin.) This is, from a literary point of view, the most successful of all the volumes of this series that we have seen. The illustrations, also, are more numerous, and, on the whole, of much better quality, than in any of the earlier volumes. M^{de} Ragozin makes no pretence of being an Assyriologist, but she has evidently studied with care and intelligence what has been written on the subject by the scholars of greatest authority. The introduction, occupying about a third of the book, consists of a well-digested and interesting account of the progress of modern discoveries on the sites of

the Mesopotamian cities, and a general outline of the results obtained up to the present time. The remainder of the work gives a spirited and, in the main, trustworthy sketch of the history of Chaldees, and of the characteristics of its institutions and civilisation during the early period indicated on the title-page. The author has in some cases deferred too much to the authority of Lenormant, and the passages relating to the points of contact between Chaldean and Hebrew history or legend are not free from untenable hypotheses. The suggestion that Cain is the eponymus of the Turanian race is not very probable, and the specific arguments adduced for it ignore the obvious fact that the Adam-Cain-Lamech genealogy and the Enosh-Kenan-Lamech genealogy are simply two versions of the same pedigree. The author also accepts the assertion, which is utterly destitute of real evidence, that the ancestors of the Hebrew people emigrated from Chaldea because they were persecuted for their religion. Altogether, however, this is an excellent book of its kind; and we shall look forward with some interest to M^{de}. Ragozin's promised volume on Assyria, in which she will have the advantage of dealing with facts that rest on unequivocal historical evidence.

"ENGLISH HISTORY FROM CONTEMPORARY WRITERS."—*Strongbow's Conquest of Ireland*. With Illustrations and Map. By Francis Pierrepont Barnard. (David Nutt.) This volume consists chiefly of translated passages from Gerald de Barri ("Giraldus Cambrensis"); but it also contains extracts from the other contemporary writers on the English side, from the Irish annals, and from one or two unpublished charters. The passages are well chosen and well translated, the quaint affectations of Giraldus's style being often cleverly rendered. Perhaps Mr. Barnard has allotted too large a proportion of his limited space to that lively writer's entertaining gossip about the natural and supernatural wonders of Ireland; but the fault is at any rate easily pardonable. The quoted passages are connected by brief remarks by the editor, which will enable the reader to follow the course of the story with little difficulty, even if previously unacquainted with its outlines. The appendices include a genealogical table of the Geraldines, lists of the principal persons, Anglo-Norman and Irish, who were concerned in the war, an account of the territorial divisions of Ireland at the time of the Conquest, and a brief notice of the authorities quoted.

The Life and Times of Queen Victoria. Illustrated with numerous Portraits, Views, and Historical Pictures. By Robert Wilson. In 2 vols. (Cassell.) It would no doubt be an injustice to this book to judge it by any very high standard of literary workmanship; but it is far above the ordinary level of the books that have been written to meet the popular demand occasioned by the "Jubilee" of last year. Mr. Wilson shows both fulness of knowledge and independence of judgment. The style is lucid and vigorous, and the selection of material shows a sounder appreciation of the relative importance of events than is often met with in books of this occasional character. The author's opinions on the conduct of political leaders are expressed with frankness, and, however open to question they may be, are at any rate free from all suspicion of narrow partisanship. The same candour is displayed in the references to the Queen's personal action in matters of public interest. There is no want of cordial recognition of the enlightened public spirit by which her Majesty's conduct has, in the main, been characterised; but the author does not attempt to maintain that every one of her acts has been

judicious. Mr. Wilson has, of course, been obliged to make some concessions to the triviality which the public demands in a "Jubilee history"; but in spite of this he may be congratulated on having been able to give to his work so much of serious historical value. The illustrations—about 500 in number—are mostly well executed, and in nearly every case strictly pertinent to the subject.

Origins of the English People and of the English Language. Compiled from the best and latest Authorities. By Jean Roemer. (Kegan Paul, Trench, & Co.) This curious volume contains two distinct books. The first 452 pages treat of the subjects indicated in the title-page; but the so-called appendix, which extends to 188 pages, is an account of the origin and development of the French language. Dr. Roemer, who is Professor of French in the College of the City of New York, would, we suppose, speak of himself as the "author" of the volume; but the title that really belongs to him is that of "compiler," in the sense assigned to that word by the Latin dictionary. We should not be surprised if his method of "compiling" were to bring him into trouble with certain English publishers. Messrs. Macmillan, especially, have good reason to complain of his procedure, many entire pages of the book being made up of sentences copied verbatim (without specific acknowledgment) from Canon Taylor's *Words and Places* and Mr. Kingston Oliphant's *Old and Middle English*. In the former case the offence is peculiarly flagrant, for the work in question is nowhere referred to by name, not even in the list of authorities, although that contains the title of the same writer's *Greeks and Goths*, which has also been pillaged. Whether there is anything original in the volume we are unable to say. We find, it is true, several gross blunders that we never met with before; but it is quite possible that Dr. Roemer may have "compiled" even these from one or other of his "best and latest authorities." There have no doubt been writers before Dr. Roemer who were ignorant enough to regard the name of the Jutes as "undoubtedly a variation of the Gothic root *thiuda*, *tiut*, *diut*, meaning 'men of the nation,' or to believe that the Northumbrian gloss on the Durham gospels is coeval with the Latin text, instead of being more than two centuries later. It must be acknowledged that the volume contains a large amount of valuable and interesting matter—among other things, an extensive series of specimens of Early English and Old French, and some well-executed facsimiles of MSS.; but it also contains so much that is inaccurate and misleading that we should have considerable hesitation in recommending it, even apart from the reprehensible manner in which it has been manufactured.

History of South Africa. By George McCall Theal. (Sonnenschein.) Mr. Theal's present volume is adapted from his previous work, *Chronicles of Cape Commanders*, and gives a minute account of the Dutch settlement at the Cape from the first landing in Table Bay, under Van Riebeeck, in April, 1652, to the year 1691, a period of not quite forty years. The Dutch governors kept an exact chronicle of every event, great or small, important or insignificant, that happened in the infant colony; and Mr. Theal follows their example. He remarks that there are circumstances under which the deeds of 600 individuals may be of greater importance in an historical retrospect than are ordinarily those of 600,000. History affords many such, but we cannot place the worthy Dutch burghers of the Cape in that category. It would have been easy to have condensed the early history of Cape Colony without in the slightest degree diminishing its interest or historical value; but condensation is not Mr.

Theal's forte. He is, indeed, singularly diffuse and prolix. Nevertheless, it must be remembered that he writes for the descendants of the original colonists, and they may be of a different opinion from ourselves. It is impossible not to admire his industry and perseverance. He tells us that the bulk of the records of Cape Colony is so vast that years are required to examine only the most important of them; and they have only lately been collected in one place, and are not yet arranged. All of them relating to the period treated of in the present work Mr. Theal has examined; and besides this he visited the Hague, and spent some months in examining manuscripts and maps relating to South Africa which had a bearing on his work. He is now occupied on another volume, which will embrace the remaining period of Dutch rule in South Africa.

A Concise History of the Australian Settlement and Progress. (Sydney: Fairfax & Sons.) This square pamphlet is an exact reproduction, in parallel newspaper columns, of a series of articles on Australia and New Zealand, published early in the present year as a centennial supplement to the *Sydney Morning Herald*, and of a very full description of the various ceremonies and rejoicings which took place at the centennial celebration. The former part supplies a large amount of information on most subjects connected with the Australian colonies, which will, doubtless, be of considerable use to travellers in Australia, though the form is inconvenient and the type trying to the eyes. There are two useful maps, one of the whole of Australia, the other, on a larger scale, of New South Wales with its divisions.

NOTES AND NEWS.

IN consequence of the temporary indisposition of Mr. Leslie Stephen, the dinner of the contributors to the *Dictionary of National Biography* has been postponed from Wednesday in this week to Wednesday, June 27. As previously arranged, the dinner will take place at the Star and Garter Hotel, Richmond, at 6.30 p.m. It is hoped that as many of the contributors as conveniently can will attend. Those intending to be present are requested to communicate as soon as possible with Mr. S. L. Lee, 14, Waterloo Place, London, S.W. We are glad to hear that Mr. Stephen is much better, and that he will certainly preside on Wednesday week.

MR. A. H. BULLEN is editing, for private issue in September, the works of Dr. Thomas Campion, the sweetest of the Elizabethan lyric poets. The volume will include, besides the songs, Campion's delightful masques, his interesting "Observations in the Art of English Poesie," and most of his Latin epigrams. Mr. Bullen will supply full introduction and notes. Four hundred small-paper and one hundred and twenty large-paper copies will be printed. The book will be printed at the Chiswick Press, Took's Court, E.C., where subscribers' names are now being received. Most of the large-paper copies are already subscribed for.

THE Rev. W. M. Metcalfe, of Paisley, has just sent to the press the last sheets of the first part of Barbour's *Legends of the Saints* for the Scottish Text Society, with annotations. Barbour is valuable to philologists for his store of old Scottish words, many of which have escaped record in Jameson's Dictionary.

THE delegates of the Clarendon Press have the following works ready for early publication: *Catalogue of Fossils of the British Islands*, part i., Palaeozoic, comprising the Cambrian and Silurian systems, on which Mr. Robert Etheridge has been so long engaged. It will form a small quarto volume. Hume's

Treatise on Human Nature, reprinted from the original edition and edited by Mr. L. A. Selby-Bigge, of University College. A school edition of Euripides's *Heracleidae*, by Mr. C. S. Jerram, on the same scale as his editions of the *Alcestis* and *Iphigenia in Tauris*. A school edition of Xenophon's *Hellenica*, books i. and ii., with notes and historical introduction by Mr. G. E. Underhill, of Magdalen College. *An Old High German Primer*, by Dr. Joseph Wright, corresponding to his *Middle High German Primer* recently issued. It is an elementary book, but it endeavours to bring within a comparatively small compass all the really important features of the language. *A Handbook to the Land Charters and other Saxon Documents*, by Prof. Earle. In his introduction Prof. Earle rejects Kemble's view of the elementary scheme of English life, and offers an entirely new exposition. He shows reasons for thinking that the manorial system was part of the first plantation, and this new theory will no doubt be canvassed by Mr. Seebohm and those who are interested in such questions.

Scribner's Magazine will begin in the autumn the publication of a romantic story of adventure by Mr. R. L. Stevenson, entitled "The Master of Ballentrac."

THE next volume in the "Story of the Nations" series will be *Turkey*, by Mr. Stanley Lane-Poole.

A NEW novel by Mrs. Croker, entitled *Diana Barrington: a Romance of Central India*, will be published next week by Messrs. Ward & Downey.

MR. THOMAS GREENWOOD, author of *Free Public Libraries*, has just finished a companion volume on Museums and Art Galleries, which will be issued shortly by Messrs. Simpkin, Marshall & Co. It will contain chapters upon the relation of the state to museums, the place of museums in education, and the British Museum.

MR. LELAND's *Practical Education* has already reached a second edition. He now intends to carry out the ideas set forth in that book, by a series of cheap illustrated handbooks on the minor arts and industries, each to consist of lessons, from the earliest rudiments, suitable for experienced amateurs and students. The series will begin with a manual on *Drawing and Designing*, which will be followed by *Wood-Carving*, *Modelling*, *Leather Work*, and others.

MARK RUTHERFORD's *Autobiography and Deliverance* having been for some time out of print, Messrs. Trübner & Co will shortly re-issue them in a cheaper form, revised, with a new preface, and some other added matter.

WE are promised this month another Anglo-American story in *Bledisloe; or, Aunt Pen's American Nieces*, by Ada M. C. Trotter. Mr. Alexander Gardner will publish it; and also *Tempted of the Devil*, a story retold from the German of August Becker, by M. W. Macdowell.

MESSRS. G. P. PUTNAM'S SONS, of New York, announce, in their pretty little series of "Knickerbocker Nuggets," Thackeray's *The Rose and the Ring*, with facsimiles of the author's illustrations.

A MEETING of the Selden Society will be held in Lincoln's Inn Old Hall on Wednesday next, June 20, at 4 p.m. The Lord Chief Justice of England will preside, and a paper will be read by Mr. F. W. Maitland.

DURING the whole of the two next weeks, beginning on Monday, June 18, Messrs. Sotheby will be engaged in selling the first portion of the library of the late Robert Samuel Turner, well known as a member of the Philobiblon Society. Of all the historic collections that have been dispersed during the past few years,

this is perhaps the most representative of those rarities that are dear to the professed bibliophile. It is specially rich in romances and novelle, in volumes from famous libraries or bound by famous binders, and in privately printed books. It also includes Americana, first editions (of English authors as well as the classics), and some valuable MSS. Among the latter we may mention nine volumes in the autograph of Thomas Gray, chiefly consisting of notes upon Greek historians.

THE June volume of the "complete edition" of Lord Tennyson's works (Macmillan) fulfills the promise of the prospectus in containing "everything that the author has published," except the plays, which are to follow. Though numbered vi, it corresponds to vol. vii. of the edition of 1884. Like that, it begins with "The Lover's Tale" and the series entitled *Ballads, and other Poems*, which was notable as including "Rizpah" and "The Revenge." Then follow the contents of the volume published in 1885, under the title of *Tiresias, and other Poems*, with a few changes. "Balin and Balan" has now been put in its place before "Merlin and Vivien" among the *Idylls of the King*; while, by the bisection of "Geraint and Enid," the total number of *Idylls* is raised to twelve. But, on the other hand, we here have, for the first time in a collected edition, "Locksley Hall Sixty Years After"; the verses on "The Fleet"—

"You, you, if you shall fail to understand"—

which appeared in the *Times* in 1886, on the occasion of one of our naval scares; and the "Opening of the Indian and Colonial Exhibition by the Queen." Lastly, we may mention that the sonnet beginning

"Old posts fostered under friendlier skies"

now has a title given to it, "Poets and their Bibliographies." Despite, however, the fulness of the present volume, the original *Tiresias* will always possess an attraction for the book-lover in its dedication to Robert Browning, which (from the necessity of the case) is not repeated.

UNIVERSITY JOTTINGS.

IN accordance with general expectation, Dr. Sidney H. Vines, of Cambridge, has been elected to the Sherardian chair of Botany at Oxford, vacant by the migration of Prof. Balfour to Cambridge.

DR. F. H. H. GUILLEMARD, author of that fascinating and handsome book of travel, *The Cruise of the "Marchesa,"* has been selected by the Royal Geographical Society and the council of the senate to be the first university reader in geography at Cambridge, for a term of five years.

THE Rev. F. J. Smith, who has for some three years past been in charge of the Millard laboratory at Oxford in connexion with Trinity College, has now been appointed by the delegates of the common university fund to give lectures in practical mechanics and experimental physics.

PROF. POSTGATE has been appointed deputy reader in comparative philology at Cambridge, for Dr. Peile, during the Michaelmas term.

THE general board of studies at Cambridge has approved Mr. Walter Leaf, the Homeric scholar, for the degree of Doctor in Letters.

THE University of Oxford has conferred the hon. degree of M.A. upon Mr. R. E. St. Andrew St. John, of Wadham, teacher in Burmese at Oxford and also at Cambridge.

MR. G. P. BIDDER, of Trinity, has been nominated by the special board for biology and geology at Cambridge to occupy a table at the

Naples zoological station for six months from October next.

THE Rev. Dr. E. Moore, principal of St. Edmund Hall, and Barlow lecturer on Dante in University College, London, delivered a public lecture at Oxford on Wednesday of this week upon "Dante in Sicily."

AT a meeting held on Wednesday, June 6, in the president's lodgings, Trinity, a "local league" was founded "for the protection of the interests of the public in the beauties and antiquities of Oxford and the neighbourhood." The secretary is Mr. Matheson, of New College.

THE *Oxford Magazine* of June 13 prints a handlist of "current books of reference useful to residents in Oxford," compiled by Mr. F. Madan, who promises in the future similar lists from the early days of printing.

AN association has been formed at Edinburgh, following the example of Cambridge and Oxford, to provide lectures in academic subjects for those who have had no opportunity of benefiting by an academic course of study, but who are desirous of being brought into personal relation with the work done in universities. It is proposed to arrange for courses of twelve lectures each, in various local centres, in history, literature, science, and art. The president of the association is Sir Thomas Clark, the lord provost; the vice-chairman is Prof. Laurie; and the hon. secretaries are Messrs. H. B. Baildon and Patrick Geddes.

ORIGINAL VERSE.

TO A NIGHTINGALE.

"Forse a memoria de' suoi primi gual."—*Pwry.*

SAD bird, when thou dost flood the listening night
With liquid music from thy bursting heart,
Within some tangled thicket out of sight
Of moon and stars, till saddened they depart
And leave the world unlit, does thy quick brain
Teem with the dim remembrance of the past?
Dost thou forget thy bird-shape, and again
Put on that other self that once thou wast?
Does the deep love that erst attuned thine eyes
Now pour itself in music to the skies?
Lone bird, would thou could'st know how thou
hast wrought
My laden soul to sympathy with thine!
Would thou could'st know, and gladden with the
thought,
How, easing thy full heart, thou eatest mine!
PAGET TOYNBEE.

MAGAZINES AND REVIEWS.

MR. W. H. JAMES WEALE, the learned author of *Bibliographia Liturgica*, has begun this month the publication of two periodicals devoted to the furtherance of his favourite study. One of these, *Analecta Liturgica*, is a quarterly, which will give at least 400 pages for a yearly subscription of £1. The first number consists of two parts, separately paged: (1) "Clavicula Missalis Romani," or an alphabetical index to the contents of the missal as authoritatively revised by Pius V. in 1570; and (2) the first instalment of what promises to be an invaluable "Corpus Hymnologicum," compiled by M. E. Misset in conjunction with the editor. The plan adopted is to take up first the early printed missals according to dioceses, and give a catalogue of all their *prose* and hymns, quoting in full those only which have never before been published; and then to treat in the same way the missals in MS. The compilers, who anticipate that the work will occupy them some ten years, state that

"nous avons dans nos cartons plusieurs milliers de Proses, d'Hymnes, et pièces liturgiques inédites, collationnées sur les manuscrits et les incunables de toutes les bibliothèques de l'Europe. Et malgre

cela nous ne nous dissimulons pas que nos collections sont biens incomplètes."

The second periodical, entitled the *Ecclesiologist*: Notes and Queries on Christian Antiquities, is to appear every six weeks, on the 1st and 15th of alternative months. The first number contains notes on the differences in the *Horae* of certain Uses; the text of a unique copy of a printed address by Bishop Alcock, of Ely (circ. 1499), which Mr. Weale rescued from an old binding in the cathedral library at Wells last year; and the first instalment of a catalogue of Breviaries, supplementary to that of missals in the *Bibliographia Liturgica*. Both of these periodicals are published by Mr. Thomas Weale, 2 Orange Street, Red Lion Square, W.C.

LATIN ADDRESSES AT CAMBRIDGE.

THE following is the text of the congratulatory letter written by the public orator, Dr. Sandys, on behalf of the Cambridge senate, and presented to the university of Bologna by the delegates of the senate (Dr. R. C. Jebb and Prof. J. H. Middleton) on the occasion of the celebration of the eighth centenary of that university during the early part of the present week. The orator quoted in the course of the letter is Burke; the "friend of Newton" is Count Luigi Ferdinando Marsigli, F.R.S.:

"Animo quam laeto nuper audivimus, societatem vestram antiquitate tanta venerabilem, ut orbis terrarum inter universitates vetustissimas numeretur, annis fere octingentis ab origine sua expletis, sacra saecularia esse celebraturam. O diem faustum et felicem, quo sapientiae sedes tam insignis, diu alterum Europae lumen, ad condendas Academias alterum exemplar, doctorum omnium qui ubique sunt oculos ad sese convertit, et vetera amicitiae iura cum illis denuo confirmat. Iuvat nos quoque professorum vestrorum fastos evolvere; iuvat illius praesertim memoriam revocare, qui iuris Romani disciplinam inter vosmet ipsos plusquam septem abhinc saecula illuminavit; iuvat praeceptorum plurimorum nomina illustria recordari, qui sive in medicina docenda sive in rerum natura investiganda sive in aliis studiis postea emiserunt; iuvat illarum denique laudes commemorare, quae in vestris sapientiae sacrariis, virginum Vestalium ritu, doctrinae flammam illibatam conservarunt.

"Tam praeclearis igitur professoribus ornata universitas illa vestra, in civitate florentissima collocata, olim per Europam totam legum nutrix, studiorum mater iure optimo nominata est: quin etiam urbs ipsa, prope centum abhinc annos, nostratium ab oratore quodam 'libera illa et fertilis et felix Bononiae civitas, iurisprudentiae denuo nascentis incunabula, scientiarum atque artium sedes dilecta' merito appellata est. Urbem vero tam insignem, tanta advenarum multitudine quotannis frequentatam, si quis nostro e numero forte invisit, libenter ille quidem vestra artium monumenta, vestras porticus, vestra palatia, vestra musea admiratur; sed singulari quadam veneratione atrium illud antiquum contemplatur, ubi tot clipei coloribus vividis depicti illorum nomina et gentes indicant, quoscumque titulo vestro honorifico olim ornavistis. Recordatur deinceps etiam ab ipsa Britannia quondam juvenes veritatis avidos ad doctrinae domicilium illud, tamquam ad oraculum, adventare solitos. Inde ad sedem vestram recentiore digressus, audit idem scientiarum institutum vestrum celeberrimum ab uno e Newtoni nostri amicis fuisse conditum.

"Ergo tot hospitii veteris vinculis vobiscum coniuncti, et communium studiorum cultu consociati, nihil hodie vobis auspiciatus exoptare possumus, quam ut plurima in saecula amorem doctrinae, amorem libertatis, vobis ingentem, fovere perseveretis; et veterem illam laudem, 'Bononia docet,' vobis velut olim in perpetuum vindicetis. Valet."

Of the fifteen speeches delivered by Dr. Sandys, on the occasion of the conferment of

honorary degrees at Cambridge on June 9, we have room to quote only the following:

"LORD ACTON.

"Salutamus deinceps virum doctissimum, qui in Italia prope pulcherrimum orbis terrarum sinum, montis Vesuvii in vicinia natus, in Bavaria inter Monacenses a professore illo eruditissimo educatus est quem historiae ecclesiasticae Nestorem nominaverim. Idem Britanniae inter senatores delectus et senatus illius ordini superiori adscriptus, postea in ipsa Roma fidei Catholicae antiquae acerrimus defensor exstitit. Quid dicam de libellis illis quos sive de Henrico octavo et Wolseio sive de Sancti Bartholomaei die fatali conscripsit? Quid de tot litterarum monumentis sive libertati vindicandae sive veritati investigandae sive rerum gestarum historiae fideliter narrandae consecratis? Si Plinius ille, qui avunculi sui eruditissimi cum memoria consociatum montem Vesuvium exardescentem descripsit, viri huiusce laudes hodie celebrare potuisset, sine dubio verbis eiusdem usus esset, quibus unum ex amicis suis posteritati tradidit: 'Nihil est illo gravius, sanctius, doctius; . . . quantum rerum, quantum exemplorum, quantum antiquitatis tenet! Nihil est quod discere velis, quod ille docere non possit. Mihi certe, quotiens aliquid abditum quaero, ille mihi thesaurus est.'"

"PROF. STOKES.

"Salutamus deinceps regiae societatis praesidem, professorum nostrum Lucasianum, senatorum nostrorum omnium consensu Britanniae senatoribus additum; quem in munere illo triplici Newtoni nostri in vestigiis insistere gloriamur. Atqui ipse, qua est morum suavitate et modestia, vix tali sese honore dignatur, sed a plausu populari remotus et seclusus, templum quoddam serenum occupat, ubi reverentia debita rerum naturae miracula perscrutatur, ubi 'in statione tranquilla collocatus' lucis leges obscuras observat, observatas ingenii sui lumine illustrat. Viro tali rerum naturam contemplanti crediderim apparere nonnunquam sedes illas quietas,

"'quas neque concutiunt venti, nec nubila nimbis aspergunt, neque nix acri concreta pruina cana cadens violat, semperque innubilis aether integit, et large diffusum lumine ridet.'"

"LORD RAYLEIGH.

"Venio ad nomen physicorum professoris quem non sine desiderio nuper amissimus, viri cum cancellarii nostri munificentia haud ita pridem consociati. Ex illo velut fonte, liberalitatis flumen amplum professoris nostri in provinciam defluxit, inque alias Academiae partes redundavit. Ipse fontium exsistentium et aquarum destillantium naturam quam feliciter exploravit; caeli colorem illum caeruleum quam dilucide explicuit; quicquid audiendi quicquid videndi ad rationes intimas pertinet, quam sapienter interpretatus est; quotiens in rerum natura eventis specie quidem inter sese diversis causas easdem subesse ostendit. Quam profundam rei mathematicae thesaurum, ut aiunt, cum quanta in experimentis institutis solertia coniunxit; quam subtilem denique scientiae cognitionem cum sensu illo communi consociavit qui non in magna tantum fortuna sed in omni vitae conditione rerum omnium est revera rarissima."

"PROF. CAYLEY.

"Pervenit tandem ad professorem nostrum Sadlerianum, virum non modo in recentioris quae dicitur algebrae provincia, sed etiam studiorum mathematicorum in toto regno inter principes numeratum; qui, quamquam iuris peritia honores summos adipisci potuisset, maluit sese scientiae illi dedicare, quae verbis quam paucissimis, quam illi quae verbis quam plurimis, rerum veritatem exprimere conatur. Quantum tamen prudentia eius Academiae profuerit, et senatus totius concilium et collegium plus quam unum testantur; neque Cami tantum prope ripas sed etiam in ipsa Europa atque adeo trans aequor Atlanticum fontes eius alii patuerunt. Idem, velut alter Socrates, ipsi rerum pulchritudini et veritati mentis oculis contemplandas sese consecravit, arbitratus illa sola quae studiorum suorum in puro velut caelo sint, revera esse, illorum autem imagines quas *φανέρωτα* vocamus, velut specus *εἰδωλα* videri; ipsam vero pulchritudinem percipi quidem posse sed non omnibus explicari. Quam dilucide tamen regnum suum quondam non campo deserto comparavit sed

regioni cuidam pulcherrimae primum e longinquo prospectae, cuius partem unamquamque posse deinde peragrari, cuius et clivos et vales, et rivos et rupes, et flores et silvas posse propriis maxima cum voluptate aspicere. Diu, inter numina silvestria, regionem illam laetam feliciter pererret professor noster insignis.

"PROF. ADAMS.

"Extra ipsas Athenas, stadiis fere decem ab urbe remotus, prope ipsam Platonis Academiam, surgit Coloneus ille tumulus Sophocleo carmine olim laudatus, Neptuni templo quondam ornatus, astronomi magni Metonis cum memoria consociatus. Et nos Colonom nostrum iactamus, clivum illum spatio a nobis eodem distantem, locum arboribus oblitum, avibus canorum, ubi in templo quodam stellis observandis dedicato vivit Neptuni ipsius inventor. Quid si Colono nostro deest Cepheus? sed aqua de olivo illo antiquitus deducta, collegii Herscheliani sub hortis transmissa, Newtoni in collegio in fontem exaluit. Quid si Neptuni inventi gloria cum altero participatur? sed, gloriae illius geminae velut imago perpetua, Geminorum in sidere est stella quaedam quae caeli totius inter stellas duplices praeceteris fulget. Idem neque stellarum geminarum cursus, neque Saturnum neque Uranum inexploratum reliquit; neque faces illas caelestes, Leonides vocatas, quas ter in annis fere centenis orbis suos magnos conficere ostendit; neque motum illum medium lunae qui cum mota diurno terrae collatus per saeculorum lapsum paulatim acceleratur. Talium virorum laudibus non debet obesse quod inter nosmet ipsos vivunt; pravum enim malignumque foret 'non admirari hominem admiratione dignissimum, quia videre, alloqui, audire, complecti, nec laudare tantum, verum etiam amare contigit.'"

CORRESPONDENCE.

THE LOST DECADES OF LIVY.

Lancing College: June 8, 1888.

The *Gentleman's Magazine* for 1769 (xxxix., p. 131) contains a story "translated from a scarce little piece, entitled *Lettres de la Reine de Suède*" (Christina), to the effect that some MSS. of the eighth, tenth, and eleventh decades of Livy existed in the seventeenth century. The writer, by name Chapelain, dates his letter 1668, and says that forty years ago the Marquis de Rouville saw the parchment used for battledores near Saumur. The parchment had been bought as useless by an apothecary from the Abbey of Fontevraud, and sufficed for much more than twelve dozen battledores. I have failed to find, either in the Bodleian or the British Museum, the volume referred to. It is not the *Lettres secrètes de Christine* (Geneva, 1761). Perhaps some one else may be more fortunate, and be able to test the story told by M. Chapelain. It would at least give a hint to an imitation of Freytag.

F. HAVERFIELD.

A DISTRESSING BLUNDER.

Westborough, Massachusetts, U.S.A.:
 May 26, 1888.

In a recently published volume of *Selections from Browning*, by Mr. W. J. Rolfe, there is a note upon the phrase "cows and twats," l. 95 of the epilogue of "Pippa Passes." Mr. Rolfe says:

"*Twats* is in no dictionary. We now have it from the poet (through Dr. Furnivall) that he got the word from the Royalist rhymes, entitled '*Vanity of Vanities*,' on Sir Harry Vane's picture. Vane is charged with being a Jesuit.

"*'Tis said they will give him a cardinal's hat: They sooner will give him an old nun's twat.'*"

"The word struck me," says Browning, "as a distinctive part of a nun's attire that might fitly pair off with the cowl appropriated to a monk."

It would seem that Mr. Browning and Dr. Furnivall and Mr. Rolfe have, all three of them, made a distressing blunder. Luckily, it is only necessary to correct the error of Mr. Rolfe. The word in question is probably still in provincial use*, and may be found in its place in Wright's Dictionary.

H. W. FAY.

THE PUNCTUATION OF SHAKSPEARE'S 129TH SONNET.

Birkdale, Southport: June 9, 1888.

In my review of *Shakspeare and other Lectures*, by the late George Dawson (ACADEMY, May 12), I criticised Dawson's approval of a very eccentric punctuation of Shakspeare's Sonnet, "The expense of spirit in a waste of shame," which seemed to have the authority of Mr.

* Like many other provincialisms, it is also in use in London.—Ed., ACADEMY.

C. Armitage Brown, the sonnet—with a semi-colon at the end of l. 2—being apparently transcribed from Mr. Brown's work, *Shakspeare's Autobiographical Poems* (1838). This work was not at hand for reference, and I assumed—perhaps rashly, for the editing of Dawson's Lectures was not proved impeccable—that the transcription was accurate. Mr. W. Aldis Wright has been kind enough to inform me that this is not the case; but that in Mr. Brown's book the accepted punctuation is followed, the line standing thus:

"Is lust in action; and till action, lust
 Is perjured," &c.

JAMES ASHCROFT NOBLE.

PROPERTY IN TITLES.

London: June 13, 1888.

Had Mr. C. L. Pirakis confined himself in your last issue to the general question of property in titles, I should have had nothing to say; but when he makes statements which are not only inexact, but of whose incorrectness he is fully aware, it is, I think, time to enter a protest.

He asserts that a dramatic author—myself to wit—recently appropriated the title of one of his novels and wrote a play to it. The first statement is misleading, for one can hardly appropriate that of whose existence he is in perfect ignorance. The second is absolutely untrue—a fact which the copy of correspondence between Mr. Pirakis and myself (sent to you, by the way, without my permission) abundantly proves.

Mr. Pirakis is so anxious not to have himself advertised that, following his example, I do not mention either the name of his novel or that of my piece. But it may interest him to know that not until the last moment, when rehearsals were practically complete, was the title of the latter decided on. Even Mr. Pirakis may be brought to acknowledge the difficulty of "writing a play to a title" which is non-existent. Moreover, seeing that he only called my attention to the matter six weeks after the production of the piece; and that, in addition, he has received my assurance that I never saw or heard of his book, it is a little difficult to understand the state of mind which permits him still to bring against me a charge of literary theft.

I ask the insertion of these facts partly because the subject has been made the basis of adverse comment, founded doubtless on insufficient knowledge, in another paper.

T. MALCOLM WATSON.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, June 18, 4 p.m. Asiatic: "The Tantrikhyana: a Collection of Indian Folk Lore, contained in a unique Sanskrit MS. discovered in Nepal," by Prof. Cecil Bendall.

8 p.m. Victoria Institute: "The Botany of Syria," by Prof. G. E. Post.

TUESDAY, June 19, 7.45 p.m. Statistical: "The English Poor Rate: some Recent Statistics of its Administration and Pressure," by Major F. G. Craigie.

8 p.m. Wagner Society: *Conversazione*.
 8.30 p.m. Zoological: "The Poison-glands of *Typhlocyba*," by Prof. W. Newton Parker; "Collection of Coleoptera from Korea made by Mr. J. H. Leech," by Mr. H. W. Bates; "Some Abnormalities occurring among Animals in the Society's Gardens," by Mr. J. Bland Sutton; "A Collection of Echinoderms made at Tuticorin, Madras," by Mr. Edgar Thurston.

WEDNESDAY, June 20, 8 p.m. Geological: "The Occurrence of Marine Fossils in the Coal-Measures of Fife," by Mr. J. W. Kirkby; "Directions of Ice-flow in the North of Ireland, as determined by observations of the Geological Survey," by Mr. J. R. Kilroe; "Evidence of Ice-action in Carboniferous Times," by Mr. J. Spencer; "The Greensand Bed at the Base of the Thanet Sand," by Miss Margaret I. Gardner; "The Occurrence of *Alpheia meridionalis* at Dewlish, Dorset," by the Rev. O. Fisher; "Fossil Fishes from the Herefordshire Beacon,

and the possible Origin of some Epidorites," by Mr. Frank Rutley; and "The Ejected Blocks of Monte Somma," I. "Stratified Limestone," by Mr. H. J. Johnston-Lavis.

8 p.m. Cymmrodorion: *Conversazione*.

4 p.m. Selden Society: Paper by Mr. F. W. Maitland.

THURSDAY, June 21, 5 p.m. Hellenic: Annual Meeting.

8 p.m. Linnean.

8 p.m. Chemical: "Chlorofumain and Chloromalin Acids; their Derivatives and Magnetic Rotations," by Dr. W. H. Perkin; "Combustion by Means of Chromic Anhydride," by Messrs. C. F. Cross and E. J. Bevan; "Metoxylsulphonic Acids," by Dr. G. T. Moody; "Isomeric Change," by Dr. H. E. Armstrong; "A New Method for the Production of Mixed Tertiary Phosphines," by Dr. N. Collie.

8.30 p.m. Antiquaries.

8.30 p.m. Historical: "Austria as the Central Factor in the European Movement of 1848," by Mr. O. A. Fyfe.

FRIDAY, June 22, 3.30 p.m. British Museum: "The Social Condition of the Babylonians, IV. Civil Life," by Mr. G. Bertin.

SATURDAY, June 23, 8 p.m. Physical: "Continuous Current Transformers," by Prof. S. P. Thompson.
 8.45 p.m. Botanic: General Meeting.

SCIENCE.

A GERMAN STUDY OF PLATO'S "REPUBLIC."

Zur Lösung der Platonischen Frage. Von Dr. E. Pfeleiderer. (Freiburg i. B.: Mohr; London: Williams & Norgate.)

We have often thought that the readiness of scholars in our age to dissect a poet, a philosopher, or a historian into pieces improperly joined under a common name is really a result of over-education in the critics. They have been taught by their own training to expect too much from a piece of composition. On the one hand they have learned to aim at faultless accuracy in point of grammar, and on the other to look for perfect logical coherence and consistency in what is said. What has been expected of them they in turn expect of others; and they argue that where the grammar or the logic does not hang together the personality does not hang together either, and that compositions by various hands have been fused by time or fraud. Nor is this all. Having been taught (and very properly taught) to study the personal features of an author's style, they cannot away with a change in the familiar features. As a man writes habitually, so he ought always to write. If he do not, he is not the same man. They take Buffon's dictum, *Le style c'est l'homme*, much too literally. *L'homme* can only be allowed one style under penalty of losing his identity. Yet a man who writes simply, and as the birds sing, is just the person to reflect varying moods in varying tone; while a regular stylist cannot always keep up the strain of composition in one manner, and, even if he could, is likely to be ambitious of composing in more than one style. In fact, the critics expect greater regularity of their victims than anyone but a composition-master has a right to look for. They have acquired, owing to our special education, minds which are in one sense well trained; and they expect exactly the same class of negative merits from authors trained on a very different system (or on none at all), and often unable to revise effectually what they had written. They examine with a microscope what was meant to be seen with the naked eye. This insistence upon minute accuracy and conformity is surely the essence of pedantry; and from it spring theories that "Herodotus" was compiled at Alexandria, or that the eighth book of "Thucydides" is a forgery by St. Augustine.

Akin to these is the craze for breaking-up a book into parts, written from different points of view and published at different times by one author. To detect imperfectly hidden lines of junction is the latest ambition of German scholarship, and the pursuit seems to us to reflect little credit on the taste and ingenuity of a nation whose scholarship has far solder exploits to boast of. This turn of mind, however, is illustrated by Dr. Pfeiderer's criticisms on Plato's *Republic*. The Platonic question is narrowed down in his hands to the question of the unity of the *Republic*; for, from the character and combination of its disparate parts, conclusions may, he thinks, be drawn as to the history and proper grouping of the other writings. Coming nearer to the views of Hermann than to those of Krohn, he wishes to divide the *Republic* into three portions of different ages and belonging to inconsistent points of view (i.-v., 471c, with viii.-ix.; x.; v., 471c-vii.). There is more kinship between the first and second than between these and the third. The three were put together (after separate publication of the early parts) and published by Plato himself, who resolutely let the inconsistencies stand as a permanent memorial of his successive efforts.

This latter part of the theory is, of course, totally incapable of proof; and Dr. Pfeiderer would, no doubt, wish his views rather to be examined on the question of inconsistency and patchwork, where some sort of proof can be attained. The presumption must be at starting against the theory; for is there any certain and known instance of two or more works which have so got fused? Many are suggested, but is there one certain case? The inconsistencies here noted fall under four heads: (1) Dialectic and the Theory of the Ideas; (2) Psychology; (3) Ethics and Education; (4) General tone. The last is too impalpable a thing to lay hold of; it is so much a matter of individual impression; and thus the first three have to bear the burden of the argument. After going carefully through them, we come to the conclusion that most of Dr. Pfeiderer's points are of no real importance. He assumes that silence is contradiction; or that, if a view be not spoken of in each division of the work, the author did not hold it when he wrote that division. Thus the ideal-theory is, he thinks, wanting in the first part. Well, if it be not mentioned it is not necessarily unknown or rejected; and, as a fact, it does appear to be alluded to in 402c, though Dr. Pfeiderer holds that that passage proves nothing. To us it seems that Plato's skill is nowhere more clearly shown than in his keeping back views until the natural time comes for them; he does not load his pages and confuse his readers by talking of everything at once. But the views, though kept back, are throughout the *Republic* regularly indicated beforehand by some little phrase—a sign of what is coming; and such a preliminary hint we take 402c to be. Its value must be estimated by the number of similar small phrases introductory to great theories. Then we find the familiar assertion that there are two educations in the *Republic*, and that the author of the first had at the time no idea of going on to the second. But 416a-c suggest pretty plainly that there is a second, and a better,

stage of education yet to come. This is suggested three times—most plainly, perhaps, when Sokrates declines to say that the Guardians are already τῷ ὄντι καλῶς πεπαιδευμένοι.

But of course it is not our intention to deny that there are real inconsistencies in the *Republic*. Dr. Pfeiderer has got hold of one in the difference of the criticisms on art and poetry in books ii.-iii. and x. They do not hold well together; and he might even go on to ask why hymns to the gods are exempted from the general condemnation of poetry in 607a. Dr. Pfeiderer, too, might have added to his list that Plato never harmonises his statement that there are but four virtues with the longer list given elsewhere. But how many writers have been able to avoid inconsistencies in a book of any length? The novels of Dickens or Scott, and the philosophical writings of Berkeley, are not free from inconsistencies; and the conditions of composition and education were more unfavourable to precision and consistency among ancient writers than they are among ourselves.

FRANKLIN T. RICHARDS.

CORRECTION OF A WELL-KNOWN PASSAGE IN GIBBON.

WITH the present year the *Annuaire* of the Association pour l'Encouragement des Etudes Grecques has been transformed into a quarterly review (Paris: Ernest Leroux), edited by M. Théodore Reinach, which consists of original articles, documents and notes, bibliography, &c.

Among the contents of the first number is a paper by M. Henri Weil, entitled "Des Traces de Remaniement dans les Drame d'Eschyle"; the only cases of alteration by a later hand in the original text that he is disposed to admit are two in the *Eumenides* (vv. 767-774 and 667-673) and the conclusion of the *Septem contra Thebas*. M. Reinach himself contributes an elaborate interpretation, with facsimile, of the inscription of Lygdamis, found by Sir Charles Newton; the indefatigable M. P. de Nolhac writes about the study of Greek at Paris in the time of Louis XII.; and M. D. Békéas about the jubilee of the University of Athens.

But the article perhaps most interesting to us is that in which M. Spiridion Moraitis examines the well-known passage in Gibbon (c. 66) reflecting upon the morals of the women of England, as reported by the Byzantine chronicler, Chalcondyles (circ. 1460). Here are the words of Chalcondyles:

Νομίζεται δὲ τοῖσι τὰ τ' ἀμφὶ τὰς γυναῖκας τε καὶ τοὺς παῖδας ἀπλοικότερα· ὅστε ἀνὰ πᾶσαν τὴν νῆσον, ἐπειδὴν τις εἰς τὴν τοῦ ἐπιτηδείου αὐτῷ οἰκίαν εἰσῇ καλούμενος, κύσαντα τὴν γυναῖκα οὕτω ξενίζεσθαι αὐτόν. Καὶ ἐν τοῖς ὁδοῖς δὲ ἀπανταχῇ παρέχονται τὰς ἐαυτῶν γυναῖκας τοῖς ἐπιτηδείοις. Καὶ οὐδὲ ἀσχύνην τοῦτο φέρει ἐαυτοῖς κύεσθαι τὰς γυναῖκας αὐτῶν καὶ τὰς θυγατέρας.

On consideration of the entire context, it becomes clear that the words κύσαντα and κύεσθαι bear only the innocent meaning of "kissing" and "to be kissed," being precisely identical with the passage from the Letters of Erasmus, also referred to by Gibbon *ad loc.* It is not difficult to understand why a Byzantine would regard as indelicate what Erasmus deemed "mos nunquam satis laudatus." M. Moraitis, however, is able to clench the question by quoting from another Greek chronicler, Nicander Nuncius of Corfu, who accompanied the Venetian Gerard on a mission from Charles V. to the court of Henry VIII. It is hardly doubtful that Nancius must have had this very

passage of Chalcondyles in his mind when he wrote:

Ἀπλοικότερον δὲ τὰ πρὸς τὰς γυναῖκας σφίσι εἶδεται καὶ ζηλοτυπίας ἔνευ· φιλοῦσι γὰρ ταύτας ἐν τοῖς στόμασιν ἀσπασμοῖς καὶ ἀγκαλισμοῖς, οὐχ οἱ συνήθεις καὶ οἰκείοι μόνον, ἀλλ' ἥδη καὶ οἱ μηδέποτε ἑταροῦντες. Καὶ οὕτως σφίσι ἀσχύρην τοῦτο δοκεῖ.

M. Moraitis goes on to suggest that the interpretation of Gibbon was probably based upon the Latin translation of Chalcondyles by Clauser, who makes a sad mess of the whole passage, beginning it thus: "Parva ipsius uxorum liberorumque cura est."

CORRESPONDENCE.

THE INSCRIBED STONES FROM JERABIS.

London: June 12, 1888.

As regards the curiously inscribed stones from Jerabis, the supposed site of Carchemish, various theories have been started, but none, I think, has hitherto been so fortunate as to win general acceptance. I have myself given a considerable degree of attention to a problem which many affect to treat as hopeless; and at last I seem to have arrived at a result of some plausibility.

The proper name, which occurs thrice in J. I. and twice in J. III., I transcribe,

AR—TA—MA—SE—TL.

That is to say, "Artavasdes." In J. III. 2. there is an important variant spelling:

AR—TA—MA—AZ—DA—A (?).

In J. II. 1, we have apparently:

AR—TA—MA—AZD SAR AR—MI.

"Artavasdes, King of Armenia."

These, and other results, with the grounds upon which they rest, will shortly be set forth in this month's *Proceedings* of the Society of Biblical Archaeology.

Of course, I write with a due sense of the possibility that my fabric, like those of some other builders, may turn out to be ill-founded. It is wonderful how, in an age when the sceptic is king, a man may still accord the most obstinate credence to his own individual fantasies.

C. J. BALL.

THE ETYMOLOGY OF "MAMMON."

London: June 12, 1888.

With reference to the interesting philological note in the *ACADEMY* of June 9, in which it was stated that Mr. Pinches has made a new discovery as to the derivation of the word "Mammon," I should like to make the following remark. Mr. Pinches says, on p. 4 of his description of the tablets in the possession of Sir Henry Peek:

"S.A.G.A. These two characters, which have hitherto been read *šaga*, are undoubtedly an Akkadian ideograph. As the termination *ga* shows that the value of the foregoing character ended in *g*, it would be better to read *nigga* (or *niga*) as the Akkadian pronunciation. The most probable Assyrian equivalent is *mimnu*, or *mammnu*, 'anything,' 'everything,' 'property,' 'wealth,' a word of which the plural seems to have been *mammamni* or *mammēni*, probably weakened from *mammāni*. This is apparently the same word as the Chaldee מַמְמָנָא 'mammon,' Greek μαμμονᾶ."

I cannot agree with this derivation.

1. The ideograph S.A., of which a pronunciation *nik* was pointed out in 1885 by Delitzsch, *Lesestücke*, 3rd ed., p. 37, note 5, interchanges with *nin*, which is supposed to be a "prefix" with the meaning of "whatever," by Haupt, *Akkadische Sprache*, p. 10. S.A.G.A. is explained on K. 4110 by a word to be read not *ma-ak*

ku-hu as Haupt and Delitzsch have given, but *ma-ak-ku-ru*, as suggested by Strassmaier, *A.V.*, p. 620, and by Teloni, *Zeits.*, 1885, p. 374. See, also, the reference from K. 4806, given by Briannow, *List*, No. 1292. *Mimmu* is nowhere given as the equivalent to ŠA.GA in the syllabaries hitherto known.

2. *Mimmu* means "quidvis," which was pointed out as early as 1859 by Oppert, *E.M.*, II., p. 190. But there is no passage where it has the sense of "property" or "wealth."

3. It is not very likely that an indefinite pronoun in a Semitic language should have a plural. There is no proof that the word *me-me-ni*, which very often occurs in Assyrian letters, has anything to do with *mimmu*; very probably it is no plural at all.

We must not, therefore, connect the Chaldee מִמְּמוֹ with *mimmu*, or with the "plural" *mementi*, "weakened from *mammīni*." To do so is a mere assumption. At present, it is better not to apply to Assyrian for a derivation of the Chaldee מִמְּמוֹ, Greek *μυμμοῦς* (thus the nominative), but to be satisfied with the derivations already supplied by Buxtorf, or Castell, or Gesenius, and other competent scholars. C. BEZOLD.

SCIENCE NOTES.

PROF. MACNAB has been appointed to deliver the Swiney Lectures on geology, in connexion with the natural history department of the British Museum. The subject chosen is "The Fossil Plants of the Palaeozoic Epoch"; and the course will consist of twelve lectures to be delivered at the Natural History Museum, Cromwell-road, on Mondays, Wednesdays, and Fridays, at 4 p.m., beginning on June 25. Admission is free.

THE Council of the Institution of Civil Engineers has made the following awards to the authors of some of the papers read and discussed at the ordinary meetings during the past session: a Telford medal to Robert Abbott Hadfield, for "Manganese in its Application to Metallurgy," and "Some Newly discovered Properties of Iron and Manganese"; a Watt medal to Peter William Willans, for "Economical trials of a Non-condensing Steam-Engine, Simple, Compound, and Triple"; a Telford medal to Dr. Edward Hopkinson, for "Electrical Tramways: the Bessbrook and Newry Tramway"; a Watt medal to Edward Bayzand Ellington, for "The Distribution of Hydraulic Power in London"; a Telford medal to Josiah Pierce, Jun., for "The Economic Use of the Plane-Table in Topographical Surveying"; a George Stephenson medal to Sir Bradford Leslie, for "The Erection of the 'Jubilee' Bridge, carrying the East Indian Railway across the River Hooghly at Hooghly"; and the Manby premium to the late Hamilton Goodall, for "The Use and Testing of Open-hearth Steel for Boiler-making."

A REPORT of the excursions undertaken last year by the London Geological Field Class, under the direction of Prof. H. G. Seeley, has been published as a pamphlet by Messrs. G. Philip & Son. It contains short notes of excursions to Lewisham, Oxford, Caterham, Merstham, Godstone, and Dunton Green. The notes have been prepared by Mr. Nicol Brown and Mr. W. May, the honorary secretaries of the class, and are illustrated by some useful horizontal sections.

PHILOLOGY NOTES.

At the meeting of the Royal Asiatic Society on Monday next, June 18, Prof. Cecil Bendall will read a paper on "The Tantrākhyāna, a

Collection of Indian Folklore, contained in a unique Sanskrit MS. discovered by himself in Nepal."

Zu den Paroemiographien. Von L. Cohn. (Breslau: Köbner.) Nearly every large library in Europe possesses among its MS. collections of Greek proverbs the writings of the so-called "Paroemiographs." The study of these collections is due, in recent times, mainly to Gaisford, and is one of the many services rendered to philology by that forgotten Oxford scholar. But since his day a great advance has been made, and the Greek Paroemiographers, like the Latin Glossaries, have been subjected to a more or less scientific and elaborate examination. The work is not yet finished. Just as in the case of the Latin Glossaries, the immediate need is the publication or overhauling of fresh MS. material. This is Dr. Cohn's aim. He has collated several MSS., either new, or imperfectly known before, and publishes the results in the pamphlet before us. Whether his collations are correct we cannot say, but his discoveries certainly seem worth the attention of all interested in his subject. The MSS. examined are Cod. Laur. lviii. 24 (in the Florence Library), and Cod. Paris. Gr. 3070, ib. 1773, and Suppl. Gr. 676 (all three in the Bibliothèque Nationale). The first is interesting in its relation to two other important "Paroemiographic" collections, and the proverbs it contains are given in full. Of the Paris MSS., the first two were known before, but the information about them in Gaisford's work is here corrected and supplemented, while the third had never been examined at all. The net result is to throw a certain amount of light on the relations of various other collections, though we are still very far from being able to construct any certain genealogy, or even to constitute the several "families." A dozen or so fresh *παροιμια* have also come to light—none of very great interest. Cicero's *Διονύσιος ἐν Κορίνθῳ* (Att. ix. 9.1) occurs, apparently for the first time, in these collections. Another new proverb (p. 82), *χαλεπὸς βίος ἰσφρί ἔχοντος*, adds a new word to the lexicon and a new, but corrupt, fragment of the "Protesilaus" of Euripides—*ἔ' ἡ σ' λαμβὼν ἢ πεσοῦς ἂν ἰσφρίδῃ* *κευθμῶνα πηγαῖον ὕδωρ*. Heuychius gives us *ἰσφαίνω*, and Dr. Cohn connects both with *ἰσθμον* and *ἰσθμίδω* (= "be unhealthy," rejecting—and very rightly, too—the "Vulgate" explanation of the latter word—"to attend the Isthmian games." We do not feel sure that he is right about *ἰσφρίω* itself.

De Demosthenis quas feruntur proœmiis. By R. Swoboda. (Wien: Konegen.) Herr Swoboda, an Austrian scholar whose name is unknown to the present writer, here discusses the "proems," *προœμια* *δημηγορικὰ*, of Demosthenes. These are a tolerably well-known collection of fifty-six or sixty-two introductions to public speeches, in some cases identical with the openings of the earlier orations of Demosthenes, but of very disputed authorship. Herr Swoboda (or should we call him Gosp. Swoboda?) comes to the conclusion, after 100 pages of argument, that the collection was put together by a writer "a Demosthenis ætate non ita longo intervallo disiunctus," and is drawn partly from Demosthenes, partly also from Isocrates. The argument that in form and style these proems resemble Demosthenes too closely to be by anyone else—an argument advanced, among others by Mr. Mahaffy (*Gr. Lit.*, p. 339)—does not at all receive Herr Swoboda's assent. Following mainly Dobree and Cobet, he fills several pages with unDemosthenic words, phrases and points of style. The other argument of those who maintain the genuineness of these proems—that they correspond only with the earlier of Demosthenes' orations—is met by showing that

some proems belong to or are based on speeches delivered after 350 B.C. For example, proems 46 and 49 correspond to the *Παραρρησία*. One may add that the parallelisms with Isocrates do not seem to be strong. None "verbis et sententiis congruunt" but only "simile aliquid significantes vinculo quodam tenentur."

Dissertationes Hulsenses Philologicæ. Vol. viii. (Halle: Niemeyer.) This volume contains four articles. In the first page Röllig discusses the relationship between Photius and Suidas, and concludes that they both drew from the same sources. The writer attempts to draw up a sort of genealogy of Harpocration, Eudemus, Timæus, &c., and makes large use of a "lexicon paulo plenius" than that of Bachmann, but his arguments do not seem to entirely prove his conclusions. A. Nebe contributes a paper on the Eleusinian mysteries, which sums up what is known from inscriptions and other sources. G. Kalkoff discusses the MSS. of the Epitome of Harpocration, and the connexion between the Epitome and the MSS. of the fuller work. He compiles an ingenious *stemma codicum*, but his work would have been more valuable had he been able to consult and collate afresh the MSS. themselves. The last paper, by E. Herforth, is a very useful summary in 100 pages of the forms &c. employed in the Cretan dialect. The phonology and accentuation are fully worked out, but very little is said of the syntax beyond a casual allusion to final sentences (§ 43.6). The paper is also in much need of a conspectus of contents or an index.

MEETINGS OF SOCIETIES.

CLIFTON SHAKESPEARE SOCIETY.—(Saturday, May 26) Miss FLORENCE HERAPATH in the chair.—Miss Emma Phipson sent a paper on "Marston as a Dramatist." The few facts known about Marston's life were first noticed. His literary career extended from 1598 to 1607, when he retired to prepare for clerical life. He was appointed to the living of Ohristchurch. His mind underwent a great change. When he ceased to write, he lost his interest in worldly matters, and took no part in the re-publication of his works. He resigned his living in 1631, and died in 1634. His earliest writings—the Satires—gained him many enemies. In humour, he seems to be entirely wanting. His comedies sparkle with smart sayings, but have no hearty ring of mirth. When personal animosity guides the satirist's pen, his wit becomes jealous rancour and loses its charm. Marston seems to have been animated too often by mere rivalry, notwithstanding his repeated assertions that no attacks were ever made by him on individuals. Dramatic compositions afford a good opportunity for the satirist to convey his admonitions, and are eminently adapted for the instruction of the public mind. But this method of enforcing a moral is too often quite destructive of the play as a work of art. A writer who has some ulterior motive cannot lose himself in his work. There is a strong tendency to introduce characters only as types of men whom he is anxious to abuse, or as mouthpieces for witticisms or for personal attacks which do not sit well upon them. A play written for the sake of satire, like a novel with a purpose, generally fails to interest; and the works of Marston are no exception to this rule. There are more poetical passages to be found in "Antonio and Melinda" than in Marston's other plays. Miss Phipson then gave an outline of several of the plays. "The Malcontent" was pronounced to be the most interesting. Its language in the serious scenes is dignified and compact, and some of the descriptions are very graphic. "The Dutch Courtesan" deserves notice chiefly for the sprightly dialogue, but it is too unrefined for modern taste. "Eastward Hoe," written in conjunction with Chapman and Dekker, is valuable for the vivid insight it gives into the manners and customs of the Elizabethan age. "Parasitaster" is ingenious and amusing. "Sophonisba" is a well-intentioned and not undramatic production. Hazlitt considered

Marston to have been even more of a freethinker than Marlowe, on account of his frequent and not unfavourable allusion to sceptical notions. But the whole tone of his writings seems to contradict this view. Whatever his private opinions may have been, Marston is somewhat dogmatically theological in his expressions. He took a gloomy Calvinistic view of human nature. The fact that he gave up his literary career for a clerical life is a sufficient answer to such accusations of unorthodoxy. Had Marston reached a maturer age and outgrown the impulsiveness, intolerance, and cynicism of youth, he might have left some dramas more worthy of the powers which he undoubtedly possessed. His semi-Italian origin must not be forgotten. To this may be traced his fiery, impulsive temperament, his sharp wit, quick temper, readiness to take offence, delight in fierce and terrible incidents, as well as his frequent introduction of Italian speeches and phrases, and his too frequent use of words of Latin origin. Marston was led by his ambition to attempt to excel in branches of his art that were beyond his reach. Had he devoted himself to comedies of life and manners, with his keen wit, his power of observation, and his faculty for characterisation, he might have achieved much. His temper was apparently sardonic and unhappy, slow to appreciate the "soul of goodness in things evil," which Shakespeare's more genial, all-loving nature ever recognised.—Mr. L. M. Griffiths read a paper on "Some Shakespearisms in 'Antonio's Revenge.'" Such a play should not be judged entirely from a nineteenth-century standpoint. When it was written the taste for horrors on the stage was strong; and it must also be borne in mind that the play was acted by the Children of Paul's, whose audience consisted only of "gentlemen and scholars." This explains the frequent introduction of scraps of foreign languages. In its broader features "Antonio and Mellida" can be compared with "Romeo and Juliet." "Antonio's Revenge" can in like manner be compared with "Hamlet," for the incidents on which the plots of the two plays develop are similar, and many of the situations are much alike. Also many of the characters and much of the phraseology have a strong Shakespearian likeness. Marston's lighter style, which he freely exhibits in "Antonio and Mellida," is here made subordinate to the tragic character of the play, which, apart from its few exquisitely pathetic passages, deserves careful study as an integral and representative development of the more finished drama as it left Shakespeare's hands. The closing scene, though, in quantity, it falls short of the slaughter at the end of "Hamlet," makes up for it in quality, and altogether the scholarly audience in the school-room of St. Paul's, who had gone for a feast of horrors, must have felt that a rich treat had been given them. The Shakespearian resemblances of detail are not so many in this play as in the first part, which was rather a record of Marston's contemporary London life than a serious attempt, as this is, at a consistent tragedy where unity of action was steadfastly kept in view. So it comes to pass that, in this branch of dramatic work, Shakespeare had no difficulty in showing his marvellous pre-eminence, although he would, in the delineation of life and manners, be always closely run, and sometimes surpassed, by such keen satirists as Ben Jonson and Marston. But in the presentation of the more complex forms of human motive and human passion, Shakespeare's powers of expression transcend all efforts of other writers. Judged by the Shakespeare-standard, Marston's works must be pronounced failures. Yet it must be admitted that they have in detail a considerable amount of power, if not of beauty.—Mr. S. E. Blugough read a paper on "The Similes and Metaphors in 'Antonio's Revenge.'" Some general observations were first made on the use of simile and metaphor. Analysis of the metaphors here employed by Marston discovers almost every species of offence against good taste; but yet it must be granted that the reader is startled with occasional flashes of genius lighting up with a single phrase a whole region of thought or quickening with electric life men's dormant passions. In this play there is a large excess of figurative language. Few plays are more thickly strewn with metaphor. There is any amount of vigorous thought not under due control, and not

subordinate to artistic aims. Grace and beauty always involve a certain reserve of power. But Marston puts forth all his strength on every occasion. There seems to have been a vein of most outrageous coarseness in Marston's nature, and this was always near the surface.—This meeting brought to an end the society's thirteenth session. The work for next session is "As You Like It," "A Woman killed with Kindness," "Twelfth Night," "Julius Caesar," "A Yorkshire Tragedy," "Hamlet," "Epicoene."—The hon. secretary (9 Gordon-road, Clifton, Bristol) will be grateful for any magazine-articles, newspaper-scrap, or anything else to add to the society's library, which now consists of 319 volumes.

NEW SHAKSPEARE SOCIETY.—(Friday, June 8.)

Dr. F. J. FURNIVALL in the chair.—The chairman read a paper entitled "A few Suggestions on Greene's Romances and Shakspeare," by Prof. C. H. Herford, who pointed out that while Lyly's influence on Shakspeare had never been ignored, that of Greene, which, though less, was somewhat of the same kind, had been less completely acknowledged. In Greene's *Farewell to Folly*, the wit-combats of Benedetto and Katherine found their nearest parallel in those of Beatrice and Benedick; and, while it would be going too far to attempt to attach Shakespeare's Benedick to Greene's Benedetto, yet, though we can rarely put our finger upon Shakespeare's models, we can nearly always indicate the group of literary or social antecedents within which any of his creations have grown up. Again, in *A Mourning Garment*, the discourse of the father of Philador had a very close relation with Polonius's utterances to Laertes, the situation also being analogous. With regard to "Troilus and Cressida," of all the poets from Benoit de S. More, Boccaccio, and Chaucer, to Lydgate and Henryson, who have treated the Cressid story, Greene's treatment was the nearest approach, not in genius but in manner, to Shakespeare's, in his *Euphues*, *His Censure to Philantus*; in which, too, might be found a hint of Shakespeare's characterisation of Cressida.

ARISTOTELIAN SOCIETY.—(Monday, June 11.)

SHADWORTH H. HODGSON, Esq., president, in the chair.—Miss F. A. Mason was elected a member. The following were elected officers of the society for the ensuing session:—Mr. Shadworth H. Hodgson, president; Messrs. S. Alexander, B. Bosanquet, and E. P. Scrymgeour, vice-presidents; Prof. W. B. Dunstan, editor; and Mr. H. W. Carr, hon. secretary and treasurer.

FINE ART.

J. M. W. TURNER'S CELEBRATED WORKS.—"Crossing the Brook," "Caligula's Bridge," and "Child Harold's Pilgrimage"—(National Gallery)—also Mr. KEPPLE HALLWELL'S "October Woodlands"—(Grosvenor Gallery). Important Etchings of the above works are now in progress by Mr. DAVID LAW.—For particulars apply to the Publishers, Messrs. DOWDESWELL, 160, New Bond-street.

THE ARCHAEOLOGY OF THE GREEK STAGE.

Die Griechischen Bühnenalterthümer: the Third Volume of K. F. Hermann's "Griechischen Antiquitäten." By Dr. A. Müller. (Freiburg i. B.)

It is as safe as it is easy to prophesy that this will for many years be the standard work on the archaeology of the Greek stage. The importance of the work is not only that it contains the conclusions of a scholar who has devoted many years to his subject, but also that it for the first time collects all the enormous amount of scattered work which has been published during this century on the Greek stage, and which has hitherto been hidden away from most readers in inaccessible programmes, dissertations, magazines, year-books, &c. It is hardly necessary to say that the references to, and the quotations from, original authorities are most copious and

complete. The only omission that I have noticed is on p. 153, where one would have expected that, in discussing the machine by which the *deus ex machina* made his appearance or disappearance, Dr. Müller would have referred to the *kremathra* on which Socrates appears in the *Clouds* (l. 218 f.), and to the ridicule which is poured on this machine by Alexis, in a fragment of the *Lebés* (iii. 19, Meineke iii., p. 439).

In the work, viewed as a whole, there is a certain want of perspective, which is due to the fact that the author is so thoroughly immersed in his subject and in working out its details. Thus he rarely uses the modern stage for purposes of comparison or contrast, even when the comparison would be most enlightening. Again, the connexion of the drama with the state is only alluded to, not worked out so as to give the reader a proper conception of the revolutions which constitutional changes might effect in a state-established drama, such as was that of Athens. Another instance of this want of perspective is to be found in the insufficient account given of the Great Dionysia. Dramatic contests were not the only performances that took place at this festival; and one would have liked to know whether, or how far, the dramatic performances were affected by the other proceedings. And this is not merely a question of style, or a case of omitting something interesting but not necessary to the purpose of the author; it affects a question, on which Dr. Müller, strange to say, has nothing to tell us—that is, the question how many *choregi* there were in a year, and how and by whom the number was fixed. This, again, affects the important question, how many poets were allowed to compete at the same festival; or, in other words, how many choruses were granted. If Dr. Müller is right in believing that the number was six—three tragic and three comic—then four of the tribes were left out in the cold, unless we assume that they provided the lyric choruses of men and boys which competed at the Great Dionysia. The perspective of time, also, is much neglected; there is little or no attempt made to give us a connected view of the chronology of the drama. Yet it is, at the least, interesting to group together the events which happened, say, about 458 B.C. About that date comedy, so far as we know (*C.I.A.*, ii. 971), first became state-established; in that year, too, Aeschylus put on his three great plays—the *Agamemnon*, the *Choephori*, and the *Eumenides*. About that year, according to Boeckh's conjecture, the *theoricon* was first introduced. All this, therefore, inclines us to think that Mommsen (*Heortologie*, p. 61) is probably right in suspecting that the Great Dionysia were instituted by Pericles, as part of his policy of magnificence. It is, indeed, possible that 458 B.C. was not the first year in which the Archon granted comedy a chorus, or in which the Great Dionysia were first celebrated. But if the festival was instituted by Pericles it is not unnatural to suppose that he would willingly be chosen to act as choregus for his tribe on the occasion of the first celebration of his new festival. The interesting inscription just referred to shows that Pericles did act as choregus, and that the plays which he produced were those

of Aeschylus—a fact which must give cause for reflection to those who still believe that the *Eumenides* was designed by Aeschylus as a protest against the policy of Pericles in the matter of the Areopagus, but which is intelligible enough, if we suppose that the play was meant to reconcile the more old-fashioned Athenians to the changes which had been made, and that the new festival was itself intended to relieve the tension of the political and religious situation. A similar use had been made of the drama by Cleisthenes, who gave his new tribes an interest in the dramatic contest by providing that the competing choruses should be supplied by and be representative of the newly invented tribes.

In a work touching on so many disputed questions it is not to be expected that every reader will agree with all the conclusions of the author. There is, however, one position taken up by Dr. Müller which will, probably, meet with universal dissent. He has thought fit to revive the attempt made many years ago by Wieseler to show that the orchestra was boarded over to a considerable height; and that it is this boarding to which Suidas (s.v. *skéné*) refers under the name *thymelē*. It is only necessary to say about this that it is based, as N. Wecklein pointed out in 1879 in Bursian's *Jahresbericht*, on "a remarkable mode of interpreting" the passage, and that such a structure would have prevented people in the front seats from seeing anything on the stage because of the legs of the chorus. As for the passage in Vitruvius, v. 7, 2, I venture to suggest that the word *thymelē* does not refer to the chorus, but to performers in musical contests, which took place in the Odeum, and, therefore, prove nothing about the theatre.

The most exciting thing in the book is undoubtedly the letter from Dörpfeld, published in the appendix. He has discovered an orchestra in the market-place; and, as the ground round it is level, it is plain that the spectators to see must have stood on wooden platforms rising one higher than another. This lends every probability to the statement made by Suidas that, during the performance of a contest between Aeschylus, Pratinas, and Choerilus, the stands for the spectators (*τὰ ἵκρια*) broke down, and that, in consequence of this accident, in 500 B.C., performances were transferred to the Lenæum. Suidas says that it was in consequence of this accident that the theatre was built, and it has hitherto been generally believed that the oldest remains of the theatre in the Lenæum go back to this date. But Dörpfeld declares that the whole of the stone auditorium belongs to the fourth century; and that before that time the audience must have sat either on the bare hill-side or, at the best, on wooden seats. In confirmation of this I may point out that we have literary evidence in the mention of these wooden stands not only in Cratinus (*fr.* 51, Meineke ii., i. 192), but also in Aristophanes, and that in a play as late as the *Thesmophoriazusæ* (l. 395), 411 B.C. as well as in *Ach.* 24. Further, Dörpfeld's excavations have shown that the stage-buildings in no case belong to a period before the fourth century. Before that time there was neither a stone stage nor a substructure to support a stage. If there was a stage at all, in the time of the three

great tragedians, it must have been a mere temporary wooden affair. It is evident that these discoveries must modify considerably the views that have hitherto been held as to the mounting of plays in classical times. The earliest plays of Aeschylus were performed in the open air in the market-place, and without scenery; for we have it on the authority of Aristotle that Sophocles introduced scenery. That the scenery was of the simplest kind, we may well believe; but scenery there certainly was, and stage machinery as well, such as the *oecyclēma* and the *kremathra*. Unfortunately, Dr. Müller apparently did not receive Dörpfeld's letter in time to modify his views; and, accordingly, he attributes to the classical stage much in the way of mounting which now seems very doubtful.

F. B. JEVONS.

THE NEW GALLERY.

II.

NOT even Mr. Burne-Jones's elaborate pictures will be remembered so long as Mr. Watts's profoundly impressive "Angel of Death," grand in its simplicity, awful in its tenderness, one of the greatest of all his designs. The colour of it is wan and greenish, gravely suggestive of the theme, but not repulsive. The Angel herself—grand and beautiful in feature—a very death in life and life in death, with heavy, half-shut eyes, bends tenderly over the child which she holds like a mother. The folded wings curve grandly round the group, and add greatly to the sense of peace and shelter and loving care.

From Hyperion to a satyr is not, perhaps, so far as from the Angel of Death to a centaur; but Mr. Arthur Lemon distinctly deserves mention among the artists who have successfully treated a theme of pure imagination. He has two pictures here of centaur life, in which he has endeavoured to conceive, if not a possible centaur, at least one in which the disparity between the human and the equine should be reduced to the minimum, and the impossibility of one animal with two trunks be bridged over as far as possible. The difficulty of realising a "mixtum genus, prolesque biformis" has never perhaps been so faced and mastered before. It would not trouble an artist like Mr. Burne Jones, who cares nothing for possibilities. A similar problem is presented by the idea of a mermaid; but he never thought of solving it in his famous and solitary contribution to the Royal Academy, but frankly spliced a salmon's tail to the body of a woman. Mr. Kennedy, in a clever picture now at the Grosvenor, has had more regard for continuities. The cod-like tail that he has given to his mermaid has more affinity in surface and substance to human flesh than the scaly mail and stiff body of a salmon, but he has evaded the difficulty of the junction by hiding it in a mass of sea-weed. Miss Dorothy Tennant's charming little picture of "The Dead Mermaid" (203), if, by reason of its small scale, it did not present so much difficulty, is successful in this respect, almost too successful perhaps; and it shows how realism is invading the province of imagination that Mr. Lemon should have taken such pains to make his centaurs credible. He has succeeded at least so far as to establish human sympathy with his race of half equine savages. In the struggle on the sea-shore every limb and muscle of the duplex creatures is brought into play with such apparent unity of effort that no doubt is aroused as to truth of construction; and in the still finer conception of "The Vendetta" the creature rears and falls with so life-like a movement, semi-human,

semi-equine, that we become ourselves half man, half horse in our sympathy.

Among other more or less imaginative pictures are Mr. Albert Goodwin's "Enchanted Lake" (26), not one of his most successful pictures of the kind; Mr. Hallé's "Paolo and Francesca" (44), which has much richness of colour and sweetness of expression; and Mr. Philip Burne-Jones's "Vision of Ezekiel" (51), the most impressive picture he has yet exhibited.

To turn from the painters of the unseen to those whose whole heart is in the truthful record of daily experience—Mr. La Thangue's "Gas-light Study" is the most striking work of this class, and one of the most pleasant. The young lady at the writing-table is charming in herself, and as a study of flesh-painting under gaslight is excellent. Her pretty hands are beautifully drawn. The picture on the wall may be quite "right"; but the fact that most persons take it for a window with an old man and a landscape outside shows that it is not quite successful in producing the intended impression. Mr. Clausen's study of an old woman, "A Toiler Still" (37), has his usual merits; but it is somewhat cold, and is not so fine an example of his extremely masterly execution as his young peasant lad at the Grosvenor, which, by some accident, I forgot to mention. Mrs. Swynnerton, in her picture of robust girls with ruddy faces and rich-coloured dresses, seen against a sunset sky, has succeeded in producing a very clever, if not a very agreeable, work; and her "Bacchante" (103) is equally strong, and is remarkable not only for its colour but for its humour, both of which may be called broad. Another lady, Miss E. A. Armstrong, has a fine study called "Apprentices" (45). Other good works of this character are Mr. F. D. Millet's charming "Quiet Hour" (150), and Mr. W. H. Bartlett's "Wool-washing" (72); but both these artists are better represented elsewhere. Mr. David Carr's "Sea Urchins" (143) marks an advance.

With portraits and works of the portrait class the New Gallery is at least well furnished, if not very strong. Mr. W. B. Richmond has succeeded so well at the Academy that it is disappointing to find so little to praise in his many contributions to the New Gallery. His portraits of Mr. Cunningham Graham and Mr. Drummond are certainly striking both in design and colour, but they are more elaborate than successful. Mr. Holl has two portraits, one of which at least—that of "Robert R. Symon, Esq."—is of his finest quality. The same may be said of Mr. Herkomer's admirable portrait of Mr. Macmillan, and, with some reservations, of those of Sir George Maclean (23), Mr. Burnand (105), and of Julia, Marchioness of Tweeddale (113). Mr. John Collier's portrait of "Miss Ethel Huxley" (154) nearly achieves a remarkable success. The tall girlish figure in a white dress, with her back to you, and her head just turned to show something less than a profile, is set in a finely painted landscape—white dress, buff gloves, fair skin and hair sympathising with the blooms of the tall meadow sweet which grows around her, make up with the foliage a tender and original scheme of colour; but the whole effect is a little tame and featureless. No greater contrast in feeling and colour to this tender ineffective picture could be found than Mr. J. J. Shannon's spirited portrait of "Mrs. Williamson," full of elegance and style, and painted with singular power and ease—by far the best of all the female portraits here. Among the portraits may also be mentioned Sir John Millais's "Last Rose of Summer" (157) and "Forlorn," which cannot in any way be regarded as worthy of the master.

Among the landscapes which have not yet been mentioned praise is due at least to those

of Mr. Alfred Hunt, Mr. North, Mr. Grace, and Mr. Helcké; but of these and of the work of Mr. Colin Hunter, Mr. Macallum, Mr. Hemy, and Mr. Henry Moore, there is nothing special to say. Mr. Hennessy's charming "April Day" (149) has a delicacy of colour and tone which should not be overlooked, and two little slight landscapes in the Gallery by Mr. Maurice Pollock (174 and 265) deserve a word for the same reason.

This notice must not close without mention of Mr. Alma Tadema's contributions. Though not large, they make a very palpable addition to the attractions of the New Gallery. There is the sketch for his "Heliogabalus," small but exquisite; one of his pretty little classical *genre* subjects, "He Loves Me, He Loves Me Not"; two portraits strongly characterised; and a charming little unfinished picture of a little ancient Roman girl holding a figure of Mars like a doll, full of beautiful painting of air, and sun, and sky, and marble, and oyster shells, and flesh.

Of sculpture there is not much, but it is nearly all interesting, if not important. There is a bronze reduction of Mr. Thornycroft's "Mower." Mr. Harry Bates's reliefs in terra-cotta of "Peace and War" (317 and 318) are the finest of the original designs, and Mr. Bowcher has some elegant figures. Mr. Swynnerton's "Love's Chalice" is a clever group, ingenious, well modelled, and picturesquely effective. Miss Hallé shows fine feeling, and skill also, in her low relief of "Dead Christ," which is like, but not so like as to be regarded as an imitation of, M. Legros's painting.

Several excellent busts, two or three interesting cases of medals, and some of the charming little wax reliefs of the Misses Casella, agreeably vary this part of the exhibition; and, lastly, I would call attention to a work of peculiar tenderness—the low-relief of "Mary" (348), by Mr. G. G. Frampton.

COSMO MONKHOUSE.

EXHIBITION OF J. C. WINTOUR'S WORKS.

THERE is at present on view in the gallery of the Messrs. Dott, Edinburgh, an exhibition of more than common interest, consisting of nearly a hundred and fifty works in oil and water-colour by the late J. C. Wintour, A.R.S.A.—a painter probably less widely known than he deserves to be, but certainly one of the most noteworthy figures among the landscapists of Scotland. Born in 1825, and trained, like so many of the best artists of the North, in the "Trustees' Academy," under Sir William Allan, he began with portraiture and figure subjects, but soon turned towards that landscape work in which lay his true faculty.

Among the earliest of the landscapes now on view are a series of water-colours, subjects refined in feeling and delicate in handling, but utterly destitute of that decision of touch and force of varied colouring which he afterwards attained, especially in his work in oil. In the latter medium he fully declared himself in such important pictures as "The Cottar's Well," 1855, and "The Miller's Cottage," 1856—subjects very brilliant in their chromatic arrangements, and admirably spirited in their suggestion of the richness and intricacy of nature's detail. In their general treatment, these owe something at least to the example of Constable. Indeed, without at all sacrificing his own very pronounced individuality, or merging his personality in that of any other painter, Wintour learned much from the artists who had preceded him, or were his contemporaries; for he was a man delicately sensitive to every influence, keenly receptive to all impressions of beauty, whether they came

to him directly from nature, or reached him through the mediation of art. The influence of Constable is certainly that most clearly traceable throughout his work. But, manifestly, in "A Shady Pool," 1859, he has learned from the oil-colours of David Cox; while his "Driving to Pasture, near Melrose," 1858, is suggestive of Alexander Fraser; and the general tone of water-colours like "Balhousie Castle, Perth," 1857, and "Study from Nature at Menstrie Burn"—their combinations of cool blues, warm browns, purplish greys, and sharp greens that verge towards blackness—very distinctly recalls similar exquisite subjects by the present President of the Royal Scottish Academy. Gradually Wintour's work tends towards breadth of effect, and shows an increasing impatience of detail. Harmony of tone and colouring, truth and delicacy of lighting and atmosphere, become paramount in his art. And, by the unity of impression for which he seeks, by his synthetic grasp of his subject as a related and harmonious whole, he shows such a return towards the aims and practice of the earlier school of British landscape as is visible in the work of no other contemporary Scottish painter—if, indeed, we except the quite recent experiments in similar directions of Mr. J. Campbell Noble and Mr. Robert Noble. This work of the later, and, as we must judge it, most fully developed period of Wintour's art, tends usually towards a certain sumptuousness of potent colouring, and treats, by preference, scenes and moments in which the pomp of evening plays its part. He was fond of painting ardent sunsets, where the tenderest aerial clarity has succeeded a day of rain. The great "Gloaming on the Eye"—one of his latest works—in spite of the looseness of its handling, is a noble example of such an effect, with an exceeding delicacy, and the subtlest sense of fluctuating changeableness in the sky against which the black, sharply struck shapes of birds soar and sway—the very sky of "fleeting rose and kindling grey" of which the painter-poet has sung. "On the Ellwand," 1879, is a smaller, but more crisply touched, and even more luminous, rendering of a similar sunset. But the artist was not less successful in his moods of greater quietude—in the gentle daylight, and the infinite gradation of filmy, white, ascending clouds in the "Border Castle" of 1872, in the moonlight shed "softer than sleep" upon the placid water and the lonely towers of "Blairlogie."

J. M. GRAY.

CORRESPONDENCE.

THE STATUE OF RAIAN AND THE LION OF BAGDAD.

Weston-super-Mare: June 4, 1888.

Mr. Griffith's letter is full of interest. There are a few points on which I shall be glad to comment briefly.

(1.) Some years ago I carefully sketched the Bagdad lion for a book of mine, and Mr. Ready made me a cast of the cartouche which I had photographed in opposite lights and heliotyped for *Studies on the Times of Abraham*. While I was drawing the lion Dr. Birch and I carefully examined it, and I pointed out to him that it had been apparently an androsphinx like the sphinxes of Sān of similar type; that the royal features had been knocked off, and the features of a lion very rudely "roughed out." Dr. Birch agreed, I believe, in this view. It was Th. Deveria who in 1861 first (I think) proposed to read the name Ra Set Nub (*Rev. Arch.* 1861, p. 256.) On receiving my photographs Dr. Birch wrote:

"Many thanks for the photographs, which confirm my opinion as to the little trust to be placed in the cartouche, and the possibility of its being after all spurious,

The lion is figured in Playte's *Religion des Préhistoriques*, pl. i. fig. 9, and noticed by G. Smith in *Assyr. Disc.*, p. 420. I must say that I always felt disposed to believe in the cartouche, and to ascribe Dr. Birch's doubts to his characteristic extreme caution.

Mr. Griffith will allow me to ask whether he is correct in saying "Dr. Birch and others settled, in sheer despair, that the cartouche upon the lion must have been an unprecedented manner of writing the name of a Hyksos king 'Ra Set Nub,'" &c. To me Dr. Birch always expressed incredulity as to the cartouche and the reading "Ra Set Nub." He used to say: "It is cut with a knife."

(2.) I should be most glad to compare the praenomen on the Raian fragment with the name on the lion (or sphinx) of Bagdad, but I have been unable as yet to procure a photograph to examine.

(3.) It is interesting, in view of the alternative of late (Saite) date, as at first suggested by Mr. Griffith, that the beautiful green basalt statuette in the Louvre, taken by Deveria as a Hyksos king, should be referred by Maspero to the Saite period. Will M. Maspero adhere to that opinion? On examining the figure itself, and subsequently the excellent photographure in the splendid work of Maspero and Rayet (of which Prof. Maspero kindly sent me a proof copy), it has always seemed to me that the features are of the same type as those of the Sān sphinxes and the Fayūm head and the Ludovisi fragment and the fish-offerers. I should like to see the Louvre statuette brought into the comparison, in view of the newly discovered statuette of Bubastis.

HENRY GEORGE TOMKINS.

NOTES ON ART AND ARCHAEOLOGY.

THE Arts and Crafts Exhibition Society have now made arrangements for holding their first exhibition in the New Gallery during October and November of the present year. The exhibition will be arranged under the following twelve sections: textiles; gold and silversmiths' work, including enamelling; metal and iron work; fictiles; decorative painting; wall papers; book-binding; printing; glass; stained glass; wood and stone carving; cabinet making. It is insisted on as special features that all work must be exhibited under the name of the designer or responsible executant; and that each section will be treated in the catalogue by a writer thoroughly conversant with the particular art. A guarantee fund of £700 has already been subscribed. The president of the society is Mr. Walter Crane; and the secretary is Mr. Ernest Radford, who may be addressed at the New Gallery, Regent Street.

Now that the great galleries have somewhat lost their bloom, a number of minor shows are again being offered to the insatiable public. Next week there will be opened (1) a collection of pictures by James Maris, together with some examples of the work of Matthew and William Maris, at the Goupil Gallery; (2) Mr. E. A. Abbey's illustrations to "She Stoops to Conquer," and drawings in black and white by Mr. Alfred Parsons, at the Fine Art Society's; (3) some sketches in oil of Venice, by Mr. W. Heath Wilson, at Messrs. C. E. Clifford & Co.'s, in Piccadilly, and (4) an exhibition of watercolours at the Dudley Gallery, Egyptian Hall. In addition to these, there will also be on view Sir J. E. Millais's contribution to the Royal Institute Art Union; Laurits Tuxen's large picture of "The Queen and the Royal Family at Windsor, 1887," at Mr. Mendoza's, in King Street, St. James's; and Mr. A. B. Houghton's "The Exit of Useless Mouths from a Besieged City," at Messrs. Vicars's, Eagle Place, Piccadilly.

AN annual prize competition has been started in connexion with M. Ludovici's art school for lady students, for the best subject picture. Three money prizes and three orders of merit in gold, silver, and bronze, will be given. The awards will be made in October, 1888, the judges being Messrs. Albert Moore, Mortimer Menpes, and G. H. Broughton. Messrs. Dowdeswell & Dowdeswell have consented to lend their gallery in Bond-street for the public exhibition of the competitive paintings.

MR. W. J. HENNESSY, who has been unable to complete any important picture for this year's exhibitions, though he is represented by charming little works at the Grosvenor and the New Gallery, has a little gathering of his more recent pictures in oil and pastel at 11 Holland Park Road, which will repay a visit from those who appreciate his delicate and refined art. They are for the most part executed in a brighter scheme of colour and render more sunny effects than he has attempted for the last few years. Two scenes of "Summer" and "Winter," part of a set of "The Seasons," of which the "Spring" is at the Grosvenor, are especially successful.

THE annual meeting of the Hellenic Society, for the election of council and officers and to hear the council's report, will be held at 22 Albemarle Street on Thursday next, June 21, at 5 p.m. Mr. Sidney Colvis, vice-president, will be in the chair.

THE STAGE.

"THE TAMING OF THE SHREW."

WE did not manage to see the Daly Company's performance of "The Taming of the Shrew" so soon as we should have liked; but let us lose no time now in saying in plain English to our readers that it is a performance which it is their business to witness. In spite of great difficulties—of some obvious disadvantages—it is a distinguished success. It is now some time since anything Shaksperian has been presented with such force in London. The scenery—which is the least important thing of all—is sufficient, and is in the most excellent taste. The costumes are singularly rich and harmonious—they are a study for Sir James Linton or Mr. Gregory. Bishop's "Should he Up-braid" is sung, in the fifth act, by fresh and charming voices. And as things go, nowadays, these things would render tolerable, in the eyes of many managers and many audiences, a second-rate interpretation of the comedy. Happily they are not, on the present occasion, asked to discharge any such function. They are in their right place, as the accessories only; what one remembers best, and enjoys most, is the actual performance. From the "Induction" to the very end, this is as it ought to be.

Mr. William Gilbert strikes the right note, from the first, as the bibulous good-natured tinker: from the moment he is on the stage the play's low comedy has begun. The entry of Miss Ada Rehan marks the signal for the beginning of the high comedy—or, rather, for one of the most brilliant of its effects. To her and to the representative of Petrucio—Mr. John Drew—the spectator is indebted for most of what gives force and charm to the representation. The acting of Mr. Drew is singularly authoritative and confident. However shrewish Katherine may be—"curst" and a scold—she has her master in the Petrucio here made visible. Mr. Drew bears himself bravely, and even in his audacity there is discretion. But the greatest honours of all fall to Miss Rehan. We are now privileged to see her art in the fulness of its development. She has been upon the stage, probably, those "ten years"

which are required, the French say, "to make a comedian." And her high comedy is, in many ways, the firmest and the most brilliant that has been witnessed in London in our day from any actress speaking the English tongue. In its fearlessness of method, in its delicacy of effect, it is fit to be regarded along with that of the very best mistresses of comedy whom the Théâtre Français has possessed. Miss Rehan's art would hold its own against that of the Brohans or of Mme. Arnold Plessy. She is more sympathetic than they, and is of a different generation. Just now our younger English actresses would do well to study her minutely—to get by heart, some of them, with their pretty, charade manner, the largeness of her style—her novel breadth. The concentrated passion of Miss Rehan's Katherine, her ungovernable spirit, her immediate explosiveness, are quite remarkable. A large Venetian blonde, splendidly habited, now in various reds, and now in whites, yellows, and golds, she is picturesque, and the delight of a colourist. But her various expressiveness is fully as notable. And it is with a thoroughly mastered art that Miss Rehan portrays the gradual declension of Katherine's violent and froward spirit, and how at last she is persuaded to the full that it is only in willing submissiveness that a wife fulfils her function. Her speech of counsel to the young widow, who is about to be wed, is given in a voice of fine quality and with admirable feeling. We had occasion to praise Miss Rehan a good deal when she was here, two or three years ago, in "Nancy and Co." But she has matured since then; and it is well that the public—which sometimes takes inexplicable fancies, and sets up idols, we will not say of brass or clay, but by no means of gold—should be told roundly that she is a very great comedian. She is one of the few women on the stage who can put aside their own personality. Her Katherine is a creation. Like whatever is really fine in any art it is at once a lesson and an enjoyment.

FREDERICK WEDMORE.

STAGE NOTES.

THE *matinée* of Friday in last week—"Clara Vere de Vere"—at the Prince of Wales's Theatre, was certainly only a success as regards the actors; the piece itself having few qualities to commend it to any audience. Mr. Campbell Rae-Brown was the author of it. From its title it may have been imagined that the story of the play would practically be that of Lord Tennyson's poem. But the scornfulness and pride of Tennyson's Clara are reproduced but scantily in the character sketched by Mr. Rae-Brown; nor indeed would the sympathetic art of Miss Alma Murray have easily or favourably lent itself to the impersonation of a Clara so conceived. In the play with which we have to deal, it is not very easy to know how far Clara is or is not in love with the young countryman, Hubert Lawrence. He, after a stage career of pronounced sentimentality, commits suicide, for which she is naturally sorry. But then his foster brother, Lord Hylworth, comes back incognito from foreign travel—plays the part of a steward—makes love to her, at first, only that he may have an opportunity of breaking with her—of disappointing her—as she had disappointed Laurence; but the young woman, in the end, proves really too attractive, and it is confessed that she was not heartless nor was he for ever implacable. Certainly, good opportunities for dramatic effect are provided, or might be provided, by the adequate development of such a plot as we have outlined. But Mr. Campbell Rae-Brown's conceptions and treatment appear alike somewhat common. Characterisation, distinction,

literary style, are, it must be confessed, lacking to the work. We have said nothing about two quite prominent characters, both of them very ridiculous. They are a newly made lord—Lord Capelcourt—and his son, the Honourable Tom Bullion. We can assure the author that the very latest additions to the peerage are not of that style. Lord Capelcourt and Tom Bullion are wholly impossible people. The satire is so gross and exaggerated that it has no real point. Only the most ignorant of socialists could in any way approve of, or be amused by, it. We doubt if we shall see the piece again. That it afforded to Miss Alma Murray a very prominent part was almost its unique merit. Mr. Frank Rodney had to be uninterestingly sentimental as the earlier of the two lovers—in circumstance and temperament a Claude Melnotte of our day. Mr. William Herbert played Lord Hylworth with some strength. And Mr. William Farren, junr., was at times effective as the father of the youth who omitted to recognise the futility and the unspeakable cowardice of self-slaughter. Nor was it difficult to see that, if Mr. E. M. Robson had only had a good part, and not a part the fun of which was forced and impossible, he would have made a distinct success. As it was, he made us laugh a little. Miss Alexis Leighton was ill placed in a character we have not had occasion to name, and so was far less effective than in the last performance by the Browning Society. As for Miss Alma Murray, we have implied, of course, that she was artistic, interesting, agreeable. But fancy that talent—a talent so delicate and, as the French say, "just"—fancy that talent expended upon a piece so common, upon writing so hopelessly poor! Mr. Campbell Rae-Brown has indeed much to learn. Possibly he has the wit to sit down steadily and learn it.

MR. ERNEST PERTWEE and MISS BERTHA MOORE had a distinct success on Wednesday in last week at the Marlborough Rooms, Mr. Pertwee showing a pronounced advance on the excellence which we were glad to note last year. He is probably now quite the first among our younger masters in recitation. "Gabriel Grub" is one of the least effective of Dickens's pieces; yet even here Mr. Pertwee made his mark. We should like to have heard him in the delicate humour of "Copperfield and the Waiter." It is precisely suited to him. But in the stronger characterisation of "The Charity Dinner" he was extremely good. Miss Bertha Moore sang with her now well-recognised charm of voice and of delivery Sir Arthur Sullivan's "Orpheus and his Lute"—a composition to which she is giving prominence—and also sang admirably a song of Grieg's, and Schumann's "Humility," and some lighter *Lieder* by Meyer Helmund.

AN interesting *matinée*, for the benefit of the Provident Infirmary for Women and Children, is announced for Wednesday next at the Novelty Theatre, when two new pieces will see the light. The authorship of "Laura"—a comedy in three acts—is not announced; but the piece has the advantage of presenting Miss Mary Rorke as its heroine, and it will be further supported by Messrs. Thalberg, Robson, William Poel, and others. The second piece is by Edith Cuthell—"The Wrong Envelope"—in which the author will herself appear.

MUSIC.

ITALIAN OPERA.

THE performance of "Don Giovanni" at Covent Garden last Thursday week was in many respects excellent. Mdlle. Arnoldson is an exceedingly graceful Zerlina, but her voice does not appear to be increasing in volume. Mme. Fursch-

Madi played the part of Donna Anna with effect. Mdle. Macintyre has a pleasing voice, and her songs were much applauded, but she is scarcely equal, as yet, to the rôle of Donna Elvira. M. Lassalle is a capital "Don," both as singer and actor. Signori Ravelli, Navarini, and Ciampi played and sang in their usual manner. Mr. Harris has mounted the ball-room scene most brilliantly. The "Marriage of Figaro" was given on the following evening, when Mdle. Ella Russell as Susanna, and Mdle. Arnoldson as Cherubino, won much applause. What an improvement it will be when these two operas of Mozart are not spoilt by encores!

On Saturday evening "Les Huguenots" was presented for the first time this season, with a strong cast, and an imposing chorus of 160 voices. With Mdme. Nordica as Valentina, Miss Ella Russell as the Queen, and the two De Reskes as Raoul and St. Bris respectively, the principal characters were in safe hands. It was not, however, the success of any one, so much as the united efforts of all, both principal and subordinate, which gave such *éclat* to the performance. The "Benediction des Epées" was given with immense effect. Where everything was so good, it seems needless to go into detail. We ought perhaps to mention that Mdme. Scalchi was the Urbano, and Signor Navarini the sturdy old Huguenot Marcello. For the splendid mounting of the piece, and for the admirable performance, Mr. A. Harris and Signor Mancinelli deserve the highest praise. Meyerbeer, however, unlike Wagner in most respects, resembles him in this—that, to produce any effect, his works need to be presented with the greatest attention to every detail. It is gratifying to be able to add that this brilliant performance drew a brilliant house.

Covent Garden was again crowded on Monday evening, when an excellent representation of "Faust" was given. Mdme. Nordica may not be an ideal Marguerite, but it is certainly one of her most successful impersonations. It is unnecessary to say a word in praise of M. J. de Reske as Faust, and of his brother as Mephistopheles.

"L'Africaine" was given for the second time on Wednesday evening. The rôle of Selika was undertaken by Mdle. Columbia. Selika is not the only part of importance in this last and most unequal of Meyerbeer's operas, but still it is one of which much may be made by a good actress and singer. Mdle. Columbia is, apparently, not new to the stage, but her voice is not of pure quality, and her intonation most uncertain. How far she may have been affected by nervousness we cannot say; but at her best she would not be able to do justice to the part of the dusky queen. By way of compensation Miss Macintyre sang excellently in the part of Inez, and from her first appearance gained the sympathy of the audience. The two De Reskes were magnificent—the one as Vasco, the other as Don Pedro. Mr. Lassalle as Nelusko was also efficient. The stage effect in the ship scene of the third act was very good. Signor Mancinelli conducted.

J. S. SHEDLOCK.

RECENT CONCERTS.

WE were sorry not to see a larger audience at Mdme. de Pachmann's pianoforte recital last Saturday afternoon. But there is much music going on just now; and on that particular afternoon, Señor Sarasate, with his magic bow, was tempting concert-goers with a programme including the Beethoven and the Mendelssohn Concertos. Mdme. de Pachmann is a rising artist, and has made enormous progress since she appeared a few seasons ago at the Popular Concerts as Miss Maggie Okey. From the first

her technique was good, but now there is more poetry and refinement. With full remembrance of Mdme. Schumann's simple yet beautiful reading of Beethoven's "Adieux" Sonata, we thoroughly enjoyed Mdme. Pachmann's performance of this work. No exaggeration, no affectation, no imitation; nearly everything was given with the right accent and feeling. A Sonata in E minor for pianoforte and violin, composed by the lady herself, was another feature of interest. The music is exceedingly graceful, and the writing is clever. The lady has carefully avoided diffusion, the besetting sin of so many modern composers; the four movements are all admirably concise. The influence of modern Germany may be traced in the music, but in time Mdme. de Pachmann will develop her own ideas with more individuality. The sonata was well played with Mr. Gompertz, an experienced violinist.

Herr Richter gave his fifth concert on Monday evening. Mr. Henri Marteau, the youthful fiddler, made his second appearance, and played with wonderful decision and finish M. Saint-Saëns's showy Rondo Capriccioso in A. His reception was most enthusiastic. Dr. Mackenzie's "Twelfth Night" Overture was repeated. A second hearing strengthens the favourable opinion made upon us last week. At the same time we fancy it is somewhat long, and that there is not quite enough key-contrast. It was again well received. Wagner's "Trauer-Marsch" and Charfreitag's "Zauber" were played very well, though the wind instruments were, at times, a trifle coarse in the former. The programme concluded with the "Jupiter" Symphony.

Dr. Hans von Bülow gave his second "Beethoven" recital on Tuesday afternoon. He commenced with the Sonata in E flat (Op. 27, No. 1), taking the first movement in slower time than is usual. The added note connecting the Allegro molto with the Adagio was, perhaps, a slip of the finger. The first two movements of the so-called "Moonlight" were beautifully rendered; the Finale pleased us less—there was not enough left to the imagination. A brilliant performance of the Variations on the Theme from the "Eroica" was marred by a rough and exaggerated rendering of the Oda. The Largo and Finale of the D minor Sonata (Op. 31, No. 2) were, in our opinion, the gems of the afternoon. The programme concluded with Op. 31, No. 3, and the C minor variations. The audience was highly appreciative.

Mdme. Sophie Menter gave her second recital at St. James's Hall on Thursday afternoon. With the exception of a small slip of memory, her reading of the first two movements of Beethoven's Sonata (Op. 81a) was excellent; but the "Retour" was somewhat exaggerated. Schumann's "Carneval" was at times hurried, at times incorrect, and often very noisy. Mdme. Menter was heard, doubtless, to better advantage in the Liszt transcriptions which followed.

Space prevents us noticing in detail many interesting concerts during the past week. But we must just mention that of Mr. Gardner at Willis's Rooms last Saturday, when Beethoven's Trio in G, lately given at Mr. Beringer's concert, was performed with the proper instruments, i.e., flute (Mr. Barrett) and bassoon (Mr. Wotton); a *matinée* by M. and Mdme. Breitner at Belgrave Square on Monday afternoon; and Mr. Austin's Testimonial Concert on Wednesday evening, in which Mdmes. Valleria, Patey, Trebelli, Antoinette Stirling, Mr. Sims Reeves, Mr. E. Lloyd (his first appearance since his return from America), Mr. Santley, M. de Pachmann, Messrs. Richter and Cousins took part. There was a full house, and with such a list of artists the audience was naturally most enthusiastic.

MUSIC NOTES.

Two special musical services were held in Bristol Cathedral to celebrate its completion, last Friday and Saturday, when "Israel in Egypt" and "Elijah" were performed, conducted by Mr. G. Riseley. The solo singers were Miss Anna Williams, Miss Hilda Wilson, Mr. Kearton, and Mr. Santley, with a chorus of 600 voices and a band numbering one hundred. After recording the presence of some thousands of persons who paid the closest attention to the works rendered, the feature most worthy of note was the fine singing of the choir, especially in the double choruses in "Israel" and in the dramatic portions of "Elijah."

Echoes of Hellas. (Marcus Ward.) The letterpress and illustrations having been noticed in the ACADEMY of May 19, it only remains for us to say a few words about the music composed by Messrs. Otto Goldschmidt, Malcolm Lawson, Walter Paratt, and Dr. W. H. Monk. The first named has contributed only the short prelude (for piano, four hands) to the "Tale of Troy," a graceful and melodious *andante sostenuto*. Dr. Monk also has written but one number, "The Song of the Shuttle," for soprano voices, with accompaniment of harp, flute, and clarinet. It is simple, yet taking, with some pleasing touches in the small score. Mr. Paratt has furnished three numbers for "The Tale of Troy," and the whole of the music for "The Story of Orestes." He makes use of modern harmonies; but throughout there is a quaintness and simplicity of melody and rhythm which give to his numbers an old-world flavour. The chorus of maidens, entitled "The Sacrifice of Iphigenia," and the bass solo, "Lament for the House of Atreus," are very effective. The writing throughout is musicianly. Of Mr. Malcolm Lawson's four pieces in the *Odyssey*, the "Lay of the Trojan Horse" appears to us the most characteristic. The others are graceful and pleasing, but essentially modern in character.

UNDER the Union of Benefices Act, the Church of St. Olave, Jewry, near the Guildhall, is in course of demolition. The remains of Dr. Maurice Greene (born 1695, died 1755), who held the post of organist of St. Paul's Cathedral from 1718 to 1755, were formerly deposited therein; but they have now been removed to the crypt of St. Paul's.

AGENCIES.

London Agents, Messrs. W. H. SMITH & SON, 186 Strand.

Copies of the ACADEMY can also be obtained every Saturday morning in EDINBURGH of Mr. MENZIES; in DUBLIN of Messrs. W. H. SMITH AND SONS; in MANCHESTER of Mr. J. HEYWOOD. Ten days after date of publication, in NEW YORK, of Messrs. G. P. PUTNAM'S SONS.

SATURDAY, JUNE 23, 1888.

No. 842, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

The Ingenious Gentleman Don Quixote de la Mancha. By Miguel de Cervantes Saavedra. Done into English, with Notes Original and Selected, and a new Life of the Author. By Henry Edward Watts. Vols. I. and II. (Bernard Quaritch.)

It was a bold undertaking to bring out a new translation of *Don Quixote* so soon after the publication of those by Mr. Duffield and Mr. Ormsby. For the ordinary reader either of these editions, certainly that of Mr. Ormsby, would suffice. Mr. Watts's work, as appears by the very conditions of its issue (the edition being limited to 250 copies), will not supersede these. It appeals to another and an inner circle. These volumes will have a warm welcome from all lovers of Cervantes, and not the least from those who have studied most carefully, and are most alive to the merits of, the preceding versions. Bibliophiles, too, will hail this edition with delight. In paper, print, and binding, it seems almost perfect. Strong and yet light; though a quarto, yet not too heavy to be held in the hand; clear in type, with head and tail-pieces not too obtrusive, but which repay investigation—it is materially a model of what a student's edition of a favourite author should be. *Beati possidentes.*

The whole work is to be completed in five volumes. Vols. i. and ii. are now before us. Vol. i. contains the preface, introduction, life of Cervantes, various appendices on bibliography, the romances of chivalry, and especially a translation of Heine's essay on Cervantes and *Don Quixote*. Vol. ii. contains the first part of the *Quixote* to the end of cap. xxiv., also with useful appendices, particularly those on the *Amadis*. In the following remarks I shall deal chiefly with the life of Cervantes, reserving criticism of the translation until more of it has been completed.

Mr. Watts, throughout vol. i., shows his high ideal of what a translation of his original should be. He has in the fullest extent what the French call "the courage of his opinions." It is almost a shriek of defiance to assert (p. 2) "that *Don Quixote* is the book of all others in the world the most translatable, which is proved, I maintain, by the fact of its being the book most often translated." Well, if this be so, then the Old and New Testaments, and Homer, should be still more easy to be translated. Grant that it is so in parts of the former, did our latest revisors find it to be so throughout? Will any true lover of Homer say that any version gives even tolerable satisfaction to one familiar with the original? We fear that it is a *non-sequitur* to argue from the frequency of translation that the original is easy to translate. It is the very difficulty, the danger of the task,

that is often sufficient lure—witness the countless versions of Horace, those of *Faust*, and of Heine's poems. The attraction is that of the enchanted castle in the fairy tales—"the many fail, the one succeeds"; and each latest champion hopes that he will be the favoured, the exceptional, the unique, the only one to make his own the hidden beauty within. Excellent are the rules for translation of the *Quixote* laid down in pp. 15-19 of this introduction. Few would have had the boldness to present critics with such an arm to be used against themselves. We think none the worse of Mr. Watts for the frank confession—"I must acknowledge that sometimes I have failed to make sense of the words as they stand." These are golden words; and, were I an autocrat, they should be inscribed on the front of every edition of a foreign or an ancient classic put into the hands of school boys and undergraduates.

The life of Cervantes is an excellent one. It brings before us the man in his nobility, his manliness, his courage, his large-heartedness, his hard fortunes, and his unfailing genial humour, not the mere writer only. There was nothing petty or mean about Cervantes. His absolute fearlessness is shown best, I think, by the influence that he gained over his Algerian masters. Tyrants such as they, cruel and capricious, if they be only brave themselves, often like just the one man who is not afraid of them, who, in straits of life and death, shows to them the same careless genial humour which he evinces to his fellow captives. This I deem to be the secret why that arch-plotter of escape, Cervantes, was spared the blows and mutilation and death which fell so often on his fellow-captives, who had not done half so much (from the slave-owner's point of view) as he had done to deserve them. The presentment of Cervantes is given well. In one point alone does it seem to me that the author is mistaken. Mr. Watts is free from the idolon of British insularity; but here and there appears the working of the leaven of English religious narrowness—the incapability of looking at certain subjects unless through Protestant spectacles. Philip II. is still the unnatural monster in his eyes which he appeared in the eyes of our fathers. Sta. Teresa is "a female *Quixote* if ever there was one." *Don Quixote*, if not written with anti-Roman Catholic and anti-inquisitorial tendencies, still shows a secret, if unconscious, leaning that way. This is a mistake. Heine's words (pp. 314, 15, 17) are rigidly exact: "There is in *Don Quixote* no trace of anti-Catholicism; neither is there any of anti-absolutism, and the critics who detect such are clearly mistaken." There may be traces of a feeling against the Dominicans *versus* the Redemptorist fathers. Such family jars have continually arisen in the Spanish Church, the divers orders belabouring one another in the press, and from the pulpit, with epithets as strong as those ever bandied between Calvinists and Arminians, Evangelicals and Ritualists, and sometimes compelling the interference of the secular power to silence them; but there has been no thought of heresy or anti-Romanism in all this. As to Philip II.'s subserviency to the Pope or to the Church in mere politics, it is all moonshine. He was within an ace of

making himself as much a Pope over the Spanish Church as Henry VIII. was over the English Church. The difference is simply that of a man with a masterful will, and one weak and irresolute, if persistent. The decline of Spanish constitutional liberty had begun long before his time. We are sorry to see, in a note on p. 222, such an expression on the wretched last years of Lope de Vega, that his conduct "was one not unworthy of a priest and a familiar of the Inquisition." I am aware of the damning and incontrovertible evidence as to the morals of some of the Spanish clergy of that and other periods; but this cannot make us overlook the noble lives of others, nor the fact that Spanish religious literature of that age, for beauty of style, for intensity of devotion, for depth of spirituality, is equal to any in Europe.

To descend to particulars. In a note on p. 25 Mr. Watts mentions "Juan Calderon, the author of an admirable little book, entitled *Cervantes Vindicado* (Madrid, 1854), "of whom I can learn nothing but that he was a refugee in England and had turned Protestant." I have before me *Don Juan Calderon, sa vie écrite par lui-même* (Paris: J. Bonhoure et Cie. 1880). From the preface it appears that this autobiography had been already published in Spanish at Madrid by Ucoz in 1855. His name also appears in vol. i., p. 53, of Boehmer's *Spanish Reformers of Two Centuries*. He was the editor in succession of two Spanish journals published in London, *El Catolicismo Neto* and *El Examen Libre*, and author of several grammatical and religious works. I do not find his book on Cervantes mentioned among them; but this is not surprising: even Wiffen does not seem to be aware of Ucoz's literary works previous to his conversion. Juan Calderon died in January, 1854. His son is the distinguished member of the Royal Academy. I quite agree with Mr. Watts that the dedication of the *Quixote* to the Duc de Bejar, as it now stands, may not be wholly from the pen of Cervantes; but I cannot join with him in rejecting the "Relacion de lo sucedido en la ciudad de Valladolid" on the occasion of the Earl of Nottingham's embassy. The assertion of the contemporary sonnet (whether written by Gongora or by any other disappointed scribe), coupled with the other evidence brought forward by Señors Gayangos and Ramirez de Villa-urruia, is too direct and decisive to be set aside by any merely subjective criticism. As to the acquaintance of Cervantes with Arabic and with Mohammedan customs, besides his captivity in Algiers, Mr. Watts seems to forget that Arabic must have lingered still in many parts of Southern and South-Eastern Spain among the Moriscos, and that Cervantes's official duties necessarily brought him into contact with these country people. Critics, of course, will continue to differ about the comparative value of Cervantes's writings. No one can affect to dogmatise in such matters. I should not place the *Nunantia* quite so high as Mr. Watts does on p. 141. On the other hand, I should give more prominence to *La Gitanilla*, with its creation of Preciosa, the fruitful mother in literature of such offspring as the Esmeralda of Victor Hugo, the Preciosa of Longfellow's "Spanish Student," and, per-

haps, of the *Spanish Gipsy* of George Eliot. She is for all Europe as much the typical ideal of the Spanish gipsy girl, as Don Juan is of the reckless Spanish libertine. I must cut short these desultory remarks, only asking if the surname *Duro* should not be attached to the "Don Ceráreo Fernandez" of note, p. 245; and mentioning that the letter of Cervantes (p. 238, note) has just been bequeathed by the Marqués de San Roman to the Real Academia de la Historia to be there preserved with due honour in glass case under lock and key.

One glance at the translation. The difficult prefatory verses are here rendered more literally than by Mr. Gibson in Mr. Duffield's edition. While they are not equal to these as English poems, they perhaps give a truer idea of what the Spanish is; but in one line Mr. Watts has violated one of his own canons of translation (p. 26, l. 3): "The provender which proves thy providence" introduces a verbal play not to be found in "Que mostraron tu cuerda providencia." As to the commentator's notes on p. 12, Cervantes merely echoes at first or second hand the Vulgate text (1 Reg. xvii. 2), "Vallem terebinthi," without a thought of anything else. This is an instance, I believe, of commentators seeing more than their author ever dreamt of. For Don Quixote's Saturday supper of *duelos y quebrantos*, Mr. Duffield's "resurrection pie," Mr. Watts's "hotch-potch," would not "skin and grief," if it has not become obsolete within the last thirty years, be the best equivalent? This was the name given in my youth by Buckinghamshire shepherds to the hurt or worn-out sheep with which they were occasionally presented by their employers: "Thank-ee, measter, it's nought but skin and grief." I have also heard the phrase applied to human beings, "old skin and grief," as the most cutting of all possible terms of contempt.

These alternative suggestions will not, I hope, lead anyone to undervalue Mr. Watts's version. It is too soon yet to affirm that he is "the master bowman," with the highest score attainable; but he has certainly sent an arrow fair, and pierced an inner ring, even if he has not cleft the mark, and distanced all competitors.

WENTWORTH WEBSTER.

The Tripartite Life of Patrick, with other Documents relating to that Saint. Edited, with Translations, by Whitley Stokes. (Rolls Series.)

THE character of the present work and the high reputation of Mr. Stokes as a Celtic scholar, if in themselves sufficient guarantee for thoroughness of treatment, evidently preclude anything like a detailed criticism of it in this place. It must suffice to give a general idea of the scope of the work, together with such remarks as are suggested by a careful perusal of it.

Of all the documents here printed the substance has long been known to students of Irish ecclesiastical history. But, apart from its special reference to St. Patrick, this edition of the *Tripartite Life*, with its elaborate Introduction, has a particular interest for the historian and philologist. Perhaps (though the remark savours somewhat paradoxical) we should not be far

wide of the mark if we were to assert that the interest attaching to the life of the saint is wholly subordinate to these two wider and more general claims upon our attention. Indeed, if we accept (as we undoubtedly must) Mr. Stokes's conclusion that the *Tripartite Life* is a production of the eleventh century its importance as an authority for St. Patrick's life is very trifling. For it is evidently nothing more than a mere gloss upon the authentic documents contained in the Book of Armagh. So far as St. Patrick is concerned, the translation, or, as Mr. Stokes more properly describes it, the "paraphrase for edification" of old John Colgan, published at Louvain in 1647, and the more recent translation of Mr. Hennessy in Miss Cusack's *Life of St. Patrick*, were quite sufficient to demonstrate its unreliableness. Nevertheless, as I have said, it is not without its interest for the historian and philologist alike. And in this respect Mr. Stokes's Introduction of nearly two hundred pages leaves little to be desired.

Nor do I think, considering the class of students for whom it is intended, and the glaring inaccuracies of the printed catalogue, that any valid objection can be raised to the lengthy and apparently irrelevant description of all the contents of MS. Rawlinson B 512. But it is a point of more general interest to learn that of the three MSS. used by Colgan, and which he describes as "pervetusta," not one now exists—a fact which, having regard to the considerable lacunae that occur in the MS. of the present text, naturally seems to enhance the value of Colgan's work. In opposition to Colgan, who believed, with excusable credulity, the *Tripartite Life* to have been written by St. Evin, supposed to have flourished in the sixth century, and to Dr. Petrie, who calls it "a compilation of the ninth or tenth century," Mr. Stokes's argument—from an historical and linguistic point of view, that it was compiled in the eleventh century, after the Middle-Irish period had well set in, but from documents many, if not all, of which were composed before A.D. 1000—appears irrefutable. The linguistic argument is evidently one of great merit, and will naturally attract the attention of all students of Old Irish.

In the fifth section of his Introduction Mr. Stokes enters upon a systematic and exhaustive analysis of the documents he has printed in order to discover what light they throw upon the social condition of the early Irish. This, as it appears to me, is the most valuable, as it is the most interesting, portion of his work; though I cannot say that the result adds very much, even in ecclesiastical matters, to our previous knowledge on the subject, while the argument from the *Tripartite Life* to the doctrines professed by St. Patrick strikes me as extremely hazardous. It is clear that the *Tripartite Life* can only be brought in evidence of the opinions held by the writer of it and his contemporaries. To me it appears about as valuable for the doctrines of St. Patrick as the Apocryphal Gospels are for those of Christ. There are one or two points, however, that seem to call for notice. According to Mr. Stokes (p. clix.) the Druids did not in Ireland constitute a hierarchy, or separate class, as they are said to have done in

Gaul and Britain; but were simply a species of wizards, sorcerers, or enchanters. But surely the two brothers, Moel and Caplait, of whom it is said (p. 93) that they "reared Loejaire's two daughters, Ethne, 'the fair,' and Fedelm, 'the ruddy,'" were teachers and instructors of youth, as well as wizards. Indeed, it will be remembered that, in his *Lectures on the Manners and Customs of the Ancient Irish*, Dr. O'Curry lays very great emphasis on this point. Of the curious legal procedure of *troscas*, or fasting, which has long ago been compared to the Indian *dharna*, Mr. Stokes notices that it is mentioned in the documents he publishes three times. First (p. 218), when Patrick fasts against a merciless master to compel him to have compassion upon his slaves. Secondly (p. 418), where Germanus and Patrick fast against a heretical city to compel it to become orthodox. Thirdly (p. 556), where Patrick fasts against the pagan king Loejaire to constrain him to his will. It would be interesting to know whether the following curious incident (pp. 113-121) is not an example of the same method of procedure. The story runs that on Saturday of Whitsuntide an angel came to Patrick and said, "God gives thee not what thou demandest, because it seems to Him excessive and obstinate, and great are the requests." "Is that His pleasure," saith Patrick. "It is," saith the angel. "Then this is my pleasure," saith Patrick, "I will not go from this rick till I am dead, or till all the requests are granted to me." Then, the story proceeds, Patrick abode in Cruachan in much displeasure, without drink, without food, from Shrove Saturday to Easter Saturday. The angel tried to overcome his obstinacy, but Patrick refused to leave the place till he obtained a promise that all his demands should be granted by God. Then said Patrick, "A blessing on the bountiful king, who hath given; and the rick shall now be departed from." The sanction here is evidently suicide by starvation and not fear of the divine displeasure. Many of St. Patrick's miracles recorded in the *Tripartite Life* present a curious resemblance to the familiar aetiological myths of early Roman history. Here, for example, we read (p. 181):

"The Hui Torrorrae stole and ate one of the two goats that used to be carrying water for Patrick, and they went to perjure themselves to Patrick; but the goat bleated out of the bellies of the three who had deceived him. 'My God's doom!' saith Patrick, 'the goat himself announces the place in which he was eaten. From to-day for ever,' saith Patrick, 'goats shall cleave to your children and your race.' Which thing (adds the writer) is still fulfilled."

According to Colgan the descendants of these thieves had always beards "caprinis sub-similes."

The first volume being taken up with the Introduction and *Tripartite Life*, the second is devoted to all those other documents which in any way relate to the life of St. Patrick. All the materials for a biography are thus to hand, with such criticism of them as is necessary to enable the student to appraise them at their right value. It is curious to note how little we really know of Patrick, and how much is mere conjecture. Two pages of Mr. Stokes's Introduction are

sufficient for all the facts about him. Nevertheless, nothing could be farther from the truth than to doubt his existence. Despite the accretion of monkish legend, his personality is unmistakable as a modest, shrewd, generous, enthusiastic missionary, with a Celtic tendency to exaggerate failure and success. Like St. Paul, desirous of martyrdom—a man of strong passions, but of still stronger will.

The present work, with its valuable indexes, especially that of places and tribes, for which every student of Irish history will feel deeply grateful to Mr. Stokes, will naturally supersede those of Dr. Todd and Miss Cusack—despite the length of the addenda and corrigenda lists.

R. DUNLOP.

A Book of Verses. By William Ernest Henley. (David Nutt.)

IF these verses of Mr. Henley are nothing else, they are at least fresh—fresh in expression, fresh also in subject; for even in these days of "impressions" and realism it is not often that we find a poet who sings of sensations mental and physical during a long and weary sojourn in a hospital ward. He cannot be said to teach in song what he has learnt in suffering, because his muse is not didactic; but he has evidently suffered, and he does sing. Even the dullest and most disagreeable experience seems to have a "tune in it" for him, or if not a tune at least a rhythm. He has the gift, even at the most unpromising times, of "dropping into poetry." The swaying of the hospital basket in which he is carried to the operating theatre suggests a measure, and he wakes from chloroform pregnant with a sonnet. The verses which record such experience must be grim; but they are verses having at least this quality of true poetry—they say in verse what could not be said so effectively in prose. From a note at the end of the series of twenty-eight lyrics, entitled "In Hospital," it would seem that his sojourn in this sad hostelry lasted for more than a year—a little life within a life, with its own special stages between entrance and exit—a theme *prima facie* not ill adapted for artistic treatment.

If Mr. Henley's treatment of it is not quite the noblest or the most beautiful which it is possible to conceive, it is powerful, genuine, and manly throughout. It may be shortly described as a series of self-vivisections photographed, mixed with pictures of hospital life from the point of view of an in-patient. His theme is therefore primarily himself, but he looks outside rather than in; and there is little of the invalid in his verses.

He is no professional emotionalist, making poetical capital out of pain, but evidently wrote only for solace in suffering intensified but made less deadly by imagination and sympathy for others. Though sometimes he causes a shudder of revolt against the naked horror of his pictures, and sometimes a smile at the trivial items of a sick man's chronicle, he never exaggerates or wails. Through the Dantesque world of his infirmary the joy of a strong life runs ever like a stream.

It is this which keeps his verses sound. They are vivid, but not morbid. Their vividness is, indeed, their excuse. In the

first sonnet he makes us realise "what it feels like" to enter a hospital with its "loud spaciousness and drafty gloom," and one's spirits fail with his, because

"A tragic meanness seems so to environ
These corridors and stairs of stone and iron,
Cold, naked, clean—half workhouse and half jail."

As an introduction to the hospital poems, the sonnet from which these lines are taken is excellent. It strikes the chord of the whole; but perhaps the finest of the sonnets descriptive of personal sensation is the following:

"BEFORE."

"Behold me waiting—waiting for the knife.
A little while, and at a leap I storm
The thick, sweet mystery of chloroform,
The drunken dark, the little death-in-life.
The gods are good to me: I have no wife,
No innocent child, to think of as I near
The fateful minute; nothing all-too dear
Unmans me for my bout of passive strife,
Yet I am tremulous and a trifle sick,
And, face to face with chance, I shrink a little:
My hopes are strong, my will is something weak.
Here comes the basket? Thank you. I am ready."

But, gentlemen my porters, life is brittle:
You carry Caesar and his fortunes—steady."

The operation over, the poems become naturally calmer and more contemplative. In the long months "lived on one's back," there is time to think and observe. The little world of the ward with its doctors, nurses, and patients affords its pictures and its dramas. The life personal is not excluded, for there are restless nights and memories and hopes, but it is no longer paramount. Several of the portraits are excellent. The best, perhaps, are the "Staff Nurse: Old Style," with her "experienced ease and antique liveliness" and

"The sweet old roses of her sunken face,
The depth and malice of her sly gray eyes;
The broad Scots tongue that flatters, scolds,
defies,
The thick Scots wit that tells you like a mace."

The "Lady-probationer" with

"A bashful air, becoming everything,
A well-bred silence always at command."

The "Visitor," described in a question,

"Can you conceive a Fairy Godmother,
The subject of a real religious call?"

Such are the pleasant sights of the ward, and there is mirth, too, on New Year's day, when

"Kate the scrubber (forty summers,
Stout, but sportive) treads a measure,
Grinning, in herself a ballet,
Fixed as fate upon her audience."

"Stumps are shaking, crutch supported;
Splinted fingers tap the rhythm;
And a head all helmed with plasters
Wags a measured approbation."

And there are sad sights also of "Casualty" and "Suicide," and two or three beautiful lyrics, including a hymn to Death called "Ave Caesar" and a "Pastoral," which contains lines like these:

"O the brilliance of blossoming orchards,
O the savour and thrill of the woods,
When their leafage is stirred
By the flight of the angel of rain!
Loud lows the steer; in the fallows
Rooks are alert; and the brooks
Gurgle, and tinkle, and trill. Through the
gloaming,
Under the rare, shy stars,
Boy and girl wander,
Dreaming in darkness and dew."

This, and many other of the best poems in the book, are in unrhymed verse, more or less irregular; and in these Mr. Henley shows unusual power of rhythmic phrase, the words following the subtlest and quickest motions of thought and feeling so closely that they seem to have been born together. From Collins he may have learnt much, from Walt Whitman not a little, from Longfellow he got at least the metre of "Hiawatha," which he employs now and again with effect; but few, if any, writers in English have employed unrhymed verse with such variety and success. He has attempted several forms of stanza untried before; and in these, as well as in more irregular verse, his lines carry their own music with them quite independent of rhyme.

This is perhaps the "newest" fact in the book; for some of the Hospital sonnets which were published in the early days of the *Cornhill* have not been entirely forgotten, and his skill in writing rhymed verse of a more complicated kind is still better known. Some of his ballades, rondeaux, and other "French forms" are reprinted in this volume in a section called "Bric-à-Brac," and will hold their own with the best. One, at least, of the ballades, that "On a Toyokuni Colour-Print" has not appeared before, and is quite a *chef-d'œuvre* of its kind; and of the rondeaux there is one, at least, that is also new and perfect. It deserves quoting, if only to show that this form may rival the sonnet for the expression of serious emotion:

"What is to come we know not. But we know
That what has been was good—was good to
show,
Better to hide, and best of all to bear.
We are masters of the days that were.
We have lived, we have loved, we have suffered
even so."

"Shall we not take the ebb who had the flow?
Life was our friend. Now, if it be our foe—
Dear, though it spoil and break us!—need we care
What is to come?"

"Let the great winds their worst and wildest
blow,
Or the gold weather round us mellow slow;
We have fulfilled ourselves, and we can dare,
And we can conquer, though we may not share
In the rich quiet of the afterglow,
What is to come."

It is also worth quoting because it expresses in the finest manner what is most noble in the writer's philosophy. It is for the most part a very simple philosophy, deeply impressed with the solemn mystery of life, but in default of a solution, taking for its maxims "Carpe Diem" and "Nil Desperandum," yet it is brave and strong enough to send a breath of life throughout the volume. It is more especially the burthen of that section of it not yet mentioned, which is called "Life and Death"—a section which, if not so striking as the "Hospital" poems, or so ingenious as the "Bric-à-Brac," has more of the true lyric note than either, for the poet's voice is neither strained by sickness nor fettered by artifice. It would take many extracts to do justice to the variety of thought and music contained in these forty-two songs. One of the most beautiful is the twenty-seventh—an invitation to an old friend to go "a-maying." The next is a charming allegory of life, dedicated, to judge from initials, to another old friend and collaborateur; but most of them are love songs, warm,

and throbbing from the heart. With one of these let us conclude:

"The nightingale has a lyre of gold,
The lark's is a clarion call,
And the blackbird plays but a box-wood flute,
But I love him the best of all.

"For his song is all of the joy of life,
And we, in the mad spring weather,
We, too, have listened till he sang
Our hearts and lips together."

The blackbird's note is, perhaps, the least common of all in modern poetry, and it is not the least charm of Mr. Henley's volume that he lets us hear it again.

COSMO MONKHOUSE.

Encyclopædia Britannica. Ninth Edition. Vol. XXIII. Article "Temple." By W. Robertson Smith, LL.D. (Edinburgh: Adam & Charles Black.)

In this monograph, which is almost exclusively concerned with the temples erected at Jerusalem by Solomon, Zerubbabel, and Herod in succession, Dr. Smith has supplemented the article contributed by him to a former volume on the ancient topography of the Holy City. As in the latter he vindicated with masterly power the limitation of the metropolis of David to the eastern hill, so now he has, as it seems to me, with equal ability, justified his preference for the measurements assigned by Josephus to the temple, over the exaggerations of the Talmud.

With the exception of Ferguson, Lewin, and Sandie, I doubt if there is one of the numerous writers on this subject before himself who has not, with a strange persistency, preferred to adopt the curious theory that the Jewish historian—of all writers specially prone to exaggeration, especially in what concerned the credit of his own people, and the magnitude of the efforts of their Roman foes—should yet, in a matter which concerned the chief architectural ornament and principal fortress of the capital, have grossly, and over and over again, underestimated its dimensions. Four times over he tells us that it comprised a square of 400 cubits or 600 feet; and he was speaking of what he had seen with his own eyes. Yet it has become the fashion to accept the measurements of the Mishna, at least three hundred years later than his day, against these repeated asseverations, and to take the square as one of 500 cubits, or 750 feet, with the result that the whole width of the eastern hill is required for the location, and that from the area so occupied it is impossible to exclude the site of the Dome of the Rock.

It is not difficult to see how the original error arose. It was long ago pointed out by Ferguson. In the prophetic sketch of the temple given in chaps. xl.-xliii. of Ezekiel there is nothing to clash with the dimensions of Josephus until reference is made, in chap. xlii., to the measuring of the sides by a measuring "reed," which would necessitate the enlargement of the area to a square, not of 500 or 750 ft., but of no less than 4500 ft. It is clear that the prophet is here referring to the area not of the temple itself, but of the sacred enclosure in which it and its courts were in prophetic vision seen to stand, and which is the first of the prophetic divisions of the Land of Israel referred to in chap. xlv. In

the Septuagint, however, we find "cubits" substituted for "reeds," and to the dimensions thus brought out the Talmudists seem to have felt bound to accommodate themselves. It landed them in a curious dilemma. Their internal arrangements exactly corresponded in all other respects with the measurements of Josephus; but, after using up the whole inner area, they found they had a large surplus of 100 cubits remaining, and "not knowing what better to do with them, put them into the court of the women" (Ferguson's *Temples of the Jews*, p. 64), with the result of making it nearly twelve times as broad as that of the men of Israel.

Adopting, then, the area of Josephus, Dr. Smith proceeds to justify the location of that area in the south-western corner of the present Haran. His arguments, to my mind, are irresistible; but their effect to the casual reader must be a good deal weakened by the unfortunate insertion of a diagram on which are reproduced the wholly imaginary contour lines which have obtained currency on the plans of the Palestine Exploration Fund, and to which I have had more than once before to direct the attention of the readers of this journal (*ACADEMY*, January 8, 1881, and October 25, 1884). It is true that in a note it is added that many of these lines "are almost purely conjectural," but the effect produced by them on the eye is much to be deprecated.

In the short note on the topography of the wall and gates of Nehemiah, which concludes the article, it is to be regretted that Dr. Smith has not dealt more at large with the area intervening between the eastern wall of the temple and the present line of the eastern wall of the Haran. He indicates indeed by a dotted line in his plan the limits within which he conceives this may have in early times been occupied by the palace of Solomon; but its occupancy in the days of Herod, and its relation to the wall of Ophel discovered by Sir Charles Warren form two of the great problems of the location still to be solved.

ALEX. B. McGRIGOR.

Reynell Taylor: a Biography. By E. Gambier Parry. (Kegan Paul, Trench & Co.)

Who was Reynell Taylor? the incurious reader may, perhaps, ask, and be not wholly satisfied by the answer that he was another Indian hero. For we have been somewhat overdone with heroes—weaklings that we are—and India is always a weariness. Be this as it may, the Punjab Puritans were a set of very real people in their day; and it is good for us to be occasionally reminded of their doings. Even if Longfellow may have gone too far, and it be not quite true that we can all make our lives sublime, it cannot in any case do us harm to know that a number of British and Irish gentlemen lived such lives not many years ago. Here is the testimony of their Arthur to the merits of this modern Round Table.

"I was very fortunate," wrote Henry Lawrence, "in my assistants, all of whom were my friends, and almost everyone was introduced to the Punjab through me. George Lawrence, Macgregor, James Abbott, Edwardes, Lumsden, Nicholson, Taylor, Cocks, Hodson, Pol-

lock, Bowring, Henry Coxe, and Melville, are men such as you will seldom see anywhere." Other names will be easily added by those mindful of the time.

Reynell Taylor, the subject of Mr. Parry's volume, was a perfect type of such a class. Tall, strong, handsome, a good rider and consummate swordsman, a rigid Evangelical, an active and intelligent administrator, with a revolver in his right hand and a religious tract in his left—so he appeared in the stony places of the frontier, pushing back barbarism and upholding his country's cause. Mr. Parry's book, modest and conscientious as it is, does not, perhaps, give the full measure of the man. Taylor was not an egotist. The diaries and despatches by which some men—especially in India—achieve greatness are not largely available to this biographer. Such distinction as he won was due to an unceasing and unostentatious performance of whatever duty was devolved upon him by the course of his employment, and by the habits of self-sacrifice engendered by that discipline. Born in 1822, the son of a cavalry officer singularly accomplished and devout, he was educated at home, deriving his qualities alike from inheritance, from instruction, and from example. In 1840 he obtained a "direct cadetship" for the Bengal Cavalry; and sailed for Calcutta, early in that eventful year, while the Afghan war hung in the balance.

His person is thus described, in words supplied by one of his brothers. He was

"a remarkably good-looking boy, with bright complexion, and wavy brown hair. He was not quite six feet in height then, but he subsequently attained that height. He was strong and muscular, but with a light and active figure; good at all outdoor exercises, . . . and in every way calculated to make a good soldier."

His regiment was the 2nd Bengal Cavalry, but he had not had an opportunity to join when it was disbanded for misbehaviour in Afghanistan. In 1842 it was reformed as the 11th. Taylor joined it at Cawnpore; and the earlier part of his service passed in learning drill, in studying Hindustani, and in the sports and amusements of a young Indian officer. In 1843 the 11th took part in the Gwalior campaign, and was engaged, though not very deeply, at Maharajpur. At the end of that brisk little war Taylor was selected for the adjutancy of the governor-general's body-guard. In connexion with that corps he next made the campaign of the Satlej—1845-6, and acquired both wounds and glory. As a reward for this service he was appointed assistant to the political agent at Ajmere, the (locally) distinguished Col. Dixon, to whose work on Merwara he contributed some assistance. In January 1847 he received an offer of employment at Lahore, and soon afterwards entered upon what was to be the field of his exertions for the next thirty years—the remaining portion of his public life.

These years were those of the annexation and formation of that province which, after shaking the empire to its base, became its chief source of moral and physical stability. At Banu, Kangra, and elsewhere, Taylor combined with the ordinary work of a sub-prefect a considerable amount of dangerous and important military service. As commissioner of the Derajat—the long group of

wild districts on the Sulaiman slope—he continued the same combination in a position of still greater authority and responsibility. He also, at great expense to himself, established a branch of the Church Missionary Society (which now, it seems, boasts fifty-nine baptised members) and obtained the distinction of C.B. Transferred to Pesháwar, in the like capacity, he accompanied the force sent to put down the fanatics of the Black Mountain, and took part in the dramatic destruction of the fastness of Malka-Sitána. After a short furlough in England, Taylor returned to the Punjab, and obtained the pleasant post of Commissioner (Prefect) of the Ambála Division. Less expert in the arts of peace than in those of war, he passed a troubled time at Ambála, and was finally transferred to the neighbouring Commissionership of Amritsar. While here he had the honour and gratification to receive from Lord Northbrook the offer of political employment as resident at the court of Sindhis, Maharája of Gwalior, which offer, however, he elected to decline. Early in 1877 he retired; but, before leaving the Punjab, he was entertained at Lahore, where a public banquet was given in his honour, and many of his old friends assembled round him for the last time. On returning to England he settled in Devonshire, the shire of his family; and he died, somewhat suddenly, on February 28, 1886. Copious testimony to his modesty, chivalry, and Christian sincerity, was borne by Sir Robert Montgomery in the *Times* newspaper; and his fellow-parishioners recorded their sense of his devotion and distinction on a brass tablet in Wolborough Church. Other memorial brasses, in India and in another Devonshire place of worship, bear a long inscription from the pen of Gen. R. MacLagan, in which the story of his life is admirably epitomised.

Of the religiosity—somewhat aggressive and fanatical—which Taylor shared with Edwardes and other of his colleagues, this is not the place to speak. The careers of an earlier race of Anglo-Indians—Wellesley, Elphinstone, Metcalfe, &c.—are enough to show that men could be brave, devoted, and successful without this element of character. In other respects the evangelising zeal of the Punjab Puritans has produced but small results. Like Mr. Greetheart, of the *Pilgrim's Progress*, they were more distinguished for quelling giants and slaying wild beasts than for paving the Valley of Humiliation or lighting the Shadow of Death. But their countrymen should not soon forget their great services and their noble lives.

H. G. KERN.

NEW NOVELS.

The Rebel Rose. In 3 vols. (Bentley.)

Peccavi. By Emily F. D. Osborn. (Sonnenschein.)

Robert Holt's Illusion. By Mary Linskill. (Ward & Downey.)

The Lassies of Leverhouse. By Jessie Fothergill. (Hurst & Blackett.)

Sunny Fields and Shady Woods. By Madame de Gasparin. (Sampson Low.)

The Argonauts of North Liberty. By Bret Harte. (Spencer Blackett.)

First and Last. By Ella James. (London Literary Society.)

Tin. By Edward Bosanketh. (Fisher Unwin.)

PERHAPS the most surprising thing in contemporary literature is the political novel. Who reads it? To the "young person"—who is commonly supposed to be responsible for the mental consumption of two-thirds of three-volume fiction—it must be as Hebrew. To the lover of sensation and manifold incident it must be as caviare. To the ordinary male, who every morning religiously reads his "leader" and "political summary," it must be as unappetising as the proverbial cold mutton. As for the reviewer—it is to him as the Dead Sea Apple—almost, if not quite, as fearsome as its Irish rival with its two-thirds of Home-Rule padding. Perhaps the dreariest fate that could overtake the lover of literature would be confinement to a south-coast watering-place out of the season, with nothing to read but reports of electioneering intrigue and lobby gossip involved in a hotch-potch of fictitious narrative. It is, therefore, to the credit of *The Rebel Rose* that it is by no means a wearisome novel, although it deals with parliamentary details to a disastrous extent. The heroine, who is very nearly an original creation—who just falls short thereof, indeed, by an indeterminate yet distinct lack of the final vivifying touches—is a charming young woman whose specialty is her claim to wealth and honour through her descent from the royal Stuarts. She is, in a word, the representative of Mary, Queen of Scots, and is theoretically a claimant to the throne of her ancestors. This remarkable young woman—a cross between a lady-horsebreaker and Queen Mary, as she is described by a disinterested spectator in the opening sentence of the story—appears in the House of Commons in a long stiff bodice with a sort of modern adaptation of the old-fashioned stomacher; with rosary and cross hanging from her girdle; with bonnet peaked in front and edged with large jet beads, with full lace ruffle—"all harmonising with a face startlingly Stuart in outline." This modern representative of the White Queen, the Hon. Mary Stuart Beaton, as she is called, has for guardian and chaperon an elderly Anglo-Austrian officer, General Falcon, who always addresses her as Madame, and deferentially treats her in all respects as a princess. The only attempt at tragedy, unless it be the dramatic death from apoplexy of Lord Saxon at an awkward moment for Lady Saxon and "the liberal leader," is afforded near the close of the third volume, when General Falcon practically abducts Miss Beaton and endeavours to force his witless love upon her. The plot is a very poor one, and the whole story is a mixture of absurdity dished up with stale political sauce. In the end the Rebel Rose very sensibly discards her royal assumptions and marries Lord Rand—I mean, Mr. Bellarmin, the fiery young Tory Democrat. The political personages are very thinly disguised: Sir Victor Champion, the Liberal leader; Lord Saxon, his Whig lieutenant; the Tory leader, the Marquis of Bosforth; Sir Rowland Chase; Lord de Carmel, the late Conservative chief; and so forth. There is something theatrical, unreal,

about the whole story. Not that such a personage as the "Rebel Rose" is impossible, or that social intrigues do not play an important part in the minor phases of parliamentary life; but, after all, the House of Commons is not a mere assemblage of noodles with a sprinkling of scheming duchesses, countesses, and leaders of parties. The *Rebel Rose* may be recommended to the unsophisticated country cousin, who, after perusal of it as a story, will preserve it as an excellent guide to the "House."

If the title of Miss Osborn's novel might be taken as a personal confession in connexion with her authorship, the critic could benignly reply, "Well, well, let bygones be bygones—but don't do it again." It is not Miss Osborn, however, who cries *peccavi*, but a headstrong young woman named Milly Devereux, who, after jilting a wealthy lover in the person of Mr. Tomkinson, comes to grief with a *roué*-husband named Dering. The main interest of the story is centred in the struggles of Charlie Devereux and his wife Ruth after they have been cast adrift by the rich, but miserly and cross-grained, old uncle, John Falconer. The story recalls a kind of novel which has long ceased to be the vogue; but mere oldfashionedness would not matter if there were originality of plot, vigour of narration, and pleasing style. Unfortunately none of these essentials is fulfilled. There is not an interesting leading character in the book. Ruth is an amiable creature; but the "hero," her husband, is an incapable fool, and supremely selfish. The miserly uncle is, of course, stock property. On the whole, I fear that *Peccavi* is as little likely to make its author famous as *Fetters of Gold* to reinstate the broken fortunes of Captain Charles Devereux, late of the —th Hussars, and for a time producer of "light literature."

Miss Linskill's writing has always a charm about it. She has lived so long by the north-country shores, whose life she describes so well, that the salt breath of the sea and the fresh moorland wind breathe through and animate her pleasant tales. Her faculty of description, indeed, is perhaps surpassed by none, mainly because she does not describe, but suggest. Here, for instance, is all that is necessary for a mental picture of Stonebeck Gill. Not a word is wasted; every epithet is not only apt, but the most apt.

"Presently, by a turfy track leading down from the moor, he comes to a kind of ravine. A noisy sienna-coloured beck runs over the stones that lie at the bottom of it; rugged scaurs, grey and yellow and red, rise up on either hand; stunted trees and whin-bushes fringe the top; a few hazel-trees grow near the water; there is abundant bracken; and here and there a purple foxglove, here and there a patch of spreading coltsfoot."

Again, the effect of such a passage as the following, introduced incidentally, and not by way of descriptive padding, is unmistakable:

"Behind the long black rocks day was coming up out of the sea; grey, ghostly sails were moving slowly against the horizon; there was a splash of wavelets on the beach; a solitary sea-gull hovered on the edge of the cliff. . ."

In the delineation of certain types—strong, simple natures, of either sex—Miss Linskill is also more than ordinarily excellent. The

fault of her writings is a frequent tendency to make her humble personages dress and talk in an impossible fashion—indeed, solecisms of this kind are a distinct characteristic of Miss Linskill's fiction. Sometimes these solecisms are so oddly introduced that one is inclined to wonder if the author finds the usual run of coast-folk so unfitted for romantic treatment that she has perforce to "brighten them up." The volume under criticism consists of three tales: one of considerable length, called "Godwyn"; "Robert Holt's Illusion"; and a short tragic idyll—if the conjunction be permissible—entitled "Raith Wyke." The first is a somewhat dull, though well-written, story. In the second, Miss Linskill has in Robert Holt and Hester Shepherd characters after her own heart—the woman of infinite love and forgiveness, the man of wayward impulse and strong passions, but loyal and even noble at bottom. It is one of the author's best tales. In "Raith Wyke" the "pity of it" will bring tears to the eyes of a sympathetic reader; but the pathos is genuine, there is no malingering, as in so many stories of the kind. None of the tales is new; and the last, if I mistake not, appeared so far back as thirteen years ago.

Miss Fothergill's new book is also a reprint of old matter, but the result is less agreeable than in the case of Miss Linskill. The author of those charming novels, *The First Violin* and *Probation*, could hardly do otherwise than write well and pleasantly; but *The Lassies of Leverhouse* is—well, the author should have been content with its serial appearance in the *Bolton Journal*. Not that the story is an unworthy one; the objection is that it is simply much below the literary level of the books wherewith Miss Fothergill has made her deservedly high reputation. The Howarths, the lassies of Leverhouse, are a pleasant family; and it is something to be thankful for to have associated for an hour or two with real people, even though the narrative of their sins, follies, and virtues be as uneventful and unexciting as a day's roach-fishing in a midland stream.

It is now many years ago since the Comtesse Agénor de Gasparin—or M^{me}. de Gasparin, as she is known to the world of readers—first obtained a widely extended English audience by her *Near and Heavenly Horizons*. It is strange that her most charming book, *Dans les Prés et sous les Bois*, has so long remained untranslated. Probably the fact is due to the circumstance that most of the contents of that volume appeared separately in magazines and journals. Although the emotion is occasionally merely sentimental—to use the word in its common acceptation—it is in the main as genuine as it is gracious in expression. Ten episodes make up the volume, every one of them well worth reading. The ardent religious spirit which dominates the book is so free from anything sectarian, or narrow, or offensive, that none save a bigot could resent its continual intrusion. M^{me}. de Gasparin may best be described as an impulsively fervent evangelical Richard Jefferies. She has the same keen love of nature and thorough understanding of the life of the fields and the woods, and, if too diffuse, has a rare faculty for exquisite description. "Mar-

jolaine," "The Slippers of Venus," and "Serinette," are beautiful little *contes*, and in "Our Great Grandfathers" a deeper note is touched than is usual with this author. The translation might have been considerably better. It is faulty in parts and inadequate in others; but neither for the English rendering nor for the title is the author—as she has already assured readers of the ACADEMY—responsible.

In *The Argonauts of North Liberty* Mr. Bret Harte has broken new ground. His narrative is primarily the story of a Puritan girl belonging to a wretched little Presbyterian community in Connecticut—a prim, prude-like "daughter of grace," but with the dormant passions of a Lucrezia Borgia and the readiness to abandonment of a *Lais*. Whether such a character as that of Joan, in such an environment, and in the circumstances described by the author, be possible is a matter of extreme doubt. That Mr. Bret Harte, however, has made a thrilling romance out of the impassioned wantonness of the prim daughter of Deacon Salisbury is beyond question. Her first husband, Blandford, strikes me as a somewhat shadowy creature; but Dick Demorest, the lover with whom she had such fantastic antenuptial dalliance, is real flesh and blood. It is one of the author's best stories, and, to my mind, is none the worse for the fact that there is so complete a change of characters and scene.

If there be any amusement derivable from *First and Last* it must be on account of its extraordinary style and its innumerable solecisms. I doubt if there be a single correctly written page in the volume; there is certainly not a well-written one. The story itself is foolish and sentimental to the last degree; and if it were not that the author is manifestly very young, or, at any rate, very inexperienced, the best advice that could be given would be for Miss Ella James to discontinue a profitless pursuit. But crudeness of thought and style can be outgrown, so perhaps some day Miss James may write a readable book. When she begins it, may it be with the determination to limit herself to, say, one-hundredth of the French and Latin phrases and words wherewith she sprinkles the pages of *First and Last*! To find one's way through ever-recurrent confusion of the tenses, I may add, is a more laborious and disheartening task than to perceive the clue in the most complicated of mazes.

Tin is a story of the Cornish mines. It is indifferently written, and can, I should think, have none other than a local interest.

WILLIAM SHARP.

SOME PHILOSOPHICAL BOOKS.

The Creator and what we may know of the Method of Creation. The Fernley Lecture of 1887. By W. H. Dallinger. (Woolmer.) Mr. Grant Allen, in one of his clever little stories, describes the mental agony experienced by a pious naturalist when he comes across a fossil which bears convincing testimony to the truth of the evolution theory. It seems to him that in presence of this fearful fact all his previous moral and religious beliefs must go by the board; and he goes home to his wife in a truly pitiable condition, whence he is gradually rescued in part by her good sense. Dr.

Dallinger is, like the Prof. Milliter of the story, at once a biological specialist and a minister of religion; but there is no appearance of his ever having been troubled by the same dilemma. At once a fervent Theist and a thoroughgoing evolutionist of the Darwinian school, the development of species through the survival of the fittest in the struggle for existence is the "method of creation" hinted at in the title of his lecture; and in a passage more remarkable for good logic than for good grammar (pp. 77, 78), he maintains that the origin of man offers no exception to the general rule. So clear an expression of adhesion to the new doctrine has great importance, coming as it does from one whose scientific competence and religious orthodoxy are equally above suspicion; and it will, let us hope, carry due weight with those to whom it is principally addressed. But no work with the microscope, however patient and successful, will supply the place of philosophical training; and that Dr. Dallinger does not possess such a training, that he cannot walk without stumbling on the slippery paths of metaphysical reasoning, nearly every page of his lecture too painfully shows. At the very outset we find it asserted that "because we can act and produce phenomena, we infer that all phenomena were inevitably produced by some transcendent but equivalent act of conscious power." Passing over the complete illegitimacy of such a generalisation, the underlying assumption may fairly be construed as equivalent to an acknowledgment of human free-will. But subsequently (p. 58) Dr. Dallinger speaks favourably of the hypothesis according to which miracles are the result of natural laws so arranged from the beginning as to bring about an apparent break in the order of nature at a particular moment. Now to provide for such an occurrence all the human actions antecedently connected with it must have been accurately foreseen by the Creator—a supposition absolutely incompatible with that free-will which gives us the primary assurance of his own existence. Pursuing the subject of causation, we soon light on the expression "an infinite cause," which is a *contradictio in adjecto*, since any cause *plus* in effect must be greater than the cause alone. In other words that which existed before the creation of the world could not have been infinite, since it was capable of increase. Again citations are multiplied to show that in the opinion of good authorities there can be no causal action between mind and matter (or motion); and the antithesis between them is pressed home to the great discomfiture of materialism, while it is assumed throughout that organic adaptation is an evidence of the action of mind on matter. Finally, it appears that "a 'mind' that is not a mind in any sense as [sic] we know it, is, to us, nothing" (p. 74); and that "mind is inseparably associated with neural matter" (p. 82); whence the obvious inference seems to be that the Creator has a brain. But who designed that brain? After all, it would be more interesting to know what in Dr. Dallinger's opinion is the bearing of the new scientific ideas on the more specific doctrines of orthodox Christianity: what, for example, he would say about a work issued under the auspices of his own religious body, the Rev. J. Fletcher's *Rational Demonstration of Man's Corrupt and Lost Estate*, as illustrated by Darwin's *Descent of Man*.

The Ethical Import of Darwinism. By Jacob Gould Schurman, Sage Professor of Philosophy in Cornell University. (Williams & Norgate.) So far as one can judge from this little volume, the author is a clear-headed, well-read, and conscientious scholar, rather than an original or penetrative thinker. The book is dedicated to Dr. Martineau; and, coming from an old pupil of that theologian, it

starts from a position rather hostile to Darwinism. In the historical sketch there is, perhaps, a tendency unduly to minimise Darwin's special contribution to the theory of evolution, and to magnify proportionately that of his predecessors. It is misleading to say that, "if our agnostic scientists reject the theology of Aristotle, they will give him credit at least for his idea of cosmic development of a world subject to evolution" (p. 48).

Who would suppose from reading this that Aristotle believed in the eternity and immutability of organic species, that he resolutely put his foot on the evolutionist hypotheses of his predecessors? The often-repeated, but sufficiently unmeaning, assertion that Darwin was anticipated by Empedocles, naturally meets us again in these pages. The notion that the different parts of the organism, such as the head, arms, legs, &c., were separately formed by spontaneous generation, and afterwards coalesced into a complete animal, seems sufficiently unlike the notion that they were formed by differentiation from a homogeneous lump of protoplasm. On this subject, Prof. Schurman should study the excellent paper, reprinted by Ed. Zeller, in the third series of his *Vorträge u. Abhandlungen*. With regard to the more immediate subject of his treatise, our author holds that Darwinism really favours one ethical theory no more than another; but, finding that it is (although, in his opinion, accidentally) associated with the cause of utilitarianism, he devotes a whole chapter to a sharp attack on that doctrine, which would carry more weight were it not considerably weakened by the admissions with which the volume concludes. Darwin's own speculations as to the genesis of morals may safely be abandoned to the tender mercies of his critic. The attempt to derive moral distinctions from the habits and instincts of animals was an enterprise doomed to failure, because moral conduct can only be conceived as conscious obedience to law, in other words, as a rational act; so that its origin and growth can only be studied in connexion with the origin and growth of reason as a whole. Nevertheless, the Darwinian theory exercises a certain regulative and limiting function in relation to ethical theories. It proves that no standard of conduct can be permanently upheld the observance of which does not further the vital interests of humanity, and those alone—the preservation and propagation of our race in the only world that we know. This is why it has been welcomed by utilitarians as a natural ally. Prof. Schurman's last chapter, although the most interesting of the work, is but loosely connected with his main subject. It deals with the history of the family; and, while rebutting the theory that promiscuous intercourse was a necessary or universal phase in the evolution of the sexual relations, it brings facts to show that chastity was and is a virtue absolutely unknown to certain tribes. Our author fully admits that the virtue in question cannot be intuitively recognised as such, but clings to the notion that morality must have an intuitional foundation of some kind. It is, in his opinion, the business of history and observation to ascertain "the number and the nature of the primitive and universal moral intuitions" (p. 256). The enterprise seems a tolerably hopeless one; and the result, so far, is more favourable to Prof. Schurman's opponents than to his allies.

Miscellanies, Vol. II. *Essays, Tracts, or Addresses, Moral and Religious*. By F. W. Newman. (Kegan Paul, Trench & Co.) The papers collected in this volume extend over a period of forty-five years, the earliest being dated 1841, and the latest 1886; but by far the greater number were written between 1868 and 1878. Prof. Newman fears that they will not

be much read by the English public of the present day; and there are good grounds for his apprehension. Such a prognostic implies no disrespect either for the author or for the public. A generation ago, Prof. Newman had a great work to do, which was the emancipation of England from the evangelical theology; and he did it so effectually as to make himself superfluous. An anecdote told in this volume will well illustrate what is meant:

"I was certainly startled when confronted (perhaps for the first time in my life) with a thorough-going Calvinist—an old clergyman of the Anglican Church. The moment I was in his company he came up to me abruptly and said: 'Mr. N.! I have a question to put to you. If you were God, what would you do?' I was so taken by surprise that I merely replied: 'The hypothesis is so strange that I know not what to answer.' In another moment I should have said that I needed Divine wisdom to predict Divine action; but before I could get this out, he resumed the discourse himself, thus: 'Oh, nothing is easier. The answer is on the surface. If you were God you would seek your own glory'" (p. 367).

It is largely due to the labours of Prof. Newman that nobody in the present day would even dream of such an answer as the old clergyman's. So violently, indeed, has the tide of rationalism swept along that at the present moment Prof. Newman seems to find himself more in sympathy with his orthodox opponents than with those who have pressed his own principles to what they thought their logical conclusion. But, in fact, his own creed is such as to isolate him from all parties alike. A fervent and even fanatical Theist, without any faith in human immortality, his true place is to be found among the old Stoics, whose thorough-going optimism he also shares—an optimism which, perhaps, has for its necessary foundation the vigorous and inexhaustible vitality of this octogenarian sage. Apart from other interests, these essays would well deserve to be studied for the sake of their style; only, as Warrington says, "the people in this country don't understand what style is." Least of all can they appreciate a style the principal charm of which lies in the absence of all effort and pretence, in the perfect clearness, sincerity, and seriousness of thought that it expresses. One paper, the "Reply to a Letter from an Evangelical Lay-Precacher," shows still higher qualities than these, and deserves to rank with Spinoza's great epistle to Albert Burgh, as a model of austere and scathing intellectual eloquence.

Ethical Forecasts: Essays. By William F. Revell. (Kegan Paul, Trench & Co.) These "forecasts" consist of four agreeably written essays. The first insists on the necessity of testing the teaching of religion as we test the teaching of science; the second discusses the probable nature of the religion of the future; the third deals with "causation in morals," and the last with "the safeguards of morality." The essays are thoughtful and easily read—perhaps, considering the difficulty of the questions they discuss, too easily read. We are instinctively suspicious of the philosopher whose reasonings require no particular effort for their comprehension. In his discussion of religion, Mr. Revell ignores the point that many minds will deny that he treats of religion at all. They will object that religion, if, indeed, there be such a thing, is given as well as sought for; and that any discussion of it which ignores this is futile. Religion is primarily a faith or belief about what is unseen. It is either this or nothing; and only confusion is produced when the fact is not recognised. We sympathise on the whole with Mr. Revell's attack on Prof. Drummond; but, when he accuses Prof. Drummond of "leaving the spiritual world in the region of hypothesis," we think that, like Prof. Drummond, he misunderstands the spiritual

world; for the present it must be "in the region of hypothesis." The essay on "Causation in Morals" refuses to consider the question whether causation in the physical world is a reality. "With causation would also go invariability of sequence itself, since an invariable sequence means a sequence that cannot be varied, and not simply an unvarying sequence." But Mr. Revell cannot prove the last half of this statement. We can see no reason why "an unvarying sequence" must be "a sequence that cannot be varied." At the same time we agree with Mr. Revell's declaration, "Do what I will, I cannot rid myself of the conviction that causation is a veritable fact, and means more than succession and contiguity and sequence." But if causation must rest on such an irresistible conviction, why not moral responsibility also?

Faith and Conduct. An Essay on Verifiable Religion. (Macmillan.) The anonymous author of this work describes himself as "a lay member of the English Church." It may be briefly described as a defence of what used to be called "natural religion," and covers much the same ground as Dr. Martineau's recent work on that subject. It is unfortunate for one who is by his own admission an amateur in philosophy that his treatise should appear almost simultaneously with that of the veteran theologian. The latter is an amusing book to read, whatever we may think of its arguments, whereas the "layman's" volume, though written in a clear, crisp, epigrammatic style, is somewhat dull, and will certainly convince nobody who is not already convinced. The leading *motif* may be described as an attempt to reclaim and utilise for the traditional theology Mr. Matthew Arnold's celebrated definition of God—"the Power not ourselves that makes for righteousness." According to this author the moral law can only be understood as a direct revelation of God to the human conscience; and the inward happiness that accompanies its fulfilment points to a similar supernatural interposition. He knows that there are ethical theories professing to explain moral phenomena by purely natural causes; but he seems to be very imperfectly acquainted with their contents, and dismisses them after a very perfunctory examination. His own answer to the question—"How can we know what is right?" (p. 59) is singularly weak and evasive. When we ask for bread he does not even give us a stone, but a pinch of dust. As to the contention that right conduct gives happiness, it is virtually retracted in the chapter on "The Future Life," where he argues quite in the traditional style that, as many good people die in misery, there must be some compensation for them hereafter. This is not "verifiable religion," whatever else it may be. The argument that belief in God is necessary as a "practical postulate" of morality has been before the world for a hundred years, and has gained no ground in that time. *Faith and Conduct* will not increase its chances of success.

NOTES AND NEWS.

WE understand that the second series of *Essays in Criticism*, by the late Matthew Arnold, which is announced by Messrs. Macmillan, will consist entirely of literary papers that have already appeared in magazines. The selection was made by the author himself last January.

MRS. OLIPHANT'S biography of Principal Tulloch will not be published, as has been stated, within a few days. It will not appear, we hear, before October, if even then.

MESSRS. KEGAN PAUL, TRENCH & Co. announce for immediate publication, *Authority*:

a Plain Reason for joining the Church of Rome, by Luke Rivington. It is understood to contain an exposition of his own reason for leaving the English Church, and also to deal with Canon Carter's new book on "The Roman Question."

A SECOND series of Carlyle's Letters, edited by Prof. C. E. Norton, will be published shortly by Messrs. Macmillan, in two volumes. The period covered is from 1826 to 1835.

MESSRS. FIELD & TUER, of the Leadenhall Press, the original publishers of Mr. Eric Mackay's *Love Letters by a Violinist*, are about to issue a new volume of poems by the same author.

THE next volume in the series of "Twelve English Statesmen" will be *Henry II.*, written by Mrs. J. R. Green.

Contemporary Medical Men, edited by Mr. John Leyland, with many portraits, will shortly be published at the office of the *Provincial Medical Journal*, Leicester.

THE Royal Academy of History of Madrid has undertaken the publication of the recently discovered palimpsest of the *Lex Romana Visigothorum*. Facsimiles will be given of the MS., and its deficiencies supplied from the edition of Haenel. The general editors are Fernandez-Guerra, Cárdenas, and Fita, with J. Muñoz to assist in palaeographical difficulties.

THE council of the Society of Arts have awarded a silver medal to Sir William Wilson Hunter for his paper on "The Religions of India," which attracted so much attention when read before the society in February of this year.

THE seventy-eighth annual meeting of the Swedenborg Society was held on Tuesday, June 19. The committee's report states that 2854 volumes of the society's publications have been delivered during the year, of which 35 were in Welsh, 27 in Latin, 5 in French, 1 in Polish, and 3 in German. Seven hundred volumes have been presented to free libraries and other institutions, to clergymen and others. The first volume of the Swedenborg Concordance, by the Rev. J. F. Potts, has been completed. In Italy a work is in preparation on Swedenborg, "biographical, expository of his doctrines, and critical." A friend to the society, residing in St. Petersburg, has received copies of the Life of Swedenborg, and of the Chapter on the Ten Commandments from the True Christian Religion, both in Russian, which he is distributing.

THE following is the text of the operative section of the American bill on international copyright, as passed by the Senate and now before the House of Representatives:

"No person shall be entitled to a copyright unless he shall, before publication in this or any foreign country, deliver at the office of the Librarian of Congress, or deposit in the mail within the United States, addressed to the Librarian of Congress, at Washington, District of Columbia, a printed copy of the title of the book or other article, or a description of the painting, drawing, statue, statuary, or a model or design for a work of the fine arts, for which he desires a copyright, nor unless he shall also, not later than the day of the publication thereof in this or any foreign country, deliver at the office of the Librarian of Congress, at Washington, District of Columbia, or deposit in the mail within the United States, addressed to the Librarian of Congress, at Washington, District of Columbia, two copies of such copyright book or other article, printed from type set within the limits of the United States, or in case of a painting, drawing, statue, statuary, model, or design for a work of the fine arts, a photograph of the same. During the existence of such copyright the importation into the United States of any book or other article so copyrighted shall be, and

it hereby is prohibited, except in the cases specified in section twenty-five hundred and five of the Revised Statutes of the United States, and except in the case of persons purchasing for use and not for sale, who import not more than two copies at any one time, in each of which cases the written consent of the proprietor of the copyright, signed in the presence of two witnesses, shall be furnished with each importation. All officers of customs and postmasters are hereby required to seize and destroy all copies of such prohibited articles as shall be entered at the custom house or otherwise brought into the United States, or transmitted to the mails of the United States. In the case of books in foreign languages, of which only translations in English are copyrighted, the prohibition of importation shall apply only to the translation of the same, and the importation of the books in the original language shall be permitted."

We hear that, though a majority of the House have expressed a favourable opinion of the bill, there is little hope that it will be taken up out of its order. It is expected, however, that it will be passed in the December session, after the presidential election has been determined.

Correction.—Sir Richard F. Burton writes to correct a slip in his review of Graham and Ashbee's *Travels in Tunisia*, published in the ACADEMY of last week. The Egyptian bibliography there referred to (p. 406, col. 1, l. 41) is, of course, that compiled by H. H. Prince Ibrahim Hiluy, of which, by the way, the second and concluding volume has been issued this week by Messrs. Trübner.

THE FORTHCOMING MAGAZINES.

MR. HENRY JAMES's new story, dealing with literary life in London, will be begun in the July number of the *Universal Review*.

THE *Reliquary* for July will contain: "Armorial Ledger Stones, Holy Trinity, Hull" (illustrated), by D. Alleyne Walter; "Pedigrees from the Plea Rolls," by Gen. the Hon. G. Wrottesley; "Two Mediaeval Chalcies" (illustrated), by T. M. Fallow; "Notes on the Great Fire of London," by J. E. Price; "The Norman Porches of Yorkshire—Brayton" (illustrated), by J. Romilly Allen; "Recent Discoveries at Jerusalem," by the Rev. J. Hirst; "The Blackfriars of Norwich," by the Rev. C. F. B. Palmer; and "The Retreat of 1745" (illustrated by plans), by Chancellor Ferguson.

THE *Century* for July will contain: "Pasteur and his Granddaughter," from a painting by Bonnet; "Lichfield Cathedral," illustrated by Joseph Pennell; "The Steppes of the Irish," by George Kennan; "The Career of the Confederate Ram *Albatraz*," "Dreams, Nightmares, and Somnambulism," by D. Buckley; and "Sinai and the Wilderness," by E. L. Wilson.

Scribner's for July will contain an article by Prof. T. D. Seymour, of Yale, on "Life and Travel in Modern Greece," illustrated by Mr. Frank Millet. Mr. R. L. Stevenson's paper in this number is entitled "Popular Authors."

Time for July will contain: "Actresses as Actors," by Mr. Schütz Wilson; "Diplomacy," by a Secretary of Legation; "French Journalism before the Empire," by Tetta Blaze de Bury; "Immortality," by Prof. Knight, of St. Andrews; "That Dreadful Season," by Norman Pearson; together with papers on "Potsdam" (illustrated), the "Trouble with Thibet," "Labour Representation," &c.

Two new serial stories will be commenced in the July number of *Little Folks*—the one, entitled "Little Oddity," by the author of "Little Empress Joan," &c.; the other, "King Penguin Land," by Theo. Gift. Both these stories will be illustrated—the former by M. E. Edwards, the latter by J. Finnemore.

EARLY in July Messrs. Roper & Drowley will commence to publish a new literary journal—the *Writer and Reader*—which is intended to form a link between readers of all classes of books and their authors.

UNIVERSITY JOTTINGS.

MR. ROBERT SEYMOUR CONWAY—whose essay on *Verner's Law in Italy*, originally written as a dissertation for the second part of the classical tripos, was reviewed in the ACADEMY of February 4—has been elected to a fellowship at Gonville and Caius, Cambridge—the college, we may add, of Mr. E. S. Roberts and of Prof. Ridgeway.

DR. JOSEPH WRIGHT has been appointed Taylorian teacher of German at Oxford, in succession to Dr. A. A. Macdonell, now deputy-professor of Sanskrit.

MR. E. J. BROWNE has been appointed resident university lecturer in Persian at Cambridge for a term of five years.

THE syndics of the Cambridge Press have undertaken to publish, in ten volumes demy quarto, the collected mathematical papers of Prof. Cayley.

WE regret to record the death of the Rev. R. L. Clarke, fellow and librarian of Queen's College, Oxford, who had been ill for more than two years past.

WE learn from the *New York Critic* that a department of journalism is to be opened next term at Cornell University, under the charge of Prof. Brainard Smith, who was himself at one time a newspaper man. Prof. Smith will lecture to seniors, juniors, and post-graduates, on the condition of newspaper work in the great cities. He will also act as managing editor of a staff of students organised like that of a daily paper, and give instruction in editing copy, condensing it, preparing it for the printer, and in writing head-lines.

THE Government Bureau of Education in the United States is issuing "Circulars of Information" for the benefit of the public, two of which, for the year 1887, are before us. The first is an account, by Dr. Herbert B. Adams, head of the department of history and political science in Johns Hopkins University, of the history of William and Mary College in Virginia, interesting as the second institution for the promotion of higher education in North America, coming next to Harvard in date of foundation, and the earliest institution of the sort in the South. William and Mary College suffered its full share from the results of the Civil War, and has long been in a declining condition; but the present treatise is less a plea for its reimbursement (a subject publicly mooted more than once) than an account of the course and influence of the higher education in Virginia and the South generally, the need of popular support for its maintenance, and more specially the revival of political education as a definite branch of study.

THE second circular, from the pen of the same author, is of much greater bulk (299 pages as compared with 89), and deals with the Study of History in American Colleges and Universities. It begins with Harvard, as the oldest, tracing the historical methods pursued there from the foundation down to the present time, and does the like successively for Yale, Columbia College, Michigan University, Cornell University, Johns Hopkins University, and the four colleges for women—Vassar, Wellesley, Smith, and Bryn Mawr. Then the special study of American history in the various schools, colleges, and universities is surveyed in a single chapter, followed by another treating of

Washington High School separately. A final chapter, by another writer, Carroll D. Wright, on political education, and a set of statistical tables, close the number. Both circulars have illustrations, meant rather for utility than adornment, being chiefly representations of class-rooms and reading-rooms, showing what arrangements are made to facilitate study and reference.

ORIGINAL VERSE.

ON THE DEATH OF THE EMPEROR FREDERICK.

Not only on the battle-field
With wonted courage thou didst wield
Thy sword of might,
When cruel sickness laid thee low,
Another weapon thou couldst show
In thy last fight.

For, though 'tis Death that wins, some say,
We cannot reckon thee to-day
Weak and discredited;
Thou hast but left this lower sphere,
Death cannot follow; he is here,
But thou hast found
A vantage spot he cannot tread,
Thy valiant spirit, upwards led,
Gives Death defeat.

Three months of power and of pain,
And we may grieve thy life, thy reign,
Not here complete;
Thy eagle soul has soared above
These lower plains where Death can rove;
Thou hast a name,
Glorious among the warriors bold,
The heroes of the days of old
Thy kinship claim.

B. L. TOLLEMACHE.

OBITUARY.

DR. JAMES FREEMAN CLARKE.

THE death is announced of James Freeman Clarke, on June 8, in his seventy-ninth year.

Dr. Clarke's name is intimately linked with the Transcendentalists of New England; for, although he can hardly be described as one of the leaders in that movement, he was in many ways so closely connected with its leaders, and was so imbued with its spirit that, when its history comes to be fully written, it will be found that his influence, though quiet, was far from insignificant. He was one of the original members of those social gatherings of liberal thinkers which were popularly known as the Transcendental Club; but, said Dr. Clarke, they called themselves "the club of the like-minded, I suppose, because no two of them thought alike." In other ways he took a share in the same work. He translated De Wette's *Theodor* for the series of "Specimens of Foreign Literature," with which, in 1838, George Ripley strove to transplant German philosophy into America. Later, from 1840 to 1844, he was a frequent contributor of prose and verse to *The Dial*. He was also (so Mr. G. W. Cooke states in his interesting essay on *The Dial*) the author, jointly with Christopher P. Cranch, of a work not published, and not intended for publication, which represented Transcendentalism in quite another aspect. It was called "Illustrations of the New Philosophy, 1835," and consisted of humorous pictorial interpretations of selected sayings of the Transcendental oracles. Several of Emerson's phrases, made ludicrous by detachment, served the purpose readily, such as: "Standing on the bare ground, I become a transparent eyeball"; "The great man angles with himself; he needs no other bait"; "We are lined with eyes; we see with our feet"; "I expand and live in the warm day like corn and melons." Evidently Dr. Clarke was a hearty and incorruptible Transcendentalist; for a man's faith is not perfect until he can afford, on fitting occasion, to make it a subject for good-natured laughter.

Dr. Clarke was essentially a theologian and divine. Emerson abandoned the pulpit for the platform; George Ripley left it to organise Brook Farm; Parker did not leave it, but he converted it to unaccustomed purposes of social as well as religious reform. But Dr. Clarke was a clergyman from first to last. Yet the brave and many-sided man was not obscured in the clergyman. Among Transcendentalists, as well as in the unregenerate world, there were antipathies. Parker failed to appreciate Alcott, and Alcott was not an enthusiastic admirer of Parker. Margaret Fuller and Lowell said some bitter things of one another. But Dr. Clarke, like William Henry Channing, was a man with sympathies so wide that he could be the friend of all. When Parker's early heresies had offended the Unitarian as well as the Trinitarian "orthodoxy" of his day, and the persecution had reached such a depth that to befriend the outcast preacher was almost to outcast oneself, Dr. Clarke was not to be deterred from exchanging pulpits with him, although he by no means agreed with the doctrines Parker was announcing. His association with others was not less intimate. While editing the *Western Messenger* (1835-39) he encouraged Emerson to allow three of his earliest poems to be printed in its pages. He was the officiating minister at Hawthorne's marriage, and, twenty-two years later, at his funeral. A similar wide-mindedness impressed itself on his literary work. As Mr. Frothingham, referring to his book on *Ten Great Religions*, says, it shows "the power of the Transcendental idea to render justice to all forms of faith, and give positive interpretations to doctrines obscure and revolting. It detects the truth in things erroneous, the good in things evil."

In conjunction with Emerson and W. H. Channing, Dr. Clarke prepared the *Memoirs of Margaret Fuller* (1852). His other works are chiefly of a religious character, and include *The Legend of Thomas Didymus* (1881)—a remarkable and far from unsuccessful attempt to "reproduce the times in which Jesus lived," to picture him and his companions and surroundings just as they appeared to his contemporaries.

The club of 1829, made famous by Dr. Holmes, has lost in Dr. Clarke one of its noblest members. He died in the fulness of time. Many of his friends had gone before, but he has left many others behind.

WALTER LEWIN.

MAGAZINES AND REVIEWS.

THE June *Livre* has two articles of a wider (by which we mean a less specially literary) interest than usual, and both are very well worth reading. The first and shortest, by M. de Contades, is a somewhat desultory but agreeable miscellany on "Les Livres et les Courses," that is to say, on the chief passages of recent French literature dealing with racing. It is illustrated with a plate of a *Reliure Sportive*. The second, and more generally interesting, is by M. Maurice du Seigneur (any relation to Jehan?) on Caricature, and is illustrated freely with unpublished designs of the highest interest from the author's collection. The examples of the *Portrait-Charge* here given from the work of Eugène Giraud (Sainte-Beuve and Flaubert) are less unfamiliar than some specimens of an artist very little, we think, known in England—Albert Coinchon. Coinchon seems to have had something of Gillray and something of Gavarni in him, which will be admitted to be an unusual combination; and his design to illustrate the *Châtiments* as given here is exceedingly remarkable. A couple of satirical sketches of Mérimée's, too, show that that master of the

pen was by no means a dunce with the pencil. It is a very interesting paper.

THE articles in the *Revista Contemporanea* for May are mostly continuations of those in former numbers. The critical observations of Fernández Merino, on the "Etymologies of the Dictionary of the Academy," resolve themselves into a discussion on the Galatians and Celts. The notes of Jimenez de la Espada on the *History of New Granada*, by Juan de Castellanos, show the worst side of the Spanish conquest. The chapters by Acero y Abad on "Ginés Pérez de Hita," deal with the genealogy and the bibliography. Adolfo de Sandoval gives some interesting particulars about the immediate disciples of St. Catherine de Siena. Francisco Pons describes some of the native libraries in Algeria and Tunis, and also the libraries and museums of antiquities of the French—so much superior to those of Spain that he asks, "Is it not to be wished that Africa began at the Pyrenees?" Catalina Garcia continues his transcript of the "Fuero of Brihuega," and F. Hardt his Madrid news. José Mareca writes on Milton, comparing "Paradise Regained" with "La Cristiada" of Fray Diego de Hojeda.

THE *Boletín* of the Real Academia de la Historia for May is chiefly occupied with some valuable Roman inscriptions lately discovered. The most important is a bronze *tessera* of Clunia giving the right of hospitality to, and fixing the names of, the consuls for the first six months of A.D. 40. There is a good engraving from a cast, and an admirable commentary on the inscription by Fernandez-Guerra. Next is an account of Arabic MSS. relating to Spain, discovered by St. Codera in Tunis and Algeria; lastly, some fresh notes on "Columbus," by Fernandez Duro and Augustin Muñoz y Gómez. The *Historia de la Enseñanza en España*, of Vicente de la Fuente, is most favourably reported on by Rada y Delgado; while V. de la Fuente himself gives only qualified praise to M. Macías's *Historia de Salamanca*.

THE CREWEIAN ORATION AT OXFORD.

WE quote the following passages from the Creweian oration delivered by Mr. F. T. Palgrave at the Oxford Commemoration on June 20, in which he refers to his two predecessors in the chair of poetry, both recently dead—Matthew Arnold and Sir Francis Doyle:

"Hoc in primis notandum, hoc exempli optimi apud Universitatem ponimus, quod Litterarum antiquam illam dignitatem et amplitudinem a iuventute usque ad exitum firmaverit. Procul ab hoc vitia illa speciosa, quae indies apud scriptores ubivis exaestuant, quibus satis videatur volubiliter aliquid chartis illinere, modo auram popularem blanditiis capient, modo in loculos nummum demittant. Optima querebat; nec protinus offerentibus se gavius est. Itaque 'multa magis quam multorum lectione' ingenium finxit; 'sincera illam sermonis Attici gratiam' neque consecutus. Homerum, Sophoclem, Pindarum, primores quoque inter antiquos, in manu semper verebat; quae amotis a schola, ab universitate, culturam animi veram sanamque nullo modo exutare posse iustissime credidit. Nec interdum bonarum litterarum oblitus est, quascunque saecula recentiora attulerint: neque haec studia solum iuvenis persecutus est. Memini equidem ipsum mihi nuper dicentem, se noctu semper perlegere Comedias Dantianae illius vere Divinae cantum: unde aethera hoc terrestri largiorem, et lumen caeli purpureum sibi non frustra vindicabat.

"Superest, ut de Poeta Arnoldo pauca quaedam at ex corde dicamus. Hunc unum recentiores inter poetas quos genuit Oxonia, praestantissimum audeo dicere. Hic,—id quod ubi de vate certo agitur, neque videmus,—vera facultas; hic vera gloria, perennis. Sincera ingenium, homo ipse,

in versibus inveniendus; his se totum tradidit; Poesi super res a musico, a pictore gestas, sceptrum iure vindicans. Sunt poete, qui arti suae, formae, elegantiae, se nimis dant: sunt qui id maxime curant, ut doceant. Has inter Symplegadas, ut ita dicam, recto cursu navigabat Arnoldus. Arte igitur, haud secus ac materia valet. 'Non illi vis, non subtilitas, non amaritudo, non dulcedo, non lepos defuit.' Opus hinc tersum, iucundum, et plane in ipsius domo, ut aiunt, non alius poete culusedam, confectum:—"puro tamen fonti." si ad summam respicias, "quam magno flumini propius." Quanta arte, coloribus quam nitidis ad pictoris exemplar, hic ruris montium amnium aspectum descripsit! Quam miro modo numina nymphas heroas, fabulis Graecis decantatos, quasi ante oculos legentium ponit! Praeterea multa: quis autem est quin in memoriam redigat Idyllia illa pulcherrima; alterum Scholaris culusedam errabundi Oxoniensis vitae deditum; alterum, in quo Thyraïdos sub nomine, amore atque ingenio pari amicum,—albi mihi que amicissimum desideratissimumque—morte ablatum conciliavit. In hoc genere supremas sibi laudes conciliavit noster. Ludit etiam aliquando amabiliter; fabulas, mythologica, amores cantavit. At Musam quodam loco pinxit suam, specie externa festivam, cilicio intus vestitam: austeram simul ac venustam. Atque hoc pro vero eius ludicio tenemus. Scripsit itaque severiora multa; inter quae Empedocleum illud carmen ipsius philosophi dignum, laudatissimum. Ast hinc maesti aliquid frequentius apud poetam invenies: audienda saepe vox illa Philomelae dulcissima; Alaudae nunquam. Sonat amore philosophiam pacem lyra eius: spem non sonat."

"Praelectorem alterum, poetam alterum, amicum alterum, eundemque mihi necessitudine coniunctum, amissum ploro. Doylii autem laudes decentius alitis linquendas: hos flores saltem spargam,—Anglum neminem, nominis, honoris, armorum Anglicorum magis studiosum, patriae dilectissimae ex imo corde amantorem, exultantem. Nec quae de virtute militari Britannica cecinit carmina, peritura credo:—pauca quidem, at Tyrtaea."

CORRESPONDENCE.

A REGISTER OF "COMMONERS" OF WINCHESTER SCHOOL.

The Palace, Salisbury: June 19, 1888.

Mr. J. S. Cotton, in his appreciative notice of *Winchester Scholars* (ACADEMY, June 16), after referring to the significant omission of "Commoners" from that book, expresses, as I understand him, a hope that the work of bringing out a list of "Commoners" may be taken in hand.

I venture, therefore, to inform your readers, and especially such of them as are of Wykehamical families, or are interested in works of this kind, that a register of "Commoners," from 1668 to the present date, has been for some time in preparation. The work will be divided into two parts—the first from 1668 to 1836, the second from 1836 to the present date. Prior to 1668, I regret to say that there do not appear to be any definite records of even the names of the commoners of the school. With the year 1668, however, commences the series of "Long Rolls," on which the names of commoners and scholars appear side by side.

The first part will consist, if circumstances permit, of a transcript of the "Long Rolls" themselves, which are in manuscript until after the commencement of this century, and which are the depositaries of many interesting facts relating to the history of the school. After-life particulars of the commoners on the rolls will be given in every case possible, and perhaps information may be added as to some of the scholars at present without record in Mr. Kirby's valuable list.

The second part, which will be published first, and which is approaching completion, consists of the names of the commoners printed from the head master's register, which was commenced by Dr. Moberly on his going to Winchester in 1836. Dr. Fearon has asked me to edit this portion of the work; and has commenced it by having had slips of the earlier entries printed and sent round to a considerable

number of old Wykehamists, asking for biographical and other details.

In all cases, for both portions of the work, as full and accurate particulars as can be obtained on the following points will be recorded, viz.: full date of birth; name and address of father; subsequent places of education, with University and other honours; degrees, commissions in the services, business and other appointments, with dates; names of works written or edited; date and name of person to whom married; and date of death.

I have to thank many who have already helped me; but there are still, I regret to say, a large number of names, even in the period since 1836, of which I have no after-life record. I appeal, therefore, earnestly to all old Wykehamists to enable me to fill up these blanks, by sending me particulars of themselves and of their contemporaries, and by referring me to likely sources of information.

Finally, with regard to the first portion, 1668 to 1836—which is my own enterprise—I shall, of course, be equally grateful for any particulars on the points already mentioned, with regard to the names; but I wish specially to ask for the loan of any "Long Rolls" prior to 1730, to compare with those which I have already, and to complete certain gaps in the series.

C. W. HOLGATE.

PARIS AND TRISTAN IN THE "INFERNO."

Stanhoes Grange, Norfolk: June 16, 1888.

In the two former letters to the ACADEMY (October 1, 1888, and Feb. 7, 1888) on the above subject I quoted passages from Chaucer and Eustache Deschamps in support of the opinion that in *Inf.* v. 67, the allusion is to the classical, not to the mediæval, Paris; in spite of the commentators, who maintain that the coupling of the classical Paris so closely with the mediæval Tristan would be unnatural.

To these I may now add the following passages (for the first two of which I am indebted to a friend), where Paris of Troy and Tristan are mentioned together in close connexion, as Helen and Iseult were in those already given.

The first is from Chaucer's *Assembly of Foules*:

"Semyramus, Candace, and Ercules,
Biblys, Dido, Tesbe, and Piramus,
Tristram, Iseude, Paris and Achilles,
Eleyne, Cleopatre, and Troylus,
Silla, and eke the moder of Romulus:—
Alle these were peynted on that other syde,
And al her love, and in what plite they dide."
(vv. 238-294)

The next is from the *Roman de Renart*:

"Seigneurs, oi avez maint conte
Que maint conterre vous raconte,
Comment Paris ravi Elaine,
Le mal qu'il en ot et la paine:
De Tristan qui la chievre fist,
Qui assez balement en dist
Et fabliaus et chancon de geste."
(Branche II., vv. 1-7: Vol. I., p. 91, ed. Martin.)

The third is from a thirteenth-century MS. belonging to the Ashburnham Collection, from which extracts have been printed in the *Bulletin de la Société des Anciens Textes français* (1887, No. 2).

"Li cortels Tristam fu enginâé
De l'amor et de l'amisté
Ke il ont envers Ysolt la bloie.
Si fu li beau Paris de Troie
De Elaine e de Penelopé."

It is evident, from the various passages I have adduced, that the mention of Paris and Helen, and of Tristan and Iseult, as typical instances of lovers whose woes were wrought

by love, was regarded in the Middle Ages as a poetical commonplace. There need be no further difficulty, therefore, in assuming definitively that Dante's allusion is to the Paris "qui de Gresse ravi Helaine," and not to the comparatively unknown hero of the mediæval romance.

PAGET TOYNBEE.

"STEERMAN."

Adelbert College, Cleveland, Ohio, June 2, 1888.

Following Mr. Paget Toynbee's letters in the ACADEMY of May 12, I would call attention to the following statements and quotations:

Ducange ed. Henschel knows not only the Anglo-Saxon *steoresman*, but also the latinised *sturemannus*, under which we read:

"Gubernator navium, Germanis Steurmann, Angli. Steersman. Liber nig. Scaccarii, p. 369: Item constituantur boni et legales homines in portibus . . . qui capiant sacramenta omnium Sturemannorum et marinellorum navium ibi applicantium."

Ducange also knows *esturmain*. In the *Glossarium Gallicum* we find: "*Estrument, Vaisseau, navire. Gl. Strumentum, [et Esturment, Pilote, Flore et Blancet, vers. 1365, &c.]*" It is evidently an error to give to *estrument* the meaning "*vaisseau*," as is done under *Strumentum*.

"Nostrum *Estrument*, pro *Instrument*, etiam dixerunt. Le Roman de Vacoce MS:

"De Constantiu lor fist bons Estrumenz baillier, Qui bien sourant par mer et sigler et vagier."

Diez, *Etymol. Wb.* 4th ed. p. 578, has:

"*Esturman* altfr. *steuer mann*. Ignaur, p. 65 (*esturmant* Fl. Bl. 1365, *estirman* Brt. ii. 226, *stieresman* G. Galm. p. 33): vom ndl. *stuurman*, age. *steorman*, engl. *steersman*. Vgl. Fr. Michel zum Ger. de Nev. p. 14. Des einfachen *estiere* *steunerruder*, bedient sich Mar. de France i. 462."

The same forms are given by Burguy in his *Glossaire*.

The form *estirman* occurs in at least two other passages of the Roman de Brut.

In Layamon's Brut we find *stermen*, i. p. 335, and *steormen*, iii. p. 136, as well as *steoresman* or *steresmon*, i. p. 57, and *steores-mon*, or *steresman*, ii. p. 75.

Jamieson's Scottish Dict., abridged ed., has: "*Sterman-fee*. s. The wages of a steersman. 'To pay vii. sh. of sterman-fee.' Aberd. Reg."

ARTHUR H. PALMER.

PROPERTY IN TITLES.

Nutfield, Surrey: June 15, 1888.

Whether Mr. T. M. Watson wrote his play to my title, or merely selected one which extensive advertising and the railway bookstalls had made very familiar to the reading public, seems to me a question beside the mark. The question at issue is not *how* he has done this thing, but whether he had a right to do it at all.

If Mr. Watson, or anyone else, will answer this question, he will confer a benefit on the fraternity of literature.

C. L. PIRKIS.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, June 25, 4 p.m. Natural History Museum: Swiney Lecture, "Plants of the Palæozoic Epoch," I, by Prof. W. R. McNab.

8.30 p.m. Geographical: "Explorations in Central Africa," by Lieut. H. Wissmann; "Christmas Island, Indian Ocean," by Capt. W. J. L. Wharton, with Illustrations by Dioptric Lantern.

TUESDAY, June 26, 4 p.m. Statistical: General Annual Meeting.

8.30 p.m. Anthropological: Exhibition of Pottery from Recent Excavations in New Mexico, by Mr. A. S. Burr; "The Nicobar Islanders," by Mr. E. H. Mann.

WEDNESDAY, June 27, 4 p.m. Society of Arts: Annual General Meeting.

4 p.m. Natural History Museum: Swiney Lecture, "Plants of the Palæozoic Epoch," II, by Prof. W. R. McNab.

4 p.m. College of State Medicine: "The Rise and Progress of Sanitary Engineering within the Present Century," by Sir Robert R. Wilson.

THURSDAY, June 28, 8.30 p.m. Antiquaries. FRIDAY, June 29, 2.30 p.m. British Museum: "The Social Condition of the Babylonians, IV., Laws," by Mr. G. Beria.

4 p.m. Natural History Museum: Swiney Lecture, "Plants of the Palæozoic Epoch," III, by Prof. W. R. McNab.

SCIENCE.

The Principles of Sound and Inflection in Greek and Latin. By J. E. King and C. Cookson. (Oxford: Clarendon Press.)

MESSRS. KING AND COOKSON are unquestionably right in holding that there is a real need for some adequate English text-book, setting forth the recent results of the comparative study of Greek and Latin. In German, these results have been collected by Brugmann and Stolz in Iwan Müller's *Handbuch*. In French, a very convenient summary has been given by M. Henry in his lately issued *Précis de Grammaire comparée du Grec et du Latin*. But the English student has been left without any means of acquainting himself with the researches which have, within the last ten or twelve years, largely modified, if they have not transformed our notions of both the phonology and the morphology of the classical languages.

It may be said at once that our authors have carried out their task with full competence, sound judgment, and great accuracy. The work makes no claim to be an original contribution to philological science. It is not the function of a textbook to put forward new speculations; and even on those points where certainty has not been reached, and new views might have been acceptable, the authors have preferred to state the most plausible theories, sometimes, but not always, indicating their own judgment. But they have used the best authorities, especially of the "young grammarian" school, and it is rarely that any important suggestion has been overlooked. They have "in great part followed the plan, and embodied much of the material, of the articles of Brugmann and Stolz"; but it would be unjust to regard this work as merely an adaptation for the English reader of these treatises. There are abundant signs of independent study; and even where the facts are already to be found in Brugmann or Stolz, the indications of the sources whence they are derived are often a welcome addition. It would be superfluous to praise the general accuracy of the work. If the excellent authorities used did not almost preclude the possibility of error, the approved scholarship of the Provost of Oriel and the Rector of Lincoln, both of whom have corrected the proofs, would be a sufficient guarantee that no slips would be allowed to pass. A critic might content himself with recording the appearance of a work which fills so serious a gap, and is sure to find wide acceptance as an authoritative text-book. But perhaps a few suggestions may be offered towards the improvement of a second edition.

In the first place, although much has been done, more might be added with advantage in the way of references to the literature of the subject. It is difficult to see always on what principle references have been given. The

book will come into the hands of many who have been unable to follow the progress of philological science. They will naturally be desirous to learn where they may find new theories or comparisons, given here *ex cathedra*, discussed and established. Unfortunately the references given are, as a rule, only to the more accessible authorities. Monro's *Homeric Grammar* and Rutherford's *New Phrynichus* are referred to repeatedly, but these are just the books which the English student is not likely to overlook. The references to Osthoff and De Saussure are more generally helpful; but it might be worth while considering whether these and the like should not be given more frequently.

One or two somewhat dubious suggestions are borrowed from Havet—a scholar more distinguished for ingenuity than for sobriety. For instance, if *jārbha* appears in Latin as *globus* (p. 136), it is difficult to see what it has to do with *vulva* (p. 137), or what is the significance of the fact that the latter word often appears in MSS. as *bulba*. No error is more common than the confusion of *v* and *b* in MSS.; but surely no scholar would lay any stress on corruptions like *cibes*, *bixit*, or *bibere* (for *vivere*), to explain the origin of the words. If it is held that *g* of *g* drops, leaving only *u*, the mention of the corrupt *bulba* is misleading. Havet is also responsible for the statement that *nepos* means "nephew" in Latin. No earlier authority for this is adduced than Suetonius (*Cass.* 83); and a glance at the context shows that Freund and his followers, even Lewis and Short, have fallen into an absurd error here. *Sororum nepotes* were undoubtedly the grand-nephews of the dictator, but that does not prove that *neposes* alone has this meaning. To Havet, too, is due the bold, but not very valuable, suggestion that *latera* is borrowed from *λάπαρα*, with assimilation to *lātus* and *lateo*. On p. 73, we find *oncure* apparently identified with *uncare*; but the two words are quite distinct, and are used of different animals. The connexion of *μῆπος* with *morosus* is surely in no way to be defended; this is one of those cases where a reference to the propounder of the connexion is to be desiderated. The important quotation from Josephus on p. 57 is unduly compressed. The place assigned to *Idus* on p. 246 will certainly lead the unwary to suppose that the *i* is short. It might have been noticed that both *pēdēs* (Plaut. *Stich.* 311) and *turbidēs* (Ter. *Trin.* 835) are somewhat doubtful; and, in any case, each is followed by a word beginning with a consonant. "The fact that Cato uses *fociem*" might have been stated more precisely, or readers might have had the means supplied to them of acquiring greater precision for themselves by a reference to *Neus.* ii. 447. Apparently the sentence on p. 360—"The form *mehē*, quoted by Quint. i. 5, 21, is noticeable"—has been displaced from its proper position at the end of the preceding paragraph; it is confusing as it stands. A note on the *κ* of *κιστός* (p. 194) would have been desirable, when it is compared with *hedera*; to a thoughtful student it might have been sufficient to insert (**χθ-ος*). And if *λοβός* is to be compared with *lop-eared*, we ought to have something about the loss of the *s* in English (*cf.* p. 140).

These points are but trifling; and it speaks

well for a book of such bulk that a careful examination of it shows so few. On the other hand, there is much which calls for warm praise. The introductory chapter is admirable; the second—though, perhaps, somewhat out of place in what is not a treatise on comparative philology—will be useful to many. The volume is handsomely, and extremely correctly, printed. In this respect, as well as in the possession of ample indexes, it has a great advantage over its German predecessors. In short, it can be recommended with full confidence to all who wish to learn the latest results of comparative philology as applied to Latin and Greek.

A. S. WILKINS

SOME BOOKS ON GEOMETRY.

The Harpur Euclid. Book I. By E. M. Langley and W. S. Phillips. (Rivingtons.)

Geometrical Drawing. By W. N. Wilson. (Rivingtons.)

Geometry in Space. By R. C. J. Nixon. (Oxford: Clarendon Press.)

THE editors of the *Harpur Euclid* state in the preface that Euclid's sequence of propositions is retained, but that some of his demonstrations are replaced by easier ones, and that much superfluous matter has been discarded from those retained. As no indications are given where changes have been made on Euclid's text, it may be well to point them out here. They are the addition of the second case to prop. 7, of the first case to prop. 35, the substitution of other demonstrations for props. 24 and 26, a slight shortening of the proofs of props. 34 and 45, and a modification of the diagram for prop. 48. Many of the propositions are followed by useful notes and exercises; and at the end there are, besides a collection of miscellaneous exercises, a short and interesting article on the classification of quadrilaterals, remarks on loci and on the methods of solution of geometrical problems. The only unsatisfactory feature of the book is the arrangement of the definitions. Take, for instance, the word rhombus. On p. 7 we are told that it is a quadrilateral which has all its sides equal; the same thing is repeated on p. 21; on p. 97 we are told that it has all its sides equal, but its angles are not right angles; and, lastly, on p. 101, that in modern works on geometry it is usual to employ the word in a wider sense than that assigned to it by Euclid. Again on p. 6, preparatory to the first proposition, an equilateral triangle is defined, and in the notes we learn that a triangle is sometimes regarded as standing on a selected side called its base; on p. 14 we are introduced to the fifth proposition, "The angles at the base of an isosceles triangle," &c., without any explanation of what an isosceles triangle is, or which of its sides is selected for the base. On p. 28, in connexion with a four-sided figure, the term diagonal occurs without previous explanation; on p. 41, we learn that a five-sided figure has five diagonals, and that of a six-sided figure, $AB C D E F$, there are three diagonals, AD , BE , CF ; on p. 64 we are told that the diagonal of a quadrilateral is the straight line joining two of its opposite angles, and that diagonals of a parallelogram are sometimes called diameters. There are one or two other terms, such as perimeter (p. 41), which should have been defined before being used. To a few of the miscellaneous exercises references are appended, in each case with a slight typographical oversight. Two, at any rate, of these references may be carried farther back. Ex. 156 is the first proposition of the fourth book of Pappus's *Mathematical Collection*, and Ex. 169 is found

in McDowell's *Exercises on Euclid and in Modern Geometry*, § 29.

Mr. Wilson's aim in writing has been twofold,

"to provide a school text-book which shall contain all that is necessary for the army examinations and be an introduction to the mechanical drawing of engineers, and to place geometrical drawing on a more sure basis as a study of great educational value."

While it should be said that in the first part of his aim the author has been more successful than in the second, it ought also to be stated that this text-book is much superior to many of the ordinary manuals of practical geometry. It gives the usual collection of problems, prefaces some of them with the principles which underlie their solution, and, what is not usual, adds the proof that the solution is correct. On p. 9 the author states that there is no simple geometrical construction by which an angle containing a whole number of degrees less than 15° can be constructed. Surely the construction for an angle of 9° is not so complicated but that it might have been indicated, especially after the problem of dividing a line in extreme and mean ratio has been solved. The construction (approximate) for inscribing in a circle a regular figure of any given number of sides is really of no practical value, and might have been omitted; and the accurate construction for the regular pentagon or decagon been inserted instead. Some of the principles by the aid of which figures are inscribed in symmetrical figures might have been elucidated more fully. They are well enough exemplified in the problems given, but a short statement of when figures are similar and similarly situated and what a centre of similitude is, would have made the methods employed clearer to a beginner. Each of the chapters of the book is followed by a good collection of exercises, and at the end there are a dozen of examination papers. The answers are given in all cases where they are numerical.

Mr. Nixon has followed up his *Euclid Revised*, which treated only of plane geometry, with a manual containing parts of Euclid's eleventh and twelfth books, and some properties of polyhedra and solids of revolution. In the opening chapter the first twenty-one propositions of Euclid's eleventh book are given much as in the ordinary school editions, but with sundry improvements. In the fourth proposition, however, which is proved in Legendre's manner, there is assumed the solution of a problem for which no previous authority can be quoted. The second chapter is on polyhedra, and embraces all the important elementary theorems whether of ancient or modern discovery. The third chapter on the solids of revolution contains also an extension of the modern geometry of lines and circles to planes and spheres, or at least an outline of such extension. It is to be hoped that the author will in a future edition expand this outline, and particularly the very brief section relating to surface spheres. The parallelism, often complete, now and then partial, between the theorems of the first and third books of Euclid and the corresponding theorems of spherical geometry is not only interesting in itself, but is valuable for the light it throws on some of the fundamental ideas of geometry. A short appendix on the geometrical theory of perspective in space, written by Mr. Alex. Larmor, concludes the work. Each of the chapters is accompanied by a considerable number of exercises to be solved, some of which, if considerations of space did not intervene, might well have deserved a place in the text. As in *Euclid Revised* the greatest possible brevity of expression has been studied, and there are no references to preceding proofs. Throughout

the book Mr. Nixon has, in connexion with several of the theorems, mentioned the names of their discoverers, but he has made one notable omission. He has nowhere even alluded to Archimedes. The treatise on solid geometry published by the Society for the Diffusion of Useful Knowledge is ascribed to De Morgan—curiously enough, for it does not betray any of the characteristics of De Morgan's style. It was written by Pierce Morton. The typographical mistake of "frustrum" for "frustum" is perhaps hardly worth calling attention to.

CORRESPONDENCE.

SAYANA'S COMMENTARY ON THE "RIGVEDA."

Bombay: May 29, 1888.

Will you let me break a lance with Prof. Max Müller, if that distinguished scholar will honour me by accepting the combat? The ground may be said to be of his own choosing.

In the preface to the sixth and last volume of his edition of the *Rigveda*, it will be found that Prof. Max Müller, in order, as he tells us, to justify his critical proceedings, cites, *inter alia*, Sayana's explanation of the words "yasyemāḥ pradiśo yasya bāhū" (*Rigveda* x. 121, 4) as a case in which changes of a bolder character than others he has been referring to are required for a restoration of Sayana's commentary. Prof. Max Müller's MS., as do also mine, virtually agree in reading here: "Yasya chemāḥ pradiśāḥ prārambhāḥ āgneyyādyiḥ konadiśa īsitavyāḥ." In the edition three changes have been made. "Prārambhāḥ" has been changed to "prāchyārambhāḥ." "Īsitavyāḥ" has been changed to "Lānāntāḥ." Lastly, what I will call a sky-lotus has been added, in the shape of the word "vā," of which there is no trace in the MSS. It is fair to add that this last change, not unnaturally, raises some little misgiving in the editorial conscience. "Lastly," Prof. Max Müller pleads, "I was driven to add a 'vā' at the end, in order to get a proper construction, though I confess that the absence of any trace of such a particle makes me doubt whether, after all, my correction is quite right."

Rigveda x. 121 is one of a number of hymns from the *Rigveda* which are prescribed for the B.A. examinations of this university. I have been engaged for some time on an edition of these hymns with Sayana's Commentary, and had, of course, to decide whether I should follow the MSS. here, or give Prof. Max Müller's restoration. How are the changes justified? I give Prof. Max Müller's own words:

"Sayana's first idea was evidently to take 'pradiśāḥ' in the sense of 'diśāḥ,' the principal regions, or four points of the compass; but he saw that he had to explain 'yasya bāhū' independently, and wishing to assign to the arms of Prajāpati the place of the principal regions, he recollects himself, and assigns to 'pradiśāḥ' the meaning of 'vidiśāḥ,' or 'konadiśāḥ,' the intermediate points of the compass."

What may be called the major premiss of this argument follows, that "the MSS., as they stand, are simply unintelligible." Let us see. To me, at least, it seems clear that Sayana begins and ends by taking "pradiśāḥ" in his text here to refer to the intermediate regions. He cites them by name (āgneyyādyāḥ). He gives a synonym (konadiśāḥ). Lastly he adds a word which specifies more closely the relation of dependence intended. The intermediate regions are Prajāpati's (yasya), because they stand at his bidding (īsitavyāḥ). The remaining word "prārambhāḥ" is put forward as an etymological explanation of the prefix "pra" in "pradiśāḥ," going to show how that word may be taken here to refer to the intermediate regions. I am not sure that I understand it. But I should be sorry on that account to

say that it is unintelligible, and still more reluctant to change it for another word. It seems to me to be dealing hard measure to Sayana to put in his mouth a word he did not use, and on that charge him with writing his commentary in the slipshod manner suggested.

So much for the idea that Sayana at any time thought of taking the "pradisaḥ" of the text in the sense of the principal regions. The reason assigned for his sudden abandonment, in the middle of a sentence, of that explanation appears to me to be equally chimerical. There is nothing in Sayana about wishing to assign to the arms of Prajapati the place of the principal regions. Sayana's comment on the clause "yaśa bāhū" is simply that the dual is used for the plural here, and that by "arms" we must understand in this context the principal regions, which Sayana speaks of, rightly enough, as "pradisaḥ" also. He gives a reason—a far-fetched one it must be said—why "bāhū" may be held to bear such a meaning. And he adds "svabhūtaḥ," precisely as before he added "īṭavyāḥ," to specify the exact relation of dependence intended by the genitive case.

If the foregoing be right, as I believe it is, have we not here one more case in which we shall ultimately have to fall back on the reading of MSS. which are only "simply unintelligible" in the sense that they have not been understood? I have reason to know that in calling attention to similar cases, as I judge them to be, in Schlegel and Lassen's *Hitopadesa*, I have seemed to some to be wanting in respect to illustrious scholars. If the remarks which have given offence were a little too vivacious in style, I regret it. But surely something is due, too, to Sayana, to say nothing of the patient copyists. I confess I think that European editors of Sanscrit texts do occasionally forget that, to quote the great commentator himself, "it is not the fault of the poet if the blind man runs his head against it."

I am not afraid of the antagonist I have provoked being too sensitive. It is very possible that Prof. Max Müller may have himself already reconsidered this passage, or had his attention called to it by others. If not, I shall hope to hear that the arguments I have brought forward have convinced him that this restoration must be abandoned. P. PETERSON.

"MOSHEH" AND "MĀSU."

Cambridge: June 18, 1883.

In a matter necessarily so doubtful as the etymology of *Mosheh* (for which Prof. Sayce refers to the Akkadian and Babylonian *Māsu*, a name of the sun god) every point must be considered which bears even indirectly upon the question. One such point is the fact that there is no certain instance of the name of a Babylonian deity ever occurring as, or in, the proper name of an Israelite. Samson, for obvious reasons, is not a case in point. Again, it is somewhat difficult to imagine at what time such a name could have been given to the great Israelitish leader, when it would have been consistent with either the faithfulness of the narrative or the carefulness of the redactor. Moreover, were it probable that these names would be so used, should we not expect well known ones, e.g., Sin, Rammānu, &c., rather than such as *Māsu* and *Savul*?

G. W. COLLINS.

SCIENCE NOTES.

PROF. K. MARTIN, of Leyden, has published, as the first part of his *Geologische Studien über Niederländisch West-Indien*, an excellent memoir on the geology of the islands of Curaçao, Aruba, and Bonaire. The geological

structure of these islands presents a striking resemblance to that of the mainland. They consist fundamentally of crystalline schists, believed to be of archæan age, associated with much diabase, and overlain by cretaceous rocks and coral formations of pleistocene and recent date. The coral limestones have become partly converted into phosphorite, by the action of infiltrations from deposits of guano. It is notable that gold-bearing quartz-veins traverse some of the diabasic and dioritic rocks of Aruba. Prof. Martin has illustrated his memoir by three coloured maps and sections, and by two plates of fossils.

The Baths and Wells of Europe. By John Macpherson, M.D. (Stanford.) Dr. Macpherson is a well-known and highly-esteemed physician, and, moreover, of large experience in those diseases, often induced by life in India and by luxury everywhere, which, once the London season is over, defy fruit salts and blue pill, and clamour for complete change of air and life. The most grateful and successful treatment of such cases is a visit to some one of the many fashionable baths of Europe; and from this handbook—a model of its kind—all may learn what resort is most suitable to particular complaints, tastes, and purses. The author is very happy in his arrangement, whereby endless repetitions are saved. He deals first of all with the action of water, hot and cold, pure and mineral, taken as a drink and used as a bath, upon the body in health and disease. Then, under certain well-considered heads, he passes in rapid but discriminating review each bath and well of value or repute in Europe, states its peculiar claims, indicates its real use, and withal, describes its climate, environ, social advantages, and medical appliances. In a word, all that doctors and patients wish to know beforehand they will find given here plainly, systematically, and briefly, without exaggeration and with most judicial impartiality. Dr. Macpherson is master not only of his subject but also of a dry humour and Scotch scepticism which make his chapters very palatable and piquant reading. He is a student, at least a quoter, of Montaigne, and this book too, we can assure our readers, is essentially one of good faith and commonsense.

PHILOLOGY NOTES.

THE next volume in Messrs. Macmillan's "Classical Library" will be *Pliny's Letters to Trajan*, edited, with notes and introductory essays, by Mr. E. G. Hardy.

Cornell University Studies in Classical Philology. Nos. 1 and 2. (New York: Ithaca.) The authorities of the Cornell University have determined "to publish, in connexion with their classical work, such papers by instructors or students as may be thought to have an interest for workers in classical philology elsewhere." The two first of such papers are now before us: "The Cum Constructions," by W. G. Hale, Professor of Latin; and "Analogy," by B. I. Wheeler, the Professor of Greek. The former, of which apparently only the first part has appeared, is entirely "critical." Prof. Hale occupies his seventy pages in examining the different theories by which previous scholars have attempted to explain and give reasons for the constructions of *cum* with the indicative and subjunctive in Latin. The main part of the pamphlet is occupied by a minute refutation of Hoffmann and Lübbert. We are inclined to think that Prof. Hale has succeeded so far as his destructive efforts are concerned, and we shall look eagerly for the constructive part which is to follow. The second paper is an attempt in fifty pages to classify the examples of analogy in ancient and modern languages.

The classification seems to be based on that of Paul, and the article does not contain much that is exactly new. But the scheme put forward is a good "working hypothesis," the collection of instances brought together is both interesting and useful, and the full references to the literature of the subject are very convenient. The *Cornell University Studies* promise to be a valuable series of papers, if they keep up to the level of the two opening numbers.

De vi atque indole rhythmorum quid veteres indicaverint. By G. Amsel. (Breslau: Köbner.) This is a somewhat disappointing pamphlet. The title leads one to expect that it aims at solving the difficulties of Greek "rhythmic," and that its solution is based on the only solid material we have—the fragments of Aristoxenus and other Greek writers on the subject. Such a book, working out and criticising Westphal, is much needed. Instead of that, we have chapters on such subjects as "divina rhythmorum origo," or the *æres* of the iambic, and a good deal more that might well have been omitted. The pamphlet is, however, worth consulting for two reasons. First, there is a good deal scattered up and down its 160 pages which deserves attention, especially, perhaps, from a writer on Plato's rhythmic. From p. 97 we may quote a new version of Horace A. P. 80, in which *popularis strepitus* is rendered *sermocotidianus*, though one desiderates a parallel for this use of *strepitus* earlier than Apollinaris Sidonius (*Ep.* ix. 13). Secondly, the last fifty pages are taken up with collations of MSS. made by L. Cohn and Studemund, and not yet published. Most of these are taken from Italian MSS. of Aristides, and are of value for future editors and students of that writer.

Essai de Métrique Grecque. By A. E. Chaignet. (Paris: Vieweg.) M. Chaignet goes tooth and nail for the received ideas about Greek metres and rhythms. He will have none of the long syllable which balances a trochee (—) or spondee (u), he introduces anapaests into the middle feet of the ordinary iambic, and does a variety of other things by the side of which J. H. H. Schmidt's wildest rhythmical periods seem the impotent efforts of an unimaginative speculation. M. Chaignet has also new ideas on prosody. His book might be popular with schoolboys who do not mind anapaests and spondees "in the fourth place." We do not think scholars will regard it as an advance in the difficult study of the Greek metres and rhythms.

MEETINGS OF SOCIETIES.

UNIVERSITY COLLEGE LITERARY SOCIETY.—(Monday, June 11.)

THE President in the chair.—Mr. T. Onions read a paper on "Robert Burns." After a sketch of his life and education, the character of the poet was dwelt upon; his openness, hatred of hypocrisy, independence, and, above all, his kindly disposition were emphasised. His greatest charm is his love of nature and his beautiful descriptions of country and country life, of which he was a close and loving observer. His poetry is eminently simple, natural, and plain; in quaintness, originality, power of graphic description, humour and humourous pathos, he is unsurpassed; as examples we may take "The Elegy on Poor Mailie," and "Death and Dr. Hornbook." "Holy Willie's Prayer" was given as an example of his satires, which are most cutting. Mr. Onions then discussed the poems on Mary Campbell, "The Jolly Beggars," "Halloween," "The Address to the De'il," "Tam o' Shanter."

PHILOLOGICAL SOCIETY.—(Friday, June 15.)

HENRY BRADLEY, Esq., in the chair.—Mr. Alex. J. Ellis read a paper on "the conditions of a universal language in reference to the invitation

of the American Philosophical Society of Philadelphia, U.S., to send delegates to a congress for perfecting a universal language on an Aryan basis, and its report on Volapük." Mr. Ellis reviewed the whole question with respect to phonetics, the construction of roots, the nature of an artificial grammar, the formation and position of Volapük, the various other proposals made both on an Aryan and non-Aryan basis, and the adaptability of a congress for discussing such points, and concluded by moving that the Philological Society should take no action in the matter? first because the subject could not be properly dealt with in a congress, even if a complete programme were submitted; secondly, because it was not clear from the report what an Aryan basis meant, or whether it was *a priori* desirable; and lastly, because of the large acceptance of Volapük, which was excluded by the terms of the invitation, but which is the only scheme with a completely elaborated grammar and dictionary, and counting its adherents by the hundred thousand.—This resolution was seconded by Prof. Rieu, supported by Dr. Furnivall and the chairman, and carried unanimously. The society then adjourned till November 2.

FINE ART.

J. M. W. TURNER'S CELEBRATED WORKS.—"Crossing the Brook," "Caligula's Bridge," and "Child Harold's Pilgrimage" (National Gallery)—also Mr. KEBLEY HALLSWELL'S "October Woodlands" (Grosvenor Gallery). Important Etchings of the above works are now in progress by Mr. DAVID LAW.—For particulars apply to the Publishers, Messrs. DOWD SWELL, 160, New Bond-street.

Memoir of Peter Dewint. By Walter Armstrong. (Macmillan.)

THE publishers have issued, in a form of hopeless awkwardness, what might have been in all respects a pleasant possession—the memoir of Dewint. It is a book in which the illustrations have dominated, and it is only a few of them that are at all successful. Low as was the key in which Dewint's colour was pitched, colour itself was of the very essence of the effect in his work. He was marvellously sober, and an unerring harmony of hue was half his charm. Very skilfully executed mezzotint—such mezzotint as might be produced by Mr. Frank Short, were he minded to address himself to the reproduction of this master—would conceivably render Dewint's tone, and the extreme subtlety of his gradations within narrow limits. But illustrations by the photographic processes as a rule do nothing of the kind. At the best, of course, we should miss colour; but there would be some suggestion of it in the balanced translation of Dewint's own colour into light and shade. Photographic reproduction gives us no translation at all. It gives us, generally, an arbitrary substitution. The thing may be tolerable—may convey something of the character of the master. Or it may be, as here it sometimes is, intolerable; conveying nothing of the master whatever, except such part of his work as can display none of the individuality of his vision and his touch.

Many of Dewint's drawings—as all students of his art will remember—are very long oblongs. That was the form best adapted to views or compositions which were often panoramic in their character and extent. Dewint's drawings are in this way a most complete contrast to the compositions of George Barret. In George Barret's drawings there is continually a great extent of country. You look across to the horizon through depth beyond depth of plain. But in Dewint's drawings, while the land represented is seemingly as extensive, it stretches

to the right hand and stretches to the left. To reproduce the forms of such drawings at all in a printed book—unless upon a scale on which their features must be sacrificed—the printed book must be of a very awkward shape to read and to handle. The printed line upon the page is immense in extent; it is absolutely fatiguing. And this obvious adaptation or subordination of the literary part of the volume to the pictorial part of the volume—which yet is, on the whole, unsuccessful—subjects the writer, perhaps unjustly, to the suspicion of having furnished what the trade calls "text." The book is too much a drawing-room book, and not a very pretty drawing-room book. Any facts about Dewint hitherto unknown might well have been presented in a form more compact. The truth is, however, that, though Mr. Armstrong has done entirely his best, and has written excellently what he has written at all, there was very little to know, very little to relate. The "memoir" has but six and forty pages. The origin of the book, as I take it, was the possession on somebody's part, of these not very portable, not very comely, illustrations. Or there was a deep sense of duty, that Dewint's life, although uneventful and uninteresting, had somehow to be written.

Peter Dewint was really an estimable person, but estimable like the first *bourgeois* in the street. The best of him—of his character, that is, in private relations—nearly all the good in him was shown, not to men of distinction on the high level of their friendship; not to youthful, poor, or faulty artists whom, with a sympathy with the work common to them all, he might have helped; but to his own immediate family and to one friend, Hilton. He was as domestic as a linendraper in Brixton. He had no errant sensibilities—no extensive mental range—few human associations to feed him with a various diet. But he taught drawing to well-to-do and well-placed people; earned steadily an excellent income, rather by that than by any considerable prices received for his work. He lived an ordinary life. A single fellow-artist of eminence, it seems—John Constable—appreciated his work to the point of actually buying it. But in the main his buyers were "the gentlemen"—"the gentlemen" and Mr. Vokins, who was amazingly like "a gentleman" too. Dewint died, having conducted, as it may be said, a successful business. And then, afterwards, some connoisseurs and critics—the sort of people popular painters and ignorant writers are fond of telling us about as "differing in opinion" so much, as unsafe guides, as judges somehow accepted (Heaven knows why, since probably malicious, and certainly foolish!)—these people, when the chance was given to them, saw the genius which the popular painter had passed over and the average writer had ignored, though Mr. Vokins had seen it in good time. Dewint's immortality was declared. He takes up his rank—an uninteresting man, it may be, for the public to read about; but an artist with a vision of his own, exquisite, if homely. Thenceforward a great name in Art—a name to stand beside the name of Constable and the name of David Cox.

Dewint was, in great measure, of Dutch descent, and very Dutch—admirably Dutch,

may one say?—was his satisfaction with homeliness, his content with the unexalted. That must be borne in mind as the true keynote to his work. That was its dominating spirit. Perfectly unpretentious, he was unambitious also. He saw the material for his art in the first field that stretched beyond the small provincial city where he took up his summer quarters; and though, indeed, in the course of a fairly long life, he painted a little in Normandy, and painted in the Lakes, and in the Isle of Wight, and in the Vale of Gloucester, he would have gained a distinction hardly less enviable than that which he has now acquired—nay, hardly at all different from it—if he had performed every morsel of his work within three miles of the cathedral and the upper town of Lincoln. Save for the presence of the coast in a very few of his drawings, it is possible to see within three miles of Lincoln everything, practically, by which Dewint was ever inspired. Walking out into the country that distance is enough to throw the great towers, the chapter-house, the Galilee porch of the noblest of English churches, into quite a remote background, so that they shall rise against the sky far away, after furlong upon furlong of field and fen. Turning your back upon the city altogether, there comes almost directly the real and quiet land: the barton, the strawyard, the waggon, the immense cornland—the "la Beauce" of England. All that—that sometimes in strongish sunshine, but chiefly in grey weather—Dewint painted much as it really lay, yet in rhythmic composition, with restful breadth, with simplicity, in quiet hues. Of course there was a very definite connexion between the man's own temperament and the capacity to do this perfectly, to do it with content, and to do little besides. And certainly his Dutch origin must be remembered continually when we are in presence of the work which, with attachment, but never with passion, Dewint wrought, bringing before us a landscape of quietude, effects entirely unseasonal, far-stretching, yet uneventful, skies.

A good deal has been written already about the art of Dewint. Even Mr. Ruskin—busy in turn with the interests of Turner and the interests of the race—has found time to pay a tribute to the directness, the sincerity, and (by implication) the wholesomeness of his work. But one side at least of this delightful artist's excellence has never been better expressed than in the following paragraph, the closing, and I think the most careful, one in Mr. Armstrong's book:

"Dewint's place in English art is with Constable and David Cox. Like Constable, he saw instinctively the true capabilities of English landscape, and, like Cox, the true powers of the medium in which he worked. His *coup d'œil* for a subject was even finer than theirs. He seized with a quicker instinct on the best point of view, the most rhythmical combinations of line, the most effective chords of colour. His sense of unity was almost unerring. In his most hasty sketches, no less than in his finished pictures, there is ever a central idea led up to and enhanced by every touch of his brush. He was less robust than Constable. He had none of his inability to follow; none of his desire to combine illusion with balance, to make the restlessness of nature shine through the repose of art. Neither had he the intense sympathy with Nature's moods which distin-

guished Cox, nor his sense of the brotherhood between still-life and humanity, nor his love for the infinities of colour. His greatness depends more on insight than imagination, more on selection than inclusion, more on unity than width of view. He was, in short, more strictly—more narrowly, some might say—an artist."

Having said quite enough about the incapacity of the illustrations, in the main, to really recall the characteristics of Dewint's work, let me single out two or three that do in great measure represent him. No. 7 and No. 10—"Haymakers" and "Canterbury Meadows"—make an inevitable, yet none the less a happy record of his composition, of his fashion of seeing the world. We are well reminded of his actual touch in the "Gloucester" (No. 17), and it was very right to include among the subjects chosen such a study of still life as is afforded by the "Weeds" (No. 8). That, perhaps, is hardly "still life" proper; but it at least approaches it, and it shows, as well as anything else, with what largeness and nobility of vision Dewint approached the commonest and the most familiar material.

FREDERICK WEDMORE.

CORRESPONDENCE.

"TARATHA" AND "BABIA."

London: June 14, 1888.

The goddess Babia may or may not have been worshipped at Carchemish, wherever that was, as well as at Damascus; but there are indications that a deity of the like or the same name was honoured with more than a merely local cultus. The statement of Damascus that "the Syrians, and especially those in Damascus, call infants and even striplings Babia, from the goddess Babia worshipped by them," reminds me that *ba-bu* is one of the Assyrian terms for "child" (see the list of synonyms of *māru*, 2 R. 36). The Syriac (Nisibene) proper name Bābai seems to be connected with that of the goddess; and Baba is the name of a god in the Vannic inscriptions, according to Mordtmann (*Z.D.M.G.* xxxi.). In the case of folk so fond of verbal allusiveness as the Semitic peoples appear to have been, it would be strange if the likeness in sound between *bāba*, "gate," and these divine names had been overlooked.

Lastly, it appears that Zirpanit, the Babylonian goddess of procreation, had a chapel in the temple-gate called KA KHILISŪ or *bāb kuzbu* (*E. I. H.* ii. 51; Grotf. i. 31-33, see Flemming's note on the former passage); so that "gate-goddess" would not have been a meaningless epithet in her case at least. I would, however, prefer to suggest a connexion between the "goddess Babia" of Damascus and the Pahlavi *Bāb*, *Bābai*, "father," a title of fire. The Greek writer may be answerable for the Greek ending. C. J. BALL.

THE HYKSŌS KING RA-LAN AND THE BAGDAD LION.

Weston-super-Mare: June 20, 1888.

Through the kindness of Miss Edwards, I have now before me a photograph of the sculptured throne and legs of Ra-lan; and on comparing the signs composing the prænomen with those of the cartouche on the breast of the Bagdad lion (in the accurate cast taken for me by Mr. Ready), I am quite of Mr. Griffith's opinion that the two must be identical. On the lion (or rather sphinx) the upright ears and

the feet of the third sign are distinct in a good side light, and doubtless led to the suggestion of Deveria that it was intended for the sitting Set-monster. The last sign, cut (as Mr. Griffith says) with such difficulty, may be identical in the two.

In my last letter Playte is misprinted Playte.

HENRY GEORGE TOMKINS.

NOTES ON ART AND ARCHAEOLOGY.

MR. W. BISCOMBE GARDNER—who is probably best known as a wood-engraver by his masterly interpretation of pictures by Sir Frederick Leighton, Mr. Alma Tadema, &c.—is also himself by no means unskilled with the pencil, as those know who remember his illustrations to an article by Mr. Grant Allen in the *English Illustrated Magazine* a year or two ago. He now proposes to exhibit a collection of his work in black and white, dealing mainly with Surrey farms and landscapes in the neighbourhood of Dorking. The exhibition will be held at 17A Great George Street, opposite Westminster Abbey; and the private view is fixed for to-day.

MISS MARY BOYLE is engaged on a biographical catalogue of Lord Bradford's pictures at Weston Park. The volume will be printed for private circulation by Mr. Elliot Stock.

THE July number of the *Magazine of Art* will contain an article by Sir John Millais, entitled "Thoughts on our Art of To-day," which is understood to be the first occasion on which the painter has expressed his views in print. It is gratifying to know that he is

"emphatically of opinion that the best art of modern times is as good as any of its kind that has gone before; and, furthermore, that the best art of England can hold its own against the world."

The article will be illustrated with two portraits: one, at twenty-one years of age, from a pencil drawing by Mr. Holman Hunt; the other after Mr. Frank Holl's diploma picture.

A SPECIAL number of the *Art Journal* will be published on June 28, devoted entirely to the Glasgow Exhibition. It will contain about sixty illustrations, including reproductions of the newest designs in industrial art, engravings of the most important pictures and sculpture, with several drawings of the exhibits in the Bishop's Palace. The number will contain, in addition, four full-page representations of the main entrance from the grounds, the royal reception rooms, the Bishop's Palace, and the Gray Street front.

THE School and Guild of Handicraft at Toynbee Hall, Whitechapel, is to be opened to-day by Sir William Hart Dyke.

MR. W. HEATH WILSON has a little exhibition of little pictures at Clifford's in Piccadilly. Venice is the subject of most of them, and the title by which it has been chosen to advertise them; but they comprise a good many views in the neighbourhood of Florence and elsewhere in Italy—indeed, some of the best are taken from the bank of the Arno, the hills of Fiesole, and near the quarries of Carrara, and a few are scenes in Suffolk. Some of Mr. Heath Wilson's larger pictures of Italian scene have attracted some attention at the Royal Academy of recent years, and this little collection of his studies sustains his reputation as a colourist and as a faithful and poetical observer of nature. They are all very clever, very pretty, and very cheap.

WE are requested to state that the Royal Academy *soirée*, which was fixed for Wednesday next, June 27, has been postponed to Wednesday, July 11.

THE STAGE.

STAGE NOTES.

"THE SQUIRE" was revived on Saturday night at the St. James's Theatre. The revival of "The Iron Master," it appears, had no very real success; but the performances of "The Squire" are intended, it is said, to continue to the end of the season—a period not indeed very distant. It is likely then that Mrs. Kendal will take her farewell of the St. James's audience in the character of Kate Verity—a character in itself profoundly sympathetic, and one which she interprets with the best profundity of her art.

A WELCOME change—a change in the direction that nearly all qualified writers, who have expressed themselves about it, have ventured to advise—was made on Saturday, by Mr. Stephen Coleridge and Mr. Norman Forbes, in the ending of their "Scarlet Letter." While the death of the revengeful Chillingworth at the hands of the mob is retained—that Hester may be rid at last of a husband who has become only a persecutor—the death of Dimmesdale, her lover, is for the first time accomplished, that a deep and fitting pathos may settle over the end of the story. So treated, the piece—albeit but slightly relieved throughout its course by the humour which an audience loves—is from beginning to end a worthy presentation of the main theme of a powerful romance. An opportunity afforded to us on Tuesday of seeing the play at the Royalty a second time served to persuade us more strongly of the quite unusual excellence of its literary style. It is true indeed that Mr. Coleridge (by implication) represents Goethe as having been indebted to a young New England divine for one of his famous phrases—"the spirit that denies"—but this anachronism may be pardoned in a composition from which the commonplace is banished wholly. We are thankful for dialogue so terse, so sober, and, at need, so vivid. Altered as it now is in the sense in which we have indicated, the piece ought certainly to receive the continued support of the best playgoers in London; for, in closing with the appropriate and, as we dare to think, the inevitable sadness, it gives to its principal exponents—to Miss Oaloun and to Mr. Forbes Robertson—only one opportunity the more for fine effect. And the opportunity is fully taken. The "Scarlet Letter" is unquestionably a performance which it is an artistic and even a social duty not to miss.

MUSIC.

RECENT CONCERTS.

MR. C. HALLÉ gave his fifth concert last Friday week, and played Beethoven's Sonata in B flat (Op. 106). It is not often that one has a chance of hearing this remarkable work. It is nearly twenty years since it was given at the Popular Concerts. Mr. Hallé interpreted it with his usual precision and refinement; but, before the close of the terribly exacting fugue, he seemed somewhat exhausted. The first three movements rank among Beethoven's finest inspirations; but the fugue, if clever, is long and laboured. Beethoven, it is said, added it to make the work sell—a proof how little he was a man of the world. The programme included an exceedingly interesting pianoforte Trio in A minor (Op. 26), by M. E. Lalo, the composer of the *Symphonie Espagnole*, with

which Señor Sarasate has made us familiar. The Trio combines modern German style with French clearness and elegance. The first movement, *Allegro passionato*, has most attractive themes, and the working of them shows a skilful hand. The *Presto* has much character. The *Très lent* is, perhaps, slightly monotonous in rhythm, but is nevertheless a fine movement. The *Finale* is bright. The work deserves a hearing at the Popular Concerts. It was admirably interpreted by M^{me}. Norman-Néruda, Herr Néruda, and Mr. C. Hallé.

The last Philharmonic Concert took place on Saturday afternoon at St. James's Hall. Herr Svendsen conducted Beethoven's "Pastoral" Symphony. On the whole he gave a very characteristic reading of this familiar work, although we could not agree with his fast *tempo* in the first three movements, nor with the pause before the storm. Fräulein Soldat played Brahms's Violin Concerto with considerable effect; but we should prefer to hear her in a work in which she would be less hampered with thankless difficulties, and in which she could show what she possesses of grace and refinement. M^{me}. Sophie Menter played Rubinstein's Pianoforte Concerto in G—a work full of immense technical difficulties which, of course, she overcomes with the greatest ease. Unfortunately, from a musical point of view, the Concerto is of small interest. The programme included Dr. Mackenzie's Scotch Rhapsody (No. 1), conducted by the composer. Besides, there were some songs sung by Herr Mayer from Cologne; and altogether the concert was too long. There was a good attendance.

Berlioz's "Faust" was given at the sixth Richter Concert on Monday evening. It is strange that this work, which since its production by Mr. Hallé in 1880 has become so popular, should only now be taken in hand by Herr Richter. That the conductor would do justice to the instrumental part was a foregone conclusion. The Hungarian March was given with all brilliancy, and the Ballet of Sylphs with all delicacy. The solo parts were taken by Miss Mary Davies, Mr. E. Lloyd, and Messrs. Pierpoint and Santley; and they all sang with much effect. Mr. Santley, unfortunately, was not in good voice. With respect to the chorus, the ladies deserve great praise, but the tenors were limp and at times flat. The programme-book gave an interesting account of Berlioz's first setting of "Faust." The *Huit Scènes de Faust*, as it was called, did not please the composer, and he tried to have all the printed copies destroyed. Some were, however, preserved; and Mr. Barry, having obtained one of these from Mr. Dannreuther's library, was able to give a brief account of it. Another copy has been preserved in the library of the Conservatoire at Paris. The performance of "Faust" was preceded by the impressive Funeral March from the "Götterdämmerung," in commemoration of the death of the German emperor.

Dr. Bülow was in splendid form last Tuesday afternoon. In his readings of the earlier Sonatas there was some dross mixed with the gold; but this time, when he set himself the formidable task of playing five of Beethoven's grandest creations for the piano, there was not a trace of eccentricity or of exaggeration. His reading of the "Appassionata" was pure and dignified; and in the three last Sonatas (Ops. 109, 110, and 111) he displayed all his powers both as executant and interpreter. With Dr. Bülow, the harder the task the greater is his success; the finer the work, the finer the playing. It is unnecessary to go into detail; and, indeed, where everything was so good and so well balanced, it would be difficult to do so without becoming monotonous. One little remark, however, may be made about the

second movement of the Sonata in A flat (Op. 110), in which Dr. Bülow takes the liberty of playing the trio twice. In his edition of the Beethoven sonatas he tells us that by this means the movement is improved. We will not venture to quarrel with the learned doctor's assertion, but it seems scarcely right to make such a change in the text without proper notification.

On the same afternoon, M. Ovide Musin was giving an orchestral concert at Prince's Hall. While Dr. Bülow was playing the "Adieux" Sonata and the Fantasia (Op. 77), we went there and heard part of the programme. M. Musin, a clever violinist, played a Concertstück in the form of a serenade by the late Dr. Damrosch. The music is light and graceful. The second movement is the best. Beethoven's Symphony in A was performed under the direction of Mr. W. Damrosch, the conductor of the Opera House at New York. This gentleman is not lacking in energy—a very good thing in its way; but too much of it is aggravating to the audience as well as to the players. Mr. Damrosch is, however, young, and shows signs of promise.

The Wagner Society held their annual conversation at Prince's Hall on Tuesday evening. To do justice to the genius of Baireuth a stage and large orchestra are absolutely necessary. But the society is at present in its infancy, and is obliged to accommodate itself to circumstances. The "Siegfried" Idyll for small orchestra was given under the direction of Mr. Armbruster, and excerpts from the "Götterdämmerung" were sung with pianoforte accompaniment. One cannot but admire the skill and zeal displayed by Mr. Armbruster in trying to make the music acceptable with such a poor substitute for the orchestra. The principal vocalists were Miss P. Cramer, Miss M. Willis, and Miss M. Hall. The pure and refined singing of choruses from "Rienzi" and "The Flying Dutchman" by the ladies of the H. de Park Academy, under the direction of Mr. H. F. Frost, deserves special mention.

The performance of "Lohengrin" at Covent Garden on Saturday last was one of special interest. It would be difficult to find a stronger cast. M^{me}. Albani was the Elsa; M. J. de Reske, the Knight of the Graal; and his brother, the King. The difficult rôles of Ortrude and Tetramund were most effectively played by M^{lle}. Hastreiter and Signor D'Andrade. The chorus was not all that could be desired, but at times sang exceedingly well. Signor Mancinelli is an able musician, but not an ideal Wagner conductor. It is scarcely necessary to add that the house was crowded in every part.

There is no need to enter into any detail respecting M^{me}. Christine Nilsson's farewell concert at the Albert Hall on Wednesday evening. There were, of course, many attractions; but the interest centred around the artist who, for nearly a quarter of a century, has been a star of the first magnitude in the musical firmament. The crowded hall, the enthusiasm, and the encores testified to the great esteem in which she is held by the public. Her triumphs on the stage and in the concert-room will not be for a long time forgotten.

J. S. SHEDLOCK.

MUSICAL PUBLICATIONS.

Fünf Stücke, Two Musical Sketches, Bourrée, Seguidilla. By Herbert F. Sharpe. The selection of suitable music is always a difficulty with teachers. For some pupils it must not be too dry, for others not too difficult. Pianoforte pieces, then, that comply with both these conditions are exceedingly useful, and among such we may class most of the above-named. The *Fünf Stücke*, especially Nos. 1, 2 and 3, are

very pleasing. They have a strong Schumann flavour; but who can escape the influence of this composer? The two Sketches are scarcely equal in merit, yet they are not without interest. The Bourrée is a good study in staccato, and the Seguidilla is quaint and lively. Mr. Sharpe has also written some "Character Pieces" as pianoforte duets, a "Legende" for violin and piano, an "Idylle" for flute and piano—all interesting. His duets for two violins, with pianoforte accompaniment will please young players. His song, "Twilight Visions," is only moderately interesting, and the constant repetition of words is not to our taste.

Four Pieces and Bolero for pianoforte, by Sydney Shaw, may be recommended as light drawing-room music above the average. Nos. 2 and 3 of the Four Pieces are graceful. No. 1 is rather weak, and No. 4 is uncomfortably written. Composers of this kind of music should avoid as much as possible large stretches. Mr. Shaw's "Romance" for violoncello and piano is a showy piece. His "Three Songs," "Can you Forget," and "The Angel and the Child," are not without good points; yet there is more of sentimentality than sentiment in them.

Mr. G. Saint-George is not an ambitious composer. His pieces are light, but often very graceful. The "Chant d'Amour," for violin with pianoforte accompaniment, and the "Fueilles d'Album" for the same, will suit players who like flowing melody and simple rhythm. Of a similar character are his pianoforte pieces, "La Gioconda" and "Toujours toi"; and his songs, "The Magyar's Home," "The Castle in the Air," and "Mabelle." He has also written an overture for orchestra, entitled "Réveil du Printemps."

Mr. A. S. Beaumont writes music of a very similar character. His "Lullaby" for piano, violin, viola, and harmonium; his "Lullaby" for orchestra; his "Idyll" pianoforte duet; and the songs, "Resignation" and "Sleep, Sleep," are all more remarkable for softness and grace than for strength and originality.

Trois Danses de Salon, by Carl Weber, are light and pretty; but the trio of the Gavotte is rather common, and does not match well with the rest of the piece.

Caprice and Souvenir, for pianoforte, by W. Davies, are two simple but well-written pieces we prefer the former.

In Fairyland, for pianoforte, by J. C. Forrester, does not quite come up to the title, but it is pretty. It would have gained by being shorter. His song, "Phyllis," is simple but rather taking.

Of light pianoforte pieces we may mention, "Resignation," by E. Wagner; "Valse de Concert," by De Orellana; "In Olden Time" (minuet), by S. E. Oldham. Of songs, "Love's Return," by S. E. Oldham; "Guardami" by the same; and particularly "Sae far away" and "A Rosebud by my Early Walk," by J. J. Haakman.

All the above named pieces are published by Mr. C. Woolhouse.

LITERATURE.

Finance and Politics: an Historical Study, 1783-1885. By Sydney Buxton. In 2 vols. (John Murray.)

THIS is a useful work, the preparation of which has involved great labour and political research. Its value must be tested by its merits as a book of reference, for it is anything but light reading; and the man who follows our example, and peruses every one of Mr. Buxton's 700 pages, has before him about as tough a task as any two volumes issued by Mr. Murray ever imposed upon a reader.

From this point of view the arrangement becomes of primary importance; and, though in matter so greatly complicated, it would not be difficult to find fault with Mr. Buxton's plan, it appears far less easy to suggest improvement. The period including and preceding the time of the great war is undoubtedly well chosen. The finance of Gladstone is inseparable from that of Pitt. With such a start we are better able to study the conditions of the "forty years' peace" which followed upon Waterloo; and thus we are carried forward to "the date of the Crimean War—a date which the Devil must have marked with a white stone in his calendar"—a date from which "began a series of chronic wars and disturbances on our imperial frontier or in connexion therewith," the result being that "time after time, against their own will, our rulers have multiplied the nation and, as of old, have not increased the joy." In quite a friendly way Mr. Buxton explains in his preface that his notes are too numerous and discursive. He "couldn't part with them," but "the reader is at full liberty to skip." This self-accusation is not made without some reason; but the notes contain so much valuable and interesting matter that we would far rather have the surplus than be without them. If Mr. Buxton should ever rewrite his volumes, he might find that incorporation of the best of these notes would enliven the tremendous specific gravity of his text.

Again, it may be questioned whether Mr. Buxton has been prudent in demonstrating by his own industry that every matter of foreign politics and domestic concern is within the scope of his work. The current of financial affairs would have run more clearly without some of these digressions, which, however, are brief and summed up with much skill. Since the Prince Regent was advised to declare in 1817 that our government was "the most perfect that had ever fallen to the lot of any people" much has happened with which Mr. Buxton has hearty sympathy. Before the end of his second chapter we arrive at 1841, when the historic Whig party "disappeared. Not annihilated, as the Tory

party had been annihilated at the time of the Reform Bill before an outburst of Liberalism. The great Whig party had been simply muddled away. So ended the Reform era, opening so hopefully, closing so pitifully."

The Free Trade policy occupies many pages. Disraeli did not, perhaps, know he was talking nonsense when he said that in 1842 no Dorsetshire farmer worked his horses after three because he had "to take his illicit cargo at night." But the reduction of dutiable articles was extraordinary:

"Peel found the tariff with over a thousand articles subject to duties, and left it with but half the number; the total number of duties reduced by him was 1035, the total number entirely repealed 605, duties for the most part on articles which concerned the food, the clothing, and the comfort of the people, or which, as levied on the raw material of manufacture, affected employment."

Like Peel, Mr. Gladstone "was not and has never become a man of the world"; but he found the customs tariff loaded with nearly five hundred duties, and left it with that number reduced to fifty. Mr. Buxton notes Mr. Gladstone's three failures—to reduce the interest on the Debt, to calculate aright the yield of succession duty, and to extinguish the income tax. One of his beneficent successes has been in connexion with a duty still in force. The reduction of the tea duty by twenty pence a pound has been the work of Mr. Gladstone. In the number of his Budgets, only Walpole, North, and Pitt have surpassed him. Did Mr. Gladstone, as Mr. Buxton thinks, lay down "one of the most valuable principles of taxation in saying, 'If you want to do the labouring classes the maximum of good, you should rather operate on the articles which give them the maximum of employment'?" This was used as an argument against the further removal of taxation from articles of food. We have not a word to say against the relief of any materials from taxation; but security of the maximum of employment cannot be disconnected from the cost of subsistence. Cobden's argument that cheap food brought high wages, because the workman had a greater margin to spend upon manufactures, points just as surely as Mr. Gladstone's principle to the maximum of employment. It is difficult to recall how strenuously our fathers maintained those navigation laws which decreed that no goods whatever, the produce of Asia, Africa, or America, might be imported into, or exported from, England or Ireland, or into the Colonies, except in British ships; and one remembers with surprise that the venerable nobleman is still alive who, as Foreign Secretary, declared that without Protection "this great kingdom would soon return to its normal and natural state—a weather-beaten island in the North Sea."

The annals of many governments are traced in these volumes, and we see how large a number have fallen upon questions of finance. It is consoling to remember that the changes since 1885 have not exceeded those of the eight years from 1852 to 1859, when there were six changes of government. One of the most profitable uses of such a long record as that of Mr. Buxton is to show that Liberal governments are more liable to the internal malady of dissension, which operates not only to their

downfall, but more injuriously, in preventing useful and progressive legislation. The most united Liberal administration of our time was that of 1869, which disestablished the Irish Church, passed the Irish Land Act, the Education Act, and the Ballot Act, which abolished University Tests, Army Purchase, created the Local Government Board, the High Court of Judicature, and established halfpenny postage. How unfavourably does the work of the Cabinet of 1880 contrast with all this! Mr. Buxton is quite right in saying that "the country might have been better governed if there had been a little less ability and a little more unanimity." A united Cabinet is strong not only against opposition, but for legislation. It is more prompt to recognise its own errors, and to take the wind from the sails of any jealous rival or adversary; and, if directed with energy and ability, it is a happy and a successful government. But, as Mr. Buxton is obliged now and then to write: "Let us go back to finance." Shortly after the Crimean War, which "cost the English some seventy millions of money," occurred the French treaty, under which the consumption of French wines rose in 1873—the highest point ever reached—to 6,242,000 gallons. In this connexion it is worth mentioning that while the consumption of spirits has declined, the quantity in bond has increased from 4,000,000 gallons in 1854 to 72,000,000 gallons in 1884; so that "upon the least breath of suspicion of an increase in the duty" the owners could so operate as to make the increased taxation for a long time practically ineffective. It may be needless for Mr. Buxton to refer to the deeds of the *Merrimac*, but one of his luminous notes contains in a few words the most stupendous financial proceeding up to 1871. The debt of the United States in 1860 was £16,000,000; in 1865 it was £580,000,000, bearing interest at nearly 7½ per cent. By 1887 this had been reduced to £248,000,000 bearing about 3 per cent. interest. Mr. Buxton, who never gives too much of his own opinions, advocates in one line a graduated income tax. He would have done well to explain how this can be made to operate fairly between joint stock and individual enterprise, which has always appeared to us to be a fatal objection to any graduated taxation other than upon legacies and inheritances.

These volumes are mainly useful for reference, and therefore we must not complain when Mr. Buxton consolidates information on the Dog Tax in one page and repeats it in part upon another. Sir Stafford Northcote, in 1878, raised the tax from 5s. to 7s. 6d.; but he gained nothing, because the addition reduced the number of dogs brought to charge from 1,300,000 to 896,000 in a single year. Mr. Buxton's care and accuracy—at fault only, so far as we have noticed, in an excess of £1,000,000 devoted to public works by the Acts of 1863-64—are throughout admirable, nor is there discernible any trace of partiality. If he does less than justice to Mr. Lowe's fair argument that the careless use of dangerous articles makes in favour of taxing them, he is as just to Mr. Disraeli and Sir Stafford Northcote as to Mr. Gladstone. His subject presented immense difficulty, because it excludes nothing. If the work approaches the usual character of history it

avoids it in one particular: for we do not remember to have met with a single reference to the sovereign. We may conclude, with Mr. Buxton, that

“it may be, as Pepys remarked 200 years ago, ‘impossible for the king to have things done as cheap as other men,’ but if we cannot get economy we ought at least to have efficiency; of late we do not seem to have secured either the one or the other.”

ARTHUR ARNOLD.

Songs, Ballads, and a Garden Play. By A. Mary F. Robinson. (Fisher Unwin.)

THE note of mournfulness, rarely absent from the best of Miss Mary Robinson's poetical work, is again discernible in this last volume of hers. It is a sad little book. Indeed, for this, the etching of Dürer's "Melancholia" which fronts the title-page will prepare the reader, and give him its keynote as a keynote of quiet sorrow, almost of dejection. And the songs, as he reads them through, fascinated meanwhile by their delicacy and music, will only confirm this impression. Such unhappiness, however, forms part of the secret of Miss Robinson's power to charm as a singer. And, if here or there in them we have a sign of something fantastic, affected, her new songs and ballads are all skillfully fashioned, being marked by sweetness of melody and truth of colour. In saying this, we only say a trite thing. For Miss Robinson has been justly praised for such poetic excellences before. The present volume certainly reminds us that they are hers.

In the first division of the book, under the heading "Songs of the Inner Life," admirers may find much to charm them. Three of the pieces in this part first appeared in the exquisite French translation which M. Darmesteter gave to Parisians only a short time ago. They have not the effect for us of a song in three motives called "Tuberoes." It opens thus:

"The Tuberoes you left me yesterday
Leans yellowing in the glass we set it in;
It could not live when you were gone away,
Poor spike of withering sweetness changed
and thin.

"And all the fragrance of the dying flower
Is grown too faint and poisoned at the source,
Like passion that survives a guilty hour,
To find its sweetness heavy with remorse.

"What shall we do, my dear, with dying roses?
Shut them in weighty tomes where none will
look

—To wonder when the unfrequent page uncloses
Who shut the wither'd blossoms in the book?—

"What shall we do, my dear, with things that
perish
Memory, roses, love we feel and cherish?"

The writer gives us only seven "Spring Songs"; but in these her talent as a lyricist is perhaps most apparent. The first is delightful as a piece of music and as a picture. It tells us of spring's awakening as imaged by "La Belle au Bois Dormant," in

"A forest thick and dim.
Overgrown and hoar indeed,
Hung with lichen, choked with weed.
To the brim.
Sleeps the knight and sleeps the steed
Under him.
Here the pale princesses
Lying on the green.
Pillow with their tresses
'Their enchanted queen,'"

"Going South" deserves quotation as a graceful lyric that in form and accent is quite Greek. In fact, it is in her close approach to classic models that Miss Robinson so notably succeeds. And we should fix upon the Hellenic note in her best pieces if asked to name another of the distinguishing charms of her verse. The following song may bear us out in our assertion:

"GOING SOUTH.

"A little grey swallow
I fled to the vales
Of the nightingales
And the haunts of Apollo.

"Behind me lie the sheer white cliffs, the hollow
Green waves that break at home, the northern
gales,
The oaks above the homesteads in the vales,
For all my home is far, and cannot follow.

"Oh! nightingale voices!
Oh! lemons in flower!
O branches of laurel!

You all are here, but ah not here my choice is:
Fain would I pluck one pink-vein'd bloom
Of sorrel,
Or hear the wrens build in some hazel bower."

The "Ballads" which follow the "Spring Songs" are styled by the writer in her dedication "superficial and fantastic." She must permit us to disagree with her as to the superficiality. They show decided ability to tell a story graphically, in the not-too-easy ballad-metre. And, of course, Miss Robinson's power as a colourist and painter of landscape is abundantly displayed. How vivid is the effect produced by the following lines from "Rudel and the Lady of Tripoli":

"For pale across the wan water
A shining wonder grows,
As pale as on the murky night
The dawn of grey and rose.

"And dim across the flood so grey
A city 'gins to rise,
A pale, enchanted, Eastern place,
White under radiant skies.

"O domes and spires, O minarets,
O heavy-headed drowse
Of nodding palms, O strangling rose,
Sweet in the cypress boughs!"

E così avanti. We could let our zeal for quotation carry us down another column before all the good things in this dainty little book had been used up. Yet that were not quite fair to the poet; and, in truth, we have passed beyond our limits already. She to whom Miss Robinson gives this set of "short pieces and stories" (as she calls them in her page of preface) is certainly to be envied. "Little things," so the Greek critic phrased it, "little things; but roses." Many of Miss Robinson's little things are undoubtedly roses. And who of her admirers would not feel glad and proud to have such fragrant blossoms offered to him in so light and graceful a way?

PERCY E. PINKERTON.

Philo Judæus; or, the Jewish-Alexandrian Philosophy. By J. Drummond. (Williams & Norgate.)

THE darkness which has long brooded over Philo so far as English students are concerned, and which Prof. Jowett's well-known Excursus only partly relieved, has just been sufficiently illuminated from two independent sources. Dr. Edersheim's learned and elaborate article in the fourth volume of Smith's *Dictionary of Christian Biography* has been followed

within a few months by Prof. Drummond's masterly monograph on the same subject. Henceforth the English student will have no cause to bewail his ignorance of the German language as the sole available passport to a comprehensive acquaintance with the founder of the "Jewish-Alexandrian Philosophy."

Dr. Drummond's work is partly historical, partly expository; and this not so much of his own choice as by the exigencies of his subject. Philo was the first thinker of any note who tried to find an intermediate standpoint between Judaism and Greek philosophy. Not that he originated such a point of view—it had already been provided for him by the similar tendencies of Judaic and Hellenic speculation. Forced by the stress of all thought which deals with the larger problems of the universe, both Jewish and Greek thinkers set themselves to find mediating persons or agencies by which the gulf between the infinite and finite, between the divine and human, might be spanned. It was characteristic of the several tendencies that the Jewish thinker devised intervenient created beings, such as angels, to serve his purpose, while the Greek philosopher postulated impersonal agencies or forces with the same object. With his keen eclectic intellect, Philo perceived that the initial need of the two thought-efforts was the same, however much the method of satisfying it might differ. He thereupon conceived the bold possibility, by interpreting each in the light of the other, to fuse the nearest assimilable elements of the two speculations into a kind of thought, conglomerate—it would be absurd to term it a system—which should, at the same time, best represent the aggregate of his own diversified conclusions.

This primary position and object of Philo is recognised by the plan of Dr. Drummond's work. Standing at the junction of two streams of noble proportions and far-reaching course, he perceives that the only method of ascertaining the force and composition of the confluent is to investigate in turn each of its branches. Accordingly he devotes his first book to a discussion of Greek philosophy from Heraclitus to the Stoics, selecting the salient features embodied by Philo in his teaching. He next considers, in his second book, "the blending of Hellenism with Judaism till the time of Philo"; wherein he recounts, with admirable clearness of thought and arrangement, the rise and growth, in the Old Testament, the Apocrypha, and the Sibylline oracles, of those theories and speculations which, developed in Philo's ardent imagination, became the foundations of his hybrid and heterogeneous superstructure. What this was in its motley entirety Dr. Drummond discusses in his third and last book, which is simply a model of lucid treatment of complex diversiform material.

Dr. Drummond's superiority to most other interpreters of Philo—*s.g.*, Gfrörer, Dähne, &c.—consists in his perspicuous and orderly arrangement of his materials, in his ingenuousness, and in sense of proportion. Writing not as a critic, but as an expositor, he does not, like most of his predecessors, approach the great thinker with any set purpose of establishing a predetermined system, or proving any pet theory from his works. He adopts the only fair, however laborious,

method of dealing with a multiple-minded syncretist like Philo, i.e., by a lucid and methodical juxtaposition of various selected passages he allows the reader to become his own critic, and on a fair balance of similarities and inconsistencies to determine the thought which on the whole most dominated the Jewish philosopher's mind and heart.

But this expository method implies another feature in which Dr. Drummond excels most Philo commentators, viz., his exhaustive knowledge of every portion of Philo's works. What this denotes in the way of labour and comparison I need not point out, but its influence in determining incidental points in Philo's teaching is obvious, and receives continual illustration in different portions of Dr. Drummond's book. I may refer as a striking example to the mode in which this fulness of knowledge is employed to ascertain Philo's real opinion on the eternity of matter (vol. i., pp. 303-304), where the presumptions of the case, as well as not a few incidental passages, would have pointed to a conclusion which Dr. Drummond shows to be unfounded.

Probably most English readers of Dr. Drummond's book will at once turn to his discussion of the Logos as the best-known link which connects Philo with the New Testament. The question takes up nearly half of the whole work, and is treated with an unsurpassed amplitude of research, as well as with an absolute freedom from bias of any kind. Those who think—as too many superficial commentators on St. John's Gospel are apt to think—that the genesis and use of the term are readily explicable, will be able to learn from Dr. Drummond how curiously involved has been the history of the word and the various doctrinal significations attached to it at different times. In point of fact, the Logos is the central crux of an enormous mass of perplexing speculation. As Dr. Drummond himself says, and the quotation will further serve my purpose as representing the spirit of his book (ii., p. 156):

"We encounter here all the difficulties that beset our way in the consideration of the powers (i.e., the half-divine potencies of which the Logos was one). The same florid and rhetorical style, the same fondness for personification, the same mingling of the literal and allegorical. Moreover, the uncertainty arising from Philo's eclectic method now reaches its highest pitch; and it is increasingly difficult to decide whether the heterogeneous elements of which his doctrine is composed—Platonic, Stoical, and Jewish—lie side by side without organic connexion, or have been fused together in the mould of a really philosophical mind. Besides these sources of perplexity which affect Philo's philosophy in general, the doctrine of the Logos has an ambiguity of its own springing from the variety of meanings which belong to its principal term," &c.

Such is the warning prelude to a long and able exposition, to which I must be content to refer my readers, with the hint that its general outcome may be found succinctly stated on p. 273 (vol. ii.).

Dr. Drummond's monograph and its method sets before the English reader in a peculiarly vivid form the intellectual formation of Philo. Keenly susceptible of all thought of a spiritual intuitional kind, he is indifferent to its amalgamation in a coherent system. As regards human

knowledge, he is, indeed, *ipso facto* a skeptic, a believer in the uncertainty of knowledge and in the duty of suspense. If his belief in the divinely inspired communications of Moses and the prophets seem to promise greater certainty, this is almost wholly neutralised by his excessive allegorism, which is applied in a manner at once so elastic and unscrupulous as to leave no truth firmly based. Neither Dr. Drummond nor any other Philo-commentator has adequately discerned the complementary tendency of these characteristics—that unlimited allegorism is a principle as solvent and undogmatising as confessed skepticism. It is curious to remember how all the leaders of the Alexandrian philosophy were men of a kindred type. Accepting on the one side the final results of Greek speculation, embracing on the other [the ostensibly divine revelation of Judaism or Christianity, they were] skeptics in human, allegorists in revelational knowledge, without a distinct perception that both methods were in operation and outcome largely akin.

Dr. Drummond admits that his labours on Philo have led him to form a higher estimate of that thinker's speculative power than he once held. A like result will, in my judgment, follow the reading of his book by every thoughtful and impartial student. At the same time Philo is a writer who requires discrimination in his readers. His value consists not in systematic teaching, but in striking flashes of thought and profound suggestion. He is 'not a field of corn which one may cut and garner in bulk, but a garden crowded with miscellaneous products, wild as well as cultivated, and leaving ample room for selection, taste, and co-ordinating skill. With Dr. Drummond as guide the exercise of such taste and skill is no longer difficult.

JOHN OWEN.

Democratic Vistas, and other Papers. By Walt Whitman. (Walter Scott.)

A COMPLETE edition of Whitman's prose writings in the useful and convenient "Camelot" series would be very acceptable; and, as one more volume would secure this, I hope the publisher will see his way to it. There is a suggestion of incompleteness about this otherwise excellent series. The number of volumes of selections included in it seems rather excessive. It provides the British public with admirable samples of many authors, but even the British public cannot live well on samples alone. Complete sets of Landor, Swift, Leigh Hunt, and the rest, would, of course, be out of the question in such a series; but it might sometimes be better to give one complete work of an author than cuttings from half a dozen. At any rate, in the case of Whitman, the whole of his prose works are within reach; and, as the two volumes already issued omit several important pieces, there is a special reason why a third and concluding volume should follow. Perhaps the very best piece of prose from Whitman's pen is the preface to the first edition (1855) of *Leaves of Grass*. Much of the substance of it appeared in another form in the second and subsequent editions, chiefly in the pieces which now bear the titles "Song of the Answerer" and "By Blue Ontario's Shore." It was, however,

never reproduced in its original shape until 1868, when Mr. W. M. Rossetti gave an incomplete version of it in his English volume of *Selections*. In 1881, at the suggestion of the late Thomas Dixon, of Sunderland (to whom Ruskin's letters—entitled *Tims and Tide*—"to a working man of Sunderland" were addressed), and, by permission of the author, I myself reprinted this preface un-mutilated; and Whitman includes it in his *Specimen Days and Collect*. But, for some reason or another, it does not appear in either of the "Camelot" volumes. Other valuable prefaces and essays are also missing, quite enough in quantity, and quite good enough, to make a volume. Perhaps author, editor, and publisher, will consider the suggestion.

Leaving now the omissions, we find there is plenty of excellent matter in the present volume. Next to the "Preface" above named, "Democratic Vistas" is quite the best thing Whitman has produced in prose. Whatever may be said for the genius that created the peculiar style of *Leaves of Grass* (and, for my part, I think a great deal may be said on this point) Whitman's essays do not mark him out as a master of style in prose. They are fittingly described by a favourite word of his own—jottings. But what they may lack in style is more than compensated by the abundance of thought they contain. Jottings so valuable will easily pass muster, even though they be not arranged in accordance with high literary art. "Democratic Vistas" consists of jottings on the future of democracy and, incidentally, on many topics not suggested in the title. The "other papers" in the volume consist of jottings, variously named, on Shakspeare, on Tennyson, on Burns, and on other subjects, including the author himself and his writings. Yet it would be wrong not to correct my criticism about Whitman's style by pointing out that there are numerous passages scattered through all these essays which are remarkable not only for the ideas they express, but for the finished beauty of their form as well.

The poet of the modern has some interesting things to say about those poets of other days whose reign is now drawing to a close; the singers of "those beautiful, matchless songs adjusted to other lands than these—other days, another spirit and stage of evolution." "What," he asks, and proceeds to answer,

"is Tennyson's service to his race, times, and especially to America? First, I should say, his personal character. He is not to be mentioned as a rugged, evolutionary, aboriginal force—but (and a great lesson is in it) he has been consistent throughout with the native, personal, healthy, patriotic, spinal element and promptings of himself. His moral line is local and conventional, but it is vital and genuine. He reflects the upper crust of his time, its pale cast of thought—even its ennui. . . . He shows how one can be a royal laureate, quite elegant and 'aristocratic,' and a little queer and affected, and at the same time perfectly manly and natural" (p. 127).

Admitting that he may be himself "non-literary and non-decorous," Whitman is able and willing to appreciate in Tennyson that "latent charm in mere words, cunning collocations and in the voice ringing them, which he has caught and brought out beyond

all others." Burns, in some respects, comes closer to Whitman's heart. "There are many things in Burns's poems and character that specially endear him to America," he says. For one thing, he was "essentially a republican"; for another, he was "an average sample of the good-natured, warm-blooded, proud-spirited, amative, alimentive, convivial, young and early middle-aged man of the decent-born middle classes everywhere and anyhow" whatever all this may mean. In better style Whitman remarks, later on:

"There is something about Burns peculiarly acceptable to the concrete human point of view. He poetises work-a-day agricultural labour and life (whose spirit and sympathies, as well as practicalities, are much the same everywhere), and treats fresh, often coarse, natural occurrences, loves, persons, not like many new and some old poets, in a genteel style of gilt and china, or at second or third removes, but in their own born atmosphere—laughter, sweat, unction" (p. 118).

Yet, while anxious to give full honour to all poets of the past, Whitman does not forget for a moment that poetry of the future whose pioneer it is his mission to be. "Even Shakespeare," he says, "belongs essentially to the buried past."

As to this mission of his, and the way in which he has fulfilled it, Whitman has several things to say—more, perhaps, than was necessary. For in these latter days, without explanation—which he never condescended to give while he was abused—he and his work have come to be pretty well understood. One of the best possible evidences of the inherent strength of *Leaves of Grass* and its author is that, under circumstances the most unfavourable, and against all kinds of impediments, they have held their own, and come to be esteemed. But Whitman, who would explain nothing in answer to abuse, is prepared to explain much in answer to sympathy; and, accordingly, in three separate articles in this volume, he discourses of himself and his book. *Leaves of Grass*, he says,

"is, or seeks to be, simply a faithful and doubtless self-willed record. In the midst of all it gives one man's—the author's—identity, ardours, observations, faiths, and thoughts, coloured hardly at all with any colouring from other faiths, other authors, other identities or times. Plenty of songs had been sung—beautiful, matchless songs—adjusted to other lands than these, other days, another spirit and stage of evolution; but I would sing, and leave out or put in, solely with reference to America and myself and to-day. Modern science and democracy seemed to be throwing out their challenge to poetry to put them in its statements in contradistinction to the songs and myths of the past. As I see it now (perhaps too late), I have unwittingly taken up that challenge, and made an attempt at such statements, which I certainly would not assume to do now, knowing more clearly what it means" (p. 87).

The book is valuable precisely because it is a faithful and self-willed record. It is, as I have said elsewhere, a biography, in poetry, of the human soul—of Whitman's own soul, ostensibly; really of all souls, for the experience of the individual is simply the experience of the race in miniature. That the record is "self-willed" is undeniable; and, in these days, when few persons dare to utter

their own thought, while most are mere echoes or, at best, speak only when they are quite sure that their opinions are supported by precedent, surely the faithful, honest, uncompromising Whitman is a much-needed teacher.

WALTER LEWIN.

A Season in Sutherland. By J. E. Edwards-Moss. (Macmillan.)

THIS little book appears in good time for holiday-makers. It will delight all who know Sutherland already, and be nothing short of a revelation to those who are unacquainted with one of the most charming districts in the British Isles. Most people fancy it a land of bleak moors and rugged mountains, with no trees and few of our common birds, where thick mist shrouds what is not black peat and low-lying heath, while rushing streams run among the hills, and loch succeeds loch offering endless pleasure to trout fishers. In dull weather Sutherland certainly must be painted in a low scheme of colour; but there are plenty of brilliant tints to charm the artist among the heathery tracts running up to the shoulders of its great mountains during summer, while every fisherman believes it a paradise. It is as well, however, not to take the verdict of fishermen's wives on this point. For the future they must be introduced to Mr. Edwards-Moss's book. He is a perfect enthusiast for Sutherland, and shows that Strath Borgie may, in many respects, rival the beauty of an English flower-garden. His house in that northern valley is overgrown with honeysuckle, jasmine, and creeping roses. His lawn is belted by trees and gay with borders full of rhododendrons, fuchsias, and a large variety of good old-fashioned plants. Ribbon borders he detests, and very properly in Sutherland. As we read his delightful pages fairyland seems to open afresh in every chapter. And yet we remember staying at a celebrated fishing inn thirty miles south of Mr. Edwards-Moss's country where gooseberries and cabbages were literally all that its garden could produce; and a cucumber, which a friend had brought with him from England, had a narrow escape of being boiled, as it was an utterly unknown vegetable to the household. The explanation of the seeming paradox is that probably a branch of the Gulf Stream sets in at the mouth of the Borgie, and that Mr. Edwards-Moss must live in a sheltered part of its valley.

The author is a naturalist as well as a sportsman. He has a keen eye for beauty, and an ardent love of nature. From the dawn of a Sutherland summer at the end of May till autumn's glow has fallen upon heath and fell in mid October, he describes to his readers the successive changes in his flowers, the varied beauty of the landscape, the different sports and avocations of each month. He possesses the secret of describing common things well, and his sympathy with all forms of life and Scottish scenery is extreme. One day he takes us to catch salmon in the Naver, or trout-fishing among the lochs, or we try sea-fishing on a quiet afternoon. After a kindly consideration of the so-called grievances of the crofters, it is time another day to follow the grouse over miles of moorland or to stalk

a seal on Island Roan. A third day a Pictish fort evokes archaeological tastes. But all these rambles only take us, full of admiration, from the polyanthuses and petunias in the morning, to bring us back during the magnificent saffron twilights of Sutherland to the odours of musk and the fragrance of Li France, to the pink spiraeas and sweet peas of the lawn. Thus this book is a veritable idyll of Sutherland. It must delight every lover of a garden, even if he never saw, and never intends to look upon, these happy Hyperboreans, as compared with Londoners—the Southlanders, as opposed to the great northern *haf* of the old Vikings in the Orkneys. In a word, *A Season in Sutherland* is a "country-book"; one of those enjoyable volumes, like Gilbert White's and St. John's books, which men take under their arms to read on the shady seat, and intensify the pleasure of a summer evening.

The joys of little amusements is a topic often unobtrusively pointed out here. Every year after middle life emphasises the wisdom of not neglecting these, which make up a large portion of happiness. No reader will be sorry to go mushroom-picking, or even shrimping, with Mr. Edwards-Moss. He is a student of birds, too, and not above listening to stories of old women changing into hares, of witches' "cantrieps," and the marvels of second-sight. All he writes about fish or fishing is fresh and interesting. Thus, it does not happen to everyone to hook a trout behind a turnip as a "spate" is subsiding in a turnip-field. The work in which he is busying himself is trout-culture, especially in lochs which have hitherto been untenanted by this fish; and improving the beds of rivers—an occupation which will commend itself to every friend of Scotland. He is setting about this in a philosophical spirit which contrasts strongly with the empirical fashion in which fish culture is too often treated. The two kinds of trout which he finds in his fishing appear to agree with the two forms of *S. fario* observed by Dr. Günther—*S. fario Gaimardi* and *Ausonii*. Both varieties are found in Cumberland and Shropshire, and may well coexist in Sutherland. So far as we remember, however, all we caught in Sutherland belonged to the former, the distinctly northern, form.

Much of the charm of this book arises from the author's view of sport, in which men will heartily concur. Killing for the mere sake of killing, worse still, for publishing the size of the bags obtained in the sporting papers, is abhorrent to him; the aesthetic side of sport is what he rejoices in, "the thousand associations historical, classical, poetical, mythological, which surround it, and which spring unbidden, as one treads the moor, lingers by the river, or dreams upon the sea." *A Season in Sutherland* is just the book for the Scotch sportsman or tourist with a love for nature to put into his pocket for the journey north. We have marked one or two mistakes to be amended in the next edition. The late naturalist whose books pleased so many country lovers spelled his name "Jefferies," not "Jeffries"; "penguecula" should be *pinguicula*; "limnae," *limnaea*; and "autochthonoi," *autochthonous*. And so we close a charming book.

M. G. WATKINS.

NEW NOVELS.

The Strange Adventures of a House-Boat. By William Black. In 3 vols. (Sampson Low.)

Love's Labour Won. By James Grant. In 3 vols. (Ward & Downey.)

Led from Afar. By Mallard Herbertson. In 2 vols. (Remington.)

Broken Wings. By Avery Macalpine. (Chatto & Windus.)

Derelict. By Claud Harding, R.N. (Spencer Blackett.)

The Mystery of a Turkish Bath. By "Rita." (White.)

Bristol Diamonds. By Emma Marshall. (Seeley.)

So as by Fire. By J. F. Seton. (London Literary Society.)

Two Chorus Girls, and Other Stories. By Hamilton Clarke. (Sonnenschein.)

MR. BLACK has never written a more delightful story than his *Strange Adventures of a House-Boat*. It is a book not for criticism but for enjoyment. It has no plot, but it contains several excellent studies of character; and the American girl, Peggy Rosalyn, with her beauty and witching grace, deserves to take high rank among the author's heroines. The gospel of flirtation finds its most profound interpreter in Mr. Black, who knows as much of the workings of the feminine mind as, say, Sir John Lubbock does of those of ants. But Mr. Black is also something much more—he is an artist among the novelists. These three volumes alone would abundantly prove this, for they exhibit a singular power of grasping the salient features of an English landscape, of whatever character that landscape may partake, or however changing and varied may be its moods. There is no lovelier scenery in England than that through which the Thames, the Severn, the Kennet, and the Avon meander; and as we read these pages we envy both the passengers by the House-Boat their journey, and the recorder of the party his power of description. Doubly seemly and attractive under the circumstances appears the Scriptural motto, "Go thou and do likewise." Here is a little sketch, taken at random, of a placid Warwickshire landscape:

"There had been some rain during the night, or perhaps early in the morning; but now the skies were fair, if not completely clear; long streaks of turquoise blue lay between the motionless, soft, fleecy, white clouds; and a dull sultry sunlight lay over the moist green meadows, and the hawthorne hedges, and the great wide branching elms, not a leaf of which was stirring. A death-like silence brooded over this wide extent of country, that rose at the horizon into a line of low-lying hills serrated with woods; but somewhere far away there was the tinkling of a bell—probably a school bell; and around us there was a continuous twittering of birds busy after the rain. There was no other sign of life. And in this perfect stillness and solitariness one grew to fancy that, however Stratford town may have been altered in its old-world streets and houses, these meadows must have been in Shakspeare's time, and long before that, too, very much what they are now, with buttercups among the lush grass, in the sweet May-time, under the fleecy white skies."

There are many such passages of delicate

description; but besides scenery, the *dramatis personae* of these volumes discuss a thousand mundane matters, from the high things of philosophy down to the meaner things of food consumption. Shakspeare and the poets come in for a good deal, and that "modern abomination," the critic, is very severely handled. Jokes are scattered throughout the volumes, some new and excellent, some—well, with just the slightest suspicion of Joe Millerism about them; but all enjoyable. Altogether, this latest novel by Mr. Black is a clever specimen of high-class comedy, interspersed with passages of a deeper and more serious import. The measure of its success may be gauged by the reader's regret when Mrs. Threepenny Bit, Col. Cameron, V.C., Miss Peggy Rosalyn, and the other travellers step out of the Nameless Barge at the end of their journeyings.

Love's Labour Won, the last novel written by the late James Grant, is decidedly inferior to many of his earlier productions. The English scenes, where ordinary love-making goes on, lack the *verve* and energy which gave the author's stirring military novels a deservedly high reputation. The leading heroine—for there are several prominent women characters—loves a young soldier, and rejects a baronet old enough to be her grandfather, although he tempts her with diamonds and £20,000 a year. Melanie Talbot's guardian is a vulgar sort of fellow, who plays an underhand game of a very poor quality, and one which was doomed to be found out. There is not much reality in many of the characters, even in Plantagenet Pugwash, who boasted of his "h'ancestors who fought at 'Astings with William of H'Orange." A change of names sometimes shows that his characters had not indelibly impressed themselves upon the author's mind, as a novelist's creations should do. There are one or two amusing things, as when Melanie vaunts her independence as a woman, and her aunt replies, "She talks quite like those dreadful people, the Socialists and Liberals who use dynamite at the Reformers' tree in Hyde Park." Another character, being reminded of Douglas Jerrold's saying that Eve ate the apple in order that she might dress, retorts, "Dress, by Jove! then she didn't do it extravagantly." By far the best parts of this story are those devoted to the recital of deeds of British valour in Africa, and during the last Burmese war, when King Theebaw's power was utterly demolished. Here Mr. Grant is seen at his best, and the descriptions are full of vigour and excitement. The book is worth reading for these passages alone; but, historically, its pages are sometimes disfigured by prejudice.

There is some slight interest from the psychological point of view in *Led from Afar*; but it is not sufficient to make the narrative really attractive, or to constitute it a successful work of fiction. The mission undertaken by Hugh Trevelyan on behalf of his old love, Ethel Darcy—which consists in establishing her fair fame as the wife of one of the greatest of scoundrels—is estimable in itself, and is carried through with energy; but there was no necessity for him to tell the old Welsh minister that he had no interest in

the matter, seeing that this was the exact reverse of the truth. One of the best characters is a Yankee, Mr. Ephraim C. Slack; but there is a great lack of backbone in the whole novel. The author should do better in his next venture.

A very tender and pathetic story is that of *Broken Wings*, and it manifests also no slight literary skill. We do not remember to have ever seen brought out more strongly the unutterable depth, and the wondrous self-sacrificing nature, of a mother's love. Yet it is almost matched by the clinging affection of the child Claire, the little *dansseuse* heroine of this touching narrative. The only fault one can find with the sketch is that it is almost too sad; and the author would do well to address himself to the lighter as well as the graver aspects of humanity. But his work is distinctly above the average, and he does not spoil it by trying to attenuate into two volumes matter that is infinitely more effective in one.

The writer of *Derelict*, which is described as "a tale of moving accidents by flood and field," is more at home on shipboard than in the political sphere. Some of his descriptions of encounters at sea are graphic enough, and what are nautical mysteries to landmen are all plain sailing to him. His hero, Tom Marston, is a jolly young Englishman, frank, brave, and manly; and he well deserves the wife he secures at last, after he has been enmeshed for a time by an aristocratic Delilah, Lady Sybil Challenger. There are here several vigorously drawn characters, but the author has no confidence in the rank and file of his own countrymen. He objects to their desire to better themselves. They hate the army and navy, he says, "because they are officered by a class which is antagonistic to them"; "they hate the aristocracy on account of their superiority of birth and breeding"; they tolerate the plutocracy, "because they all hope to be plutocrats themselves some day"; and the climax of their political vices is that "Gladstone is their idol!" Mr. Harding, R.N., should keep to a good sailor's yarn.

Another story into which politics are introduced is *The Mystery of a Turkish Bath*; but surely a writer who allows her characters to traduce one great statesman should at least be able to spell the name of another. The author of the Education Act of 1870 appears here as *Foster*. Clairvoyance is the basis of this latest of the "Mysteries," but it would be manifestly unfair to expose the plot or its *dénouement*. The story is not badly written, but it is slight. It may, however, serve to while away an hour.

Mrs. Marshall's *Bristol Diamonds* is, like "Rita's" story, also very short, but it is far superior from every point of view. The narrative is interesting, and well kept together, and as a description of society at the Hot Wells in the year 1773 it is extremely interesting. We obtain passing glimpses of Edmund Burke and Hannah More; but the real intention of the author is to relate a touching love story as affecting two persons in a less distinguished sphere. This she does in a very graceful manner, and the sketch is one to enlist the sympathy of every reader.

The hand of the amateur lies heavy upon *So as by Fire*, otherwise there would not be much objection to it as a story. It has its good points; but they might have been treated more happily and successfully. Mr. Seton's name is new to us, and it may be that this is his first plunge into literature.

We have placed Mr. Hamilton Clarke's volume last, because it is a collection of short sketches; but in merit it deserves precedence over many of the stories already noticed. Those who are inclined to think that there is nothing but evil associated with the theatres may learn a lesson of charity and sympathy from the sketch of "Two Chorus Girls"; and it is long since we have read more touching transcripts of life than those entitled "A Child Musician" and "The Abbey Chorister."

G. BARNETT SMITH.

SOME BOOKS ON EDUCATION.

Prosperity or Pauperism. Edited by the Earl of Meath. (Longmans.) In this volume the editor has collected a good deal of floating literature dealing with "physical, industrial, and technical training." As a matter of course, the contributions are of very unequal interest, and there are one or two the inclusion of which it is hard to understand. The main object which Lord Meath has had in view is to bring the weight of united opinion to bear on educational authorities in order to influence the government to add to the existing codes physical, technical, and industrial training. Most, if not all, of the articles have been published before; but there are some, notably those by the editor himself, by Mr. Chadwick, by Mr. Samuel Smith, by Miss Chapman, and by Mr. Paton, and a few others, which are well worth conning and noting. The problem, in a nutshell, is this. How are we to deal with the great mass of casual unskilled labour—or idleness—that is increasing round about the centres of industry? How are we to make it useful instead of destructive? Mr. Smith is surely right when he denies that Mr. Giffen's comfortable statistics about the progress of the working-classes apply to this ne'er-do-weel part of our population. The remedy proposed is "technical education," which, however, is not to be supposed capable of reversing the effects of economic laws, though it must surely modify them. No one puts the matter more clearly than Mr. Paton; no one knows its practical bearings better. He sees with perfect truth that how well soever we have provided for the education of our population up to the age of thirteen or so, there is between this and the age of sixteen or seventeen "a terrible gap" indeed. During this time our children, whom we have trained so carefully and at such expense in our state-endowed schools, not only lose the keys to literature and science that were given to them with the three R's, but (with Mr. R. L. Stevenson's permission) are left amusing themselves in the gutter to pick up gutter-things. Now, so far, the chief ways in which the endeavour to reform has expressed itself are the teaching of science in state-endowed schools and the founding of technical schools. Well, as Sir John Lubbock here tells us, out of 4,500,000 children in our schools, less than 25,000 were examined last year in any branch of science as a specific subject. And, we must say, with every deference to Sir John Lubbock, from some knowledge of the working of state-endowed elementary schools and the text-books of science used therein and of the examinations, that we should be very much surprised if any good at all came of

them. It is a great pity that a good cause should be so unscientifically injured by Sir John's advocacy. What weight does it add to his demand for science-teaching to say that Mr. Gladstone never learnt any English grammar, and to quote approvingly the strange statement that the places of the *i* and *e* in "believe" and "conceive" are profitless conventions which we teach our children? In the first place, neither these statements nor the equally interesting declaration that there are milestones on the Dover Road have anything to do with the matter; in the next, Mr. Gladstone certainly learnt Latin Grammar (which we infer from Sir John's facts and in Sir John's way must be better than English, seeing that it has made Mr. Gladstone) and the places of the *e* and the *i* in the words quoted are as little conventions as the position of the antennae of ants. Let it not be supposed that this criticism is needlessly captious. It is vitally important to the future of our educational system that we should not discard sciences mainly observational for sciences more strictly physical and experimental. In spite of much wisdom, this contribution of Sir John Lubbock's is one of the least satisfactory in the book, because least convincing. Mr. Cunynghame is right in deprecating the teaching from books of things which even a very clever man could hardly learn, except from observation. And Mr. Cunynghame probably knows that the South Kensington examinations have produced some teachers and many books capable of doing nothing beyond getting a grant under South Kensington conditions. We confess we do not know what the teaching of such "science" is to do for us. Nor are we satisfied with the technical schools proper, in so far as this particular object is concerned—the raising of the mass of "casual unskilled labour." It is the proverbial pill so good against the proverbial earthquake. Such schools draw from a higher stratum than that which we desire to see tapped. Apart from a large displacement of population or some other purging economic movement, by far the most powerful remedy ever proposed is that urged by the wisest contributors to Lord Meath's book. First, we must accustom children to the use of tools, teach fingers and brains to minister together to the satisfaction of the healthy restlessness of youth, so that the child may be pliable and adaptable to all sorts of conditions. This is to be done by direct government encouragement to the teaching of manual training. Secondly, we must have compulsory continuation-schools, an extension of the system of "half-time," in order to deal with the fatal dangers attending *désoeuvrement* in the festering streets. Mr. Smith says wisely, "I should recommend that Eton as well as Seven Dials should have industrial education." And we should like to urge with the utmost earnestness, in Sir Philip Magnus's words, "that the object of workshop practice, as a part of general education, is not to teach a boy a trade, but to develop his faculties and to give him manual skill." It is not, perhaps, surprising that trades unions are sometimes the stubbornest opponents of technical education, but it is very pitiful. Considering the great number of writers whose ideas are set forth under Lord Meath's marshalling, there is marvellous unanimity. Little discrepancies occur. For instance, most writers tell us that any decent artisan would do to take charge of the training workshop; but Miss Chapman most emphatically warns us that we must have a specially and intelligently trained teacher. It is not a serious difference however. Let us get our training-shops; the bad teachers will soon be improved away.

Industrial Instruction. By Herr Seidel. (Boston, U.S.: Heath.) In the years 1882 and 1884 the question of industrial instruction was being

hotly discussed in the Synod of the Cantons of Zurich, and Herr Seidel published a book the objections raised against the scheme. A little book now translated by Miss Margaret Smith is substantially the same work, dealing with local and personal matters, and giving it a more general character." He sets forth the thesis that industrial instruction is a pedagogic necessity, and shows that it is the duty of the state to introduce hand labour into the school. Let us admit at once that Herr Seidel's book is a good one. Miss Smith performed her part of the task with as much success as possible considering the involved and semi-metaphysical style of her original, though we will say at once that we can accept "schoolman" as an equivalent for "schoolmaster" or "educationist" (the latter, no doubt), in spite of the fact that were once favoured with an essay on "Schoolmen," which devoted itself to criticism of Roger Ascham. The author begins by examining the rational relation between industrial instruction and the conditions of society; but chapter i. is by no means a specimen of his real power, though it is of characteristic faults. It is true, no doubt, that education and instruction are conditioned by existing social and civil relations, and it is true also that in feudal pre-revolutionary days the present system of Swiss national education would have been impossible; but it is not true that the "gracious lords" there and elsewhere "declared education to be one of their inalienable prerogatives, and forbade it, and rendered it impossible for the people." So Herr Seidel declaims, and furthermore insists that education had but a single aim—"to strengthen the power of the governing classes." But soon works his way out of this kind of thing, and then the book (making allowance for occasional socialistic aberrations) becomes a well-ordered and unanswerable series of arguments for industrial instruction. Beyond doubt "the future in the state, as well as pedagogy, belongs to labour," but not, if we please Herr Seidel, exclusively to hand labour which he sometimes makes believe to be. He hits the right nail a square stroke on the head in chapter ii. by claiming an equal place for practical teaching with theoretical teaching, the principal aim of both being the harmonious development of the future man. In Lord Meath's book, noticed above, Mr. Samuel Smith urges the same course for the Eton boy and the boy of the Seven Dials. Why not? The teacher, surely, is working in *materia*, boy, to effect the same end—to make a thoroughly developed man. The author proceeds to face the economic objections made to industrial teaching, plausible and legitimate objections, and alleged substitutes, all of which he lays low. We cannot, however, quite follow him on page 61, where his argument runs somewhat as follows. Modern society is based on labour, and demands in its own interests that everyone should possess a certain amount of practical education in labour, and shall have a general understanding of the ideas based on labour. Hence society must see that each of its members gets these. Therefore industrial instruction cannot be left to the judgment of the family; it must be undertaken by the state. Nor can we conscientiously echo his approval of Pestalozzi's "Property is an artificial creation of society." At all events we are not content to take Pestalozzi as an unopposable authority on such points. And, again, it is perfectly true that "what no father would fail to do for his son, what no master would fail to do for his apprentice, the government has failed to do for its people." Of course, the government is not the father of its people, nor the employer of apprentices; so nothing follows from the analogy. We do

not think, with Herr Seidel, that "the majority of great men come from the lower classes" (!), and yet we hold with him that it would be well for the state to take any steps which would conduce to the "harmonious development" of the veriest clodhopper. Herr Seidel gives up chapter v. to answering objecting educators and "schoolmen," in which he (among other points) disposes very satisfactorily of the plea set up in favour of the substitution of gymnastics for the suggested hand labour. Chapter vi. is a marshalling of authorities for the "classic educators," and the last chapter gathers up the arguments. In taking leave of the book, it is only fair to Herr Seidel to say that, much as we differ from his speculative opinions, we regard his little work as, on the whole, the completest statement we have yet met of the reasonable necessity of industrial education in any system of public instruction which is not to be halting, and one-sided, and actually dangerous.

Compayré's History of Pedagogy. Translated by W. H. Payne. (Sonnenschein.) Whoever takes up M. Compayré's book is pretty sure to read it to the end, and Mr. Payne's translation keeps the clearness and vivacity of the original almost without loss. The translator is quite right in saying that historical pedagogy has received but little attention from English and American teachers; and it has received even less from English and American writers. It would seem to be a special gift of Frenchmen to be able to put together clear and compendious treatises, to compile real cyclopædias, and to so generalise historical facts as to concentrate and broaden the view of them at the same time. The history of educational experiments and writings has many advantages over a like history of politics. To begin with, we may confidently expect that the efforts of persons bent on educating the young will be more disinterested than of those engaged in political struggles; and we may be sure, in the next place, that we are getting the mature experience of reflecting persons, the best of the spirit of their times. It is true, then—though true in a sense to which perhaps Herr Seidel, whose book we have noticed above, will not attach much importance—that the education of any period is that period's most distinctive outcome; certainly it is that by which we can most readily estimate its good and its bad. Perhaps this is one of the reasons why M. Compayré's book is so fascinating. It is, in little, a history of civilisation, and quite as likely to interest general readers as teachers, to whom it ought to be indispensable. The *Histoire de la Pédagogie* is an amended form of the *Histoire critique de l'Éducation en France depuis le seizième siècle* published in 1879. It is a survey of educational methods and writings in twenty-two chapters, each chapter being a complete and interesting study in itself. To be sure, such a manual can never take the place of practical acquaintance at first hand with authorities. But most students cannot hope to master the whole matter of educational philosophy in the short time allowed them before they have to begin practical work; and to such, as well as to those whose memory requires enlivening and stimulating by the electric spark of happy generalisation, M. Compayré's work is of great value. He determined, we think rightly, to follow the chronological order in his treatment of the subject, rather than to examine its progress under the head of this or that "tendency" or "principle." For it is impossible to separate the history of pedagogy (if not of education) from the history of society in general; and to classify under this or that tendency or principle would be confusing, and lead to serious cross-division without offering any advantage to counterveil its arbitrariness. Moreover, as M. Compayré himself feels, if

his work is to be of real advantage to the pedagogic student, it is most likely to succeed where the sense of continuity is not lost to him and where he feels that he is adding his brick to a strong pile rising generation by generation. M. Compayré would not be a Frenchman and a deputy of advanced opinions if he did not let his political views colour his work a little. He notes with great approval the Rabbinical requirement that the schoolmaster should be married; he is not over-generous in his estimate of the "Teaching Congregations"; and he does more than justice to the Protestant reformers. Occasionally, his conjectures seem to us a little extravagant. Is it really true that Andrew Bell got the hint for his monitorial system from the Hindus? Is it anything more than the wildest generalisation to make Greece and Rome prototypes of the modern classical and scientific spirits? In his chapters on Pestalozzi and Froebel, our author has performed the somewhat ungrateful but very necessary task of playing *advocatus diaboli* against these two distinguished men. He does not grudge them an atom of the credit justly due to them for their passionate enthusiasm, which has given such dignity and new lustre to the profession of teaching and has done so much to rationalise its methods; but he raises a timely protest against the kind of Pope-worship which raises their *dicta* and practices to the level of things incontrovertible. It is well that teachers should be on their guard against nebulousness and mysticism—states very easy to communicate. One of the very best chapters in the book is the last, dealing with those eminent writers, Messrs. Spencer and Bain. It is a model of just and powerful criticism, which, leaving unimpaired one's admiration for their wisdom, provides the hint and instrument for detecting their fallacies. We have said that Mr. Payne has done his work well. Not the least valuable parts of the book are his analytical summaries affixed to successive chapters, and the notes explanatory and critical which he has appended here and there to his author. It would be mean if, thus indebted to him, we objected to "affranchissement," "back of" (for "behind"), "dismission," and "rapport," which are not English.

Annuaire de l'enseignement primaire. (Paris: Armand Colin.) This useful little publication consists of two parts. The first is a record and directory, and the second contains short pedagogical articles of interest to teachers and the general public. It is the latter which will naturally offer most interest to English readers, as dealing with matters of importance to both nations alike. We confess to being a little disappointed, however, as some of the articles hardly deserve permanent record in what is, after all, mainly a directory.

Health Maps. By Anna Leffler Arnim. (Sonnenschein.) These handy little folding maps are meant to help us in "maintaining the health in a state of integrity . . . correcting any tendencies to functional irregularity . . . and resisting the encroachments of disease." The author is well-known as a writer on medico-gymnastic subjects, and her last contribution to that literature is worthy of her reputation. The exercises are divided into five groups, and can be easily learnt and practised, no apparatus being required—a very great recommendation indeed.

NOTES AND NEWS.

THE committee formed to collect subscriptions for a memorial to the late Matthew Arnold have adopted the following resolution: "The appropriation of the funds obtained cannot be absolutely determined at present; but it is

desired by the committee, in the first instance, to place in Westminster Abbey a medallion or bust, as may be found most convenient; next, to make adequate provision for Mrs. Arnold and her unmarried daughter; lastly, after providing for the foregoing objects (should the sum obtained be sufficient), to found at Oxford an Arnold Scholarship or Lectureship, with a view to promote the study of English literature. It is estimated that the cost of the medallion or bust will not exceed £500, including all attendant expenses."

At a meeting held last week at the India Office, it was resolved that the memorial to the late Sir Henry Sumner Maine should take the form of a marble medallion in Westminster Abbey, and that the execution of the medallion should be entrusted to Mr. J. E. Boehm. The total cost is estimated at about £360; and individual subscriptions are limited to three guineas.

The Incorporated Society of Authors have resolved to invite Mr. J. R. Lowell and as many other American men of letters as may be then in England to a dinner, in recognition of their persevering efforts on behalf of international copyright. The date fixed is Wednesday, July 26.

An appeal has been issued by the council of Bedford College, London, for subscriptions towards an extension of their premises. A lease of ground immediately adjoining has been offered, on condition that a building of a certain value be erected. It is proposed to take advantage of this opportunity to meet a want that has long been felt, by the erection of adequate laboratories for scientific instruction, of additional class-rooms, and of cheaper accommodation for resident students. It is further proposed to call the new building the "Shaen Wing," in memory of the long and devoted services which the late Mr. Shaen (who died last year) rendered to Bedford College and to the general cause of women's education. It is estimated that a total sum of £3000 will be required to carry out the scheme, of which about £600 has already been promised.

THE council of the Selden Society will be glad to receive for its second volume, now in preparation, information as to the existence of any early manorial rolls of the reigns of Henry III. or Edward I. Information should be sent to the Hon. Secretary, Mr. P. Edward Dove, Lincoln's Inn.

At the annual meeting of the Royal Statistical Society, held last Tuesday, Dr. T. Graham Balfour was elected president for the ensuing year.

THE Hon. Roden Noel has almost ready for the press a new volume of poems, which will take its title from the longest piece, "A Modern Faust." This is an adaptation of the elements of the old legend to modern problems and conditions. It is written in various metres, and includes a prose interlude, chiefly satirical.

MESSRS. MACMILLAN will shortly publish a new work by the Rev. Philip H. Wicksteed, entitled *The Alphabet of Economic Science*.

THE August volume in the monthly series of "Great Writers," published by Mr. Walter Scott, will be *Congreve*, by Mr. Edmund Gosse.

THE author of "Antiqua Mater" has in hand a new work on the *Rise of the Catholic Church*, which will throw fresh light on the questions raised in his previous book.

THE new edition of *Boyne's Tokens*, which was announced as coming out under the editorship of Mr. G. E. Williamson, is now at press. The work has been so enlarged that it will be about twice the size of the original. It is to be published by Mr. Elliot Stock.

MR. CHARLES G. LELAND's forthcoming work on *Americanisms* will contain a contribu-

tion by Dr. Oliver Wendell Holmes on the dialect, superstitions, and folklore of Massachusetts, with a number of specimens.

MR. WILLIAM PATERSON, of Edinburgh and London, will issue in a few days a new edition of the poetical works of Sir Walter Scott, in four volumes, uniform with his edition of the Waverley Novels. He has also in the press a new novel by Mr. James Peddie, entitled *The Work of a Friend*; and a collection of weird tales in five volumes, collected from English, Scottish, Irish, German, and American writers—a volume being devoted to each nationality.

We understand that Mr. William Sharp's *Romantic Ballads* (which was reviewed in the ACADEMY of June 16) is out of print, and that no new edition will be issued at present.

We quote the following from the New York Critic:—

"I must ask, through your columns, to warn the reading public against purchasing surreptitious and fraudulent copies of the 1860 edition of Walt Whitman's *Leaves of Grass*. All copies of this edition (or nearly all) put upon the market for the last quarter of a century have been stolen impressions from the original plates; Mr. Whitman has not received a cent of copyright on them. I was some weeks ago put in possession of the facts in the case by a letter from Mr. Charles W. Eldridge, one of the original publishers of the 1860 edition, and now residing in Los Angeles, Cal. Mr. Eldridge states that he finds spurious copies for sale in towns in California, and thinks they are being worked off in large lots; and that they virtually supply the existing demand for Whitman's poems. I saw to-day in one of the largest bookstores in Boston a copy of the 1860 edition (in its familiar binding), temptingly displayed in the window; and learned, on inquiry inside, that they had bought quite a lot of them 'cheap' at a trade-sale at Leavitt's in New York. I myself innocently bought, nine years ago, a copy in a Boston store, and find now, by the help of Mr. Eldridge's letter, that it is one of the unauthorised, stolen copies. These can be detected in the following way:—The stereotype plates, steel-engraved portrait, and dies for cover are the same as those used in the Thayer & Aldridge edition; but on the back of the title-page, immediately under the certificate of copyright, in the genuine edition, appear the words 'Electrotyped at the Boston Stereotype Foundry. Printed by George O. Rand and Avery.' In the fraudulent edition these words are lacking. . . . It should be known that the only honest edition of *Leaves of Grass* now to be had is that published by David McKay, of Philadelphia—although I believe Mr. Whitman still has a few sets left of the two-volume \$10 edition." W. S. KENNEDY.

At the end of next week, Messrs. Sotheby will sell the very choice library of the late Mr. John Duff, of Greenock. It includes copies of all the four folios of Shakspeare—the Kilmarnock Burns, the Pisa *Adonais*, Shelley's *Zastrozzi*, and the Canadian reprint of Tennyson's early poems (1862).

Correction.—With reference to a note under "University Jottings" in the ACADEMY of last week, we are requested to state that Prof. A. A. Macdonell has not resigned his office of German teacher at the Taylorian Institution, Oxford; but that Dr. Joseph Wright has been appointed his deputy for one year.

THE FORTHCOMING MAGAZINES.

THE July number of the *Antiquary* will open with an article on "Thomas Taylor, the Platonist," by Mr. Edward Peacock; Mr. J. Theodore Bent will give an account of the adventures of Dallam when he conveyed an organ to Turkey as a present from Queen Elizabeth to the Sultan; and among other articles will be one on the "Parish Registers in the Uxbridge Deanery," by the Rev. J. H. Thomas, and on the "Eleanor Cross at Geddington," by Mr. W. Brailsford.

THE forthcoming number of the *Political Science Quarterly* (London: Henry Frowde), edited by the Faculty of Political Science of Columbia College, New York, will contain a second paper by Prof. Richmond Smith upon "Control of Immigration." Prof. Smith seeks to show that the United States no longer needs the vast quantity of unskilled labour supplied by Europe, and that the recent immigration is seriously injuring the welfare of the American people by lowering the standard of living. Mr. Randolph writes on the "Surplus Revenue," advocating the reduction of customs' duties. Mr. Powers describes the "Reform of the Federal Service," showing the progress of the reform movement under President Cleveland's administration. Of more direct interest to English readers are Prof. Farnham's discussion of the relations of the "State and the Poor," and Prof. Goodnow's criticism of the "English Local Government Bill." Prof. Goodnow discusses the Bill largely from the administrative point of view, and concludes that the consolidation of local authority is insufficient, and that further legislation will be required before English administration attains the simplicity of structure and ease of action which characterise the French and German systems. The political effect of the Bill, on the other hand, Prof. Goodnow considers of great importance. Prof. Burgess describes the "Tenure and Powers of the German Emperor," showing how largely the aggressive powers of the Prussian crown have been lessened by the formation of the Empire, in which the real sovereignty lies in the Federal Council.

A MONOTINT lithograph of "The First Cloud," by Mr. W. Q. Orchardson, will be issued as a frontispiece to the July number of the *Leisure Hour*.

ORIGINAL VERSE.

A THOUGHT OF LESSING'S.

"WENN Gott in seiner Rechten alle Wahrheit, und in seiner Linken den einzigen, immer regen Trieb nach Wahrheit (obschon mit dem Zusatz mich immer und ewig zu irren) verschlossen hielte und spräche zu mir: 'Wähle!' ich fiel ihm mit Demuth in seine Linke und sagte: 'Vater, gib! Die reine Wahrheit ist ja für dich allein!'"

Did I stand face to face with God, and he Command: "Choose, man, right hand or left at will!

All faultless knowledge, truth of good and ill My right hand holds. Take, and live error-free!

Or choose my left hand, see, or seem to see Hard-matrix'd truth gleam gold-like out, and still

Astrain to reach it, hunger, yearn and thrill, And, erring, doubt if truth indeed there be!"

Then I: "Give me that hunger, Lord!—the gift Of perfect knowledge suits not man; 'twould lift

His sloth-prone soul with pride and vain content—

These only it befits. Give me to sift Truth out of error grainwise, though I drift And err, so seeking—yea, till life be spent!"

R. M'LINTOCK.

OBITUARY.

PROF. KAHNIS.

CARL FRIEDRICH AUGUST KAHNIS died at Leipzig, early in the morning of Wednesday, June 20. He was born at Greiz, December 22, 1814, and became a Privatdozent at Berlin in 1842. Prof. Philip Schaff was Privatdozent with him there, and Prof. Luthardt was one of his students. In 1844 Kahniss was appointed Extraordinary Professor at Breslau, and in

1850 Ordinary Professor at Leipzig. In 1856 growing weakness compelled him to stop lecturing, and he has since been scarcely visible even to his intimate friends. His department was Church History, but he also gave lectures on "Encyclopædia" and on Dogmatics. A man of great clearness of statement, he was equally facile in speaking German and Latin, and genial in every relation of life. Of his many books we can mention only *Der inner Gang des deutschen Protestantismus* (1854, 3rd ed. 1874) and *Die lutherische Dogmatik* (1861, 2nd ed. 1874-75). He was buried on Friday, June 22. Pastor Hölcher spoke for the domestic side of his life, and Prof. Luthardt for his academical and theological work.

C. R. G.

EDMUND GURNEY.

WE regret to record the death of Mr. Edmund Gurney, some time fellow of Trinity College, Cambridge. He was perhaps best known to the public as one of the secretaries of the Society for Psychical Research, and as the chief author of that portentous work, *Phantasm of the Living*. But his exceptionally acute intellect was by no means entirely devoted to the unprofitable business of thought-reading and ghost-hunting. In 1880 he published *The Power of Sound*, which was quickly recognised by those best qualified to judge as inaugurating a new philosophy of music. And only last November there appeared two volumes of collected essays from his pen, entitled *Tertium Quid*, dealing in the most trenchant way with a number of topics—moral, metaphysical, and æsthetic. Mr. Gurney, who was in his forty-third year, died at Brighton on the night of June 22, as the result of an overdose of chloroform, self-administered, to remedy chronic sleeplessness and neuralgia.

THE Rev. John Penrose, of Uffculme, near Cullompton, in Devonshire, died suddenly at Osen, in Norway, on June 20. His father, an English clergyman, who was Bampton lecturer in 1808, held several Lincolnshire benefices, and among them was that of Bracebridge, where the son was born on May 21, 1815. He graduated at Balliol College, Oxford, in 1836, and in the next year was elected to a fellowship at Lincoln College, which he retained until 1842. For some years (1839-46) he was an assistant-master at Rugby; but from 1846 he has been resident, first at Exmouth and then at Uffculme, in the pleasant county of Devon. His compilation of *Easy Exercises in Latin Elegiac Verse*, originally published in 1850, has passed through more than twelve editions.

MR. BAKER PETER SMITH, one of the oldest members of the Middle Temple, died at Maidenhead on June 18, aged 87. His father was Thomas Smith, attorney and vestry clerk of the parishes of Tottenham and Stoke Newington; his mother was Sarah, daughter of the Rev. William Sellon, of Clerkenwell, and sister of Serjeant Sellon. So long ago as 1840 Smith issued an entertaining little volume called *A Trip to the Far West of England*.

MR. JAMES LAPWORTH, long a familiar figure in legal circles, died at 7 Blenheim Road, Bedford Park, Chiswick, on June 21, aged 90. His first start in life was as clerk to a solicitor at Warwick; and from 1820 to 1837 he was in the same position with Messrs. Gregory & Co., the well-known firm of solicitors at Bedford Row. In the last year he became clerk to Sir William Follett, with whom he stopped until Sir William's death in 1845. After a short connexion with the Home Office, he was appointed in 1846 to the post of librarian to the Incorporated Law Society in Chancery Lane—a place which

he retained until he was pensioned in 1876. During his tenure of office in that institution he compiled two catalogues of the books in the library: the first, a subject catalogue, was issued in 1851; the second, an author catalogue, with an index of subjects, was issued in 1869.

MAGAZINES AND REVIEWS.

THE current number of the *Journal* of the China Branch of the Royal Asiatic Society contains two articles of more than usual interest, by Dr. Hirth. The first is on "Ancient Chinese Porcelain," and the second on "The Chinese Oriental College." Dr. Hirth disagrees with the conclusion arrived at by Julien on the antiquity of the manufacture of porcelain in China. The French scholar assumed that the art was practised in China as early as the Han period (206 B.C.—A.D. 220), from the fact of the occurrence of the expression *ts'uch'i*, by which is now understood "porcelain," in the literature of that period. An exactly similar reason used to be adduced to show that the Chinese had a knowledge of gunpowder long before it was known in Europe. The word *pao* now used for "cannon" occurs in the early dynastic records; *ergo*, it was argued, the Chinese manufactured gunpowder at the time spoken of. But it was afterwards pointed out that the word *pao* was anciently applied to ballistas. Hence the confusion. In the same way Dr. Hirth contends that the expression *ts'uch'i* probably meant "pottery" at the period mentioned. He also points out that, like the Greek *γλαυκος*, the Chinese word *ts'ing* means either "green" or "blue," and that in translating accounts of the porcelain of the Sung dynasty, Julien has rendered the word by "blue" when it should have been "green." In the second article Dr. Hirth gives an interesting account of the college which has for many centuries existed at Peking, for the instruction of students in the languages of the peoples with whom the Chinese have had relations. At this college vocabularies of the various languages are prepared. One of these Dr. Hirth has lately discovered in MS. which differs from all others known, inasmuch as it contains a list of Juchih words. Juchih was the ancient appellation of the Manchus; and from the twelfth century until the establishment of the present Manchu Dynasty in China, the Juchih used a writing which was compounded with parts of Chinese characters. With their assumption of imperial state, the Manchus, as they then became, adopted their present alphabetical writing, and the Juchih script was allowed to drop out of existence. Only one or two specimens of the writing have until now reached Europe, and Dr. Hirth's MS. will doubtless, therefore, prove a valuable addition to our knowledge of the Juchih written character.

CORRESPONDENCE.

THE TRIPARTITE LIFE OF ST. PATRICK.

London: June 23, 1893

Mr. Dunlop's notice of my edition of the Tripartite Life is, on the whole, so kind and fair that I can only attribute to my own want of clearness his suggestion (*ACADEMY*, June 23, 1888, p. 424, col. 2) that in the introduction I argue "from the Tripartite Life to the doctrines professed by St. Patrick"—an argument which he rightly characterises as "extremely hazardous." But the only references in the introduction to the saint's doctrines are in p. cxxxv., to which I refer in p. clxi. In the former place I quote only the *Confessio*, the *Faéd Fiada* (a copy of which is in the *Liber Hymnorum*) the hymn of Secundinus, the *Liber Angueli*, and the canons edited by Wasserscheleben. I carefully abstain from quoting as evidence of Patrick's doctrines the Tripartite Life, which I describe (p. cxxxvi.) as a religious romance, and which I cite (p. clxi.

et seq.) only to show the opinions of mediaeval Irish Christians, such as its compiler, his contemporaries, and their immediate predecessors.

Nor can I admit that Patrick's fast on Cruachan is an example of *dharna*. If we go to India for analogies, I should compare it rather with those god-constraining austerities, of which Padmavati says (*KSS*. ii. 538, ed. Tawney): "There is nothing that austerities cannot accomplish." The thaumaturgic power of the saint's fast is also exemplified in p. 312, where it dispels the magical mists over Magh Ai.

Let me take this opportunity of correcting an error and supplying an omission in my book. In the introduction, p. cxxxiii, ll. 7, 8, for *Potitus read Potitius*, as in *C.I.L.* viii., 1381. In p. 81, l. 17, the dots should be replaced by "from me (a part) of the fosterage-fee" (*tarrad*), and in the next line for "the land that," &c., read "The land that," &c.

The passage is important as showing that the fee paid for fosterage (*Ancient Laws of Ireland*, vol. ii., p. 146) occasionally consisted of land.

Whitley Stokes.

Youghal: June 5, 1893.

In the *ACADEMY*, No. 803, Mr. Whitley Stokes writes: "I called, and still call, the scribe of the Oxford Tripartite Life of St. Patrick (Rawl. B. 512) 'a careful and learned person,' meaning, of course, that he was a careful scribe and learned in his own tongue." The Tripartite has been recently issued in the *Rolls* series under the editorship of Mr. Stokes. As the bulk of the text is taken from the Oxford MS., ample data are now within reach for putting the foregoing statements to the proof.

First, with regard to the Latinity. I have to premise, however, that some of the corrigenda are not to be laid to the scribe's charge. For instance, *historiam dicere*, given (p. 2) as the expression of St. Jerome, is not due to the copyist. Allowing for the native interchange of *d* and *t*, he wrote accurately *historiam decere*. Hence the Italian *tessere l'istoria*.

Nor is the following his:

"Non enim potest fieri ut corpus baptism recipiat sacramentum nisi ante [quam] anima fidelis suscepit veritatem—for it cannot be that the body should receive the sacrament of baptism before the soul receives the verity of faith (pp. 4, 5)."

Quite right; but, needless to say, the editor's English makes St. Jerome state the very reverse of the editor's Latin. Omit [quam], replace *suscepit* by *susceperit*, and you have the original, as given in the Egerton (British Museum) MS. In Rawl. B. 512, such was the care employed that the compendium of *er*, a line drawn across the down-stroke of *p*, was omitted.

Of scribal errors in transcription of single words, some forty are corrected in the text and printed in the margin. To show their character, I set down specimens.

LATIN FORMS, RAWL. B. 572.	CORRECT FORMS.
p. 56, illeis	illaesi
100, in spiritu	inspirat
138, peniper	semper
160, enyca	enixa
204, cerse	coenae
244, cant	canit
Britorum	Britonum
248, dixit	Deus
254, unias	lineas
262, in terra	intra

Others have been reproduced, probably from oversight. Such are *accederat* (*acciderat*), p. 124, *adit* (*adi*), p. 128, *quem dicebatur* (*qui*), p. 212.

The English version is based on the vocables as amended.

Of chief importance, however, are the radical corruptions which the editor has neither amended nor perceived. I select some, "Habentur et haec—these too are implied (pp. 4, 5)." Noteworthy is the new equation—*habentur = implied*. The Latin has to be taken upon trust, for we are not informed whether the scribe used contractions. Be that as it may, the true lection can be supplied from Egerton: Herent haec (ubi dicit: Data est, etc.)—these words adhere (where he saith: Data est; i.e. vv. 19, 20 fit on to v. 18 of Matt. xxviii.) The corresponding Irish, which the careful copyist did not copy, is *leth atuib[th]e*. The equivalence is employed in three glosses of the Milan Columbanus, quoted in the editor's Index verborum.

"Pro fide ac baptismo—in favour of faith and baptism (pp. 6, 7)." St. Jerome wrote, of course, *post fidem ac baptismum*. The reading in Egerton, which is here relegated to a note, should, accordingly, have been placed in the text.

"Et posuit ibi Assicum et Bite filium Assici (p. 96)." Yet, the editor had under his hand abundant proof that Bite was nephew of Assicus. For the original in the Book of Armagh has: Et posuit ibi Assicum et Betheum, filium fratris Assici (fol. 11b, c; p. 313). Next, Egerton gives: filium fratris Assicus [-ci]. Thirdly, another passage in the Tripartite contains: Bite, filius fratris Assici (p. 148). Here, of all places, you would consider, was the occasion for one of the notes "illustrative of the various readings" required, the Minute prefixed to the volume says, by the Treasury.

"Hoc enim non cum eis habuit rex aquarum—for he [St. Patrick] did not, as they did, hold it to be a king of waters (pp. 122-3)." *Hoc*, namely = *fons*! The emendation is so easy that one is ashamed to claim credit for it. *Hoc enim nomen*, &c.—for (the fountain) had this name with them, viz., rex aquarum. Cf. Book of Armagh: quia dederunt illi [i.e. font] nomen, aquarum rex (fol. 13d; p. 323).

"Pausantur—have their rest (pp. 178-9)." *Pausant*, the requisite word, is given at foot; doubtless, to show that the vocable was considered a vox nihili by the editor.

"Sic quod verbum uniuicque ex eis dixit: quod impletum est—unto each of them he thus said a word; which hath been fulfilled (p. 212-3)." Duplicating the relative is an accession to Latin syntax. In Egerton we find sicque verbum, &c.; the conjunction, not the pronoun, being demanded.

Next, with respect to the scribe's native learning. Here, too, some of the corrigenda, it is right to premise, are not of his causing. For instance, we have *secht* in the text, translated *six* on the opposite page (pp. 114-5). The MS. gives the numeral in Roman notation. The Irish for *six* is *se*, not *secht*. The copyist, consequently, we must conclude, wrote *vi*, as in Egerton, not *vii*.

Here (pp. 96-7) is an imaginary textual deficiency. "Dindail . . . nominatur locus Ail-find; de aqua nuncupatur—the place is named Ail-find from the stone (ail) . . . ; it is called from the water [find (fair)]." The sentences are to be arranged thus: Dindail . . . nominatur locus Ail; find de aqua nuncupatur—from the rock (ail) . . . the place [Elphin] is named Ail; find (fair) it is called from the water.

In "ail Oengusso ocus Ailella, maico Nat-fraich—seed of Oengus and Ailell, son of N. (pp. 196-7)," *maico*, the facsimile prefixed to Vol. I. shows, represents the scribal *m*, with stroke overhead. The sense requires gen. pl., not gen. sg. The full form is, therefore, *mac*; "of O. and A., sons of N."

When this scribe, Mr. Stokes has said,

(ACADEMY, No. 792), gives *Mel* (not *Maile*) as gen., he may be trusted. Here is tabulated evidence on the point.

GENITIVES, R. B. 512.	GENITIVES, OLD-IRISH.
P. 74, Corcan	Corcain
76, Chasan	Chasain
84, Ohiaran	Chiarain
104, Ohianan	Chianain
" Cethecho	Cethig
108, Loman	Lomain
" Talan	Talain
" Coeman	Coemain
110, Sachall	Sachell
130, Foelan	Foelain
136, Olcan	Oleain
162, Gabran	Gabrain
164, Conadan	Conadain
166, Saran	Sarain
188, Ercan	Ercain
194, Feidilmid	Fedelmedo—theo

The sole clue afforded by the editor to the existence of this black list consists in the words italicised. In these cases, the native expressions have been retained amended in the translation.

That the left-hand column is the product of the copyist's carefulness and learning, is made manifest by the fact that elsewhere he transcribes Chiarain (p. 88), Cethig (p. 104), Lomain (p. 204) and Talain (p. 108), quite accurately; thereby proving unconsciously under his own hand that the exemplar was not in fault. Nay more, Cethecho and Cethig occur within five lines; Talan is found at foot of one column (13a) and Talain at top of the next. In sooth, a most excellent scribe!

Of substantial corruptions that have been neither removed nor pointed out in the present edition, a few will suffice to show the nature. "Is he, immorro, leth ataeibi ind aisneissi . . . codu. Now, this is one of the two contents of this declaration . . . as far as the place (pp. 4, 5)." Elsewhere (p. 431), we have *leth ataeibi* = "one of the two connected passages." Though Mr. Stokes wrote in September 1887 (ACADEMY, No. 803) that "about three years ago" he discovered *leth ataeibi* to mean *context*, it is only in his corrections (p. 674) that the new version appears for the first time, and restricted to p. 431. I am willing to extend the effect of the discovery to p. 5.

But, even in the amended form, it would be difficult to find a version to which objections more insuperable lie. First, *is*, being a mere copula, can never predicate. No doubt, we have an editorial bettering "is cell [and]—there is a church [there] (pp. 420-7)." Any child, however, who talks the mother-tongue, would stare and gasp at such Irish. *Ata cell* and is the native sentence (p. 30). *Is cell* is quite correct where it stands; the scholiast says Caill Foclaid, in Tyravley (Co. Mayo) is a church. As here translated, the verb, accordingly, has no subject.

Moreover, if *ataebi* were, as put down in the index, pres. ind. sg. 3, the antecedent, *leth*, would have the article. Alleth crin irrabi (p. 58), as ind port irrabi (p. 82), alla mbeithe (p. 118), ise ropu hualloha int Oengus (p. 126).

Thirdly and chiefly, *ind aisneis* is not gen., but nom. The gen.-ending is copied correctly by the scribe in *aisneisen* [= Old-Irish *aisindisen*] (p. 256), the case of which is beyond question. The word, we know from the article *ind* of Rawl. and, still better, from *inna* (aisindisen) of the Milan Columbanus (16d), is feminine. To maintain his ground, therefore, the editor, willy nilly, must write the scribe down an ignoramus.

Fourthly, the gen. would not be employed here, but the dative with *di*—dind aisindisin. Dinleith andes do sleib Mis (p. 38), alleth nur dontig (p. 58). To show the usage, it will suffice to state that I found the periphrasis

only thrice, and the periphrasis more than seventy times, in the Tripartite.

Is he leth atuib[th]e, ind aisindis codu is, consequently, the only possible reading. "The narrative (of Isaiah) at the place (ix. 1) is the context [lit. side of adherence] (of v. 2)." The pronoun *he* stands proleptically for the subject, *ind aisindis*. The article, as a rule, is not employed with sb. followed by dependent gen., or with verbal sb. (infinitive). *Atoibe* is phonetic gen. of *atoibad* (p. 90). The correct form, *atoibthe*, occurs twice in one column of the St. Gall Priscian (29b). Zeuss cited the word in two places (pp. 363, 1021), and in both gave it accurately, not *atoibethe*, as assigned to him in this book (p. 430).

"Doluid Patraio iarsin don topur. i. Cliabach, hi alessaib Cruachan fri turgbail ngrene—thereafter Patrick went at sunrise to the well, namely, Cliabach on the sides of Cruachan" (pp. 98-9). Now, *fri* does not signify *at*, but *opposite, towards*: *fri Auu Ailella*, *fri Ba[d]igna*—over against Hy A., over against B. (p. 94); *fri Caill Foclaid*—over against C. F. (p. 130); *fri beolu mara*—towards the entrance to [lit. of] the sea (p. 136); *fri abainn*—towards the river (p. 199).

Turning to the Book of Armagh (fol. 12 a., pp. 314-5), we find: "Deinde venit S. Patricius ad fontem, qui dicitur Clebach, in lateribus Crochan contra ortum solis, ante ortum solis." *Contra ortum solis* is determined by the correlative: *de cellola Toch*, in regiones Temenrigi i Ceru *contra solis occasum* (fol. 15b, p. 329). It is, obviously, *fri terebail grene* of the Tripartite. Add *ri terebail grene*, the Irish of the Armagh *ante ortum solis*, to the Rawlinson reading and the lacuna becomes filled up. The meaning is: St. Patrick went before sunrise to the fountain Clebach, [situated] on the slopes of Cruachan towards the east. Clebach, which the editor is unable to identify, still exists on the eastern declivity of Rathcroghan, the royal seat of Connaught, nine miles north of Roscommon town. Its flow of water is as constant and copious as when the two royal sisters

"had rushed,
Ere earliest dawn the East had flushed,
To bathe them in its well."

The source of the scribe's error is now discovered. He had before him *fri terebail grene*, *ri terebail grene*. The dissimilarity was so slight as to lead him, like the learned pundit he was to conclude that the second expression was a repetition of the first. He omitted it accordingly. This, with your latter-day editor, is proof of his carefulness and learning.

"Docotar la Cethecho epscoo diatir. Do ceniu Ailella amathair, Do ceniu Sai . . . [athair]—They went with bishop Cethech to his country. Of the race of Ailill was C.'s mother. Of the C. S. . . was his father (pp. 104-5)." Let us see what the Book of Armagh has respecting Cethech's parentage. Exierunt cum [Ce]thiaco, sancto episcopo, [ad] suam propriam regionem; quia de genere Ailello eius pater fuit, et mater eius erat de genere Sai (fol. 12c, p. 318). Thus, had Mr. Stokes been cut out for amending anything, he could easily have corrected his text here. Read: lotar diathir; athair di C. A., amathair di C. S.—they went to his country; his father (having been) of C. A., his mother of C. S.

From blundering or oversight, no matter which, the scribe left out *athair* (his father): with the result that the editor unwittingly sets up for being a better authority than Tirechan and his informant, bishop Ultan of Ardbraccan, "who died A.D. 656 (p. xci.)."

"Cathir docum vii episcoporum—a city for seven bishops (pp. 148-9)." But *docum* never signifies *for*. It always means *to*, and regularly follows verbs of motion. Dodechatar docum Temrach—They went to Tara (p. 53); o thanico

dochum nErinn — when he came to Ireland (p. 66); tecaít modechum—they come to me (p. 98). Similar examples are to be found at pp. 124, 160, 224, 242. Furthermore, the compendium *epis.* must be lengthened *episcopis*. For in *nomina episcoporum* (p. 106), where the case is undoubted, the gen.-termination is written in full.

The scribe, it is easy to see, jumbled up Latin and Irish. We have to read: cathir do, cum septem episcopis—a city for him (Patrick), with seven bishops. The cognate passage is (p. 96): la Patraic in dhell—to Patrick belongs the church (of Racon, co. Donegal). Its seven bishops are invoked in the Litany of Oengus (Book of Leinster, p. 374a).

So much as to how far this work has been edited "in such a manner," to quote the Treasury Minute, "as to represent with all possible correctness the text... derived from a collation of the best MSS."

The "estimate of historical credibility and value postulated in the same Minute," students will be enabled to appraise, when it is added that the editor employs here the same method that led to such notable results in the *Calendar of Oengus* and *Stowe Missal*. From a text demonstrably vitiated in form and corrupt in substance, worthless consequently as a linguistic basis, a synopsis of grammatical forms has been compiled. This cumbersome catalogue, bristling with italics and arabics, hyphens and equation-marks, drags its laborious length through five and twenty pages of small print. It is made to do duty as a "linguistic argument." If we subjoin, we are told, eleven similar formations there given of equal purity, "we can hardly avoid the conclusion that the Tripartite Life was compiled in the eleventh century" (p. lxxxix.).

Mr. Stokes has been operose in exhibiting in the ACADEMY what, with felicitous phrase, he dubbed "curiosities of official scholarship."

"mutato nomine, de te

Fabula narratur."

These two volumes are tangible proof that such characteristics are still found thick strewn on the field of Irish Philology.

B. MACCARTHY.

"STEERMAN."

Stanhoe Grange, Norfolk, June 23, 1883.

I am much obliged to Mr. Palmer for the quotations bearing on this word which he gives from Ducange and elsewhere.

My statement that neither "stermannus" nor "esturmain" occurs in the *Glossarium* (at any rate as head words) was literally correct; though the various forms of the latter registered by Burguy ought to have enabled me to give the proper references to Ducange.

The forms "esturment," "estument," are apparently due to the influence of "instrumentum," though they have no connexion with it in signification—the meaning, "vaisseau," "navire," given by Ducange (under "estument") being, as Mr. Palmer points out, clearly erroneous.

PAGET TOYNBEE.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, July 2, 4 p.m. Natural History Museum: Swiney Lecture, "Plants of the Palaeozoic Epoch," IV., by Prof. W. R. McNab.
5 p.m. Royal Institution: General Monthly Meeting.
WEDNESDAY, July 4, 4 p.m. Natural History Museum: Swiney Lecture, "Plants of the Palaeozoic Epoch," V., by Prof. W. R. McNab.
THURSDAY, July 5, 4 p.m. Archaeological Institute: "The Antiquities of Trèves and Metz," by Prof. Bunnell Lewis; "Roman Life in Egypt," by Mr. W. M. Flinders Petrie.
FRIDAY, July 6, 4 p.m. Natural History Museum: Swiney Lecture, "Plants of the Palaeozoic Epoch," VI., by Prof. W. R. McNab.

8 p.m. Geologists' Association: "The Rheotides and Lias of Glamorganshire," by Mr. H. B. Woodward; "The Geology of the Forest of Dean," by Mr. E. Wethered; "The Clays of Bedfordshire," by Mr. A. O. G. Cameron.

SCIENCE.

MATHEMATICAL BOOKS.

American Journal of Mathematics. Vol. x., No. 2. (Baltimore.) Mr. G. P. Young, in his memoir on "Solvable Quintic Equations with Commensurable Coefficients," continues his work upon quintics by applying his general method (vol. vii., p. 103) to the solution of twenty examples. This is an exceedingly valuable pendant to his former paper, and enables the reader to grasp the author's mode of solution in the case under consideration, that of irreducible quintics with commensurable coefficients (pp. 98-130). In "Forms of Non-Singular Quintic Curves" Mr. D. Barcroft discusses quintics with fifteen, eleven, seven, and three real inflexions, and has illustrated his paper with forty-seven very carefully-drawn figures on twelve pages (pp. 131-140). "The twelve lines each containing three of the nine inflexions of a cubic" will intersect in twelve other points. From the twelve lines we get twelve points, which are clearly the critic centres or possible double points of all cubics having the same inflexions as the one considered." This is the text of Mr. F. Morley's article, entitled "On Critic Centres" (pp. 141-148). Captain Macmahon's contribution carries on his previous work with the title "The Expression of Syzygies among Perpetuants by means of Partitions" (pp. 149-168). The Abbé Faà de Bruno gives a "démonstration directe de la formule Jacobienne de la transformation cubique." Another short note is "Note on Geometric Inferences from Algebraic Symmetry," by F. Morley; and the number closes with a memoir by M. P. Appell on "Surfaces telles que l'origine se projette sur chaque normale au milieu des centres de courbure principaux" (pp. 175-186).

Companion to the Weekly Problem Papers. By the Rev. J. J. Milne. (Macmillan.) The "Weekly Problem Papers" and their "Solutions" have found their way into the hands, we should suppose, of all who have anything to do with the preparation for a mathematical scholarship examination, and the work before us is a most excellent "Companion" to them. It is the result of the united efforts of several contributors who have won for themselves a claim to be listened to on the respective subjects they here handle. Mr. Milne, who is the editor, states in his preface that his object has been "to direct attention to those points hitherto passed over in silence by previous writers, or not treated with the fulness which they deserve." He has taken for his part the "theory of maximum and minimum," treated algebraically and geometrically, and the "theory of envelopes" similarly treated. We think the interest of these papers would have been enhanced by references to previous writers on the subjects. He refers only to Cresswell for geometrical maxima (in his preface), though he says (p. vi.): "I have in every case throughout the book endeavoured to indicate the authors of the various propositions and proofs so far as I was able to trace them." This is, however, a small matter which can be easily rectified if our views are held by other readers, and commend themselves to Mr. Milne. What he gives is well-done, and of considerable interest. Mr. R. F. Davis and Prof. Genese are two geometers whose work is always elegant, and their contributions are not confined to the signed articles—by the former on "Centroid" applied to geometry, binomial series, and algebraical and trigonometrical

identities; and by the latter on "Force" applied to geometry, biangular co-ordinates, geometrical and mechanical constructions. These gentlemen also contribute, with Mr. R. M. Langley, interesting articles on Feuerbach's theorem. Mr. Langley makes some acute remarks on the theory of inversion, and on pedals. The longest article is the Rev. T. C. Simmons's excellent account of the modern geometry of the triangle (pp. 99-184). In a paper on this subject read at the last January meeting of the Association for the Improvement of Geometrical Teaching, Mr. Davis rightly calls this

"the most remarkable and interesting of recent additions to elementary mathematics. Within the last few years it has arisen in the sky like some strange unknown planet, and many telescopes from different lands have been eagerly pointed at it."

This article, the supplementary chapter (pp. 165-222) of the fourth edition of Dr. Casey's *Sequel to Euclid*, and pp. 245-257 of Casey's conics, with several articles in different parts of the same work, are the only connected accounts we have, in any language, of this modern geometry. There are plenty of separate papers; but these are not, without considerable difficulty, obtainable by the general reader. A fairly full and very accurate account, so far as continental sources are concerned, is given by M. E. Lemoine, in his "renseignements historiques et bibliographiques" appended to a paper read before the Association Française pour l'Avancement des Sciences—Congrès de Grenoble (1885, pp. 19-27). Mr. Simmons has given a brief *résumé* of this account in his chapter ix. In correction of his note (p. 181), a very small matter—we may state that the term "symmedian point" was first used in the *Educational Times* (see "Reprint," xli, p. 26). Some early provisions of recent discoveries will be seen in the *Ladies and Gents' Diary* for 1859, 1861, 1862, 1866 (the Cosine Circle), and 1868. In the "Reprint" we may refer to vols. xviii, xix, xx., where Kiepert's hyperbola—so called from that mathematician's article in the *Nouvelles Annales*, 1869—forms the subject of a question, proposed by the editor, Mr. Miller, so long ago as July, 1862; cf. also question 424 of Whitworth's trilinear co-ordinates 1866), vol. xxii., and later volumes. The fact remains, however, as M. Lemoine puts it:

"Les points de Brocard ont sans doute aussi été fréquemment rencontrés, mais il est également certain qu'avant ce géomètre nul n'avait soupçonné leur rôle et leur importance dans la géométrie du triangle."

The same holds also of the Lemoine point. English geometers had paid no attention to the matter; and it was not until the present writer (April, 1885), while engaged upon an examination of a circle, which he called the "H. M. Taylor Circle" (*Messenger of Mathematics*, vol. xi.) conceived the "triplicate-ratio" circle, which he subsequently connected with the Brocard circle, that the matter at all came before them. We made an early communication of results to Dr. Casey; and this brilliant geometer at once saw his opportunity, and entered into possession of a domain which he has greatly beautified and extended. Mr. Simmons, in an extremely able sketch, has taken up a new position, while going over much of the old ground. He is the first writer who has introduced the use of the eccentricity of the Brocard ellipse into a treatment of this branch of geometry, and the result is highly satisfactory and elegant. M. de Longchamps says: "Cette science [Brocardienne] est née en France, mais elle y est encore peu répandue, bien qu'elle soit déjà classique à l'étranger." Prof. Neuberg, too, of Liège, states that there is not, nor is there likely to be, a French text-book of the same elementary,

and at the same time comprehensive, nature as this account we are considering. So, though late in the field, the English mathematicians have done good work, and advanced the outposts some way beyond the position occupied in 1883. Mr. Simmons, in a paper entitled 'A New Theory of Harmonic Polygons,' read before the London Mathematical Society (April 7, 1887) has done original work in another direction of this subject; and we have reason to believe that were this "companion" work to be done over again he would start with the harmonic polygon, and take the triangle as a particular case. This article will undoubtedly lead to many other mathematicians taking an interest in the new geometry, with the result that more lines will be opened up, and then the way will be prepared for an enlarged treatment of the whole subject. Meantime, all honour is due to Dr. Casey, our author, and other investigators, for their good services. The discoverer of the nine-point circle is, we believe, unknown. The modern practice of attaching discoverer's names to circles may not commend itself to all, yet how are we to distinguish between individual circles? We cordially commend Mr. Milne's new book to our mathematical readers, feeling sure they will find much to interest them. May we correct a small slip in the preface? The expression "ten-minute conundrums" was employed by De Morgan in his presidential address to the Mathematical Society, and was quoted from this address by Henry Smith, in his presidential address to the same society. He makes express reference to De Morgan (*cf. Proceedings of the London Mathematical Society*, vol. viii., p. 7).

A Treatise on Algebra. By Charles Smith. (Macmillan.) A notice of a text-book on algebra in these days must be prefaced by a statement as to whether it is drawn up on the old familiar lines or whether it follows the path marked out in Prof. Chrystal's work. We say then that Mr. Charles Smith has in the main kept to the old treatment; but there are numerous excellencies of exposition and arrangement which are departures for the better. The student is to some extent expected to have read some such work as the author's admirable small book on algebra, and hence the earlier parts are treated in a rather concise manner. There is a good account of the fundamental laws and of the usual subjects up to the binomial theorem for a positive integral exponent. Then we have a very valuable chapter on convergency and divergency of series—a change in the usual order for which Mr. Smith justly asks for approval. The chapter on continued fractions also appears to us to be very well done, and to contain some novel features for an elementary work. The closing chapter on determinants gives as much as one can look for in a treatise which is not specially devoted to this branch. It is not necessary to go into any detail; the book everywhere gives evidence of careful compilation and arrangement, and contains a storehouse of well-selected examples—many of which are new to us. The student has now a triplet of recent algebras to choose from, each one of which is admirable, and has special features of its own.

A Higher Arithmetic and Elementary Mensuration. For the Senior Classes of Schools and Candidates preparing for Public Examinations. By P. Goyen. (Macmillan.) This is an excellent book for intelligent students. There are no formal rules and definitions; but a great number of carefully selected examples are worked out with some detail, and the reader is left to make the rules for himself. All through the work exercises abound, and at the end is a collection of 400 miscellaneous examples.

Arithmetic for Beginners. A School Class-book of Commercial Arithmetic. By the Rev.

J. B. Lock. (Macmillan.) This is a simplified form of Mr. Lock's larger work with a "re-written" collection of exercises graduated for junior pupils. It is well adapted for the class of "commercial" candidates, and to meet the wants of this class a chapter on exchanges and foreign money is included. On p. 151 our author has made a serious mistake in working out a bill on Paris for 7,625 francs, when the course of exchange is 25·25, for he gives as answer £500. He has apparently taken the exchange to be 15·25. There is a great deal of excellent material in this little book, and it is placed before the reader with much clearness.

Key to Todhunter's Differential Calculus. By H. St. J. Hunter. (Macmillan.) Mr. Hunter has performed a useful piece of work in an excellent manner. The solutions are good, clear, and yet concise. The descriptions, where figures are needed, are sufficient and to the point. This would be a capital book for students who have not a private tutor at hand to do the work for them.

Arithmetic Papers set in the Higher Local Examination. From June 1869, to June 1887, inclusive. The Papers on Questions, with Notes on Arithmetic, by S. J. D. Shaw. (Cambridge: Deighton, Bell & Co.) The notes are taken from lectures delivered to the students of Newnham College, and are a very useful accompaniment to the papers which they, in a measure, complement. Miss Shaw has produced a little book which we can commend to the class of readers for whom she has compiled it—viz., teachers and older students.

The Elements of Plane and Solid Mensuration. With Copious Examples. By F. G. Brabant. (Rivingtons.) This is a full and apparently accurate treatise on the subject, drawn up with special reference to the requirements of present-day examinations. It covers a larger area than Todhunter's (where was he "Professor," as our author styles him?) booklet; and, in addition to a large collection of solved and unsolved examples, has several carefully drawn figures.

Elements of Dynamics (Kinetics and Statics). With numerous Exercises. A Text-book for Junior Students. By the Rev. J. L. Robinson. (Rivingtons.) The following account of the headings of the chapters will show that the author has adopted the system suggested by Thomson and Tait. Chaps. 1 and 2 treat respectively of uniform and accelerated velocity. Chaps. 3, 4, 5 of the laws of motion; chap. 6 of fundamental propositions in statics; chap. 7 of two parallel forces; chap. 8 of moments; chap. 9 of centre of gravity; chap. 10 of conditions of equilibrium; chap. 11 of machines; chap. 12 of friction; chap. 13 of impact; chap. 14 of projectiles; chap. 15 of work and energy, and chap. 16 of the pendulum. We do not look for novelty; but the old themes are treated with some freshness, and special attention appears to have been paid to the elucidation of the difficulties which junior students encounter in this subject. The book will serve to prepare the way for Garnett and Minchin; and it contains, as might be expected from Mr. Robinson's experience, all that is required by candidates for the navy examinations. At the same time, candidates for other examinations—such as the Oxford and Cambridge Local—will find sound explanation and numerous worked and unworked examples suited to their wants.

THE AMERICAN ORIENTAL SOCIETY.

We quote the following from the *New York Nation* :—

"The spring meeting of the American Oriental Society was held in the library of the American

Academy in Boston, on Wednesday, May 2, [D. Andrew P. Peabody in the chair. Among the papers read was one by Prof. Richard Gottlieb, Columbia College, on 'A Syriac Geographical Chart of the Thirteenth Century,' found in an old MS. of the 'Lamp of the Holy Things,' by Gregorius Bar Ebhrāyā, who lived in the second half of the thirteenth century. The chart comprises the whole world so far as it was known to this Eastern ecclesiastic, and forms an interesting addition to the history of cartography. Bar Ebhrāyā, following the Arabic geographical writers, divides the whole earth into seven parallels or 'climates'; but he goes beyond the Arabic charts which we find, for instance, in Kazwini, and attempts to delineate roughly the forms of the different countries. We can see here the effect of contact with Greek learning. Mr. James R. Jewett of Harvard University, spoke upon the School of Biblical Archaeology which it is proposed to erect at Beirut in Syria, and to found and manage upon the same principles as the Classical School at Athens. Orientalists, archaeologists, and theologians are there to become practically acquainted with Palestine and the neighbouring countries, to study the habits and languages of the present inhabitants, and, when the opportunity offers, to make archaeological and antiquarian researches. Prof. David G. Lyon, of Harvard, treated of 'The Trustworthiness of Assyrian Statements, Figures, and Dates.' During the year 1887 two editions were brought out of a tablet dated 499 B.C., containing a synchronous history of Babylon, Assyria, and Elam, down to the year 688. This tablet is likely to shake our faith in the accounts which the Assyrian kings have handed down to us. From his own inscriptions we had been led to believe that during the first years of his reign (about 720 B.C.) the great Sargon II. had defeated Humbanigash of Elam at Düriliu. The Babylonian chronicler, however, says distinctly that the Elamite carried off the victory, and not Sargon (Hiele, *Babylonisch-Assyrische Geschichte*, p. 614). In the same manner Sennacherib, in his account of his bloody conflict with Babylon and her allies at Hallulu, not far from the present town of Bagdad (692-1 B.C.), ascribes the victory to his own arms. Our tablet, however, gives the victory to the Elamites. The accounts have been written by different people, and it is possible that misrepresentations have been made by both sides. The Society adjourned to meet in the fall either at New Haven or at Philadelphia."

SCIENCE NOTES.

THE Geologists' Association is busy making arrangements for a week's excursion to the West of England and South Wales early in August. The party will start from Gloucester, and visit the coal-field of the Forest of Dean, the rhaetic beds at Westbury-on-Severn, and the Silurians of May Hill. They will then proceed to the Valley of the Wye, examining the country between Symond's Yat and Chepstow. The headquarters will afterwards be transferred to Cardiff, when opportunity will be offered for visiting the classical rhaetic section at Penarth, and the Silurian inlier at Rhumney. The great coal-field of South Wales will be penetrated by a journey up either the Taff Vale or the Rhondda Valley, and finally an excursion will be made to the Silurian district around Usk.

MR. J. ELLARD GORE has in the press a volume, entitled *Planetary and Stellar Studies*; papers on the planets, stars, and nebulae, which will be published shortly by Messrs. Roper & Drowley.

PROF. LLOYD MORGAN, Dean of Bristol University College, has written a pamphlet showing the gradual geological development of the district around the Mendips, which will be published shortly by Messrs. J. Baker & Son, of Clifton. It will be illustrated with fine maps.

DR. MURRELL'S *Massage as a Mode of Treatment* has been translated into Russian, and will

shortly be published under the editorship of Prof. B. K. Panchenko of St. Petersburg.

THE third Heft of the *Internationales Archiv für Ethnographie* (London: Trübner) contains the continuation of J. Biittikofer's monograph upon the aborigines of Liberia; and an elaborate paper, fully illustrated, upon the Golds and Giljaks—two tribes dwelling near the mouth of the Amur—by A. Woldt, of Berlin. The Shamanism of these tribes illustrates the condition of the Chukchis, as described by Norden-ekiöld. Among the minor notices are an account of the museum of archaeology at Cambridge, and a description of a carved boomerang—both written in English. We fancy that carved boomerangs are not so uncommon as is here suggested; certainly carving on Australian clubs—both geometrical patterns and figures of animals—is the rule rather than the exception. The bird here depicted is more probably an emu than a turkey; and we incline to regard the nondescript figure as that of a fish or eel, and not a club or palm tree. We may add that Dr. E. B. Tylor, of Oxford, has joined the editorial committee, and that Baron A. von Hügel, of Cambridge, has promised to contribute, so that England is not now so badly represented as it was at first.

PHILOLOGY NOTES.

PROF. TERRIEN DE LACOUPERIE has reprinted from the *Babylonian and Oriental Record* (David Nutt) the elaborate paper in which he aims at proving that the Chinese script is derived from the Babylonian, by a comparison of the primitive Chinese characters with the pictorial forms out of which the cuneiform writing subsequently developed. This paper should be considered in connexion with previous ones, in which the professor argued that other forms of the earliest Chinese civilisation were similarly derived from Western Asia. From the point of view of Assyriology, Prof. Sayce has given his support to this theory in a recent number of *Nature* (June 7).

THE June number of the *Classical Review* contains the second instalment of Mr. E. Maunde Thompson's "Catalogue of Classical MSS.," dealing with Greek MSS. in the British Museum from Hesiod to Aristophanes; a full account, by Mr. David G. Hogarth, of the excavations at Paphos undertaken on behalf of the Cyprus Exploration Fund; and some notes on vases in the museums at Athens, contributed by Mr. Cecil Torr.

Etude sur le Papyrus d'Orbiney. Par William N. Groff. (Paris: Leroux.) We have received from the author this elaborate study of the celebrated d'Orbiney papyrus, better known by its popular title, "The Tale of the Two Brothers," and already many times translated by Egyptologists. Mr. W. N. Groff modestly classes his present study under the head of a compilation: it is a very careful word-for-word translation, with the hieroglyphed text on one page and the French on the opposite page, followed by some valuable notes and a complete vocabulary of all the words contained in the papyrus. The French text also abounds in cross references to the versions of previous translators, as well as to the different readings of certain words as found in Brugsch's Dictionary and in the works of various authors. Mr. Groff's *Etude*, in short, forms an invaluable supplement to the translations of De Rouge, Chabas, Le Page Renouf, Brugsch, and Maspero, and will be peculiarly useful to students.

THE *Berliner Philologische Wochenschrift* for June 23 contains a long and not very favourable review, by R. Meister, of Mr. Robert's *Introduction to Greek Epigraphy*.

MEETINGS OF SOCIETIES.

CAMBRIDGE PHILOLOGICAL SOCIETY.—(Thursday, May 31.)

THE PRESIDENT in the Chair.—Prof. Skeat communicated a paper on "The Provincial English Words *serres*, Sliding Stones, and *aiz*, Harrows." In Dickinson's Cumberland Glossary, I find the entry: "*Serres*, the running debris on the side of a mountain." I submit that this form has been wrongly evolved from the pl. form *serres*, which is, notoriously, the form commonly in use. I greatly doubt whether *serres* is really used at all by natives of that county. I believe that the right form of the singular is really *serith*, whence the pl. form *seriths*. Then the voiced *th* must have been dropped, as in the common word *clothes*; and the vowel-lengthening, consequent on the loss of the *th*, would naturally take place, and give us the precise form *serres*, which we find to be in use. The etymology is from the Icel. *skriða*, a land-slip on a hill-side; also used, as Vigfusson tells us, of the black streaks on a mountain-side from old alps, and frequent in local names. *Skriðu-fall*, i.e., a scree-fall, is the Icelandic word for "avalanche." There are several related words, such as *skriðr*, a creeping, or sliding, motion; *skriðask*, to sink along; *skriði*, a shoal of fish; all from various stems of the strong verb *skriða*, to creep, crawl, glide, cognate with the Dan. *skride*, G. *schreiten*. Hence a *skrið* means "that which slides or glides down." Another related word is the Lowl. Scotch ab. *seriddan*, used in Ross-shire to mean a "mountain-torrent." Jamieson quotes two most interesting passages. "The farms which are bases to high mountains, as in Kintail, suffer great losses from what is called a *seriddan*, or mountain-torrent." And again—"When the rain, falling on the side of a hill, tears the surface, and precipitates a large quantity of stones and gravel into the plain below, we call it a *seriddan*." In the latter case a *seriddan* has precisely the sense of *serres*. Observe also that the Icel. *skriða* belongs to the weak declension; the A.S. equivalent would be **seride*, with a pl. **seridan*, which is just the form required to explain the Ross-shire form. The *n* still appears in Icelandic in the gen. pl. *skriðna*.—*Aiz* is an old Wiltshire word for "harrows"; it is recorded in an old glossary lately reprinted in the first number of the new *Archæological Journal*. We are there told that harrows are so called because they are made in the shape of the letter *A*, which is plainly a trumped-up story. The old-fashioned triangular harrow might be likened to the letter *V*, but there is no reason for supposing that our ancestors were very well acquainted with the modern English alphabet. In Shropshire, an *A* is called an *aa* (pronounced as *ah*!), and in Somersetshire its name has a diphthongal sound (see Elworthy's Somersetshire Glossary). Here, once more, the simple explanation is that a voiced *th* has been lost. The singular of *aiz* is *aithe* (riming with *bath*), and the plural *aithes* became *aiz*. The form *aithe* answers precisely to the M.E. *eythe*, A.S. *eyðs*, a harrow, cognate with the O.H.G. *egida*, a rake or harrow, G. *egge*. As in the related word *edge*, the initial *e* arose from an i-mutation of *a*, and the connexion with the Lat. *ae-is* is obvious. Vaníček derives the Lat. *occa*, a harrow, from the same root AK. Cf. Lat. *ac-us*, a needle, and E. *acute*. The implement plainly takes its name, naturally enough, from its sharp points or teeth. There is an excellent example of the word in Piers Plowman, C. xxii. 273. The author says of the four great fathers of the Latin church that they "harowede in a hand-whyle al holy scripture With to *eythes* that thei hadden, an olde and a newe"; i.e., they harrowed, in a short time, all holy Scripture with two harrows that they had, an old one and a new, viz., *Vetus et novum testamentum*. He means that they commented on all the books of the Bible, dividing their commentaries into two parts, one on the Old and one on the New Testament. The M.E. *ey* was pronounced like *ey* in *they*, and the prov. E. word has kept this sound without change.—Mr. J. H. Moulton read a paper of suggested etymologies, of which the following is an abstract: *sword*, i.e. *swida*, *swes* + *dhe*: cf. Zend. *harsh* to strike.—*swath*: P. cf. Lith. *swaidiu* to whip.—*swan* and *σῶμα* (i.e. *swū-mā*), from *swen* to shine: cf. Zend. *huereg* (Gāthās, i.e. **suana*) and *hāpra* brightness.—*sound* (healthy) for

sunló., ppp of *swen* to be strong (P same as last), seen in *swain*, Goth. *swintha*.—*swim*, *sound* (strait), *swum*, Zend *huanmahi* we move, but Bartholomae equates Vedic *supānai*.—*serre* perhaps for *serres*, cf. Zend *har* to eat (radical idea of *biting*?)—*serres* cannot be identical with *serres*, for Ch. Sl. *svakrū* proves a velar *q*, and the loss of *u* is inexplicable.

The I.E. masc. was *svākuro*, cf. *κύριος*, "own lord" (Ourlus); the fem. *svagrū* is "own lady," cf. Ags. *frēd*, Ger. *Fräu*. The two words, originally distinct, have naturally been mixed up.—*serer*, I.E. *svā-s-or*, possibly shows tlesatute of *svā*, "she who is one's own."—Attention was called to the origin of "*swai* to shine" (*σέλας* &c.), which is only an abetufung of I.E. *swai*, sun: can other verbal roots be similarly explained? Thus *severus* answers to *serius* = *serios*, Goth. *sewa*. *serpis* presupposes a noun *serp* (**serp* in Latin). *seridna* requires *seruon*, which I compare with *swen* to shine (*supr.*): the connexion with *serius* is only popular etymology. *seri*, *serā*-*serim* may be I.E. *seruola*, life: cf. Goth. *seiwala*, E. *soul*.

seres *upa* represent *sviraks* gen. *svirakōs*, and may start from an I.E. noun *svair*, a shrill noise (Skt. *svāratī*, *svīryā*): *Saurast* (Oato) is a derivative.—*serinus* cannot be compared with *seras*, for *svā* always became *ser* in Latin. It has lost an initial *k*: cf. either *serpis* (*serpis*) or *seris*, the latter describing a "burnished" sky.—*serius* must also part company. I.E. *svair* "twinkler" made an adj. *svairios*, whence *serius*, and *serp* analogically. Cf. Vedic *svi* "micare," Lith. *svieks* it flickers.—*Fidus* from neuter base *svid*: for the i. cf. Oscan *svim*, Skt. *svay-am*, Zend *has*—*svā*, *svad*(h): cf. Skt. *vadhū*, bride, E. *well*.—*svi*: add Ch. Sl. *svistati*, hiss, to Goth. *sviglon*—*svos* and *svānus* (i.e. *svas-no-s*), *svas*: cf. Vedic *svasti*, welfare. Popular etymology read this as *svasti*, from a supposed connexion with *svā*; but the abstract of *svā* is rightly *sti*, both in Skt. and Zend.—*ser* perh. for *sv-er-s*, a compound of the preposition *sv* (*svā*), *er* (*er*) with *svā*, Skt. *svayati*, set in motion.—*seruola* part. act. of **sv-er-va* (*svayati*),

for *sv-er-va* us-i, in which abetufung has destroyed the reduplicating vowel.—Dr. Paley communicated a paper on the "Arms of Achilles" in 11. 18 and elsewhere.

ROYAL ASIATIC SOCIETY.—(Monday, June 18.)

SIR THOMAS WADDE, president, in the chair.—Prof. Cecil Bendall read a paper on the "Tantrakulyāna"—a collection of Indian tales from a MS. discovered by himself in Nepal in 1884. The existence of this collection had been previously pointed out by him at the Orientalists' Congress in 1881, from Newari MSS. at Cambridge; but the MS. forming the basis of the paper which he exhibited was the only known copy of the book. The tales, forty-seven in number, occurred in substance in several other Indian story-books, especially in the great collection of somewhat similar name, the Pañcatānta. But it was important, to form a comparison of the early Arabic and Syriac versions of that book, that the compiler had access to an older recension of the Sanskrit text than that now extant. Several of the stories show interesting variants from old collections like the Jataka-books. Others, again, Prof. Bendall had only succeeded in tracing in much later collections, such as the Tota-Kahani and the Turkish "Forty Vezirs." Among the latter was an interesting parallel to Chaucer's "Merchant's Tale." Among stories not identified was a curious counterpart of the Roman tale of Mettius Curtius. Prof. Bendall proposes to publish a full index, abstracts of new tales, and specimens of text, with translations.

HELLENIC SOCIETY.—(Annual Meeting, Thursday, June 21.)

SIDNEY COLVIN, Esq., vice-president, in the chair.—The hon. secretary, Mr. George Macmillan, read the report of the council. The progress and activity of the society during the past year had been remarkable, especially in connexion with schemes of exploration. Of these the most important was the excavation undertaken in Cyprus, which the society had assisted to organise, and which was carried out by the director and students of the

British School at Athens. A scientific account of the discoveries would probably appear in the *Journal of Hellenic Studies*. Assistance had also been given to explorations in Asia Minor, conducted by Prof. Ramsay and Mr. Theodore Bent. The *Journal* had during the past year fully maintained its high standard of excellence. The steady demand for back volumes had necessitated the reprinting of two volumes of which the stock was exhausted. The expenditure involved amounted to £500, but the council had good reason to expect that in the end it would be more than covered by the sale of complete sets of the *Journal* to new members and to libraries. It was pointed out that from vol. ix. onwards the form of the *Journal* would be changed to imperial 8vo., which would allow of all plates being bound up with the text. Important additions had been made to the library, and a catalogue of its contents had been printed and distributed to members. The receipts of the year amounted in all to upwards of £900. The expenditure, which was in some respects quite exceptional, as explained in the report, amounted to £1138. The balance at the bank on May 31 was £255. The £1014—chiefly life subscriptions—previously invested in Consols had during the year been sold out and re-invested in New South Wales Inscribed Stock at 3½ per cent. It would be necessary to trench upon this reserve fund for the reprinting of the *Journal*, but arrangements had been made to repay by instalments the amount withdrawn. There had been during the year a net increase of 35 members and 9 subscribing libraries, making in all 662 members and 93 subscribers. Sir John Lubbock had retired from the office of treasurer, and Mr. John B. Martin was nominated in his stead. The council, in conclusion, congratulated members upon the progress of the society, and urged the constant bringing-in of new candidates that the council might be in a position to fulfil adequately, and without any excess of expenditure over income, the numerous claims that were made upon the resources of the society. The adoption of the report was moved by the chairman, who explained in some detail the causes which had led to increased expenditure, and seconded by Mr. Chancellor Christie, who expressed his entire satisfaction with the action of the council and the progress made by the society. The report was unanimously adopted. The former president (the Bishop of Durham) and vice-presidents were re-elected, Sir John Lubbock being added to the latter. Mr. Martin's appointment as treasurer was confirmed, and Mr. George Aitchison, Mr. R. A. Nell, and Mr. Cecil Smith were elected to vacancies on the council. In place of the usual address by the chairman on the discoveries of the year, Miss Jane Harrison, who had lately returned from Athens, read an account, illustrated by photographs, of the recent excavations in Greece. Special mention was made of the discoveries on the Acropolis; of the excavation by the German Institute of a temple of the Kaberoi near Thebes; and of the excavations of the American school at Dionuso, to the north-east of Pentelicon, which had been identified as the centre of worship of the deme of Ikaria. Foundations of two shrines, of Apollo and of Dionysos, had been found and some sculptured remains of high importance.

FINE ART.

J. M. W. TURNER'S CELEBRATED WORKS.—"Crossing the Brook," "Calligula's Bridge," and "Child Harold's Pilgrimage"—(National Gallery)—also Mr. KEBLEY HALLOWELL'S "October Woodlands"—(Governor's Gallery). Important Exhibitions of the above works are now in progress by Mr. DAVID LAW.—For particulars apply to the Publishers, MESSRS. DOWDSEWELL, 160, New Bond-street.

RAYET AND COLLIGNON'S HISTORY OF GREEK VASE-PAINTING.

Histoire de la Céramique Grecque. Par Rayet et Collignon. (Paris: Decaux.)

A GREEK vase in the hands of a French archaeologist ought to be an instance of the fitness of things. The vase itself is so happy a choice of form, line, and colour, that if it is to be the mark of criticism, if the secrets of

its charm are to be told, we should be able to reckon on felicitous language such as it seems safe to expect in France.

What promised to be a work of the first order on the history of Greek vases was shattered, a few years ago, by the untimely death of M. Dumont. He had carried the general outline of his subject down to the date of the Persian wars, and had elaborated the earlier periods of the art with every useful detail. At that point he stopped, leaving much to be done by the devotion and learning of his young friend, M. Pottier, in the way of filling in details for the period immediately preceding the Persian wars. That has now been done, and M. Dumont's great work—for which, at one time, the most apt symbol seemed to be a broken vase—is now complete within certain lines. Meantime M. Rayet had conceived the plan of a much shorter history of vases, which he counted on making useful to a wide circle of readers. But again death intervened. M. Collignon took up the task, and, starting where his lamented friend had left off, has completed the work now before us. Fortunately this call of affection was the more easy to follow since M. Collignon had already made special studies in just the direction where help was most needed.

There is much to be said yet on the earliest changes that took place in Greek vase painting, and it is no blame to M. Rayet if he has not done more than state the case from a particular point of view. He is not alone in describing (p. 45) a certain vase in the British Museum as of a very ancient Lydian fabric; but there is at least equally good reason for comparing it with works of late Romano-Egyptian style. On the subject of the Mycenae pottery he is with those who assign to it an antiquity of over 1000 B.C., treating as a blank the period that intervened from then to the seventh century B.C., which at present is the farthest back we can go with certainty. Yet it is possible to argue that there was no such immense blank—that, in fact, the pottery of the Mycenae type was the product of a time very little anterior to the seventh century B.C. These, however, are questions into which the element of taste does not enter far, and M. Rayet was known for his taste no less than for his learning. The richer the art, the more his faculties expanded.

It was in M. Rayet's plan to give at each turning point in the history of vase-painting a rapid outline of the principal features in contemporary life and public movements, with the view of indicating the quarters whence art was most likely to have been influenced. The effect is to give a realistic colouring to a narrative which otherwise might easily be monotonous to any but a special student. Even the special student gains considerably. He sees how M. Rayet's method of endeavouring to realise the surroundings of each epoch had enabled him to anticipate one of the most interesting results of recent excavation and research. On Athenian vases of the early part of the fifth century B.C., and even earlier, it is not uncommon to find the names of men conspicuous in the history of the time with the epithet of *καλός* added to them. We have such names as Kallias, Hipparchos, Hippocrates, Leagros,

and Megakles. The habit would remind of Orlando haunting the forest and car "Rosalind" on the barks of the yew trees, if it were known that these names were painted to order for intending chasers. But this could not hold good of vases which had been exported to Etruria and have been found in Etruscan tombs, the case with many of them. Modern experience would suggest that the vase painter had merely sought to profit by the name popular favourites. But the objection employing modern experience as a rule of ancient Greek practice is so great and so dangerous that M. Rayet's conclusions they had been published when he wrote they would have been received as fanciful. It is different now. We are free to accept the names as indicating persons historically known to have been favourites of the people. Germany they have been called *Liebhaber Namen*. It would be more correct to call them "popular names," though the change may distasteful to archaeologists of an affectionate nature.

The argument is that this liberal recognising of popular favourites by name points to a susceptibility on the part of the vase painters to the currents of public life, and implied a readiness to throw over tradition in the face of any change which might commend itself in their own art. What they did was to introduce an entirely new method, by which the skill of the painter was at last set free from technical restraint of a very cramping kind. It does not seem revolutionary to say that this change consisted in substituting red figures for black. But, though that is the usual form of expression, it is not accurate; nor does it in the least suggest those extraordinary facilities of artistic advancement which the new method contained within itself. It is not accurate because it means strictly that the figures were now painted red as they had been before painted black, and that the change was only one of colour. That is not the case. In the new manner the figures are not painted, they stand out in the natural reddish colour of the clay. It is only to trace the outlines of forms and anatomy, or to give details of costume, that colour is employed. Wherever delicacy of line is most noticeable in nature, there the vase painter was now able to trace the accuracy of his observation and the fidelity of his hand. While the clay was soft, he could put in his lines with a fine point, and correct them as much as he pleased before going over them finally with colour. The very process of working was a challenge to his artistic capabilities. In the old manner, the finest lines of the human figure, all markings of form within the contours, had to be laboriously scratched in through the hard, fired surface. There was no possibility of correction or of preliminary studies. Be though the change led to a great advance in the drawing of the figure, there was also a manifest loss in the general colour and effect of the whole vase, which before had been often singularly rich and beautiful, besides having the charm of retaining as its principal effect of colour the natural red of the clay, which on vases of the new manner is, for the sake of a background, painted over with black. At this moment of change it was as

uncommon for vases to be signed by the painters of them quite as if the profession were well recognised in Athens as a fine art, and yet with a sense of humility as compared with the great artists, whose signatures included a statement of their parentage and local habitation. The vase-painters were, or had to be, content with their own names. At present the ruling passion in archaeology seems to be to group and discriminate between the styles of these "signing" vase-painters. The study is full of interest and the material abundant, not as formerly when a similar passion possessed a few scholars, nor even as when M. Rayet wrote. Every year brings a large increase of material. Yet we must place it to the memory of M. Rayet that he did this part of his work well in the circumstances. Here his share in the book ended.

M. Collignon has been able to add to the work of his friend a very interesting chapter on the series of *pinakes* or painted tablets which have been found in recent years, mostly near Corinth, and belonging to the sixth century B.C. A special attraction of these tablets is that they take us directly to the workshops of the old Corinthian potters, exhibit the potters at work, or introduce us to the export of their wares in ships which needed the protection of the sea-god Poseidon, as we gather from the dedications painted on the tablets. By a fortunate coincidence, the publication of a large series of these tablets in the last *Antike Denkmäler* furnishes the most ample illustration of M. Collignon's subject. He then passes on to vases where the surface is prepared with a white ground or slip (to receive a design drawn in with a brush, and for the most part in outline only. Most of them are in the form of *lekylthi*, and were made for funeral ceremonies. Appropriate motives for their decoration were chosen from among the expressions of sorrow and grief familiar on such occasions. But they were chosen with an eye only to refinement and nobility of bearing, the result being that these Athenian vases abound in artistic motives of the rarest beauty. Grief, which breaks through restraint and becomes tumultuous, was as well known in Greece as elsewhere; but in the arts, where dignity of form was a first consideration, such manifestations of passion were necessarily avoided. This chapter of M. Collignon's, and the illustrations accompanying it, are both admirable.

The later stages of vase-painting—the efforts to obtain a pleasing effect by the extra aid of gilding and bright colours, the introduction of novel shapes made from moulds, the combination of moulded and painted designs on the same vase, the search for new glazes—these are all questions of importance from the historical point of view, and not least so for those who look to antiquity for something akin to the multifariousness of modern pottery. But as a conclusion to the centuries of beautiful thought and exquisite workmanship through which the Greeks had passed, the later stages of their vase-painting are too like the efforts of a last fever to be an agreeable study. M. Collignon is true to his office as a historian, and spares himself in no way from tracing the art to its close.

Altogether the book is worthy of the subject. If slips occur in it, they are, so far as

we have noticed, such as easily correct themselves. On p. 104 the date of 460 B.C. for Solon is practically set right on the same page. So also, on p. 263, AΘN is obviously AΘHN, and is rightly given in the index. On p. 218 ΕΠΟΙΗΣΗΝ should be ΕΠΟΙΗΣΕΝ, as everyone would expect.

A. S. MURRAY.

THE TURNER HOUSE AT PENARTH.

A LITTLE art museum of quite unusual character was opened on Tuesday last at Penarth, Cardiff. It has been erected by Mr. Pyke Thompson on an outlying portion of his grounds; and, though neither the building nor its contents are formally made over to the public, the *raison d'être* of "The Turner House"—for that is what it is called—is that Mr. Pyke Thompson's neighbours, richer and poorer, may have access to his collection almost as readily as the collector himself. And a great point is made of the collection being open on the Sunday as well as on that day of the week which is observed as a weekly half holiday in Cardiff.

This new little art gallery does not attempt to compete with the galleries of some provincial corporations in the acquisition of sensational modern pictures. It is strictly a private collector's collection, instructive, and somewhat systematic. The name of "the Turner House"—bestowed upon the building at the suggestion of Mr. Frederick Wedmore—is meant as a tribute to our greatest landscape artist rather than as indicating the character of the contents, though one fine Turner drawing and a small selection from Turner's prints—from the "Liber Studiorum" and the "Southern Coast"—especially—do find a place upon the walls. Perhaps the distinctive feature of the collection is a group of about two score of English water-colours, representing the art from Paul Sandby, Rooker, and Wheatley, to a contemporary lady artist—Miss Clara Montalba. But the strength of the collection of drawings lies chiefly in the presence of a few good works by David Cox, Dewint, Copley Fielding, and Cotman. Original etching is represented by a certain number of examples from the needle of Rembrandt and Hollar, Meryon, Whistler, and Seymour Haden; and it is probable that the Turner House is the first place in England accessible to the public wherein etched work—rather than ambitious modern painting—is displayed, as an attraction, on the walls. There is, furthermore, a small collection of very choice porcelain, ranged in table-cases; quite a representative show of Old Worcester from its earliest period to its degeneration; and specimens of Bow and Chelsea, Swansea and Nantgarw.

The charming little building in which this modest but very interesting collection finds a home has been erected from the designs of Mr. Edwin Seward. It is somewhat classic in character.

CORRESPONDENCE.

KING RAIAN AND THE LION OF BAGDAD.

Malagny, near Geneva: June 22, 1888.

On reading the Rev. H. G. Tomkins's letter on the lion of Bagdad, I referred at once to his learned book, *Studies on the Times of Abraham*, where I found two very good photolithographs of the cartouche of the lion. I believe there cannot be the slightest doubt that it is the same as the coronation-name of Raian or "Ian-Ra." The two legs of the sign which I read *user* are quite visible, the *s* is placed opposite, and an erasure of the stone has given the appearance of a *nub* to what is clearly an *n*. I, therefore, quite agree with Mr. Griffith, who

pronounced the two cartouches to be identical. It is a very important discovery, as it gives a clue to the epoch to which Raian must be attributed.

But I differ from Mr. Griffith on the special points which he mentions in discussing the date which might be assigned to the monument. The faintly incised scale ornament on the sides of the throne, which, according to him, would point to a Saita epoch, is found on one or two statues of the Thothmes in the museum of Turin. I noticed in those statues a great likeness of style to what is left of Raian, especially in the work of the feet. One of the Thothmes is evidently an ancient statue, which has been appropriated. On the other hand, the nine bows do not always point to the Middle Kingdom. In the same museum of Turin, not only the Thothmes, but the beautiful statue of Ramesses II. dressed in a long garment—a magnificent piece of art unquestionably made for him—rests also on the nine bows. This shows how difficult it is to assign a fixed date to an Egyptian monument, when, instead of considering the general style, it is a detail or a special feature which is taken as the criterion. Arguments of this kind are more dangerous in Egypt than anywhere else, because of the care with which the religious and local traditions were preserved.

The late Mr. George Smith, in his *Assyrian Discoveries*, says that he purchased the lion at Bagdad. It is curious, considering the possible connexion of the Hyksos with Mesopotamia, that it should be a Hyksos monument which comes from thence. It may be a fact belonging to the obscure chapter of the connexions of Egypt and Asia at that remote epoch. A great deal of light has been thrown quite unexpectedly on this most interesting subject by the 160 cuneiform tablets discovered at Tell el Amarna, and purchased by the Vienna Museum. They have been noticed lately in the ACADEMY by Prof. Sayce; extracts of them have been read to the Academy of Berlin by Prof. Erman and Schrader. Those inscriptions show that the conquests of Thothmes III. in Asia had left much more lasting results than was before thought.

The wars of the Great King had also some important consequences for the Delta. Here I would mention one of the last discoveries we made at Bubastis. It is a granite slab, whereon the King Amenophis II. is represented twice making offerings to his father Amon, who is said to reside at Perunefer. Between the two pictures Seti I. has inserted a short inscription, saying that he renewed the statues of his father (Amon). Thus it is only after the conquests of Thothmes III. that his son, Amenophis II., reoccupied Bubastis, which had been conquered from the Hyksos, or abandoned by them. The three last Amenophis have left their name at Bubastis. At present it is only Benha and Bubastis where monuments of the XVIIIth Dynasty have been found in the Delta, and none of them older than Amenophis II.

A few days before we left, in rolling the blocks of the festive hall of Osorkon, we found on an architrave a very large coronation cartouche of Sebekhotep I. of the XIIIth Dynasty. It is the first time it is seen on a building.

EDOUARD NAVILLE.

NOTES ON ART AND ARCHAEOLOGY.

AT the closing general meeting of the Royal Institute of British Architects, held last Monday, the royal gold medal, the gift of the Queen, was presented by the president, Mr. Alfred Waterhouse, to Baron Theophilus von Hansen, of Vienna, in recognition of his architectural designs—notably the newly erected Parliament Houses at Vienna, and the Sina Academy at Athens.

THE Queen has been pleased to command that the association of original engravers heretofore known as the Society of Painter-Etchers shall henceforth be entitled, The "Royal" Society of Painter-Etchers.

By the kind assistance of Mr. Henry Irving, Messrs. Dowdeswell are enabled to announce the early publication of an etching, by Mr. C. O. Murray, of the beautiful scene, "St. Lorenz Platz" in "Faust." The moment chosen is when Marguerite leaves the church and is accosted by Faust, while Mephistopheles watches them from behind the fountain.

ARRANGEMENTS have now been made for holding the tenth annual ecclesiastical art exhibition, in connexion with the forthcoming Church Congress at Manchester. The loans will embrace goldsmiths' and silversmiths' work, ancient and modern, ecclesiastical metal work in general, embroidery, needlework, tapestry, wood and ivory carving, ecclesiastical furniture, paintings, drawings, architectural designs for churches and schools, photographs, books, and MSS.

ALTHOUGH Mr. Biscombe Gardner's drawings now exhibited at 17A Great George Street, Westminster, are in "black and white" only, they are far better worth seeing than many highly coloured performances. They are small, and their subjects are merely bits of picturesque scenery in Surrey, round and about Dorking; but their feeling is charming and their execution of marvellous delicacy and skill. It is difficult to believe that they are entirely executed with the brush, the drawing of the trees and the architecture is so clear and dexterous; but they have that softness of line which cannot be attained by the point, and the use of one tool throughout ensures a homogeneity not otherwise to be obtained. Mr. Gardner's skill as an engraver on wood is very well known, and it is, therefore, the more remarkable that these drawings do not show the spirit and habit of the artist who is practised in translating the language of the brush into that of the graver. These are eminently "painters'" drawings, and have a variety of handling and a fineness of gradation which is only seen in the work of the most skilled of water-colour artists. They are, perhaps, specially remarkable for their skies, which are most varied and complex, and yet always soft and luminous, and in all cases admirably in sympathy with the subject; but there are few parts of these drawings, whether trees or buildings, or figures or flowers, in which Mr. Gardner does not achieve a quite unusual success.

AN exhibition of objects of art lent by the Hon. W. F. B. and Mrs. Massey Mainwaring was opened this week at the Bethnal Green Museum. The collection consists mainly of Dresden china, old silver plate, and furniture.

SOME of the decorative work executed by members of the Kyrle Society for various institutions in London, during the past year, will be on view on Friday, Saturday, and Sunday, June 29 and 30, and July 1, from 2 to 6.30 p.m., at the Studio, Holly Lodge, Seymour Place, Fulham Road, S.W.

MISS AMELIA B. EDWARDS'S appeal, on behalf of the Egypt Exploration Fund, for special subscriptions towards the transport to England of the colossal sculptures discovered this year at Bubastis by M. Naville, has resulted in the promise of nearly £270. But it is estimated that the total sum required will be £500. Many of the sculptures weigh more than ten tons. It has been found necessary to make a road from the great temple to the canal bank, and to build a bridge over an intervening canal. In addition, sledges must be constructed for the con-

veyance of the sculptures to the boat by which they will be floated to Alexandria. Subscriptions may be sent to Mr. Herbert Gosselin, 17 Oxford Mansion, W.

As a contrast to the illustrated catalogues which are becoming so common, we would call attention to a clever skit entitled *Pictures at Play* (Longmans). The illustrations are by Mr. Harry Furniss, whose style—in dealing both with politicians and with R.A.'s—is too well-known to need comment. The text purports to be written by two art critics, who are unnamed; but as for one of the two, it is impossible to read a page without exclaiming: "Aut A— L— aut diabolus."

THERE can be no doubt as to the attractiveness of the first number of a new periodical called *Artistic Japan*. It is published by Messrs. Sampson Low, and is conducted by Mr. S. Bing, the well-known lover and collector of Japanese art in Paris. The English editor is Mr. Marcus Huish. Every page has its margin and corners, and odd bits here and there decorated with well-cut facsimiles of Japanese designs; and there are no less than ten separate coloured plates of drawings and patterns. The monkeys of Sosen are alone worth the price of the number. The "staff" of *Artistic Japan* includes Mr. W. Anderson, Mr. Franks, M. Louis Gonsse, and other well-known authorities on Japanese art.

THE March number of the *American Journal of Archaeology* (which is published at Boston by Messrs. Ginn & Co., and may be obtained in this country from Messrs. Triebner) contains several articles of varied interest, with abundant illustrations. M. Salomon Reinach writes about a marble head which he acquired at Smyrna in 1881 for the Louvre, and which he is now able to identify as a portrait of Plato, by comparison with a similar head at Berlin described by Prof. Helbig in the *Jahrbuch* of the German Archaeological Institute. Next we have a further instalment of Prof. W. M. Ramsay's report on his explorations in Southern Phrygia, with two maps. Mr. S. B. P. Trowbridge and Mr. Allan Marquand both discuss the origin of the Ionic capital, in connexion with the archaic examples recently found on the Acropolis. Mr. Alfred Emerson contributes an interesting paper upon a small bronze relief of a bull, preserved at Metaponto, which is erroneously described as a "bull" in Baedeker's *Southern Italy*. Mr. W. H. Ward gives photographic reproductions of two stone tablets from Babylonia in the possession of Dr. A. Blau, which present not only archaic figures, but also "a type of writing (to be read downwards, as in Chinese) more nearly approaching the original hieroglyphs than anything hitherto known." The number concludes with some eighty pages of correspondence, reviews, and notes. Among the books reviewed are Maspero's *L'Archéologie égyptienne*, Naville's *Goshen*, and Stanley Lane-Poole's *Art of the Sarcophagi in Egypt*.

THE STAGE.

"LAURA."

ON Wednesday in last week, we were at an interesting, if not in all respects an absolutely satisfactory, performance at the Novelty Theatre. There were two items in the programme. One of these was the first really public representation of a one-act play by Mrs. Cuthell, the other the *première* of Mr. William Poel's "Laura." Mrs. Cuthell, known already as the author of many very telling short stories, showed in the construction of her little play, "The Wrong Envelope," a somewhat unusual knowledge of stage effect, and her writing is distinctly lively and bright. The piece not

only afforded the author an opportunity showing some capacity for the practice of art other than that which is her recognized *métier*; for it displayed, very favourably, the powers of Mr. Edwin Shepherd in character of an old General very much attached to his engaging niece. Mr. Shepherd's great ease upon the stage. We shall hear this comedietta again. Mr. Poel's "Laura; or, Love's Enchantment," is in two acts; and it is certain that each act possesses distinct elements of attractiveness, that the act is well devised, and that, wherever it is opportunity for good writing, the opportunity is fully taken. Much of Mr. Poel's work is, indeed, in conception—some of it in execution—greatly above the level to which the contemporary stage accustoms us. The weak point of his piece—it is a mistake which, in his admirable dramatization of *Mehalah*, he had no opportunity fall into—is that the serious interest, so fully in his first act, lapses in the second; reason of the too abounding presence of spirit of fun. The audience laughs all through the second act as it laughs at a Crispian farcical comedy; and Mr. Robson, as a fore-romantic lover, is, in truth, very funny. The enjoyment is obtained too distinctly at the cost of one's graver interest in the fortunes of the *dramatis personae*. In the third act, Mr. Poel himself—acting very well as an American of a good, but not of the best, type—has a difficulty in recovering one's deeper sympathy nor can the manly bearing of Mr. Talbot and the artistic discretion of Miss Mary E. quite overcome the obstacle that has been created to the full success of the play. We are of opinion that, by a revision of the second act, the difficulty might be minimized and the excellent conceptions of the writer and his charm of style preserved to the play. Miss Florence Haydon, bustling and good-natured, was effective as the wife of a certain lawyer; and the lawyer himself—quaint and fussy beyond measure—was played with much gusto and much aplomb by E. L. Longville. The most accomplished performance was naturally that of the heroine, by Miss Mary Rorke. The part gave the actress little opportunity for the display of strong dramatic power, but much occasion for the display of her restful and characteristic grace. And Mr. Poel, in several passages of the writer passes into a vein of true prose poetry—and these passages are fortunately given to Miss Mary Rorke to deliver—we had the satisfaction of hearing some excellent things said memorably; and there are times, as the observant playgoer knows, when Miss Mary Rorke's voice is to be listened to like a musical instrument.

STAGE NOTES.

THE season at the Lyceum draws to a close with the programme of a few weeks ago, Mr. Terry's singularly sympathetic performance in the "Amber Heart" having availed to atone for any disappointment that may have been felt with regard to the Robert Macaire of Mr. Irving, played the same night. We are short to be interested in Mr. Richard Mansfield's performance of "Mr. Hyde and Dr. Jekyll" at the same theatre; and on Mr. Irving's return from the provinces late in the autumn there will be a revival of "Macbeth"—a play in which the acting of Mr. Irving, eight or ten years ago was not, we think, rated sufficiently highly either by critics or the public. To our mind Mr. Irving was a very remarkable Macbeth, playing the part with a befitting desperation—at the end with a splendid statement.

MUSIC.

THE HANDEL FESTIVAL.

A FESTIVAL without the "Messiah" would be no festival; and it would certainly be a mistake not to give the "Israel." Musicians might perhaps be willing to sacrifice either or both of these popular favourites to hear one or two of the less-known oratorios, but the general public would certainly resent any change. The story of the Man of Sorrows appeals directly to the hearts of all, while the story of the Exodus, as told by Handel, has irresistible power. The wonderful effect produced by these oratorios is perhaps due to the words quite as much as to the music—at any rate in the former. There remains, then, little for the musical critic to do with regard to the performance of the "Messiah" on Monday, the first day of the festival. He has only to speak about the choir, the solo vocalists, the orchestra and conductor, and to give the figures of the attendance. That Mr. Manns proved himself equal to his arduous task will not surprise any who can remember the zeal and ability displayed by him on former occasions. To conduct the Saturday Concert orchestra is one thing, to control the large army of singers and players at a Handel Festival is another. The latter requires quite a different style of conducting, but Mr. Manns understands well how to do both. It is scarcely necessary to say that he was enthusiastically received. Mmes. Albani and Patey, and Messrs. Lloyd and Santley were the vocalists; and all were heard at their best. The singing of the choir was truly magnificent. Each department is strong, and the voices blend well. Fine as was the performance of the "Messiah" last festival, we think this one even finer. The choruses were given with immense precision, and with marked attention to light and shade. In memory of the late German Emperor, the oratorio was preceded by the "Dead March in Saul" and the National Anthem. The audience numbered over 22,000.

The programme of Wednesday was one of considerable interest. There were selections from nine oratorios, from five operas, from the Serenata "Acis and Galatea," and, besides, the Coronation Anthem and an Organ Concerto. It must be acknowledged that the most was made of the limited time at disposal for showing the versatility of the composer's genius. From "Esther" was given the invocation, sung by Mme. Trebelli; and the bold dramatic chorus, "He comes." The latter was transferred by the composer, almost in its entirety, to the Concerto for double orchestra, produced at the last festival. The pathetic air, "Total Eclipse," and the grand chorus with its wonderful contrasts, "O first-created beam," from "Samson," were given for the first time. The characteristic chorus from "Belshazzar," "Ye tutel gods," proved another attractive novelty. The famous Saraband from "Almira," Handel's first opera, produced at Hamburg in 1705, was played by the orchestra; and immediately afterwards, Mme. Trebelli sang the still more famous "Lascia ch'io planga," from "Rinaldo," the composer's first London opera. The two pieces are closely related to one another. "O Calumny," the chorus from the oratorio "Alexander Balus," is certainly one of the composer's finest efforts: there are in it chromatic chords and harmonic progressions which, in their boldness and marvellous effect, remind one of Beethoven. The performance of this chorus, said the programme book, "would test the question as to the necessity or advisability of additional accompaniments." Anyhow, it was scarcely a sound test, for there was not the Handelian balance of strings and wind. At the Commemoration Festival of 1784 there were 26 oboes to 96 first and second

violins; but, at the Palace, the proportion was only 16 to 203. And we say nothing about the bassoons which, in Handel's time, took part with the basses in the choruses, though not marked in the score. But the book further informed us that, with the exception of Mr. Prout's organ part, not a note was added. But Mr. Prout's organ part could be called an added part. If it could, it would have proved another flaw in the test. Mr. Prout only attempted—and successfully we think—to reproduce the unwritten part played by Handel. But why strain at a gnat and swallow camels? Almost an apology is made for an essential organ part, the invisible soul of the visible body—viz., the autograph score—and yet the unnecessary Costa prelude to the "Wretched Lovers" was retained without a word of comment. And the Sonata in A for solo violin was played by all the violins of the orchestra. And yet, again, an air for soprano from the opera, "Deidamia," was sung by a tenor voice (Mr. E. Lloyd). We may well ask why the artistic mistake of playing the Handel Sonata by all the violins was repeated at this festival? "Because," says the book, "the result of the experiment in 1885 was satisfactory." Satisfactory so far as the choir performance or the applause was concerned, but no farther.

But little space is left us to speak of the afternoon's performance. The choir again sang splendidly, although the "Polypheme" section of the "Wretched Lovers" was somewhat unsteady. The vocalists were Mmes. Albani, Trebelli, and Nordica, and Messrs. Barton McGuckin, Lloyd, and Santley. They were all in splendid voice. Mr. Manns deserves the highest praise for the ability which he displayed throughout. Besides the pieces mentioned, the programme included the overtures to "Samson" and the occasional oratorio, the "Organ Concerto," in B flat, No. 7, played by Mr. W. T. Best, "Del minacciar," a bass air from "Otto," very like "O, ruddier than the cherry," some airs from "Jephthah," "Samson," "Solomon and Judas," "Acis and Galatea," and an interesting selection from "The Triumph of Time and Truth," including the magnificent chorus, "Ere to dust is changed." The attendance exceeded 21,000.

J. S. SHEDLOCK.

RECENT CONCERTS.

M. DE PACHMANN gave a pianoforte recital at St. James's Hall last Saturday afternoon, the programme of which consisted almost entirely of works by living composers. Three short pieces by M. H. F. Cowen, dedicated to the pianist, may be described as light, graceful, and—at any rate, with M. Pachmann as interpreter—effective. The third, a Scherzo, is, musically, the best. Dr. Bülow's Tarentelle (Op. 21) is a dry piece, and made little or no impression. Mme. de Pachmann's clever variations were, of course, well rendered. Rubenstein's graceful Barcarole is a piece quite to M. Pachmann's taste. The programme commenced with Beethoven's Sonata in F sharp major (Op. 78), and the performance of it was most satisfactory. There was, of course, a long Chopin selection; and how well the concert-giver interprets the works of the gifted Pole needs no telling. There was a fairly large and highly appreciative audience.

Dr. Bülow gave his fourth and last Beethoven Recital on Tuesday afternoon. To hear this pianist interpret the Sonata in B flat (Op. 106), and the Diabelli variations is a great intellectual treat; but we do not think it wise to place them both in the same programme, and to give in addition the Sonata in A (Op. 101) and the posthumous Rondo a capriccio (Op. 129). It is exhausting alike to player and to listener. And then, it must be remembered that Beethoven is not

always inspired. Even Dr. Bülow, with all his clever playing, cannot make the Fugue of Op. 106 attractive, and some of the Diabelli variations are principally interesting from a technical point of view. The eminent pianist, however, visits us but rarely, and one must take him as he is. In the four Recitals just concluded, he has given us readings of Beethoven remarkable for purity of style and depth of thought. Of all living pianists, he is the most diligent student of the great composer; and, whether one agree with him or not, one can always admire his zeal and earnestness. Dr. Bülow has achieved with success a task which few pianists would care to undertake, and still fewer be able to carry out with the same ability.

"Il Flauto Magico" was given at Covent Garden Theatre on Monday evening. In spite of the confused, and, at times, absurd, libretto, the opera is attractive, for it contains some of Mozart's finest music. Mme. Minnie Hauk took the part of Pamina, Miss Ella Russell that of the Queen of Night, while Mlle. Sigrid Arnoldson was content to appear in the second act in the small rôle of Papagena; and these three ladies sang and acted with considerable ability. Signor Ravelli was a good Tamino, and Signor Del Puente a good Papageno. The three ladies and the three genii were also entrusted to efficient artists. M. E. de Reske was to have been the Sarastro; but, owing to indisposition, his place was taken by Signor Novaro, who sang in an artistic manner. The choruses were, for the most part, admirably rendered. Signor Randegger conducted, yet the orchestra was not always satisfactory. The piece was effectively put on the stage. The animals, however, which assembled to listen to Tamino's flute-playing gave to that scene quite a pantomimic effect. And what shall we say about the ballet during the fire ordeal? Is it not a shame that such things should be done? Mozart intended no ballet, and hence provided no music. But that obstacle was got over by introducing the Finale from Mozart's G minor Symphony, and the Menuet and Trio from the same composer's Symphony in E flat. If Mr. Augustus Harris thought a ballet indispensable, why did he not have one after the opera?

We are sorry not to be able to notice many concerts of interest—and particularly Mr. Hallé's sixth Recital, Herr Richter's seventh Concert, Mr. Henschel's second and last vocal Recital on Wednesday, and Otto Hegner's farewell Concert on Thursday.

AGENCIES.

London Agents, Messrs. W. H. SMITH & SON, 186 Strand.

Copies of the ACADEMY can also be obtained every Saturday morning in EDINBURGH of Mr. MENZIES; in DUBLIN of Messrs. W. H. SMITH AND SONS; in MANCHESTER of Mr. J. HEYWOOD. Ten days after date of publication, in NEW YORK, of Messrs. G. P. PUTNAM'S SONS.
